## ABSTRACT

Six doctoral students evaluated an educational leadership program they were in by participating in a focus group simulation. The students were all enrolled in or auditing a qualitative research course at Northern Arizona University's Center for Excellence in Education (NAU/CEE). Prior to the simulation participants were given instructions on the process of the group. Participants were to discuss the program's strengths, weaknesses, and make recommendations for improvement in admissions, program of studies, and the dissertation. The same three categories were also measured in a survey completed by all six respondents. The session met for about 1 hour and the students encoded the data from written transcripts. Recommendation results for doctoral program improvement addressed introduction to the program/admission process, class content, and preparation for dissertation/program support. Specific recommendations included the following: improvement of the formal outreach component of the introduction and admissions process; clear itemized policies; informal portfolio review prior to the admissions process; improvement in the sequence of classes; greater flexibility of summer class offerings; limiting a faculty member's number of advisees; and clarifying the roles of college offices. Sample matrixes uses in the evaluation process are attached. (JB)

AN EVALUATION OF KEY COMPONENTS OF AN EDUCATIONAL  
DOCTORAL PROGRAM: Results of a Focus Group Teaching Simulation for  
Education Doctoral Students

Introduction

The purpose of this paper is to report the results of a focus group simulation with selected members of a doctoral qualitative research class at Northern Arizona University's Center for Excellence in Education (hereafter called NAU/CEE) during the second summer session of 1993.

The focus group methodology was chosen because of the qualitative nature of the research class (EDR 725). As pointed out by authors such as Krueger (1988), the focus group technique allows the educational researcher an opportunity to collect data which is reported from the client's point of view and contains a depth of detail not possible with quantitative methodology.

Procedure

The subjects for this focus-group simulation study consisted of 6 doctoral students in the Educational Leadership sub-speciality who were enrolled in EDR 725 (Qualitative Research) or who were auditing the course during the second summer session of 1993.

Prior to the actual focus-group session, the participants were given instructions about the proposed process of the group. The facilitator (another NAU/CEE doctoral student) informed the respondents that they would be discussing the Educational Leadership doctoral program in terms of perceived strengths, insufficiencies, and recommendations for improvement within three key areas. The three general areas of the program to be discussed were: admissions, program of studies, and the dissertation.

In order to have a structure for presenting and analyzing data, a series of matrices (see blank matrices #1 - 4) were formulated with the same three

columns: strengths, weaknesses, and recommendations. The same three categories were also measured in a survey completed by all 6 respondents and a matrix was developed to present the survey results (see matrix #5).

The actual focus-group simulation was conducted on July 15, 1993, with one of the doctoral students acting as facilitator and another doctoral student scripting and maintaining the taping equipment. The session lasted approximately one hour. Subsequently the students encoded the data derived from the session from written transcripts.

Educational Leadership Doctoral Program:  
Perceived Strengths, Weaknesses, and Recommendations

Data Analysis and Interpretation

The data analysis/reporting procedures included :

1. Cluster/coding of the focus group data.
2. Presentation of the demographic survey data in a profile sheet (see Demographic Profile).
3. Graphic presentation of the open-ended survey data in a matrix (see Matrix # 5).
4. Graphic presentation of the focus group data in matrix format (see Matrices 1 - 4).

Conclusions

Specific recommendations for doctoral program improvements were proposed in each of the three predetermined general areas. They are briefly outlined in the following section:

### Introduction to the Program / Admissions Process

Suggestions included the following:

- (1) Improved formal outreach;
- (2) California should be able to begin and finish classes in California;
- (3) Designation of an admissions advisor;
- (4) Clear, itemized policies;
- (5) Informal portfolio review prior to admissions process;
- (6) Interview guidelines for candidates to preview.

### Class Content

Recommendations in this area included:

- (1) Improved sequence of classes;
- (2) Increased flexibility of summer class offerings;

### Preparation for Dissertation / Program Support

Suggestions to strengthen the program overall and the dissertation process specifically included:

- (1) Each faculty member in the department should have a limited number of advisees in order to increase accessibility;
- (2) The role of other offices on campus (i.e. the Graduate College and the Institutional Research Board) should be made clear earlier in the process;
- (3) Point out to applicants the program's emphasis on collaborative learning;
- (4) Have uniform of departmental and university policy for all students.

## DEMOGRAPHIC PROFILE

Gender: Males - 4  
Females - 2

Average Age: 39.83  
Range: 35 - 42

Ethnicity: One African American  
Two Caucasians  
Three Mexican Americans

Cities of Origin: One Sierra Vista, Arizona  
One San Diego, California  
Four Phoenix, Arizona

Professional Positions: One Principal  
One Mid-level Manager  
Two Teachers  
Two Assistant Principals

Average Years Experienced in Field: 13.1666  
Range: 7 - 19 Years

Years Experienced in Present Position: 6.5  
Range: 4 - 13 Years

Length of Time in Educational Leadership Program: 26 months  
Range: 12 - 36 months

Expected Time of Graduation: One in 1993  
Five in 1994
