IDENTIFIERS New York (New York Metropolitan Area); TECH REACH

ABSTRACT

TECH-REACH, a federally funded rehabilitation technology information exchange program, serves New York City and some surrounding areas. Its mission is to improve the delivery of technology information and rehabilitation services for people with disabilities and the professionals who serve them. The information exchange has gathered and maintained information from various sources including print, microcomputer-based, and online systems. A technology demonstration center, along with a video and print library including a computerized bulletin board system, was made available. The project also evaluated the technology applications that resulted from the information system and disseminated the information exchange model to programs in other communities. TECH-REACH's role as a federally funded Regional Technology Center for the Technology Related Assistance for Individuals with Disabilities (TRAID) program has involved developing and analyzing consumer and employer needs surveys regarding assistive technology devices, providing awareness training, and providing assessments regarding appropriate assistive devices. Appendices contain a list of vendors of rehabilitation technology products, copies of 13 fact sheets produced by TECH-REACH, lists of library holdings, statistical data from the need surveys, a report of a paper titled "TECH-REACHes to Technology for Answers" by Sandra Berman, and project administration materials. TECH-REACH

A REHABILITATION TECHNOLOGY INFORMATION EXCHANGE

FINAL REPORT

I. OVERVIEW

TECH-REACH was funded by the Rehabilitation Services Administration to develop a community-based rehabilitation technology information exchange for the Greater New York City area to improve the delivery of technology information and rehabilitation services to individuals with disabilities and the professionals who serve them. Technology services for people with disabilities are generally offered through a patchwork of agencies with differing eligibility, funding and service criteria. Consumers are forced to deal with confusing, if not conflicting, policies and procedures. Furthermore, many individuals who could benefit from technology equipment and services are not aware of their existence. TECH-REACH addresses these problems by having a central source where people can receive information about technology products, service providers, and funding.

During the three years of operation, TECH-REACH gathered and maintained information on rehabilitation technology from different sources including print, computer-based, and on-line systems. This was complemented with written materials such as newsletters, periodicals and journals. Up-to-date information gathered from engineering centers, vendors, manufacturers and other product developers has been integrated into TECH-REACH's knowledge base so that the information was kept current. An information specialist, available throughout the day and one evening a week, was available to respond to inquiries. More than 2,500 inquiries received by phone, TDD, correspondence and in-person inquiries were addressed. An even greater number of individuals were reached via training activities, conference presentations and referrals. More than 30,000 brochures, newsletters, articles and other material have been distributed to interested persons throughout the three years TECH-REACH was funded. More than 400 referrals were made to agencies, vendors, speech pathologists, special education instructors and other sources as appropriate. On-site demonstrations at the TECH-REACH Information and Demonstration Center reached more than 400 individuals. These demonstrations were directed at school groups, Commission for the Blind and Visually Handicapped, VESID, employers, Physical Therapists and Occupational Therapists, consumers, family members, professionals, IBM, Touro College students. Consumers and family members constituted the largest number of individuals attending on-site demonstrations, numbering approximately 285.

Assessments and direct services numbered more than 400. These included vocational adaptations, personal computers and environmental controls.

A technology demonstration center, along with a video and print library was developed which focused on rehabilitation technology and services. A computerized Bulletin Board System (TRBBS) for sharing information electronically was developed and was available to consumers at no cost.

TECH-REACH serves as a regional technology center on Long Island for TRAIID, which is a project of the New York State Office of Advocate for the Disabled and funded by the U.S. Department of Education, National Institute on Disability and Rehabilitation Research (NIDRR). The TRAIID program extends on-going efforts in New York to deliver a consumer-responsive, comprehensive state-wide program for technology related assistance by and for individuals with disabilities. TECH-REACH is part of TRAIID's Service Network and coordinates the service delivery process.

II. Accomplishments According to Objectives

1. Objective 1 - To obtain relevant information about technology applications for people with disabilities from local, regional and national sources.

1.1 Advisory Board

An Advisory Board was developed consisting of 19 members, including consumers, parents of a children with disabilities as well as rehabilitation technology professionals and service providers, representatives of independent living centers, vocational rehabilitation professionals, and employers. This Board has been operating since January, 1991 and has met at least once each year. Individuals from the Board have been called upon throughout the three years to assist/and/or provide information relative to the project. Board members supported the technology fairs, recommended dissemination efforts, visited the demonstration center and encouraged consumers and professionals to utilize the services of TECH-REACH.

A complete roster of Advisory Board members is located in Appendix A.

1.2 Agreements of support with national and regional technology centers and organizations.

Throughout the three years of the project we have made contact with more than 90 organizations informing them about TECH-REACH and offering to disseminate information about their centers and organizations through our outreach channels. We have reached information resources such as databases and on-line networks that relate to technology for individuals with disabilities; publications, including resource guides, books, periodicals; disability-specific organizations; technology-specific organizations; rehabilitation professional organizations; rehabilitation research and training centers; and rehabilitation engineering centers. (See Appendix B)

1.3 Form network of rehabilitation technology experts

Through use of our bulletin board system and our professional contacts during three years of operation, we have been able to locate professionals with particular expertise in rehabilitation technology and assistive devices. We have also used electronic networks and personal and professional contacts to inform consumers and professionals that we can help them locate an individual with expertise to address a particular need. These included Special Net, CompuServe, BitNet, Series, Satirn and TRBBS.

1.4 Develop ongoing relationships with local vendors, product developers, and technology service providers.

During the first year of operation (February, 1991) we sent a mailing to 369 vendors and developers listed in the Trace Resource Book. We described our mission and asked that they send us information on their products. We catalogued all information received from them as well as product information received from other vendors as time went by. All vendors were put on our mailing list, and received on-going information about TECH-REACH through our quarterly newsletter, press releases and flyers. As TECH-REACH became known throughout the field, we had offers from vendors to loan us equipment for our demonstration center and we also asked vendors for loan of specific equipment for particular clients and/or general demonstration purposes. Manufacturers and vendors who donated products and equipment to us received acknowledgement of their donations as we received the promised items. For the past two years more than 70 vendors displayed their products at our Technology Fair and throughout the three years vendors came to the demonstration center and presented at conferences and training workshops sponsored by TECH-REACH to demonstrate their products. (See Appendix C for Vendor List)

1.5 Subscriptions to resource guides, journals and other publications

TECH-REACH has on staff two librarians with expertise in rehabilitation. They have set up a rehabilitation technology library with subscriptions to rehabilitation journals, newsletters, and purchases of books, directories, videos, etc. New acquisitions periodicals are listed in a Fact Sheet sent to 90 different organization. (See Appendix D).

A listing of newsletters and journals that we subscribe to is included in Appendix E.

1.6 Attend local, regional and national technology conferences

For the past three years, staff has attended local, regional and national technology conferences for the purposes of learning more about technology and for disseminating information about TECH-REACH. These conferences have provided an excellent opportunity for networking and both TECH-REACH staff and conference participants have benefited.

A listing of conferences attended is included in Appendix F.

1.7 Conduct needs survey

Consumer and employer needs surveys were conducted throughout the three years of the project. Researchers at the RTI worked along with TECH-REACH staff to develop an instrument and conduct a survey to assess the needs of rehabilitation service providers, consumers, and employers in the Greater New York area. This population was assessed again at the end of 1993.

An analysis of these surveys appears in Appendix G.

1.8 Conduct product demonstration and testing

Product demonstration and testing has been an ongoing activity of TECH-REACH. This information is shared with information requestors who want particular information in the area of computer access. This information is also disseminated through the quarterly newsletter which was mailed to more than 1500 individuals each quarter. This activity continues through the TECH-REACH demonstration center with funding from sources other than RSA.

1.9 Form network of consumers

The names, addresses, and phone numbers of consumers who call for information or share technology related information with us are entered into our database. Also, everyone that visited the demonstration center filled out a form listing the same information. This enabled us to connect callers to previous requestors for information with the same needs. We were also able to locate consumers with a particular expertise through the use of our and other electronic bulletin board systems. We have then been able to refer consumers in need of information to other consumers who have the information.

We also ask consumers to write of their experiences with technology and assistive devices so that we can include their articles in our newsletter. This has also helped to strengthen our network of consumers.

Project staff have gone to local libraries to talk about TECH-REACH and its services, meeting consumers in their community. Staff has also described the services of TECH-REACH at meetings with parents of children with disabilities. Names of individuals attending these events are added to our database and TECH-REACH information and newsletters are mailed to these people. These activities have also helped to enhance our network of consumers.

The TECH-REACH Advisory Board has several members who are parents of children with disabilities and/or have disabilities themselves. Other Advisory Board members are professionals with disabilities. They helped us with suggestions and ideas on how to reach more consumers.

Task 1.10 Identify formal and informal funding sources of technological applications

TECH-REACH's Information Specialist and Occupational Therapist have developed an ongoing resource sheet of funding sources for technology services and products. The Information Specialist and Occupational Therapist have attended many workshops regarding funding of assistive devices. Funding has been a topic at workshop presentations at the Technology Fairs. Workshops on funding have also been presented for specific groups such as speech therapists, case managers, etc. These workshops included funding information regarding VESID, Medicaid, insurance companies, etc. TECH-REACH has also worked with VESID to develop a funding schedule for evaluations and assessments. Initially, an agreement on fees was difficult to arrange but by Year 2 of the project, TECH-REACH's fee arrangement with VESID was established. Referrals have come and continue to come from all New York and Long Island offices on a regular basis. This activity is continuing after product funding ended.

Objective 2 - To organize the information into a database system that permits a variety of ways of accessing the content and can be updated easily.

Task 2.1 Acquire, develop and build upon existing computerized databases and develop new ones as needed with appropriate topical indexes.

A. During the three years that TECH-REACH was in operation, we acquired the following databases or subscribed to the following on-line information systems:

1. Hyper-Abledata product database for the Apple Mackintosh.
2. Compuserve information system
 - a. Handicapped users database
 - b. VA Rehabilitation database
 - c. IBM Special Needs exchange library
3. SpecialNet
 - a. Apple solutions
4. BRS
 - a. Rehabdata
 - b. Abledata
 - c. Medinfo
5. SERIES
6. SATIRN

B. We have created the following databases:

1. abstract database for technology related articles
2. database of all journals and books in our rehabilitation technology library
3. database of all calls and information provided in our demonstration center
4. technology professionals database
5. consumer database
6. product assessment database

C. We have developed, operated and maintained a Bulletin Board System. (See Appendix H)

Task 2.2 Maintain a variety of channels for different audiences.

A. We have established the following channels for audiences to access our information center:

1. Information specialist: interested consumers, professionals, and developers were able to make their inquiries directly to an information specialist. The specialist then used TECH-REACH's internal resources and links to on-line information systems and networks to gather the appropriate information.

2. On-site searches: TECH-REACH's library and document files, including journals, newsletters, resource guides, books, vendor catalogues, etc., were made available to interested individuals. This information outreach was advertised through our brochure, mailings, newsletter, presentations and press releases. A Library Fact Sheet was developed, printed and mailed monthly to libraries in Nassau and Suffolk County, and by request to 90 libraries and organizations. This Fact Sheet includes a list of the Library's latest acquisition with short abstracts on various publications. An information specialist and librarian were and still are available on premises to answer questions during working hours and appointments for assistance can be made at times convenient to individuals needs. TECH-REACH remains open to 8 PM on Tuesday evenings so people can be served after working hours.

3. 800#: Individuals from around the state and adjoining areas can reach TECH-REACH through an 800 number. This service has been advertised in the same manner as mentioned above.

4. Bulletin Board: A bulletin board system (BBS) was developed that allowed professionals, consumers, and developers to access in-house databases and exchange information through electronic conferences and mail. This bulletin board was serviced by an information specialist.

5. Video Exchange: We have built up our collection of video tapes related to rehabilitation technology. Interested parties were able to view these videos at our demonstration center or by-loan by sending us a deposit of \$100. which was returned when video was returned.

6. TECH-REACHes out, a quarterly newsletter was sent to 1500 individuals whose name and/or organizations were on our data base. This newsletter was also distributed at conferences, workshops, seminars and training. (See Attachment L)

Task 2.3 Provide means for making channels accessible to special populations

We have accommodated individuals with disabilities by providing our materials and information in accessible formats as follows:

1. 800# TDD with answering machine capabilities.
2. Large print
3. Voice output on-site
3. FAX
4. Written materials on audio cassettes
5. Videos

Task 2.4 Use the TECH-REACH Demonstration Center for hands-on evaluations.

The TECH-REACH Demonstration Center has acquired a great deal of equipment throughout the three years TECH-REACH has been in existence, both high-tech and low-tech. This equipment has been acquired through a combination of long term loan, purchase and donation. As an IBM Community Service Organization we demonstrated and set-up IBM computers and peripherals and IBM special needs equipment, including the IBM SpeechViewer, ScreenReaders, and Phone Communicator. As a Regional Technology Center for the TRAUD Project we have also acquired equipment for demonstration including ramps, grab bars, labelers, utensils, and a multitude of low tech items.

Our demonstration center includes an adaptive office workstation, adaptive computer input and output devices and adaptive software for individuals with special needs NYNEX has set up a splay of their telecommunication for individuals with disabilities. A complete list of equipment found in TECH-REACH appears in Appendix I.

VESID has been and continues to refer clients for evaluations on the use of computer and other assistive devices. Our Occupational Therapist and Information Specialist perform these evaluations. For the convenience of clients, demonstrations and evaluations are scheduled throughout the day including evening hours. The Demonstration Center is opened during business hours and Tuesday evening until 8 PM.

Objective 3: To manage a comprehensive marketing program with a variety of outreach strategies that is responsive to the needs of the target audiences in our local area, is easily accessible in terms of their unique preferences, and actively promotes the information system to them.

Task 3.1 Present at conferences or seminars.

Throughout the three years staff of TECH-REACH has presented and/or exhibited at a variety of conferences. Information regarding the services provided by TECH-REACH were reported at conferences attended by staff members of the Research and Training Institute. TECH-REACH has also provided a variety of training workshops, in-service courses and demonstrations both on-site and in the community. One successful outreach method was to present information about TECH-REACH at community libraries. This activity enabled TECH-REACH staff to touch base with consumers directly, particularly senior citizens who enjoy attending activities at their community library. One outstanding activity to promote the services of TECH-REACH, was to plan and implement Technology Fairs. TECH-REACH held two fairs, one in June, 1992 and one in June, 1993. More than 70 vendors took exhibit space at the National Center for

Disability Services each year, with more than 1000 professionals and consumers attending the fair. See attachment "N", evaluation form.

Several workshops were presented and well received at the Fair. Topics of these workshops were: Plan for Achieving Self-Support; Accessing Assistive Technology Through the Medical Model; Funding Workshop for Assistive Technology, Assistive Technology for Older Individuals with Disabilities; Reasonable Accommodation in the Workplace. The ADA information booth was opened throughout the fair time as well as the TECH-REACH Demonstration Center.

Task 3.2 Conduct media outreach

Information regarding TECH-REACH has been heard on the radio, seen on television and printed in various newsletters and articles. An article on assistive technology has been written by TECH-REACH's Information Specialist and appeared in the Fall, 1992 issue of Technology and Disability. See Appendix M.

Task 3.3 Distribute General Awareness Documents:

Brochures describing TECH-REACH and the services it offers have been developed, printed and distributed whenever appropriate. These brochures were developed with a focus for specific audiences such as employers, parents and consumers and their families. The primary brochure is a general brochure, "TECH-REACH Resource Center and Information Exchange". This brochure has been distributed at conferences and included in correspondence where general information is requested. Employers were sent copies of "How Can Modern Technology Help You Fill the Gaps in Your Workforce." Consumers and their families were sent "Do You Have A Disability - Modern Technology Can Help" and "How Can Modern Technology Help Your Child" is sent to parents with concerns regarding their child with a disability and the use of technology. These brochures were printed in Spanish and distributed through the RTI's Hispanic networks. (See appendix J).

Brochures have been distributed in several ways. The main branches of the New York City Library and Nassau and Suffolk County Libraries have distributed the brochures to local libraries for distribution directly to the consumer. Mailings have been sent to more than 2,000 consumers, educators, rehabilitation professionals and employers. These names and addresses have been organized and entered into the appropriate database.

We have also distributed our material via mailing lists from the New York State Advocate's Office for the Disabled, Independent Living Centers, Rehabilitation Engineer Society of North America and the New York State Occupational Therapy Association. These brochures are also distributed at conferences and seminars. More than 4500 brochures have been distributed.

Task 3.4 Conduct training for staff of the New York state Office of Vocational Educational Services for Individuals with Disabilities (VESID).

Several times throughout the three years TECH REACH Staff have conducted training for managers from the Nassau, Suffolk and Queens VESID Offices. These were hands-on training sessions where managers learned about the services provided by TECH-REACH, and also provided the opportunity to see and use some of the technology available for demonstration. This hands-on experience provided a unique opportunity for those managers to experience the complexity and/or simplicity of various assistive devices.

A hands-on training was presented to leaders of Hispanic organizations in Nassau County. Fifteen representatives from the Hispanic community attended so that they could provide technology information to consumers and families of individuals with disabilities in their communities, as the Hispanic population in Nassau County is considered undeserved.

Task 3.5 Utilize the network of technology specialists.

During the three years of this project and continuing today we have utilized the contacts we have made with specialists in the field of rehabilitation technology. We have asked many of these specialists to come to the TECH-REACH demonstration center to demonstrate their products. We have called upon specialists to write articles for TECH-REACHes OUT, the quarterly newsletter, and we have referred clients to certain specialists for additional information. TECH-REACH staff have also tapped into this network to enhance their various project responsibilities.

Task 3.6 Establish a network of consumers

This has been and continues to be an important activity of TECH-REACH. Our outreach activities have been geared to consumers as well as rehabilitation and educational professionals and employers. Much emphasis has been placed on reaching the consumer so that they can become aware of what technology and adaptive devices are available for their use. We have also provided consumers with information regarding the funding of assistive devices and adaptive equipment. As stated previously in task 1.9, TECH-REACH worked with an active advisory board who encouraged consumers to participate in our activities.

Task 3.7 Operate the RTIE in conjunction with existing rehabilitation programs and independent living centers.

We have built solid relationships particularly with the Independent Living Centers. Several key personnel of Independent Living Centers in New York City, Long Island and Westchester have been members of our Advisory Board. We have called upon these individuals to assist us in disseminating information regarding our services and they have encouraged their clients to utilize these services. Many of our outreach activities were geared to reach rehabilitation programs and agencies. We tapped into this audience by using our contact made by other projects implemented by the RTI. Whenever appropriate RTI staff spoke about TECH REACH's activities, thereby, providing an opportunity for TECH REACH to substantially increase its ability to reach new organizations and individuals, Project PEER, a Regional Information Exchange, funded by NIDRR and managed by the individual who directs TECH-REACH, as well. This allowed for a positive collaboration where TECH REACH drew off the resources, individuals, agencies and programs identified by PEER. TECH REACH also benefited by having the ADA Northeast Business and Disability Technical Assistance Center (NDBTAC) housed in the demonstration Center. NDBTAC's staff has worked together with TECH-REACH's staff to provide information regarding assistive devices, accommodations and employment and we still continue to provide information and assistance to them.

Task 3.8 Utilize an 800 number

This number is called quite often. Throughout the three years we have received more than 2,500 calls requesting specific information relating to technology and assistive devices and have responded to each one. Requests for information run from general information to specific information on devices for particular disabilities that enhances the ability to work or live independently.

Task 3.9 Prepare a catalog of exemplary technology applications

We have completed a catalog of technology applications based on the equipment we have in the Technology Demonstration Center. See Appendix K for copy. We printed 100 copies, in house, and distributed them at various trainings.

Task 3.10 Join disability related conferences on public bulletin boards

TECH-REACH joined several on-line networks and bulletin boards such as SpecialNet, CompuServe, BitNet, Series and Satirn. We also built our own bulletin board and used this to inform audiences of our services.

Objective 4 - to evaluate the technology applications that result from the information system and their impact on the employment of people with disabilities through a technology demonstration center managed by a rehabilitation technology services team.

Task 4.1 - Identify consumer needs for technology services

When specific technology services were requested, such as an evaluation or assessment, a standard intake interview was completed by the information specialist and occupational therapist. Consumers were often linked up with appropriate service providers and vendors in the community to provide other resources that were not available at the TECH-REACH Demonstration Center. The needs of the consumers were always a major consideration and referrals to outside sources are always made if that is the best way to provide the services.

Task 4.2 - Measure consumer characteristics, including functional capacities

Appropriate evaluations were made during the initial assessment interview. Specific attention was given to the consumers' functional capacities and how it will affect their computer usage and the environment the computer will be used in such as educational, recreational, and/or vocational.

Task 4.3 Measure consumer performance with and without technology in criterion environments.

Our evaluations are specific, not a full functional capacity evaluation. These evaluations only relate to how the computer and the adaptations made to the computer will impact on a specific area of the consumer's life. If other evaluations are required, such as a wheel chair seating or positioning evaluation, they will be stated in the recommendations. Often, these evaluations are requested before the client even reaches TECH-REACH.

Task 4.4 Conduct periodic follow-ups of consumers regarding their employment status, performance and satisfaction, and compare to initial assessments.

Phone follow-up is the most productive follow-up. The occupational therapist speaks with the consumer directly or a member of the consumer's family. Immediate feed-back is offered. Often, too, the occupational therapist will speak with the consumer's counselor to determine if the consumer is satisfied with the equipment and using it as expected. The consumer is also encouraged to call into TECH-REACH and speak with the occupational counselor regarding the equipment and its use.

Objective 5 - To disseminate the technology information exchange models to programs in other communities for replication

Our comprehensive media outreach program has resulted in recognition of TECH-REACH by consumers and professionals throughout the country. When we speak at regional and national conferences we encourage others to visit the TECH-REACH Demonstration Center and speak with staff regarding how our program was established and how it is being operated.

When funding opportunities appear for rehabilitation technology information and dissemination activities, various organizations have visited our Center to see what we have done so that they can request funding to replicate similar activities in their region. Recently, we have had visits from universities, hospitals and rehabilitation centers, who have modeled their proposals and sites, based on work done at TECH-REACH such as the Kennedy Medical Center, in New Jersey and Hudson Valley Regional Technology Center at the Westchester Institute for Human Development.

Impact

All work as proposed has been completed in a timely way. The creation of the BBS and the catalog of assistive devices were delayed due to changes in staff. However, the work was completed within a time frame that allowed for distribution of product and product information.

Our work during the three years TECH-REACH was funded paved the way for the continuation of services through TRAIID, the Regional Technology Center that is in operation at this moment. We will receive \$60,000 a year for the next two years from the New York Office of the Advocate for the Disabled to be a Regional Technology Center and continue to disseminate information on technology and demonstrate adaptive equipment, particularly throughout Nassau and Suffolk Counties. The Office of Special Education has awarded us \$200,000 a year for three years through the technology educational media and materials projects for Project TIES. This project is designed to evaluate the use of technology and how appropriately the technology is matched and utilized by students from District 75, The Special Education District of New York City Schools. We also receive money from fees for service for evaluation and assessments of technology for individuals with disabilities. These activities have provided more of an opportunity to disseminate information on TECH-REACH and provide information to others that might not want to replicate TECH-REACH in its entirety but replicate certain components.

The funding received from RSA was a start for what is a continued and successful effort to inform the public about the technology that is available for those with disabilities and how this technology can best be used.

APPENDIX "D"

Fact Sheet

This is the first of a series of Fact Sheets that we intend to issue to announce new acquisitions and abstracts of Journal articles that might be of interest to you. Reprints of articles can be supplied on request.

New Acquisitions:

The following journal titles have been added to our collection, starting date January 1992:

- American Rehabilitation
- Brain Injury
- Educational Technology
- Electronic Learning
- Exceptional Parent
- The Journal of Occupational Rehabilitation
- Technology and Disability
- Technology and Learning

Abstracts:

Personal Response Systems in the U.S.: Promoting Independent Living by Christina Montgomery in the International Journal of Technology and Aging. Vol. 4, No. 1, Spring/Summer, 1991.

Describes the Personal Response System (PRS) called Lifeline which connects elderly or disabled persons to a central alarm system when help is needed.

The Latest in Computer Speech Recognition by Regina Lewis. Rehab USA, Summer 1991.

A new computer system, IBM Voice Type recognizes and stores an individual's speech pattern for any word for future reference, allowing use of a computer because of a mobility impairment.

Provision of High-Quality Orientation and Mobility Services to Older Persons with Visual Impairments, by J.M. Hill: E.W. Hill. Journal of Visual Impairment and Blindness. December 1991.

This article discusses the problems associated with providing high-quality orientation and mobility services to older persons with visual impairments, including problems in attitudes, characteristics, financial consideration, in-service training and the availability of age-appropriate assessment instruments.

Requests for reprints of the above articles may be sent to:

Ruth A. Velleman
TECH•REACH
National Center for Disability Services

TECH•REACH
National Center for Disability Services
201 I.U. Willets Road
Albertson, N.Y. 11507
Telephone: (516) 747 - 5400 x1402

TECH•REACH is supported in part by grants from the Rehabilitation Services Administration and National Institute on Disability and Rehabilitation Research given to the TRAUD project, New York State Office of Advocate for the Disabled.

New Acquisitions:

The following book titles have been added to our collection:

- Man-Machine Interfaces, Graphics and Practical Applications, (Editors) C. W. M. Magnee, F.J.M. Vlaskamp, M. Soede and G. Butcher, Concerted Action on Technology and Blindness, Medical and Health Research Programme of the European Community, Long, England, Royal National Institute for the Blind, November, 1988, 88 Pages. Graphs, charts and illustrations.
- Managing Information Resources for Accessibility, General Services Administration, Clearinghouse on Computer Accommodations, Washington, D.C., December 1991, 21 pages. Appendices.
- Network Terminals for the Visually Disabled, (Editor) J.M.Gill, Concerted Action on Technology and Blindness, Medical and Health Research Programme of the European Community, London, England, Royal National Institute for the Blind, Technical Report #2, December 1987, 49 pages.
- Scooters: Product comparison and evaluation, Rehabilitation Engineering Center, National Rehabilitation Hospital, Washington, DC, June 1991, 91 pages.

Abstracts:

- Feeling Good with Simple Exercise by Marybeth Eland, in Accent on Living, Vol. 36 No. 2, Fall, 1991.
The author is co-leader of an exercise class for people with multiple sclerosis. A gentle approach to exercise.
- Special Facilities and Services for University Students with Mobility Impairment: A Demographic Study (U.S.A.) by Mary Blake Huer, Ph.D. Assistive Technology, Vol. 2 No. 4, 1990.
The use of technology in services/programs for students with disabilities in higher education.
- Employment and the Americans with Disabilities Act of 1990, by Elena Linthicum, Jack T. Cole and Bruno J. D'Alonzo, in Career Development for Exceptional Individuals, Vol. 14 No. 1, Spring 1991.
Provides an overview of how the ADA affects employment of individuals with disabilities.
- Deaf Adults in Society, by Merv Garretson in A Deaf American Monograph, Vol. 4, Nos. 1-2, 1991.

Technology has made society much more accessible for deaf adults in the late 20th century - through TDD phones, relay services, captioned television and movies, doorbell and other alarm lighting systems and computer electronic mail and bulletin boards.

- ▶ Prospectives on Deafness: Hearing Parents of Deaf Children by Larry Hawkins and Sharon Baker-Hawkins, A Deaf American Monograph, Vol. 4 Nos. 1-2, 1991.

For hearing parents, understanding deafness occurs in stages. Because of evolving technology parents can view deafness less as a disorder or a tragedy, but rather as a culturally defining condition that requires certain accommodations.

- ▶ Networking: Information from the National Parent Network on Disabilities, a special section, in The Exceptional Parent, January-February, 1991.

Contains address of Parent Coalitions, Information about UCP NYC, including support to families of children with IV infection, access to health insurance and an equipment resource section.

The above articles and other materials are available at TECH•REACH.

New Acquisitions

Books:

The following book titles have been added to our collection:

- ▶ Libous, Thomas W. (1991). Employment: An information resource to assist persons with disabilities. Albany, NY: Senate Select Committee on the Disabled.
- ▶ Rawlings, Brenda W., Karchner, Michael A., Decaro, James J., and Allen, Thomas E. (1991). College and career programs for deaf students. Rochester, NY: Gallaudet University, Washington, DC and the National Technical Institute for the Deaf, Rochester, NY.
- ▶ Resources for Rehabilitation (1991). Meeting the needs of employees with disabilities. Lexington, MA: Author.
- ▶ Resources for Rehabilitation (1991). Resources for people with disabilities and chronic conditions. Lexington, MA: Author.

Abstracts:

- ▶ Murphy, Claire, and Davidson, Terence M. (1992). Geriatric issues: Special considerations. Journal of Head Trauma Rehabilitation, 7 (1), 76-82.
 A geriatric patient with head trauma-related olfactory loss is potentially faced with a far greater impairment than the young person with head trauma, since the aging process alone takes its toll on the ability to smell, and because other senses are less available to adapt to this loss.
- ▶ Shiller Heinisch, Barbara. (1992). Establishing an adaptive technology laboratory in a university setting. Technology and Disability, 1 (2), 47-52.
 This article explains how to get a lab started using the Adaptive Technology Lab at Southern Connecticut State as an example. A starter kit is available from them for a fee. Contact Barbara Heinisch, Southern Connecticut State University, 501 Crescent Street, New Haven, CT 06515.
- ▶ Smith, Rich. (1992). Kids take the plunge. Rehabilitation Management, 5 (1), 31-36.
 Pediatric water therapy's increasing popularity can be attributed to its unparalleled success with even the most difficult and frustrated patients, because of its relaxing atmosphere, and the fact that it is fun.

- Williams, John. (1992). ADA and the changing workplace. Careers and the Disabled, 1 (2), 37-42.
Learning how to comply with the law has become big business through telephone inquiries, information packets, and seminars. Some information is being offered by nonqualified people.

New Acquisitions

FACT SHEET 4

May 1992

Books and Monographs:

The following items have been added to our collection:

- ▶ Center for Health Care Rehabilitation (1992). Case management resource guide. Irvine, CA: Author.
- ▶ Church, Gregory, Glennen, Sharon (1992). The handbook of assistive technology. San Diego, CA: Singular Publishing Group Inc.
- ▶ Coston, Caroline A. (Ed). (1988). Planning and implementing augmentative communication service delivery. Washington, DC: Association for the Advancement of Rehabilitation Technology (RESNA).
- ▶ Jageman, Larry W. (1984). Adaptive fixtures for handicapped workers. Menomonie, WI: Materials Development Center, State Vocational Rehabilitation Institute.
- ▶ Mackenzie, Leslie (Ed). (1992). The complete directory for people with disabilities. Lakeville, CT: Gray House Publishing.
- ▶ National School Board Association and Josten Learning Corporation (1989). Policies and planning for educational technology. San Diego, CA: Author.
- ▶ Pacinelli, Ralph N., Stude, E.W. (Eds). Human resources development: Partnerships in rehabilitation education. Washington, DC: NCRE, RSA and CSAVR, sponsors.

Abstracts:

- ▶ Chaikind, Stephen (1992). Children and the ADA: The promise of tomorrow. Exceptional Parent, 22 (2), M8-M10.

The Americans with Disabilities Act is an important missing link in the compendium of laws reinforcing the civil rights of children with disabilities. Reasonable accommodation will make it possible for children to achieve career aspirations. New accessibility requirements will make public and private services accessible to them.

- ▶ Dunham, Bob (1992). Diet, drinking and exercise. Accent on Living, 36 (4), 38-40.

It is important for a disabled person to maintain a schedule of exercise and proper diet throughout rehabilitation, since lack of these can be debilitating. An unbalanced diet and lack of exercise can make a person more susceptible to diseases such as diabetes, as well as drug or alcohol addiction.

- ▶ Lazzaro, Joseph (1991). Opening doors for people with disabilities: Adaptive technology lets personal computer users lead more productive lives. Rehabilitation Education, 5 (4), 245-252.

The technologies discussed are speech synthesis for people with blindness, large print processing for people with visual impairments, TDD modems and communication equipment for people with deafness and hearing impairments, as well as special switches and keyboards for people with motor and muscular impairments. Products described are currently available on the open market. This article has implications in the education area due to the need for schools to establish assistive technology computer labs for their students with disabilities.

- ▶ Woodworth, Barbara (1992). Back pain: Causes & cures. Independent Living, 7 (1), 59-62.

There are two major causes of back pain...aging and trauma. Accuracy of diagnosis and treatment place a vital role in remediation. There are many means of treating back pain. This article presents a sampling of the numerous treatments and practitioners available.

The above articles and other materials are available at TECH•REACH.

New Acquisitions

The following items have been added to our collection:

Books and Monographs

- ✓ Equal Employment Opportunity Commission and the U.S. Department of Justice. (1991). Americans with Disabilities Act handbook, Washington, DC: Author and the National Institute on Disability and Rehabilitation Research.
- ✓ Pearlman, Leonard G. and Hansen, Carl E. (eds). (1989). Technology and employment of persons with disabilities. A report on the 13th Mary E. Switzer Memorial Seminar. Washington, DC: Rehabilitation Engineering Center and Electronic Industries Foundation.
- ✓ Wilson, A. Bennet, Jr. (ed). (1989) Provision of assistive technology: Planning and implementation. Washington, DC: Rehabilitation Engineering Center and Electronic Industries Foundation.

Videotapes

- ✓ The Technical Assistance Center has acquired over fifty videotapes in the area of new technology. These are available for viewing at the Center. An updated listing of these tapes is available on request.

Abstracts

- ✓ Alexander, Judy. (1992). Getting fit: Fitness for people with disabilities is moving into the mainstream. Rehab Management, 5 (4), 68-73.

Fitness programs, modified to meet the needs of people who have physical disabilities, are emerging across the country. According to the law, all recreational facilities must be fully accessible to disabled individuals, but not all aerobic and fitness instructors know how to offer instruction.
- ✓ Bartholomew, Douglas. (1992). Opening your doors to ADA: New regulations make it easy for small business to comply. Careers and the Disabled, 7 (3), 37-42.

Become an advocate to help implement the Americans with Disabilities Act (ADA) by knowing the responsibilities of small business owners.
- ✓ Hansen, Carl E. and Pearlman, Leonard G. (1991). Aging and the rehab process: An overview of the 15th Mary E. Switzer Memorial Seminar. The Journal of Rehabilitation, 57 (3), 7-10.

Recommendations and implications for action to maximize the potential of older persons with disabilities.

- ✓ Porto, Patti Place, and Lipka, Dan. (1992). Toy power. Team Rehab Report, 3 (4), 35-41.

Adapted power toys can provide mobility-impaired pre-schoolers with the experience of independent movement, and the ability to participate more equally with their non-disabled peers.

The above articles and other materials are available at TECH-REACH.

New Acquisitions

The following items have been added to our collection:

Books and Monographs

- ✓ Curtis, Gayle (ed.). (1991). Rehabilitation Research and Development Center, 1991 progress report. Palo Alto, CA: Department of Veterans Affairs Medical Center.
- ✓ Division of Library Development. (1992). Parent resources on prevention and early intervention of development disabilities: A buying guide. Albany, NY: University of State of New York, New York State Education Department, New York State Library.
- ✓ National Institute on Disability and Rehabilitation Research. (1992). Digest of data on persons with disabilities. Washington, DC: US Department of Education, Office of Special Education and Rehabilitation Services.
- ✓ RESNA. (1992). Assistive technology and individualized education program. Washington, DC RESNA TA Project.
- ✓ Wichita Rehabilitation Engineering Center. (1992). TECH BRIEF. Wichita Kansas: The Cerebral Palsy Research Foundation of Kansas, Inc. Wichita State University College of Engineering..

Abstracts

Accessibility

- ✓ Norman, Nancy Lee. (1992). New technology works miracles. Independent Living, 7 (2), 41-44.

Everyday products such as visual aids and automatic door openers can have a profound effect on quality of life for people with disabilities

- ✓ Shelton, Emily. (1992). Accessibility plus. Independent Living, 7 (2), 46-51.

The latest designs in wheelchairs, scooters, van lifts, and ramps. Industry leaders are expanding their lines and improving products.

- ✓ Shrockey, Karen. (1992). Bathrooms for easy access. Independent Living, 7 (2), 66-71.

With some planning a bathroom can be made accessible. Suggestions for convenience and safety without sacrificing beautiful design. Includes a listing of companies specializing in special products.

Communication

- ✓ Beck, Karl. (1992). Communicating from your vehicle. Paraplegia News, 46 (8), 35.

Evaluations of CB radios, cellular telephones and amateur radio. Choice of a system depends on individual needs and where you live or travel.

- ✓ Stevens, John, H. (1992). Air waves. TeamRehab Report, 3 (5), 26-28.

The case is made for persons with physical disabilities to use cellular phones in vehicles. They have a wide range of other uses such as on camping trips or any daily outing. Rehabilitation professionals should acquire a general knowledge of cellular technology. Cellular service is expanding and becoming available in more rural areas.

New Aquisitions

The following items have been added to our collection:

Books and Monographs

- ✓ Compton, Cynthia L. (1989). Assistive devices: Doorways to independence. Washington, DC: School of Communication, Gallaudet University.
- ✓ Eckstein, Richard M. (1990). Handicapped funding directory. A guide to sources of funding in the U.S. for programs and services for the disabled. Seventh Edition. Margate, Florida: Research Grant Guides, P.O. Box 4970.
- ✓ Foos, Donald D. and Pack, Nancy C. (1992). How libraries must comply with the Americans with Disabilities Act (ADA). Phoenix, Arizona: Oryx Press:
- ✓ Mann, William C. (1990). Services in technology for persons with disabilities: A directory for New York State. Second Edition. Buffalo, New York: State University.
- ✓ Mendelsohn, Steven B. (1989). Financing adaptive technology: A guide to sources and strategies for blind and visually impaired users. New York, NY: Smiling Interface.

Abstracts

Accessibility

- ✓ Frontczak, Arthur. (1992). Accessibility technology: Telecommunications and hearing impairments. In the Mainstream, 17 (5), 5-8.

As regulations implementing the Americans with Disability Act go into effect, many businesses are seeking to make their organizations accessible to people with disabilities. Communications are a vital part of every business. Some people with hearing impairments cannot use the telephone. This article discusses two categories of solutions: telephone amplifiers and text telephones. Manufacturers' addresses are given for further information.

Mobility

- ✓ Hall, Marian. (1992). Powered scooters. Exceptional Parent's Guide for Active Adults with Disabilities, 1 (1), 36-37, 42.

Powered mobility devices are a simpler, less expensive option than traditional power wheelchairs for people who don't require sophisticated electronics. Many people who use powered scooters have some ability to walk but need the device

for longer distances. This article explores several types of scooters. The address is given for obtaining the complete report providing evaluation studies.

- ✓ Lunt, Suzanne. (1992). Getting there. Independent Living, 7 (4), 46-48.

The marketplace is exploding with inventions to defeat doorways, conquer curbs and subjugate steps. Devices are described and addresses and prices given.

Accessible Housing

- ✓ Davies, Tom Jr. and Beasley, Kim, (1992). Implementing fair housing: Paraplegia News, 46 (9), 35-42.

A review of the history of the Fair Housing Amendments Act of 1988 as the regulations have evolved. The scope of the Fair Housing Amendments Act extends beyond providing wheelchair access to new housing. The act previews the parallel process that the Americans with Disabilities Act (ADA) will follow.

- ✓ Sanders, Stephen. (1992). Custom bathrooms: The shower table. Paraplegia News, 46 (9), 37.

A description is given of the invention of a shower table, as is the address for further information from Creative Independent Builders, Houston, Texas.

The above articles and other materials are available at TECH-REACH.

New Acquisitions

The following items have been added to our collection:

Books and Monographs

Abrams, A. Jay and Abrams, Margaret Ann. (1990). The first whole rehabilitation catalog: A comprehensive guide to products and services for the physically disadvantaged. Whitehall, VA: Betterway Publications, Inc.

Berliss, Jane R., Borden, Peter A. and Vanderheiden, Gregg C. (1991-1992). Trace resource book: Assistive technologies for communication, control and computer access. Madison, Wisconsin: University of Wisconsin, Trace Research and Development Center.

Division of Library Development. (1992). Parent resources on prevention and early intervention of developmental disabilities: A buying guide. Albany, NY: New York State Education Department, New York State Library.

Field, Timothy F. and Norton, L. Patrick. (1992). ADA Resource manual for rehabilitation consultants. Athens, GA: Elliott & Fitzpatrick.

Hospital Audiences, Inc. (1992). Access for all: A guide for people with disabilities to New York City Cultural Institutions. New York, NY: Hospital Audiences, Inc. and CBS News Radio.

National Institute on Disability and Rehabilitation Research. (1992). Digest of Data on persons with disabilities. Washington, DC: U.S. Department of Education.

Phonic Ear, Inc. (1991). The many faces of funding. Petaluma, CA: Phonic Ear, Inc.

RESNA. (1992) Assistive technology and the individualized education program, Washington, DC: RESNA TA project.

Abstracts

Employment

Church, Sandra G. (1992) ADA Update: How will the Americans with Disabilities Act affect your future? Careers and the Disabled, 8 (2), 26-29.

Title I of the Americans with Disabilities Act (ADA) protects qualified individuals with disabilities by prohibiting private employers, state and local governments, employment agencies and labor unions from discriminating against them. This article explores these rights.

Kiernan, William and Lynch, Sheila. (1992). Employment opportunities for people with disabilities in the years to come. American Rehabilitation, 18 (3), 12-19.

This article looks at the changes which are having, and will continue to have, an impact upon attaining productive employment in our modern economy for people with disabilities. National data clearly show that people with severe disabilities are accessing integrated employment in greater numbers.

Estate Planning

O'Day, Michie S. (1992). Estate Planning: What you need to know. *Paraplegia News*, 46 (12), 22-24.

Understanding legal terms and alternatives will help you determine your best course of action. A helpful brochure, Planning your will: A step-by-step guide, is available free from Development Department, Paralyzed Veterans of America, 801 Eighteenth Street NW, Washington, DC 20006. (800) 424-8200.

Wood, Lisa J. (1992). Estate planning for parents of children with disabilities. *Exceptional Parent*, 22 (8), 18-20.

This article highlights the pitfalls of traditional estate planning for parents of children with disabilities, identifying several alternatives to the conventional estate planning techniques, and provides parents with a concrete list of questions to ask their estate planning attorney.

New Acquisitions

The following items have been added to our collection:

Brandt, Barry and Rice, B. Douglas. (1990). The provision of assistive technology services in rehabilitation. Hot Springs, AR: Arkansas Research & Training Center in Vocational Rehabilitation.

Burnette, Jane. (1990). Assistive technology design in special education. Issue Brief 2. Reston, VA: Council for Exceptional Children.

Leach, Linda N. and Harmon, Adrienne S. (1992). Annotated bibliography on secondary special education and transitional services. Urbana-Champaign, IL: University of Illinois Transition Research Institute.

Lewis, Cindy and Sygall, Susan. (1990). A world of options for the 90's: A guide to international educational exchange, community service, and travel for persons with disabilities. Eugene, OR: Mobility International USA (MIUSA).

National Institute on Disability and Rehabilitation Research. (1990). Directory of national information sources on disabilities. Washington, DC: U.S. Department of Education, Office of Special Education and Rehabilitation Services.

Perlman, Leonard G. and Hansen, Carl E. (1991). Aging, disability and the nation's productivity. Reston, VA: National Rehabilitation Association.

Abstracts

Golinker, Lewis, Esq. (1993). Freedom of speech: Finding AAC device funding. TeamRehab Report, 4 (2), 24-29.

People with significant communication disabilities hope that some day Medicaid funding for Alternative and Augmentative Communication Devices (AAC) will be a routine matter. That dream appears to be coming true today in both New York and Maine.

Lynch, Ruth Torkelson and Rodriquez, Arthur. (1992). Carpel tunnel syndrome: Considerations for rehabilitation. Journal of Applied Rehabilitation Counseling, 23 (3), 23-29.

Carpel tunnel syndrome is becoming one of the most frequently reported work injuries. This article highlights findings from the medical/surgical, public health and industrial engineering research literature that impact on rehabilitation and placement for clients.

Mann, William C. et al. (1993). Needs of home-based older persons for assistive devices. Technology and Disability, 2 (1) 1-11.

This article explores the need for, and use of, assistive technology by the elderly.

Many of their needs relate to safety and security.

Shelton, Emily. (1993). Overcoming impotence. Independent Living, 8 (6), 54-62.

Highly effective treatments are available for almost every man with erectile dysfunction.

Wright, Tennyson J. (1993). African Americans and the public vocational rehabilitation system. Journal of Vocational Rehabilitation, 3 (1), 20-26.

African Americans experience severe disability at a disproportionately higher rate than other individuals in the general population. Yet, their success rate in the public rehabilitation system is lower than their non-African American counterparts.

Abstracts

Funding

From Section 3, Technology-Related Assistance for Individuals with Disabilities Act of 1988. Finding funding for assistive technology. Exceptional Parent, 23 (3), 18-28.

Sources of financial assistance for purchasing assistive technology are many and varied. This article identifies both public and private sources and guidance for accessing such funding.

Parent and Family Involvement

Irvin, Larry K. and Singer, George H.S. (1993). Family-related roles and considerations: Transition to adulthood by youth with developmental disabilities. Journal of Vocational Rehabilitation, 3 (2), 38-46.

Families are an important source of ongoing support both for the transition of youth with developmental disabilities to vocational roles and in maintaining their successful social and personal adaptations to adult life.

Stineman, R. M. and Turnbull III, H. Rutherford. (1993). Toward a method of person-centered planning. (1993). Journal of Vocational Rehabilitation, 3 (2), 52-61.

In spite of the fact families play an important role in the vocational success of

young adults with disabilities, several factors negatively affect parental involvement in transition planning. These include professionals' perceptions of families; families' past negative experiences with professionals; limited expectations; lack of opportunity to participate in transition planning; and, family stress associated with transition. Happily, solutions exist.

Yancey, Glenn. (1993). Importance of families in transition from school-to-adult life: A rehabilitation practitioner's perspective. Journal of Vocational Rehabilitation, 3 (2), 5-9.

The role of the family in the transition of a student with a disability from school to adult life is particularly critical. It is essential they develop a relationship of trust with agency professionals and adult service providers, and support the decisions agreed to.

The above articles and other materials are available at TECH-REACH.

Library books are not available for loan. We will be happy to reproduce tables of contents, and up to 20 pages of text, in answer to requests. TECH-REACH is open for visitation from 9:00 - 4:30 every Monday, Wednesday, Thursday, Friday, and every Tuesday until 7 p.m. A librarian is available by special appointment (800-487-2805).

The following items have been added to our collection:

Monograph

Parino, Sandra Swift. (1993). Study on the financing of assistive technology and services for individuals with disabilities. Washington, DC: National Council on Disability.

Videos

Henry Viscardi School. Ventilator dependent children at school.

Laureate Learning Systems. Software solutions for special needs.

Love Lift System. Transfer Lifts. A practical and versatile solution for wheelchair passengers and care providers.

RX Rocker Corporation. Triumph: At last comfort and therapy. A video dealing with wheelchair design.

Visions on Video. Growing up capable. Assistive devices including switches, toys, etc.

Journals

Fact Sheet #10 had a misprint. The correct title of the new journal is the Journal of Disability Policy Studies.

Abstracts

ADA Updates

Anthony, Gordon W. (1993). ADA update: One year later. Independent Living, 8 (3), 10-13.

It has now been over a year since the Americans with Disabilities Act became effective. Where we are today is discussed in this article.

Douglas, Rick. (1992). What a small business needs to know about the Americans with Disabilities Act. American Rehabilitation, 18 (1), 35-36.

Questions are answered about such things as hiring practices, reasonable accommodations, definitions of disabilities under the ADA, etc. The President's Committee on Employment of People with Disabilities serves as a National Clearinghouse for technical assistance, resources, and all the Job Accommodation Network (JAN) at 1-800-ADA-Work (Voice/TDD). Fax: (304) 293-5407.

Travel

Lawson, Diana. (1993). Airline access: A partnership. Paraplegia News, 47 (8), 10-15.

Airlines have a tremendous responsibility in assisting disabled travelers, but passengers also play a large role in ensuring a safe, pleasant trip. Many services require 48-hour advance notice and 1-hour check-in.

NOTE: Make your travel easier with these two brochures on the Air Carrier-Access Act, available free from PVA at (800) 424-8200, ext. 709.

- New Horizons for the Air Traveler With A Disability
- The Air Carrier Access Act, How to Make the Law Work for You

Lynch, Robert A. Esq. Access to the friendly skies: The Air Carrier Access Act of 1986. (1993). Action Digest, 2 (1), 10-12.

Discusses what you can expect regarding access at airports and in aircraft (as to architectural accessibility and services), and what you can do if you don't receive proper treatment.

The above articles and other materials are available at TECH-REACH.

Books and monographs are not available for loan. We will be happy to reproduce tables of contents and up to 20 pages of text, in answer to requests.

Video and audio cassettes are now available for out-of-the-building loan for a 15 day period. A \$100 check for each item is required which would only be deposited if the videotape is not returned in 15 days. A non-refundable \$2.50 shipping charge must be sent in advance. A listing of our video holdings is available on request.

TECH-REACH is open for visitation from 9:00-4:30 every Monday, Wednesday, Thursday, Friday, and every Tuesday until 7 p.m. A librarian is available by special appointment (800-487-2805).

Driving

D'Alonzo, Bruno J. Ph.D. and Giordano, Gerard Ph.D. (1993). Adaptive driver training: a pathway to transition. American Rehabilitation, 19 (1), 21-23, 37.

Transportation is a persistent problem for professionals delivering transition and supported employment services to people with disabilities.

No Author. Getting on the road again: How do you determine the right vehicle and adaptive devices for your driving needs? Paraplegia News, 47 (9), 17-20.

The key to job opportunities and general independence for people with disabilities is mobility. It is important to know about new advances in vehicle modification and adaptive driving devices.

Employment

Duffy, Yvonne. (1993). A new kind of employment agency. Careers and the Disabled, 9 (1), 40-41.

Personnel specialists are now centering their recruitment efforts on college graduates who happen to have a disability.

Handler, Barbara and Mikrut, Sharon. (1993). Vocational Rehabilitation following traumatic brain injury. American Rehabilitation, 19 (2), 29-32.

Assisting people with traumatic brain injury (TBI) to engage in work or other productive activities is a major challenge. This article reports on some of the activities common to the six Traumatic Brain Injury Regional Centers of the Rehabilitation Service Administration.

Harvey, Carol, Ph.D. (1993). Employment after traumatic SCI. Paraplegia News, 47 (10), 10-14.

Fewer than two out of every five people aged 18-64 with SCI (Spinal Cord Injury) are actually working or even look for work.

This article is one in a special section devoted to the results of a survey on employment and SCI which examines the impact of the implementation of the Americans with Disabilities Act, and offers insights on how individuals and businesses have made inroads into accessible employment.

The Tech Reach Library and Media Center is being developed to provide clients and consumers with access to a variety of materials in many areas of technology for the disabled.

Some of the subject areas covered follow:

Resource Guides	Assistive Devices
Service Delivery	Funding
Technology Transfer	Agencies and Organizations (including volunteer)
Information Networks	Directories and Thesauri
Rehabilitation Engineering	Alternative Augmentative Communication
Home Making/Home Management	Accommodation on the Job
Robotics	Transportation
Occupational Therapy	Technology Databases
Vacation and Travel	

At present we have cataloged a collection of:

Resource Guide Books
Technology Related Journals

Technology Related Newsletters

Catalogs from Technology Product Suppliers

Collections of Publications from:

The American Foundation of the Blind

The Center For Special Education Technology

Publications of the Electronic Industries

Foundation Center

RESNA

and others

We have built a collection of videotapes and some video cassettes relating to accessibility, assistive devices, adapted computers, and independent living.

APPENDIX "G"

Surveys

**TRAID CONSUMER REPORT
ANALYSIS OF FINDINGS BY DISABILITY
FEBRUARY 1993**

1. Number of respondents

Date	Hearing	Seeing	Mobility	Personal Needs	Relationships
February 93	N=39	N=52	N=168	N=155	N=111

Date	Working	Coping	Speaking	Breathing	Learning	Other
Feb.1993	N=121	N=135	N=105	N=29	N=105	N=41

2. Average age of respondents

Date	Hearing	Seeing	Mobility	Personal Needs	Relationships
February 93	37	30.7	37.9	36.4	32.1

Date	Working	Coping	Speaking	Breathing	Learning
February 1993	39.2	36.3	30.6	37.3	31.0

3. Location of residence

Location	Hearing	Seeing	Mobility	Personal Needs	Relationships
rural	13.2%	6.0%	9.0%	7.1%	6.4%
small town	7.9%	10.0%	8.4%	9.7%	9.1%
town	42.1%	40.0%	33.5%	37.7%	38.2%
city	36.8%	44.0%	49.1%	45.5%	46.4%

Location	Working	Coping	Speaking	Breathing	Learning
rural	8.3%	4.4%	7.7%	17.2%	8.8%
small town	6.6%	10.4%	13.5%	6.9%	15.7%
town	36.4%	38.5%	37.5%	41.4%	38.2%
city	48.8%	46.7%	41.3%	34.5%	37.3%

4. Type of residence

Type	Hearing	Seeing	Mobility	Personal Needs	Relationships
home/apartment	30.8%	38.5%	41.7%	32.9%	33.3%
with family/friends	41.0%	46.2%	31.5%	33.5%	39.6%

APPENDIX "H"

Bulletin Board

ANNOUNCEMENT!

TECH-REACH Bulletin Board System is being brought On-line!

Access number: 1-516-248-2837

Communication settings: 300/1200/2400/9600,n,8,1

(300-9600=choice of baud rates, n=parity, 8=data bits, 1=stop bits)

(Note: the ",s and "1"s following the telephone number routes calls to our BBS. Without this postscript, you will not be able reach our system.)

TECH-REACH's Bulletin Board System, located at the National Center for Disability Services, is presently being brought on-line. This system is meant to serve as a forum for the exchange of information related to assistive technology and other disability related subjects.

The following are the discussion and file areas currently on the TECH-REACH BBS. This list will be added to over time.

Discussion areas

- 1) Assistive Technology Forum
- 2) Funding Forum for Assistive Technology
- 3) ADA Information and Discussion Area

File areas

- 1) Adaptive software (demonstration and shareware)
- 2) Assistive technology-related articles and information
- 3) IBM resource guides and screen reader newsletter
- 4) Disability related articles and information
- 5) Copies of laws and related articles

There is also a Bulletin area where callers can obtain information on future activities occurring at TECH-REACH, TRAIID (Technology-Related Assistance for Individuals with Disabilities), and other local and national assistive technology related projects.

If you have any problems reaching our bulletin board system please contact TECH-REACH at 1-800-487-2805, 1-516-747-5400 (voice), 1-800-676-2831 (TDD).

TECH-REACH is supported in part by grants from the Rehabilitation Services Administration and National Institute on Disability and Rehabilitation Research given to the TRAIID project, New York State Office of Advocate for the Disabled.

Article

TECH—REACHes to Technology for Answers

Ms. Berman is the Rehabilitation Technology Specialist for the TECH-REACH project and the Technical Assistance Specialist for the PEER Regional Network and is assisting in the TECH-REACH project. Both projects are located at the National Center for Disability Services in Albertson, New York. Prior to this she was a teacher, a writer of educational materials and a developer of educational and business computer software. She received her AB and MS from Hunter College of the City University of New York.

Saundra Berman, MS

Over the last two decades, advancements in technology have expanded independent living and work options for persons with disabilities. Both low-technology devices and high-technology applications have impacted on these individuals, particularly in the workplace. This article will describe how information and assistance relating to these advances is provided at a Regional Technology Information Exchange (RTIE) and a demonstration center known as TECH-REACH.

TECH-REACH is located at the National Center for Disability Services in Albertson, Long Island. It is funded by the Rehabilitation Services Administration to enhance access to technology applications and employment opportunities for all people with disabilities in the greater New York area. A second source of funding is NIDRR, under the Technical Assistance Act, which allows TECH-REACH to act as a regional technology center for the Technology Related Assistance for Individuals with Disabilities (TRAID) project, New York State Office of Advocate for the Disabled. As such, it serves Long Island as well as develops links with Northern New Jersey.

There are five primary components of the TECH-REACH Program. They are:

1. To collect information
2. To organize information for easy accessibility
3. To encourage the use of rehabilitation technology and devices to enhance employment, education, and independent living of people with disabilities
4. To evaluate technology applications
5. To disseminate information.

I would like to thank Diane Bernstein, Elizabeth Cantor, Carol Fuher, Howard Kramer, Sheila Sarrett, and David Vander for editorial assistance on this article.

To Collect Information

A primary goal of TECH-REACH is to obtain and disseminate relevant information about technology applications for people with disabilities from local, regional, and national services. Making this information readily available ultimately enhances employment and independent living opportunities for people with disabilities.

Gulick, Yam, and Touw (1989)¹ conducted a study concerning conditions facilitating or hindering the work performance of people with multiple sclerosis. The results concluded that among the elements reported to enhance performance of work tasks were assistive devices, human support, personal attributes, health promotion behaviors, and person-environment adjustments. Scadden commented, "Assistive technology as a means to promote employment of people with disabilities should be viewed in the context that employment is only part of a daily experience and workers with disabilities may need technology for the performance of daily living, such as transportation, communication, personal grooming, and use of the bathroom that will improve work performance" (cited in Hansen and Perlman, 1989).²

A significant obstacle in promoting employment for those with disabilities is the lack of information about assistive devices as well as information on how to make low-cost modifications, rather than high-cost purchases, for the workplace. TECH-REACH obtains, and makes available, information from rehabilitation engineering centers, manufacturers, and other product developers to address the needs of consumers, educators, rehabilitation professionals, and employers. Further, feedback from these audiences is given to technology developers, thus enabling them to improve or enhance their products. Since manufacturers are often unfamiliar with their competitor's products, or do not have sufficient resources to do more than superficial field testing, devices produced are often inadequate. The same mistakes are repeated, and advancements are few (Roessler, 1986).³ Therefore, this input from TECH-REACH will benefit all.

TECH-REACH has established a local advisory board consisting of representatives from the com-

munities served. Formal agreements to share information on new developments in technology with other centers were initiated, and ongoing relationships with local vendors, product developers, and technology service providers were instituted.

The TECH-REACH library contains video and print reference books, resource guides, videocassettes, commercial catalogs, journals, and newsletters all focused on rehabilitation technology and services. Related to these information resources are the presence of microcomputers and large data bases, like ABLEDATA and REHABDATA, which are used to access information relevant to labor-market planning.

ABLEDATA is a data base of thousands of products, aids, and devices that can be used to accommodate the functional limitations of people with disabilities. Aids are classified and described within categories for therapy and training; prostheses and orthoses; personal care, transportation and locomotion; adaptation of premises; communication, information, and signaling; as well as the handling of other products. The range of products is extensive—from a simple remote control that turns appliances on and off to the sophisticated Speech Secretary Systems. Speech Secretary Systems is a device that would allow a person with quadriplegia, a speech impediment, and minimal hand use, to accomplish sophisticated word processing, as well as mathematical equation development and problem solving. This is done through the product's ability to recognize speech. An accent or hesitation in speech does not influence results.

REHABDATA, produced by the National Rehabilitation Information Center, covers a variety of literature forms such as technical research reports, consumer publications, books, and conference proceedings.

Also available as a resource is the Job Accommodation Network (JAN). JAN was set up to gather information about successful job accommodations, and to serve as a clearinghouse of information about accommodations to employers. Employers can contact JAN's Human Factor Consultants, via a toll-free number, to learn about practical ways to make accommodations for workers with disabilities (Figure 1).

- Providing a drafting table, page turner, and pressure-sensitive tape recorder for a sales agent paralyzed from a broken neck (\$300)
- Changing a desk layout from the right to the left side for a visually impaired data entry operator (\$0)
- Renting a headset phone that allows an insurance agent with cerebral palsy to write while talking. (\$6.01 per month)
- Supplying a telephone amplifier for a computer programmer with a hearing impairment (\$56)
- Enlarging toilet facilities and installing a hand rail for employees who use wheelchairs (\$500)
- Removing turnstiles in the cafeteria and installing lighter weight doors—as part of a general renovation—and having the cafeteria deliver lunch to a payroll technician disabled from polio (\$40 per month)
- Providing a special chair to alleviate back pain for a district sales agent affected by vertebra surgery (\$400)

Figure 1. Low-cost accommodation suggestions made by JAN to major insurance companies

To Organize Information for Easy Accessibility

The second goal of TECH-REACH is to organize information into a data-base system using a variety of means to facilitate accessing and updating the content.

One means of helping people with disabilities benefit from technology is to equip professionals who provide services to them with the expertise and equipment needed to use appropriate technology. This serves several purposes. The professional's productivity would be enhanced; he or she could advise a person with a disability on ways to benefit from similar applications; and this would serve as a model of how technology can improve an individual's performance (Vandergoot, 1984).⁴

Watters (1984)⁵ has cautioned professionals to be careful when using computerized information systems. Although the results obtained from various systems look quite similar, the validity of the data depends on the underlying pool of information and its structure, which is not always readily apparent. The responsibility for using these systems rests with professionals who must ensure that the information extracted is up to date and utilized in the appropriate way. A professional cannot assume that any new technology, or its application, is automatically sound for use by people with disabilities.

Currently the TECH-REACH staff is selecting pertinent articles and abstracting them for database entry. In addition, information from articles in all issues of the journals received by the TECH-REACH library will be entered into an established in-house data base. Information in the data bases can also be shared electronically on a free, computerized Bulletin Board System (TRBBS).

Future plans include setting up an in-house data base of technology applications that apply to employment and education. Information from this data base will be accessed on many levels, including: type of assistive device, job descriptions for which the device can be utilized, the name and address of the firm that markets the product, and the service provider. This type of data base would enable a rehabilitation counselor to improve a job match by locating devices to enable a client to fulfill a job description. Having the information on computer would make searching for the devices a quick and easy process.

Promoting the Use of Technology for Employment

A third goal of TECH-REACH is to provide information and actively promote the use of technological products, services and funding to consumers, employers, educators and rehabilitation professionals.

An information specialist is available during working hours, Monday through Friday, 8:30 A.M. to 4:30 P.M. or Tuesday evenings until 8:00 P.M., to respond to inquiries. Responses are provided in a format that meets the requestor's special needs,

such as large print, audio output, and so on. Additionally, the library and document files, as well as Hyper-Abledata—a computer data base containing descriptions of over 17,000 assistive devices—are available to anyone who inquires about rehabilitation technology. If TECH-REACH cannot provide the information needed, it will attempt to connect the requestor to an expert in that area. For example, a consumer with a physical disability wanted information on using a computer to compose and play music. Using Comuserve, an electronic computer network, TECH-REACH was able to link the consumer to an individual who was able to provide the appropriate information.

While computers and adaptive devices can remove many of the barriers people with disabilities encounter, perhaps one of the biggest barriers is money. Comparably, computers adapted to serve people with disabilities cost more than typical computers. Many people with disabilities are additionally frustrated knowing the technology exists to help them, but is just beyond their financial reach.

Federal monies for reimbursing adaptive technology have become more available due to stronger legislation and an increased demand for assistive devices (*NARIC Quarterly*, 1989).^{6,7}

A primary objective of TECH-REACH is to identify formal and informal funding sources of technological applications for persons with disabilities (Figure 2). Once the sources are identified, personal contact with representatives of the sources is made to determine how best to link them with those requesting funding assistance.

To Evaluate Technology Applications

At the TECH-REACH Demonstration Center new and existing technology applications are constantly being tested and evaluated. Information is gathered from consumers and rehabilitation professionals, and is complemented by the technology team's assessments of the adult and school-age populations served by the Center. Plans are for the assessment procedures and reports to be modeled after those done by the Electronic Industries Foundation Rehabilitation Engineering Center.

- The Technology Related Assistance for Individuals with Disabilities Act of 1988 (PL100-407) intends to increase the availability of, and funding for, the provision of assistive technology devices and services.
- Section 508 of the Rehabilitation Act of 1973 (PL 99-506) assures access to computers and other electronic office equipment in places of Federal employment.
- Individuals With Disabilities Education Act (IDEA, PL 101-476), previously The Education for All Handicapped Children Act of 1975 (PL 94-142), assures funds are available through this law if assistive technological equipment can be proven essential in meeting Individual Education Program (IEP) goals. Assistive technology is now defined throughout the Act to assure that students in need of assistive technology services receive them from trained personnel.
- Developmental Disabilities Assistance Act (PL 101-496) developed provisions for each state to submit, in their annual plans, a strategy for funding adaptive technology not currently available.

Figure 2. Legislation addressing the issue of financial assistance.

The Demonstration Center has access to a diversity of equipment from various sources, thus creating a substantial base for evaluation purposes. Products for demonstration include environmental control units, adaptive devices and software for computer, typewriter and telephone access. Further, some products are purchased with an annual New York legislative grant. As a participating Community Service Organization for the IBM National Support Center for Persons with Disabilities, TECH-REACH has access to IBM products on a long-term loan basis. Other equipment is also obtained on long-term loan from manufacturers and vendors of adaptive equipment.

Through technology, rehabilitation professionals now have a greater capacity to change environments than ever before. Historically, services

were limited, primarily, to adjusting the person with disabilities to fit the work environment. However, the present availability of technology permits the environment to be adjusted to the individual. Whether rehabilitation or habilitation is the issue, advanced technology has expanded the choices available to service providers and consumers. For example, microcomputers are being used as prostheses for persons with quadriplegia or those who are unable to speak. Computer companies manufacture "add-ons," which also are of particular benefit to persons with disabilities. These "add-ons" include speech synthesizers, speech input/output devices, speech recognition tools, software for enlarging a screen, screen review, keystroke control, and braille translation software and printers. A new computer system, IBM VoiceType, recognizes and stores an individual's speech pattern. This allows someone with a mobility impairment to voice-activate this particular computer and use its DOS, word processing, and spreadsheet applications (Lewis, 1991).⁸ Along with these high-tech devices, there is a whole plethora of low-tech tools available, like keyboard guards, mobile wrist rests to provide support, moisture guards, tactile letters, and raised dots.

To broaden its influence, TECH-REACH recently instituted a direct client service program to help adults with physical disabilities match functional requirements with the appropriate equipment. The following illustrates how the system works.

Rhonda, a 30-year-old female, is described by those who know her as pleasant, bright, highly motivated, and a quick learner. The fact that Rhonda requires a wheelchair for mobility, or that she experiences physical difficulties resulting from congenital cerebral palsy, did not deter her from obtaining viable employment. Working part time, Rhonda performed duties consistent with those of an administrative clerical employee. To optimize her work performance and productivity, Rhonda was referred to TECH-REACH for a bioengineering evaluation focusing on her job tasks and how technology, when supplied, may be used to facilitate them.

The job description, specifying the various duties she performed, was provided by her employer. Her major job tasks were specifically concentrated on processing reports, storing information on the computer, filing information and forms, and making telephone calls. Closely looked at was productivity in the context of her workstation.

The evaluation's resulting technological recommendations suggested implementation of a workstation design that centralized tasks (within her nonexerted reach), thereby eliminating non-productive movement. Centralization of tasks would be accomplished by utilization of a kidney-shaped work surface, along with a slant filing system for temporary forms storage, as well as a series of central "arms" on which traylike platforms were attached to hold a telephone, computer terminal/printer, and other office equipment (see Figure 3). It was further recommended that her telephone be replaced with one that has Autodial for up to 700 telephone numbers in memory; cordless capability to allow pickup untethered to the desk; and a 1-ounce single ear headset/speaker that would eliminate the cradle set. Other simple exchanges of office equipment, such as a manual stapler for an electric one, were also perceived to be more efficiency productive for Rhonda. To facilitate forms processing, the staff at TECH-REACH recommended that her employer purchase a specialized computer software package. This would allow her to complete all forms on screen and then print them. (Able-Office, a modular workstation designed to give mobility-impaired persons the ability to do a complete range of office tasks is set up and available for inspection at TECH-REACH's Demonstration Center.)

With the new additions and adjustments to her workstation, along with the updating of equipment, preparations could be made for potential expansion of Rhonda's duties, thereby facilitating progress in her career track. Pasteur once said, "Opportunity favors only those who are prepared for it." As a result of the assistive technology, and devices made available to her, she will be sufficiently prepared when "opportunity knocks" on her door.

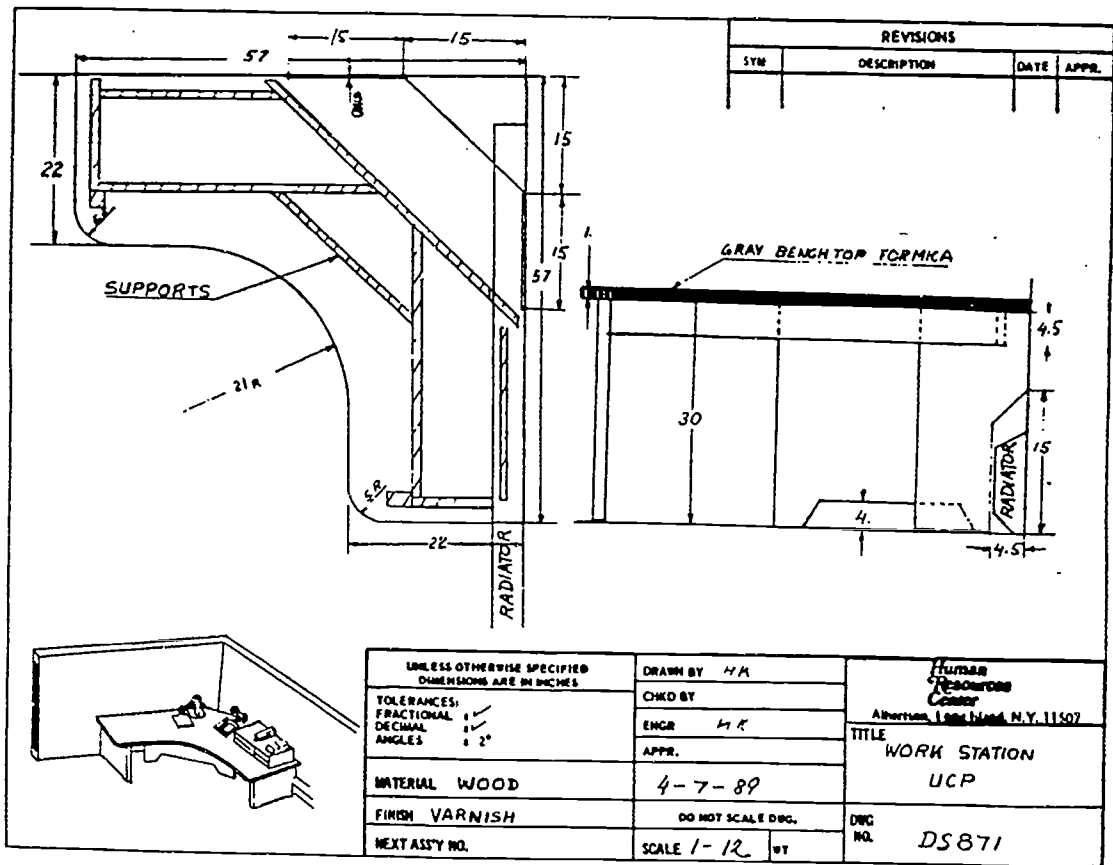

Figure 3. Example of work-station designed to centralize tasks.

As illustrated by this case study, TECH-REACH's services include such items as evaluation for computer and workstation access. Recommendations are made, after the evaluation, to cover the purchase of specific equipment, adaptations, selection of appropriate software, positioning, training, and suggestions to modify the environment. Further, wheelchair evaluation or reevaluation, positioning in the wheelchair and the fabrication of splints are services provided. Additionally, a list of individuals with expertise in various aspects of rehabilitation technology can be provided.

Disseminating Technology Information

TECH-REACH provides technical assistance on several levels; informal dissemination of materials developed by the RTIE, direct consultation where

an agency can contact the TECH-REACH staff and receive information directly regarding specific technologies or devices, and on-site demonstrations where an agency representative can meet with TECH-REACH staff to see how the model was organized and how it meets its objectives.

In order for persons with disabilities to benefit from technology, both they, and those who assist them, must be trained in the actual use of the technology. Recommendations regarding assistive-technology training address many issues. These include: the effective coordination of public and private resources in technology; collaboration with the insurance industry to make insurers more aware of technological devices and services; partnership with the technology industry to extend the awareness and use of computers and other technology to community rehabilitation

providers; dissemination of information on technologies that can help persons with specific types of impairment; provision of training and information on how technology can be used to prevent complications of impairments; development of training programs for rehabilitation technologists; encouragement of individuals with disabilities and rehabilitation professionals to disseminate information about technology applications and develop effective training on assistive technology; and establishment of a special awareness and dissemination project focused on formation and training on home-based technologies (Morrison, 1990).⁹

Training becomes a difficult issue because it is not possible to provide funding for training for all of those in need. However, if strategies such as train-the-trainer programs are adopted, and if community organizations (including both those administered by and for persons with disabilities as well as rehabilitation facilities) are used to serve as basic ongoing training sites, a considerable amount of training could take place involving large numbers of persons. An initial investment in developing model training programs for use by community organizations will have a very large payback over time.

TECHNOLOGY IN THE WORKPLACE

For some individuals with disabilities, assistive technology is a necessity that enables them to engage in, or perform, tasks. As stated in the Technology-Related Assistance for Individuals with Disabilities Act of 1988 (PL 100-407), assistive technology service is defined as any service that directly assists an individual with a disability in the selection, acquisition, or use of an assistive technology device. Services may include:

- the evaluation of the needs of an individual with a disability;
- the purchase, lease, or provision for acquisition of assistive technology devices, selection, design, fitting, customizing, adaptation, application, maintenance, repair, and replacement of devices;

- the coordination and support from other therapies; and
- the provision of training to individuals, families, or professionals.

The business and rehabilitation communities must be partners in providing employment opportunities to persons with disabilities. TECH-REACH benefits the business community by providing information to companies that need to comply with the guidelines of the Americans with Disabilities Act. Those companies can contact TECH-REACH to learn what technological products and services are available to make their businesses accessible to prospective employees with disabilities and so reasonably accommodate them.

Research has shown employees with disabilities are inclined to be harder, more diligent workers, and achieve as much, or more, than those who do not have disabilities. TECH-REACH allows for better access to assistive devices and technology applications. Such devices and services enable individuals with disabilities to have greater control over their own lives. By opening up social, educational, and employment opportunities to them they are allowed to participate in, and contribute more fully to, activities in their homes, communities, and work.

As earlier stated, within the field of employment, use of rehabilitation technology can cover the broad range from simple and inexpensive to very complex (e.g., the application of a Velcro strip to the development of a hi-tech robotic-assisted workstation, specially designed to accommodate the employee's limitations). Often moving equipment, devices, or both from one side of the office to the other may be all that is needed to allow an individual to function productively. A person's reach and grasp can be extended by a variety of devices. Computers can allow some people with disabilities to work without ever leaving their home, communicate without being able to speak, and read without being able to turn pages. Accommodations for hearing impairments can be accomplished with flashing lights instead of ringing bells or alarms, and telephone devices that allow them to "hear" using their sense of sight (TDDs). Accommodations for vision impairments include

raised lettering or braille symbols on signs and elevator buttons, as well as a range of magnification devices. Severe strength and motor limitations can be accommodated with switches operated with one's mouth, a headstick, or even rolling a wheelchair across a tape on the floor that is connected to telephones, computers, and manufacturing equipment (*Worklife*, 1989).¹⁰

Assistive technology is not a panacea. However, it offers dramatic opportunities to enhance the

lives of people with disabilities. The continued support of product development, training, and service delivery systems will bring assistive technology to all individuals who can benefit from its application.

For additional information on TECH-REACH and the services it provides call 1-800-487-2805, TDD 1-800-676-2831.

ABSTRACT

TECH-REACH, the Rehabilitation Technology Information Exchange, funded by the Rehabilitation Service Administration (RSA) since October, 1990 completed three years of operation on September 30, 1993. This project developed a community-based rehabilitation technology information exchange for the greater New York area including New York City, Long Island, Westchester, Bergen, Essex and Union Counties in New Jersey. Its mission was to improve the delivery of technology information and rehabilitation services for people with disabilities and the professionals who serve them.

This information exchange was designed to gather and maintain information on rehabilitation technology from different sources including print, micro-computer-based, and on-line systems. A technology demonstration center, along with a video and print library including a computerized bulletin board system, was made available to all individuals at no cost.

Five major objectives were established to achieve TECH-REACH's mission. These objectives include: obtaining relevant information about technology applications; organizing the information into a system that permits a variety of ways for easy access and updating; managing a comprehensive marketing and outreach program; evaluating the technology applications that result from the information system; and, disseminating the technology information exchange model to programs in other communities for replication.

Three months after RSA awarded funds for this technology center, TECH-REACH was asked by the New York State Office of the Advocate for the Disabled to become a Regional Technology Center for the TRAIID project funded by the National Institute on Disability and Rehabilitation Research. This opportunity has enabled TECH-REACH to provide additional activities such as developing, disseminating and analyzing consumer and employer needs surveys regarding assistive technology devices, coordinating yearly TRAIID fairs, providing awareness training to consumers and professionals throughout the region and obtaining more equipment for demonstration purposes. A rehabilitation technology library has been established with a large selection of rehabilitation journals, newsletters, periodicals, other printed materials as well as videos. An occupational therapist provides evaluations and assessments regarding appropriate assistive devices. Referrals for these services are obtained from VESID and other organizations.

This is the final report of the project as funded by RSA. It concludes a brief overview and outlines the accomplishments of the project in relation to the objectives. The report contains a set of appendices which shows the work and activities that have taken place for the past three years.

TECH-REACH will remain a viable rehabilitation technology information exchange and will continue to serve as a Regional Technology Center and enhance its activities with continued funding as a Regional Technology Center and new funding from the Department of Education to evaluate assistive devices for youth attending schools in District 75 of the New York City Board of Education. Evaluations and assessments for individuals needing assistive devices will also continue.
