## A STRACT

This updated annotated bibliography of 93 items is intended for people who design spaces and facilities to be accessible for people with disabilities and for those who assure that such facilities are in compliance with regulations. It cites books, chapters in books, articles, and pamphlets, most of which were published from 1988 to 1993. It also includes audiovisual materials, most of which were produced from 1991 to 1993. References usually include bibliographic information, availability information and cost (if available), and a brief annotation. References are arranged alphabetically by author within the following categories: (1) bibliographies and general information; (2) children's environments; (3) home design; (4) legislation and standards; (5) public facilities and the workplace; (6) safety and evacuation; (7) transportation; and (8) audiovisuals. A final section lists 20 sources for further information, including addresses, phone numbers, and brief descriptions. (DB)

ED 374 638

The passage of the Americans with Disabilities Act in 1990 and the aging of the United States population have created an awareness that facilities that are accessible to people with disabilities benefit everyone. Thus, the emphasis in the literature on accessibility has shifted from the building to the total environment since the publication of the reference bibliography Accessibility: Designing Buildings for the Needs of Handicapped Persons. This updated bibliography is intended for people who design accessible spaces and those who assure that their facility is in compliance with the regulations. It cites books, chapters in books, articles, and pamphlets, most of which have been published from 1988 to 1993. Most of the audiovisuals included were produced from 1991 to 1993; please contact the sources listed for information about the availability of rental, previews, or purchase.

Abbreviations used are ADA--Americans with Disabilities Act, ANSI--American National Standards Institute, and UFAS--Uniform Federal Accessibility Standards.
