ABSTRACT

This revised edition of a guide to vocational program planning in Virginia is intended to be used as a principal resource for vocational program design and application and to serve as a supplement to program information provided to localities by the individual service areas. The guide is organized in eight sections, one for each program area: agricultural education, business education, health occupations education, marketing education, programs for special needs students, technology education, trade and industrial education, and work and family studies. Each section contains the following information: (1) service area overview; (2) student organization information; (3) information on substitutions for high school science, mathematics, and practical arts credits; (4) a graphic representation of suggested program sequences by grade level; (5) a table showing programs and courses along with course codes, grade levels, class sizes, and duration in number of weeks; (6) individual program and course descriptions, including Classification of Instructional Programs (CIP) Code, suggested grade level, prerequisites, approved courses, and related postsecondary programs; and (7) completer requirements for vocational programs. GUIDE TO VOCATIONAL PROGRAM PLANNING

Developed by

Virginia Department of Education Division of Instruction Office of Vocational, Adult, and Employment Training Services Richmond, Virginia 23216-2120

in cooperation with

The Virginia Vocational Curriculum and Resource Center Glen Allen, Virginia 23060

Revised 1994

©Virginia Department of Education, 1994

Preface

This edition of A Guide to Vocational Program Planning has been revised to reflect information essential for use in 1995-96. It is intended to be a principal resource for information concerning vocational program design and application and serves as a supplement to program information provided to localities by the individual program service areas.

The *Guide* is divided into eight sections, one for each program service area. Each section contains the following information:

- A service area overview
- Student organization information
- Information on substitutions for high school science, mathematics, and practical arts credits¹
- A graphic representation of suggested program sequences by grade level
- A table showing programs and courses along with course codes, grade levels, class sizes, and duration in number of weeks
- Individual program and course descriptions, including Classification of Instructional Programs (CIP) Code, suggested grade level, prerequisites, approved courses, and related postsecondary programs.
- Completer requirements for vocational programs.²

iii

It should be noted that the completed vocational offerings that may substitute for a mathematics or science credit are valid only for a 21-unit diploma. No substitution for vocational program completion is allowed when a 23-unit diploma is required. The decision to allow any substitution is a local option.

²A program completer is a student who completes a program that includes a coherent sequence of courses: vocational courses identified by the <u>Vocational Education Reporting System Users Guide</u> and academic courses as identified by the <u>Standards and Regulations for Public Schools in Virginia</u> or an approved alternative education program.

Additional standards are available for students desiring a stronger academic and vocational program, along with information on developing occupational programs that combine two or more courses from different programs.³

Requests for additional information or clarification should be addressed to the appropriate program service area at the following address:

Virginia Department of Education P. O. Box 2120 Richmond, Virginia 23216-2120.

³ Vocational program mix refers to career preparation involving two or more vocational programs and related academic instruction.

Agricultural Education in Virginia

Program Completer Options

..... page 27

Agricultural Education is much broader than vocational agriculture. Agriculture encompasses the study of economics, technology, politics, sociology, international relations and trade, and environmental problems, in addition to biology.

Some instruction about agriculture should be offered to all students, regardless of their career goals or whether they live in urban, suburban, or rural communities. New courses developed for sixth, seventh, and eighth graders, along with the other courses offered, will help to make our society more agriculturally literate.

The agricultural education curriculum is predicated on the belief that certain abilities and skills necessary for successful employment in agricultural occupations can best be developed through systematic and extended instruction; therefore, instruction is based on a five-year sequential program. The first two years are devoted to basic agricultural science and mechanics. These courses provide knowledge and skills basic to employment in agricultural business and lead into one of the five specialized occupational areas in agricultural education offered at the senior high school level.

The agricultural education curriculum stresses the development of leadership abilities and work values and attitudes in units of instruction contained in each course. In addition to the personal employability skills and job search skills that are developed in all occupational preparation programs, the student organization (FFA) provides members with opportunities to use and refine their abilities in leadership and in work situations. FFA activities are an integral part of the total instructional program in agricultural education.

Each student enrolled in an agricultural education course (other than Introduction to Agriscience) should have well planned, supervised agricultural experiences. These include work at school facilities, in agricultural businesses, in home enterprises, or through a combination of these opportunities.

Mission of Agricultural Education in Virginia

The needs of all students in agricultural education in kindergarten through adult will be met by providing a quality instructional program. Instruction in agricultural education will focus on

- the awareness and appreciation of agriculture
- the preparation of students to enter and advance in agricultural occupations
- the application of basic skills to strengthen and support other courses taught in public schools.

- become aware of employment or self-employment opportunities and requirements for making career choices and determining their education programs.
- acquire the competencies needed for employment or self-employment in occupations of their choice and for which there are employment opportunities.
- * acquire the competencies needed as consumers of resources, goods, and services for home and family living and for personal needs.
- develop the competencies needed for a successful transition from school to work with emphasis on the following:
 - leadership skills
 - the American free enterprise system
 - responsible citizenship
 - personal employability skills.
- benefit from programs developed through collaborative efforts with business, industry, and government that effectively use public and private resources.
- become aware of the importance of agriculture in today's society.

Sandle (Control of Control of Con

The FFA is a national organization of students enrolled in agricultural education in 50 states, Puerto Rico, the Virgin Islands, and the District of Columbia. Organized in 1928, the FFA is an integral part of the curriculum in agricultural education departments in the public schools. All students in these programs are to receive instruction in personal leadership growth and development, which can best be achieved through the FFA.

Through active participation in the FFA, members learn by taking part in and conducting meetings, speaking in public, participating in contests based on occupational skills, earning awards and recognition, and becoming involved in cooperative efforts and community improvement. The FFA offers opportunities for becoming productive citizens in a democracy.

FFA members believe in leadership, citizenship, and patriotism. They believe in free enterprise and freedom under the law in making their homes, schools, and communities better places in which to live and work.

Substitution for High School Science, Mathematics, and Practical Arts Credit

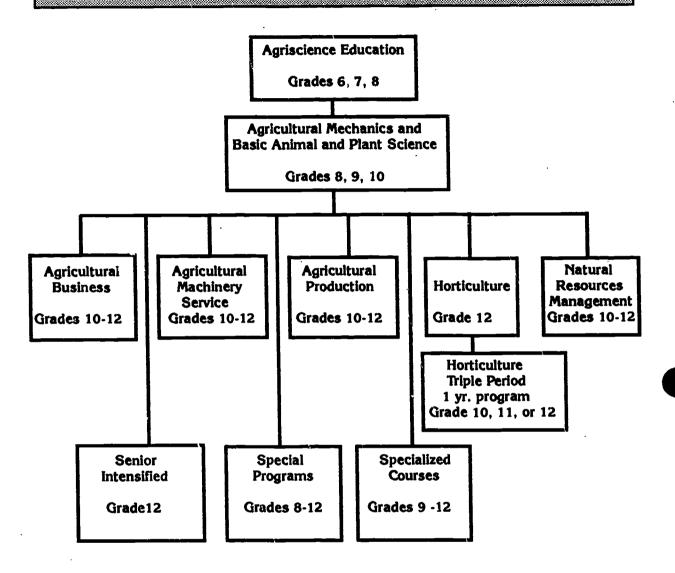

Students who fulfill the requirements of any one of the following may substitute them for one unit of high school mathematics or science in a 21-unit diploma system, if approved as a local option:

- Completion of two courses with at least 2 credits earned (not including exploratory).
- Completion of a vocational center program offered as a single year of tripleperiod classes.
- Completion of a senior intensified course scheduled for a double period or more than one year.

Agricultural Education courses meet requirements for a practical arts elective.

Agriscience Education

Description: This program introduces agriscience to all middle school students as

they become aware of, explore, and apply science to agriculture. Students develop an understanding of the nature of science and how

it is applied in the food and fiber system.

CIP Code:

01.999

Suggested

Grade Level:

6, 7, 8

Approved

Courses:

Introduction to Agriscience 8002 Agriscience Exploration 8003 Agriscience and Technology 8004

Introduction to Agriscience 8002

Grade Level: 6 (18 weeks or less)

Middle school students develop an awareness of the relationships between agriculture and science. Major concepts covered in the course include awareness of agriculture, the world of work, agribusiness careers, human relations, and scientific principles applied in agriculture.

Agriscience Exploration 8003

Grade Level: 7 (18 weeks)

Students explore science as it relates to agriculture. Through well planned instructional activities, students develop an understanding of human relations, communication, the importance of agriculture to the economy, and key scientific terms related to the field of agriculture.

Agriscience and Technology 8004

Grade Level: 8 (18 or 36 weeks)

Through laboratory settings, students apply scientific principles to the field of agriculture, including plants, animals, and ecology/conservation. The course introduces students to biotechnology as it relates to agriculture.

Agricultural Mechanics and Basic Plant Science (I) Agricultural Mechanics and Basic Animal Science (II)

Fundamental Courses Relative to All Agricultural Education Programs

Description:

Agricultural Mechanics and Basic Plant Science (Level I) and Agricultural Mechanics and Basic Animal Science (Level II) are introductory and basic in nature and provide a background for success in agricultural occupations. Students develop basic skills and receive guidance and counseling to help them select an advanced course option leading to entry-level employment in an agricultural occupation. Students review, study, and apply basic principles of the sciences and economics to agricultural situations. This two-year program of study provides much of the knowledge and many of the skills common to agricultural production and employment in off-farm agricultural industries and businesses.

The program covers the first two years in the agricultural education curriculum and is normally a prerequisite for entry into agricultural courses taught in the third, fourth, and fifth years. Schools that offer the third-, fourth-, and fifth-year programs without the first two years of agricultural mechanics and basic plant and animal science must include the essential units of instruction from these basic courses within the course content of the specialized areas.

CIP Codes:

01.0101 01.0601

Suggested Grade Level:

8, 9, 10

Approved Courses:

Agricultural Mechanics and Basic Plant Science

(Level I) 8006

Agricultural Mechanics and Basic Animal Science

(Level II) 8008

Agricultural Mechanics and Basic Plant Science (Level I) 8006

Grade Level: 8 or 9 (suggested) (36 weeks)

Approximately one-half of this single-period occupational preparation course is devoted to agricultural mechanics, with emphasis placed on skill development in basic metals, tool fitting and cold metals, introduction to arc welding, sheet metal, soldering and brazing, plan reading and sketching, and hand woodworking. The remainder of the course emphasizes the development of competencies in plant sciences, rural and urban living, leadership, and resource conservation.

Agricultural Mechanics and Basic Animal Science (Level II) 8008

Grade Levels: 9 or 10 (suggested) (36 weeks)

During the first half of this single-period occupational preparation course, students continue to learn agricultural mechanics, with emphasis placed on fundamentals of electricity, arc welding, gas cutting and welding, small engines, power woodworking, and wood and metal preservatives. They also receive instruction in animal science and further develop competencies in rural and urban living, leadership, and resource conservation.

Agricultural Business

Description:

The Agricultural Business program provides the basic education necessary for entry-level employment and advancement in the broad field of agricultural business. Most secondary agricultural business programs are cooperative education programs; students are involved in classroom activities for one period and are released to work in an agricultural business for one to three periods each day. Classroom topics include human relations, types of agricultural businesses, leadership training, agricultural business management, record keeping, accounting, and agricultural law. A training plan, developed for the student's cooperative work experience and approved by the employer, parent, student, and instructor, lists the competencies (skills) that the student will practice. An evaluation instrument used by the student, employer, and instructor monitors the student's progress toward completing the training plan. Skills developed in the secondary agricultural business programs in Virginia vary greatly and depend upon the student's interests and community resources. Students work for agricultural businesses in all areas of the agricultural industry.

CIP Codes:

01.0101 01.0103 01.0501 01.0102 01.0104 01.0199

Suggested Grade Level:

8, 9, 10, 11, 12

Approved Courses:

Agricultural Mechanics and Basic Plant Science (I) 8006 Agricultural Mechanics and Basic Animal Science (II) 8008

Agricultural Business Fundamentals (III) 8022 Agricultural Business Operations (IV) 8024 Agricultural Business Management (V) 8026

Related Postsecondary Programs:

The Agricultural Business program is articulated with the Agricultural and Natural Resources Technology program offered within the Virginia Community College System, which leads to an Associate in Applied Science Degree. Each degree program includes several majors, some of which are further divided into appropriate specializations.

Agricultural Business Fundamentals (III) 8022

Grade Level: 10 or 11 (suggested) (36 weeks)

Students enrolled in this occupational preparation course develop the necessary knowledge, skills, habits, and attitudes for employment in off-farm agricultural businesses. These businesses provide supplies and services to farmers and process and market agricultural products. Where training centers are available, cooperative arrangements with local agricultural businesses provide occupational experiences for students. When training centers are not available, simulated experiences may be provided. Students acquire an understanding of agricultural business opportunities and the importance of an off-farm agricultural business. They develop product knowledge of items such as feed, seed, fertilizer, machinery, and agricultural chemicals. Leadership training is provided through the FFA.

Agricultural Business Operations (IV) 8024

Grade Level: 11 or 12 (suggested) (36 weeks)

Wherever possible, students enrolled in this occupational preparation course participate in cooperative on-the-job training programs with local agricultural businesses. The curriculum emphasizes off-farm agricultural occupations, business procedures, merchandising, marketing, and agricultural business management. Instruction is provided in agricultural product knowledge, agricultural mechanics, plant science, and leadership development.

Agricultural Business Management (V) 8026

Grade Level: 12 (suggested) (36 weeks)

This occupational preparation course should be operated on a cooperative on-the-job training basis with local agricultural businesses. Much of the instruction may be individualized. The course provides further opportunities for the development of business procedures, management techniques, and agricultural product knowledge. Leadership skills continue to be developed.

Agricultural Machinery Service

Description: The Agricultural Machinery Service program involves the operation,

maintenance, setup, adjustment, repair, reconditioning, and overhaul of agricultural machinery and equipment. Curriculum includes dealership organization, management, sales, human relations, and leadership development. The study of career opportunities and the development of job experience through

supervised occupational experiences are also a part of this program.

CIP Codes: 01.0204 01.0202

01.0201 01.0299

Suggested

Grade Level: 8, 9, 10, 11, 12

Approved Courses:

Agricultural Mechanics and Basic Plant Science (I) 8006 Agricultural Mechanics and Basic Animal Science (II) 8008

Agricultural Power and Equipment (III) 8016

Agricultural Mechanization Sales and Service (IV) 8018

Advanced Agricultural Mechanization (V) 8020

Related Postsecondary Programs:

Agricultural Machinery Service is not an articulated program; however, both the Virginia Community College System and several

four-year colleges in Virginia offer postsecondary degrees in agriculture and related fields. Refer to their catalogs for specific

information.

Agricultural Power and Equipment (III) 8016

Grade Level: 10 or 11 (suggested) (36 weeks)

Agricultural Power and Equipment prepares students for entry-level employment and advancement in the agricultural equipment industry or for the operation and maintenance of farm equipment. Students learn to use selected hand tools, precision measuring tools, and testing equipment. The course also includes instruction in safety, human relations, small engines, farm tractor maintenance, and introduction to tractor engine analysis.

Agricultural Mechanization Sales and Service (IV) 8018

Grade Level: 11 or 12 (suggested) (36 weeks)

Students enrolled in this course learn operating procedures in a parts department, newly developed agricultural machines, engine analysis and troubleshooting, basic hydraulics, mechanical power transfer systems, the implement industry, metal fusion and fabrication welding, and adjustment and repair of tillage equipment.

Advanced Agricultural Mechanization (V) 8020

Grade Level: 12 (suggested) (36 weeks)

Much of the instruction in Advanced Agricultural Mechanization may be offered through individualized instruction and independent study. Major learning areas include operation of an agricultural machinery service department; adjustment, maintenance, and repair of planting, spraying, fertilizing, and crop harvesting equipment; diesel engine systems; organization and management of agricultural machinery dealerships; and agricultural sales techniques.

Agricultural Production

Description: Students who complete the sequence in Agricultural Production are

proficient in animal, plant, and soil sciences and in farm business management and agricultural mechanics. The program provides leadership training through the FFA and incorporates supervised

occupational experiences whenever possible.

CIP Codes:

01.0301 01.0303 01.0305 01.0302 01.0304 01.0399

Suggested

Grade Level:

8, 9, 10, 11, 12

Approved Courses:

Agricultural Mechanics and Basic Plant Science (I) 8006 Agricultural Mechanics and Basic Animal Science (II) 8008

Agricultural Production Technology (III) 8010 Agricultural Production Management (IV) 8012

Operating the Farm Business (V) 8014

Related Postsecondary

Programs:

Agricultural Production is not an articulated program; however, both the Virginia Community College System and several four-year colleges in Virginia offer postsecondary degrees in agriculture and related fields. Refer to their catalogs for specific information.

Agricultural Production Technology (III) 8010

Agricultural Production Technology emphasizes the attainment of competencies in one or more areas of plant science, animal science, soil science, agricultural business management, and agricultural mechanization, based upon the student's employment objective. The course includes appropriate instruction in agricultural mechanics, crop production, farm family living, and basic farm management. Supervised occupational experience programs and leadership training are important parts of the course. When only single periods are provided, greater emphasis is placed on individualized instruction and supervised occupational experience programs.

Agricultural Production Management (IV) 8012

Grade Level: 11 or 12 (suggested) (36 weeks)

Agricultural Production Management includes instruction in agricultural mechanics, with emphasis placed on the application of mechanical skills to farm power and machinery, soil and water management, supervised farming programs, and leadership training.

Operating the Farm Business (V) 8014

Grade Level: 12 (suggested) (36 weeks)

Much of the content in this occupational preparation course may be provided through individualized instruction. The course focuses on farming, farm management, and occupational experience. Students receive instruction in adjusting, operating, and maintaining farm machinery and equipment and in planning and constructing farm buildings and facilities. Continued emphasis is placed on leadership training.

Natural Resources Management

Description:

The Natural Resources Management program focuses on the production, maintenance, harvesting, processing, and distribution of natural resources. The course includes resources management, conservation, human relations, and leadership development topics. The study of career opportunities and the development of marketable skills through supervised occupational experiences are also a part of this program.

The primary purposes of the course of study are to

- provide job entry and/or marketable skills training in natural resources management and related occupations
- provide a broad base of occupational experiences and information upon which students can make a career decision
- contribute to the fulfillment of the broad educational objectives set forth in the high school where this course is taught.

Related Postsecondary Programs:

The Agricultural Resources program is articulated with the Agricultural and Natural Resources Technology program offered within the Virginia Community College System, which leads to an Associate in Applied Science Degree. Each degree program includes several majors, some of which are further divided into appropriate specializations.

Introduction to Natural Resources (III) 60/0

Grade Level: 10 or 11 (suggested) (36 weeks)

Students develop knowledge and skills required for employment in occupations related to forestry and wildlife management; outdoor recreation; and air, soil, and water conservation. Because of the emphasis on different facets of natural resources management in different parts of the state, the course varies to meet local needs and interests. The course includes instruction in forest production and management, wildlife, soil and water conservation, mechanics relating to the field, and leadership training.

Forestry, Wildlife, and Soil Wanagement (IV) 8042

Grade Level: 11 or 12 (suggested) (36 weeks)

Forestry, Wildlife, and Soil Management includes instruction in forest protection and harvesting, fish pond ecology and management, planning and operation of a hunting and fishing preserve, wildlife ecology and management, soil and water management systems, service and operation of large power equipment, and leadership training.

Natural Resources Büşinesi Management (V) 9044

Grade Level: 12 (suggested) (36 weeks)

Much of the instruction in this course may be individualized. Major learning areas include processing forest products, lumber grading, and determining the feasibility of establishing, financing, and managing a business such as forestry, outdoor recreation, wildlife, or urban conservation. Based upon interests, students may receive instruction in developing and operating campgrounds, hiking and riding trails, riding stables, marinas, vacation farms, and farm ponds. Operation and maintenance of equipment is also emphasized. Leadership training is an important area of instruction.

Horticulture

Description: The Horticulture program is a specialized occupational area in

agricultural education. The program curriculum is based on the assumption that students have successfully completed Agricultural Mechanics and Basic Plant and Animal Science I and II. In addition to specific topics in the area of horticulture, the program stresses development of leadership abilities, work values, and attitudes.

CIP Codes:

01.0601 01.0604 01.0606 01.0699

Horticulture Sciences and Practices (III) 8034

Horticulture Operations (IV) 8036 Horticulture Management (V) 8038 Floral Production and Design (III) 8038

Nursery and Landscape Management (III) 8038 Horticulture Production and Marketing (III) 8038

Related Postsecondary:

Programs:

The Horticulture program is articulated with the Agricultural and Natural Resources Technology program offered within the Virginia Community College System, which leads to an Associate in Applied Science Degree. Each degree program includes several majors, some of which are further divided into appropriate specializations.

Horticulture Sciences and Practices (III) 8034

Grade Level: 10 or 11 (suggested) (36 weeks)

Students develop the necessary knowledge, skills, habits, and attitudes for entry-level employment and advancement in areas such as floriculture, landscape design, greenhouse operation, nursery plant production, and turf management. Students receive instruction in using soil and other plant-growing media and in identifying, propagating, and growing horticultural plants in the greenhouse and land laboratory. Instruction is provided in safety practices and leadership development.

Horticulture Operations (IV) 8036

Grade Level: 11 or 12 (suggested) (36 weeks)

Units of instruction in this occupational preparation course include growing greenhouse crops; producing and maintaining nursery crops; establishing, maintaining, and designing landscape planting; establishing and maintaining turfgrass; and operating a flower shop and garden center. Leadership skills continue to be developed.

Horticulture Management (V) 8035

Grade Level: 12 (suggested) (36 weeks)

Much of the instruction in this occupational preparation course may be provided on an individual basis, and cooperative education is recommended as a part of this course. Major learning areas include planning and managing horticulture facilities and crops; managing horticultural businesses; and merchandising, advertising, displaying, and selling horticultural products and services. Leadership development is emphasized.

Floral Production and Design (III) 8038 *
Horticulture Production and Marketing (III) 8038
Nursery and Landscape Management (III) 8038

Grade Level: 10-12 (suggested) (36 weeks)

Each of these courses is designed as a one-year, triple-period, occupational preparation course offered at the tenth-, eleventh-, or twelfth-grade level in localities where no other horticulture course is offered. The particular course is selected by the local school according to student interest and occupational opportunities in the school community.

Senior Intensified

The Senior Intensified program is designed for high school seniors **Description:**

who do not have marketable skills. Turf Management, within the Horticulture program area, provides students with job entry skills as groundskeepers. Farm Equipment Operator, within the Agricultural Mechanics Program area, prepares students with entry-level skills as

operators of farm equipment. The courses are offered in either

cooperative or classroom/laboratory setting.

01.0607 (Horticulture--Turf Management) **CIP Codes:**

01.0299 (Agricultural Mechanics--Farm Equipment Operator)

Suggested

Grade Level:

12

Approved Courses:

Turf Management 8051

Farm Equipment Operator 8052

Turf Management 8051

Grade Level: 12 (suggested) (36 weeks)

Turf Management is a double-period program designed to help high school seniors acquire job-entry skills as groundskeepers. Instruction involves units in growing and maintaining turf grasses for areas such as lawns, golf courses, and athletic fields. The program includes instruction in the proper seeding, fertilizing, thatching, aerating, and mowing of grasses. Other units of instruction include disease control of turf and recommended methods of irrigation. Cooperative education is recommended as a part of this course.

Farm Equipment Operator 8052

Grade Level: 12 (suggested) (36 weeks)

This double-period course helps high school seniors acquire job-entry skills as operators of farm equipment. Instruction includes units on the safe operation and preventative maintenance of equipment used in planting, cultivating, fertilizing, dusting, spraying, and harvesting crops. Cooperative education is recommended as a part of this course.

Special Programs

Description:

The instructional programs in agricultural education that do not fit the category of regular programs are referred to here as "special programs." Generally, the programs described are specially designed for students who are not enrolled in regular programs for a variety of reasons and who require special services and assistance.

These specially designed programs meet student needs that cannot otherwise be met in regular programs and are approved for certain school divisions where such needs have been identified. These programs offer students different approaches to gaining skills needed for employment. It is recommended that teachers, guidance counselors, and others work very closely with students who enroll in special programs in developing individual training plans and instructional objectives.

The primary objective of these programs is to provide a means whereby the student may acquire agricultural occupational skills for employment. In addition, it is hoped that many students will improve to such an extent that they can succeed in regular programs, remaining in school and seeking further educational preparation. Further information on the courses listed below can be obtained from the Agricultural Education Service, Virginia Department of Education.

CIP Code:

01.9999

Suggested Grade Level:

8, 9, 10, 11, 12

Approved Courses:

Agricultural Education for the Disadvantaged 8050 Agricultural Education for the Disabled 8053 General Mechanics for the Disadvantaged 8070

Specialized Courses

Description:

Specialized courses enhance the programs offered in Agricultural Education by providing for concentrated instruction in areas of leadership, ecology, and conservation, small engine repair, agricultural concepts, and equine production. The local schools can

offer the courses on an 18- or 36-week basis.

The courses are designed for students who wish to take an Agricultural Education course but are not enrolled in a program in Agricultural Education.

Specialized courses may substitute for the 8006 or 8008 courses in a program if approved by the local school system.

CIP Codes:

01.0399 (Applied Agricultural Concepts)
03.9999 (Ecology/Conservation)
01.0302 (Equine Management and Production)
01.0199 (Leadership)
01.0299 (Small Engine Repair)

Suggested Grade Level:

9, 10, 11, 12

Approved Courses:

Applied Agricultural Concepts 8072/8073

Ecology/Conservation 8045/8046

Equine Management and Production 8015/8080

Leadership 8009/8081

Small Engine Repair 8021/8082

Applied Agricultural Concepts 8072 (18 weeks) Applied Agricultural Concepts 8073 (36 weeks)

Grade Level: 9-12

Students who have limited or no agricultural background or experience learn fundamental agricultural competencies needed for rural or urban living. Areas of instruction include meat grading and selection; maintenance of home appliances and equipment; and the study of plumbing, electrical wiring, and carpentry fundamentals. Teachers may incorporate additional competencies in the study of soil fertility and in cultural practices for shrubs, lawns, gardens, and fruit trees. The course emphasizes leadership development activities and participation in FFA activities.

Ecology/Conservation 8045 (18 weeks) Ecology/Conservation 8046 (36 weeks)

Grade Level: 9-12 (18 or 36 weeks)

Students develop conservation competencies and skills through the understanding of environmental concerns. Instructional content includes the care, management, and preservation of soil, air, water, and wildlife. Students identify and discuss prevalent environmental problems and learn methods and practices used to preserve natural resources and maintain a healthy ecology. Teachers incorporate specific environmental concerns and issues common to the local school community. The course emphasizes leadership activities and opportunities to participate in FFA functions.

Equine Management and Production 8015 (18 weeks) Equine Management and Production 8080 (36 weeks)

Grade Level: 9-12

In this course, students learn how to care for and manage horses. Equine health, nutrition, management, reproduction, training, evaluation, and showmanship are the major instructional areas. In addition, course content includes instruction in the tools, equipment, and facilities for equine enterprises. Business management topics include the economics of boarding, training, and merchandising horses. Leadership development activities are included, and participation in FFA activities is encouraged.

Leadership Development 8009 (18 weeks) Leadership Development 8081 (36 weeks)

Grade Level: 9-12

This course equips students with personal and group leadership skills. Course content includes units in principles of leadership, officer training, parliamentary law, public speaking, the development of effective communication and human relations skills, the development of positive public relations, and the use of proper etiquette. Principles of organizing and conducting group meetings and activities are also included in the instructional program. Students are encouraged to be active members of a community or school organization.

Small Engine Repair 8021 (18 weeks) Small Engine Repair 8082 (36 weeks)

Grade Level: 9-12

This course offers an intensive study of the operation, maintenance, and repair of small gasoline and diesel engines. Instructional topics include principles of operation of gasoline and diesel engines, tune-up and maintenance procedures, and disassembly, overhaul, and reassembly. Instruction may also include the operation of two-cycle and four-cycle engines commonly found on lawn mowers, garden tractors, snow blowers, rotary tillers, chainsaws, and other equipment. The course emphasizes leadership activities and opportunities to participate in FFA functions.

Course Descriptions page 7

The Business Program in Virginia

Overview

The Business program offerings are designed to meet two widely recognized goals:

- Attainment of business skills and knowledge, including career exploration for all.
- Preparation for entering business occupations and for pursuing additional education.

Business Program

Unlike previous business curricula that have multiple occupational programs, only one program, Business, is proposed in this draft curriculum. The nature and role of office occupations have changed, and there is duplication if the areas are separated.

The program is based on a foundation of keyboarding and word processing skills along with courses in Computer Applications, Computer Solutions, Career Pathways, Make It Your Business, and Principles of Business and Marketing. Enrollment in the foundation courses allows students to explore a variety of careers. Students not only receive instruction in the fundamental skills associated with a number of business occupations but also learn essential life management skills.

Intensive preparation for business and office careers is available at the secondary level. Courses are available that will enable students to explore opportunities in business, prepare for entry and advancement on the job, develop management skills, and identify further education and training necessary within a chosen career cluster.

Opportunities for special populations to receive preparation for entry and advancement on a job are available in the Office Specialist courses. Individuals with special needs may be served through a special business studies course. Course content is based on each student's individualized educational plan.

Note: Local school divisions may decide to alter the curriculum framework for such items as course titles, additional (multiple) periods, longer time frames, additional prerequisites, grade level adjustments, and sequence of course offerings and to make other modifications necessary for successful local operation. Where such changes affect curriculum, the adaptations must be made locally and validated by local advisory councils.

The Business curriculum has been revised for 1995-96, subject to further validation. Information related to the 1994-95 curriculum is contained in the 1993 edition of the Guide to Vocational Program Planning and the 1994 VERS User's Manual.

Cooperative Office Education

Cooperative Office Education (COE) is a teaching method available in each occupational course. It includes supervised, on-the-job instruction. Students attend classes part of the day and work in an approved business/office position part of the day. The teacher-coordinator develops with the on-the-job training sponsor and the student an individualized training plan identifying learning experiences according to the student's occupational objective. The on-the-job instruction is an extension of the classroom instruction coordinated by the classroom teacher into a single learning package.

All occupational courses listed for Business are eligible for the cooperative education method of instruction. Local school divisions should identify which of the occupational courses they designate as Cooperative Office Education courses.

Student Organization: Future Business Leaders of America

The Future Business Leaders of America (FBLA) is the vocational student organization for all individuals enrolled in business courses. The activities are specially related to the development of personal employability and leadership skills. Through participation in the organization, business students learn to engage in individual and group business enterprises, to hold office and direct the affairs of a group, to work with representatives of other student organizations, and to compete honorably with their colleagues.

^{*}Required maximum class size

Cooperative Office Education (COE): All occupational courses listed for the Business program are eligible for the cooperative education method of instruction. Local school divisions should identify which of the occupational courses they designate as COE.

Elementary Level Courses

An integrated approach to providing keyboarding instruction to students in the elementary grades is recommended when appropriate instructional staff, hardware, software, and instructional scope and sequence are available. A position paper, a keyboarding instructional guide, and training are available from the Department of Education, Business program area specialist.

Foundation Courses

Keyboarding 6150 (Middle School)

Grade Levels:

6, 7, 8 (6/9/12/18 weeks)

CIP Code: 52.0408

Prerequisite: None

This course is designed for middle school students to develop touch skills for entering alphabetic, numeric, and symbol information on a keyboard. Students learn to produce simple technical and non-technical documents.

Keyboarding 6151 (Secondary)

Grade Levels:

9-12 (18 weeks)

Prerequisite: None

CIP Code: 52.0408

This course is designed for secondary school students to develop and enhance touch skills for entering alphabetic, numeric, and symbol information on a keyboard. Students learn to produce simple technical and nontechnical documents.

Keyboarding Applications 6152

Grade Levels:

9-12 (18, 36 weeks)

Prerequisite:

None

CIP Code: 52.0408

Students develop or refine touch skills for entering alphabetic, numeric, and symbol information on a keyboard. Students apply keyboarding skills to produce a variety of personal and business documents. (Students who can demonstrate touch keyboarding skills may test out and enter into the applications semester to develop document preparation skills.)

Note: Local school divisions may decide to alter the curriculum framework for such items as course titles, additional (multiple) periods, longer time frames, additional prerequisites, grade level adjustments, and sequence of course offerings and to make other modifications that are necessary for successful local operation. Where such changes affect curriculum, the adaptations must be made locally and validated by local advisory councils.

Career Pathways 9070 (Phase I), 9071 (Phase II), 9072 (Phase III), 9073 (Phase IV)

Grade Levels:

6-12 (Duration to be determined locally)

CIP Code: 52.9999

Prerequisite:

None

In this four-phase competency-based program of career exploration, all students study how to find the right career (Phase I) and investigate career clusters (Phases II and III). The program may culminate in choosing and preparing for careers (Phase IV). Localities identify clusters and design the program based on the needs of the community. (Note: The four phases usually require a two-year time frame.)

Computer Applications 6611

Grade Levels: Prerequisite:

7-10 (18, 36 weeks)

Keyboarding recommended

CIP Code: 52.1299

Students develop or review correct keyboarding techniques and gain a basic knowledge of word processing, spreadsheet, database, and graphics applications. Students demonstrate an understanding of computer concepts through application of knowledge. Students learn to use software packages and to operate many types of equipment such as word processors, printers, copiers, and computers.

Computer Solutions 6610

Grade Levels:

7, 8 (6/9/12/18/36 weeks)

;)

CIP Code: 52.1299

Prerequisite:

None

Students use the computer as a problem-solving tool to complete a variety of projects. Students participate in team-building activities that integrate academic and business competencies. Basic touch keyboarding instruction is provided early in the course.

Make It Your Business 6110

Grade Levels:

6, 7, 8 (6/9/12/18 weeks)

CIP Code: 52.0701

Prerequisite:

None

Students are provided opportunities to run a business based on their own design for providing a service or product needed at their school. They learn business terminology, basic entrepreneurship concepts, and fundamental business operating principles in this course. Design of course content provides for interdisciplinary approaches.

Principles of Business and Marketing 6115

Grade Levels: 9, 10 (18, 36 weeks)

Prerequisite: None

CIP Code: 52.0101

Students explore the roles of business and marketing in the free enterprise system and the global economy. They study how the American economy operates and prepare to make decisions as consumers, wage earners, and citizens.

Occupational Courses

Accounting 6320

Grade Levels: 10-12 (36 weeks)

Prerequisite: Keyboarding recommended

CIP Code: 52.0302

Students study the basic principles, concepts, and practices of the accounting cycle. Students learn fundamental accounting procedures using a manual and an electronic system.

Advanced Accounting 6321

Grade Levels:

11, 12 (36 weeks)

Prerequisite:

Accounting

CIP Code: 52.0302

Students gain in-depth knowledge of accounting procedures and techniques utilized in solving business problems and making financial decisions. They use the calculator, computer, and accounting software, with emphasis on electronic spreadsheets, to analyze and interpret business applications.

Business Law 6131

Grade Levels: Prerequisite:

11, 12 (18, 36 weeks)

None

CIP Code: 52.0202

Students examine the foundations of the American legal system. They explore economic and social concepts as they relate to legal principles and to business and personal laws.

Note: Local school divisions may decide to alter the curriculum framework for such items as course titles, additional (multiple) periods, longer time frames, additional prerequisites, grade level adjustments, and sequence of course offerings and to make other modifications that are necessary for successful local operation. Where such changes affect curriculum, the adaptations must be made locally and validated by local advisory councils.

Business Management 6135

Grade Levels: 11, 12 (18, 36 weeks)

Prereauisite: None

CIP Code: 52.0201

Students study basic management concepts and leadership styles as they explore business ownership, planning, economics, international business, and human relations issues such as employee motivation and conflict resolution. Student leadership skills may be enhanced by internship experiences.

Computer information Systems 6612

Grade Levels: Prerequisite:

10-12 (18, 36 weeks)

Keyboarding Applications*

CIP Code: 52.1201

Students apply problem-solving skills to real-life situations through (a) database, spreadsheet, and word processing software; (b) charting; and (c) integrated activities. They work individually and in groups to explore data/telecommunications, operating systems, and basic networking principles.

*Keyboarding course(s) or teacher approved demonstrated touch keyboarding skills.

Advanced Computer Information Systems 6613

Grade Levels: Prerequisite:

11, 12 (36 weeks)

Computer Information Systems

CIP Code: 52.1201

Students study advanced integrated computer applications, programming, expert systems, networking, and telecommunications and the impact of new and emerging technologies in each of these areas. When this course is offered as a daily, multipleperiod class, students study all of the above areas. When offered in comprehensive high school schedules, two or more of these areas are emphasized.

Desktop/Multimedia Presentations 6630

Grade Levels: Prerequisites:

11, 12 (18, 36 weeks)

Keyboarding/Computer Applications

CIP Code: 52.0407

Students develop proficiency in using desktop publishing software to create a variety of business publications. Students work with sophisticated hardware and software to develop multimedia presentations.

Note: Local school divisions may decide to alter the curriculum framework for such items as course titles, additional (multiple) periods, longer time frames, additional prerequisites, grade level adjustments, and sequence of course offerings and to make other modifications that are necessary for successful local operation. Where such changes affect curriculum, the adaptations must be made locally and validated by local advisory councils.

Finance 6120

Grade Levels:

11, 12 (18, 36 weeks)

Prerequisite:

None

CIP Code: 52.0899

Students explore many facets of financial decision-making involved in daily life. Skills in money management, recordkeeping, and banking are enhanced through the study of basic concepts of economics, insurance, credit, and other related topics. As a year offering, the course will also prepare students occupationally to plan, manage, and analyze the financial and monetary aspects and performance of business enterprises, banking institutions, or other organizations.

Legal Systems Administration 6735

Grade Levels:

11, 12 (18, 36 weeks)

CIP Code: 52.0403

Prerequisites:

Keyboarding Applications

(Administrative Systems*)

Students completing Administrative Systems and wishing to gain employment in the legal field may take this course to learn how to use legal terminology and procedures useful in preparing legal documents and functioning effectively in a law office.

*When this course is offered as a daily multiple-period class, the competencies identified in the Administrative Systems course may be included.

Medical Systems Administration 6730

Grade Levels: Prerequisites:

11, 12 (18, 36 weeks)

Keyboarding Applications (Administrative Systems*)

CIP Code: 52.0404

Students completing Administrative Systems and wishing to gain employment in the medical field may take this course to learn how to use medical terminology and procedures useful in developing medical documents and functioning effectively in a medical office environment.

*When this course is offered as a daily multiple-period class, the competencies identified in the Administrative Systems course may be included.

Notetaking 6241

Grade Levels: Prerequisite:

9 - 12 (18, 36 weeks)

Keyboarding recommended

CIP Code: 52.0401

Students learn an easy, abbreviated writing system of notetaking that enables them to take and transcribe notes for educational, business, or personal use. Students explore reasons for taking notes, ways to listen effectively, and strategies for improving communication and study skills for academic success.

Office Administration 6621

Grade Levels:

10-12 (18, 36 weeks)

Prereauisite:

Keyboarding Applications

CIP Code: 52.0401

Students enhance word processing and communication skills as they develop competencies needed by administrative support professionals. Students study office procedures such as machine dictation/transcription, telecommunications, electronic records management, and financial records management.

Note: Completion of this course may prepare students for apprenticeship in an occupation related to administrative support. For further information, contact the Virginia Department of Labor, Apprenticeship Division.

Word Processing 6625

Grade Levels:

9-12 (18, 36 weeks)

Prerequisite:

Keyboarding*

CIP Code: 52.0407

Students develop intermediate to advanced level word processing skills using a variety of software functions, including graphics and desktop publishing. Students gain competence integrating other applications such as database and spreadsheet into word processing activities. Classroom experiences also provide for skill development in communication.

*Keyboarding course(s) or teacher approved demonstrated touch keyboarding skills.

Special Programs

Office Specialist I (6740), II (6741), III (6742), IV (6743) (Special Populations)

Grade Levels:

9-12 (36 weeks)

Prerequisite:

None

CIP Code: 52.0408

Students complete the Office Specialist sequence identified locally or progress in the sequence until prepared to transfer into other business courses. Students develop skills in areas including keyboarding, word processing, office procedures, and records management.

Note: Completion of this course may prepare students for apprenticeship in an occupation related to administrative support. For further information, contact the Virginia Department of Labor, Apprenticeship Division.

Business—Individualized Education Program 6745

Grade Levels: 9 - 12 (36 weeks)

Prerequisite: None

CIP Code: 52.0408

This course is designed by each local school division to serve students with special needs who desire and can benefit from business studies. The course is developed cooperatively between local business and special education personnel based on an individualized education plan for each student. Course length is determined by students' needs and job requirements.

Note: Completion of this course may prepare students for apprenticeship in an occupation related to administrative support. For further information, contact the Virginia Department of Labor, Apprenticeship Division.

Generic Course Competencies

Competencies generic to all business courses are currently found in appendices located in the Business Education Suggested Course Competencies and Performance Objectives. As course offerings are revised or combined, these appendices will be modified. Based on the results of these modifications, competencies common to business courses will be identified, extracted, and presented in a format to be determined.

Competencies will be identified in areas such as

- All Aspects of the Industry
- Business Math
- Communications
- Computer Basics
- Employability Skills, Leadership/Professional Development, and Work Ethics

Note: Local school divisions may decide to alter the curriculum framework for such items as course titles, additional (multiple) periods, longer time frames, additional prerequisites, grade level adjustments, and sequence of course offerings and to make other modifications that are necessary for successful local operation. Where such changes affect curriculum, the adaptations must be made locally and validated by local advisory councils.

Business Program Completer Options

Minimum completer requirements for a regular business program are as follows:

- Keyboarding prerequisite: Students may successfully complete an approved keyboarding course, or if they can demonstrate touch keyboarding skills, may test out to the teacher's approval (competencies must be documented).

 and
- Generic competencies required for all courses (see page 13) must be identified and documented.
- Any two occupational courses* (or semester equivalents that equal two 36-week courses) must be taken.
 Note: Technical center block programs that meet the equivalent of two 36-week courses constitute a completion when combined with the requirements listed above.

Occupational courses (See chart, pp. 6) for suggested grade levels and course length.):

Accounting
Business Law
Computer Information Systems
Desktop/Multimedia Presentations
Legal Systems Administration
Notetaking
Word Processing

Advanced Accounting
Business Management
Adv. Computer Information Systems
Finance
Medical Systems Administration
Office Administration

Program & Course Descriptions page 9

Program Completer Options page 33

Overview

Health Occupations Education, including practical nurse education, is designed to meet the following goals:

- To introduce secondary students to nursing, medical, dental, and allied health occupations
- To prepare students with basic skills for employment in nursing homes, clinics, medical and dental offices, hospitals, homes, and certain public health settings
- To facilitate entry into advanced health occupations programs that require post-high school education leading to state licensure, certification, registration, or national credentialling
- To enable students to become more knowledgeable consumers of health services.

The occupational preparation programs provide the knowledge for career choice and basic skill training with which students immediately can enter employment in the health field for which they were trained, or move into advanced training for health occupations at the technical and professional levels. Programs offered during the tenth, eleventh, and twelfth grades include health career exploration and preparation for aide or assistant-level positions in the following areas:

- Nursing--certified nurse's aide or licensed practical nurse
- Medical--medical assistant, emergency medical technician-A, or surgical technologist
- Dental--dental assistant
- Allied Health--physical or occupational therapy aide, respiratory therapy assistant, rehabilitation aide, dietary aide, laboratory aide, geriatric aide, home health aide, housekeeping aide, sterile supply aide, transportation aide, or veterinary assistant.

The first course of every occupational program is normally scheduled as a two-hour block program. However, under certain conditions, a course may be offered as one-hour or three-hour program once permission of the Health Occupations Education Specialist has been secured. Five content areas are applicable to all health occupations offerings:

Health Occupations Education

3

- Biomedical health sciences
- *** * *** Basic health care knowledge and skills
- Health careers orientation and selection
- Communication and problem-solving skills
- Psycho-social care skills.

Teacher-supervised work education or on-the-job training such as a clinical practicum, a cooperative program, or a work experience situation is an integral part of each program; some require minimal time, while others, such as practical nursing, may require as much as six months of teacher-supervised clinical hospital practice. Work education or on-thejob training is an extension of the classroom instruction and is coordinated by the health occupations teacher. It may be scheduled outside of regular school hours if approved by the teacher and appropriate school officials. Shadowing may be an integral part of the exploratory course.

Local school divisions determine how programs are structured. Programs may be offered in two- or three-hour blocks or in a one-hour block the first year and a two-hour block the second year.

Student Organization: Health Occupations Students of America

Virginia HOSA (Health Occupations Students of America) is the recognized student organization for approved Health Occupations Education programs and courses. Virginia HOSA is a member of the national HOSA Association, recognized by the United States Department of Education as an integral part of the HOE program. Local HOSA activities, which are an outgrowth of classroom and on-the-job training, reinforce the student's basic skills and knowledge, as well as attitudes and behavior leading to success as an entrylevel employee. Development of leadership abilities is also stressed.

Substitution for High School Science, Mathematics, and Practical Arts Credits

- A student who completes the senior year triple-period block portion of the Practical Nursing program that includes pharmacology may substitute it for a mathematics or science credit in the 21-unit diploma.
- * A student who attains the competencies identified for any of the following two-year programs is classified as a program completer and may substitute it for one science credit in the 21-unit diploma:

Health Careers Cluster Dental Assistant Nurse's Assistant **Veterinary Assistant**

Medical Assistant Surgical Technology **Emergency Medical** Technology (EMT-A).

One unit of science for the 21-unit diploma is allowed for students who complete requirements for the following programs:

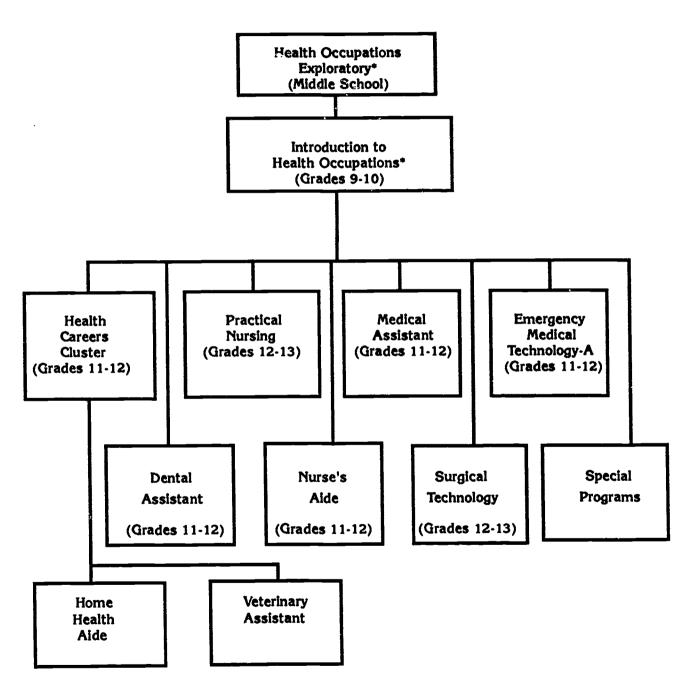

Health Careers Cluster Dental Assistant Nurse's Assistant Medical Assistant Surgical Technology Veterinary Assistant.

Health Occupations courses designed for grades 9-12 can be taken to satisfy a practical arts graduation requirement.

Note: The decision to allow any substitution is a local option.

Health Occupations Education Recommended Program Sequence

Health Occupations Exploratory 8370

Grade Level: Middle School (18 weeks)

Complementary Course: Careers and You

This one-semester, single-period course follows a complementary course such as "Careers and You." Students explore families of health careers and related occupations, participate in self-awareness activities, and receive an overview of the national health industry. Course content may also include the criteria for entering certain biomedical scientific careers and activities dealing with communication, problem-solving, and critical thinking.

Introductory

Description:

Introduction to Health Occupations is a single-period, one-year course designed to introduce to the student all health occupations and to develop basic skills common to all health occupations. The purposes of the course are to

- acquaint the student with the health care industry
- introduce the student to all health occupations
- survey various health careers
- enable the student to select one or more careers for an in-depth study
- help the student determine if he or she wishes to become a worker in the health care industry
- help the student in choosing a health career
- help the student select a specific occupational preparation program.

As a foundation course, Introduction to Health Occupations contains generic skills and knowledge necessary for all occupational program offerings. Additionally, the course is recommended to those students interested in a career that requires postsecondary study.

When students do not take Introduction to Health Occupations, core competencies of that course must be included in the first year of the occupational program. These core competencies include communication skills, health worker body mechanics, first aid procedures, and CPR techniques.

CIP Code:

51.9999

Suggested Grade Level:

9, 10

Complementary Course:

Health Occupations Exploratory (8370)

Approved Courses:

Introduction to Health Occupations (8302)

Related Postsecondary Programs:

Refer to the Allied Health Education Directory, 12th edition. All occupations accredited by the American Medical Association (AMA) Committee on Allied Health Education and Accreditation (CAHEA) are listed in this publication.

Introduction to Health Occupations 8302

Grade Level: 9-10 (suggested) (36 weeks)

Prerequisites: None

This single-period course introduces the student to all health care careers and develops basic skills common to all health occupations. It is recommended as the first course for the following occupational offerings:

Practical Nursing I 8357
Nursing Assistant I 8360
Health Assistant I 8331
Emergency Medical Technician-A I 8333
Dental Assistant I 8328
Medical Assistant I 8345
Surgical Technologist I 8351

Students study families of health careers such as dental, medical, nursing, allied health, and related occupations. Introduction of basic health care skills prepares students for advanced occupational skill training. Organizations for health care, financing of patient services, and ethics may be studied. Field trips to health care facilities and interviews with selected health workers can be included. Student volunteer activities, including shadowing experiences and selected skills practice in health care facilities, are organized by the teacher.

Dental Assistant

Description:

Students who complete the two-year Dental Assistant program may either enter the occupation at the aide level in a dental office or continue their studies at the postsecondary level. Students learn entry-level clerical as well as clinical skills necessary to assist the dentist in the routine functions of a dental office. Introduction to Health Occupations is strongly recommended as a foundation course. The curriculum includes classroom study and supervised on-the-job occupational training. Student organization activities (HOSA) are an integral part of classroom instruction and on-the-job training and serve as an excellent method of reinforcing basic skills and knowledge and gaining leadership abilities.

The initial design of the Dental Assistant program was reviewed and accepted by the Dental Health Regulatory Board and has since been field-tested in three sites in Virginia. Results of the field tests also have been reviewed and approved by the Board. The Executive Council of the Virginia Dental Association, Dental Education and Continuing Education Committee has unanimously endorsed the program. Questions concerning design, adoption, and implementation of the program should be addressed to Specialist, Health Occupations Education, Virginia Department of Education.

CIP Code:

Occupations is strongly

recommended.

Students in this double-period occupational preparation course learn (aide level) to assist the dentist in the following areas: cleaning equipment, laboratories, and offices; performing basic first aid; assembling and filing charts; and performing simple chairside dental procedures, including sterilizing instruments. Radiation safety practices are also included in the course of study. Teacher-supervised work education or on-the-job instruction is an inherent part of the course and is supervised by a certified dental assistant, or dentist, or possibly a hygienist and managed by the teacher.

MANGER KAREMENER

Grade Level: 12 (suggested) (36 weeks) Prerequi

Prerequisites: Dental Assistant I

Students benefit from classroom study and on-the-job advanced clinical training with a dentist, certified dental assistant, dental hygienist, or dental office manager. Students learn to maintain office equipment, act as a receptionist, pour study models, trim casts, process radiographs, and assist with complex chairside procedures. Program completers can seek employment as dental aides in a dentist's office or public health dental clinic. Typewriting 6151 is a recommended elective. Four-handed dentistry and taking X-rays are taught at the postsecondary level only.

Emergency Medical Technology

Description:

See course descriptions for Emergency Medical Technician-A l

(8333) and Emergency Medical Technician-A II (8334).

In this double-period occupational preparation course, students focus on the role and responsibilities of emergency rescue workers, basic medical terminology, and health care skills that include first aid; cardiopulmonary resuscitation; aseptic technique; and related anatomy, physiology, and disease knowledge. Supervised work education is given in a hospital or with rescue squads and managed by the HOE teacher.

Emergency Medical Technician-A II 8334

Cirade Level: 12 (suggested) (36 weeks)

Prerequisites: Emergency Medical

Technician-A I

Students in this double-period occupational preparation course become skilled in identifying and dealing with emergencies such as bleeding, fractures, airway obstruction, and cardiac arrest. Instruction emphasizes proper care and use of common emergency equipment and safe methods for lifting, moving, and transporting injured persons. Supervised on-the-job training and patient-care experiences are part of the instructional program. Program completers may take the state certification examination administered by the State Department of Health.

Health Careers Cluster

are listed in this publication.

Health Assistant I 8331

Grade Level: 11 (suggested) (36 weeks)

Prerequisites: None--Introduction to

Health Occupations is strongly recommended.

In this double-period occupational preparation course, students explore careers in the allied health field by developing basic skills common to several assisting careers. They study body structure and function, principles of health, microbes and disease, and an overview

of the national health and patient care system. Supervised work education or on-the-job training may begin as part of the course in hospitals, nursing homes, or public health agencies and is managed by the HOE teacher.

Health Assistant II 8332

Prerequisites: Health Assistant I Grade Level: 12 (suggested) (36 weeks)

Students in this triple-period course choose advanced preparation in one of the four tracks--dental, allied health, medical, and nursing--for further classroom instruction and clinical practice. Course content is based on validated competencies for a specific worker such as dental aide, medical assistant, physical therapy aide, or respiratory therapy assistant. Students achieve advanced skills in assisting with therapeutic and emergency measures, assisting therapists with patient rehabilitation, assisting with care of the elderly, preparing the patient for examination, and performing simple laboratory procedures and health tests. Each student, depending on his or her choice, may be prepared to assist physicians, dentists, nurses, and/or therapists in hospitals, nursing homes, clinics, and public health facilities in such jobs as orderly, sterile supply aide, and physical therapy aide. Successful completion may lead to employment in areas such as certified nursing assistant, dental aide, and respiratory therapy assistant.

Health Occupations Education

60

Home Health Aide

Description:

Home Health Aide is designed as an "occupational mix" program that provides for entry-level skills within the health-related field. It provides students with the knowledge, understanding, and basic skill training necessary for entering advanced health occupations programs or locating entry-level employment as a certified nurse's aide/home health aide in a hospital, nursing home, home for adults, private home, or other health care setting.

To ensure maximum skills and employment opportunities, the curriculum is designed to be taught by both the Health Occupations instructor and the Work and Family Studies teacher. Access to a clinical training facility is essential.

Home Health Aide may be offered as a three-hour block senior intensified program or may (local option) be scheduled as a two-year, two-hour block at the 11th and 12th grades.

Grade Level: 11 (18/36 weeks) Prerequisites: None

HOCE is a cooperative work experience program that combines classroom instruction with two or three hours of school-released time for on-the-job training in a health care setting. A two-credit course requires 180 hours of cooperative work experience. The program prepares students for occupations in one or more health careers.

Health Occupations Cooperative Education II (8396)

Prerequisites: None Grade Level: 12 (36 weeks)

HOCE is a cooperative work experience program that combines classroom instruction with two or three hours of school-released time for on-the-job training in a health care setting. A two-credit course requires 360 hours per year or a senior intensified course. A threecredit course requires 540 hours per year. The program trains students for occupations requiring knowledge and skills in one or more health careers.

Medical Assistant

Description:

Medical Assistant is a two-year instructional program that prepares students to assist a physician by performing functions related to both business administration and clinical duties of a medical office. Business aspects of instruction cover insurance, accounts, reports, medical records, and medical transcription. Clinical aspects of study include preparation of the patient for examination, assessment of vital signs, assistance with medical examination and treatment, routine laboratory procedures, and use of the electrocardiograph machine. Essential elements and guidelines for a nationally accredited education program are available from the American Medical Association (AMA). This occupational program may be reviewed and accredited by the AMA Committee on Allied Health Education and Accreditation (CAHEA).

CIP Code:

51.0801

Medical Assistant I (8345) Medical Assistant II (8346)

Medical Assistant I 8345

Grade Level: 11 (suggested) (36 weeks)

Prerequisites: None--Introduction to

Health Occupations is strongly recommended.

Students in this double-period occupational preparation course learn body structure and function, principles of health, and microbes and disease. They develop basic skills and techniques to assist the physician in the following areas: receptionist duties, assistance with patient examinations, cardiopulmonary resuscitation, and performance of simple laboratory tests. On-the-job clinical instruction may occur in physicians' offices or clinics and is coordinated by the health occupations teacher.

Medical redsemplinesses

Grade Level: 12 (suggested) (36 weeks) Prerequisites: Medical Assistant I

In this triple-period occupational preparation course, students further develop medical assisting skills and techniques learned in Medical Assistant I. They also learn medical economics; assembly and maintenance of patient records; care of equipment; special diagnostic testing such as EKG, visual, and audio testing machines; and assistance with office therapy. Advanced on-the-job clinical experience in physicians' offices or clinics is a part of the course. Successful completion of the program leads to employment in physicians' offices or clinics. Keyboarding is recommended.

Nurse's Assistant

Description:

The competency-based Nurse's Assistant program is designed to provide students with the knowledge, understanding, and basic skill training necessary for entering advanced health occupations programs or locating entry-level employment as a certified nursing assistant in a hospital, licensed nursing home, private residence, or other health care setting. Introduction to Health Occupations is strongly recommended as a prerequisite for this one- or two-year program. Supervised occupational experience is an integral part of the course, and clinical practice in a licensed nursing home is required and is coordinated by the instructor. Student organization activities (HOSA) are an outgrowth of classroom instruction and on-the-job training and serve as an excellent method of reinforcing basic skills and knowledge and gaining leadership abilities.

The program may be taught in one year if courses I and II are combined in a three-hour block in a senior intensified program and all competencies are addressed. Access to a clinical training facility is essential as well as time to dress in uniform, to be transported, and to practice with patients. Upon successful completion of the program, the student is eligible to take the certification exam. Virginia State Health Department Nursing Home Licensure regulations and the Virginia Board of Nursing regulations are applicable to this program.

Grade Level: 11 or 12 (36 weeks)

Prequisites:

None--Introduction to

Health Occupations is strongly

recommended.

Nursing Assistant I, offered as a single-, double-, or triple-period occupational preparation course at the eleventh-grade level, emphasizes the study of nursing occupations as related to the health care system. Students study normal growth and development, simple body structure and function, and medical terminology and are introduced to microbes and disease. They receive elementary skill training in patient-nurse's assistant relationships; taking and recording vital signs; cardiopulmonary resuscitation; and bathing, feeding, dressing, and transporting patients in hospitals and nursing homes. Limited on-the-job instruction in nursing homes and hospitals is part of the course. This course can be used as an introduction to practical nursing or to prepare the student for Nursing Assistant II so that all competencies for a certified nursing assistant are met.

Nursing Assistant II 8362

Grade Level: 12 (suggested) (36 weeks) Prerequisites: Nursing Assistant I

Nursing Assistant II is a double- or triple-period occupational preparation course, emphasizing advanced skill training in areas such as catheter care, recording intake and output, admission and discharge procedures, range of motion, bowel and bladder training, care of the dying, and selected procedures for maternal and infant care. In addition, students learn diseases and body systems as related to advanced clinical care of the acute medical-surgical patient, the chronically ill, and the elderly. On-the-job instruction in a licensed nursing home is part of the course. Upon completion of the nurse's assistant program, the student is eligible to take the nursing assistant certification exam that leads to employment as a certified nursing assistant in hospitals and nursing homes.

Veterinary Assistant

Description: Veterinary Assistant is a one-, two-, or three-year, one- or two-

period occupational preparatory class that combines lecture and laboratory. Instruction includes information and skill training

necessary for employment in a veterinary hospital, pet store, kennel, or research laboratory as an assistant who attends to the needs of

animals.

recommended.

Veterinary Assistant I may be offered as a double- or triple-period occupational preparation course beginning at the tenth-grade level. Students learn animal science and the care of animals, including animal structure and function, principles of health, and micropes and disease. They develop basic skills and techniques of assisting the veterinarian in the following areas: receptionist duties; animal examinations; examining room and laboratory work; the handling, caring, and feeding of animals; first aid and surgery; and maintenance of equipment and facilities. On-the-job clinical instruction may occur in veterinary offices or animal clinics and is coordinated by the health occupations teacher.

Veterinary Assistant Level II 8311

Grade Level: 11-12 (36 weeks)

Prerequisites: Veterinary Assistant (Level I)

Veterinary Assistant II may be offered as a double- or triple-period occupational preparation course for students who choose advanced preparation in veterinary assisting. The student may incorporate a cooperative work experience that combines classroom instruction with two or three hours of school-released time for on-the-job training in a health care facility such as a veterinarian's office or clinic.

Practical Nursing

Description:

The Practical Nursing program prepares students with the skills and knowledge to become Licensed Practical Nurses. Upon successful completion of the program, students qualify to take the Virginia practical nurse licensing examination. Two types of Practical Nursing programs are offered.

- 1. The high school extended program is open to high school seniors and adults. This three-hour block program runs eighteen months.
- 2. The adult program is a one-year, post-high school program offered on a full-day basis.

The program also must meet certain Virginia Board of Nursing regulations. Student organization activities (HOSA) are an outgrowth of classroom instruction and clinical practice and serve as an excellent method of reinforcing basic skills and gaining leadership abilities.

Students enrolled in this triple-period occupational preparation course learn nursing care of patients of all ages, in various stages of sickness or wellness, and with a variety of disease conditions. They focus on human anatomy, body function, communication, community health, introduction to fundamental nursing skills, nutrition, drug therapy, and elementary medical-surgical nursing.

Practical Nursing II 8358

Grade Level: Adult, 13 (36 weeks)

Prerequisites: Practical Nursing 1

Practical Nursing II is an all-day, 36-week occupational preparation course offered to Practical Nursing I completers only. Classroom and clinical training are given in approved hospitals, licensed nursing homes, or home care settings under the direction of a nurse educator. Instruction emphasizes administration of medicines, advanced and complex patient care, and practice with patients of all ages. In addition, students learn advanced anatomy, physiology, and human behavior as they relate to health and disease, including mental illness. Upon successful completion of the total program, students qualify to take the practical nurse licensing examination.

Prerequisites: None--Introduction to Health

Occupations and/or Nursing Assistant I is recommended.

Students in this triple-period occupational preparation course acquire knowledge and assisting skills to function in association with licensed nurses and surgeons/physicians, providing the best possible care of the surgical patient. Instruction emphasizes human anatomy, medical terminology, cleanliness, asepsis, safety, and efficiency in the operating room.

Surgical Technologist II 8352

Grade Level: Adult, 13 (suggested) (4 months) Prerequisites: Surgical Technician I

Surgical Technologist II is a full-time, eight-hour-per-day course offered to students who have successfully completed Surgical Technologist I. Classroom and clinical training are given in selected approved hospitals under the direction of a nurse educator. Students learn operating room procedures and aseptic surgical techniques, including preparation and handling of materials and surgical instruments at the operating table. Upon successful completion of the program, students qualify to take the national certification examination.

Program & Course Descriptions page 11

Program Completer Options page 29

Overview

Marketing Education prepares students for careers in the marketing of goods or services:

- the buying, transport, and storage of goods
- promotion of goods and services
- marketing research
- * marketing management.

Through classroom instruction and supervised on-the-job training, Marketing Education enables students to develop competencies for entry into full-time employment or into advanced educational or training programs.

The cooperative method of instruction inherent in Marketing Education programs requires the joint interest and efforts of the school, local marketing businesses, and the community. In cooperative programs, school activities and work experiences are components of the total competency-based learning package designed by the teacher-coordinator, who implements the classroom instruction and, along with a supervisor at work, also coordinates each student's on-the-job training. On-the-job training may take place either during part of the school day or outside regular school hours, ensuring maximum scheduling flexibility for students.

In addition to cooperative programs, Marketing Education offers occupational experiences that focus on simulated activities of marketing businesses that are replicated in the classroom, school or community projects, or periodic employment in local marketing businesses. These occupational experiences may also take place during or in addition to the regular school day. Apprenticeship opportunities also are being developed.

Students may concentrate all of their courses in the General Marketing Program or in one specialized area, or they may choose to combine courses for both. Fundamentals of Marketing or Introduction to Marketing is not a prerequisite for upper level competency development; however, either course is strongly recommended to students for basic skill development and as a basis for identifying an occupational interest within the marketing field.

Student Organization DECA: An Association of Marketing Students

The co-curricular student organization, DECA: An Association of Marketing Students, is designed to complement, supplement, and strengthen the marketing education curriculum and instructional program. Through participation in local, state, and national activities, DECA members develop a better understanding of the business world, become conscious

Marketing Education

3

of their civic obligations, and develop social poise and leadership ability. The DECA program of work includes activities related to classwork and participation in community projects, district meetings, and competitive events.

Substitution for High School Science, A Mathematics, and Practical Arts Credits

- Completion of the combination of any two credits in marketing education qualifies as an alternative for one credit in mathematics for a 21-unit diploma, if approved by the local school division.
- Completion of any one-year course in the marketing education program qualifies for a practical arts credit.

On-the-Job Training

Marketing Education students enrolled in cooperative programs or in courses using the occupational experiences method may receive the required on-the-job training at times other than during the school day, such as afternoons, evenings, or weekends, provided the program coordinator is able to maintain a flexible schedule to conduct coordination during these times.

Accessibility to Marketing Education

School divisions may also want to consider the following alternatives as ways to provide students greater accessibility to Marketing Education:

- ♦ Offer a two-year Marketing Education program only, consisting of Fundamentals of Marketing (8110) or Introduction to Marketing (8111) in the 11th grade and Marketing (8120) in the 12th grade, or Marketing (8120) in the 11th grade and Advanced Marketing (8130) in the 12th grade.
- ❖ Enable over-age 9th grade students to enroll in Fundamentals of Marketing (8110) and enter a Marketing Education cooperative program in the 11th or 12th grade.
- ❖ Enable students to shift their required credits to the 11th and 12th grade in order to enroll in Marketing Education courses in the 9th and 10th grade.
- Based on student interest and labor market needs, offer specialized Marketing Education options such as entrepreneurship, marketing management, hotelmotel operations, and travel-tourism marketing.

Course Requirements

Student requirements for many Marketing Education courses vary depending on whether the course uses the cooperative education method or the occupational experiences method.

- ❖ Cooperative Education: In courses using the cooperative education method (identified as "co-op" in the course descriptions), students receive a combination of classroom instruction and a minimum of 540 hours of continual supervised on-the-job training throughout the school year. This training, which takes place in an appropriate local marketing business, is planned, supervised, and documented by the marketing education teacher-coordinator. Students work an average of 15 hours per week for 36 weeks. On-the-job training that takes place in the summer months may be counted toward the 540 hours, if documented by a training plan and supervised by the marketing teacher-coordinator.
- Occupational Experiences: In courses using the occupational experiences method (identified as "oe" in the course descriptions), students combine classroom instruction with a minimum of 360 hours of occupational experiences consisting of simulations, school and community-based projects, or periodic employment in appropriate local marketing businesses, all of which are planned, supervised, and documented by the marketing education teacher-coordinator. Occupational experiences during the summer months may be counted toward the 360 hours, if supervised by the teacher-coordinator.
- Laboratory Approach: In certain courses (currently applicable only to Hotel/Motel Marketing, Advanced Hotel/Motel Marketing, Travel and Tourism Marketing, and Advanced Travel and Tourism Marketing), the occupational experiences method is conducted using the laboratory approach. Students combine a minimum of 360 hours of intensive classroom instruction and occupational experiences in daily blocks of instruction that are planned, supervised, and documented by the marketing education teacher-coordinator.

Fundamentals of Marketing 8110

Grade Level: 10 or 11 (suggested) (36 weeks) Prerequisites: Verified interest in

marketing occupations

Fundamentals of Marketing is the basic elective course offered in the three-year marketing education program. Students achieve a basic understanding of marketing and its importance, and develop fundamental social, economic, mathematical, marketing, job search, and occupational decision-making competencies necessary for successful initial employment in retail, wholesale, or service businesses.

Students receive classroom instruction and a minimum of 90 hours of occupational experiences, consisting of simulations, school and community-based projects, or periodic employment in local marketing businesses. These occupational experiences may take place during or after school hours, and are planned, directed, and documented by the marketing education teacher-coordinator. The competencies developed in this course are important for successful completion of the other marketing education occupational courses.

Introduction to Markeding 311.1

Grade Level: 10 or 11 (suggested) (18 weeks) P

Prerequisites: Verified interest in

marketing occupations

In this course, an abridgment of the year-long Fundamentals of Marketing course, students gain basic knowledge about marketing and its importance and basic skills important for entry-level marketing employment.

Students receive classroom instruction and a minimum of 45 hours of occupational experience consisting of simulations, school and community-based projects, or periodic employment in local marketing businesses. These occupational experiences may take place during or after school hours, and are planned, directed, and documented by the marketing education teacher-coordinator. The competencies gained in this course will contribute to the successful completion of upper-level marketing education occupational courses.

Marketing B120 (co-op) Marketing 8121 (ce)

Grade Level: 11 or 12 (suggested) (36 weeks) Prerequisites: None

Students learn the functions involved in the marketing of goods and services and achieve the competencies necessary for successful marketing employment. The development of social and economic competencies in conjunction with marketing competencies in the areas of personal selling, advertising, visual merchandising, physical distribution, purchasing, market planning, product/service technology, and marketing mathematics enable students to become well-rounded marketing employees who contribute to the success of marketing businesses.

Advanced Marketing \$130 (co-op) Advanced Marketing \$131 (oe)

Grade Level: 12 (suggested) (36 weeks)

Prerequisites: Marketing 8120 or 8121

In the third-year course in the General Marketing program, students gain (a) in-depth knowledge of the marketing functions and the supervisory and management responsibilities for those functions and (b) competencies important for successful supervisory management employment and advancement to other management positions. Students develop economic and advanced marketing competencies in professional selling, marketing planning, marketing mathematics, purchasing, physical distribution, advertising, and visual merchandising, as well as social competencies related to the supervision of marketing employees.

Executive Marketing Program

Description: The courses in the Executive Marketing Program are designed

for the high school senior who plans to study marketing,

business, or management at the postsecondary level; who plans

to manage or own a business; or who is interested in

international trade and the global economy. Emphasis is given to developing a knowledge base that can be expanded through

postsecondary study and field experience. International Marketing, Marketing Management, or Planning for

Entrepreneurship may be selected to enhance other programs of

study.

International Marketing 8135

Grade Level: 12 (suggested) (36 weeks)

Prerequisites: None

(It is recommended that students be enrolled in a foreign language course either concurrently or prior to enrolling in this

course).

International Marketing is a specialized course for students with a career interest in the field of international trade. Students gain an understanding of the various careers in international trade, finance, shipping, and marketing and consider fundamental concepts, principles, and theories of marketing in an international setting. Course content blends macro and micro economic theory with international culture, concepts, practices, and application.

Students combine classroom instruction with a minimum of 360 hours of occupational experiences consisting of simulations, school and community-based projects, or periodic employment in international trade related businesses, all of which are planned, supervised, and documented by the marketing education teacher-coordinator. Occupational experiences during the summer months also may be counted toward the 360 hours if supervised by the teacher-coordinator. Domestic and foreign internships may be available to provide students with additional opportunities for "hands-on" experiences in international marketing.

Grade Level: 12 (suggested) (18 weeks)

Prerequisites: None

Checker Education is a one-semester, single-period course offered on an elective basis for twelfth-grade students for a minimum of one-half credit. Students develop occupational competencies required for entry-level employment as a cashier checker. Emphasis is on operating a cash register, cashing checks and making change, computing tax, bagging merchandise, reading a scale and computing produce weight, figuring split prices, detecting pilferage, processing food stamps, and developing effective customer relations.

Vocational application is provided through a laboratory especially designed for food marketing. Activities take place during school hours and are planned and supervised by the marketing education coordinator.

Retail Selling 8122

Grade Level: 12 (suggested) (18 weeks)

Prerequisites: None

Retail Selling is a one-semester, single-period course offered on an elective basis for twelfth-grade students for a minimum of one-half credit. Students develop occupational competencies required for entry-level employment in retail selling. Emphasis is on successful interview techniques, effective human relations, attitudes essential for job success, sales techniques, retail arithmetic, and stockkeeping.

Vocational application is provided through classroom projects, supervised learning experiences in local businesses, or placement in a retail selling job. Activities may take place during or after school hours and are planned and supervised by the marketing education coordinator.

Program & Course Descriptions page 9

Special Programs

Program Completer **Options** page 11

Overview

Instructional programs in vocational education that do not fit into the category of regular offerings are referred to as "special programs." The programs are designed specifically to meet the needs of students who for a variety of reasons cannot succeed in a regular vocational program without special services and assistance. Special vocational programs offer disadvantaged and disabled students opportunities to meet realistic goals. Where other aspects of education may only reinforce the negative through repeated failures, the primary purpose of vocational special programs is to help develop the skills, knowledge, and attitudes that special needs students require to make them employable and/or capable of seeking further education and training.

Each vocational special program shall contribute to preparation for optimum employment of each student. This includes development of objectives for students based on their interests, abilities, achievement level, intelligence, aptitudes, and special needs. The same quality and variety of course offerings, instruction, equipment, and supplies made available to regular students must be made accessible to students enrolled in special vocational programs. These students shall have every opportunity to develop to their educational and/or employment potential.

Vocational Program Options for Special Needs Students

Option I. Regular Vocational Education Program

Students are mainstreamed in regular vocational education programs with few or no modifications necessary.

◆ Option II. Vocational Education Program with Support Services

Students are mainstreamed in regular vocational education programs and receive special support services from personnel such as a resource teacher, itinerant teacher, interpreter, tutor, or teacher aide. Specialized equipment and resource materials should be made available. Modification of curriculum, teaching strategies, and environment must be continually examined by teachers to accommodate a wide range of special learners.

◆ Option III. Separate Vocational Education Programs and Courses

Students may enroll in separate programs and courses specially designed for the disadvantaged or disabled. Separate programs or courses are offered in the following vocational education program service areas: Agricultural Education, Business Education, Health Occupations Education, Work and Family Studies, Technology Education, and Trade and Industrial Education. For program planning, refer to the appropriate service

Special Programs

3

area sections. In addition, Special Programs service offers the Education for Employment (EFE) Program and the Work Experience Cooperative Education Program (WECEP).

Education for Employment (EFE) Work Experience Cooperative Education Program (WECEP)

The EFE/WECEP program provides experiences that help special needs students make informed and meaningful occupational choices.

The development of work values, appropriate attitudes, and self-concept is the focus of instruction as students learn and refine their employability, job search, and job keeping skills. The ultimate goal is to keep the student in school until graduation and to provide an educational program that develops the student's vocational skills and career knowledge.

It is recommended that other vocational program options be explored before enrolling students in EFE/WECEP in order to allow the students to develop to their fullest vocational potential.

Cooperative Education

Cooperative education, a teaching method used in the WECEP program, includes supervised, on-the-job instruction. Students attend classes part of the day and work in an approved job part of the day. The teacher-coordinator, the on-the-job training sponsor, and the student develop an individualized training plan that identifies learning experiences according to the student's occupational objective. The on-the-job instruction is an extension of the classroom instruction coordinated by the in-class teacher into a single learning package. For a student to meet the objectives of WECEP, a minimum of 540 hours of on-the-job instruction is required. A student may receive credit toward graduation for classroom instruction as well as on-the-job training.

Substitution for High School Mathematics Credit

A student enrolled in EFE or WECEP must complete the full sequence for a mathematics course requirement in the 21-unit diploma, if approved locally. The following program sequences apply:

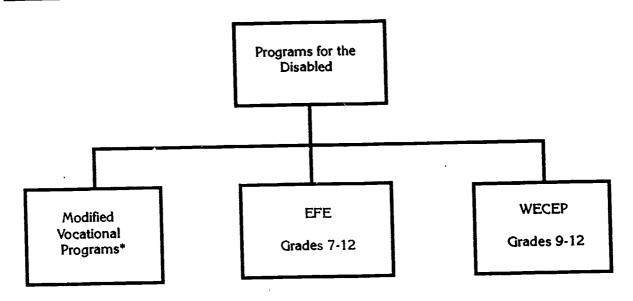

- EFE I, EFE II, and EFE III
- WECEP I and WECEP II.

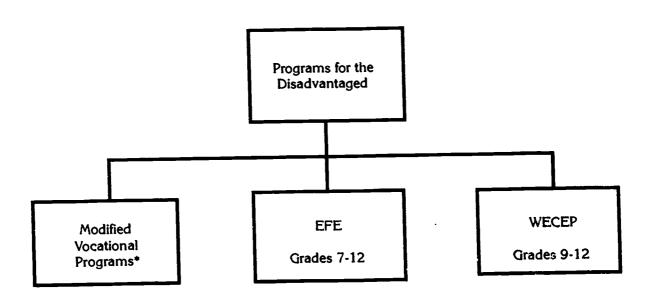

Any other program sequences of EFE or WECEP must be approved by the Virginia Department of Education. Each course must be offered for a period of 36 weeks.

Special Programs: Disadvantaged/Disabled Recommended Program Sequence

* Modified vocational programs for the disadvantaged and disabled are offered in the following service areas: Agricultural Education, Business Education, Health Occupations Education, Work and Family Studies, Technology Education, and Trade and Industrial Education.

ERIC FRONT PROVIDENCE FROM

Programs for the Disadvantaged

Description:

The term disadvantaged refers to individuals (other than disabled individuals) who have economic or academic disadvantages and who require special services and assistance in order to succeed in vocational education programs. The term includes individuals who are members of economically disadvantaged families, migrants, individuals who have limited English proficiency, and individuals who are dropouts, or who are identified as potential dropouts, from secondary schools.

Academically Disadvantaged: For the purpose of this definition, an individual who meets one or more of the following indicators may be considered academically disadvantaged:

- Scores below the 25th percentile on a standardized achievement or aptitude test
- Secondary school grades below 2.0 on a 4.0 scale (where the grade "A" equals 4.0)
- Failure to attain minimal academic competencies.

The definition does **not** include individuals with learning disabilities who have been identified as disabled.

Economically Disadvantaged: An economically disadvantaged family or individual is one who is eligible for one or more of the following:

- Aid to Families with Dependent Children under Part A of Title IV of the Social Security Act
- Benefits under the Food Stamp Act of 1977
- To be counted for purposes of Section 1005 of Chapter I of Title I of the Elementary and Secondary Education Act of 1965
- Receipt of a Pell Grant or comparable state program of needbased financial assistance
- Participation in programs assisted under Title II of the Job Training Partnership Act (JTPA).

Programs for the Disabled

Description:

The term disabled, when applied to individuals, means those who

- are mentally retarded
- are hard of hearing
- are deaf
- are speech-impaired
- are visually handicapped
- are seriously emotionally disturbed
- are orthopedically impaired
- have other health impairments
- have specific learning disabilities.

These persons require special education and related services, and because of their disabling condition, cannot succeed in the regular vocational education program without special educational assistance or require a modified vocational education program.

Technology Education in Virginia

Program
Completer
Options
. . . . page 29

Overview

A Technology Education program must ensure that citizens of tomorrow are prepared to live in and contribute to a competitive and technologically based society.

Mission

The Technology Education program teaches students to understand, use, and control technology. The curriculum covers the development of technology and its effect on people, the environment, and society. Students learn how to adjust to change, to deal with forces that influence their future, and to participate in controlling their future.

In the Technology Education laboratory, students develop insights into the application of technological concepts, processes, and systems. They are prepared to be active participants in controlling their future.

The study of technology stimulates a learning cycle that includes the following:

- a sense of accomplishment and satisfaction
- an excitement that generates further exploration
- a desire to relate this new ability to other areas.

Consequently, studying technology fosters learning in science and mathematics as well.

Goals

Program goals lead to the development of technologically literate people. Consistent with their abilities, interests, and educational needs, students completing a technology education program will achieve the following goals:

- Comprehend the dynamics of technology, including its development, impact, and potential.
- ❖ Employ the technological processes of problem-solving, creating, and designing.
- Analyze the behavior of technological systems and subsystems, including the tools, materials, processes, energy, information, and people involved in systems.
- Apply scientific principles, engineering concepts, and technological systems in the processes of technology.
- Discover and develop personal interests and abilities related to a wide variety of technology-oriented careers.

Technology Education

114

Middle School Program (Grade, 6-8)

The Technology Education program designed especially for the early adolescent provides the student with active learning situations and higher-order thinking skill development through practical problem-solving experiences. The program, titled *Explorations in Technology*, addresses two principal tenets of early adolescent education: (1) help learners discover and explore personal interests, aptitudes, and abilities; and (2) provide learners with experiences in technology.

Goal: Explorations in Technology

The goal of the middle school program is to assist students in exploring and preparing for appropriate educational and technological choices.

The program consists of three levels or courses. One is available for each grade level of the school structure. Each level, whether offered for 9, 12, 18, or 36 weeks, includes the four basics of technology: resources, processes, systems, and impacts. Students study these four components within the changing context of each level.

- The first level stresses resources and problem solving. Students discover that resources undergirding technology are the same no matter where they are applied. Problem solving, the inherent process of technology, becomes a way of thinking and creating new ideas.
- The second level accentuates **creativity** in **problem solving**. Students build models of existing inventions and explore possibilities for future inventions and innovations.
- The third level emphasizes technological systems. By simulating these systems, assessing their impacts, and relating these discoveries to the experiences of the two previous levels, students acquire a global view of technology.

Learner Benefits

The rich experiences of the three-level sequence help learners acquire knowledge and the process skills of technology. These experiences also help learners discover and explore the personal interests, aptitudes, and abilities necessary to make wise decisions regarding educational and career opportunities.

ERIC Full Text Provided by ERIC

High School Programs (Grades 9-12)

The technology education program for the high school provides challenging experiences for the adolescent learner. Program content stems from the study of a variety of technologies and challenges the student's ability to apply scientific principles, engineering concepts, and technological systems.

Goal: Application of Technology to Life and Work

The goal of the high school technology program is to assist students in applying technology to their needs and in making intelligent judgments about problems associated with technology.

The high school student of technology education shall . . .

- evaluate technology's capabilities, uses, and impact on individuals, the environment, and society
- apply design concepts to solve problems and extend human potential
- employ the resources of technology to analyze the behavior of technological systems
- apply scientific principles, engineering concepts, and technological systems in the processes of problem solving, creating, and designing
- develop personal interests and abilities related to careers in technology and engineering.

Learner Benefits

Completion of the high school Design and Technology program prepares the student for technical or professional programs of higher education. The student becomes a technological thinker and innovator through practical applications of mathematics, science, and technology. The program engages the student in applications of the technological method in real world situations. Further, these experiences enable the student to visualize and assess the impacts of technology and develop designs for the future.

ERIC Full text Provided by ERIC

ilzabon: Technology Student Association

Activities of the Technology Student Association (TSA) are included as a part of the instructional program to promote leadership qualities, high standards of craft quality, scholarship, and safety. Teachers integrate TSA experiences within their instruction by providing for students . . .

- an involvement with the community's industrial and technological resources.
- * activities in parliamentary procedures and democratic decision making.
- recognition for exemplary performances.

Substitution for Illen School Science, Mathematics, and Practical Arts Credits

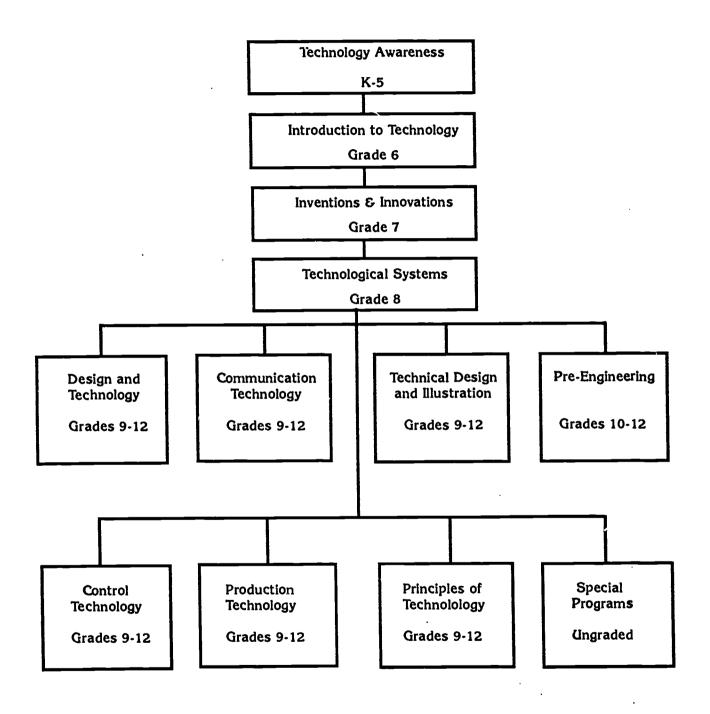

Students who fulfill the requirements of the following may substitute it for one unit of high school elective mathematics or science in a 21-unit diploma, if approved as a local option:

Completion of any two courses in a technology program with at least two credits earned above the eighth-grade level.

High school Technology Education courses meet requirements for a practical arts elective.

Technology Awareness

Description:

Technology Education experiences in the elementary school are designed to help students learn and achieve the educational goals of the total elementary school program. These experiences orient students to technology, develop psychomotor skills, and refine attitudes about technology's influence on society. Technology-based activities should be integrated into the total elementary school curriculum so that activities motivate students and reinforce the subject matter.

Technology education in the elementary school

 provides opportunities for children to learn fundamental concepts of how people create and control technology

reinforces and enriches concepts of the elementary school curriculum

 allows students to work with tools, materials, and technological concepts and processes to explore ways in which technology influences society.

CIP Code:

21.0101

Suggested Grade Level:

K-5

Suggested Experiences:

Problem solving using the technological method

Interdisciplinary studies using real-world technology applications
Creative thinking using inventiveness, engineering, and economics

• Information technology using computers, telecommunica.)ns, videos, and graphics

Psychomotor development using manipulative materials, tools, and modeling packages

 Building of self-confidence by talking, writing, and drawing/illustrating for others

Program: Middle School Explorations in Technology

Description:

Technology Education at the middle school level (grades 6-8) introduces students at each grade level to the broad nature of technology through a planned sequence of specially designed hands-on explorations in technology.

Through laboratory activities in which they learn to solve relevant technological problems, students gain insights into the underlying fundamentals of technology. They learn to recognize the social and environmental impacts of technology and develop skills in using the processes of technology to accomplish results.

Students also refine their physical, cognitive, and affective skills through experiences that encourage eye-hand coordination, observation, prediction, analysis, evaluation, and creativity.

CIP Code:

Programs:

N/A

Introduction to Technology 8481 (9 weeks) Introduction to Technology 8484 (12 weeks) Introduction to Technology 8482 (18 weeks) Introduction to Technology 8483 (36 weeks)

Grade Level: 6

Prerequisites: None

Students first study the basic elements of all technology, including processes, energy, information, and people. They explore up to four systems of technology, including construction, transportation, communication, and production/manufacturing. Finally, they relate the impact of technology on society, environment, and culture to future consequences and decisions.

inventions and innovations 8461 (36 weeks) inventions and innovations 8464 (18 weeks) inventions and innovations 8485 (12 weeks)

Grade Level: 7

Prerequisites: None

Students make models of significant inventions that have advanced society. After studying these developments, they explore contemporary technological problems facing them, their community, or the world and apply systematic procedures to invent new products or innovations as solutions.

Technological Systems 8462 (36 weeks) Technological Systems 8463 (18 weeks) Technological Systems 8486 (12 weeks)

Grade Level: 8

Prerequisites: None

Students combine resources and techniques into systems, realizing technology as a system. By simulating systems, assessing their impacts, and relating this experience to the two previous levels, students gain an insight into how to approach the problems and opportunities of a technological world in a broad sense. They also explore occupational areas and educational programs for technology-oriented careers.

Program: Design and Technology

Description:

This activity-b sed lab program for high school students offers a sequence of three courses focused on concepts and skills that serve as a foundation for a lifetime of interest and application. Students develop a technological capability that allows them to

- know and use the technological method of problem solving
- build and control systems with computers
- expand imaginative and mechanical abilities
- assess and design/improve technologies

adapt to changes in technology.

Design and Technology presents a core of technological understanding and know-how that serves as the educational foundation of all students, regardless of sex, race, academic talent, or life goals.

CIP Code:

21.0101

Suggested Grade Level:

9-12

Prerequisites:

None

Approved Courses:

Technology Foundations (8402/8403) Technology Transfer (8404/8405) Technology Assessment (8406/8407)

Related **Postsecondary**

Programs:

Engineering Science Sociology Technology

Technology Foundations 8403 (36 weeks) Technology Foundations 8402 (18 weeks)

Grade Level: 9, 10, 11, or 12

Prerequisites: None

In the beginning high school course in Technology Education, students acquire a foundation in technological material, energy, and information and apply processes associated with the technological thinker. Challenged by laboratory activities, students create new ideas and innovations, build systems, and analyze technological products to learn further how and why technology works. They work in groups to build and control systems with engineering in the development of a technology.

Technology Transfer 8405 (36 weeks) Technology Transfer 8404 (18 weeks)

Grade Level: 10, 11, or 12 Prerequisites: Technology Foundations

Building upon Technological Foundations, students work with a variety of computers, materials, and systems to improve their skills and knowledge. Groups work together on a project that combines systems such as production, energy, communication, transportation, and other technologies. These activities are transferred to other courses in the school because the students use math, science, and communication to design and build a computer device, an energy efficient vehicle, or a multinational package. Thematic activities engage students in community problems where they transfer the technological method to address recycling, space exploration, and housing.

Technology Assessment 8407 (36 weeks) Technology Assessment 8406 (18 weeks)

Grade Level: 11 or 12 Prerequisites: Technology Transfer

Technology Assessment is offered as a capstone course for students in high school. Students use their knowledge and abilities in math, science, and technology to analyze the contributions of technical devices to their homes and the world. Students use information they acquire through library research or computer databases to predict the future. They design futuristic products and use assessment to determine possible results. They also use computer graphics, videotapes, and design portfolios to present their newly created products and systems.

Program: Pre-Engineering

Description: Designed to introduce students to engineering and related careers,

this program integrates mathematics and science concepts into high-tech engineering-type activities. Students explore challenges of

a career as an engineer, technologist, or technician.

Students build competencies relevant to engineering principles such as problem solving, materials processing, and materials science. These experiences are useful to the future engineer, technologist, or

technician.

Introduction to Engineering 8490 (36 weeks)

Grade Level: 10, 11, or 12

Prerequisites: None

While undergoing an orientation to the careers and challenges of engineering, students are actively involved with high-tech devices, engineering graphics, and math/scientific principles through problem-solving experiences. Activities in descriptive geometry, materials science, and technical systems challenge students as they communicate information through seminars, technical reports, and idea sharing.

Research and Development Engineering 8491 (36 weeks)

Grade Level: 11 or 12

Prerequisites: Introduction to Engineering

To learn the applications and design process of engineering, students form engineering teams and select a group design project. Each team uses communications, graphics, mathematics, and community resources to solve problems. Each team learns appropriate information in order to complete a project. Projects may be models, systems, or products that creatively solve an engineering problem.

Sequence: Communication and Information **Technology**

Description:

Communication and Information Technology is a high school sequence consisting of at least two classroom/laboratory courses (300 hours of instruction). Students develop competencies in the areas of communication and media, resulting in occupational readiness useful to the future craftsperson, technician, technologist,

or consumer.

Students who complete the sequence are prepared with competencies that build a long-range foundation of technical application and adaptation useful for immediate employment or articulation with advanced occupational preparation programs, apprenticeship, community college, or university programs.

Publishing Electronics

Computing Systems 8421 (36 weeks) Computing Systems 8420 (18 weeks)

Grade Level: 9, 10, or 11

Prerequisite: None

Students engage in a very broad study of the technical aspects of computers and their application to production, transportation, and communication systems. Topics include computer equipment and operating systems, programming, control processing information, and social/cultural impact of computers. Problem-solving activities challenge students to plan, program, and interface devices with computer systems. Learning activities include experiences with robotics and control systems, computer-aided design, and computer-aided manufacturing.

Communications Systems 8415 (36 weeks) Communications Systems 8418 (18 weeks)

Grade Level: 9, 10, or 11

Prerequisite: None

Students use technology to communicate information in visual or audio formats. Communication systems are an integral part of the other technological activities involving input, processing, output, and feedback. Students employ tools, materials, and other elements in the application of communication systems and subsystems to solve problems, create effective media, and process information. Through the course, students develop personal interests and analyze the impact of communication systems on people, society, and culture.

Graphic Communications 8458 (36 weeks) Graphic Communications 8494 (18 weeks)

Grade Level: 10, 11, or 12

Prerequisite: None

Graphic Communications deals with printed images such as newspapers, books, printed T-shirts, signs, photographs, wallpaper, or stationery. Students use a variety of graphic arts equipment, materials, and processes to make visual projects. Students design, plan, and reproduce products similar to those produced by the graphic arts industry. Cameras, printing presses, and copy machines are among the many equipment items used.

Sequence: Control Technology

Description:

Control Technology is a high school sequence consisting of at least two classroom/laboratory courses (300 hours of instruction). Students who are interested in technical careers or who wish to further their understanding of the physical principles underlying modern technology will benefit from this sequence.

Students completing the sequence are prepared with competencies that build a long-range foundation of technical application and adaptation useful for immediate employment or articulation with advanced occupational preparation programs, apprenticeship, community college, or university programs.

Electronics Technology Electrical Engineering Engineering Technology Mechanical Engineering Science

Electronics Technology | 8416 (36 weeks) Electronics Technology | 8417 (18 weeks)

Grade Level: 9, 10, or 11

Prerequisites: None

In this single-period laboratory course, students experiment with simple electrical devices and circuits and build projects using DC and AC devices and circuits.

Electronics Technology II 8412 (36 weeks)

Grade Level: 10, 11, or 12

Prerequisites: Electronics Technology I

Students work with electronics devices, instruments, and circuits, building projects to apply theories and laws with electronic components such as resistors, capacitors, and transistors. They also study integrated circuits used in computers, amplifiers, television, and other equipment. Electronics Technology II is designed as a single-period laboratory course.

Power and Transportation 8445 (36 weeks) Power and Transportation 8444 (18 weeks)

Grade Level: 9, 10, or 11

Prerequisites: None

Students survey the many broad sources of energy and power used in power and transportation systems. Instruction in this single-period course includes ways that (1) energy is converted to power; (2) power is transmitted and controlled; and (3) power is used through mechanical, fluid, and electrical devices. Students explore career opportunities in power and transportation fields and build projects, conduct experiments, and repair mechanical devices such as small engines, electrical motors, and outboard motors.

Energy and Power 8448 (36 weeks) Energy and Power 8495 (18 weeks)

Grade Level: 10, 11, or 12

Prerequisites: None

In this single-period laboratory course, students learn about the application of power and energy systems to common power devices and transportation vehicles and apply theory to the practical servicing of common machines such as small gasoline engines, outboard motors, motorcycles, and lawnmowers.

Sequence: Production Technology

Description:

Production Technology is a high school sequence consisting of at least two classroom/laboratory courses (300 hours of instruction). To complete the sequence, students may take two 36-week courses,

four 18-week courses, or any combination thereof.

Students develop competencies in the areas of materials, sciences, processes, and enterprise, resulting in occupational readiness for the

future craftsperson, technician, technologist, or consumer.

Students completing the sequence are prepared with competencies that build a long-range foundation of technical application and adaptation useful for immediate employment or articulation with advanced occupational preparation programs, apprenticeships,

community college, or university programs.

Production Systems 8447 (36 weeks) Production Systems 8446 (18 weeks)

Grade Level: 9, 10, or 11

Prerequisites: None

Students plan, design, develop, and market products, using technology such as computer-aided manufacturing (CAM), computer numerical control, and robots used in flexible manufacturing systems. They analyze markets, design and develop prototypes, determine impact, and plan new businesses needed by people and society. Students consider the social, cultural, and economic impacts of automation. The class determines major production systems employed by local industries.

Materials and Processes Technology 8433 (36 weeks) Materials and Processes Technology 8478 (18 weeks)

Grade Level: 9, 10, or 11

Prerequisites: None

Students focus on industrial/technical materials and processes as they fabricate usable products and conduct experiments. Learning experiences include career analysis as well as the use of tools and equipment related to analysis, testing, and processing of metals, plastics, woods, ceramics, and composite materials. This single-period laboratory course is recommended for students interested in technical careers and others wishing to improve their consumer knowledge and technological literacy.

Construction Technology 8421 (36 weeks) Construction Technology 8432 (18 weeks)

Grade Level: 10, 11, or 12

Prerequisites: None

Students in this single-period laboratory course design, build, and test scale-model structures, working with projects that help them to understand the jobs of architects, carpenters, electricians, plumbers, surveyors, contractors, masons, design engineers, and a variety of other construction careers. (This course is a companion to Manufacturing Technology.)

Manufacturing Technology 8425 (36 weeks) Manufacturing Technology 8426 (18 weeks)

Grade Level: 10, 11, or 12

Prerequisites: None

Students organize and operate a manufacturing company to explore careers and work habits typical of American industry's free enterprise system. Students make projects or products in the company that can be sold, while experiencing the work of planners, designers, engineers, machine operators, personnel managers, and a variety of other manufacturing careers. (This course is a companion to Construction Technology.)

Sequence: Technical Design and Illustration

Description:

Technical Design and Illustration is a high school sequence consisting of at least two of the three approved classroom/ laboratory courses (300 hours of instruction). To complete the sequence, students must take Basic Technical Drawing and one of the other two courses listed. They develop competencies in the areas of drafting and design, resulting in occupational readiness useful to the future craftsperson, technician, technologist,

engineer, or consumer.

Students completing the sequence are prepared with competencies that will build a long-range foundation of technical application and adaptation useful for immediate employment, apprenticeship, or university programs.

CIP Code:

Architecture

Engineering Design

Basic Technical Drawing/Design/CAD 8435 (36 weeks) Basic Technical Drawing/Design/CAD 8434 (18 weeks)

Grade Level: 9, 10, or 11

Prerequisites: None

In this foundation course students learn the basic language of industry and technology and they design, sketch, and make technical drawings, models, or prototypes of real design problems. The course is especially recommended for future engineering and architecture students.

Architectural Drawing/Design/CAD 8437 (36 weeks) Architectural Drawing/Design/CAD 8492 (18 weeks)

Grade Level: 10, 11, or 12

Prerequisites: Basic Technical Drawing/Design

Students learn the principles of architecture and increase understanding of working drawings and construction techniques learned in the prerequisite course. Experiences include residential and commercial building designs, rendering, model making, structural details, and community planning. Students use computer-aided drawing and design (CAD) equipment and established standards or codes to prepare models for presentation. The course provides information helpful for the homeowner and is especially beneficial to the future architect, interior designer, or homebuilder.

Engineering Drawing/Design/CAD 8436 (36 weeks) Engineering Drawing/Design/CAD 8493 (18 weeks)

Grade Level: 10, 11, or 12 Prerequisites: Basic Technical Drawing/Design

Students use a graphic language for product design, technical illustration, assembly, patent, and aeronautical drawings. They increase their understanding of drawing techniques learned in the prerequisite course. Students use computers, calculators, and descriptive geometry and adhere to established standards to solve design problems. Throughout the course, they hold seminars, meet engineers, and tour drafting offices in order to learn about the benefits of the course on their future study and career.

Sequence: Principles of Technology

Description:

Principles of Technology is a two-course sequence in which students apply physics and math principles through a unified systems approach for a broad knowledge base of the principles underlying modern technical systems. As a foundation for more education and training in advanced technology career paths, the "principles and systems" approach ensures career flexibility as machines and technology advance. The two-year sequence covers 14 technical principles: force, work, rate, resistance, energy, power, force transformers, momentum, waves and vibrations, energy convertors, transducers, radiation, optical systems, and time constants.

Students completing the sequence are prepared with competencies that build a long-range foundation of technical application and adaptation useful for immediate employment or articulation with advanced occupational preparation programs in community college or continuing education.

CIP Code:

Related Postsecondary Programs:

Aeronautics Automotive

Electronics Technology Electrical Engineering Engineering Technology Mechanical Engineering

Science

Laboratory Science Credit:

Principles of Technology is an approved laboratory science course equivalent to Applied Physics. The program can be counted as a laboratory science both years. However, the second year (9812) is to be used as a science elective only when the student earns four science credits between grades 9 and 12.

Principles of Technology I 9811 (36 weeks)

Grade Level: 10 or 11

Prerequisite: None

Students in this single-period laboratory science course apply physics and math principles through a unified systems approach for a broad knowledge base of the principles underlying modern technical systems. As a foundation for more education and training in advanced technology career paths, the "principles and systems" approach ensures career flexibility as machines and technology advance. Instruction covers seven technical principles: force, work, rate, resistance, energy, power, and force transformers, emphasizing how each principle plays a unifying role in the operation of mechanical, fluid, electrical, and thermal systems in high-tech equipment.

Note:

Principles of Technology I 9811 is approved as a laboratory science

offering.

Principles of Technology II 9812 (36 weeks)

Grade Level: 11 or 12

Prerequisite: Principles of Technology I

Students continue to apply physics and math principles through a unified systems approach for a broad knowledge base of the principles underlying modern technical systems. As a foundation for more education and training in advanced technology career paths, the "principles and systems" approach ensures career flexibility as machines and technology advance. This single-period laboratory course covers seven technical principles: momentum, waves, energy converters, transducers, radiation, optical systems, and time constants, emphasizing how each principle plays a unifying role in the operation of mechanical, fluid, electrical, and thermal systems in high-tech equipment.

Note: Principles of Technology II 9812 may be counted as an elective only.

Careers and You 8475 (9, 18, or 36 weeks)

Grade Level: 5 or 6

Prerequisite: None

Elementary or middle school students may enroll in this one-period-per-day course prior to taking exploratory courses. They investigate the 15 career clusters designated by the U.S. Office of Education by focusing on four major areas:

Understanding oneself in relationship to work

Understanding and simulating the work styles of people (mechanical, conventional, enterprising, social, investigative, and creative)

Identifying and simulating selected careers

Planning for future exploratory courses or activities.

Vocational Ocupational Exploration—Disadvantaged 8469 (36 weeks)

Grade Level: Ungraded

Prerequisite: None

This laboratory course is designed for economically or academically disadvantaged students who have been vocationally assessed as having an aptitude for and interest in an industrial or craft career. Typically, these students are of normal or above intelligence but fail to achieve in the regular school environment. This offering creates an educational environment that encourages these students to remain in school and return to the regular academic or vocational program; however, those who drop out of school will have received experiences and training facilitating entry into the world of work as productive citizens.

Because of the wide variations in individual and community needs throughout the state, the Technology Education program for the disadvantaged consists primarily of locally developed content and objectives. Student organization activities are integrated into the instruction.

Vocational Ocupational Exploration—Disabled 8471 (36 weeks)

Grade Level: Ungraded

Prerequisite: None

This course code is reserved for programs designed to provide technical exploratory and self-development activities for students with mental and physical disabilities that prevent them from succeeding in the regular school environment. The program is locally designed for the individual student and forms the basis of the student's individualized education plan (IEP).

Program & Course Descriptions page 11

Trade and Industrial Education in Virginia

Program Completer **Options** page 65

Overview

Trade and Industrial Education programs prepare students with occupational skills, knowledge, attitudes, and work habits to become employed and progress satisfactorily in the trade and industrial field as skilled or semi-skilled craftspersons.

The basic competencies required for employment in a given trade area determine the content of each local instructional program. The teacher, in cooperation with supervisors, advisory committees, and other persons who have knowledge of the trade, develops the curriculum based upon the needs of students and opportunities for employment.

Types of Programs

Trade and Industrial Education offers occupational preparation through the following types of programs.

❖ In-school, laboratory-type programs

Students receive comprehensive instruction through the use of facilities and equipment that simulate industry in every detail. The instructor, who has industrial experience and is qualified at the journey level in his or her trade area, offers training in a specific trade area such as auto mechanics, carpentry, drafting, or electricity. Cluster programs of related trade areas (e.g., building trades, which provides instruction in carpentry, electricity, plumbing, and masonry) are included in this group. These programs usually meet for two or three class periods each day.

Cooperative programs

The Industrial Cooperative Training (ICT) program differs from the laboratory-type program in that students receive instruction in the manipulative skill processes of their selected occupation through on-the-job training.

Each student in an ICT program may be employed in a different trade area. The teacher-coordinator and the student's employer design a training plan to develop the student's entry-level skills. The teacher coordinates the student's occupational experiences with a study of related technical information in the ICT classroom. Students enrolled in a program of this type attend one-hour ICT classes and are employed for at least three hours during the regular school day.

Trade and Industrial Education

3

ICT students may complete their supervised ocupational experience before school, after school, and on weekends or evenings. The teacher-coordinator requires scheduling flexibility to permit on-site supervision of students during the working hours.

Students who fulfill both the related instruction and the supervised occupational experience requirements of the two ICT courses (ICT II and III) or the Senior Intensified ICT program will be classified as program completers and may receive a maximum of three credits (i.e., one credit for classroom activities and two credits for on-the-job experiences).

Program Options

Eight Trade and Industrial Education program options meet the challenge of change in instructional technology, the requirements for high school graduation, and the need for flexibility in scheduling.

- ❖ Option 1: Three periods per day for two years.
- **Option 2:** Two periods per day for three years.
- Option 3: One period per day for one year; two periods per day for one year; and three periods per day for one year.
- A cluster program referring to a family of occupations such as the building trades, including carpentry, electricity, masonry, and plumbing. Level I, the first year trade preparatory curriculum, rotates students through an occupational cluster of four existing T&I programs on a one-hour basis for a nine-week period, or three programs for a twelve-week period. For reporting purposes, a student entering a specific cluster at the beginning of the school year will be reported as enrolled in Level I of that subject area for the entire school year.

After completion of the first-level introductory course, students select one of the concentrated building trades courses--carpentry, electricity, masonry, or plumbing. The second and third year of the total cluster program, Levels II and III, are offered in two-hour blocks each year. Because the instructor will have the three preparations required to teach all three levels, a planning period is essential to the success of this program.

- ❖ Option 5: Three-period block per day for one year. Preparation for certain trade and industrial occupations such as bricklaying, residential wiring, and public safety can be accomplished with this schedule. Other programs, as determined by occupational or craft committees and instructors in these occupational areas, may also qualify for this option. Examples include automotive servicing, culinary arts, commercial sewing, upholstery, and welding.
- ❖ Option 6: Two-period block per day for one year; three-period block per day for one year. It is essential for the instructor to have a planning period in this situation.
- ❖ Option 7: Option for students who choose to develop competencies required for a sub-occupation within an occupational group. Certain programs are offered as a three-period block within a one-year time frame for preparation in a sub-occupation within the same career field. Technical and architectural drafting, sub-occupations within the drafting field, are examples of programs that would fall into this category.
- ❖ Option 8: Two periods per day for two years. This option enables students to complete a T&I program within four instructional blocks. The minimum amount of instructional time available for this program must be two instructional periods without a break at the 11th grade and at the 12th grade levels. There must be sufficient time to develop the competencies required in an occupational preparation program.

Student Organization: Vocational Industrial Clubs of America

Activities of local chapters and sections of the Vocational Industrial Clubs of America (VICA) are an integral part of the instruction in all Trade and Industrial Education programs. These activities provide opportunities for students to develop occupational skills and knowledge and encourage them to become better citizens. This part of the instructional program stresses personal leadership development and motivates students to excel in their chosen occupation.

Substitution for High School Science, Mathematics, and Practical Arts Credits

- All program completers, including students in Special Programs, are eligible for a mathematics credit in the 21-unit diploma, if approved by the local school division.
- Students who complete the following T&I programs may substitute the completion for a mathematics or science credit, if approved by the local school division:

Air Conditioning and Refrigeration
Barbering
Cosmetology
Electricity
Electronics
Firefighting
Law Enforcement
Public Safety
Electronic Products Servicing
Robotic Work Cell Technology.

- Completion of the ICT program is an acceptable alternative for one unit of mathematics in the 21-unit diploma, if approved by the local school division.
- Trade and Industrial Education courses meet requirements for a practical arts elective.

Industrial Cooperative Training

Description:

In Industrial Cooperative Training (ICT), students have the opportunity to prepare for employment related to the many fields within the areas of trade, industrial, or technical occupations. Each student

receives on-the-job training and instruction related to his or her chosen

trade area.

The ICT-SIP program can be operated only if there is a regular ICT

program in existence. Only seniors having an interest in an

occupational career in which entry-level skills may be learned in one year may be assigned to this program. Seniors may be assigned to ICT I or ICT II classes but are not to exceed 10% of the total enrollment

of the ICT program.

Work and **Family Studies** in Virginia

Overview

The family forms the basis of Work and Family Studies just as business, industry, and marketing form the basis of other vocational education programs. Common to all vocational disciplines is the concept of work, and as one of these disciplines, Work and Family has the work of the family as its fundamental concept.

Work and Family Studies provides educational opportunities in two ways. The family component provides for young people the opportunity to prepare for work in the family enterprise. In the job component, young people explore and prepare for jobs that originate from the family enterprise. This component concerns mastering job entry-level skills, advancing in related occupations, and continuing education in postsecondary vocational or university settings.

In both components, students continue to develop and refine the basic skills of reading, writing, oral communication, and computation. In addition, they learn career development skills, employability skills, and skills related to the work of the family. Work and Family Studies places a special emphasis on the development of reasoning skills, such as distinguishing between fact and opinion and identifying problems and evaluating ways to solve them.

Program Goals

The content of all Work and Family Studies courses is directed toward the achievement of an entire set of program goals. A concern for career development, job and employability skills, the value of work and the family, and the enhancement of reading, writing, speaking, listening, computing, and reasoning skills form the basis of these program goals.

Goals of the Work and Family Studies program are to help students

- develop knowledge about the skills for work in the family enterprise and for jobs originating from the family enterprise
- explore and understand the relationship between the concepts of work and family and how to use these concepts
- become more rational and responsible in decisions and actions involving home and family.

Occupational Work and Family Studies

The occupational program provides content and learning experiences that help students

- identify the relationship of Work and Family Studies-related jobs to one another and understand their relationship to the family and to other institutions
- develop insights about their own and others' attitudes toward work
- develop the ability to work in a chosen Work and Family Studies-related occupation.

Occupational Work and Family Studies may be provided through two methods of instruction or a combination of the two. These methods include (1) simulated laboratory and classroom instruction, (2) classroom instruction and on-the-job training, or (3) simulated laboratory instruction, classroom instruction, and on-the-job training.

Simulated Laboratory Instruction

Simulated laboratory occupational courses are offered as a double and/or triple period scheduled for 36 weeks and a two-year period of time. The classes are scheduled for consecutive periods per day and for consecutive years. A double-period year offers two Carnegie units; a triple-period year offers three Carnegie units. The simulated laboratory environment should be designed with state-of-the-art equipment.

Cooperative Education Instruction

Work and Family Studies Cooperative Education, a full-time cooperative education program, is offered one period a day for 36 weeks. The program is two years in length. The student should begin on-the-job training within two weeks after the start of the school year. If a student transfers into the program from another school, the two-week deadline for placement on the job is also applicable.

For two Carnegie units, the student should be given two hours of school release time and have 405 hours of supervised work experience per school year. This experience averages two hours per day for five days a week. For a transfer student not previously enrolled in a cooperative education program, the remainder of the school year shall accommodate a minimum of 200 work hours for two credits.

For three Carnegie units, the student should be given three hours of school release time and have 540 hours of supervised work experience per school year. This experience averages three hours per day for five days a week. For a transfer student not previously enrolled in a cooperative education program, the remainder of the school year shall accommodate a minimum of 270 hours of supervised work experience for three credits.

The cooperative work experience is supervised by the Work and Family Studies teacher, and a training agreement and plan should be developed cooperatively by the training sponsor, teacher-coordinator (Work and Family Studies teacher), and the student.

A training site approved for occupational training must be classified as an occupation requiring knowledge and skills in one or more of the following Work and Family Studies programs: child care and guidance management and services; clothing, apparel, and textile management, production, and services; food production, management, and services; home furnishings and equipment management, production, and services; and institutional, home management, and supporting services.

All students enrolled in the occupational program are encouraged to join HERO chapters of the student organization, Virginia Association, Future Homemakers of America, Inc. The Future Homemakers of America, Inc. is an integral part of the Work and Family Studies occupational program in that it contributes to employability by helping students develop personal employability skills and job-searching skills in all occupational preparation programs.

Consumer and Homemaking Education

The consumer and homemaking education program provides content and learning experiences that help students

- recognize the role of the family in society and its relationship to other institutions
- recognize the work for which the family is responsible in society
- recognize the conditions in the family and society that affect the family's ability to carry out its work
- develop the ability to help others recognize the work of the family as important.

Students have the opportunity to explore the individual development of each member of the family through the major instructional areas of child development and guidance, clothing and textiles, consumer education, family life and parenting, food and nutrition, and housing and home management (including resource management).

All courses meet five days a week, a single period per day or the equivalent thereof. Extended learning experiences, including internships, beyond the classroom environment are encouraged and are supervised by the Work and Family Studies teacher. The satisfactory completion of two years of consumer and homemaking education is required for program completion.

All students enrolled and those who have been enrolled previously in Work and Family Studies programs are eligible for and encouraged to join their local chapter of the Work and Family Studies student organization, Virginia Association, Future Homemakers of America, Inc. The Future Homemakers of America organization is an integral part of the program in that it extends and enriches classroom experiences by helping individuals to improve personal, family, and community living and to develop leadership skills.

Special Programs

Regular programs are modified to address the needs of special students. Some of the identified needs include opportunities for the gifted and talented, the at-risk, the disadvantaged, the disabled, and the limited English proficiency students.

Adult Education Programs

Work and Family Studies adult education programs provide continuing education for outof-school youth and adults. These programs are designed to assist participants in their roles of home manager, wage earner, consumer, and family member.

The rapid changes in social, economic, and technological areas have prompted the need for continuing or lifelong learning. Work and Family Studies adult education offers both consumer and homemaking and occupational programs.

Consumer and Homemaking Programs (Minimum of 12 hours per course)

Programs in consumer and homemaking adult education are considered to be supplemental in nature. They are designed to provide training for persons already engaged in the nonwage-earning occupation of homemaking or for those who have entered the labor market and need updated and upgraded training to achieve stability and advancement.

The purpose of consumer and homemaking adult education is to improve the quality of life of individuals and families. These programs address the needs and interests of people, both male and female, including those with special needs, at various stages in the life cycle. Each course meets for a minimum of 12 hours, and areas of study include the following courses:

Child Development
Clothing Management
Consumer Education and Home
Management
Parenting Education
Family Life Education
Family Management Skills

Food Management and Nutrition
Housing, Home Furnishings, and
Decoration
Managing the Family Income
Energy Management and Conservation
for Families and Individuals
Young Homemakers of Virginia

Occupational Programs

The adult occupational programs in Work and Family Studies are considered to be preparatory in nature. They are designed to provide training for persons who are employed but need training or who need retraining in preparation for a new occupation. Specifically, the programs provide training or retraining in the occupational areas of Work and Family Studies.

Adult education occupational programs in Work and Family Studies may be offered in the following areas:

Cake Decorating
Catering
Child Care
Clothing Alterations
Clothing Construction
Dietary Aide
Fashion Design

Food Service
Home and Institutional Services
Home Furnishings
Quantity Food Cookery
Tailoring
Upholstery
Other Related Areas With Approval

Student Organizations: Puture Homemakers of America Home Economics-Related Occupations

Future Homemakers of America, Inc. is a national vocational student organization. The Virginia Association of Future Homemakers of America, Inc., is the state affiliate of this national organization. Schools and Work and Family Studies classes shall form local chapters that affiliate with the state and national organizations. Local FHA, HERO, or FHA/HERO chapters associated with a school's Work and Family Studies program support opportunities for students to initate and carry out individual chapter projects.

A goal and specific purposes provide direction for the organization at all levels.

Goal:

To help youth assume their roles in society through Work and Family Studies education in areas of personal growth, family life, vocational preparation, and community involvement.

Purposes:

- To provide opportunities for self-development and preparation for family and community living and for employment
- To strengthen the function of the family as the basic unit of society
- To encourage democracy through cooperative action in the home and community
- To encourage individual and group involvement in helping achieve worldwide brotherhood
- To institute programs promoting greater understanding between youth and adults
- To provide opportunities for decision-making and for assuming responsibility
- To develop interest in Work and Family Studies, Work and Family Studies careers, and related occupations.

Opportunities to use the community as a resource and to participate in local, state, national, and international activities can help students attain a wholeness of perspective. These varied opportunities also help students learn new methods of forming partnerships and working together that can be applied to working with peers and with teachers.

Membership in Future Homemakers of America, Inc. is open to all students who are enrolled in or have taken a course in Work and Family Studies. FHA chapters emphasize preparation for community and family life, while recognizing that family members fill dual roles as wage earners. HERO chapters emphasize preparation for jobs and careers in Work and Family Studies-related occupations, recognizing that wage earners fill multiple roles as family members.

FHA/HERO may be incorporated into the program through an in-class or out-of-class chapter with one or more advisers per school. This type of chapter would include students who are enrolled in or have taken courses in occupational and/or consumer and homemaking education.

Substitution for High School Science, Mathematics, and Fine Arts

Students successfully meeting the requirements of the program offferings beyond the introductory level may substitute it for one unit of science, mathematics, and/or fine arts, whichever is the most applicable, in the 21-unit diploma system, if approved locally. The options are outlined as follows:

Consumer and Homemaking Program

- Life Management Skills I (Grades 8 or 9-12) and Life Management Skills II (Grades 9-12)
- Life Management Skills I (Grades 8 or 9-12) and Family Management Skills (Grades 10-12)
- Life Management Skills I (Grades 8 or 9-12) and two semester courses as defined by this Service (Grades 9-12)
- Life Management Skills II (Grades 9-12) and Family Management Skills (Grades 10-12)
- Life Management Skills II (Grades 9-12) and two semester courses as defined by this Service (Grades 9-12)
- Family Management Skills (Grades 10-12) and two semester courses as defined by this Service (Grades 9-12)
- Four semester courses (in three or more content areas, Grades 9-12) as defined by this Service
- GRADS (Grades 7-12) and individually prescribed courses (Grades 8-12) based on students' needs.

Occupational Work and Family Studies Program

- Child Care Occupations I
- Child Care Occupations II
- Clothing Occupations I
- Clothing Occupations II
- Food Occupations I
- Food Occupations II

- Home Furnishings Occupations I
- Home Furnishings Occupations II
- Home and Institutional Services I
- Home and Institutional Services II
- Home Health Aide (see Health Occupations Education)
- Home Economics Cooperative Education I (HECE)
- Home Economics Cooperative Education II (HECE)
- Catering Specialist
- Clothing Specialist
- Home Health Aide Specialist
- Hotel/Motel Specialist
- Occupational Home Economics for the Disabled
- Occupational Home Economics for the Disadvantaged
- Occupational Home Economics Internship

Students who complete a Work and Family Studies program may substitute it for a practical arts elective, if approved locally.

Carnegle Units for Graduation for the Eighth-Grade Student

The Standards and Regulations for Public Schools in Virginia, effective July 1, 1992, provide for alternate math or science credit in consumer and homemaking education, grades 8 through 12 and practical arts credit, grades 8 through 12, if locally approved.

In the accreditation standards, Part VII, page 26, E reads:

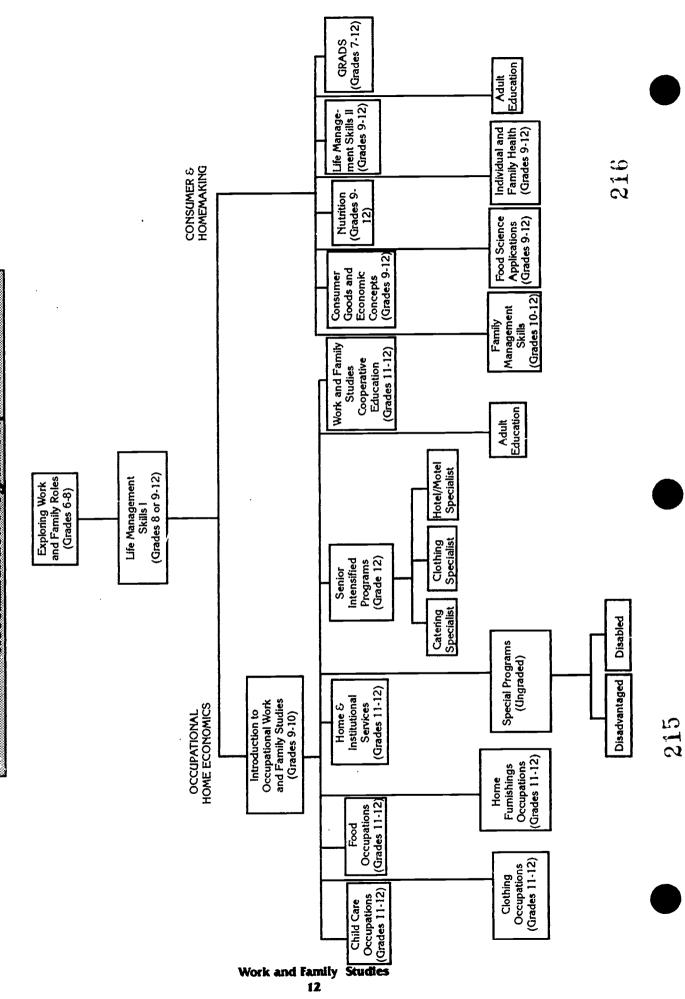

"When students below the ninth grade successfully complete courses offered for credit in grades 9 through 12, credit shall be counted toward meeting the units required for graduation."

Life Management Skills I (8230) and GRADS (8277/8277) are the only high school courses officially designated as courses available for an eighth grader to take, if locally approved.

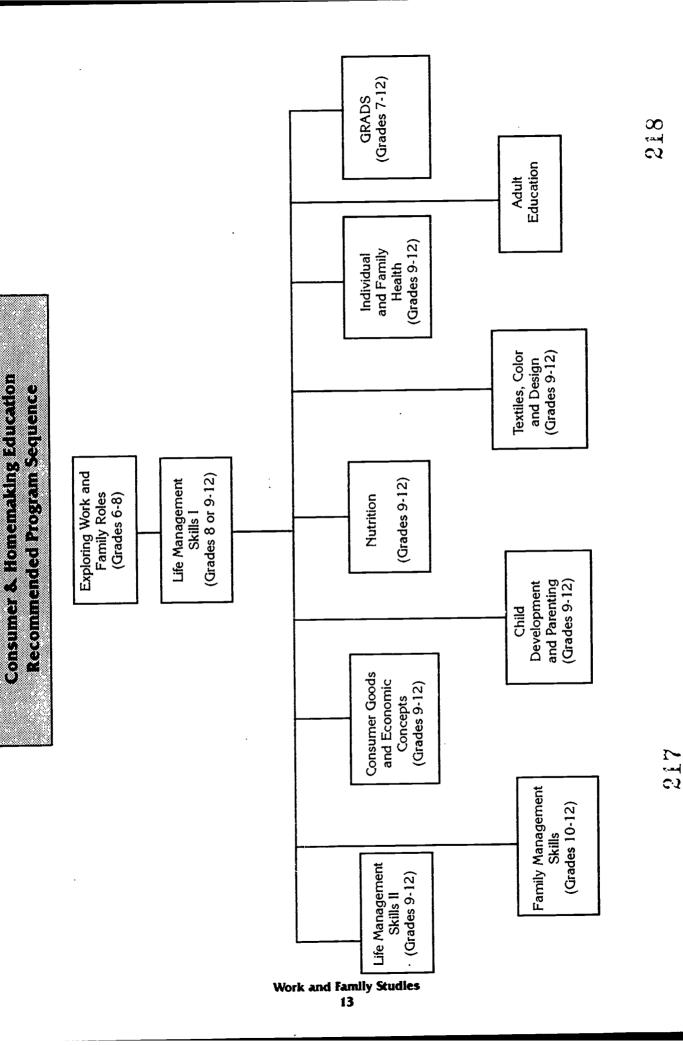

There is one exception to the above. It would be acceptable for a second-semester GRADS student to enroll in semester courses that would support the student's role as a better parent, e.g., Child Development and Parenting, Marriage and the Family, Nutrition, and Personal Consumer Decisions.

WORK AND FAMILY STUDIES NOTE

The course information on the following pages is unchanged from the 1994 edition. Work and Family Studies (formerly Home Economics Education) programs and courses are presently being restructured. Information on new and revised offerings will be distributed by November 1, 1994, and these pages should be inserted in place of the Work and Family Studies pages.

Middle-Level Program **Exploring Work and Family Roles**

Description:

The middle-level education exploratory program provides a foundation for management of personal, family, work, and community roles and responsibilities. Students explore concepts and practice skills related to problem-solving, leadership, interpersonal relationships, ethical practices, career interests, environmental issues, and high quality work. Mathematics, science, language, social sciences, fine arts, and technology are integrated throughout the program. Exploring Work and Family Roles is the foundation for Work and Family Studies

programs on the high school level.

Thematic Unit(s) (8246)

Note: The local education agency has the option of designating specific titles for exploratory courses and thematic units.

When enrollment is restricted by grade, use the following codes:

Grade 8-8208 Grade 7-8206 Grade 6-8204.

Suggested Grade Levels:

Students 9-13 years old (grades 4, 5, 6, 7, 8)

Exploratory

See program description for grade levels and course codes.

The course focuses on processes students must master in order to manage their responsibilities at home, at school, and in the community. Instructional strategies are interactive, relevant, and practical according to students' needs, age, and the length of time assigned to the course. Students apply knowledge and skills learned through the development of projects and products.

GRADS 8211/8212

Grade Level: 6-8 (18/36 weeks)

Prerequisite: None

The Graduation, Reality, And Dual-role Skills Program (GRADS) is a Work and Family Studies in-school program for pregnant students and young parents in comprehensive middle/junior high school, senior high schools, and vocational schools. This program should be individualized to meet the needs of each student, with emphasis on staying in school until graduation, literacy, basic skills, individual and family health, parenting skills, general employability skills, and possibly job training skills.

Consumer and Homemaking

Description:

The objective of consumer and homemaking education is to prepare

individuals for the occupation of being a home manager with

particular emphasis on consumer education for personal and family

use. Other major areas provide instruction in the individual

development of all family members; skill development in the areas of foods, clothing, housing, and home management; and preparation for marriage and parenthood. Life Management Skills I forms the basis for enrollment in specialized areas and is recommended for enrollment in an occupational program. All courses meet five days a week or the equivalent thereof. Extended learning experiences beyond the classroom are encouraged and are supervised by the

Work and Family Studies teacher. (See the complete list of consumer and homemaking programs on page 15-17).

Child Development and Parenting 8284

Grade Level: 9-12 (18 weeks)

Prerequisites: None

Aspects of growth and development of children are studied in this single-period course. Practical experiences in a day care center or observation of child behavior is provided as an essential part of the course. Emphasis is given to parental responsibility, community, resources, and environment.

Clothing Management 8274

Grade Level: 9-12 (18 weeks)

Prerequisites: None

Students study the management of clothing for the individual and family. Emphasis is given to purchasing practices, wardrobe planning and coordination, and proper care and storage of clothing and accessories. Garment construction may be included in this single-period course.

Consumer and Homemaking Internship 8217

Grade Level: 10-12 (18 weeks)

Prerequisites: None

A C&HE internship is a program option for students wanting on-the-job, unpaid training in one or more specific subject matter content areas. The student combines a single period of daily classrrom instruction or the equivalent thereof with two to three hours of school release time per day for on-the-job training experience in business and industry. An 18-week, 1/2-credit internship requires 200 hours of on-the-job training.

Consumer and Homemaking Internship 8218

Grade Level: 10-12 (36 weeks)

Prerequisites: None

A C&HE internship is a program option for students wanting on-the-job, unpaid training in one or more specific subject matter content areas. The student combines a single period of daily classrrom instruction or the equivalent thereof with two to three hours of school release time per day for on-the-job training experience in business and industry. A 36-week, 1-credit internship requires 405 hours of on-the-job training.

223

Consumer Goods and Economic Concepts 8252

Grade Level: 9-12 Prerequisites: None

This one-period course provides an in-depth study of the management of the consumer dollar and other resources and skills necessary for personal and home management. Basic economic concepts and the free enterprise system are examined as they apply to personal and family living.

Family Management Skills 8270

Grade Level: 10-12 (suggested) (36 weeks) Prerequisites: None

Family Management Skills is designed to provide basic consumer and homemaking instruction to students in the 10th, 11th, or 12th grade who have had no previous high school course in preparation for the occupation of homemaking (although the student may have had Teen Living or Life Management Skills I in the middle/junior high school). In this single-period, one-year course, students learn fundamental homemaking skills, coping skills, and life management skills; they study developing and implementing individual and family interactions; planning and implementing nutritionally adequate diets; analyzing and selecting consumer alternatives; and managing resources. Computer skills that can enhance Family Management Skills may be included.

Food Management 8273

Grade Level: 9-12 (18 weeks) Prerequisites: None

The management of time, energy, and money to provide adequate food for the individual and the family is studied. Emphasis is placed on skill development in planning, purchasing, preparing, and serving nutritious, tasty, and attractive meals. Included in this single-period course is a study of methods of food conservation and the selection, use, and care of kitchen equipment.

Food Science Applications 8263

Grade Level: 9-12 (18 weeks) Prerequisites: None

In this one-period course students are provided an in-depth study of foods, including laboratory experiences in food science. Laboratory experiences emphasize food science in handling and processing foods, food additives, microbial growth, enzyme activity, and other chemical reactions.

GRADS 8277/8278

Grade Level: 7-12 (18/36 weeks) Prerequisites: None

The Graduation, Reality, and Dual-role Skills Program (GRADS) is a Work and Family Studies in-school program for pregnant students and/or young parents in comprehensive middle/junior high schools, senior high schools, and vocational schools. This program should be individualized to meet the needs of each student with emphasis on staying in

school until graduation, literacy, basic skills, individual and family health, parenting skills, general employability skills, and possibly job training skills.

Home Care of the Sick and Aging 8268

Grade Level: 9-12 (18 weeks)

Prerequisites: None

In this single-period course, students study managing the home for personal and family wellness, identifying signs of illness, handling illnesses, managing emergencies and crisis situations, and providing home care for the ill and the elderly.

Home Science Applications 8257

Grade Level: 9-12 (18 weeks)

Prerequisites: None

Students study the scientific characteristics of base materials used in households, and basic facts on the use of electricity, gas, and electronics in the home. Laboratory experiences include identifying and evaluating scientific applications related to water conditioning, detergents, and other cleaning and washing aids, and safety precautions essential for their use.

Individual and Family Health 8269

Grade Level: 9-12 (18 weeks)

Prerequisites: None

The perspective of health as it relates to avoiding illness, understanding nutrition, and making family health decisions is the focus of this course. Instructional areas also include personal and family safety, community health, and public health. Careers related to public health are explored.

Life Management Skills I 8230

Grade Level: 8-11 (suggested) (36 weeks)

Prerequisites: None

Life Management Skills I is a single-period, one-year elective course. Units are taught based on individual interests, needs, and concerns of students. In this first year of a sequentially designed program, emphasis is placed on studying consumer resources, privileges, and responsibilities; using, caring for, and arranging small and large household equipment for greater efficiency; studying nutrition; planning, preparing, and serving simple meals; constructing a simple garment; using management procedures; and being a contributing family member.

Life Management Skills II 8240

Grade Level: 9-12 (suggested) (36 weeks)

Prerequisites: None

Life Management Skills II is a single-period, one-year elective course that expands upon the knowledge and skills acquired in Life Management Skills I. Content emphasis includes basic money management concepts; space management and work simplification; meal planning and preparation for the family; advanced clothing

construction; and responsibilities of families. (If a student has no previous Work and Family Studies classes, the teacher should individualize the curriculum to meet the needs of the student.)

Marriage and the Family 8272

Grade Level: 9-12 (18 weeks)

Prerequisites: None

Students are provided an in-depth study of strengthening appreciation of the family unit; developing personal and family relationships; determining decision-making responsibilities; sharing goals, values, and standards; analyzing family problem-solving activities; and evaluating the importance of communication. Responsible parenthood and emphasis on the dignity and worth of the individual are components of this single-period course.

Nutrition 8262

Grade Level: 9-12 (18 weeks)

James Commission of State of the Commission of t

Prerequisites: None

An in-depth study of nutrients, nutritional needs and issues; meal planning and preparation to meet individual needs; food fads and fallacies; safety and sanitation practices in food management; and career opportunities in foods and nutrition is provided. The microcomputer may be used in analyzing nutrient content, planning for special diet needs, and inventories.

Personal Consumer Decisions 8253

Grade Level: 9-12 (18 weeks)

Prerequisites: None

This single-period course offers an in-depth study of financial planning, credit, charge accounts, insurance, and consumer decisions. Emphasis is placed on developing skills for planning personal and family financial security.

Resource Management 8271

Grade Level: 9-12 (18 weeks)

Prerequisites: None

Human and nonhuman resources available for use in accomplishing personal and family goals are studied in this one-period course. Human capital, goal achievement, and conservation of all resources are emphasized.

Textiles, Color and Design 8267

Grade Level: 9-12 (18 weeks)

Prerequisites: None

The study of fibers, yarns, and fabrics comprises this single-period course. Emphasis is on fabric construction, finishes, dyes, and prints; color schemes and guidelines for using color; and principles of design. Students research jobs and careers related to the clothing and textile industry, including entrepreneurship.

Occupational Work and Family Studies

Description: The objectives of the occupational Work and Family Studies

program are to prepare individuals, including the disabled and disadvantaged, for employment in jobs requiring Work and Family Studies knowledge and skills and to develop personal employability and employment-seeking skills. Completion of one or two years of consumer and homemaking courses or the course Introduction to Occupational Work and Family Studies is recommended for students

entering the occupational Work and Family Studies program.

Occupational programs are two years in length and should begin in the eleventh grade. Classes meet daily during a one*-, two-, or

three-hour block.

CIP Code: 20.0100 Introduction to Occupational Work and Family Studies

20.0201 Child Care Occupations 20.0301 Clothing Occupations 20.0401 Food Occupations 20.0501 Home Furnishings

20.0601 Home and Institutional Services

Prerequisites: None--Introduction to Occupational Work and Family Studies or Life

Management Skills is strongly recommended.

Approved Courses:

Introduction to Occupational Work and Family Studies (8220/8221)

Child Care Occupations I (8285)
Child Care Occupations II (8286)
Clothing Occupations I (8280)
Clothing Occupations II (8281)
Food Occupations I (8275)
Food Occupations II (8276)

Home Furnishings Occupations I (8295) Home Furnishings Occupations II (8296) Home and Institutional Services I (8290) Home and Institutional Services II (8291)

Home Health Aide (8298)

Occupational Home Economics Internship (8215/8216)
Work and Family Studies Cooperative Education I (8293)
Work and Family Studies Cooperative Education II (8294)

*A one-hour block of classroom meeting time applies only to the occupational program, Work and Family Studies Cooperative Education. No other occupational programs are approved for a one-hour block of classroom meeting time, including senior intensified courses.

Introduction to Occupational Work and Family Studies 8220

Grade Level: 9 or 10 (suggested) (18 weeks)

Prerequisites: None

This course introduces students to a variety of work experiences and to a variety of jobs in which knowledge and skills related to work and family roles are fundamental.

Introduction to Occupational Work and Family Studies 8221

Grade Level: 9 or 10 (suggested) (36 weeks)

Prerequisites: None

This course introduces students to a variety of work experiences and jobs. It affords first-hand opportunities in work situations and enables students to begin to equate their interests and abilities with possible career objectives in a specific occupational area. Emphasis also is placed on the development of personal qualities and job-seeking skills for employment.

Child Care Occupations 1 8285

Grade Level: 11 (suggested) (36 weeks)

Prerequisites: Introduction to

Occupational Work and Family Studies recommended.

Child Care Occupations I is designed to assist students in developing the skill and understanding needed in working with small children. Emphasis also is placed on the development of personal qualities and job-seeking skills for employment.

Child Care Occupations II 8286

Grade Level: 12 (suggested) (36 weeks)

Prerequisites: Child Care

Occupations I

Child Care Occupations II is an in-depth extension of Child Care Occupations I. This course emphasizes occupational skills for workers in child care centers, workers serving as foster parents, child care attendants, kindergarten aides, or child care assistants. Cooperative (on-the-job) education under the supervision of the instructor is an option. A training agreement and plan for each student must be filed in the Work and Family Studies department. The training agreement and plan should be a cooperative effort by the training sponsor, teacher-coordinator (Work and Family Studies teacher), and student.

Clothing Occupations I 8280

Grade Level: 11 (suggested) (36 weeks)

Prerequisites: Introduction to

Occupational Work and Family

Studies is recommended.

Clothing Occupations I is designed to introduce skills for entry-level jobs in clothing occupations. Students are prepared for semi-skilled and skilled jobs in clothing such as alterationist, custom sewer, factory worker (assembly line), stitcher, and sewer. Emphasis is also placed on the development of personal qualities and job-seeking skills for employment.

Clothing Occupations II 8281

Grade Level: 12 (suggested) (36 weeks)

Prerequisites: Clothing

Occupations I

Clothing Occupations II is designed to build upon and refine the skills developed in Clothing Occupations I. Students are prepared for skilled occupations such as custom dressmaker, custom tailor, assembly line supervisor, or wardrobe consultant and entrepreneur. Cooperative (on-the-job) education in factories, clothing industries, and other such establishments is an option. A training agreement and plan for each student must be filed in the Work and Family Studies department. The training agreement and plan should be a cooperative effort by the training sponsor, teacher-coordinator (Work and Family Studies teacher), and the student.

Food Occupations I 8275

Grade Level: 11 (suggested) (36 weeks)

Prerequisites: Introduction to

Occupational Work and Family Studies is recommended.

Food Occupations I prepares students for employment as waiter-waitress, dining room attendant-bus person, counter attendant, caterer helper, and hospital dietary aide. Emphasis is placed on the development of personal qualities and job-seeking skills for employment.

Food Occupations II 8276

Grade Level: 12 (suggested) (36 weeks)

Prerequisites: Food Occupations I

Food Occupations II is designed to provide in-depth instruction in food preparation, development of personal qualities for job success, and employment opportunities in the food industry. Students acquire competencies necessary for advancement into such skilled areas as line cook, food-service supervisor, cafeteria or lunchroom manager, and entrepreneur. Cooperative (on-the-job) education coordinated by the instructor is an option. A training agreement and plan for each student must be filed in the Work and

Family Studies department. The training agreement and plan should be a cooperative effort by the training sponsor, teacher-coordinator (Work and Family Studies teacher), and the student.

Note: Completion of this program may prepare students for apprenticeships in the food

service industry. Contact the Virginia Department of Labor and Industry,

Apprenticeship Division for further information.

Home Furnishings Occupations I 8295

Grade Level: 11 (suggested) (36 weeks)

Prerequisites: Introduction to

Occupational Work and Family Studies is recommended.

Home Furnishings Occupations I is designed to prepare students for occupations in the planning, selecting, and constructing of slipcovers, draperies, upholstery, and for other jobs in home decoration. Emphasis also is placed on the development of personal qualities and job-seeking skills for employment.

Home Furnishings Occupations II 8296

Grade Level: 12 (suggested) (36 weeks)

Prerequisites: Home Furnishings

Occupations I

Home Furnishings Occupations II is designed to enhance skills developed in Home Furnishings Occupations I. Students prepare for employment as interior decorator's assistant, upholster's assistant, or home furnishings sewer. Cooperative (on-the-job) education coordinated by the instructor is an option. A training agreement and plan for each student must be filed in the Work and Family Studies department. The training agreement and plan should be a cooperative effort by the training sponsor, teacher-coordinator (Work and Family Studies teacher), and the student.

Home and Institutional Services I 8290

Grade Level: 11 (suggested) (36 weeks)

Prerequisites: Introduction to

Occupational Work and Family Studies is recommended.

Home and Institutional Services I is designed to prepare students as housekeeping aides for motels and hotels, business and professional offices, churches, and schools; institutional and appliance demonstrators; and for related jobs in private homes, nursing homes, or hospitals. This course is designed to help students develop skills in the use and care of furniture, furnishings, cleaning appliances, equipment, and supplies; gain an understanding of the procedures for cleaning and straightening a room; and learn basic safety practices. Emphasis also is placed on the development of personal qualities and job-seeking skills for employment.

Home and Institutional Services II 8291

Grade Level: 12 (suggested) (36 weeks)

Prerequisites: Home and Institutional Services I

Home and Institutional Services II is designed for advanced skill development. Students prepare for employment in homes or as institutional or executive housekeepers, management assistants, inspectors, and entrepreneurs. Cooperative (on-the-job) education coordinated by the instructor is an option. A training agreement and plan for each student is filed in the Work and Family Studies department. The training agreement and plan should be a cooperative effort by the training sponsor, teacher-coordinator (Work and Family Studies teacher), and the student.

Home Health Aide 8298

Grade Level: 12 (suggested) (36 weeks)

Prerequisites: Health Assistant I* Home and Institutional Services I or Home Care of the Sick and Aging and Individual and Family

Home Health Aide (Health Assistant II), a triple-period occupational preparation course, offers advanced skill development for students who wish to pursue entry-level employment caring for ill or disabled clients in the client's home. Course content includes both health care and home management tasks, building on the basic competencies that comprise the prerequisites. Areas of instruction include the concepts associated with aging and interpersonal relations, personal care, home management and maintenance, home safety, meal preparation, and care of the terminally ill.

*Vocational program mix with Health Occupations Education

Occupational Internship 8215

Grade Level: 10-12 (18 weeks)

Prerequisites: None

An internship is a program option for students wanting on-the-job, unpaid training in one or more specific subject matter content areas. The student combines daily classroom instruction or the equivalent thereof with two to three hours of school release time per day for on-the-job training experience in business and industry. An 18-week, 1/2-credit internship requires 200 hours of on-the-job training.

Occupational Internship 8216

Grade Level: 10-12 (36 weeks)

Prerequisites: None

An internship is a program option for students wanting on-the-job, unpaid training in one or more specific subject matter content areas. The student combines daily classroom instruction or the equivalent thereof with two to three hours of school release time per day for on-the-job training experience in business and industry. A 36-week, 1-credit internship requires 405 hours of on-the-job training.

Work and Family Studies Cooperative Education I 8293

Grade Level: 11 (36 weeks)

Prerequisites: None

WFSCE I is a cooperative work experience program that combines a single period of daily classroom instruction with two or three hours of school release time for students to experience on-the-job training in business and industry. A two-credit course requires 405 hours of cooperative work experience per year, and the three-credit course requires 540 hours of cooperative work experience per year. The program trains for occupations requiring knowledge and skills in one or more of the following Work and Family Studies programs: child care and guidance management and services; clothing, apparel, and textile management, production, and services; food production, management, and services; and institutional, home management, and supporting services.

Work and Family Studies Cooperative Education II 8294

WFSCE II is a cooperative work experience program that combines a single period of daily classroom instruction with two or three hours of school release time per day for students to experience on-the-job training in business and industry. A two-credit course requires 405 hours of cooperative work experience per year; the three-credit course requires 540 hours of cooperative work experience per year. The program trains for occupations requiring knowledge and skills in one or more of the basic Work and Family Studies programs identified above. Cooperative Education I is a prerequisite for Cooperative Education II.

Senior Intensified--Specialized Occupations

Description: The objective of this program is to prepare individuals for

employment in jobs requiring Work and Family Studies skills and knowledge. The program assists in the development of personal employability and employment-seeking skills. Cooperative work programs are implemented in the program whenever possible.

Catering Specialist is a double-period class designed to prepare students in the art of planning, arranging, preparing, and serving food and beverages at a variety of social functions, and in preparing and packaging food products for boxed meals, parties, or other special occasions. Cooperative education (on-the-job training) or simulated experiences are provided during the second semester. A training agreement and plan for each student must be filed in the Work and Family Studies department. The training agreement should be a cooperative effort by the training sponsor, teacher-coordinator (Work and Family Studies teacher), and student.

Note: Completion of this program may prepare students for apprenticeships in the food service industry. Contact the Virginia Department of Labor and Industry, Apprenticeship Division for further information.

Clothing Specialist 8289

Grade Level: 12 (suggested) (36 weeks)

Prerequisites: None

Clothing Specialist is a double-period class that includes instruction in wardrobe planning, clothing care, alteration of clothing, selection of clothing and accessories, arranging fashion shows, and rendering consultative services regarding clothing. This course is for students who have artistic and creative ability and possess the ability to work with and cater to individual tastes. Cooperative education (on-the-job training) or simulated experiences are provided during the second semester. A training agreement and plan for each student must be filed in the Work and Family Studies department. The training agreement should be a cooperative effort by the training sponsor, teacher-coordinator (Work and Family Studies teacher), and student.

Hotel/Motel Specialist 8292

Grade Level: 12 (suggested) (36 weeks)

Prerequisites: None

Hotel/Motel Specialist is a double-period class that includes instruction in commercial cleaning services, such as the care of resilient floors, carpets, and upholstery in hospitals and hotels or motels. Residential cleaning is also covered in the course. Instruction in kitchen and bathroom care, clothing care, label information, and laundry principles is included. Cooperative education (on-the-job training) or simulated experiences are provided during the second semester. A training agreement and plan for each student must be filed in the Work and Family Studies department. The training agreement should be a cooperative effort by the training sponsor, teacher-coordinator (Work and Family Studies teacher), and student.

Special Programs

Description:

These classes are designed for students who require special services and assistance and are approved for certain school divisions where such needs have been identified. This program offers students different approaches to gaining skills needed for employment. It is recommended that guidance counselors and others work very closely with students who enroll in special programs. These programs are offered as a double period for 36 weeks; a double period is required for program completion. Students must have been properly identified as disadvantaged or disabled to be eligible for the program.
