## ABSTRACT

Adults who had completed at least a portion of a large suburban community college's multistep admissions process were surveyed during the 1994 academic year to identify what motivated them to engage the institution (defined as persisting through the steps of the admissions process). Of 291 adult participants, 93 voluntarily disengaged the admissions process, and 198 engaged and matriculated. Each group of adult learners was administered a survey designed to assess their motivation to engage the community college and another designed to identify factors they considered a threat to their matriculating persistence. The factors ranked most highly as primary motivation centered around career development issues, such as preparation for a new occupation and increasing earning potential. The variety of degree and certificate opportunities was also cited as a reason to engage the community college. The adults identified the following motivating factors that may have threatened their persistence to complete the multistep admissions process: cost of tuition, inaccessibility of financial aid, and fear of taking tests. The results of a one-way analysis of variance showed several statistically significant differences between matriculators and disengagers. Results suggested that adults not primarily motivated by career development factors most likely disengaged from the admissions process because of their perception of cost, inaccessibility of financial aid, and anxiety about taking tests. (Contains 19 references, 4 tables, and survey instruments.) (YLB)

Coordinator of Institutional Research  
Owens Community College

## About the Author

Derick Kiger is currently employed by Owens Community College as the Coordinator of Institutional Research and also performs research and evaluation activities for clientele through his own consulting business, *Informed Decisions*. Mr. Kiger received his B.A. in Psychology from Ohio Wesleyan University in 1989 and his M.A. in Educational/School Psychology from the Ohio State University in 1992 and is currently taking classes in educational research at Bowling Green State University. In addition to the adult learner, Mr. Kiger's research interests include institutional effectiveness, outcomes assessment, learning and memory, and adult basic literacy as the principle investigator of Owens' Ohio Literacy Resource Center (OLRC) research and development site. Mr. Kiger has published his research in professional journals and also publishes *Random Sample*, the Owens Department of Institutional Research newsletter detailing research results with implications for institutional effectiveness.

## Executive Summary

Adults who had at least completed a portion of a large suburban community college's multi-step admissions process were surveyed during the 1994 academic year to identify what motivated them to engage the institution. The factors ranked most highly by the adults centered around career development issues such as preparation for a new occupation and increasing earning potential. The variety of degree and certificate opportunities was also cited as a reason to engage the community college.

The adults were also asked to identify any motivating factors which may have threatened their persistence to complete the multi-step admissions process. The surveyed adults cited cost of tuition, the inaccessibility of financial aid, and fear of taking tests as factors most likely to "disengage" them from the process. The results of a One-Way Analysis of Variance (ANOVA) showed several statistically significant differences between those adults who engaged the admissions process and matriculated ("matriculators") and those who did not ("disengagers"). The results suggested that adults not primarily motivated by career development factors most likely disengaged from the admissions process because of their perception of cost, inaccessibility of financial aid, and anxiety about taking tests. Results are discussed in terms of increasing the prospective adult student's probability of matriculation by maximizing engaging motivation and minimizing disengaging motivation.

## Introduction

Adult students contribute significantly to the mosaic of higher education through their diversity of knowledge and experience. Adult students (25 years of age and over) make up a large portion of the enrollment in higher education. In Ohio, approximately 42 percent (183,279) of the total post-secondary enrollment was 25 years or older for Fall 1993 (Ohio Board of Regents, 1993). Nationally, the enrollment of adults in higher education increased from 4.9 million in 1984 to an estimated 6.6 million in 1992, an increase of 34 percent. It is estimated that adults will comprise approximately 42 percent of the total national enrollment in higher education by the year 2004 (National Center For Education Statistics, 1993).

Adult students have been particularly drawn to the community college because it provides programs designed to meet their specific needs: continuing education, basic skill development, and job training and re-training. In Ohio, 56 percent (99,239) of the Fall 1993 headcount for two-year colleges was represented by adults (Ohio Board of Regents, 1993). Enrollment in U.S. two-year institutions rose from 4.2 million in 1979 to an estimated 5.5 million in 1992, a 30 percent increase over the period. Some estimate that enrollment will climb to 6.3 million by the year 2004 (National Center For Education Statistics, 1993).

The attraction of the two-year college for the adult learner is certain to become even stronger as the National Education Goals Panel sets ambitious standards for adult literacy, lifelong learning, and professional development (The National Education Goals Report, 1994). Furthermore, the performance measures established in 1994 for Ohio's two-year colleges define the mission of the community college in terms of providing continuing education and forming partnerships with industry for the education and training of the workforce to enhance the economic development of the community (Ohio Board of Regents, 1994). Providing prospective adult students maximum accessibility to community colleges will be essential for higher education to fulfill its mission.

### **A Gap in the Research**

Thousands of prospective adult students engage the multi-step admissions processes of post-secondary education each year before voluntarily disengaging (separating from the institution) prior to matriculation. Losing these adults represents a significant opportunity cost for the nation, our states, and our local communities as reflected by the educational standards and outcomes expected of institutions and students.

A survey of the literature regarding adults in higher education revealed that most of the research has focused on why adults pursue post-secondary education, what they perceive as barriers to that pursuit, and what circumstances foster persistence and degree completion. Very few researchers have examined the factors and barriers influencing the adult's decision to matriculate throughout a multi-step admissions process.

### **Why Adults Pursue Education**

Researchers have identified specific needs which motivate adults to pursue education. For example, it has been found that education helps to prepare the adult to cope with life changes and transitions in career, family, leisure, etc. (Americans in Transition, 1980). Houle (1961) devised a

classification of adult learners based upon their motivations to pursue post-secondary education as: 1) goal oriented-learning to accomplish certain objectives, 2) activity oriented-learning to develop social contacts and relationships with others, and 3) learning oriented-learning for the intrinsic reward of acquiring knowledge. The list of researchers who have also extensively explored adult motivation to pursue higher education includes: Miller (1967), Boshier (1973), Rubenson (1977), Cross (1981), and Cookson (1986) among others.

### What Prohibits the Adult Learner

In addition to what motivates the adult to seek-out education, a significant amount of research has focused on what prohibits the adult learner from pursuing post-secondary education and persisting to degree completion. Cross (1981) asserted that an adult's decision to pursue post-secondary education includes forming and overcoming perceptual barriers of disposition (e.g., I do not matter), institution (e.g., courses are not offered when I can attend), and situation (e.g., conflicting job responsibilities). The adult may form and consider combinations of these perceptual barriers during the matriculation decision making process.

Other researchers have also identified barriers encountered by the adult learner. According to Farmer (1976), perceived barriers become important moderating factors in career development (Luzzo, 1993) that can affect the student's occupational aspirations and the quality of career decision making. In another study conducted by Smart and Pascarella (1987), it was found that "employment in public and larger organizations has a positive influence on the intention of men and women to resume their college education" because these organizations typically encourage or provide support for employees to continue their educational pursuits, or "that their employees recognize the need for further education in order to succeed in these organizations" (p.318). Based upon this sample of research, the adult learner's decision to pursue post-secondary education becomes an interaction of the adult's motivation to matriculate and the perceptual barriers that must be subsequently overcome.

### Persistence to Degree Completion

A great deal of research has been conducted on the adult learner's behavior subsequent to matriculation, especially in the area of persistence to degree completion. Bean and Metzner (1985) found that the adult's rate of degree completion is low when compared with traditional students and Swift (1987) noted a tendency for adults who persist to be enrolled full-time. Naretto (1995) conducted research which suggested that membership in a supportive community is an important factor in the persistence of adult students and that persisters show greater positive involvement with student and faculty communities than those who did not persist.

MacKinnon-Slaney's (1994) Adult Persistence in Learning Model identified three components that contain factors that influence the adult learner's decision to persist: 1) personal issues (e.g., self-awareness), 2) learning issues (e.g., educational competence), and 3) environmental issues (e.g., information retrieval). Schlossberg, et al (1989) found that persistence is influenced by the adult's need to feel wanted or that he/she matters to the institution. As is evident by this sample of research, the educational persistence of adult learner's has received much attention.

## **The Research Problem**

Most research regarding the adult student has identified what motivates the adult to pursue higher education and the barriers that are formed and must be overcome prior to engaging an institution of higher education. The research has also focused on the factors which influence the adult's decision to persist subsequent to matriculation. Less research has been conducted on the barriers or "disengagers" the adult encounters once an admissions process has been engaged. This type of research is particularly important for the community college because the two-year institution attracts the largest proportion of adult students and often requires the prospective student to complete a multi-step admissions process (often completed over a period of days) involving basic skills assessment, orientation, and academic advising. Because of these circumstances this study sought to:

1. Identify why adults wanted to engage a community college
2. Compare the matriculating adult's motivation to engage the community college to those adult's who voluntarily disengaged the process prior to matriculation
3. Identify why adults voluntarily disengaged the multi-step admission process prior to matriculation
4. Compare the "disengaging" adult's motivation to leave the multi-step admission process by each step of the process
5. Discuss the results in terms of maximizing the probability of matriculation by influencing the adult's motivation

## Method

### *Subjects*

A total of 93 adults who voluntarily disengaged the college's multi-step admissions process and 198 adults who engaged and matriculated during the 1994 academic year participated in the study. Of the disengaging adults, 91 percent were Caucasian, 5.6 percent were African-American, and 3.4 percent were Hispanic. Thirty percent of the disengaging adults were male and 70 percent were female. The demographic breakdown of the matriculating adults was as follows: Caucasian (91.7%), African-American (3.1%), Hispanic (3.6%), Other minority (1.6%), male (33.7%), and female (66.3%). The demographic profile of both groups is generally congruent with the demographic profile of the student body at-large. Females are slightly overrepresented.

### *Apparatus*

Two versions of a 60 item survey were designed to assess the adult's motivation to engage the community college and voluntarily disengage the multi-step admissions process. Fifteen of the items assessed engaging motivation and forty-five assessed disengaging motivation. The difference between the two survey versions was found in the phrasing of the survey items assessing disengaging motivation. Adults who voluntarily disengaged the admissions process prior to matriculation were asked to identify the factors that actually influenced their decision. Adults who engaged and matriculated were asked to identify the factors they considered a threat to matriculation as they progressed through the admissions process. Survey items were subjected to expert review to ensure content validity. A four point Likert-type response scale (e.g., Not A Reason=1, A Minor Reason=2, A Major Reason=3, A Primary Reason=4) or was utilized for rating each survey item.

The Cronbach's Alpha was .72 for the group of survey items measuring engaging motivation. The Cronbach's Alpha was .92 for the group of survey items measuring disengaging motivation for the adults who matriculated and .80 for the survey version administered to the adults who disengaged.

### *Procedure*

Each adult who qualified for participation was mailed a survey. Survey directions read as follows: "The college is trying to make it easier for prospective students to access higher education. Survey results will allow the college to identify your needs as a prospective student and make changes in admissions procedure where indicated. Please take a few minutes to complete and return this survey. Your participation is voluntary and the responses you give will be kept strictly confidential." Respondents were instructed to return the completed survey via a postage-paid addressed envelope. The matriculating adults were offered a free grade transcript as an incentive to return the completed survey. Non-respondents were mailed a second and third survey to assure an adequate response rate.

## The Multi-Step Admissions Process

The college's multi-step admissions process requires that each prospective student attend an initial informational meeting with an admissions representative (step I), participate in basic skills assessment and campus orientation (step II), and meet with an advisor to schedule classes (step III). Completion of the admissions process is sequential, requiring three separate appointments over a period of time (e.g., days).

A disengaging student is defined as a prospective adult student who voluntarily disengages the three-step admissions process. The type of disengagement (type I, type II, type III) is defined by the admissions step at which the prospective adult disengages. For example, the adult who disengages subsequent to assessment/orientation and prior to completing class scheduling would be categorized as a type II disengaging student. The prospective adult student who persists throughout the admissions process and matriculates will be termed a matriculating student. For this study, the adults were first-semester students to the college. The adults who matriculated were attending full-time or part-time.

## Results

### Why Adults Engaged the Community College

The adults cited career and economic development as the primary motivation for engaging the community college. Preparation for a new occupation ( $M=3.20$ ,  $SD=1.03$ ) and increasing earning potential ( $M=3.20$ ,  $SD=.97$ ) were the most prominent factors. Also cited among the most influential motivators was the variety of degrees and certificates ( $M=2.77$ ,  $SD=1.06$ ) available at the community college. Figure 1 shows the top five engaging motivators cited by adults.

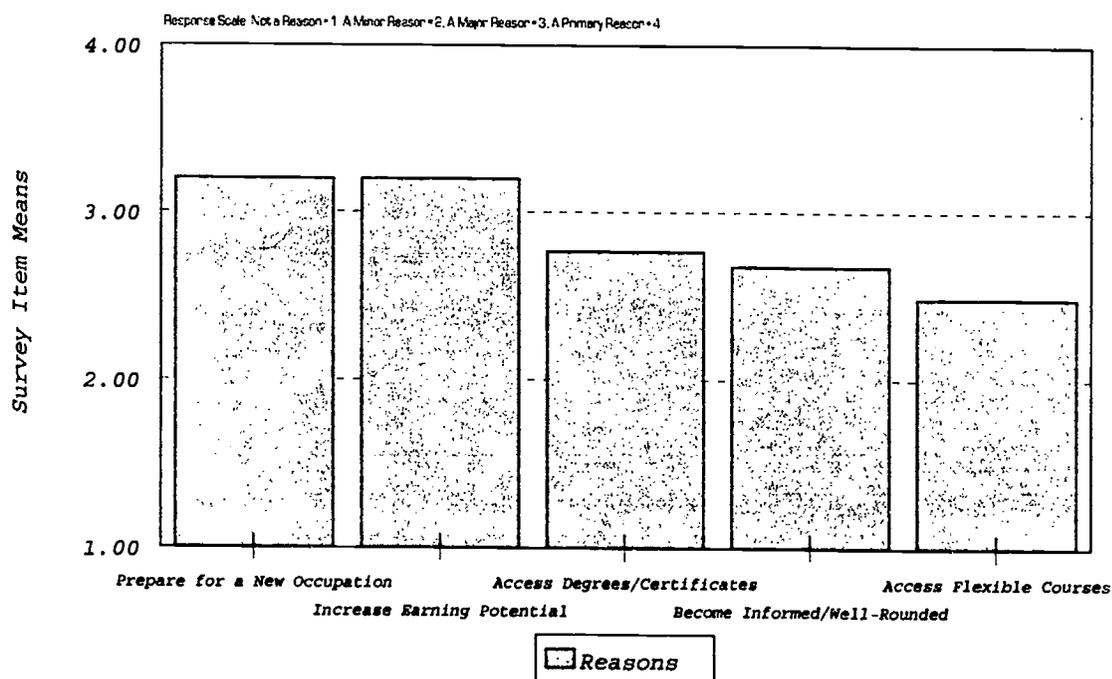

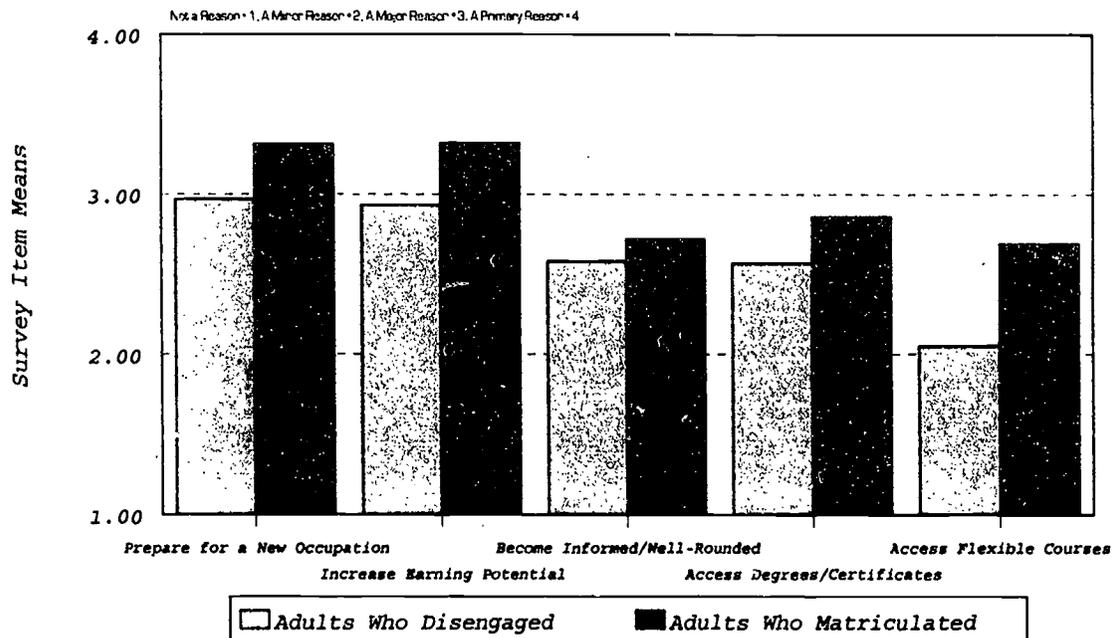

FIGURE 1. Why adults engaged the community college: Survey item means

Motivation to engage the community college was similar for the adults who eventually disengaged the process and those who matriculated. The disengaging adults ranked preparation for a new occupation ( $M=2.97$ ,  $SD=1.05$ ) and increasing earning potential ( $M=2.93$ ,  $SD=1.04$ ) the number one and two motivators for engaging. The matriculating adults also ranked preparation for a new career ( $M=3.32$ ,  $SD=.92$ ) and increasing earning potential ( $M=3.31$ ,  $SD=1.01$ ) as the top engaging motivators and attributed more magnitude to the two factors. The disengaging adults ranked becoming more informed/well-rounded ( $M=2.58$ ,  $SD=1.07$ ) third while the matriculating adults ranked the variety of degrees and certificates ( $M=2.86$ ,  $SD=1.02$ ) third. Figure 2 shows the top five engaging motivators cited by the disengaging and matriculating adults.

**FIGURE 2.** *Why adults engaged the community college by group: Survey item means*

## Comparing the Adult's Motivation to Engage the Community College

Independent samples t tests revealed several statistically significant ( $\alpha=.05$ ) differences in the magnitude of engaging motivation between the disengaging and matriculating adults. Most notably, the matriculating adults were motivated to a significantly greater extent to increase their earning potential  $t(283) = -3.17, p=.00$  and prepare for a new occupation  $t(281) = -2.63, p=.00$ . These items were ranked first and second by both groups of adults. Table 1 shows the statistically significant differences in engaging motivation for each group.

Table 1

Comparing the Adult's Motivation to Engage the Community College: Means, Standard Deviations, and t values

## Why Adults Voluntarily Disengaged the Multi-Step Admissions Process

The adults who voluntarily disengaged the multi-step admissions process cited the cost of college ( $M=2.48$ ,  $SD=1.24$ ), inaccessibility to financial aid ( $M=2.20$ ,  $SD=1.31$ ), and uncertainty about their educational goals ( $M=1.82$ ,  $SD=1.02$ ) as the primary motivators for disengaging. The matriculating adults cited the cost of college ( $M=2.55$ ,  $SD=1.19$ ), nervousness about tests ( $M=2.37$ ,  $SD=1.09$ ), and inaccessibility of financial aid ( $M=2.24$ ,  $SD=1.26$ ) as the primary threats to matriculation. Table 2 shows the top five disengaging factors cited by the matriculating adults in relation to the disengaging adults.

Table 2

What Adults Perceive as Reasons to Disengage the Multi-Step Admissions Process: Means, Standard Deviations, and Ranks

## Comparing the Adult's Motivation to Disengage the Admissions Process

Differences in motivation to disengage the admissions process were analyzed by the type of disengagement (I, II, III). One-Way ANOVA with Student-Newman-Keuls post hoc group comparisons revealed two statistically significant differences. Results showed that the type III adults (disengaging subsequent to admissions step III) perceived themselves as having a greater difficulty concentrating in class than type I or type II adults (disengaging subsequent to admissions step I, II). The type III adults also had a greater perception that the college did not care about their success than type I adults. Table 3 shows the statistically significant differences in disengaging motivation for the adults who did not matriculate.

Table 3

Comparing the Adult's Motivation to Disengage the Multi-Step Admission Process: Means, Standard Deviations, and F values

Type of Disengagement	I		II		III		F	p
	M	SD	M	SD	M	SD		
1. Difficulty Concentrating in Class	<b>1.18</b>	.58	<b>1.22</b>	.57	<b>1.71</b>	1.00	4.34	.01
2. College Doesn't Care About My Success	<b>1.04</b>	.21	1.19	.56	<b>1.42</b>	.87	3.49	.03

Note.

Response Scale: Not a Reason=1, A Minor Reason=2, A Major Reason=3, A Primary Reason=4  
The bold numbers represent the means of the statistically significant differences among type of disengagement

## Discussion

The results of this study suggest that the adult learner engages the community college largely for career and economic development. Furthermore, those adults who are not primarily motivated by these factors most likely disengage from the multi-step admissions process because of their perception of cost, the inaccessibility of financial aid, and uncertainty about educational goals.

Results also showed a statistically significant difference between the disengaging and matriculating adults in the desire to engage the community college. The matriculating adults were more motivated to engage for the reasons mentioned above. However, because both the matriculators and disengagers ranked engaging motivators and disengaging motivators similarly, the interaction between the prospective adult student and the institution throughout the multi-step admissions process is vital. This interaction may significantly affect the motivation of the prospective adult to matriculate.

### Prescriptions for Practice

The prospective adult student is motivated to persist throughout a multi-step admissions process and matriculate at the initial point of institutional contact (e.g., admissions step I). At this point, college personnel may choose to maintain and increase the probability of matriculation by maximizing the adult's engaging motivation and minimizing his/her disengaging motivation. This may entail a general, "on the spot" assessment of why the adult wants to learn and what situational or dispositional perceptions may prohibit matriculation. The official should be aware (a priori) of the institutional practices, policies, etc. that may be perceived by the adult as potential motivating factors to disengage the process.

Using the results of this study, for example, the institution's programs, services, and facilities geared specifically toward career and economic development may be featured while showing the cost-effectiveness and value of a community college's programs in comparison to other area colleges. Emphasis could also be placed upon growing technical and transfer degree program opportunities, internship opportunities, and flexible course schedules including evening, weekend, and summer courses.

In a different scenario, an admissions representative could minimize disengaging motivation attributed to the perception of inaccessibility of financial aid by generally assessing the financial needs of the adult and presenting possible financial aid sources. The adult may also be informed of the institutional assistance that is available for completing the application process. A similar process may be employed for clarifying educational goals and developing plans to meet the goals.

Results showed several statistically significant differences among those adults who disengaged the admissions process prior to matriculation. Adults qualifying as type III disengagers reported the perception of not mattering to the college to a greater extent than the type I disengagers. A disadvantage of the multi-step admissions process is the opportunity for the prospective student to "get lost" in the process which may lead to the perception of personal insignificance. A by-product of an admissions strategy which seeks to sustain and raise the prospect's level of matriculation motivation and minimize disengaging motivation should improve the student's perception of mattering to the college.

Type III disengagers also reported difficulty concentrating in class to a greater extent than type I and type II disengagers. The community college's developmental education and study skills programs should be emphasized throughout the multi-step admissions process to demonstrate a proactive curriculum that is purposely sensitive to the adult learner's needs and life issues.

### Future Study

Future study should assess the disengaging motivators of the adult learner by gender, race, educational status (e.g., full-time vs. part-time) and educational intent. Identifying the disengaging motivating factors for each of these adult groups will give student development professionals a better insight into the adult learner and increase the probability of matriculation for this growing population.

Place the completed survey in the addressed stamped envelope and return it to Owens Community College

**Appendix C**  
**Definition of Terms**

**Admission Step I-** An initial informational meeting between a prospective student and an admissions representative from the Office of Admissions.

**Admission Step II-** The admission step that includes basic skills assessment and campus orientation with personnel from New Student Advising and Assessment.

**Admission Step III-** The admission step that includes advising and class registration with personnel from New Student Advising.

**Disengaging Adult-** A prospective adult student who voluntarily disengages the multi-step admissions process.

**Engaging-** The process of initiating the multi-step admissions process by the prospective adult student.

**Matriculating Adult-** A prospective adult student who completes each step of the multi-step admissions process and attends classes beyond the final drop date.

**Type I Disengagement-** A prospective adult student who meets with an admissions representative (admission step I) but does not complete step II or step III due to voluntary disengagement.

**Type II Disengagement-** A prospective adult student who meets with an admissions representative (admission step I) and completes basic skills assessment and campus orientation (admission step II) but not step III due to voluntary disengagement.

**Type III Disengagement-** A prospective adult student who meets with an admissions representative (admission step I), completes basic skills assessment and campus orientation (admission step II), and registers for classes (admission step III) prior to voluntarily disengaging the institution.
