*Income; Population Trends; *Public Schools; *State
Action; State Departments of Education; *State
Government; Teacher Salaries

ABSTRACT

This publication contains rank-ordered educational statistics for the 50 states and the District of Columbia. The first part provides information about states' populations, which can serve as indicators of the relative demand for public education services. The second part features data on student participation in public elementary and secondary schools, which indicate change in relative demand for public school services and staff. Information on changes in the number of staff employed in education institutions and their level of compensation is presented in the third part. The fourth part offers data on general financial resources, with a focus on the percent change in per capita income. Statistics on state- and local-governmental revenue are provided in the fifth part, with a focus on revenue generated through taxation. The sixth part compares states according to their sources of public school revenue. The seventh part compares states according to general expenditures of state and local governments. The final part compares states by state and local governments' expenditures on schools at the elementary, secondary, and higher education levels. A total of 117 tables and 8 figures are included. Also included are notes on State Departments of Education, a bibliography, a glossary, an index of tables, and a framework for developing a state school funding profile. (LMD)

Foreword

Interest in education improvement and renewal continues to capture the attention of researchers, policymakers, and the public. While much has been done to enhance public education programs and services, much work and many challenges remain. In this setting, NEA Research offers *Rankings of the States, 1994* to its state and local affiliates as a tool for use throughout this period of public school reform.

Rankings of the States provides state-level data on an array of topics relevant to the complex enterprise of public education. State-by-state figures on government and school financing, state demographics, and public school personnel permit a statistical assessment of the scope of public education and an identification of emerging trends in key areas.

The *Rankings* report enjoys a long history of use by affiliates of the NEA as well as by planners and policymakers in other organizations. It has, since the 1960s, presented facts and figures useful in determining ways in which states vary from one another or from national averages on selected statistics and in explaining how the reported data reflect social and economic characteristics and changes. Of course, no one table or set of tables can tell the entire story of a state's education offerings. One must consider a state's tax system, its provision of other public services, the characteristics of its population, and more. It is therefore unwise to draw conclusions solely from the tables in this report, and the reader is urged to supplement these rank-ordered data with specific information about state and local activities and services related to public education.

State department of education staff who contributed to this report deserve much credit for the current public school data it presents, as do the state education associations across the country.

NEA Research

October 1994

Technical Notes

Rankings of the States, 1994 contains rank-ordered statistics for the fifty states and the District of Columbia. All state data are ranked beginning with the largest figure. When the values of two or more states are the same, they are assigned the same rank, with the appropriate number resumed with the next state in rank. In this case, they appear in rank order before rounding.

The education data in *Rankings* are the most recent actual or estimated data available from state departments of education. Where no data are available from a state education department, NEA Research has provided an estimate, which is identified by an asterisk in Series B, C, F, and H tables.

The State Department of Education Notes (page 64) contain additional information provided by state education departments to help explain data reported for their states.

Rankings of the States, 1994 features revised figures for some public school data previously published in *Estimates of School Statistics, 1993-94*, another report of NEA Research, published in April 1994. State education agencies were invited to review their fall 1993 estimates and revise them for inclusion in this report. For this reason, data in Series B, C, F, and H may differ from those in *Estimates of School Statistics*.

The availability of data from federal government and other sources dictates the presence or absence of certain tables in this report. Statistics for full-time employment in higher education presented in Series C are computed by the Bureau of the Census with a formula using hours worked by part-time employees. The 1992 data necessary for the update of these tables are not available at this time. For this reason, tables C-2, C-3, and C-4 for 1991 are featured in this report again.

Please note that tables featuring Average Daily Membership (ADM) do not contain values for the United States as a whole since six states do not compute or provide estimates for their statewide ADM. Consequently, averages are not computed in those cases—this fact is reflected by an "NA" notation. Tables involving ADM data are B-5, B-6, and C-8.

Because of the shortcomings of ADM as a state and nationwide count, ADM has been replaced by fall enrollment (ENR) in the computation of the expenditure per pupil featured in Series H. Moreover, the per pupil count in ENR, rather than in ADA, has become the recommended indicator for measuring public school expenditures and revenues as well as personal income per pupil in this report. However, for the readers' convenience, tables with variables in ADA have been maintained and new tables have been added for the ENR count in Series D, F, and H.

Figures A through H illustrate historical trends in selected *Rankings* data, and a detachable centerfold is provided to help state affiliates and general users develop a school funding profile. Comparisons with neighboring states can be developed for any *Rankings* tables by using the last page of the detachable section.

Tables D-15 and D-16 feature data reprinted by permission of Sales & Marketing Management, copyright: S&MM Survey of Buying Power, August 30, 1993.

Series A—Population

Tables in Series A provide information about the population of states and can serve as indicators of the relative demand for public education services or other public programs.

The level and change in total state population are featured in Tables A-1 through A-4. These tables help to identify patterns of growth or decline for each state and the resulting implications for staffing and financing public education institutions. Population density has been computed for Table A-12, while the number of births by state is the focus of A-10 and A-11.

School-age population data in Tables A-5 and A-6 focus directly on the consumers of public elementary and secondary education. Combining these figures with public school enrollment tables in Series B can indicate demand for and participation in public school services.

Tables A-7 through A-9 define the adult population within states. Changes in the size of adult and elderly age groups affect demand for public school programs and the degree to which funding for education faces competition from other public sector programs. These tables also can indicate the propensity of citizens within a state to support public education.

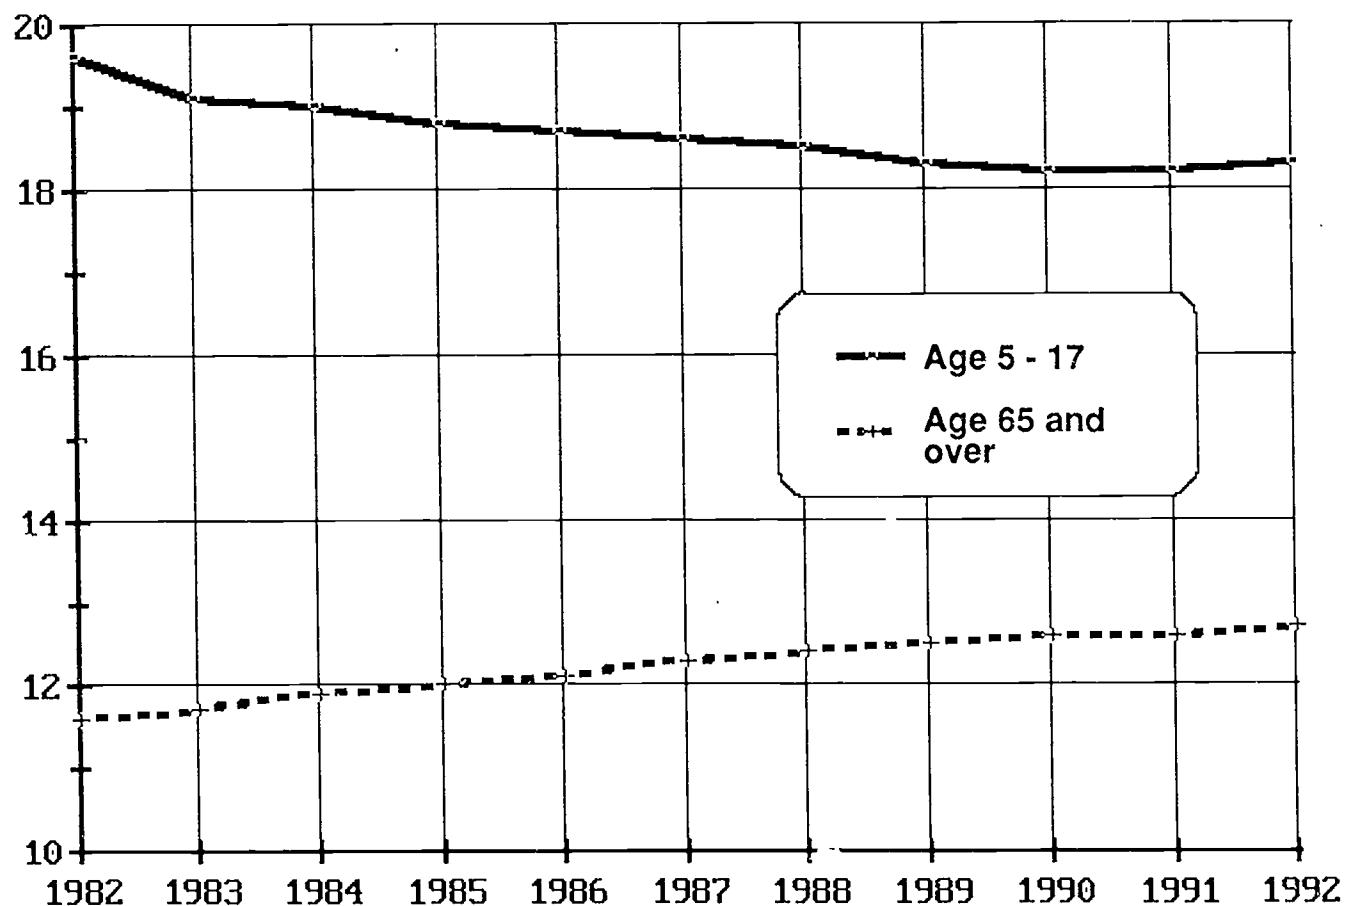

Figure A displays historical trends for two key groups--the school-age and retirement-age populations. The former indicates a potential demand for education and the latter a potential demand for health care services. Since 1982 the school-age group has declined relative to the age-65-and-over group from 8 percent greater to only 5.6 percent greater. With both services being heavily dependent upon public financing, competition for available tax dollars may increase (Tables A-6, A-8)

Bureau of the Census, *Statistical Abstract of the United States*, 1993, p. 29

Series B—Enrollment, Attendance, and Membership

Tables in Series B feature data on student participation in public elementary and secondary schools. The tables include current statistics on pupils enrolled and the change in enrollment over the previous year. These tables indicate change in relative demand for public school services and staff.

Alternative measures of public school participation also are included in this series. Average Daily Attendance (ADA) and Average Daily Membership (ADM) are presented in Tables B-4 through B-7 and differ from fall enrollment counts in that they present averages of pupil participation *year round*. Departments of education in six states do not provide data for ADM, and these instances are identified as "NA" in Tables B-5 and B-6 and throughout other series as appropriate. Also, there are no U.S. totals or computed averages using ADM, as national figures for this measure cannot be considered to represent totals or averages for all states.

Table B-9 shows the percent change in the number of high school graduates over a ten-year period, useful in predicting demand for higher education services in future years.

Please see page 64 for additional information provided by the state education departments to help explain data reported for their states in Series B tables.

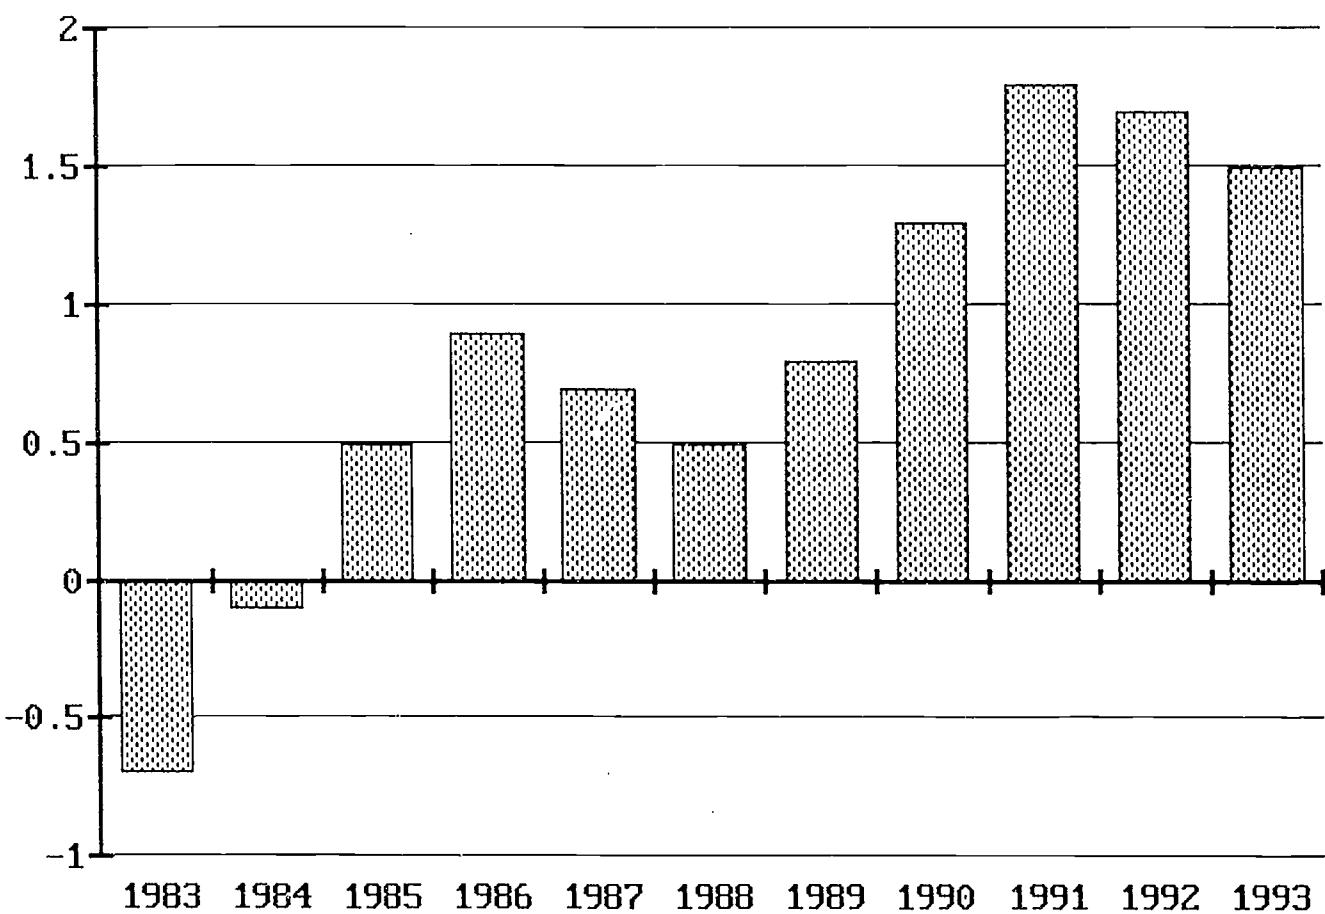

Percent change in total K-12 public school enrollment is displayed in Figure B. Declines that characterized the first half of the 1980s have reversed since 1985. Accommodating the increase has required and will continue to require increased physical and financial resources just to maintain a level measure of educational services (Table B-3).

Figure B. Percent Change: Fall Enrollment

Tables

- B-1 Number of Public School Districts (operating), 1993-94
- B-2 Public School Enrollment, Fall 1993
- B-3 Percent Change in Public School Enrollment, Fall 1992 to Fall 1993
- B-4 Average Daily Attendance in Public Schools, 1993-94
- B-5 Average Daily Membership in Public Schools, 1993-94
- B-6 Average Daily Attendance as Percent of Average Daily Membership, 1993-94
- B-7 Average Daily Attendance as Percent of Fall Enrollment, 1993-94
- B-8 Number of Public High School Graduates, 1993-94
- B-9 Percent Change in Number of High School Graduates, 1983-84 to 1993-94

Series C—Faculty

Personnel in local public schools and in public institutions of higher education are the focus of tables in Series C. Changes in the number of staff employed in education institutions as well as their levels of compensation reflect trends in enrollment, economy, and program priorities expressed by state residents.

The number of staff employed in public schools is featured in Table C-1. The statistics for full-time employment in higher education presented in Tables C-2 through C-4 have been computed by the Bureau of the Census with a formula using hours worked by part-time employees. Three tables of pupil load—pupils enrolled per teacher, pupils in ADA per teacher, and pupils in ADM per teacher—are presented in Tables C-6 through C-8.

Average salaries of public classroom teachers and total instructional staff are featured in C-10 through C-23. These average salary data are presented in "current" or unadjusted dollars and also in "constant" or inflation-adjusted dollars. These computations employ the Consumer Price Index for all Urban Consumers (CPI-U), converted to a school-year basis, using the 1983-84 school year as the base (1983-84 = 100.0).

The presentation of salary changes in constant dollar terms enables identification of salary increases attributable to inflation. The resulting picture for most states is a salary gain over the past decade far below what the public may intend or know of. As an advocacy tool, the use of these salary data can do much to dispel myths of huge jumps in the purchasing power of teacher salaries.

Please see page 64 for additional information provided by the state education departments to help explain data reported for their states in Series C tables.

Figure C traces the percent change in average salaries paid teachers from 1984 to 1994. While increases ranged between 5 and 6 percent for several years, this year's increase of only 2.0 percent was the third consecutive year below that benchmark. When adjusted for inflation, the average salary has increased by 12.1 percent over the decade (Tables C-15, C-16).

Series D—General Financial Resources

Total personal income measures the overall economic activity within a specific geographic area. It is the aggregate income from *all* sources received by persons residing in a state, and it has a significant effect on the total income or financial resources available to governmental jurisdictions through taxation. This, in turn, affects the prospects for financing public education and other government services. State personal income is used throughout the tables in this report to gauge the ability and effort of states to generate funds for public programs, and it is considered by some to present a better method of comparison than the use of per capita computations.

Tables D-1 and D-2 compare states on their total personal income and the percentage gain in each state. *Per capita personal income* provides more detail about the relative financial well-being of individuals within each state through the use of statewide population as a common denominator and is featured in Tables D-3 through D-6.

Disposable personal income represents the personal income of residents *minus* taxes and other required payments, such as fines, penalties, and fees. Disposable personal income reflects the amount of income remaining for expenditure on consumer goods, for example, and represents a different measure of "wealth" among states. Tables D-8 through D-10 feature *per capita* disposable personal income, or the amount of personal income for every person in each state, thereby providing some comparability across states for this measure.

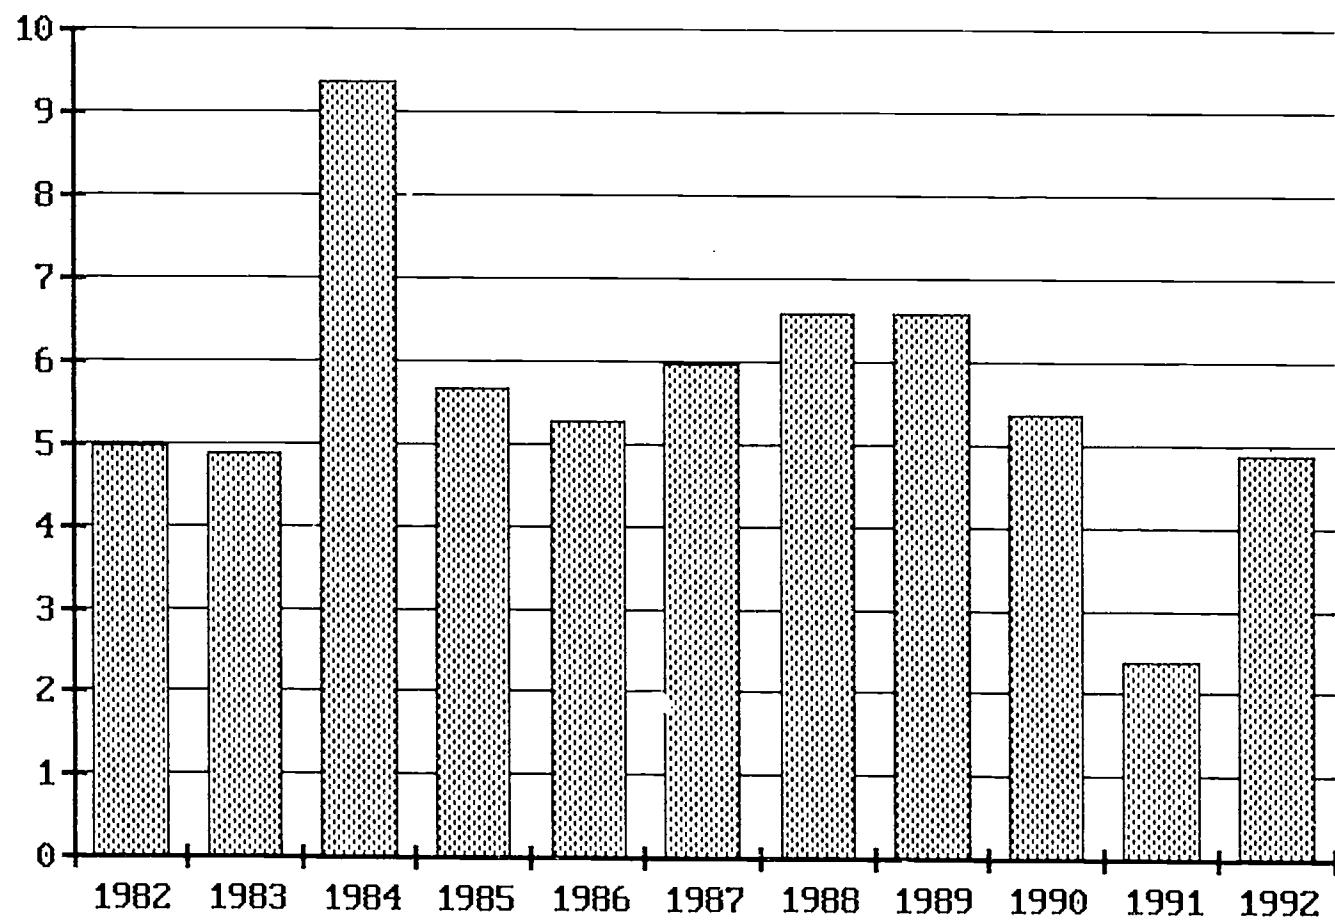

Tables D-11 and D-12 compare the states on a measure of personal income geared more closely to the consumers of public education services—the number of pupils as measured in fall enrollment and average daily attendance, respectively. Table D-13 shows the relative significance of government activity as it contributes to total personal income by measuring personal income from government and government enterprises as a percent of the total. Income from farming activities is compared by state in Table D-14, while Tables D-15 and D-16 contain average household buying incomes and retail sales per household, measures similar to disposable personal income in their approximation of consumer spending power in each state.

Figure D shows the percent change in per capita personal income for years 1982 through 1992. The 4.9 percent increase recorded in 1992 is close to the 5 to 7 percent range characteristic of the 1980s. To a large extent personal income drives state tax systems. Sales and income tax collections respond rapidly to its changes. It is therefore a key indicator to watch in education finance planning (Table D-5).

Series E—Governmental Revenue

Revenue of state and local governments, principally revenue generated through taxation, is the subject of the tables in Series E. These tables contain comparative information about the amounts and significance of selected tax sources by state, providing insight into the financial resources of government that are available for financing public education.

General revenue, own-source revenue, and tax collections are presented for state and local governments. Revenue data are expressed on a per capita basis or as a proportion of state personal income. The latter expression, found in Tables E-3, E-5, E-9, E-12, E-15, and E-16, indicates that for every \$1,000 of personal income in a state, a certain amount of revenue (sales tax revenue, e.g.) is generated. This is referred to as the "tax effort" of government units and also can be computed for expenditure categories, as shown in Series G and H.

Tables E-13 through E-16 feature state revenue from general sales and from individual income taxes, expressed on a per capita basis and per \$1,000 of state personal income. Please note that low amounts appear for several states, indicating that those taxes are restricted in some fashion, such as the income tax on individuals in New Hampshire. Please consult references on state tax characteristics for clarifying information.

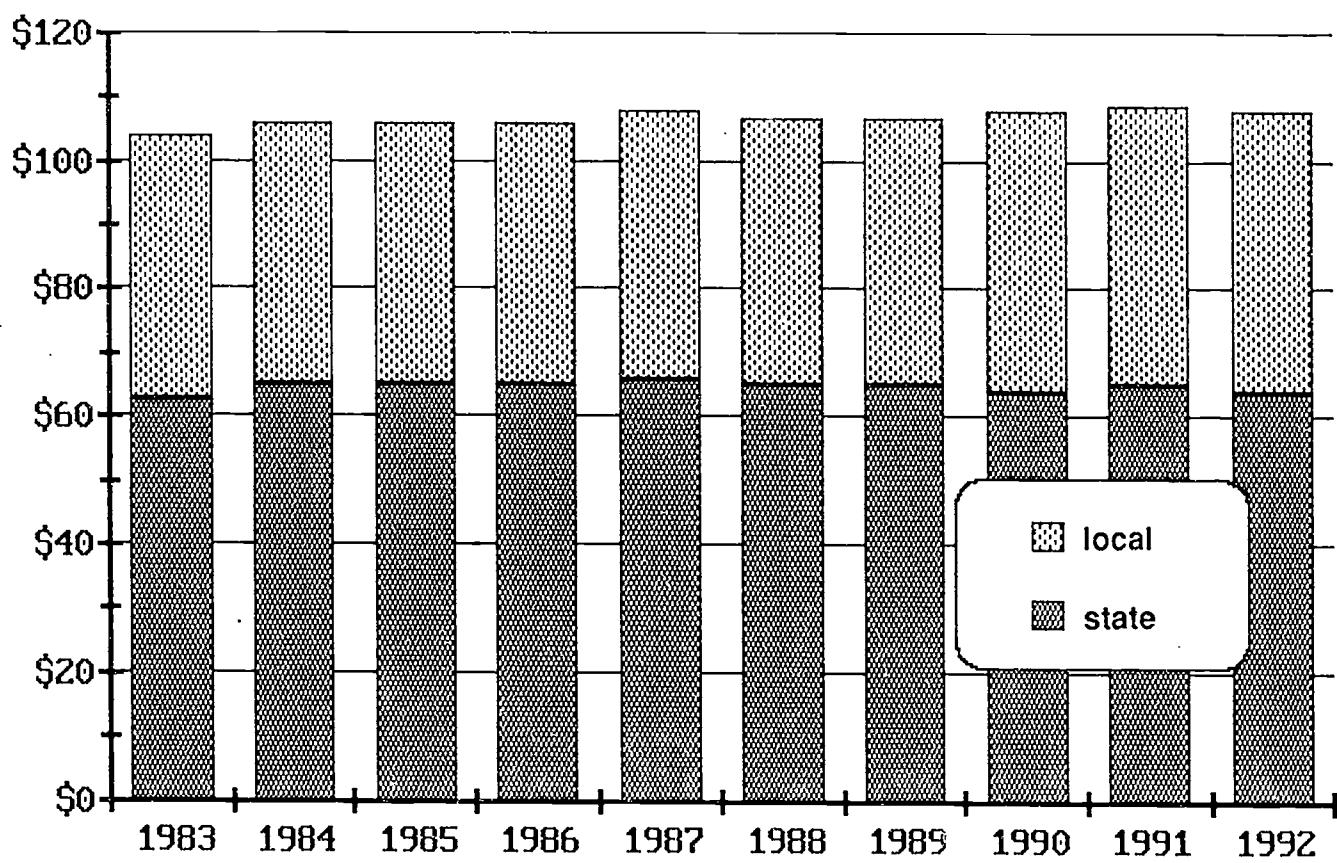

The historical trend of state and local tax collections per \$1,000 of personal income is shown in Figure E for 1983 through 1992. For all ten years, combined total collections remained between \$100 and \$110. Additionally, state and local shares show little annual variation. Given these constant relationships, it is easy to see why economic growth is the key to substantive improvement in education finance (Tables E-5, E-12).

Figure E. State and Local Taxes per \$1,000 of Personal Income

Tables

- E-1. Per Capita Total General Revenue of All State and Local Governments, 1991-92
- E-2. Per Capita General Revenue of State and Local Governments from Own Sources, 1991-92
- E-3. General Revenue of State and Local Governments from Own Sources, 1991-92, per \$1,000 of Personal Income in 1992
- E-4. Per Capita Total Tax Revenues of State and Local Governments, 1991-92
- E-5. State and Local Tax Revenues in 1991-92 per \$1,000 of Personal Income in 1992
- E-6. Per Capita Property Tax Revenue of State and Local Governments, 1991-92
- E-7. Per Capita Property Tax Revenue of Local Governments, 1991-92
- E-8. Property Tax Revenue of State and Local Governments as Percent of Total Tax Revenue, 1991-92
- E-9. State and Local Property Tax Revenue in 1991-92 per \$1,000 of Personal Income in 1992
- E-10. Per Capita State Tax Revenue, 1991-92
- E-11. Per Capita Local Tax Revenue, 1991-92
- E-12. State Tax Revenue in 1991-92 per \$1,000 of Personal Income in 1992
- E-13. Per Capita State Individual Income Tax Revenue, 1991-92
- E-14. Per Capita State General Sales Tax Revenue, 1991-92
- E-15. State Individual Income Tax Revenue in 1991-92 per \$1,000 of Personal Income in 1992
- E-16. State General Sales Tax Revenue in 1991-92 per \$1,000 of Personal Income in 1992

Series F—School Revenue

Series F tables compare states on their sources of public school revenue. Funds received by public school districts from federal, state, and local sources are listed for each state and are expressed in relation to the number of pupils in each state and to the state's personal income and according to the percentage distribution across the three government sources.

Tables F-5 and F-6 examine each state's relative position with regard to school revenues per \$1,000 of state personal income. These measures, as with the examples in Series E, make it easier to compare the effort of government units to provide financial support for public school programs through measurement of that support with the common denominator of personal income.

Please note that the school revenue data contained in Series F tables update those featured in *Estimates of School Statistics, 1993-94*, published in April. State education departments have the option of revising their estimated data for inclusion in *Rankings*.

Please see page 64 for additional information provided by the state education departments to help explain data reported for their states in Series F tables.

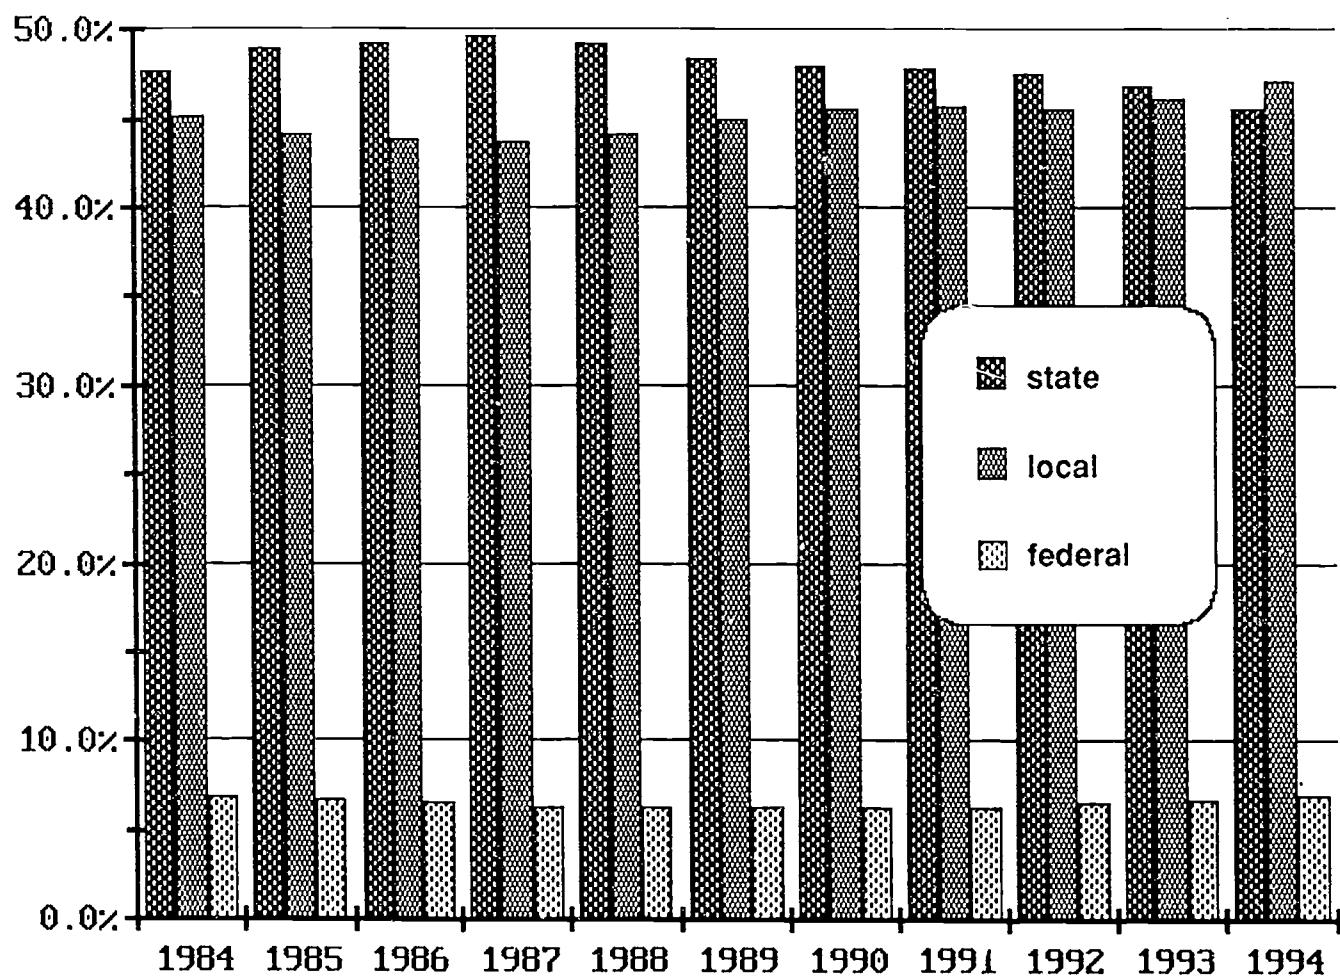

Figure F displays school revenues by source--state, local, and federal. Throughout the past ten years state and local governments have each provided between 40 and 50 percent of the total. The federal contribution has ranged between 6 and 7 percent (Tables F-8, F-10, F-12).

Figure F. School Revenue by Source

Tables

- F-1. Public School Revenue per Pupil in Fall Enrollment, 1992-93 (Revised)
- F-2. Public School Revenue per Pupil in Fall Enrollment, 1993-94

Series G—Government Expenditures

State and local government spending characteristics provide useful comparative information about the resources, needs, and priorities for public services. Expenditures for government programs vary across states for many reasons, and state-by-state comparisons should be made while keeping them in mind—demographic, economic, and political factors are but a few.

Tables in Series G describe spending by state governments and by state and local governments combined. Expenditure data are expressed on a per capita basis, allowing closer comparison of the differences in levels and objects of state and local government spending, as well as their positions relative to the U.S. average. Use of state personal income in selected tables provides an opportunity to compare the relative "effort" of government units to fund program areas, including public education.

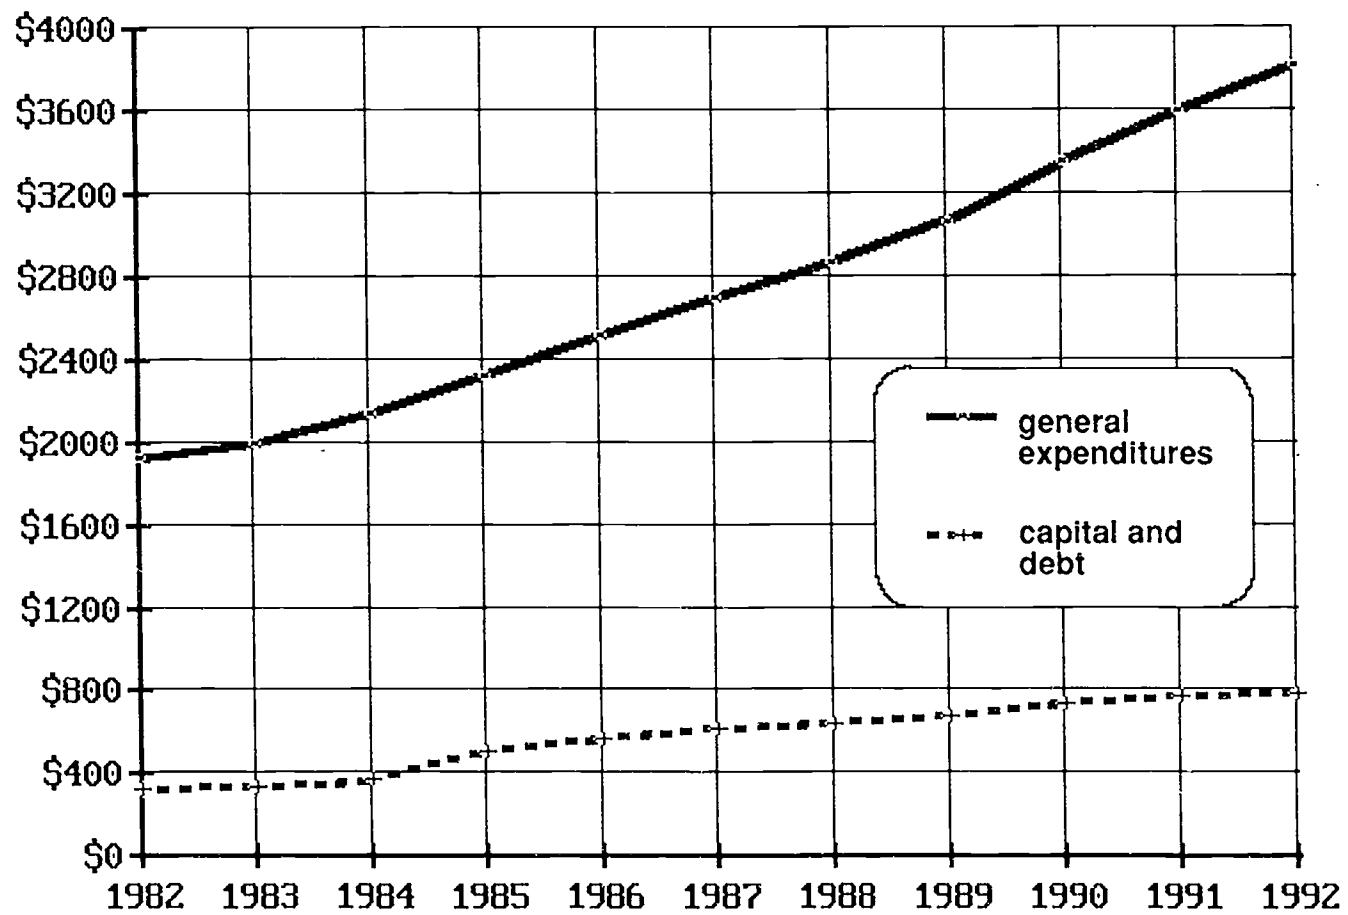

Per capita expenditures of state and local governments are shown in Figure G. General expenditures increased by 99 percent over the decade while capital outlay and debt increased 140 percent. Moreover, the ratio of general expenditures to capital outlay and debt decreased from 5.9 to 1 to 4.9 to 1. Education expenditures are included in these totals (Tables G-3, G-10, G-11).

Figure G. Per Capita State and Local Government Expenditures

Tables

- G-1. Per Capita Total General Expenditures of State Governments for All Functions, 1991-92
- G-2. State Government General Expenditures in 1991-92 per \$1,000 of Personal Income in 1992
- G-3. Per Capita Total General Expenditures of State and Local Governments, 1991-92
- G-4. State and Local Government General Expenditures in 1991-92 per \$1,000 of Personal Income in 1992
- G-5. Per Capita Expenditures of State and Local Governments for Public Welfare, 1991-92
- G-6. Per Capita Expenditures of State and Local Governments for Health and Hospitals, 1991-92
- G-7. Per Capita Expenditures of State and Local Governments for Police Protection, 1991-92
- G-8. Per Capita Expenditures of State and Local Governments for Fire Protection, 1991-92
- G-9. Per Capita Expenditures of State and Local Governments for Highways, 1991-92
- G-10. Per Capita Expenditures of State and Local Governments for Capital Outlay, 1991-92
- G-11. Per Capita Expenditures of State and Local Governments for Interest on Debt, 1991-92

Series H—School Expenditures

Expenditures for elementary and secondary schools and for higher education can serve as indicators of state and local government "effort" to fund these services. Measures used to compare states on spending for education include current expenditures per pupil in Fall Enrollment (ENR) or Average Daily Attendance (ADA). School expenditure data are also displayed in relation to state population and state personal income and as percentages of total state expenditures or as proportions of national averages.

Expenditure data are shown for elementary and secondary schools separately and in combination with higher education. Again, knowledge about public education systems and their funding characteristics is required to make fair comparisons of state-local government financial support of education relative to that found in other states. See page 64 for additional information provided by the state education departments.

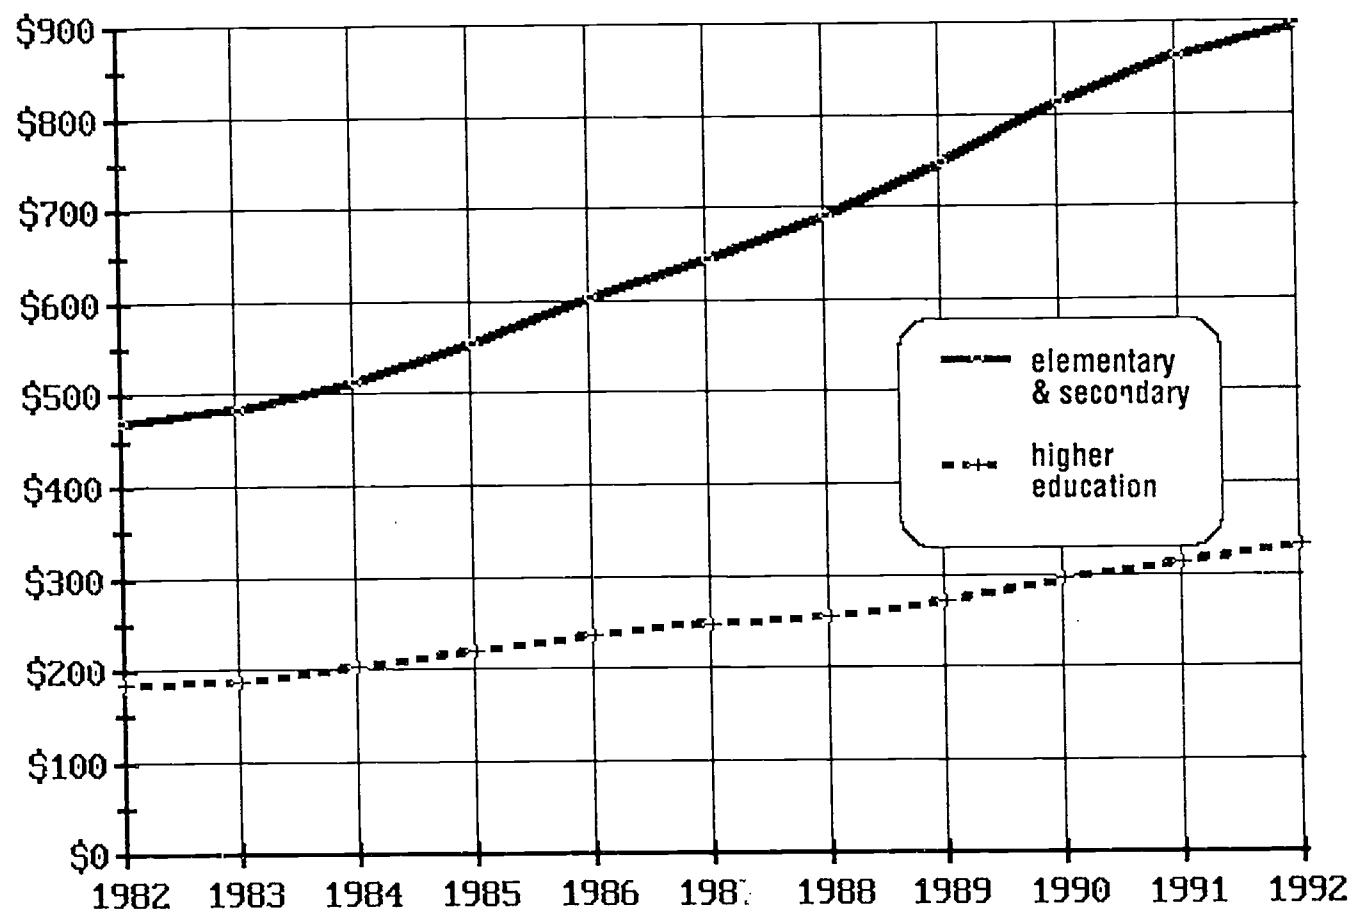

Combined per capita education expenditures of state and local governments are shown in Figure H. Since 1982, expenditures for elementary and secondary education increased 92 percent, while higher education went up 80 percent. The ratio of elementary and secondary expenditures to higher education expenditures has remained constant at 2.7 to 1 (Tables H-7, H-8).

114

State Department of Education Notes

California	The California Legislature determines the amount of property taxes which will be used to fund schools. Local school boards do not have any authority to raise any revenue for the district's instructional programs.
Colorado	Revenues and expenditures contain financial data collected from Colorado's school districts based on a calendar year reporting period.
Georgia	Prior to 1993-94, eighth grade teachers were counted as secondary teachers. Starting in 1993-94, they are counted as elementary teachers
Hawaii	Some revenue receipts were reclassified from state funds to local funds. Information on interest on school debt not previously known became available by function from the State Department of Budget and Finance.
Illinois	Revenues and expenditures figures are estimates.
Indiana	Indiana generally considers prekindergarten through grade 6 as elementary. These were incorrectly reported as PK-8 and 9-12 as secondary. All years have been corrected and are now consistent with teacher tables.
Iowa	Due to a change in the definition of funds, revenues for 1992-93 and 1993-94 include funds that were not reported before.
Kansas	The Kansas State Board of Education includes three separate forms of compensation in its average teacher salary: teaching salary, any supplemental salary, and fringe benefits. There has been a complete reapportionment of elementary and secondary teachers due to the handling of accreditation of middle schools. This has resulted in a reduction in elementary teachers and an increase in secondary teachers for 1993-94.
Louisiana	Fall enrollment for 1993-94 elementary students includes ungraded students.
Maryland	Number of classroom teachers and average salaries for teachers and instructional staff do not include substitutes since teachers for whom substitutes are hired do not have a reduction of the negotiated salary nor are they counted as less than full time.

Michigan	The average salary of teachers is not a weighted average. The average salary is determined by taking the total salaries for all full-time K-12 instructional professional staff and dividing it by the number of full-time K-12 staff. No distinction is made among elementary, middle, or secondary teachers.
	A definition of average daily attendance is written in Michigan state law as 92 percent of total reported enrollment in Michigan's 614 school districts.
Minnesota	Short-term debt is included in total current expenditure figure.
Montana	Current expenditures for 1992-93 include bond principal and exclude balance reappropriated.
Nevada	Average reported salaries DO NOT include a 9.25 percent pickup of employees' retirement contributions by local school districts. Average teacher salary with pickup is \$37,275.
New Hampshire	The only figure collected for teacher salary is a district-wide "average teacher salary for full-time teachers."
New Jersey	The 1993-94 count of staff is in terms of full-time equivalency (FTE). Prior years are head count and include only full-time staff.
Oregon	Salaries include a 6 percent pickup of employee portion of retirement contribution by employer.
	Starting in 1992-93 instructional staff number includes Regional Service District staff.
South Carolina	Number of school districts includes two special districts established by the General Assembly.
	ADA and ADM figures include kindergarten students reported at half count.
Washington	The interest on school debt does not include capital projects fund.
	Associated Student Body Fund revenues and expenditures are excluded from this report.
	Federal fund reimbursements are not deducted from food service expenditures.
Wisconsin	Starting in 1992-93, the Department of Public Instruction collects salary data in September. If negotiations are not complete, districts report whatever salary is currently being paid. Consequently, for a majority of districts, averages reported for 1992-93 and subsequent years are based upon prior year data.

Glossary

Average Daily Attendance, ADA: The aggregate attendance of a school during a reporting period divided by the number of days school is in session during this period. Only days on which the pupils are under the guidance and direction of teachers should be considered as days in session. The average daily attendance for groups of schools having varying lengths of terms is the sum of the average daily attendances obtained for the individual schools.

Average Daily Membership, ADM: The aggregate membership of a school during a reporting period divided by the number of days school is in session during this period. Only days on which pupils are under the guidance and direction of teachers should be considered as days in session. The average daily membership for groups of schools having varying lengths of terms is the sum of the average daily memberships obtained for the individual schools.

Capital Outlay: An expenditure that results in the acquisition of fixed assets or additions to fixed assets, which are presumed to have benefits for more than one year. It is an expenditure for land or existing buildings, improvements of grounds, construction of buildings, additions to buildings, remodeling of buildings or initial, additional, and replacement equipment.

Classroom Teacher: A staff member assigned the professional activities of instructing pupils in self-contained classes or courses, or in classroom situations. Usually expressed in full-time equivalents.

Coefficient of Variation, CV: The standard deviation expressed as a percent of the mean. Used to compare standard deviations of varying groups of data.

Current Expenditures: The expenditures for operating local public schools, excluding capital outlay and interest on school debt. These expenditures include such items as salaries for school personnel, fixed charges, student transportation, school books and materials, and energy costs.

Debt: The major portion of all state and local government debt is long-term indebtedness. A substantial portion of such long-term debt is nonguaranteed debt, i.e., obligations payable solely from pledged earnings of specific activities or facilities, from special assessments, or from specific nonproperty taxes.

Education: The provision or support of schools and other education facilities and services.

Effective Buying Income: Same as disposable personal income; is obtained by deducting from personal income direct personal taxes and certain other nontax payments to government. The personal taxes deducted include federal, state, and local income taxes, estate and gift taxes, and miscellaneous licenses and permits. Property taxes are not deducted.

Effort: A measure that relates the capacity to support public schools (defined as the personal income of the residents of the state) to the revenues obtained, or expenditures made, on behalf of public schools. The latest available personal income data determine the school year for which school revenues and expenditures are chosen for comparison. Personal income for the year shown would be available to pay school taxes or allay school expenditures in that school year.

Elementary School: A school classified as elementary by state and local practice and composed of any span of grades not above grade 8. A preschool or kindergarten school is included under this heading only if it is an integral part of an elementary school or a regularly established school system.

Enrollment: A cumulative count of the number of pupils registered during the entire school year. New entrants are added, but those leaving are not subtracted.

Expenditures: All amounts of money paid out by a government, net of recoveries and other correcting transactions, other than for retirement of debt, investment in securities, extension of credit, or as agency transactions. Expenditures include only external transactions of a government and exclude noncash transactions, such as the provision of perquisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments involved.

Fall Enrollment: The count of the pupils registered in the fall of the school year, usually October.

Fire Protection: Comprises fire-fighting and fire-protection activities of local governments.

Full-Time Equivalent Employment: A computed statistic representing the number of full-time employees that could have been employed if the reported number of hours worked by part-time employees had been worked by full-time employees. This statistic is calculated separately for each function of a government by dividing the "part-time

hours paid" by the standard number of hours for full-time employees in the particular government and then adding the resulting quotient to the number of full-time employees.

Functions: Public purposes served by governmental activities (education, highways, public welfare, etc.). Expenditures for each function include amounts for all types of expenditures serving the purpose concerned.

General Expenditures: All expenditures of a government other than utility expenditures, liquor store expenditures, and insurance trust expenditures.

General Revenue: All revenue of a government except the kinds of revenue classified as utility revenue, liquor store revenue, and insurance trust revenue. All tax collections, even if designated for insurance trust or local utility purposes, are classified under general revenue.

General Sales Taxes: Sales or gross receipts taxes that are applicable, with only specified exceptions, to all types of goods and services or all gross income, whether at a single or at classified rates.

Health: Health services, other than hospital care, including health research, clinics, nursing, immunization, and other categorical, environmental, and general public health activities. School health services provided by health agencies (rather than school agency) are included.

Highways: Streets, highways, and structures necessary for their use; street lighting; snow and ice removal; toll highway and bridge facilities; and ferries.

Higher Education: Includes facilities and activities of all education institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classified under natural resources, and university-operated hospitals serving the public are classed under hospitals.

Hospitals: Establishment and operation of hospital facilities, provision of hospital care, and support of other public or private hospitals.

Household: A unit that includes all persons occupying a house, apartment, or room regarded as a dwelling unit, excluding group quarters such as dormitories.

Individual Income Tax: Taxes on individuals measured by net income and taxes imposed on special types of income (e.g., interest, dividends, and income from intangibles).

Instructional Staff: Full-time equivalent number of positions, not the number of different individuals occupying the positions during the school year. In local schools includes all public elementary and secondary (junior and senior high) day school positions that are in the nature of teaching or in the improvement of the teaching-learning situation. Includes consultants or supervisors of instruction, principals, teachers, guidance personnel, librarians, psychological personnel, and other instructional staff. Excludes administrative staff, attendance personnel, health services personnel, clerical personnel, and junior college staff. In institutions of higher education includes those engaged in teaching and related academic research in junior colleges, colleges, and universities, including those in hospitals, agricultural experiment stations, and farms.

Interest on Debt: Annual expenditures to pay interest only on long-term debt.

Live Births: Number of births in the United States.

Mean: The arithmetic average of the data.

Median: The middle number in a group when data are arranged in numeric sequence.

Noninstructional Staff: In local schools includes administrative and clerical personnel, plant operation and maintenance employees, bus drivers, and lunchroom, health, and recreational personnel engaged by school systems. In institutions of higher education includes cafeteria, clerical, and custodial workers in colleges and universities, hospitals, agricultural experiment stations, and farms.

Personal Income: State personal income is the current income received by residents of the states from all sources, including transfers from government and business, but excluding transfers among persons. It is a before-tax measure. The total includes both monetary and nonmonetary income of individuals and income received in kind. It also includes the investment income of nonprofit institutions serving individuals as well as the investment income of private trust funds and private noninsured welfare funds.

Police Protection: Preservation of law and order and traffic safety. Includes highway police patrols, crime prevention activities, police communications, detention and custody of persons awaiting trial, traffic safety, vehicular inspection, and the like.

Property Taxes: Taxes conditioned on ownership of property and measured by its value. Includes both general

property taxes (i.e., relating to property as a whole, real and personal, tangible or intangible, whether taxed at a single rate or at classified rates) and special property taxes (i.e., on selected types of property, such as motor vehicles or certain or all tangibles, subject to rates that are not directly related to rates applying to general property taxation).

Public Welfare: Support of and assistance to eligible persons contingent upon their need. Excludes pensions to former employees and other benefits not contingent on need. Expenditures under this heading include cash assistance payments directly to needy persons under categorical and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditures for welfare purposes. Any services provided directly by the government through its hospital and health agencies are classed under those headings.

Range: The difference between the highest and lowest values in a group of data.

Resident Population: In addition to those who are residents of an area, also includes armed forces personnel who are stationed in the area.

Revenue: Revenue receipts for public school purposes from LOCAL, intermediate, and other sources include all funds for direct expenditures by local and intermediate districts for school services, for the operation of intermediate departments of education, for employer contributions to retirement systems and/or Social Security on behalf of public school employees, for the purchase of materials for distribution of local school districts, etc. Includes net receipts from revolving funds or clearing accounts only when such funds are available for general expenditure by the local board of education. Includes gifts and tuition and fees received from patrons.

Revenue receipts from STATE sources include all funds for the operation of the state department of education, for state (employer) contributions to retirement systems and/or Social Security on behalf of school employees, for grants in aid to intermediate and local school districts for school purposes (including funds available from state bond issues for such grants and the costs of textbooks, buses, supplies, etc., purchased by the state for distribution to local school districts), for the payment of interest on state bonds issued to provide grants to local school districts, and all other state revenue for public school purposes. Money collected by the state as an agent of a lesser unit and turned over in like amounts to that unit is not included.

Revenue receipts from FEDERAL sources include money distributed from the federal treasury either directly to local school districts or through the state and county, including grants for vocational education, for aid to federally affected areas, for school lunch and milk programs, for educating American Indians in local public schools, and money derived from federal forest reserves and federal oil royalties.

Revenue from Own Sources: All revenue of a government (taxes and other) except intergovernmental.

School District: An education agency at the local level that exists primarily to operate public schools or to contract for public school services. Synonyms are "local basic administrative unit" and "local education agency."

School-Age Population: Population age 5 through 17, inclusive (excluding armed forces abroad).

Secondary School: A school comprising any span of grades beginning with the next grade following an elementary or middle school (usually 7, 8, or 9) and ending with or below grade 12. Both junior high schools and senior high schools are included.

Standard Deviation, SDEV: A statistical technique measuring the extent to which data vary from their mean. Used to indicate the relative dispersion of individual items.

Taxes: Compulsory contributions exacted by a government for public purposes, except employee and employer assessments for retirement and social insurance purposes, which are classed as insurance trust revenue. All tax revenue is classified under general revenue and comprises amounts received (including interest and penalties but excluding refunds) from taxes imposed by the recipient government. Amounts received by a government from a tax it imposes are counted as tax revenue of that government, even though initially collected by another government; however, any amounts retained are treated as tax revenue of the collecting government. Tax amounts subsequently distributed to other governments are classified as intergovernmental transactions.

Total Revenue Receipts: Includes all revenue receipts available for expenditure for current expenses, capital outlay, and debt service for public schools, including all appropriations from general funds of federal, state, county, and local governments; receipts from taxes levied for school purposes; income from permanent school funds and endowments; income from leases of school property; interest on bank deposits; tuition; gifts; etc. Amounts that increase the school indebtedness or that represent exchange of school property for money are excluded.
