 IDENTIFIERS *Alabama; Focus Groups Approach

ABSTRACT

The stages of development and reporting of a statewide needs assessment about inservice teacher education that was conducted with educators in Alabama during the 1992-93 school year are described. The first phase was development of a pilot instrument by focus groups. The instrument was tested with 559 workshop participants, and the final instrument incorporated their comments. A two-sided scannable survey was designed, covering demographic information and educator preferences about inservice workshop formats and topics. A statewide response rate of 79 percent was achieved; over 32,000 educators, mainly classroom teachers, responded to the survey. The design of the report was a joint effort of the State Department of Education, a university representative, and staff from the Assessment and Evaluation Laboratory of the University of Alabama. Reports were prepared for system, inservice center, and state levels. Responses gave the state valuable information about the inservice needs of state educators and provided each inservice center with data to use in planning the coming year. Appendix A is the instrument and Appendix B presents result summaries in eight tables. (SLD)

DEVELOPMENT AND RESULTS OF A STATEWIDE ASSESSMENT
OF TEACHERS' AND ADMINISTRATORS'
PROFESSIONAL DEVELOPMENT NEEDS

Quality education can only be provided when educators are well prepared. Not only must they be knowledgeable about their subject area, they must also be able to impart that knowledge to their students while assessing the abilities and characteristics of those students and adhering to laws and policies pertaining to their position. This must all be accomplished while maintaining discipline and building a good rapport with the students.

Teacher education courses in college can prepare one for some of the tasks to be faced; however, it is not until one has actually had the responsibility of a classroom that weaknesses or deficiencies become apparent. This, along with the fact that subject matter, teaching methods, and requirements are constantly changing, makes teaching a formidable task unless there is some way to update one's skills.

To address these problems, the Alabama State Legislature in 1984, as part of the Governor's Education Reform Commission, formed a network of 11 regional inservice centers. The Alabama Regional Inservice Centers are charged with the responsibility of developing and offering meaningful inservice workshops for school personnel in areas identified as critical by the State Board of Education. These critical needs are broad topics; specific areas within these topics are not defined. Therefore, it is highly desirable to gather information regarding workshop preferences from school personnel so that their perceived needs within the broad critical

needs areas can be met. This was the goal of a statewide needs assessment that was conducted with educators in Alabama during the 1992-93 school year. The stages and results of this process are the focus of this paper.

Pilot Study

The first phase was the development of a pilot instrument. Focus groups helped determine the content of the instrument which was then piloted with a sample of workshop participants at four inservice centers during August, 1992. Respondents were asked to complete the survey according to the directions provided, then to identify any items or sections of the survey that were problematic and make recommendations for improvement. A total of 559 pilot surveys were completed.

Many of the surveys included comments. These were read carefully and organized by areas of the survey form. They were then condensed and analyzed. Sometimes the only "comment" was the circling of a category heading or a question mark to the side of an item. In these cases, an effort was made to determine what suggestion was intended by close examination of the instrument itself and of the responses given. The final needs assessment instrument, printed on scannable forms, incorporated changes suggested by comments.

The Survey Design

A two-sided scannable survey was designed for this needs assessment (see Appendix A). The front side included information about demographics (such as position, grade level, subjects taught)

and workshop logistics (such as preferred time, format, method and location). For several of the items, respondents were allowed to mark all answers that applied. Some items, however, should have only one response (such as position, highest degree, years of experience). There was also space for an open-ended response for "hottest inservice topic."

The back of the survey listed workshop topics within categories from which respondents could choose. Additionally, respondents could mark whether they preferred an introductory or advanced level of the workshop. Respondents could choose as many as three topics from each category on the back.

The Report Design

The design of the report was a joint effort, combining input from a representative of the State Department of Education, a representative from the University of South Alabama, and EAL staff. Naturally, the report needed to present as much information as possible, but it also needed to be manageable. This report would eventually be given to inservice center and local school system representatives who should then be able to ascertain the characteristics and needs of the respondents within their center and/or system.

A report consisting of eight pages was agreed upon initially but was later expanded to ten pages with the inclusion of Pages 6a and 7a (see Appendix B). The first page consisted of response frequencies for the items on the front of the survey. Responses

from the open-ended item were recorded for future analysis but were not included in the report.

Response frequencies for workshop topics (the back of the survey) for all respondents were presented on Page 2. This workshop topic information was then broken down by educator groups (special education teachers; regular elementary, middle, and high school teachers; and administrators), yielding Pages 3 through 6a.

Page 7 was designed to assist in identifying frequently selected topics. This page showed the five most frequently selected topics, both introductory and advanced, chosen by each teacher group. Page 7a presented the same information for administrators.

Because information about standardized test scores and numbers of teachers teaching out of field might also suggest workshop needs for systems and centers, it was decided to include in the report a summary of selected student test scores for each system and also to include a breakdown of personnel teaching out of field. This was presented on the final page of the report.

Reports were prepared on three levels. System reports contained all the information previously discussed for each school system. Inservice center reports contained aggregated data for the systems served by that center. Test score data were not reported at the center level. A state report was also produced which aggregated information from all systems, excluding student test score data.

Data Analysis and Report Preparation

By channeling the surveys through the inservice center directors, a 79% statewide response rate was achieved. Completed forms were returned to the Evaluation and Assessment Laboratory early in December, 1992. The survey sheets were scanned and the data were analyzed.

Both COBOL programming language and SCRIPT text processing language were utilized to generate the reports. Programs written in COBOL created a file containing item response frequencies, student test data (for systems only) and personnel data. Another COBOL program was then used which combined information from this data file with the SCRIPT commands required to produce the reports. Each inservice center director received the report for his/her area at a meeting in January, 1993. System reports were distributed two weeks later at a statewide meeting of staff development personnel and inservice directors.

Statewide Results

Over 32,000 educators responded to this survey, most of whom were regular classroom teachers (71%). Other demographic items indicated that a slight majority of the respondents (53%) were elementary teachers, that various subject areas were well represented, and that most respondents (61%) had at least a Master's degree.

The rest of the frequencies on Page 1 of the report provided information about workshop design and logistics. It was clear that respondents preferred workshops at their school (88%) and were

primarily concerned with a regular student population (83%). The preferred methods of presentation were demonstration (62%) and hands-on/participatory (61%). Workshops that lasted one day or less were preferred over other formats. The best time to schedule inservice activities appeared to be weekdays.

Page 7 provides a quick look at workshop choices by listing the five most frequently selected topics, both introductory and advanced, by teacher group. Although 40 different topics could have been listed on this page, only 15 were. This indicates common needs among educators at various levels that are very interesting and informative. Special education, middle school, and high school teachers expressed a desire for technological assistance by requesting workshops in "Software in my subject area" and "Computer literacy." Special education teachers also shared a need for "Behavior management" with regular teachers at the elementary and middle school level.

The topic of "Cooperative learning" was a high priority among all levels of regular teachers and was requested at both the introductory and advanced levels. It is interesting to note that the topics of "Motivation" and "Critical thinking" were major concerns only for middle and high school teachers.

As would be expected, the most frequent choices for administrators (Page 7a) were specific to their position. The six most requested topics were: (a) administrative use of computers, (b) legal updates, (c) grant writing, (d) alternative scheduling, (e) teacher evaluation, and (f) site-based management.

Although the results presented on Pages 7 and 7a served a very useful purpose, combining the various types of data in the report yielded a more complete profile of inservice needs. Pages 2 through 6a contain valuable information about educators' preferences in each category. This, along with the number of teachers out of field in various subject areas given on Page 8, provided the inservice center directors with a sound basis for determining the types and topics of workshops to be offered. Additionally, system level coordinators for staff development had the advantage of being able to compare student test data with all the other information to determine local needs.

Summary

The process of developing, producing, disseminating, and collecting the inservice needs assessment instrument and analyzing results achieved a number of purposes. First, it provided at the state level valuable information about the inservice needs of educators in the state. This had not been done on a systematic basis in the past. Second, it provided each inservice center with data that it could use in planning for the coming year. Although many centers already were doing this to some extent, the statewide assessment provided a comprehensive instrument that was consistent from one center to the next and removed some of the time and personnel demands from the inservice center staff in terms of data analysis and reporting. Third, the availability of results at the school system level and the manner in which those results were shared with system personnel resulted in opportunities for greater

system level involvement in the inservice center level planning process and provided systems with information for their own planning.

APPENDIX A

ALABAMA STATEWIDE NEEDS ASSESSMENT OF TEACHERS & ADMINISTRATORS

**USE #2
PENCIL
ONLY**

DIRECTIONS: Alabama's Regional Inservice Centers and the State Department of Education have authorized this survey to assess the training needs of teachers and administrators. It is not an evaluation of past workshops. The reverse side of this sheet will let you choose specific topics. Survey results will be analyzed by outside consultants and published by the Truman Pierce Institute. Please be candid.
