ABSTRACT

This report presents recommendations for a Unified Higher Education Budget for Alabama for fiscal year 1995-96. The recommendations are designed to effect improvements in the allocation of scarce education resources. An introductory section analyzes higher education funding over the 23-year period that the state-mandated unified budget recommendations have been prepared, concluding that higher education has made little relative progress in funding. Two funding recommendations are then presented: the amount needed for Alabama higher education to provide competitive education, and the amount recommended based on availability of only a 7.5 percent increase over the previous year's appropriation. Detailed tables present the recommended amounts for each institution of higher education, the 1993-94 and 1994-95 appropriations, and regional standards. Subsequent sections of the report describe: (1) funding formulas used in arriving at recommended levels of funding, (2) basic data elements and the derived statistics which are inputs to the formulas used in determining regional standards, (3) historic time-series of student headcount and full-time equivalents for public two-year institutions of higher education, and (4) critical capital funding needs. ALABAMA COMMISSION ON HIGHER EDUCATION

**UNIFIED BUDGET RECOMMENDATIONS
FOR FISCAL YEAR 1995-96**

December 1994

"..... The Commission shall receive, evaluate and coordinate budget requests for the public institutions of higher education of this State, shall hold open hearings on the budget requests of the separate institutions and shall present to each institution and to the governor and the legislature, a single unified budget report containing budget recommendations for separate appropriations to each of the institutions. The consolidated budget and analysis of the Commission shall be accompanied by the original requests and their justifications as submitted by each institution. The recommendations of the funding needs of each of the universities, as presented to it by the presidents, which assessment may include, but shall not be limited to, derived conclusions that may be based upon standard techniques of objective measurement, need and unit cost figures arrived at through the use of comparative and verified data secured from the various institutions, applied in an impartial and objective manner, and comparison shall be made not only between similar functions of institutions in Alabama but also between Alabama institutions and similar functions of institutions located in other states, provided that nothing herein shall be construed to prohibit any institutions of higher education in this state from submitting any matter pertaining to the financial operation and needs of said institution to the legislature or to the governor at any time....."

ACT 79-461 Section 9

Fob James
Governor

Henry J. Hector
Executive Director

TO: The Honorable Fob James, Governor, State of Alabama
Members of the Alabama Legislature

We are pleased to transmit herewith the recommendations for a Unified Higher Education Budget for Fiscal Year 1995-96.

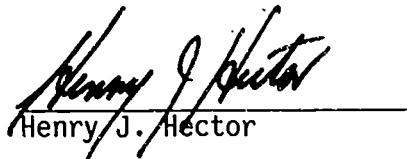

These recommendations are designed to effect improvements in the allocation of scarce education resources. However, certain conditions should apply before such modifications are made:

- the distribution of funds between the broad sectors of education should remain as in previous years;
- all institutions should attain 100 percent of the Regional Standard funding at the same time.

These recommendations are made as part of our lengthy review of higher education funding processes in Alabama. The very nature of funding public activities creates constant change and we are committed to continuing this review to ensure that Alabama's citizens receive a proper return for their investment in public education.

We ask for your continued support in our efforts to bring an increased level of realism and accountability to public higher education finance. Only through concerted efforts will we successfully address the challenges that face us.

Respectfully submitted,

Henry J. Hector

1995-96 UNIFIED BUDGET RECOMMENDATIONS

by

THE ALABAMA COMMISSION ON HIGHER EDUCATION

1995-96 Unified Budget Recommendation

By The Alabama Commission on Higher Education

Higher Education Funding in the last 30 Years

As prescribed by ACT 79-461, Section 9, the Commission on Higher Education evaluates the budgets submitted by the senior public institutions of higher education and by the Chancellor of the Junior, Community, and Postsecondary Vocational and Technical Education System and makes funding recommendations for all of higher education for each fiscal year.

This document presents the twenty-third budget recommendation made by the Commission in executing this important charge from the Alabama Legislature. In reflection, how has Alabama higher education fared during this period? Re-visitation of the original document (Recommended Unified Budget For Postsecondary Education by Spending Units, 1973-75 Biennium, March 1973) suggests that, in truth, higher education has made little relative progress in funding.

At the time of the first Unified Budget Recommendation, the Commission examined funding changes in the context of enrollment growth and cost increases over budget years 1965-66 to 1970-71. The findings were not positive. Enrollment growth and inflation had exceeded growth in State funding by fifteen percent (14.48%). More aspiring college students were being accommodated with less

real resources.

If we make a similar analysis today, we find that since fiscal year 1965-66, cost and enrollment conditions combine to demand over twenty times the level of resources available in 1965-66. This means that in the 1993-94 budget year, the colleges should have been provided an additional \$100,994,675 JUST TO STAY EVEN AT THE 1965-66 LEVEL. That additional \$100 Million would still leave Alabama higher education funding below the regional average.

The State of Alabama has not seen fit to provide for higher education as well as it has for elementary and secondary education. (See the Chart and Table on pages A-10 and A-11.) This is unfortunate since higher education and elementary-secondary education are each so important to the welfare of the other. Higher education not only produces the teachers and administrators for the public school system but is also vitally important to the economic health of Alabama and to the economic health of tax revenues.

A recent Bureau of the Census estimate placed the improvement in lifetime earnings for a person completing a baccalaureate degree at \$600,000 higher than if that person stopped with a high school diploma. As a result, these individuals contribute more substantially to the economic accumulation so important to all Alabamians.

The Census Bureau also estimated in 1990 that a state's Per Capita Income increased by an average of \$424 for each percentage point increase in its college educated population. From 1980 to 1990, Alabama increased the proportion of persons with four or more years of college from 12.2% to 15.7%. If the Bureau's estimate holds, Alabama's college graduates were responsible for supporting nearly \$1,500 improvement in the average annual income of every Alabama citizen.

Alabama, however, still lags behind in Educational Attainment at the college level. For this reason, the Commission on Higher Education continues to estimate that level of funds which should be made available to provide services to the citizens asking for our assistance. That needed funding, which we call the Regional Standard, will amount to \$1,362,016,882 for 1995-96.

Because that level of funding would entail an increase of 60% over the current budget, the Commission understands too well that cannot occur. Alabama faces many competing challenges in providing resources for needed programs. For a number of years, the Commission has accommodated that fiscal reality by also providing a recommendation concerning the best distribution for any lesser sum of monies which can be made available.

1995-96 Unified Budget Recommendation

The Commission on Higher Education met on December 9, 1994 and made two sets of funding recommendations for all of higher education for fiscal year 1995-96. The first recommendation (column 2 of the Executive Summary table, page A-12) is a statement of the Commission's estimate of the basic financial requirements which should be provided to support the institutions and their programs if Alabama higher education is to provide competitive education to our citizens. The second recommendation (identified as the 1995-96 Recommendation (column 5 of the Executive Summary table, page A-12) is predicated on availability of only seven point five percent (7.5%) additional from the Alabama Special Education Trust Fund (ASETF).

This funding level of \$916,312,773, is constructed in two parts. First, all institutions should receive additional relief from several years of budget proration and reduction. Secondly, additional Equity funds should be allocated on the basis of remaining un-met needs of the institutions. The recommended Index (column 8 of page A-12) should be used to distribute all institutional funds beyond the 1994-95 appropriation level. This two-part recommendation continues to anticipate that the traditional Alabama Higher Education share of the ASETF will be made available.

The Commission approved this recommendation by unanimous vote of members present at the December 9, 1994 meeting. The Commission members believe that this document reflects the best compromise possible between documented needs, as outlined in the Regional Standard column and the anticipated level of available revenues.

This unified budget recommendation is based upon the following beliefs. First, all institutions should receive relief in their base budgets. Second, the distribution of funds between higher education and the elementary/secondary systems will remain the same as in previous years. This means that higher education will receive one-third of the Alabama Special Education Trust Fund and K-12 will receive two-thirds. Third, funds available beyond the 1994-95 appropriation should be distributed in accordance with the recommended Index shown in column 8 of the Executive Summary table (page A-12).

The recommendation endorsed in this Commission on Higher Education Unified Budget Recommendation strives to continue a linkage to previous higher education budget agreements. By continuous recognition of relative un-met needs through use of an equity allocation, institutions can move toward the same proportion of regional standard funding.

Regional Standard recommendations

The Regional Standard recommendations (see page A-16), historically designated the "Needs Budget", are based on the following:

- (1) The institutional Regular Academic Programs, or "O&M", amounts are the products of the Commission's funding formulas for regular academic programs, at the level to achieve the average of the Southern Region states.
- (2) The "O&M" amounts shown for the schools of Medicine, Dentistry, and Optometry at the University of Alabama at Birmingham, The University of Alabama, the University of Alabama in Huntsville, and the University of South Alabama are derived from a combination of the funding formulas used for a number of years to determine funding needs for these schools and application of the Regular Academic Program formula.
- (3) The amount shown for the Auburn University First Professional Health (School of Veterinary Medicine "C&M") is, as in the past several years, the result of an algorithm that compares this activity with comparable programs in the other southern states, combined with an application of the Regular Academic Program formula.
- (4) The policy of treating year six of the Pharmacy Doctoral program as First Professional Health was continued in this year's

formula recommendation.

(5) Facilities renewal needs are based on the Commission staff's formula for estimating facilities renewal allowances and backlogs.

(6) Research and Public Service "line items" have been carried forward from their fiscal year 1994-95 funding levels combined with an allocation scheme based on instructional formulas.

(7) Capital Outlay Funds, while a continuing concern for higher education in Alabama, are not recommended for funding from normal revenue sources. The Commission continues to support special funding for the un-met Capital needs of the institutions. The Commission's recommendation for Capital Outlay is included in a systematic statement of system needs in Section F of this document.

Modified Funding Recommendations

An historic difficulty in proposing a Unified Budget Recommendation for higher education in Alabama is the necessity to complete the recommendation process before firm projections are made of ASETF revenues. Once again, the Commission has struggled to provide a viable recommendation within the confines of ASETF revenues.

(1) Facilities Renewal, are included as a sum of the educational activities generating the need. Each institution's recommendation includes an allocation based on the Facilities Renewal formula

applied to inventoried space. The Commission continues to endorse treatment of major capital needs for the several institutions via processes ancillary to the regular appropriations bill.

(2) Some statewide programs which benefit all of public higher education and all citizens of the State are recommended at above average increases. These include the Experimental Program to Stimulate Cooperative Research (EPSCOR), the Eminent Scholars Program, and the Network of Alabama Academic Libraries. In addition, funding is recommended for lines having statewide impact on accountability and educational reform. New funding is recommended for the Rising Junior Examination Program, the National Science Center Foundation, and the Alabama Electronic Data Interchange Initiative. Enhanced funding is recommended for the Teacher Education Scholarship Loan Trust Fund.

Special Circumstances of this Unified Budget Recommendation

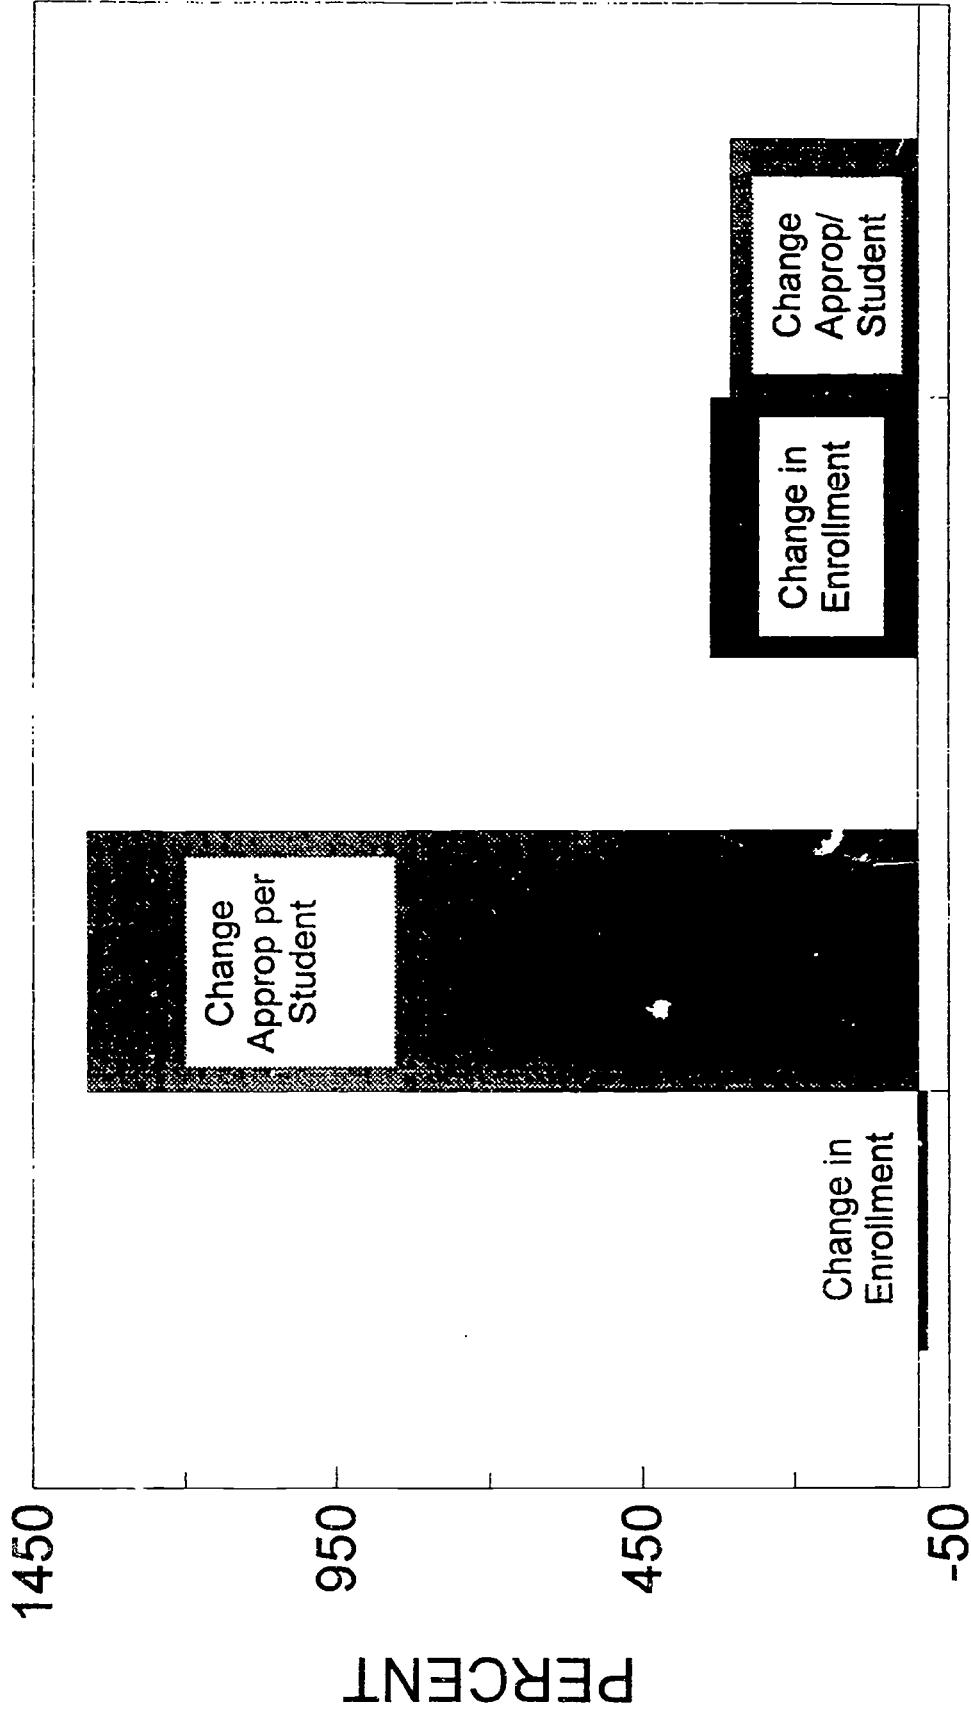

It is important to note that this Unified Budget Recommendation represents continued movement toward balance between institutional needs, as reflected in the constructions of the regional standards, and the historic gap between that standard and actual appropriations. If Higher Education continues to receive its traditional share of revenues and if the political leadership continues to use this approach for distribution among institutions, continued convergence of relative needs and appropriations will occur.

The Commission believes that the distribution incorporated in this Unified Budget Recommendation is one of many required steps to improve higher education funding in Alabama.

Therefore, just as inequities have arisen from different treatment of institutions, so equity can only be reestablished by different treatment. As the following tables demonstrate, this Unified Budget Recommendation recommends different percentage increments for institutions. There is, in fact, a direct relationship between the distribution Index recommended and how far below the Regional Standard is an institution's current appropriation. Inequities which remain will be lessened by each successive use of this approach.

SECTION C

FUNDING FORMULAS
AND UNIFIED BUDGET RECOMMENDATION PROCESS

This section describes the various funding formulas used by the Alabama Commission on Higher Education in arriving at a statement of the level of funding required to achieve the appropriate Regional Standard for the institutional elements of the Higher Education Budget and the processes used in the construction of the Regional Standard for Alabama higher education funding.

EXPLANATION OF FUNDING PROCESS FOR HIGHER EDUCATION

ACHE's recommendations for the funding of postsecondary education are based on several types of assessment:

- A set of formulas which relate funding needs for the regular academic programs of the senior and junior institutions to student credit hours, faculty productivity, and faculty salaries.
- Constructed formulas for the schools of medicine which relate funding needs to current uniform teaching procedures.
- Facilities Renewal Allowance is an estimation of the amount of money needed to provide for the aging of all building elements in a given year.
- Updated values for ongoing research and service activities and for other instructional activities which are not susceptible to "formula" determination, derived from earlier funding levels.
- Analysis of funding needs for new programs and major changes in existing programs based on estimated expenditures and revenues.

Regular Academic Program Formula - Universities

The calculation of the Regular Academic Program multiplier is predicated in the estimated SREB regional General Studies average salary for doctoral and regional institutions. A multiplier is determined from regional faculty salaries adjusted by an estimated departmental expense rate. The multiplier uses an assumed faculty productivity factor of 630 student credit hours (SCH) annually for doctoral institutions and 585 SCH for nondoctoral institutions. These productivity factors imply a General Studies faculty: student ratio of 1:26 for doctoral institutions and 1:24 for regional institutions.

The computations for 1995-96, for the senior institutions, are shown on page C-6.

The amounts calculated above are distributed to institutions according to a formula consisting of the sum of the following elements:

- (a) Weighting Factors
- (b) Other Cost Factors.

CLASSIFICATION OF INSTRUCTIONAL PROGRAMS (CIP) CODES AND WEIGHT CATEGORIES USED IN ALABAMA REGULAR ACADEMIC PROGRAM FORMULA

| Regular Academic Program Formula Category | Discipline | Academic Complexity Weights | | | | | |

| 1989-90 | 41,039 | 1.1004 | 45,159 | 86.02 |

Source: NASULGC - National Association of State Universities and Land Grant Colleges. AASCU - American Association of State Colleges and Universities. Inflation factors - Based on U.S. Bureau of Labor Statistics, CPI(U).

Notes:

- A. Multiplier equals Region IV inflation-adjusted salary divided by productivity of 630 semester credit hours, plus 20% of salary cost added for Departmental Operating Expense. Multipliers are based on salaries two-years prior to formula year, adjusted for inflation.
- B. Multiplier applied to nondoctoral is weighted by the average ratio of AASCU to NASULGC national salaries times the ratio of doctoral productivity (630 SCH) to nondoctoral productivity (585 SCH).

Oklahoma State University.

Senior Institutions

The 1995-96 calculations included three (3) changes:

- 1) The General Administration and Student Services allocation was modified in order to address the concerns of smaller colleges that this component did not adequately address their needs.
- 2) The calculation of the Purchased Utilities Allowance was modified so that it now uses a statewide standard based on the average annual consumption rates for heating, electricity, and for other utilities combined;
- 3) The First Professional Health Programs were included under the Regular Academic Program Formula.

In order to prevent disruptive changes in the allocation of funds these changes will be phased in over a three year period, this is the second year of the phase in and three-quarters of the effect is in place in this year's formula calculations.

Due to the phase in of the effect the following includes an explanation of the "historic" and "modified" calculations. The weights used for the First Professional Health Programs are included on the Classification of Instructional Programs (CIP) Codes and Weight Categories Table on page pages C-2 and C-3.

Historic Calculation

1. Instruction: The three year average of actual on-campus weighted semester credit hours for 1991-92, 1992-93 and 1993-94 is applied to the instructional multiplier. The instructional multiplier is 92.20. Remedial credit hours receive an additional 100% increment.
2. Academic Support: 5% of the amount generated for instruction.
3. Research: 2% of combined amounts for instruction and academic support plus 5% of 1992-93 sponsored research.
4. Public Service: 2% of combined amounts for instruction and academic support.
5. Library Support: Actual on-campus unweighted semester credit hours (except military science) corresponding to the weighted credit hour value multiplied by the following cost factors:

| | |
|------------------------|---------|
| Undergraduate | \$ 8.04 |
| Graduate I (Masters) | 16.14 |
| Graduate II (Doctoral) | 69.11 |
| Law | 42.63 |

6. General Administration and Student Services (GA/SS): For institutions with total approved headcount enrollment of less than 4,000:

| | |
|--------------------------|----------|
| First 1,000 Headcount | \$716.14 |
| 1,001 to 2,500 Headcount | 361.71 |
| 2,501 to 3,999 Headcount | 246.24 |

For institutions with total approved headcount enrollment of 4,000 or greater:

| | |
|--------------------------|----------|
| First 4,000 Headcount | \$407.14 |
| 4,001 to 8,000 Headcount | 304.91 |
| Over 8,000 Headcount | 274.25 |

The GA/SS amount is computed based on total approved headcount, then distributed proportionately among the GA/SS components of the formula funded lines of the institution.

| | |
|-----------------------------------|-------|
| Example: Total Approved Headcount | 4,000 |
| Main-Campus Headcount | 3,800 |
| Approved Branch Campus Headcount | 200 |

$$\text{Total GA/SS} = 4,000 \times 407.14 = \$1,628,560.$$

$$\text{Main-Campus: } \frac{3,800}{4,000} \times 1,628,560 = \$1,547,132$$

$$\text{Approved Branch Campus: } \frac{200}{4,000} \times 1,628,560 = \$81,428$$

7. Maintenance of Physical Plant and Custodial Services: Gross square feet as of June 30, 1994, multiplied by \$4.11.

8. General Institutional support: 14% of total amount generated in items 1-7.

9. Utilities: The highest annual consumption rate per gross square foot of E & G floor area for the last three years (July-June, 1991-92, 1992-93, and 1993-94) for heat energy and electrical energy were multiplied by projected rates per energy units for 1995-96. The "other" utilities input (water, sewage, and solid waste disposal) was calculated by multiplying the actual rate of consumption per gross square foot of E & G floor area for 1993-94 by a projected rate per energy unit for 1995-96. The projected escalation factor for heating fuel, electricity and other utilities are the same as the inflation factors that were used throughout the calculation of the RAP (1.030 and 1.030). The sum of the projected amounts per gross square foot were then multiplied by the gross E & G floor area as of June 30, 1994.

10. Tuition Adjustment: A weighted average credit hour charge was calculated, using Fall 1994 tuition and required fees and three-year average unweighted credit hours. Ninety percent (90%) of that rate multiplied by the three year average of unweighted credit hours (excluding Military Science) is the tuition deduction for all institutions except Alabama A&M University and Alabama State University. For those institutions, ninety percent (90%) of their actual weighted credit hour charge is used for the tuition deduction.

For the 1995-96 formula, the weighted per-credit-hour tuition deductions are:

| | |
|--------------------------|---------|
| General | \$65.01 |
| Alabama A& M University | 61.77 |
| Alabama State University | 49.21 |

Modified Calculation

General Administration and Student Services (GA/SS): For institutions with total approved campus headcount enrollment of less than 4,000:

| | |
|--------------------------|----------|
| 1 to 2,000 Headcount | \$987.13 |
| 2,001 to 2,999 Headcount | 519.54 |
| 3,000 to 3,999 Headcount | 233.65 |

Utilities:

Calculations are made using a statewide standard which is based on the average annual consumption rates for heating, electricity, and for other utilities combined. The standard consumption rates were then applied to the projected rates of costs for each institution.

Junior & Community College Funding Needs
Alabama Public Institutions
Fiscal Year 1995-96

The average funding rate per FTE student in the seven southern states in which junior colleges receive minimal local support (as in the case of Alabama) is calculated. The rate is multiplied by the Alabama Junior College FTE enrollment to produce a total which approximates the amount funded at the average of the seven southern states. This amount is modified to reflect Teacher's Retirement, Social Security, and inflation.

| STATE | APPROPRIATIONS | FTE ENROLLMENT | \$/FTE | Ranking |
|----------------|----------------|-------------------|--------|---------|

Technical Colleges Funding Needs
Alabama Public Institutions
Fiscal Year 1995-96

Total Funding needs for the Alabama technical colleges are estimated by calculating the average salary (12 months) for technical college faculty, applying a standard student: faculty ratio 15:1) and standard contact hours per year (1,296) to determine instructional salary expense per student FTE, and multiplying this rate by the total FTE for the latest year.

| | |

Constructed Formulas for First Professional Health

The "constructed" formulas used for estimating funding needs of the medical schools were derived by a consultant who worked with the staffs of the medical schools and the ACHE staff. These formulas calculate needs by determining required instructional staffing on the basis of enrollment, computing total salary requirements on the basis of regional salary averages, and estimating other expenditures from past experience in Alabama.

The formulas discretely express the resource needs of the three separate, and quite different, levels in medical education, i.e.;

1. Basic Medical Sciences (B.S.), the first two years of undergraduate medical school;
2. Clinical Sciences (C.S.), the second two years of undergraduate medical school which lead to the award of the M.D. degree;
3. Residency (Res.), the initial graduate medical education which qualifies a new M.D. for practice.

The formulas assert that the resource needs of each of these three levels can be described by four factors, i.e.;

1. The student load, the average enrollment at each level;
2. The cost per faculty contact hour with students. This factor recognizes that faculty have responsibilities other than teaching students. The cost is derived from the salary paid and its' allocation to the various responsibilities held;
3. Faculty contact hours per student, the hours a student is in contact with teaching faculty;
4. Other cost factor: The three factors immediately above describe only the resource needs of direct instruction. The other cost factor expresses the percentage that direct instructional costs are of total costs.

The formula to derive total resource needs for any level of medical education is: Student Load (SL) times Dollars per Faculty Contact Hour (\$/FCH) times Faculty Contact Hours per Student (FCH) divided by the Other Cost Factor (OCF) equals Resource Needs, i.e.,

$$\text{Total Resource Needs} = \frac{\text{SL} \times \$/\text{FCH} \times \text{FCH}}{\text{OCF}}$$

While the formula described seeks to identify the total resource needs of medical education, the formula adopted does not assume that all of these resource needs can or should be met by state appropriations. Rather, we explicitly assert that the state meet only a portion of these needs. The balance of the need is expected to be met by tuition, volunteer faculty, and other sources of income. For this reason, the product of the formula is multiplied by a state support factor, the percentage of the total to be met by the state, to derive an appropriations recommendation.

The procedures used for UAB's School of Dentistry and School of Optometry are identical to those used in previous years: a recommended level of support per student was multiplied by projected 1995-96 enrollments and reduced by tuition and SREB contract revenues to yield the recommended appropriations.

The enrollment data and funding factors used to develop recommendations for Dentistry and Optometry are presented after the medical formula values.

The category for the UAB and USA hospitals' "O&M" has been replaced by an enhancement of the medical formula to provide for clinical education within Medical Centers.

Support requirements for the AU School of Veterinary Medicine were determined by evaluating faculty and support staffing and salaries and augmenting the values produced by the Regular Academic Program to correct for discrepancies in those elements.

MEDICAL SCHOOLS

1995-96 FORMULA

1. Dollars Per Faculty Contact Hour (3.0% inflation for 1995-96.)

| | |
|---------|-------|
| 1993-94 | 77.28 |
| 1994-95 | 78.52 |
| 1995-96 | 81.59 |

2. Cost Per Student:

| Level | \$/FCH | FCH/STU | Fac. Cost | OCF | Total Cost/STU |
|-------------------|---------|---------|-----------|-----|----------------|
| Basic Sciences | \$81.59 | 100 | 8,159 | 0.4 | \$20,397 |
| Clinical Sciences | \$81.59 | 500 | 40,794 | 0.4 | \$101,986 |
| Residency | \$81.59 | 1,600 | 130,542 | 0.4 | \$326,354 |

1. Basic Sciences: cost for years 1 and 2.
2. Clinical Sciences: cost for years 3 and 4.
3. Residency: cost for 4 years, average residency length.

STATE FINANCIAL SUPPORT OF THE AUBURN UNIVERSITY

COLLEGE OF VETERINARY MEDICINE

The construct establishes a mean faculty/student ratio (for DVM students) and a mean faculty salary level for the southeastern state colleges of veterinary medicine. On the basis of data obtained by a telephone survey, a mean benefit factor is calculated and applied to faculty salaries. From reported and estimated data total expenditures are determined and the ratio of total expenditures to faculty compensation calculated.

A constructed funding level for 1992-93 for Auburn's DVM enrollment (350) was calculated by applying the derived faculty/student ratio, faculty salary and benefit factor, and "other cost" factor to this enrollment level (\$19,106,535). This amount was adjusted downward to compensate for the external funding of retirement and social security contributions and for Auburn's tuition and teaching contract revenues, producing a net support value for 1992-93 of \$15,228,582. This value was escalated according to the latest C.P.I. factors - (1.021 and 1.030) to 1995-96 level, \$16,640,683.

Facilities Renewal Requirements

Basis of Estimates:

In its Unified Budget Recommendations for the last seven budget years, the Alabama Commission on Higher Education included funding, to be provided from nonrecurring revenues, for the renewal of facilities. The amount recommended for each institution is an estimate of the amount of money needed to provide for the aging of all building elements in a given year.

The method used by the Commission staff to estimate facilities renewal needs is not as precise as a carefully prepared engineering estimate based on detailed facilities inspections. However, until each institution has thoroughly documented its entire requirement for repair and renovation a detailed engineering estimate cannot be prepared, and the process followed by the staff provides a consistent and realistic estimate of needs. This method of estimating facilities renewal needs is being adopted by a number of states and institutions. The Alabama formula, known nationally as the "Cushing Phillips Formula," is one of three formulas recommended by a national joint commission formed to study facilities renewal. This commission is composed of members of the Association of Physical Plant Administrators, the Society for College and University Planning and the National Association of College and University Business Officers. (See Reference 1)

The rationale behind the process is as follows:

- (1) The incidence of major repair and the need for general renovation of a building increase with its age and the relationship is generally skewed toward the older, unrenovated facilities.
- (2) Different elements of a building wear out or become obsolete at different ages. For example, foundations and principal elements of the superstructure are essentially permanent. Exterior walls, plumbing and lighting have expected life of 40 to 50 years. Roofs and air conditioning should last 20 to 25 years. Interior surfaces require reworking in 10 years or less.
- (3) Different types of buildings, even though constructed to similar standards of quality and of similar materials, are comprised of different combinations ("mixes") of elements, and the cost of replacing or renovating each type depends on the mix and the cost per square foot of each element.
- (4) The "renewal allowance" of a building is defined as the amount which should be budgeted in any year to provide for the aging of all elements of that building. The "renewal backlog" of a building is defined as the summation of all the years' renewal allowances to date, for that building, from its initial completion (or latest complete renovation) and is a measure of the total amount which should be spent to bring the building to essentially new condition. The renewal allowances and backlogs are estimated by multiplying the sums of maximum renewal costs for each 25-year and 50-year element by factors reflecting the age of the building elements.

Attachment 1 summarizes maximum renewal costs, at 1993 construction cost levels, for 50-year and 25-year elements, for different types of college and university buildings, derived from the 1992 Means Square Foot Costs. These construction costs were then adjusted using a regional cost factor of .835. Elements normally requiring reworking or replacement in less than 20 to 25 years (e.g. wall finishes) are not included in renewal costs, on the basis that these elements are dealt with in the course of regular maintenance. (See Reference 2)

Procedure for Calculating Renewal Allowances and Backlogs

Renewal Allowances and Renewal Backlogs are calculated as follows:

(1) Calculate the current replacement value of each 50-year and 25-year element of each major campus building according to Attachment 1 and determine the Maximum Renewal Allowance for each facility as follows:

(a) 50-year Elements: Maximum Renewal Allowance is the sum of the current replacement costs of 50-year elements.

(b) 25-year Elements: Maximum Renewal Allowance is the sum of the current replacement costs of the 25-year elements.

(2) Calculate the "adjusted age" of the 50-year and 25-year elements for each building that has undergone renovation since its construction (up to 50 and 25 years respectively), as follows:

(a) 50-year Elements - Multiply the proportion of the building area renovated by the time elapsed since each renovation. Multiply the proportion not renovated (i.e. one minus the proportion renovated) by the age of the building up to and including 50 years. The sum of the two (or more) products equals the adjusted age of the 50-year elements.

(b) 25-year Elements - Multiply the proportion of the building area renovated by the time elapsed since each renovation. Multiply the proportion not renovated by the age of the building, up to and including 25 years. The sum of the two (or more) products equals the adjusted age of the 25-year elements.

(3) Calculate the current year Renewal Allowance for each facility as follows:

(a) 50-year Elements - Divide the building age (actual or adjusted), up to and including 50 years, by 1,275 (the sum of the years digits from 1 to 50). Multiply the quotient by the Maximum Renewal Allowance for 50-year elements and this product by the gross building area.

(b) 25-year Elements - Divide the building age (actual or adjusted), up to and including 25 years, by 325 (the sum of the years digits from 1 to 25). Multiply the quotient by the Maximum Renewal Allowance for 25-year elements and this product by the gross building area.

(c) Add products (a) and (b).

(4) Calculate a 50-year element renewal factor and a 25-year renewal factor for each facility as follows.

(a) 50-year Elements - Sum the numbers from 1 to the current (actual or adjusted) age of the building (up to 50 years) and divide by 1,275.

$$F_{50} = \frac{1 + 2 + 3 + \dots + \text{Current Age}}{1 + 2 + 3 + \dots + 49 + 50}$$

(b) 25-year Elements - Sum the numbers from 1 to the current (actual or adjusted) age of the building (up to 25 years) and divide by 325.

$$F_{25} = \frac{1 + 2 + 3 + \dots + \text{Current Age}}{1 + 2 + 3 + \dots + 24 + 25}$$

(5) Calculate the Renewal Backlog for each building as follows: Renewal Backlog = (50-year renewal factor) x (50-year Maximum Renewal Allowance) + (25-year renewal factor) x (25-year Maximum Renewal Allowance).

(6) Sum the calculated current year Renewal Allowances and Renewal Backlogs for all campus facilities broken down by funding category (e.g. E&G, Auxiliary, Health Professions, etc.). The sum of the Renewal Backlogs represents current total renovation backlog. The sum of the current year Renewal Allowances will be the amount which should be appropriated for facility renewal for the current year.

Attachment 2 summarizes Renewal Allowances and Renewal Backlogs for all Alabama public postsecondary institutions of higher education, based on the Fall 1990 Facility Inventory, 1993 Space Data Reports and 1992 construction cost data.

SECTION D

DATA ELEMENTS SUPPORTING THE FUNDING FORMULAS SENIOR PUBLIC INSTITUTIONS

This section presents the basic data elements and those derived statistics which are inputs to the formulas used by the Commission on Higher Education in determining the Regional Standards for funding of Alabama public senior institutions of higher education.

SECTION F

CRITICAL CAPITAL FUNDING NEEDS ALABAMA PUBLIC HIGHER EDUCATION

This section presents the Commission on Higher Education's summary of the accumulated backlog of critical capital needs arising from the effects of age, methods and materials of construction, and other factors impacting on the continued usefulness of existing physical plant facilities at the public institutions of higher education in Alabama.

Critical Capital Needs of Alabama

Public Higher Education

As prescribed by Act 79-461, Section 16-5-2(c), "...the Commission shall serve in an advisory capacity to the legislature and the governor of this state in respect to all matters pertaining to state funds for the operation and the allocation of funds for capital improvements of state supported institutions of higher education."

Alabama's appropriations for capital programs have been sporadic since the period of rapid expansion in the 1960's. Lacking cyclical procedures for evaluating or funding capital needs, the state has initiated capital appropriations, normally from new bond revenues, only when external events made such a move politically desirable. For example, between 1978 and 1992, total capital appropriations for higher education only amount to approximately 260 million dollars.

This year, the Commission staff has received capital requests totaling over 782 million dollars. Directly following this narrative, there are three appendices which describe the institutional requests, the Commission's recommendation and a statement of critical capital needs. A summary of all three can be found in Table 1.

Table 1, Part A is a recapitulation of all the institutional requests. Table 1, Part B is the Commission's funding recommendation. The principle component of this recommendation is the inclusion of the estimated deferred maintenance backlog for all of public higher education. This estimate is based on the Commission's Facilities Renewal Formula, which is located on pages C24-C33.

Recently most of the capital funds received by the institutions have been spent for new facilities, rather than renovating existing facilities causing the backlog of deferred maintenance needs to grow rapidly. The current estimated cost for eliminating this backlog, for all categories of space except auxiliary and other, amounts to \$44,534,912 million for the senior institutions and the Marine Environmental Science Consortium, \$11,635,083 million for the two-year colleges, for a total of \$56,169,995 million. Due to the magnitude of the deferred maintenance backlog, this recommendation includes the facilities renewal formula at only 50% of the calculated backlog. The recommendation also includes one-half of the modification/alteration/renovation projects, one-half of all utilities and campus-wide projects, and omits all requests for land acquisition. (Note that in order to highlight the deferred maintenance problem, this recommendation excludes all new construction projects.)

Table 1, Part C is titled Critical Capital Needs. The staff has developed an estimate of critical capital needs by applying well-established facilities planning standards, state and national codes, and other professional criteria to campus facilities and enrollment data. This recommendation includes one-quarter of the facilities renewal formula backlog, one-third of the modification/alteration/renovation requests, one-half of the utilities/campus-wide projects and omits all requests for land acquisition.

The total for these critical needs estimates are \$266.7 million for the senior institutions and the Marine Environmental Science Consortium, \$37.4 million for the two-year colleges, or \$304 million for all public postsecondary campuses (see Table 1, Part C).

The purposes in presenting this estimate are, first, to insure that the magnitude of capital needs are recognized, and second, to make a case for placing these needs in line for regular funding.

TABLE 1

PART A
