ABSTRACT

The 1989 census data for the state of Kentucky reveals that African American childr . are more than twice as likely to be poor as White children, three times more likely to grow up in a single parent family than White children, and twice as likely as White children to live in a home that is rented as opposed to owned. The data also show that the African Americans' per capita income is only 65 percent that of Whites. This report, focusing on Kentucky's African American children and their families, analyzes trend data and presents statistics in five areas of concern: health, out-of-home placements, education, employment, and housing. It suggests actions to improve the status of African American children and families at the family, community, and governmental levels. Data sheets are also provided covering 1990 census data, 1992 vital statistics, and indicator trend data for each county within the state possessing the most African American households as well as in area development districts. This report was funded by a grant from **The Annie E. Casey Foundation** in Greenwich, Connecticut. Recommendations and opinions are the authors and do not necessarily reflect the views of the Foundation.

ACKNOWLEDGEMENTS

Two reports served as models for this document. The first, "Facing the Facts," was prepared by the Children's Defense Fund - Ohio. The second, "Progress and Peril: Black Children in America," is from The Black Community Crusade for Children (BCCC) coordinated by the Children's Defense Fund, Washington, D.C. (For more information about these groups call 1-300-ASK-BCCC.)

Under the Kentucky KIDS COUNT contract, the Center for Urban and Economic Research at the University of Louisville provided much of the data which we included in this report.

We appreciate the invaluable assistance we received in preparing this report. In particular, we would like to thank Teresa Partee, a graduate student at the Kent School of Social Work, University of Louisville. Teresa was responsible for collecting most of the data and developing many of the initial ideas incorporated in this document.

Finally, we would like to acknowledge the African American persons who agreed to be interviewed for this document and those who read the report prior to its release. The information we gained from these persons was of great importance to us in portraying the circumstances of Kentucky's African American population.

Funding for this report and other activities of the Kentucky KIDS COUNT Consortium is provided through a grant from **The Annie E. Casey Foundation** in Greenwich, Connecticut. The grant to the Kentucky Consortium is part of the Casey Foundation's national KIDS COUNT effort to publicize the needs of children, influence budget and program decisions, and monitor state and local perrormance for children.

Dear Concerned Citizen:

As I helped prepare this report I found myself wearing several hats, each reflecting a different aspect of my life. As an educator and parent, I am aware of the many challenges, obstacles, and pressures that the young people of Kentucky face daily. As an African American, I am also aware of the disparities of status between African American and white families. As an Associate Professor of Nursing at Berea College, I see the bright faces of eager African American students, many of whom have endured tough times in order to secure greater opportunities in life. As the Children's Defense Fund documented, African American children and families are currently facing one of the worst crises since slavery. In Kentucky, 47 percent of our African American children live in poverty.

The information in this report illustrates the critical dilemmas of many African American families in Kentucky. We have taken special pains to highlight some of the successful ways these problems can be ameliorated. We hope our recommendations will provide a starting point in combating some of these longstanding dilemmas.

I write this letter to ask you to begin taking action at one or more of three levels. First, you can help African American children and their families through your donations or by volunteering to participate in a mentoring program operated by one of the many community organizations that focus on helping African American children and families. Secondly, perhaps you will see unmet needs in this report which will prompt you to develop a new program to empower young African Americans and their families. And finally, you may become an advocate encouraging better funding for the government programs that help African American children and families. We can no longer accept the complacency adopted by so many members of our communities or assume that these problems will be taken care of by someone else. The time to take action is now.

Sincerely.

Betty H. Olinger, Ed.D., R.N.

Lietty White

INTRODUCTION

The Kentucky KIDS COUNT Consortium has spent the past three years gathering, analyzing, and reporting data concerning all children in Kentucky. This report, however, focuses specifically on Kentucky's African American children and their families.

Census data gathered in 1989 indicate that 7 percent of Kentucky's total population is African American. The same source reports that 9 percent of children in Kentucky are African American. While African Americans are dispersed throughout the state, 78 percent of Kentucky's African American children live in only 11 of the state's 120 counties. In 29 Kentucky counties there are no, or virtually no African American children. The map below indicates what percent of the population in each Kentucky county is African American.

Percentage of African Americans in Kentucky Counties

"The dismal picture
that is painted in this
report reflects a long
standing problem
which has existed in
the African American
community for years.
It is time that we stop
gathering data and
proceed with a
solution to address the
problem."

Darryl T. Owens
Jefferson County
Commissioner

By far, the two most compelling -- and most often cited -- statistics on African Americans in the state are that 47 percent of Kentucky's African American children are poor, and 59 percent of African American families with children are headed by single parents. The odds for African American children in Kentucky are not good. Currently in Kentucky:

- African American children are more than twice as likely to be poor as white children;
- African American children are almost three times more likely to grow up in a single parent family than white children;
- African American children are twice as likely as white children to live in a home that is rented as opposed to owned; and
- African Americans' per capita income is only 65 percent that of whites.

This report analyzes data concerning African Arcericans to determine upward and downward trends. The document presents compelling and in some cases alarming statistics in five areas of concern: health, out-of-home placements, education, employment, and housing. It suggests actions to improve the status of African American children and families in Kentucky at three levels: family, community, and government.

Throughout this book, we tell stories to high the personal experiences, opinions, and current promising programs. This report process such alarming data that we cannot imagine anyone being complacent about the circumstances under which African American children are living. Nor can these conditions be justified. This report was designed to heighten awareness of the situation and initiate a problem solving process within our communities and the state as a whole.

WHAT IF AFRICAN AMERICAN CHILDREN FACED THE SAME ODDS AS WHITE CHILDREN?

If African American families and their children faced the same odds as white families and children, in Kentucky each year:

- 19,362 fewer African American children would live in poverty;
- 43 fewer African American infants would die before their first birthday:
- 772 fewer African American babies would be born to mothers who did not receive early prenatal care;
- 2,630 fewer Arrican American babies would be born to unmarried women.
- 306 fewer African American babies would be born to mothers under 18 years of age:
- 15,852 fewer African American families with children would be headed by single parents:
- 879 fewer 1, 19 year old African Americans would be unemployed;
- 602 fewer African American children would live in out-of-home placements.

(Concept adapted from Progress and Perll: Black Children in America by the Black Community Crusade for Children. Kentucky data are based on information taken from the 1990 Census, the 1992 Vital Statistics report, and a 1993 Kenn ky Department for Social Services report.)

MATERNAL AND CHILD HEALTH

INFANT MORTALITY RATE IMPROVES BUT AFRICAN AMERICANS ARE STILL BEHIND

African American infants are almost twice as likely to die in their first year of life as are white infants. The infant mortality rate reflects the number of babies who die during their first year of life per 1,000 live births. Many factors are related to infant mortality rates. Two of the most commonly cited are: (1) lack

of early prenatal care provided to pregnant women, and (2) the care that babies receive immediately after birth and throughout their first year of life. Research suggests that women who receive early prenatal care have healthier babies, reducing the risk of infant mortality.

Figure 1 shows the infant mortality rates for African Americans and whites from 1981 to 1992. The infant mortality rate for African Americans in 1981 was 17.9 per 1,000 live births and in 1992, was 14.7. The infant mortality rate for whites were 11.7 and 8.0 per 1,000 live births for the years 1981 and 1992 respectively.

Figure 1: Infant Mortality Rates by Race 1981-1992

Source: Center for Urban & Economic Research, University of Louisville

Low birthweight has a major influence on infantmortality. African American women are more likely than white women to give birth to babies weighing less than 5.5 pounds. Recent national studies seem to show that this tendency among African American women to have smaller babies is not totally explained by either income or education levels.

AFRICAN AMERICANS RECEIVE LESS EARLY PRENATAL CARE THAN WHITES

Early prenatal care (provided in the first trimester of pregnancy) is essential for healthy babies. Studies have shown that early prenatal care reduces the risk of low birthweight babies, premature labor, and infant mortality.

RESOURCE MOTHERS: A PROGRAM FOR PREGNANT AND PARENTING TEENS

One program that is helping to alleviate the problems of infant mortality, low birthweight, and other health and social problems related to adolescent pregnancy is the Resource Mother Program provided by local health departments. By January 1994 the program will be available in 60 of Kentucky's 120 counties. Resource Mothers' employees visit pregnant and parenting teens at home and assist with the non-medical dimensions of pregnancy and child rearing. These resource mothers are experienced professionals or paraprofessionals. Efforts are made to match clients and Resource Mothers' employees by race. The resource mothers encourage pregnant women to attend prenatal care appointments and provide child rearing advice for the child's first two years of life.

The following is an excerpt from a letter a Resource Mothers' client wrote to the Lexington-Fayette County Health Department. The people served by this Fayette County program are 71 percent African American.

"I would like to thank the Health Department for their employees and for the dedication from Kathy Eberhart, my nurse, for coming to my house and talking with me about prenatal care. And if it wasn't for Kathy Eberhart, I would not have had my healthy baby boy. Because the told my Mom to call U.K. [hospital] because it wasn't normal for me not feeling the baby kick. So U.K. had admitted me in and the doctors told my Mom and Dad if I had waited two hours later, the baby wouldn't be alive today. I want to thank God for bringing Kathy Eberhart to my house that day."

"Essentially, our children need to be strengthened within the context of programs that work to strengthen the whole family."

Dr. Roz Harris Professor of Sociology University of Kentucky While the percentages of both African Americans and whites receiving early prenatal care have increased in the last ten years, African American women are still less likely to begin care in the first trimester of pregnancy. Over three-fourths of pregnant whites (79.8 percent) received early prenatal care in 1992, compared to less than two-thirds of pregnant African Americans (64.5 percent). As Figure 2 suggests, this gap between African American and white pregnant women receiving early prenatal care has not reduced over the last decade in Kentucky.

While prenatal care is more available now than ten years ago, some subtle barriers, including education about pregnancy, access to clinics, and personal shame, still stand in the way of receiving care during pregnancy. Lack of transportation prevents some low income Kentuckians from securing health services. According to Kentucky's 1990 census information, in housing units occupied by white persons, 10.1 percent have no vehicle. By comparison, in housing units occupied by African Americans. 31.2 percent have no vehicle (more than three times as many as whites).

TEEN BIRTH RATE RISES FOR AFRICAN AMERICANS

Teens who give birth risk their health and the health of their children. Health experts warn that pregnancy complications are much more common for teen mothers than for mothers age 20 and older. Additionally, the chances of having a low birthweight baby are increased for a teen mother. Low birthweight babies who survive have a greater chance of brain damage, slow growth, and nervous system problems.

The teen birth rate (the number of births per 1,000 teens) in Kentucky for African Americans is more than double that for whites. As

Figure 3 shows, for the most recent years, 1990-92, the African American teen birth rate for 12 to 17 year olds in Kentucky is 47.5 births per 1,000 teens. The white teen birth rate is 19.2 for the same three year period.

As the graph below indicates, the African American teen birth rate has risen in the last decade while the white teen birth rate has fallen. The white teen birth rate declined 21 percent (from 24.2 to 19.2 per 1,000) from the 1980-82 period to the 1990-92 period. The African American teen birth rate increased 11 percent (from 42.9 to 47.5 per 1,000) in the same time period.

Figure 3: Kentucky's Teen Birth Rates, Ages 12-17 by Race

Source: Center for Urban & Economic Research, University of Louisville

OUT-OF-HOME PLACEMENT

AFRICAN AMERICAN CHILDREN ARE OVER-REPRESENTED IN FOSTER CARE AND OTHER PLACEMENTS

According to the Kentucky Department of Social Services, as of July 1993, 3,564 children were in out-of-home care including foster homes, private child care facilities, group homes, and others. Twenty-four percent, or 851 of these children are African American.

Of the 524 Kentucky children awaiting adoption, 33 percent are African American. These figures are astounding, particularly since Kentucky's African American population makes up only 9 percent of the total child population.

The large number of African American children in out-of-home placements may reflect the economic situation of many of Kentucky's African American families. Another possible explanation for so many African American children in out-of-home care may lie in the fact that many African American children come from single parent families who are particularly subject to the stresses and strains that may lead to a child's removal. Some national experts suggest that some courts and social service agencies are quicker to remove African American children than white children from their homes in cases of abuse and neglect. African American parents -- who are more likely to be poor -- are also more likely to have inadequate legal representation in court, resulting in their children being removed from their homes.

ONE SOLUTION: THE BLACK ADOPTION PROGRAM

The Louisville Urban League operates the Black Adoption Program (BAP) in conjuction with Kentucky One Church One Child. From 1989 to 1992, BAP noted a 100 percent increase in the number of special needs children placed and a 170 percent increase in the number of African American families approved for adoption. BAP uses many strategies in their attempt to decrease the number of African American children awaiting adoption. For example, as a direct result of the roller skating party for 35 children and 20 familues held on August 29, 1992, one family met and adopted a sibling group of three youngsters. (a 14 month old girl, a two and a half year old boy, and a three and a half year old boy). In addition, two other children were placed and four adoptive or foster families pledged their support for new adoptive or foster families.

EDUCATION

THE DROPOUT RATE: NO REAL DIFFERENCE BY RACE

The dropout rates for African American and white students in Kentucky are not appreciably different. As the chart in Figure 4 shows, according to 1990 U.S. Census data, the percentage of black teens, 16-19 years old, who have not graduated from high school and are not enrolled in school is 13.6. The figure for white teens is 13.3

Figure 4: School Dropouts in Kentucky by Race

Source: Center for Urban & Economic Research.
University of Louisville

percent. Data on dropout rates collected by the Kentucky Department of Education are not kept by race, explaining why the most recent data available was from the 1990 census.

TRACKING AND ABILITY GROUPING

While there is little disparity between African American and white dropout rates, other trends in education for which fewer hard statistics are available suggest some racial disparity. National studies show that African American students are more likely than whites to be placed in special education classes and less likely than whites to be placed in gifted and talented classes. For example, at one elementary school in Jefferson County, African American students, who made up nine percent of the total enrollment, accounted for 89 percent of all students in the lower track classes. African American students are also disproportionately more likely to be subjected to practices such as suspension, expulsion, and corporal punishment.

Current government policies contribute to inequitable retention and treatment of students by not mandating data collection by race for monitoring purposes. While the Office of Civil Rights of the U.S. Department of Education randomly "Students must be taught that "smart" is good. Black child: en are as sharp as any children of any race on earth."

Reverend Doctor William Sunvners II! President,Kentucky Interfaith Community "When I was a child.

we had tracking of

sorts but there was not

as much class

conscienciousness as

there is now. If you

were smart, you were

grouped with other

academically talented

students. Your family

income or where you

lived was not part of

the equation."

Dr. Madeline Maupin Hicks Louisville Activist and Dentist

LIFTING CHILDREN UP: FROM THEIR ABCS TO THEIR COLLEGE DEGREES

The Lincoln Foundation, located in Louisville, established The Educational Opportunity Scholarship Fund. This scholarship program targets children (primarily minority) who are at "high risk" of not finishing high school or going on to college. The program begins funding children in preschool, continues through four years of college and covers all educational expenses, except a minimal contribution by the family. Children sought by the program are "average" in terms of ability, neither "gifted" nor "slow." For more information on the Educational Opportunity Scholarship, call the Lincoln Foundation at 502-585-4733.

selects school districts throughout the nation to analyze treatment and placement equity, this data should be collected every year in all Kentucky school districts so that educational practices and placements can be monitored for equity.

COLLEGE ENROLLMENT AND GRADUATION

According to the Kentucky Council on Higher Education, state-supported universities had a total student enrollment of 93,142 in the fall of 1992. Of that number, 5,553 (or 6 percent) students were African American. This is not particularly disturbing data since African Americans make up 7 percent of Kentucky's college age population. What is disturbing however, is that

only 3.7 percent of degrees awarded to instate residents between July 1, 1991 and June 30, 1992 went to African American students. While African American students enroll in higher education institutions in proportional numbers, they are less likely to complete their degree programs and therefore, less likely to reap the full rewards of a college education.

THE SHORTAGE OF AFRICAN AMERICAN TEACHERS

A significant problem with the educational system of Kentucky, affecting not only African American children, but also white children, is the number of African American teachers. According to the University of Louisville, Center for Urban and Economic Research and, as Figure 5 indicates, only 4 percent (or 2,465) of teachers in Kentucky

10

Kentucky Youth Advocates and Kentucky KIDS COUNT

schools in 1989 were African American, while 9 percent of the students were African American in the 1991-92 school year.

It is important that African American students have role models and mentors in their schools. It is also important that white students be exposed to African Americans in

Figure 5: Kentucky Students and Teachers by Race

Source: Center for Urban & Economic Research, University of Louisville

\$800,000 FOR AFRICAN AMERICAN TEACHERS

To help increase the number of African American teachers in the state. Senator Gerald Neal helped secure the passage of a bill that appropriated \$400,000 for the fiscal year 1992-93 and another \$400,000 in 93-94 for the purpose of recruiting and training teachers of color. Summerbridge, located in Lexington, Kentucky, is one such recruiting program which encourages students to stay in school and pursue a career in teaching. At Summerbridge, eleven 15 to 25 year-old students acting as teachers were responsible for teaching, counseling, and administering the four week program to other students and teachers.

11

authority positions. Through African American teachers, white students would learn more about other cultures and have the opportunity to experience cultural diversity in the classroom.

"As a former teacher.

I can see a day when

there will be no male

African American

teachers in the

classroom other

than a coach."

Al Lewis Louisville Businessman

TEACHERS TO STUDENTS

The lack of African American teachers serving as role models and communicators of culture continues to be a problem in Kentucky. For example, in order for Jefferson County's African American teachers to match the percentage of African American students in the county, the school system would have to hire 820 additional African American teachers. The Jefferson County Public Schools and the Louisville branch of the NAACP entered into an agreement to increase the number of African American teachers and employees in the school system.

EMPLOYMENT AND INCOME

AFRICAN AMERICAN UNEMPLOYMENT: THE EROSION OF DIGNITY

Employment, above all other factors, determines the fate of a family. Without adequate employment and the income it produces, African American families have little chance of securing housing, health,

food, and clothing for their children. Not only does adequate employment, provide housing, food, and clothing it also often determines the level of health care, insurance, and other benefits a family can afford. The ability to earn a living also brings with it a sense of self-esteem and security which is important to both parents and their children.

As University of Chicago scholar William Julius Wilson points out, it is important for children to see adults leaving for work each day to reinforce the work ethic. These adults serve as role models for children by demonstrating that work is essential for survival and self-esteem. Unfortunately, in many areas of Kentucky, the unemployment rate is so high that some children do not have the chance to see adults as responsible employed citizens.

Figure 6 compares Kentucky unemployment data from the 1980 and 1990 U.S. Census. The University of Louisville's Center for Urban and Economic Research reports that Kentucky's unemployment rate (the percent of people in the labor force who do not have a job and who are actively seeking work) dropped from 8.5 percent in 1980 to 7.4 percent in 1990. The percentages for both African Americans and whites dropped. The African American rate decreased from 14.7 percent in 1980 to 13.7 percent in 1990, and the white rate from 8.1 percent to 6.9 percent.

Figure 6: Kentucky Unemployment Rate for Persons 16 and Over by Race

Source: Center for Urban & Economic Research.
University of Louisville

TEENAGE UNEMPLOYMENT RATE

While unemployment data regarding Kentucky's African American and white population at large improved from 1980 to 1990, statistics for youth worsened. The unemployment rate for Kentucky youth 16 to 19 years old rose from 19.0 percent in 1980 to 20.6 percent in 1990. As figure 7 indicates, the Kentucky unemployment rate for white youth increased from 18.2 percent in 1980 to 19.4 percent in 1990 and for African American youth from 32.3 percent

to 35.5 percent. Not only did the rate increase, but the gap widened between the percentages of African American and white youth unemployed. It is essential that this age group have employment opportunities. Some experts suggest that the probability of turning to crime increases for individuals who are unemployed, as they seek other ways to meet their financial needs. Additionally, without early job training and experience, these teenagers will be less likely to secure better paying jobs as they get older.

Figure 7: Kentucky Unemployment Rate for Youths 16 - 19 Years by Race

The unemployment rate among our African American youth is high due to such factors as discrimination in hiring, termination, training, and promotions. Nationally the number of manufacturing jobs which have provided opportunities for less educated teenagers to enter the job market, has decreased. These jobs have offered excellent economic opportunities because they paid relatively high wages to African Americans (and others) who had only a high school diploma or GED. Today there are fewer and fewer low skill jobs that pay a living wage.

CONTINUING DISPARITY IN INCOME

According to 1990 census data, median family income for African Americans in Kentucky was \$17,520, 36.6 percent below the white median family income of \$27,636. Much of this disparity can be attributed to the types of occupations common to each group and the inequality of earnings between African Americans and white workers. As Table 1 indicates, African Americans are underrepresented in higher paying jobs. Additionally, the median earnings in 1989 were lower in every job category for African Americans than for whites. For example in 1989, the largest employment category for white workers (28.7 percent) was technical, sales, and administrative support, in which the median earnings were \$18,000 per year. In contrast, African American workers are most likely to be employed in service occupations (27.4 percent) in which the median earnings in 1989 were only \$11,000 per year. Clearly, racial discrimination still exists in the workplace in Kentucky.

Table 1: Selected Occupational Comparisons In Kentucky (Percentage of Workers by Race in Main Areas of Employment and Median Earning for 1989)

	African Americans % (Median Income)	White % (Median Income)
Managerial and Professional Specialty	12 7 (\$20,000)	21 (\$28.000)
Technical. Sales and Administrative Support	24.5 (17.000)	28.7 (18.000)

HOUSING

Home Ownership Remains a Dream for Many African Americans

As Figure 8 indicates, in 1989, 43 percent of African American families in Kentucky owned their homes, down from 48 percent

in 1979. While the percentage of African Americans owning their homes declined from 1979 to 1989, the percentage of white families owning their homes remained constant at 71.7 for the corresponding periods. Experts suggest that the percentage of home owners increases or decreases depending on a number of factors, including: the cost of homes, employment rates, income of young families, prevalence of single parent households, and loan availability by lenders. A larger percentage of African American families are affected by variances in these factors than are white families, partially explaining the declining percentage of African American home owners. According to 1990 Census data, the median house value for whites was \$51,000 while for African Americans it was \$34,400.

AFRICAN AMERICANS AND LOAN REJECTIONS

The relatively low home ownership rate of African Americans as compared to whites may also partly be due to the high rejection rate of loans to African American families. The Kentucky Commission on Human Rights, in their 1990 study on home mortgage lending in African American and desegragated neighborhoods of Jefferson County, reported that ten financial institutions in Jefferson County approved one mortgage loan in African American and racially-mixed census tracts for every 5.3 home loans they made in economically comparable white tracts.

Figure 8: Families Owning Their Own Homes in Kentucky by Race

Source: Center for Urban & Economic Research, University of Louisville

ining the Odds

County-wide, across all income levels, lenders denied home loans to African Americans at more than twice the rate denied to whites.

It is difficult to know with certainty the reasons for higher loan rejection rates to African Americans. Some critics suggest that racial discrimination plays a role. Given the difficult economic plight of many African American Kentuckians, financial considerations may also contribute to their applications being rejected. Probably, both discrimination and economics are at work. Nevertheless, situations that perpetuate such rejection rates must be improved.

OUR VISION FOR KENTUCKY'S CHILDREN

An African proverb has become a rallying cry for child advocates throughout the country: "It takes a whole village to raise a child." This proverb takes on special significance for African American children in Kentucky, 47 percent of whom live in poverty. The responsibility for raising these children rests with their families, communities, and government. The family cannot succeed alone, nor can the communities or the government. All must work together to be successful

in alleviating the problems discussed in this report. We believe that:

- Families are the primary caregivers for children. Families have the first responsibility for the physical and emotional well-being of children. Families, as first teachers, provide many types of education for children, from early language skills to values and ethics. But despite their best efforts, it is often difficult for some families to raise their children without help -particularly when a dramatic reshaping of our economy has changed the rules of the game for many parents.
- Communities are also responsible for the children in their midst. Some entities within the community, such as schools, have clearly defined roles. Others, including churches and civic organizations, have a responsibility to help children directly and to raise the consciousness of the whole community about children's needs. Of late, some employers and businesses have begun to consider children and family issues as they explore current and future workforce concerns. In some communities, citizens groups have orchestrated efforts to recruit, train, and assign mentors to serve as role models to individual children.

Finally, we believe that it is government's responsibility to guarantee equality of opportunity for all children. Recognizing that not all families and communities will be equally well equipped to provide for children, government at the local, state, and federal levels must help to balance the scales. The evidence is clear: investing in government programs that work is a step toward assuring children a fair start in life. African American families depend on federal and state agencies and courts to enforce anti-discrimination policies assuring that racism does not restrict opportunities.

TAKING ACTION

TEN THINGS GOVERNMENT CAN DO TO HELP AFRICAN AMERICAN CHILDREN AND THEIR FAMILIES

• Government must provide more grants to students who wish to further their education but lack the financial resources to do so. All people deserve the opportunity to better themselves. Our country has much to gain by providing such assistance, and much more to lose by denying these opportunities.

In preparing this report, we talked to Kim, a young mother of two. Kim's story indicates the harsh reality for the many single mothers who struggle to make ends meet on low paying jobs.

Kim knows the difficulties of supporting two children on her own. Kim completed her high school education while taking care of her first child with the help of her mother and grandmother. After graduating she became pregnant once again. However, through hard work and family support, she obtained a degree in data processing. She found a job and an apartment for her and her family. Unfortunately when the cost of rent on her apartment rose, Kim had to move back into a small two bedroom home with her mother and brother. With her income too high to qualify for financial assistance from the Aid to Families With Dependent Children program, but her wages only slightly above minimum wage, Kim is an example of many single mothers battling to stay financially afloat.

17

- Government must mandate data collection by race to closely monitor the retention, tracking, and treatment of all students in public schools and colleges. For example, this report suggests that Kentucky collect more education data by race to dispel charges of racist behavior.
- Government must continue and expand its efforts to recruit and train
 African American teachers (especially male) and provide the resources to support such efforts.
- Government can help reduce poverty, particularly for the single mother, by improving the federal-state Job Opportunities and Basic Skills (JOBS) and other work in-

- centive programs. Along with adult literacy programs, these initiatives were established to remove people from public assistance and place them in jobs by providing money for training and education.
- Government must rigorously enforce equal opportunity laws to ensure all people equal access and opportunity to all jobs.
- Government must ensure that all employees are paid the same wages for the same work, regardless of race.
 Government must more vigorously force national banks to ensure equal opportunities in lending. Penalties must be imposed upon banks that violate the laws mandating equity.

Education may be one answer for raising above the conditions mentioned in this report, but, as Susan, a young education major, points out, children must have their basic needs met before they will be able to benefit from education.

Susan has completed several internships in Jefferson County schools and has met many African American children who have experienced some of the hardships mentioned in this report. Susan told us of the nine year old boy who must often babysit for his younger siblings when his mother goes shopping or goes "out for the evening." He has the responsibility of caring for a 7 year old. 5 year old twins, and a 2 year old. Susan also told storics of children who must miss school because they do not have clean clothes. Recently, while on his way to school, a young boy fell into a mud puddle. Because he had no more clean clothes, he had to miss school for the day.

These examples highlight the fact that many of our African American children are lacking basic needs. How can they learn when they do not have the clothes to wear in order to attend school? How can children live the lives of children when they must assume adult responsibilities because of the parents' inability to afford child care?

- Government should expand health care to ensure coverage for <u>all</u> pregnant wo: an and <u>all</u> children.
- Government should eliminate the barriers to health care and preventive services: lack of primary care physicians, lack of transportation, and lack of knowledge of available health services.
- Government should improve the regulations and incentives associated with becoming foster or adoptive parents to provide more opportunities for African American children to be adopted.

Ten Things Communities Can Do To Help African American Children and Their Families

- Schools must recognize that children learn in different ways and develop diverse teaching strategies and diverse curricula. School systems should support teachers by providing the opportunities for professional development that they need to feel comfortable and competent to teach all children.
- High schools can work to guide African American students toward higher salaried careers. African American professionals should be recruited to teach on a part-time basis or asked to

give periodic presentations to schools and other organizations so that African American students can meet first hand African Americans in various professional fields.

- Schools must do a better job in preparing young people to be productive citizens by providing a full and complete education and by helping students establish and clarify values.
- Universities and colleges must increase their efforts at recruiting and retaining African American students. They must provide more scholarships and grants for people of color and other less privileged groups.
- Organizations should do their part by contributing to scholarship funds for people of color and less privileged groups in their community.
- Community organizations, social service agencies, and churches should work together to reduce health risks in their community by educating young parents and pregnant women about the services available to them and by making sure transportation to and from these services is available.

- e Businesses must be fair in their wage and work policies and make sure people of color are not discriminated against in these ways. Citizen groups should rally together to blow the whistle on any business or organization that demonstrates discriminatory practices and to fight for changes to be made within that business or organization.
- Businesses should make special efforts to hire African American and other minority employees to fill positions.
- Citizens at the local level should encourage their county attorney -- or the attorney with whom the state contracts -- to enhance and enforce the collection of child support.
- Churches and social service organizations must work together to find suitable people who may be willing to become foster or adoptive parents.

TEN THINGS FAMILIES CAN DO TO HELP THEIR CHILDREN

• Families as first teachers must stress to their children the importance of an education as a way out of poverty. Parents must demonstrate this

- value by becoming actively involved in their children's education both at home and in school.
- Parents without a high school diploma can enroll in adult literacy or General Equivalency Diploma (GED) programs to enhance their skills and start the process of improving their basic education. In so doing they become better role models for their children. Since training and education are so important in making transitions from one kind of work to another, parents must demonstrate a willingness to enter training programs, technical schools, and colleges to upgrade their skills. In this sense, parents demonstrate that they live by the "life long learning" principle.
- African American teacher population by demonstrating to their children that teaching is a valued profession.
- Families can instill self-esteem and pride in their children by teaching them about their history and culture. Parents and other adult family members should tell their children about present and past African American heros and heroines to help them recognize the accomplishments of their race.

- Parents and other adult family members should speak out against racism and discrimination whenever it affects them, their children, or anyone they know. Discriminatory practices can be found in many areas including education, health, employment, banks, and courts.
- Parents should make sure their children are fully immunized by the recommended age of 2 in order to preventillnesses that can result in lifelong problems or even death.
- Families should work to reduce the teen pregnancy rate by openly discussing with their preteen children sex and its consequences, abstinence, contraception, the realities and responsibilities of parenthood, and the health risks involved in having babies at a young age.
- Pregnant women should be responsible for their health and the health of their baby by taking full advantage of the services offered to them, eating healthy foods, and avoiding harmful substances and activities.
- Qualified parents who meet requirements should seriously consider adopting a child, or encourage others to adopt.

• Parents should take responsibility for their children's actions. They can set rules and limits for children and make children stick to them. Children may be more likely to follow rules if they have some voice in the development of them. Also, children should know in advance what the consequences are for breaking rules.

HOW TO RECEIVE MORE SPECIFIC INFORMATION ON THE AFRICAN AMERICAN CHILDREN IN YOUR AREA

BY THE ELEVEN COUNTIES WITH THE MOST AFRICAN AMERICAN HOUSEHOLDS

The Kentucky KIDS COUNT Consortium has prepared more specific data on the status of African American children and their families. As a supplement to this report, we have prepared a one page summary of relevant data for each of the following counties:

Christian Hardin Kenton
Daviess Henderson McCracken
Fayette Hopkins Warren
Franklin Jefferson

By AREA DEVELOPMENT DISTRICT

Data is also available by Area Development Districts (ADD). The Consortium has specific data about African American families in the following ADDs:

Barren River FIVCO Lake Cumberland
Big Sandy Gateway Lincoln Trail
Bluegrass Green River Northern Kentucky
Buffalo Trace Kentuckiana Pennyrile
Cumberland Valley Kentucky River Purchase

Copies of county and regional data pages can be received by calling Kentucky Youth Advocates at 502-895-8167 or by writing to Kentucky Youth Advocates, 2034 Frankfort Avenue, Louisville, Kentucky 40206.

ABOUT THE AUTHORS AND THE EDITOR

The principal authors of this report are Teresa Partee and Dr. Betty H. Olinger. Margaret Nunnelley edited the report.

At the time she worked on this report. Teresa Partee was a graduate student at the Kent School of Social Work, University of Louisville. A native of Columbus. Kentucky in Hickman County, Teresa was a 1987 Governor's Scholar. She received her undergraduate degree from the University of Louisville in 1992. In December 1993 she received her masters of science in social work from the University of Louisville. Ms. Partee is seeking community organizing work in a non-profit organization.

Dr. Olinger is an Associate Professor of Nursing at Berea College in Berea, Kentucky. She is a board member of the Mountain Maternal Health League Planned Parenthood (Berea) where she also served as affiliate president. Dr. Olinger is vice chair of the Southern Regional Council. She is a member of the boards of Berea Hospital, United Way, and Berea Housing Authority. She is also a member of the Kentucky KIDS COUNT Consortium. Dr. Olinger has received the Outstanding Women in America Award, Berea College Carter G. Woodson Award, KNA Research Award, and the City of Berea "Red Tie" Community Service Award. She is also a charter member of Delta Psi Sigma Theta Tau, University of Kentucky. She recently received the Berea College Miles Award for Community Service. Dr. Olinger earned her B.S.N. degree from Berea College and her M.S.N. and Ed.D. degrees from the University of Kentucky, Lexington.

Margaret Nunnelley is a native of Springfield, Kentucky. She received her undergraduate degree in accounting from the University of Kentucky. After working for several years in the business sector, Margaret attended the University of Louisville where she received a masters degree in social work. She is currently on staff at Kentucky Youth Advocates.

KENTUCKY YOUTH ADVOCATES, INC.

Kentucky Youth Advocates works on behalf of Kentucky's children to assure that their basic needs are met and their rights are protected. It researches, publishes, and distributes information about current and emerging policies affecting Kentucky's children, especially those who are poor or otherwise disadvantaged. KYA tries to make government agencies and public schools accountable to the needs of these children by providing information and analyses to both the public and private sectors. KYA functions as an independent analyst, critic, and problem solver. KYA listens to children, thier families, and service providers who are reluctant or unable to raise questions about existing policy.

THE KENTUCKY KIDS COUNT CONSORTIUM

Kentucky KIDS COUNT is a unique consortium of researchers and children's activists who have significant expertise in the aggregation, interpretation, and use of data to impact public policy. The Consortium's work includes producing a series of reports on children and families to publicize the needs of children, influence budget and program decisions, and monitor state and local performance for children. The Consortium includes individuals from three Kentucky universities and one statewide child advocacy organization.
