ABSTRACT

This report tracks the school-completion progress of New York City students who entered ninth grade in fall 1990 and were scheduled to graduate on time in June 1994. The report indicates the percentages of students (including those in special education) who graduated, dropped out, and remained in school for summer school or a fifth year in fall 1994. After correction for transfers in and out of the system, the class of 1994 contained 63,130 students. The dropout rate (without transfers) was 18.7 percent, and the total graduation rate (through June) was 44.3 percent, with 37 percent still enrolled at the end of the 1993-94 school year. A little over 14 percent were of limited English proficiency. Almost one-third of the class was Hispanic American, and just over 10 percent was Asian/Pacific Islanders. Blacks made up just under 40 percent of students, and less than 20 percent were white. Substantially higher percentages of Asian/Pacific Islander and White students graduated within 4 years than did Black or Hispanic students. While Blacks dropped out at a rate comparable to the class as a whole, Hispanics dropped out at a higher rate. Overall, school completion findings show little change from those for the class of 1993. Seven figures and six tables present school completion figures. An appendix contains school-level analyses in table form. (SLD)

## I. INTRODUCTION

This report tracks the progress toward school completion of students who entered the ninth grade in fall, 1990 and were scheduled to graduate on time in June, 1994. Designated as the Class of 1994, the report indicates the percentages of students who graduated, dropped out, and remained in school to attend summer school or enter a fifth year of high school in fall, 1994.

As noted above, the Class of 1994 is the focus of this report. The Class of 1994 is the ninth class to be studied for at least four years using the longitudinal study method. However, the results in this report represent the status of students in the Class of 1994 only through the end of the 1993-94 school year. Since updates and corrections to the central files are made during the fall semester, the results in this report are not directly comparable to the four-year statistics provided in previous reports. Also, this report excludes students who transfer out of the New York City public schools from the calculation of dropout and graduation rates. Statistical comparisons with the results for previous classes (excluding discharged transfers), are made in the section entitled, "What are the results across classes?" (See page 14.)

The present report focuses on the outcomes for the entire Class of 1994, as well as on the outcomes of various student groups, each of whom has specific academic needs, including students with limited English proficiency (LEP). In addition, results by school and program type, including the performance of students in Project Achieve schools, are included. Outcome data for the individual high schools are presented in the Appendix.

### *Definition of the Longitudinal Study Group*

General education students were assigned to the Class of 1994 based on the year in which they entered grades 9 through 12. The vast majority (almost 90 percent) of the students in the Class of 1994 entered the study group as first-time ninth-graders during the 1990-91 school year. The remainder of the students transferred into the New York City public school system during high school and joined the study group as tenth graders in 1991-92, as eleventh graders in 1992-93, or as twelfth graders in 1993-94. The study group includes students served in special education resource rooms. All of these students would have completed the traditional four-year high school sequence by June, 1994. Students who were discharged to other school systems with confirmation of enrollment in those school systems were deleted from the study group. The numbers of these students are reported.

Since self-contained special education classes are ungraded, students were assigned to the Special Education Class of 1994 based on their age and enrollment in special education programs. Students were included in the Special Education Class of 1994 if they were 14 years old during the 1990-91 school year and were in a self-contained special education class in a community school district school or high school or in a citywide special education program. Students were not added to the Special Education Class of 1994 after the initial year because of the ungraded nature of their classes. Results for these students are presented in a later section of this report.

## DEFINITION OF OUTCOMES

The primary focus of this report is on the number and percent of students graduating on time and dropping out of the New York City public schools. Related to this focus is the determination of the status of the entire class at the time the students were expected to graduate. In order to provide these results, each student in the study group is assigned to one of five possible categories based on each student's status at the end of the 1993-94 school year:

- *Dropouts:* students who have left the school system without enrolling in another educational program that leads either to a high school diploma or prepares the student for the Test of General Educational Development leading to a general equivalency diploma (G.E.D.).

Students are identified as dropouts during the school year if, after a period of non-attendance (generally, at least one month) and a subsequent search by the Bureau of Attendance, the student does not return to school. According to State Education Department regulations, students who turn 17 during the school year must be maintained on register until the end of the school year, at which time the student can be discharged as a dropout.

- *Graduates and Other School Completers:* students who have received either a high school diploma, G.E.D., or special education certificate by the end of the 1993-94 school year. For the first time, graduates are identified by the type of diploma received: regular high school diploma, Regents-Endorsed diploma, or Regents-Endorsed diploma with Honors.
- *Discharges, Transfers and Students Leaving the School System:* these are students who left the school system to enroll in another educational program or setting. This includes students who entered local private or parochial schools, left New York City altogether, or entered a non-Board of Education G.E.D. preparation program. Students who age-out of the school system and students who died prior to completing high school are also counted in this category. Students in this category are identified as "Discharged" to avoid confusion with high school transfers within the New York City public schools. Students may be discharged from the school system only after a request for the student's records (or other official documentation) has been received or there is a confirmed admission to the new educational setting.

Students who are discharged from the school system no longer attend the New York City public schools. As such, it is inappropriate to hold schools responsible and accountable for these students. Therefore, following their initial accounting, students who were discharged from the school system are not included in the final statistics for the study group.

- *Students Still Enrolled in the School System:* students who were still on register as of the end of the 1993-94 school year, including students who will graduate in August, 1994.
- *Unknown Status:* students whose admissions and/or discharges have not been recorded due to either errors or delays in data reporting or computer system entry.

## II. THE CLASS OF 1994

### *Who are the students in the Class of 1994?*

- After adding admissions to the Class in grades 10, 11, and 12 and removing students who transferred to other school systems, there were 63,130 students in the Class of 1994.
- Almost 90 percent of the 63,130 students in the Class of 1994 entered the cohort as first-time ninth-graders during the 1990-91 school year. (See Table 1.) An additional 12,684 students were in the Class of 1994 but were discharged from the school system prior to their expected graduation date.

TABLE 1

Grade and Year of Entry into the Class of 1994

Grade and Year of Entry	Admissions	Transfers (Discharges)*	Total Students in Class
9th Grade, 1990-91	67,789**	2,939	64,850
10th Grade, 1991-92	4,808	3,844	65,814
11th Grade, 1992-93	2,784	3,332	65,266
12th Grade, 1993-94	433	2,569	63,130
Total	75,814	12,864	63,130

\* Number of students transferred (discharged) from the New York City public schools during the indicated school year.

\*\* Number of students on register in grade 9 who were not held over from the previous school year.

- The Class of 1994 contains a slightly higher proportion of females than males (51.5 percent females and 48.5 percent males).
- Nearly 40 percent of the students were over age for grade when they entered high school. Research has shown that these students are at greater risk of not completing high school than those of appropriate age for grade.
- 14.4 percent of the students in the Class of 1994 were limited English proficient (LEP). 28.5 percent of the LEP students entered the New York City public schools in the 10th, 11th, or 12th grade. Most were recent arrivals from other countries and many were over age for grade.

- 5.8 percent (3,639 students) of the Class of 1994 were in a special education resource room class at some point during the four years.

*What were the school completion outcomes for the Class of 1994?*

Figure 1 shows the outcomes for students in the Class of 1994, as of the end of the 1993-94 school year. The overall results for the Class of 1994 indicate the following:

Figure 1

- the dropout rate was 18.7 percent. However, because discharged students are not included in this percentage, it is not comparable to any similar statistics reported previously.
- the total graduation rate for the Class of 1994 is 44.3 percent (which does not include August, 1994 graduates).

- a total of 37.0 percent of the Class of 1994 was still enrolled in school as of the end of the 1993-94 school year. Based on previous studies, between 10 and 15 percent of these students will complete their graduation requirements during the summer of 1994.

Table 2 presents the status of the Class of 1994, for each of the four years of the study. The percent of students in the Class of 1994 receiving a G.E.D. was 3.1 percent and the percent of students receiving diplomas (including Regents-endorsed and Regents-endorsed with Honors) was 41.2 percent.

**Table 2**  
**Class of 1994 Status by Year**

Status	<i>Year</i>				<i>Four-Year Total</i>	
	1990-91	1991-92	1992-93	1993-94		
Dropouts	400	1,599	3,514	6,278	11,791	18.7
• G.E.D Recipients	9	77	705	1,180	1,971	3.1
• Graduates and Others	15	78	839	25,082*	26,014	41.2
Total Graduates and G.E.D. Recipients	24	155	1,544	26,262	27,985	44.3
Students Still Enrolled, as of June 30, 1994	---	---	---	23,237	23,237	36.8
Students With Unknown Status	---	---	---	117	117	0.2
<b>Total</b>	<b>424</b>	<b>1,754</b>	<b>5,058</b>	<b>55,894</b>	<b>63,130</b>	<b>100.0</b>
Transfers Out, Other Discharges (for accounting purposes, only)	2,939	3,844	3,332	2,569	12,684	

\* Of these students, 19,187 students (76.5 percent) received a regular high school diploma, 4,513 students (18.0 percent) received a Regents-endorsed diploma, and 1,288 students (5.1 percent) received a Regents-endorsed diploma with honors. The remaining 94 students (0.4 percent) received special education diplomas or certificates.

For the first time, data are available on the number and percent of students in a cohort class by the type of high school diploma received. As the results in Table 2 indicate, for the over 25,000 students who received a diploma during the 1993-94 school year, over three-fourths received a regular high school diploma. Almost 20 percent of these students received a Regents-endorsed diploma, and five percent received a Regents-endorsed diploma with honors. (See Figure 1.) The 94 students who received special education diplomas or certificates were **originally** general education students. Subsequent to their identification as members of the Class of 1994, these students were placed in special education classes; hence, their special education diplomas and/or certificates.

## Outcomes by Various Student Groups in the Class of 1994

What are the outcomes for the Class of 1994 by gender?

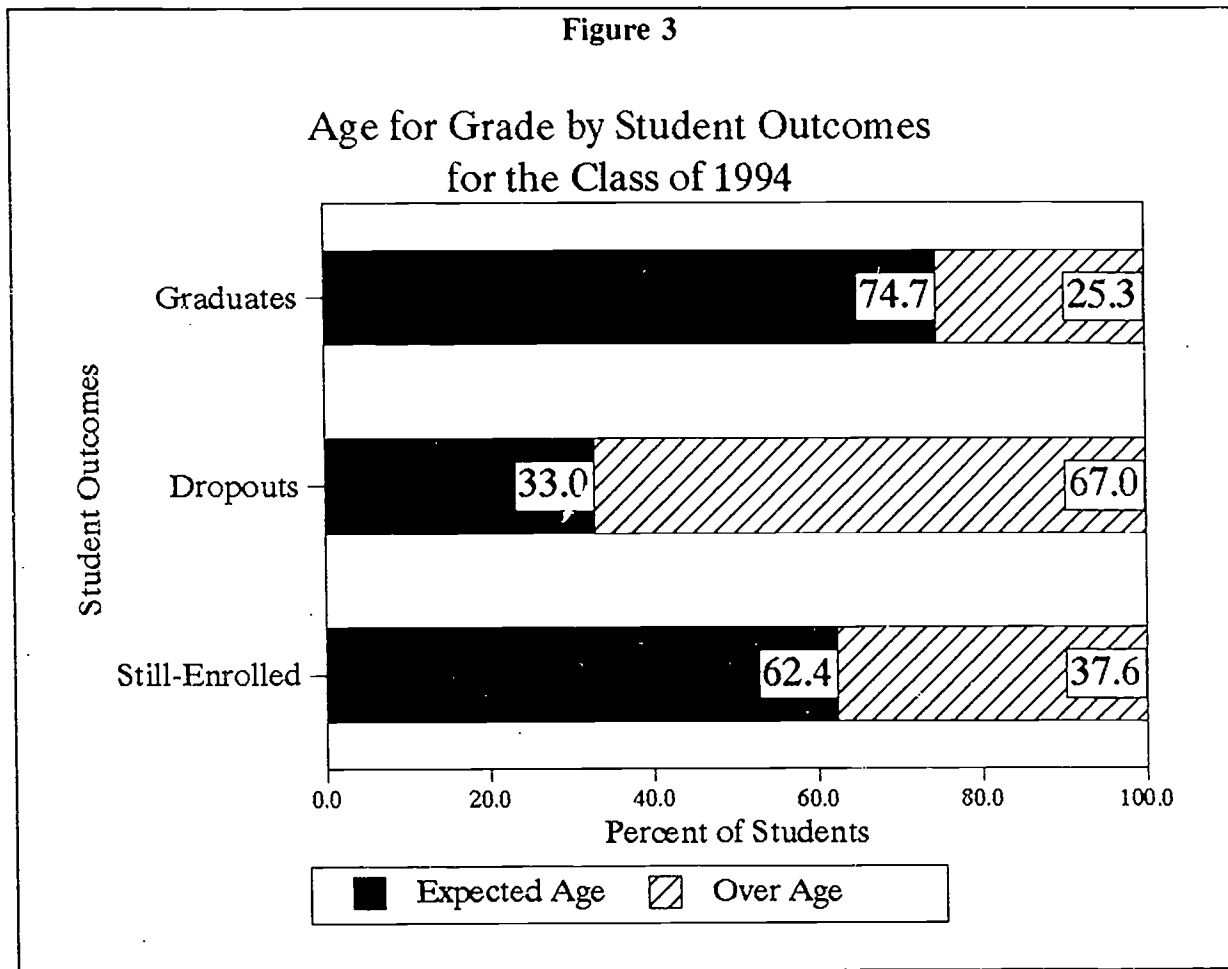

As noted above, the Class of 1994 is evenly divided by gender. However, an analysis of the student outcomes for the Class of 1994, by gender (after the discharged students have been removed), showed differences in the results. As seen in Figure 2, a substantially greater

percentage of females than males graduated on time by the end of the 1993-94 school year. Further, the percentage of males dropping out was more than two percentage points higher than that of females. Also, a substantially higher percentage of males were enrolled in school after four years of high school.

What are the outcomes for the Class of 1994 by age for grade?

Although high school is traditionally a four-year course of study, which students are expected to complete by the time they are 18 years old, many students enter the cohort in grade 9 already over age for grade. This may be due to previous retentions or because the students were over age when they entered the New York City public schools. Figure 3

indicates the percentage of students who were either over age or the expected age, by student outcome. As the results show, almost three-fourths of the students who graduated on time, at the end of the 1993-94 school year, were the expected age for grade when they entered grade 9, compared to only one-third of the students who became dropouts.

*What are the outcomes for the Class of 1994 by student ethnic/racial background?*

Student outcomes were next analyzed by the student's ethnic/racial background. As Table 3 indicates, almost one-third of the students in the Class of 1994 were Hispanic. Slightly

**Table 3**

Ethnic/Racial Background of the Class of 1994, by Status,  
as of the End of the 1993-94 School Year

Ethnic/Racial Background	Status, as of June, 1994			Total	
	Still- Enrolled*	Graduate	Dropout	N	%
Am. Ind./Alask. Native	0.3	0.3	0.3	189	0.3
Asian/Pacific Islander	8.0	16.0	5.6	7,019	11.1
Hispanic	36.6	24.5	44.1	20,593	32.6
Black(Non-Hispanic)	43.0	32.5	37.7	23,563	37.3
White (Non-Hispanic)	12.1	26.8	12.3	11,766	18.6
Total	100.0%	100.0%	100.0%	63,130	100.0%

\* Includes students with Unknown status.

**Note 1:** Percentages may not add to 100% due to rounding.

**Note 2:** Data do not include students who were discharged from the school system.

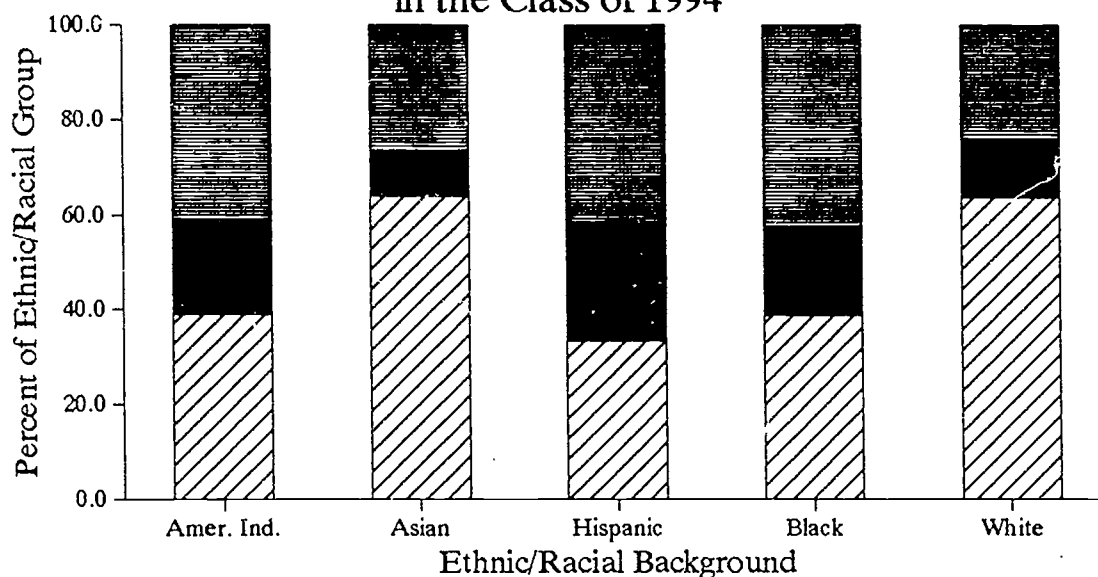

more than 10 percent of the students in the Class were Asian/Pacific Islanders. Just under 40 percent of the students in the Class were Black, and less than 20 percent of the students in the Class were white. A very small percentage of the students were of American Indian/Alaskan Native background. As the results in Table 3 indicate, Hispanic students account for a higher percentage of the dropouts (44.1 percent) than their representation in the total population (32.6 percent). Conversely, Hispanic students are under-represented among the graduates, in relation to their representation in the total population.

School completion outcomes by ethnic/racial background were analyzed in another way. Figure 4 shows the percent of each ethnic/racial group achieving each outcome. The results indicate that substantially higher percentages of Asian/Pacific Islander and white students graduate within four years than do Black or Hispanic students.

A large percentage of Black and Hispanic students drop out of school. However, Black students drop out at a rate comparable to that of the Class of 1994 as a whole; Hispanic students dropout at a rate higher than that for the Class as a whole.

Figure 4

Four-Year Outcomes for Ethnic/Racial Populations  
in the Class of 1994

Graduates	38.7	64.0	33.2	38.6	63.6
Dropouts	20.3	9.4	25.2	18.9	12.3
Still-Enrolled	41.0	26.6	41.5	42.6	24.0

*What are the outcomes for students in the Class of 1994 who are limited English proficient?*

- A total of 14.4 percent (9,088) of students in the Class of 1994 were LEP, **excluding** those students who were discharged from the school system.
- Figure 5 compares the outcomes for LEP and non-LEP students. As the results indicate, although LEP students have a substantially lower graduation rate than and about the same dropout rate as non-LEP students, a substantially greater proportion of LEP students remain enrolled in school. This finding indicates that although it takes the LEP students longer to complete their education, they are remaining in school.

Figure 5

### Four-Year Outcomes for the Class of 1994 by LEP Status

Non-LEP Students  
(N = 54,042)

LEP Students  
(N = 9,088)

\* Includes students with unknown status.

Note: Data do not include students who were discharged from the school system.

*What are the outcomes for students in the Class of 1994 by the type of school they attend?*

As noted in previous reports, there are numerous types of schools with wide variations in program offerings. However, the high schools which students attend can be disaggregated into seven basic types. The first type is Alternative High Schools, smaller settings which emphasize academic and personal support. Second are the Total Educational Options High Schools, in which students are admitted based on their previous year's academic performance. In these schools, half the students are selected by the school and the other half are randomly chosen by computer so that the entering class represents a range of student academic achievement. Third are the Specialized High Schools, the three science high schools and LaGuardia High School, all of which require students to pass special entrance examinations. Fourth are the Vocational/Technical High schools which offer programs that prepare students for jobs in a vocational or technical area, or for college. Fifth are the zoned Academic/Comprehensive High Schools, many of which have special programs with various

admission requirements, but which are required to accept all students who wish to attend and who live in the school's zone. Sixth are the Alternative High School Retrieval Programs, which are smaller settings designed for students with special problems, many of which place them at risk for dropping out, such as teenage pregnancy, substance abuse, or criminal activity. These programs provide individualized academic and personal assistance to their students so they can return to the high school or to prepare these students for the G.E.D. Finally, there are the In-School G.E.D. Programs, which are designed for students who are not succeeding in the regular academic program in the high school, but who wish to prepare for the G.E.D.

As the results in Figure 6 indicate, there is a wide variation in the four-year outcomes for students by school type, **excluding** those students who were discharged from the school system. As expected, students in the specialized high schools have the highest on-time graduation rate (76.9 percent) and the lowest dropout rate (1.5 percent). Students in the in-school G.E.D. programs had the highest dropout rate (45.3 percent), followed by students in the Alternative High School Retrieval Programs (43.3 percent). The dropout rate for the zoned academic/comprehensive high schools was 15.0 percent.

Overall, the results show a great disparity of student outcomes among the various school types. Further, the results indicated that the more selective the high school type, the higher the graduation rate and the lower the dropout and still-enrolled rates.

*What are the outcomes for students in the Class of 1994 who are in special education resource room classes?*

A total of 3,639 students (5.8 percent) in the Class of 1994 were in a resource room class at some time during the four years of the study. Virtually all of the students who were in resource room classes were students who entered the cohort as ninth-graders during the 1990-91 school year. Over 60 percent of the resource room students were male and almost two-thirds were at least one year overage for grade when they entered ninth grade. While approximately one-third of the resource room students were in those classes for only one year, slightly more 40 percent were in a resource room class for three or four years, essentially their entire high school career.

The results for students in resource room classes are found in Table 4. As the results indicate the dropout rate for these students is substantially higher than for the population as a whole (26.0 percent compared to 18.7 percent, respectively) Further, the graduation rate for resource room students is substantially lower (23.9 percent compared to 44.3 percent, respectively). However, half of the resource room students are still enrolled in high school, indicating that although they are taking longer to complete their education, they are remaining in school.

**Table 4**  
Class of 1994  
Outcomes for Students in Resource Room Programs  
at the End of the 1993-94 School Year

Outcomes	Number of Years				Total Number of Students	Percent of Total
	1	2	3	4		
Dropouts	381	334	171	59	945	26.0
Graduates and Other School Completers	209	199	161	300	869	23.9
Students Still Enrolled*	433	442	370	580	1,825	50.1
Total <sup>1</sup>	1,023	975	702	939	3,639	100.0

\* Includes Students with Unknown Status

Note: An additional 566 students in resource room programs were discharged from the school system during the four years of the study.

*What are the outcomes for students in Project Achieve schools?*

A comparison was made examining the four-year longitudinal results for the Classes of 1990 through 1994 for the Project Achieve schools. Since the results for the Class of 1994 are not directly comparable to the four-year results reported in previous longitudinal studies, results for previous classes have been recalculated, **excluding** students who were discharged from the school system. These results, found in Table 5, indicate that there has been a steady decline

**Table 5**

Four-Year Outcomes for Students in Project Achieve Schools, by Class

<i>Class of:</i>	<i>Dropouts</i>	<i>Graduates</i>	<i>Still-Enrolled*</i>	<i>Total N</i>
1990	28.3%	33.9%	37.9%	18,512
1991	24.6	37.1	38.3	15,452
1992	21.9	36.8	41.3	14,596
1993	20.6	36.1	43.3	14,495
1994	20.5	36.4	43.1	15,316

\*Includes students of Unknown Status.

**Note:** Students who were discharged from the school system are **not** included in the above results.

in the four-year dropout rate in these schools over the last five classes.

The Class of 1994 is the first in which Project Achieve has been implemented in the high schools for all four years. The results indicate that there is a continued decrease in the dropout rate and a small increase in the graduation rate. The percentage of students still enrolled remains at over 40 percent of the students in Project Achieve schools. The continued, albeit small, decrease in the dropout rate is a preliminary indication that initial program effects observed previously appear to be continuing.

*What are the results across classes?*

Table 6 shows the four year results for the past five classes with data for 1990 through 1993 recalculated for valid comparisons with the Class of 1994. As the results indicate, the dropout rate has declined by four points since the Class of 1990. Conversely, the percentage of students still enrolled has increased by four percentage points. The on-time graduation rate peaked in 1991 at 46.4 percent, and has since declined to 44.3 percent, the same rate as the Class of 1990.

**Table 6**

Comparison of Four-Year Outcomes for  
the Classes of 1990, 1991, 1992, 1993, and 1994

<i>Class of:</i>	<i>Dropouts</i>	<i>Graduates</i>	<i>Still-Enrolled*</i>	<i>Total N</i>
1990	22.7%	44.3%	33.0%	68,853
1991	20.5	46.4	33.2	59,202
1992	19.1	45.7	35.2	60,144
1993	18.5	44.4	37.2	61,347
1994	18.7	44.3	37.0	63,130

\*Includes students of Unknown Status.

**Note:** Students who were discharged from the school system are **not** included in the above results.

Of additional note, is the total enrollment of the five classes. Following the large drop in the number of students from the Class of 1990 to the Class of 1991 (approximately 9,000 students), the size of the classes has increased steadily over the past four years. The Class of 1994 contains 4,000 more students than the Class of 1991. This increase is consistent with the overall increase in enrollment in the New York City public schools during the same period.

### *What are the outcomes for the Special Education Class of 1994?*

Students in the Special Education Class of 1994 were 14 years old during the 1990-91 school year and were in a citywide special education school or self-contained class in a junior high or high school during that school year. Due to the different nature of their programs, results for the Special Education Class of 1994 are reported separately for students in Citywide Programs and high school self-contained classes. For the Citywide Programs, a total of 2,584 students were identified as members of the Class. Of these students, 741 were discharged to other school systems. For the high school self-contained classes, a total of 5,624 students were identified, of whom 762 were discharged to other school systems.

The results for the Special Education Class of 1994, found in Figure 7, indicate the following:

- the dropout rate for high school students was 19.3 percent, compared to 13.7 percent for students in citywide programs. Since discharged students are **not** included in this percentage, it is not comparable to any similar statistics reported previously.

Figure 7

Four-Year Outcomes for the Special Education Class of 1994  
for Citywide Programs and High School Self-Contained Classes

Note: Data do not include students who were discharged from the school system.

- the four-year graduation rate for high school students was 6.3 percent.
- almost three-fourths of the high school students (74.4 percent) and 84.9 percent of the students in citywide programs were identified as still enrolled in school as of June 30, 1994.

That such large percentages of special education students are still enrolled in school is not surprising. As has been noted in previous reports, many special education students are in programs designed to provide services until students are 21 year old. At that time many of these students are expected to participate in adult programs for former special education students.

## *Conclusions and Recommendations*

Overall, the school completion findings for the Class of 1994 show little change from those for the Class of 1993. Moreover, although the four-year dropout rate has declined over the past five classes, from 22.7 percent for the Class of 1990 to 18.7 percent for the Class of 1994, the on-time graduation rate has remained at 44.3 percent. The decline in dropout rate has been associated with an increase in the holding power of our high schools. The percentage of students remaining in high school beyond four years increased from 33 percent for the Class of 1990 to 37 percent for the Class of 1994.

There is evidence that the increase in high school holding power is partly attributable to dropout prevention initiatives, such as Project Achieve. Since 1990, the dropout rate of Project Achieve schools has declined by 7.8 percentage points, while the graduation rate has increased by 2.5 percentage points and the percent of students attending high school for more than four years has increased by 5.2 percentage points.

At the same time, the high schools are serving more students who, as indicated by research, require extra time to complete their studies. In recent years the percentage of limited English proficient (LEP) students in the New York City public schools has been increasing steadily. Approximately one in seven students in the Class of 1994 was LEP and many of these students were recent arrivals to this country with weak educational backgrounds. Only 36.7 percent of the LEP students in the Class of 1994 graduated on time, with 44.8 percent continuing in school beyond June 1994. These statistics compare to an on-time graduation rate of 45.6 percent and a still-enrolled rate of 35.7 percent for non-LEP students. The good news is that these students are staying in school and making progress toward graduation. However, the extra educational and support services that they require strains an already overburdened school system.

Further, the findings of this and other studies point to the importance of taking a systemic approach toward the improvement of school completion rates. The results indicate that students who are at risk when they enter high school are far less likely to graduate, and conversely more likely to drop out, than those who arrive better prepared for high school academics. Students who have poor reading and mathematics skills, low middle-school attendance rates, and are over age for grade are at risk of school failure. Efforts to increase school completion rates must focus on strengthening students' preparation for high school, as well as focusing on improving high school programs.

The following recommendations are based on the findings of this study:

- Continue and strengthen high school prevention programs that have proven effective, including Project Achieve.
- Continue the implementation of initiatives to systemically improve teaching and learning at all school levels, including Curriculum Frameworks, Benchmark Standards, and the Middle Schools Initiative.
- Strengthen programs that facilitate the transition of new arrivals to our school system.

- Continue efforts to implement the recommendations of the Latino Commission to improve the school completion outcomes of Latino students.
- Develop new reporting formats to provide school staff with useful data concerning the educational progress and success of students in their schools. These reports should disaggregate outcome data to help to determine which groups of students are and are not succeeding in each school.
- Develop a periodic (perhaps monthly) system of tracking the progress of each school on student indicators that correlate with school completion and success.
- Continue to focus on initiatives, such as the Chancellor's Math and Science Initiative, that will boost the percentage of students who obtain Regents Diplomas by encouraging the teaching and learning of higher level curricula.

APPENDIX  
SCHOOL-LEVEL ANALYSES FOR THE CLASS OF 1994

**Appendix Table 1**  
**Outcomes for the Class of 1994, by School and Superintendency**
