## ABSTRACT

This report presents the results of an employment survey of 15,583 New Zealanders who received university degrees, diplomas, or certificates during the 1992-93 academic year. Section 1 describes the survey design and population, as well as the general results. The survey found that 47.3 percent of graduates were employed, 27.9 percent were engaged in further study, 13.8 percent were looking for employment, 9.3 percent were going overseas, and 1.7 percent were not available for employment. Responses are also tabulated by gender, occupational grouping, and major employment sector. An appendix provides comparisons to 1991 and 1992 data. Section 2 provides observations on the outlook for graduate employment, which seems to be improving slightly. Section 3, the bulk of the report, provides information on employment destinations for recipients of bachelor's degrees by major subject area. Data is provided for graduates in the following fields: agriculture and horticulture; architecture, planning, and surveying; biological sciences; commerce; computer studies and information science; consumer and applied sciences; dentistry; education; engineering; fine arts, music, and drama; forestry; humanities; law; mathematics, statistics, and operations research; medicine and human biology; paramedical; physical education, parks, recreation, and tourism; physical sciences; social sciences; technology; theology and divinity; and veterinary science. # **Graduate Employment in New Zealand**

## **The 1993 Survey**

This report comprises three sections:

Section One – Outlines the survey procedure; lists the Standing Committee members; gives the results of the 1993 survey. In the appendix to this section are five tables: the Distribution of All Respondents; the Distribution of All Graduates; the Destination of All Graduates; Main Employer Groups of Employed New Zealand Respondents; Main Occupational Groups of Employed New Zealand Graduates.

Section Two – Considers the current and future prospects for graduates.

Section Three – Tabulates the destinations by major subject areas of those New Zealand respondents who had a Bachelors or Bachelors with Honours degree conferred during the survey period.

### **SECTION ONE**

#### **1. Introduction**

- 1.1 In 1971 the New Zealand Vice-Chancellors' Committee set up a special Standing Committee on Graduate Employment and charged it with the task of investigating the first destination of university graduates on completion of their course of study. The first report, published in 1976, covered the period from 1 July 1973 to 30 June 1974 and reports have been published for each subsequent year. The survey dates were changed in 1985 to cover the period 1 June to 31 May.
- 1.2 This is the twentieth report of statistics concerning graduate employment in New Zealand and results from the latest annual survey conducted by the Standing Committee.
- 1.3 The survey population comprises those who have been awarded first degrees, second degrees, post-graduate degrees, diplomas or certificates equivalent to at least one year's full-time study at a New Zealand university. Some differences exist between universities in the formal graduation procedure and it is only those who are eligible (ie. examination and other requirements have been completed) and who actually graduate or receive a diploma or certificate from each university who are included in the survey.
- 1.4 This publication summarises the destination of those who met the above criteria during the period 1 June 1992 to 31 May 1993. These people are requested to complete a standardised questionnaire before the December or the April/May graduation ceremonies. Those who fail to respond or provide insufficient information, or indicate they are still seeking employment are sent a follow-up questionnaire in May. The most up-to-date response is used with the cut-off date for inclusion in the survey being 31 May each year.
- 1.5 The survey gives a reliable general picture of the destination of graduates from New Zealand universities. As previously observed it covers graduates who are continuing with full-time study and those who have completed second degrees, post-graduate degrees, diplomas or certificates equivalent to at least one year's full-time study and who may be returning to established careers. It includes graduates who have studied on a part-time basis for several years and who will have considerable work experience, together with younger graduates entering longer term employment for the first time.  
  
Graduates employed under specially funded work schemes are included in the survey as being in employment if the survey questionnaire was completed to that effect.
- 1.6 The basic classifications used for analysing employer and occupation information are the New Zealand Standard Classification of Employers and the New Zealand Standard Classification of Occupations respectively.

- 1.7 Some information from previous surveys is included in this report for comparative purposes. Those requiring more detailed information about previous years should refer to reports 1-19 inclusive in the series *Graduate Employment in New Zealand*.

**1.8 List of Standing Committee Members as at 31 May 1993**

University of Otago	Professor B.G. Cox, Chairman Mrs H. Anderson*, Careers Adviser, Secretary
University of Auckland	Ms K.H. Moore*, Director Careers Advisory Service
University of Waikato	Mrs M. Rickard*, Careers Officer
Massey University	Ms A. Mildon*, Careers Officer
Victoria University of Wellington	Ms E. Medford*, Head of Careers Advisory Service
University of Canterbury	Ms L. Clark*, Careers Adviser
Lincoln University	Mr O.M. Wilson*, Careers Adviser

\*Regional contact person for further information if required.

**2. The 1993 Survey**

Tables in this report generated from the survey data are presented as follows:

- 2.1 Table A in Section One and Tables 2 and 3 in the Appendix relate to the TOTAL SURVEY POPULATION.
- 2.2 Table 1 in the Appendix relates to the TOTAL RESPONDENTS in the survey.
- 2.3 All other tables in this report relate to NEW ZEALAND RESPONDENTS only.

**3. Table A – Survey Population**

	Number Graduating	Number Respondents	Response Rate %
New Zealand Graduates	16,002	15,583	97.4
Overseas Graduates	709	708	99.9
TOTAL	16,711	16,291	97.5

- 3.1 This year's total (16,711) represents an 11.6 per cent increase on last year and is 38 per cent more than the 1990 figure (12,106) shown in Table 3 in the Appendix. Such is the growth facing universities in New Zealand.
- 3.2 Of those graduating, 8477 (51%) were male and 8234 (49%) were female continuing the trend towards an equal distribution of men and women.
- 3.3 The proportion of overseas graduates, ie. those graduates of overseas origin who were in New Zealand with a study permit, fell once again to be 4.2 per cent of all graduates (5.4% in 1992).

#### 4. Information Relating to New Zealand Respondents

##### 4.1 Table B – Graduate Destinations 1993

Below is a pie chart showing the destination and distribution of New Zealand respondents (15,583). This chart is followed by two graphs depicting the numbers and percentages of New Zealand respondents in the categories specified for the ten year period 1984-1993.

##### 4.2 Table C – Percentage Distribution of New Zealand Male and Female Respondents by Destination 1991-1993

	MEN %			WOMEN %			TOTAL %		
	1991	1992	1993	1991	1992	1993	1991	1992	1993
Not available for employment	0.7	0.8	1.1	1.7	2.1	2.3	1.2	1.4	1.7
Going overseas	12.6	13.3	9.8	10.5	11.2	8.8	11.6	12.3	9.3
Looking for employment	13.6	16.0	14.8	14.0	15.9	12.7	13.8	15.9	13.8
Further study	23.7	24.3	27.0	24.6	26.6	28.9	24.1	25.4	27.9
In employment	49.4	45.6	47.3	49.2	44.2	47.3	49.3	45.0	47.3
TOTAL	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

- 4.3 Both the number (7375) and the proportion (47.3%) of graduates who entered employment have increased. After years of reading newspaper headlines that highlighted the increase in graduate unemployment it is noteworthy that the 47.3 per cent employed not only records an increase but is the first reversal of that downward trend in employment since 1986.
- 4.4 It is also interesting to note that the proportion of men and of women in this category is the same ie. 47.3 per cent.
- 4.5 Previous reports have suggested, quite properly, that the tightening of the employment market encouraged graduates to undertake further full-time study. This year there is an increase in the proportion taking further study (27.9%) as well as those in employment. This might mean that graduates are seeing the need for higher or broader qualifications to increase their options.
- 4.6 There was a significant reduction in the proportion going overseas from 12.3 per cent in 1992 to 9.3 per cent.

## 5 New Zealand Respondents in Employment

### 5.1 Table D – Major Employment Sectors 1989-1993

	1989		1990		1991		1992		1993	
	No	%	No	%	No	%	No	%	No	%
Business Services	1184	11.7	1276	11.3	1279	10.6	1061	7.7	1320	8.5
Education Services	916	9.1	1163	10.3	1077	9.0	1141	8.2	1369	8.8
Public Administration	661	6.5	664	5.9	549	4.6	639	4.6	722	4.6
Medical, Dental, Veterinary	614	6.1	601	5.3	660	5.5	754	5.4	784	5.0
Financial Institutions	242	2.4	251	2.2	251	2.1	219	1.6	268	1.7
Manufacturing (Excluding Food)	219	2.2	249	2.2	216	1.8	289	2.0	382	2.5
Wholesale Trade	195	1.9	170	1.5	160	1.3	218	1.6	245	1.6
Food Manufacturing	159	1.6	155	1.4	174	1.4	187	1.4	185	1.2
Agriculture and Livestock Production	157	1.6	151	1.3	149	1.2	191	1.4	222	1.4
Retail Trade	86	0.9	128	1.1	147	1.2	233	1.7	291	1.9
Research and Scientific Institutes	115	1.1	137	1.2	182	1.5	123	0.9	209	1.3
Restaurants, Hotels and Similar	61	0.6	78	0.7	100	0.8	142	1.0	166	1.1
<b>TOTAL</b>	<b>4609</b>	<b>45.7</b>	<b>5023</b>	<b>44.4</b>	<b>4944</b>	<b>41.0</b>	<b>5197</b>	<b>37.5</b>	<b>6163</b>	<b>39.6</b>

Percentages in Table D are of the total number of New Zealand respondents (15,583 in 1993). Only sectors which employed more than one per cent of respondents are included.

- 5.2 The main employment sectors (ie. employers grouped by activity) of New Zealand respondents are shown in Appendix Table 4.
- 5.3 The increased proportion of graduates in employment, already noted, is reflected in both tables.
- 5.4 Business Services has shown some recovery, nearly one per cent, from the sharp fall noted in 1992. Financial Institutions also show a marginal improvement.
- 5.5 Education Services continue the trend to employ a greater number of graduates although the slight increase in this year's proportion to 8.8 per cent does not reach the previous levels of the 1988-1991 period.
- 5.6 The proportion employed in Public Administration remains constant at 4.6 per cent.
- 5.7 Manufacturing shows some slight improvement with 2.5 per cent being the highest proportion in the last five years.
- 5.8 Research and Scientific Institutes employed 209 graduates, the increase of 86 being a 70 per cent improvement over the previous year.

**5.9 Table E – Major Occupational Groupings 1989-1993**

	1989		1990		1991		1992		1993	
	No	%	No	%	No	%	No	%	No	%
Accountants & Related	902	8.9	923	8.2	925	7.7	790	5.7	872	5.6
Educationalists	793	7.9	971	8.6	921	7.7	946	6.8	1186	7.6
Medical, Dental, Veterinary, Dietary & Pharmacy	457	4.5	466	4.2	495	4.1	541	3.9	516	3.3
Lawyers and Related	377	3.7	364	3.2	350	2.9	302	2.2	359	2.3
Industrial & General Management Trainees	373	3.7	426	3.8	454	3.8	454	3.3	642	4.1
Psychologists, Sociologists & Social Workers	285	2.8	296	2.7	291	2.4	258	1.9	347	2.2
Engineers & Technologists	247	2.4	233	2.1	180	1.5	224	1.6	280	1.8
Clerical & Related Statisticians, Mathematicians & Systems Analysts	235	2.3	290	2.6	221	1.8	320	2.3	405	2.6
Sales Workers, Buyers and Related	226	2.2	252	2.2	252	2.1	236	1.7	301	1.9
Government Executive Officials	219	2.2	320	2.9	291	2.4	329	2.4	395	2.5
Optometrists, Registered Nurses & Related Workers	156	1.5	174	1.6	186	1.6	149	1.1	189	1.2
Agricultural & Horticultural Workers	85	0.8	77	0.7	120	1.0	126	0.9	169	1.1
	131	1.3	143	1.3	128	1.1	172	1.2	194	1.2
<b>TOTAL</b>	<b>4486</b>	<b>44.2</b>	<b>4935</b>	<b>44.1</b>	<b>4814</b>	<b>40.1</b>	<b>4847</b>	<b>35.0</b>	<b>5855</b>	<b>37.4</b>

Percentages in Table E are of the total number of New Zealand respondents (15,583 in 1993). Only those groupings which employed more than one per cent of respondents are included.

- 5.10** There are two groupings which show a marked absorption of graduates. Educationalists increased from 946 in 1992 to 1186 in 1993 and Industrial and General Management trainees from 454 to 642 for the same years.
- 5.11** Accountants and Related appear to have halted the rate of the downward trend highlighted in last year's figures but the increase of 79 did not prevent the proportion of 5.6 per cent being the lowest recorded for many years.
- 5.12** The remaining groupings showed marginal increases in line with the general improvement in this year's graduate employment figures.

## **6. Further Study**

### **6.1 Table F – New Zealand Respondents Continuing Full-Time Study 1989-1993**

	1989			1990			1991			1992			1993		
	Male	Female	Total	Male	Female	Total	Male	Female	Total	Male	Female	Total	Male	Female	Total
University	969	760	1729	990	865	1855	1197	1040	2237	1479	1341	2820	1786	1700	3486

Tertiary	29	23	52	33	32	65	40	48	88	58	87	145	75	135	210
<b>TOTAL</b>	<b>1218</b>	<b>1027</b>	<b>2245</b>	<b>1257</b>	<b>1200</b>	<b>2457</b>	<b>1499</b>	<b>1400</b>	<b>2899</b>	<b>1728</b>	<b>1785</b>	<b>3513</b>	<b>2110</b>	<b>2244</b>	<b>4354</b>

- 6.2** It can be seen from Table F that the numbers undertaking further full-time study continue to increase.
- 6.3** At each type of institution there was an increase in the numbers continuing full-time study. The increased number in the university category, 666, represents a 24 per cent rise on 1992 figures.
- 6.4** After a marked reduction in those going overseas for study in 1992, the 1993 figure of 209 is similar to numbers in more recent years. However, in view of the increased numbers of total respondents there are proportionately fewer of those continuing study undertaking it overseas.

## 6.5 Table G – Distribution by Faculty of Further University (Full-Time) Study 1989-1993

Faculty	1989		1990		1991		1992		1993	
	No	% of faculty	No	% of faculty	No	% of faculty	No	% of faculty	No	% of faculty
Agriculture/Forestry	100	13.8	55	8.3	46	8.0	54	11.3	64	11.1
Architecture	27	13.5	25	13.0	40	18.2	46	24.0	49	20.9
Humanities	323	25.3	313	22.7	510	25.6	678	34.1	815	34.2
Social Sciences	333	23.3	373	22.1	371	26.1	410	29.0	504	32.2
Education	48	7.8	72	8.4	73	9.9	102	11.7	252	19.9
Journalism	0	0.0	0	0.0	0	0.0	1	5.9	1	5.6
Commerce	135	6.2	201	7.6	283	9.4	411	13.3	494	14.2
Dentistry	0	0.0	1	1.9	1	1.6	1	1.9	0	0.0
Engineering	42	8.7	54	11.5	71	15.2	99	22.6	97	21.2
Fine Arts/Music	24	16.2	23	15.6	39	25.3	46	34.1	26	17.8
Technology	12	8.0	9	6.2	8	6.1	11	6.7	10	6.9
Consumer & Applied Science	5	8.8	8	16.6	4	7.0	9	15.5	14	23.3
Law	8	1.8	12	2.4	24	4.6	35	7.0	49	8.1
Medicine	99	20.1	102	19.6	94	15.8	123	20.9	111	19.2
Physical Education	19	23.5	14	16.8	17	17.0	25	27.8	21	24.1
Science	544	32.8	585	29.7	648	35.2	758	41.6	970	44.8
Theology	6	16.6	6	14.3	8	16.6	11	26.8	9	20.5
Veterinary Science	4	6.1	2	3.3	0	0.0	1	2.0	0	0.0

Percentages in Table G are of the number of responding graduates in that Faculty who are remaining in New Zealand (ie. excluding overseas students and New Zealand students going overseas). Graduates in some disciplines do not normally proceed to further full-time study in the year following graduation.

- 6.6** The overall increase in the numbers undertaking full-time university study are reflected in this table. The proportional distribution is similar to that of 1992.
- 6.7** There are some notable exceptions. Education with an increase of 150 to a total of 252 moves from 11.7 per cent to 19.9 per cent. Science shows an increase of 212 bringing its total to 970 which at 44.8 per cent is the highest proportion in the table.
- 6.8** The proportion of Fine Arts/Music respondents showed a marked decrease. However the resulting 17.8 per cent is closer to the normal figure for that faculty during the period covered.

## 7. Not Available for Employment

1989		1990		1991		1992		1993	
No	%	No	%	No	%	No	%	No	%
173	1.7	170	1.5	146	1.2	196	1.4	263	1.7

- 7.1** This year's 1.7 per cent represents a small increase but throughout the period 1989-1993 there has been a consistency of between one and two per cent in this category.

## 8. Going Overseas

**Table H – New Zealand Respondents Going Overseas 1990-1993**

	1990				1991				1992				1993			
	Men	Women	Total	%	Men	Women	Total	%	Men	Women	Total	%	Men	Women	Total	%
Overseas Study	130	95	225	2.0	139	82	221	1.8	73	67	140	1.0	111	98	209	1.3
Employment Overseas	469	318	787	7.0	452	273	725	6.0	355	233	588	4.2	284	224	508	3.3
Other Reasons	344	277	621	5.5	344	327	671	5.6	593	523	1116	8.1	478	461	939	6.0
<b>TOTAL</b>	<b>943</b>	<b>690</b>	<b>1633</b>	<b>14.5</b>	<b>935</b>	<b>682</b>	<b>1617</b>	<b>13.4</b>	<b>1021</b>	<b>823</b>	<b>1844</b>	<b>13.3</b>	<b>873</b>	<b>783</b>	<b>1656</b>	<b>10.6</b>

Percentages in Table H are of the total number of New Zealand respondents (15,583 in 1993).

- 8.1 There was an overall reduction in the number of graduates going overseas this year, 1656 compared with 1844 in 1992.
- 8.2 The Employment and Other Reasons categories both fell, possibly reflecting the employment situation in some of the traditional destinations eg. Australia and Europe.
- 8.3 The group going for Study increased by 69. With a total of 209 they were 1.3 per cent of the total New Zealand respondents.

## 9. Still Looking for Employment

9.1 As previously mentioned in paragraph 1.2 a follow-up questionnaire is sent to graduates whose initial responses indicate they are in this category. The cut-off date for the later response was 31 May 1993 and it is the most up-to-date information which is used in Table I.

**Table I – New Zealand Respondents Still Looking for Employment 1989-1993**

	1989 % of No faculty	1990 % of No faculty	1991 % of No faculty	1992 % of No faculty	1993 % of No faculty

<b>TOTAL</b>	<b>979</b>	<b>1202</b>	<b>1653</b>	<b>2207</b>	<b>2144</b>
<b>% of Respondents</b>	<b>9.7</b>	<b>10.6</b>	<b>13.8</b>	<b>15.9</b>	<b>13.8</b>

Percentages in Table I are of the number of responding graduates in that Faculty who are remaining in New Zealand (ie. excluding overseas students and New Zealand students going overseas).

- 9.2 It is pleasing to note a reduction in both actual numbers and the proportion of those seeking employment from the high figures recorded in 1992. This at a time when the number of graduates has increased 11 per cent over the previous year.
- 9.3 Most faculties shared this improvement with Commerce graduates in particular recovering a little from the situation they have faced in the last two or three years.
- 9.4 The figures should be treated with caution as many factors are involved in successful job seeking. Whilst the improvement reverses the trend of recent years it needs to be maintained if it is to generate the optimism so much needed in uncertain times. Nevertheless it should give some encouragement to those closely involved with graduate employment.

## 10. Ages and Salaries of Respondents

- 10.1 Although a full salary survey is not conducted the question is asked and Table J shows by faculty the average age and salaries of those who responded to the question. It will be realised that many graduates will have had previous work experience and with differing salary structures for various occupational groups such factors will have some effect on the results listed.

**Table J – Ages and Salaries of New Zealand Respondents in Employment 1993**

	Average Age	Average Salary (\$)
Agriculture/Forestry	24	24,075
Architecture	25	25,446
Humanities	29	28,342
Social Sciences	32	30,029
Education	31	30,775
Journalism	24	20,000
Commerce	28	34,755
Dentistry	24	40,645
Engineering	24	29,624
Fine Arts/Music	26	22,841
Technology	27	34,280
Consumer & Applied Science	25	22,278
Law	25	27,889
Medicine	28	39,068
Physical Education	24	22,500
Science	26	28,213
Theology	39	24,120
Veterinary Science	24	33,009

- 10.2 It might be noted here that some surveys on graduate employment taking a longer perspective than this report indicate that graduates do enjoy an advantage over others. It is understood this was one of the factors considered when the Student Loan Scheme was proposed.

## **11 1993 Graduate Survey – Summary**

### **11.1 Some of the features which attract attention in this survey include:**

The total number graduating continued to grow with this year's 16,711 graduates representing an 11.6 per cent increase on last year's total (14,978). This year's total is an increase of 64 per cent on the 1988 figure (10,191).

The proportion of women graduates came very close to parity with the men, 8234 women being 49.3 per cent of the total survey population.

Both the number and proportion of graduates who entered employment increased, 7375 being 47.3 per cent of New Zealand respondents (Table B).

The proportion of female graduates in employment was exactly the same as the male graduates ie. 47.3 per cent (Table C).

The number of graduates seeking employment (2144) has decreased compared with 1992 (2207). Although the proportion in this category, 13.8 per cent reverses the rising trend of the last few years, it is still high enough to cause concern and hopefully this year's progress will continue to be evident in future surveys (Table C).

There was continued growth in the numbers undertaking further full-time study. Of the 4354 graduates involved, 3486 continued at a university, an increase of 666 above the previous year (Table F).

Overall fewer graduates went overseas although there was an increase in those pursuing study overseas. However, this year's proportion, 1.3 per cent of the total survey population, is lower than those recorded during the 1988-1991 period (Table H).

Although the total number of Commerce graduates increased, as a percentage of the total survey population Commerce has dropped to 24.6 per cent, its lowest since these surveys began (Table I).

### **11.2 1993 Graduate Survey – Effect on Trends:**

The striking impact of this report which has "Graduate Employment" in its title is the reversal of the downward trend in the proportion entering employment first noted in 1987.

Universities do not need to be told of the pressures they face with the continually increasing numbers undertaking further full-time study. It is possible that the increasing costs facing students will have some impact in this area in the next year or two.

The two dominant employment sectors for graduates remain Business Services and Education.

Manufacturing appears to be offering renewed opportunity with 93 additional graduate appointments this year.

Similarly the rise from 457 (1992) to 642 (1993) in Industrial and General Management Trainees suggests signs of recovery from the reverses of the past few years.

The proportion of overseas graduates continues to decline and has dropped from 6.9 per cent in 1990 to 4.2 per cent in 1993 (Table 3).

## SECTION TWO

### 12 The Outlook for Graduate Employment

- 12.1 Surveys which find there is growing confidence in the market place, even though it may have a regional bias, together with the increased number and proportion of graduates who entered employment this year should give cause for some gentle optimism to those graduating in the next year or two.
- 12.2 Increasing numbers attending university and undertaking further study suggest students and graduates are answering the implied demand to invest in themselves and provide for their future by building a higher educational platform from which to develop their skills in the workplace.
- 12.3 Such acceptance of the challenge, irrespective of the uncertainties in the employment market, loan schemes, limited enrolments in some courses and the possible effects of technology, exemplifies the enthusiasm, optimism and dedication of graduates prepared to take a longer term view. Possibly they see their qualifications providing a competitive edge when seeking to persuade employers of their suitability for employment.
- 12.4 The traditional employers of graduates, the large corporations, appear to be still extremely cost conscious and it does not seem they will increase their graduate intake markedly. Smaller businesses may be the alternative but they are more likely to be at risk of ceasing operations. Graduates are showing they are adaptable and keen to gain experience for they see worthwhile experience, no matter where acquired, as being a valuable adjunct to their qualifications.
- 12.6 It may be undervaluing the potential graduates have to offer by stating quite simply that they are useful. Useful in the contribution they make to employers' operations, to the community and in the questioning attitude they bring to the task in hand. They have demonstrated an enthusiasm for learning and have shown they can apply themselves to achieve results.
- 12.7 The learning process does not stop with graduation and as more advanced techniques and systems appear in the New Zealand economy, graduates will be using, adopting, questioning and modifying these procedures for their own and the country's development. They represent a resource that should be nurtured and encouraged.

## SECTION THREE

### Introduction.

This section deals only with those New Zealand respondents who were awarded a *Bachelor* or *Bachelor with Honours* degree.

The tables indicate the destination of New Zealand respondents in their major subject areas. These subject areas are similar, but not identical, to those used for "Faculties" in Tables G and I as there are differences in the grouping of subjects into Faculties at our seven Universities. Average ages and salaries are also included.

The pie charts illustrate the employment destination by sex with percentages for that group. Due to rounding of values, totals do not always equal 100.0. Nine broad areas of employment have been used. These are:

#### Agriculture, Forestry, Fishing:

- \*eg. Farming
- Horticulture
- Fruit Growing
- Forestry
- Logging
- Fishing

#### Mining and Quarrying:

- eg. Coal Mining
- Natural Gas Production
- Metal Ore Mining

#### Manufacturing:

- eg. Food Processing
- Textiles
- Wood Products
- Paper and Paper Products
- Chemicals
- Machinery and Equipment
- Printing and Publishing
- Basic Metal Industries

#### Electricity, Gas, Water:

- eg. Electricity Generation and Distribution
- Water Works and Supply
- Gas Treatment and Distribution

#### Construction:

- eg. Buildings
- Other Than Buildings
- Heating and Air Conditioning
- Project Management

#### Wholesale and Retail Trade:

- eg. Wool
- Hides and Skins
- Groceries and Food
- Building Materials
- Pharmaceuticals
- Household Appliances
- Furniture and Floor Coverings
- Motor Vehicles
- Restaurants and Hotels

Transport and Communication:  
eg. Land, Water and Air Transport  
Telecommunications  
Postal and Courier Services

Business and Financial Services:  
eg. Banking  
Insurance  
Superannuation  
Real Estate and Business Services

Community, Social and Personal Services:  
eg. Public Administration and Defence  
Education  
Medical  
Dental  
Veterinary Services  
Welfare  
Religious and Community Services  
Recreational and Cultural Services

Not all areas are represented in every group and full data were not always returned by every respondent.

A range of JOB TITLES and types of EMPLOYERS are provided to illustrate the diversity of opportunities available to graduates.

*\* These are examples only. A full schedule of the types of employers in these groups is listed in the New Zealand Standard Industrial Classification.*

**D**EMAND FOR GRADUATES in this sector is naturally influenced by the fluctuations of commodity prices. This can pose problems for people with a relatively specialised degree. The general improvement of prices in the dairy and meat industries is reflected in an improved demand for graduates in farm finance and private consulting work. Likewise difficulties are showing up in wool-related employment and some areas of horticulture.

Overall the picture is one of gradual recovery and growing confidence in the primary industries. This year the proportion of graduates entering directly into employment grew from 52.1 per cent last year to 60.7 per cent.

**T**HE ARCHITECTURE GROUP also includes Building Science, Valuation and Property Administration. There has been a 17 per cent increase in the overall number of graduates in this group with the greatest increase shown in Architecture (33 per cent). Significant too is the 83 per cent increase in women graduates. Early signs of recovery noted last year among Architecture students rapidly gained momentum with an 80 per cent increase in the number of graduates obtaining full-time work.

The majority (77 per cent) of this year's Surveying graduates have, as in the past, found related employment either in New Zealand or overseas. The majority are employed as Assistant Surveyors in the private sector, while a few have a similar role with local bodies or government departments.

**A** SECONOMIC SURVEYS consistently report increases in business confidence and business activity expands, so the prospects for commerce graduates improve. Accounting graduates show the highest rate of employment, although as an occupational group, accountants are only just holding steady against the downward trend of the last few years. Management and Administration graduates have also shown a high employment rate, with the numbers going into trainee management positions jumping significantly from the previous year; an indication of employers' confidence in their longer term business viability.

**D**ESPITE A SIGNIFICANT increase in the numbers of graduates in this group over the last three years, the proportions of those going on to further study, gaining employment, and still seeking employment have shown little variation.

It is interesting to note that Operations Research graduates show a lower proportion than the other two disciplines in those continuing further full-time study, thereby not unexpectedly, a higher proportion in employment. It is possibly a little surprising therefore that they show a higher proportion still looking for employment.

This may reflect a confidence that opportunities will arise and they are prepared to wait.

**O**F THE 95 GRADUATES specialising in Physical Education this year, numbers were equally distributed four ways: one quarter found New Zealand employment, while similar numbers entered Secondary Teacher training, enrolled for further full-time university studies, or were still seeking employment.

This year's Parks, Recreation and Tourism graduating group went into a variety of occupations related to travel, tourism and recreation. Increasingly it is necessary for people in these areas of activity to forge new opportunities through small businesses. The range of entrepreneurial activities relating to the travel and tourism industry is gradually increasing.

**A**S EXPECTED, increasing numbers of science graduates continuing further post-graduate studies illustrate the necessity for higher qualifications in pursuing a career in a specialised science field. Of those graduates entering the workforce over 40 per cent of both men and women entered work in the Community, Social and Personal Services area. There was a four per cent decrease in graduates still looking for employment; down to nine per cent from 13 per cent last year.

Graduates in Earth Sciences doubled in number indicating the popularity of this multi-disciplinary approach. Opportunities for these graduates were in government, law firms, environmental consultancies, research institutes and Regional Councils.

**A**LTHOUGH GRADUATE NUMBERS fell markedly in some areas the overall number entering employment remained high and employment rates well above the national average were maintained.

Manufacturing industries continued as the major employers, but the diversity of sectors open to these graduates and the applied nature of technology courses means that graduates are well placed to find employment at a level which is commensurate with their studies, and to take advantage of any upturn in the economy.

**J**OB PROSPECTS have improved for graduates of Theology and Divinity in the past year. Half of the 40 current respondents to the survey had found employment, compared with only one third a year earlier. Most were involved with pastoral duties in a range of religious denominations. Fewer than last year were still seeking employment, while a similar proportion to a year ago – some 25 per cent – had enrolled for further full-time study.
