ABSTRACT

IDENTIFIERS

In an attempt to measure student satisfaction with the various components of matriculation (i.e., admissions and registration, orientation and advisement, assessment, and counseling), Golden West College (GWC) in Huntington Beach, California, administered a Matriculation Services Survey to a representative sample of 853 students in fall 1993. Results of the study included the following: (1) over 65% of the respondents rated admissions and registration processes as "excellent" or "good"; (2) students who registered by telephone rated the experience of registration as more convenient than did those who registered in person; (3) 72% felt that the helpfulness of the information they received from registration personnel was "excellent" or "good"; (4) nearly 60% of GWC students had participated in an orientation/advisement session, with 69% rating the program as "excellent" or "good"; (5) nearly 80% of the respondents had taken placement tests in writing or math, though only 72% had taken a English course and 68% had taken a math course at GWC; (6) students were generally satisfied with the convenience and effectiveness of the assessment process; (7) 66% of the students reported having had at least one appointment with a counselor, and just over 50% rated GWC counseling as "excellent" or "good"; and (8) the more appointments a student had with a counselor, the higher the student rated the helpfulness of the information and the counseling process overall. Appendixes provide demographic information on the survey's respondents, survey response percentages, and the survey instrument. (MAB)

Results of Matriculation Services Survey

Background

The Matriculation Services Survey is a locally developed, student satisfaction questionnaire that focused specifically upon components of matriculation: Admissions and Registration, Orientation and Advisement, Assessment, and Counseling. The questions were based primarily upon the recommendations made by the Matriculation Evaluation Local Research Options Committee (1989). The data from this survey were examine I to provide insight into the extent of use of, and the relative satisfaction with, this set of matriculation components. Students (n=853) in a representative sample of classes during the Fall 1993 semester responded to the 29-item survey (Demographic information is included in Appendix A and a copy of the survey is in appendix B). The students were asked to respond to questions designed to provide information to help improve matriculation services. Responses were renorded on a customized scanable response form. Processing of the data was performed by the Golden West College Matriculation Research Office.

Results

Appendix B contains a complete listing of results from all items. Response percentages are included on each item for the students who responded to the survey. Percentages reported in

the tables are based upon those students indicating an opinion. Non-responses and indications of "no opinion" or "no experience with this service" are not included in the calculation of the percentages. As such, these represent a sort of "pure" satisfaction index, and are relevant to the question, "of those students who have had experience with this service, what percentage rated the service as excellent, good, and so forth"?

Items which contain the possible response of "Fair" should be interpreted with caution. For most of these items, "Fair" represented a large portion of the students' responses. "Excellent" and "Good" are clearly positive ratings and "Poor" is clearly negative, the response category of "Fair" is difficult to characterize. It may be arqued that "Fair" responses include a percentage of both positive evaluations and negative evaluations. That is, in some cases it may represent students who are satisfied with the service and feel that it "works well" but who are not moved to provide a more glowing positive evaluation. might be expected in a campus-wide survey of this type, students' ratings of their experiences are lower after a period of time compared to ratings immediately following participation. other cases "Fair" may represent some reservation about the service area and reflect an evaluation that is clearly not positive. The problem is deciding what proportion of those "Fair" responses are positive and which are negative is unclear. is no way of accurately dividing the "Fair" responses without the risk of underestimating or overestimating. Therefore, "Fair"

responses should be interpreted with caution.

Admissions and Registration

Table 1 shows ratings for the admissions and registration processes. In rating overall convenience, over 65% of the students responded "excellent" or "good" whereas only 7% indicated "poor". These results are consistent with those from similar studies at other colleges that showed 65% to 85% of students rating the admissions process as being convenient (Spicer, 1992).

Table 1. Ratings of admissions and registration processes.

	OF ADM	NIENCE ISSIONS CESS	HELPFULNESS OF INFO BY REGISTRATION PERSONNEL		REGIS'	NIENCE F TERING CLASS	RATII ADMISSI REGISI	
EXCELLENT	99	12%	114	14%	142	18%	85	11%
GOOD	422	53%	470	58%	405	50%	483	61%
FAIR	218	27%	182	22%	194	24%	187	23%
POOR	56	7%	39	5%	72	9%	39	5%

Table 1 also shows students' ratings of the convenience of registering for classes. Nearly 70% of the students found the registration process "excellent" or "good", while only 9% rated it as "poor".

Choice of method of registration (by telephone or in person)

was found to affect their rating of the convenience of the registration process (Table 2). As might be expected, students who registered by telephone rated the convenience of registration as higher than those who registered in person.

Table 2. Ratings of convenience of registering for class by means of registering for class.

	CONVENIENCE OF REGISTERING FOR CLASS								
	EXCEL	LENT	GOO	D	FAI	R	POO	R	TOTAL
TELEPHONE IN PERSON TOTAL	106 35 141	22% 11% 18%	249 150 399	52% 46% 50%	96 96 192	20% 30% 24%	28 44 72	68 148 98	59% 42%

In order for the students to apply the information they receive, that information needs to be perceived as helpful.

Table 1 also shows that 72% of the students found the helpfulness of the information presented by registration personnel as "excellent" or "good". Students who rated the helpfulness as "fair" comprised 22% of the respondents, whereas only 5% rated the information as "poor".

Orientation and Advisement

Orientation activities seemed to have the highest variation in satisfaction at other institutions with a range from about 20% to 90% (Spicer, 1992). The medium of orientation varies from printed materials to videos to courses. Consequently it should not be too surprising that its impact can vary widely. Nearly 60% of GWC students surveyed reported having participated in an

orientation/advisement session. The student ratings of orientation and advisement at GWC are presented in Table 3.

Orientation was rated as "excellent" or "good" by 69% of those students, "fair" by 27% and "poor" by 4%.

Table 3. Ratings of orientation and advisement.

	RATE INI ORIENTATI POLICII EXPECTA	ON ABOUT	RANGE	INFO ABOUT OF SERVICES PROGRAMS	1	RATING OF
EXCELLENT	71	15%	70	548	57	12%
GOOD	270	55%	266		275	57%
FAIR	118	24%	119		129	27%
POOR	33	7%	35		20	4%

The primary goals of orientation are to provide information on college policies and expectations as well as on the range of services and programs. GWC students were asked to rate the information given during orientation/advisement sessions about important college policies, services, and programs at GWC.

Table 3 shows there were no significant differences in the ratings for the various types of information presented. Overall, the ratings were positive. "Excellent" or "good" ratings were reported by 68% to 70% of the students, "fair" by 24% to 27%, and "poor" was reported by 4% to 7% of the students who had participated in an orientation/advisement session.

Assessment

Two key questions are common to an evaluation of the assessment component of matriculation from the perspective of the students. First and foremost, are students satisfied with their course placements? Second, did they feel their course placement was accurate? Typically, as suggested by Spicer (1992), colleges reported 65% to 75% of their students affirming their English and math course placements as appropriate. Some institutions reported that over 80% were satisfied, while two colleges reported a satisfaction rate of less than 55%. Student dissatisfaction with placement typically ran around 10%, with 20% being about the highest level indicated.

Since students' judgement of the accuracy of their placement may depend, in part, upon whether they have taken the recommended courses by the time our survey, additional questions were included to ascertain their assessment experiences. Table 4 shows the percentages of students who have taken placement tests, students who have taken English or ESL classes, and students who have taken math classes at GWC. Nearly 80% of the students surveyed at GWC reported they have taken placement tests in writing or math. Slightly fewer of them have taken such courses at GWC.

Table 4. Percentages of students who have participated in the assessment process.

	TESTS A	ACEMENT GWC IN OR MATH	TOOK ENCOURSES	G OR ESL AT GWC	TOOK COURSE	MATH AT GWC
YES	665	79%	493	72%	462	68%
NO	173	21%	191	28%	220	32%

Ratings of the assessment process at GWC are presented in Table 5. Overall, students who have participated in assessment are satisfied with the assessment process. Sixty percent of the respondents rated the assessment process as "Excellent" or "Good", 33% rated "Fair", and 7% rated the assessment process as "Poor". Ratings of the convenience of the assessment process were very similar: 64% "Excellent" or "Good", 30% "Fair", and 7% "Poor" (Table 5).

Table 5. Ratings of the assessment process.

	RATE CONV OF ASSE PROC	SSMENT	OVERALL RATING OF THE GWC ASSESSMENT PROCESS			
EXCELLENT	61	10%	62	10%		
GOOD	346	54%	316	50%		
FAIR	190	30%	210	33%		
POOR	45	7%	43	7%		

Students' perception of the effectiveness of the placement process was also positive. Table 6 shows that 58% of those students whose test results were used to place them in English or ESL courses felt that they were commended to the correct course

level; 21% of the students felt that they had been placed too low, and 2% felt that they were placed at a level too high.

Nineteen percent reported that they were not sure.

Similar ratings were given by students indicating their opinion of being correctly placed in math. Two thirds of the students felt that they were correctly placed. The percentage of students who felt that they were placed too low was 16%. Only 2% of the students felt that they were placed too high, and 15% were not sure (Table 6). There is the possibility that some of the "too low" responses may be due to the general inclination to over-rate one's own skills, consistent with the pervasive self-serving bias (Brown, 1991).

Table 6. Students' perception of effectiveness of placement in English/ESL and math.

	OPINIC CORRECT I IN ENG OI BY TES	PLACEMENT R ESL	OPINION OF CORRECT PLACEMENT IN MATH BY TEST		
YES TOO LOW TOO HIGH NOT SURE	387	58%	437	67%	
	144	21%	101	16%	
	13	2%	16	2%	
	125	19%	100	15%	

Counseling

The usage level of counselor services typically varies between 55% and 75% at other institutions (Spicer, 1992).

Table 7 shows that 66% of the students at GWC reported having had at least one appointment with a counselor. Generally, 45% to 64%

of students at other institutions rated the counseling experience as good or excellent. At GWC, student ratings were comparable to ratings at other colleges. Just over 50% of the students rated counseling as "Excellent" or "Good". Table 7 also shows the number of appointments the student had with the counselor crossed with counseling ratings. The more appointments the student had, the higher the student rated the helpfulness of the information, and the higher the overall rating of the counseling process.

Table 7 Overall ratings of counseling process by number of appointments.

		OVERALL RATING OF GWC COUNSELING PROCESS								
	EXCE	LLENT	GOO	GOOD FAIR		POOR		TOTAL		
COUNSELOR APPOINTMENT ONE TWO THREE-MORE	67 43 38	27% 29% 32%	96 61 52	38% 41% 43%	58 27 23	23% 18% 19%	30 19 7	12% 13% 6%	251 150 120	
TOTAL	148	27%	129	24%	108	20%	56	10%	521	

Table 8 indicates ratings of other counseling activities. Students were asked if the counselor was helpful in choosing courses or programs of study, clarifying educational goals and how to achieve them, and understanding requirements and prerequisites. Response patterns were nearly the same for each area. Between 74% and 80% of the students reported being helped very much or some, while 20 to 26% of the students reported that

the counselor did not help or helped very little. These ratings are at the upper end of the range of responses compared to other studies. Students from other institutions rated their satisfaction with academic counseling between the 65% and 85% range (Spicer, 1992).

Table 8. Ratings of the counseling process.

	COUNSELOR HELPED CHOOSE COURSES		HELPED	SELOR CLARIFY GOALS	COUNSELOR HELPED UNDERSTAND REQUIREMENTS		
VERY MUCH	215	39%	185	34%	241	44%

VERY LITTLE	67	13%	71	14%	56	11%	
DID NOT HELP	43	9%	61	12%	46	9%	

Summary

Generally, the satisfaction ratings by students for matriculation services evaluated were positive. Ratings of counseling were especially positive. There is, however, a need to repeat this survey periodically to monitor satisfaction on these components of matriculation over time. Such longitudinal comparisons would be particularly informative in evaluating programmatic changes.

One final note is needed to place this survey and its results in a proper context, this type of general satisfaction information is perhaps best seen as a supplement to evaluations documenting the impact of matriculation services on educational outcomes such as retention, grade point average, persistence and goal attainment. A matriculation study using persistence rates

as the primary outcome has been completed (Isonio, 1993), and other studies involving other outcomes are being planned.
