 IDENTIFIERS *School Dropout Demonstration Assistance Program

ABSTRACT

In 1988, the United States Congress passed legislation that created the School Dropout Demonstration Assistance Program (SDDAP). The program provides funding for local educational agencies, community-based organizations, and educational partnerships to establish effective programs. This report, the second of two volumes, presents statistical data from a two-part evaluation to assess the effectiveness of dropout-prevention strategies used by the 89 projects that were awarded grants. Data were collected through annual surveys of all SDDAP projects and indepth studies of activities and achievements at 15 selected project sites. Data were collected at the 15 sites through site visits, student and teacher surveys, and document analysis. The report identified the organizational characteristics of effective dropout programs and the program strategies that were most effective in preventing students from dropping out of school and in encouraging dropouts to reenter school. Appendices contain data tables for elementary, middle, and high school projects, methodological notes, and copies of data-collection instruments used in the implementation study and the outcomes study. (Contains 46 tables). (LMI)

Appendix D:
Methodology

Methodology

This appendix provides greater details regarding the methodology used for the implementation and outcomes studies. For each type of study, we describe the selection and training of staff, the development of instruments, and the collection and analysis of data.

Implementation Study, 1989-90

Selection and Training of Site Visitors

Eleven experienced staff members were selected as the team for implementation site visits. All were experienced researchers; several were former educators; one was a college professor. A training workshop of one and one-half days was conducted, with emphasis on the ten instruments and on procedures for eliciting the needed information. Six of these members attended, along with the Project director; five others were trained by staff who had attended the training session. During the training, the approaches to conducting the various on-site interviews were reviewed; protocols were covered in detail. In addition to the interviews, the implementation staff were to conduct focus groups with small groups of students to gather their perceptions of the projects, and the training included strategies for structuring and leading those groups most effectively.

Development of Data Collection Forms and Materials

Eight instruments were designed for use in conducting personal interviews with project staff and school administrators during the visits to the projects. (These instruments are contained in Appendix E.) Three of these instruments guided the collection of information on (1) the community and school contexts in which the projects operated, (2) project staff and fiscal resources, and (3) the training and experience of staff assigned to the projects. The remaining five interview protocols were used to collect information from key project administrators and staff on the implementation status of each project component and on its potential for replication or adaptation to other sites. Two additional instruments were developed: one was used to evaluate the quality of implementation; the other was used to collect information during classroom observations.

The ten instruments and their purposes are described below.

- **Interview Guide for District/School Administrators**—to collect community and school district information on the environment in which the demonstration projects operated; examine district policies and practices relevant to at-risk students; obtain policy-level perspectives on the demonstration projects; and obtain perspectives on the potential of the various models for replication or adaptation in other settings

- **Interview Guide for Project directors**—to obtain detailed information on project goals, configurations of services, expectations for students, management strategies, resources and facilities, and quality and levels of commitment of staff; collect information on factors that affected project implementation; and collect information useful for replication or adaptation of the projects in other settings
- **Interview Guide for Project Teachers**—to investigate the instruction provided; collect information on teacher perceptions concerning the efficacy of the interventions; obtain information on the quality and commitment of teachers to project goals and to meeting the educational and other needs of at-risk students; assess the strengths and weaknesses of the various models and identify potential areas for improvement; and analyze factors that may influence the replication or adaptation of the models in other settings
- **Interview Guide for Ancillary Staff**—to describe the responsibilities of ancillary staff (e.g., with students, parents, other service providers, and the business community)
- **Interview Guide for Business Partners**—to explore the types of activities business partners undertook to support the projects and obtain private sector perspectives on the strengths and weaknesses of the projects in terms of preparing students for the labor market
- **School/Community Context Record**—to collect information on the community and school environments in which the projects operated; collect information on the performance of the districts in terms of educational requirements, resources, and the post-school outcomes of the high school populations
- **Project Resource Questionnaire**—to obtain information on the fiscal and human resources that supported the projects and investigate the influences of resource allocation strategies on project operations, activities, and outcomes
- **Staff Training/Experience Record**—to obtain information on staff qualifications and experience relevant to their specific assignments on the projects and to examine the extent to which staff are experienced in working with at-risk children and youth, the nature and amount of inservice training associated with their project assignments, and types of involvements with students or parents beyond the school environment
- **Implementation Checklist**—to obtain ratings of the quality of implementation of each project component, including basic skills instruction, support services, work experiences, and other components of the service configurations
- **Classroom Observation Form**—to collect information on classroom management, student participation and behavior, and the physical environment of the classrooms in which instructional activities take place

These instruments provided the basis for the training of site visitors, the conduct of the site visits, and analysis of the implementation data (presented in Chapters 3–5 of this report).

On-Site Data Collection

To accomplish the goals of the implementation study, team members conducted three-day site visits to (1) interview staff, administrators, and teachers working closely with the projects, (2) observe and rate the quality of project and classroom activities, (3) work with on-site evaluation staff to collect information on community characteristics and project resources, and (4) conduct focus groups with project participants. For the most part, the implementation field work involved one-person visits, with each site visitor responsible for visits to at least two projects. Three of the projects, all within close proximity to the contractor, were visited by two-person teams.

Using these various information sources, the implementation study team was able to establish whether and to what extent planned activities had been carried out; why changes, if any, had occurred in the activities undertaken by the projects; and how project directors and staff viewed the effectiveness of their efforts and the factors that may have increased or militated against the effectiveness of project efforts. Drawing on the information available through the grant proposals and the 1988–1989 Survey of all the demonstration projects, site visitors were responsible for careful documentation of the current projects or project components *as they actually existed*. Moreover, the focus groups and classroom observations were intended to provide important information on what project participants were experiencing and how they perceived those experiences.

At a minimum, site visitors completed the following:

- collections of forms mailed prior to the visit: staff/training experience records, school/community context records, project resource records
- personal interviews with a school or district administrator, the project director, two project teachers, two auxiliary staff (such as support service personnel), and a business partner (if any)
- observation in two classrooms
- an implementation checklist, describing and rating the quality of project components
- documentation of the treatments received by individual students selected for the outcomes study samples

Analysis of Implementation Data

Based on information gathered during these site visits, findings were synthesized, using the contexts in which the projects were located, their organizational structure and service configurations, groupings by target populations (those serving elementary students, those targeting middle school students, and those serving high school and re-entry youth) and their goals, activities, and fidelity to the intended project designs.

Following this synthesis of project activities, plausible project outcomes were evaluated, using information on (1) the influence of project participation on student experiences, (2) the coherence of project components, (3) the extent to which project services were integrated with participants' larger educational programs, and (4) effects of the projects on a number of key aspects of the school experience. Analysis of these findings suggested outcomes that projects could be expected to achieve based on their intervention strategies. The statement of these outcomes provides a basis for considering the actual outcomes achieved, which are also presented in Chapters 3–5 of this report.

Implementation Study, 1990–91

In 1990-91, implementation study site visits were made to the four in-depth study sites at which student cohorts had been selected that fall (i.e., Broward County, Portland, Denver-Discovery, and Memphis). These visits were carried out by the project director and the associate director for field operations and lasted approximately one and one-half days per site. The procedures followed on site to collect information were similar to those used in the more intensive visits made in 1989-90; for example, interviews were conducted with all key participants in the project, observations were made of the programs in operation, and focus groups were conducted with randomly selected students. In addition, an implementation rating system was used that covered 23 dimensions related to five broad aims of dropout prevention projects: ameliorating environmental, institutional, and psychological factors, and increasing students' academic and social integration and participation in school-related activities (see Appendix E for a copy of this form).

Implementation Study, 1991–92

To address issues related to sustaining dropout prevention projects and replicating dropout prevention models, the project director visited six of the in-depth study sites in fall 1992. Three of these projects had evidenced some effectiveness in producing student outcomes related to dropout prevention (i.e., Des Moines, Coleman, and Denver-Lake), and three others had attempted to replicate dropout prevention models (i.e., Broward County, the MSAP program; Hannibal, accelerated schools; and Aiken, the Diversified Education Experiences Program). The visits to these sites averaged about one day in length and consisted of interviews with project participants. All the interview sessions were informal yet extensive, several lasting for much of the day. Issues related to sustaining reforms that were explored included:

- keeping focus on key issues
- maintaining staff togetherness and focus

- keeping the experience new and rewarding
- allowing for change(s) that developed new energies

Issues related to replicating dropout prevention projects included:

- rationale and method of identifying replicate sites
- way program was operated within school; i.e., role of program in principal's repertoire
- selection of students
- selection of key staff
- training of key staff
- staff follow-up (including assessment)

Outcomes Study

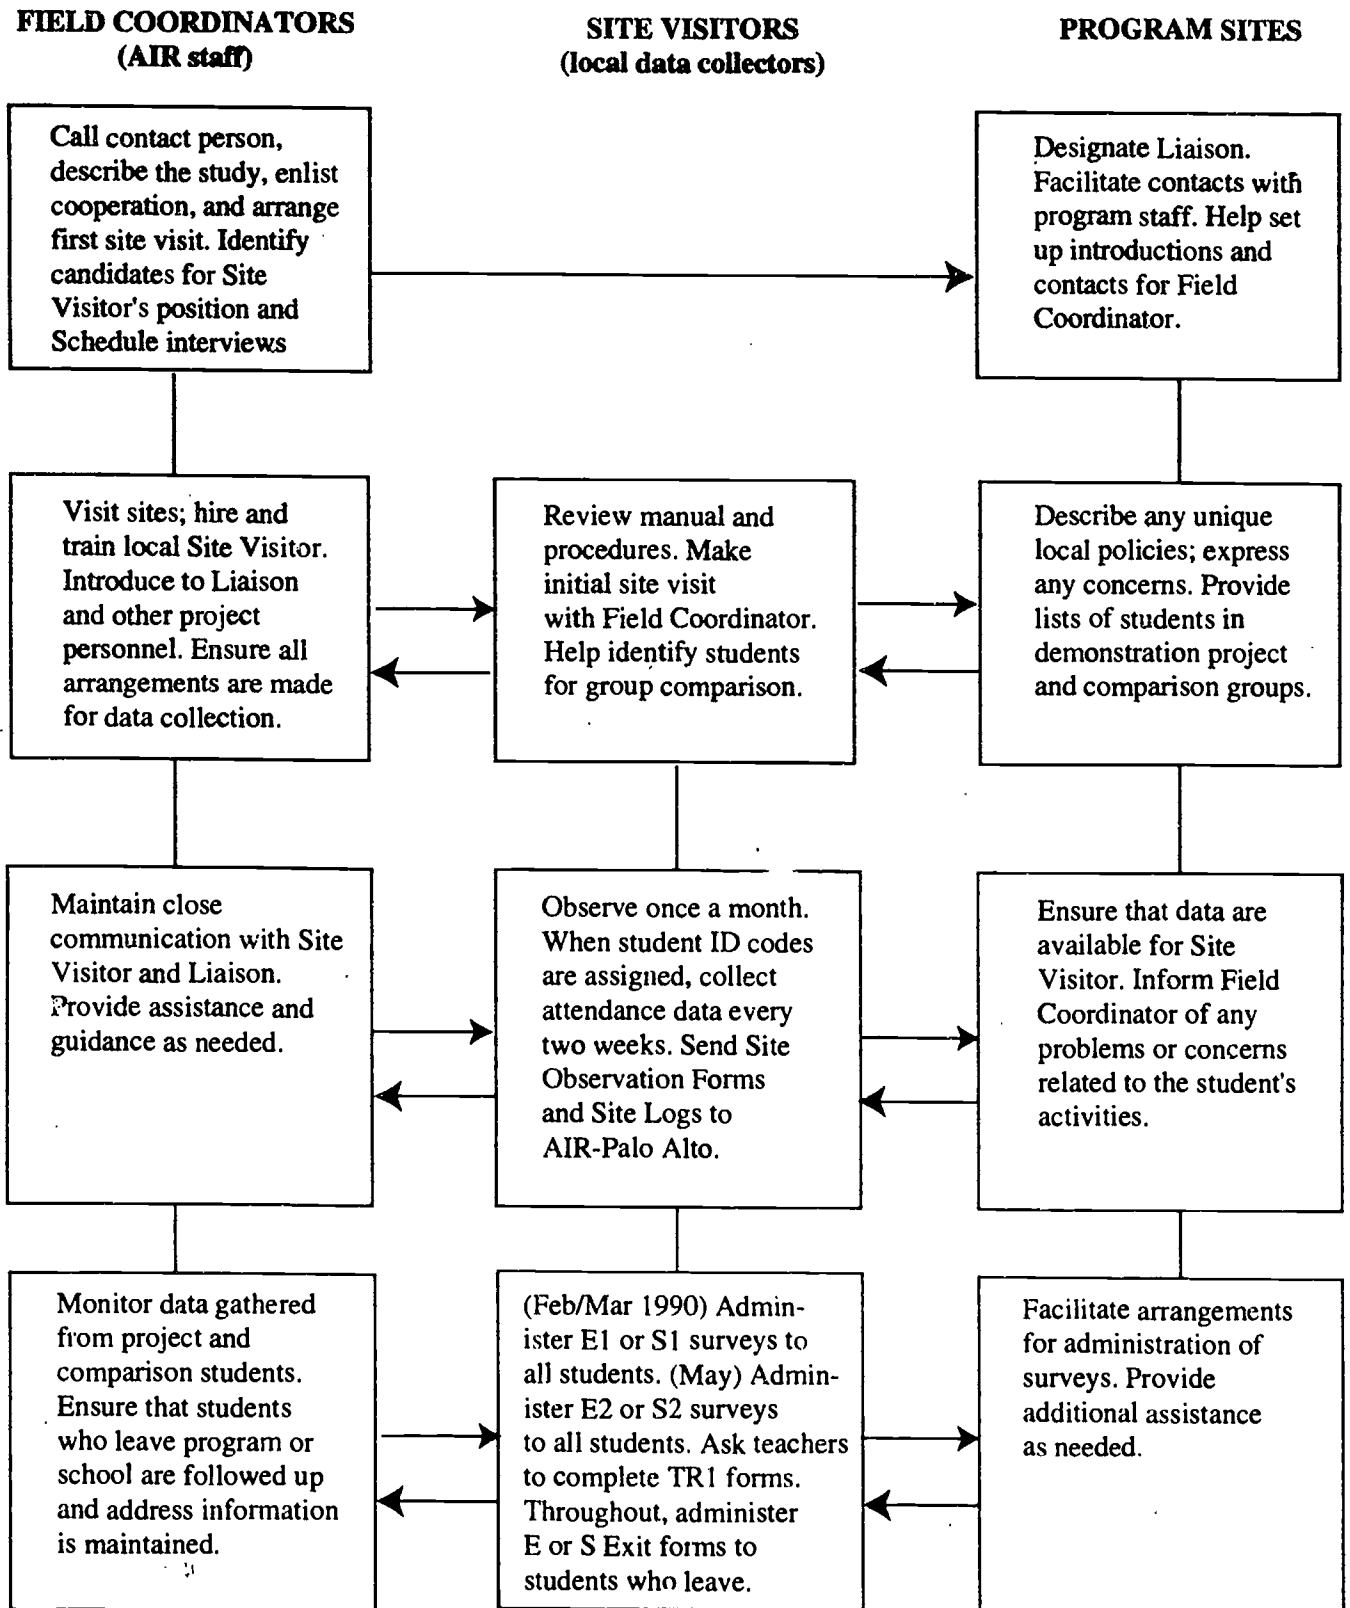

Selection and Training of On-Site Staff

The data collection plan for the outcomes study is shown in Figure B-1. As indicated, field coordinators maintained overall responsibility, working with local data collectors and project staff persons.

From the outset, outcome evaluation activities demanded close working relations with the projects to ensure that the required information was available and that sound data collection principles would be followed. A staff of eight field coordinators, including the Project director and Associate project director, supervised the sites; most field coordinators were directly responsible for operations at two sites. Visits were made to sites to verify the selections and to identify the grade levels to be included. We met with Project directors and other project staff and, in some cases, superintendents and principals, to enlist cooperation and support, and we observed the projects in action.

During the visits to the sites, field coordinators hired and trained on-site data collectors to gather data on the student samples. These on-site staff were either experienced researchers or graduate students in local colleges and universities; in two cases, they were carrying out similar work for an evaluation of dropout prevention projects in vocational education. The field coordinators provided on-site staff with several hours of pre-service training in the work they would be expected to do, following the procedures outlined in the comprehensive manual of data collection responsibilities and procedures which was provided to every on-site evaluation staff person.

Figure D-1. Overview of Data Collection Responsibilities for the Outcomes Study

The manual of data collection responsibilities and procedures, developed for this project, included background information on the study, supervision procedures and sources of help, and detailed instructions for 10 tasks the data collectors were to carry out:

1. Gather program information
2. Develop lists of program participants and comparison pools of students
3. Observe program activities, using the Site Observation Form
4. Extract data from program and school records, using the Records Form
5. Monitor attendance, discipline, and retention records, using the Site Log
6. Gather background data on program participants and data on students' attitudes, aspirations, and attainments, using the E1 and S1 student questionnaires
7. Follow up on students who leave the program or school, using the E and S Exit forms
8. Maintain on-going communication with the Field Coordinator
9. Submit reports and materials as directed
10. Represent the evaluation contractor when the Field Coordinator is not on site

The manual served as a resource and reference throughout the data collectors' work on the project.

During this first visit to project sites, arrangements were also made for the on-site data collectors to observe the project components in operation, so they understood clearly what project services the students in the sample were receiving, and could monitor them periodically. Over the course of their work, the data collectors were thus able to identify any significant changes in the project implementation and notify central evaluation staff so that those changes could be investigated and documented. Field coordinators telephoned their data collectors frequently, and a newsletter and occasional memoranda served to address common questions and to review procedures. Communication was ongoing; monitoring, continuous.

Development of Data Collection Forms and Materials

Five instruments were designed to gather data for the study of project-related student outcomes. Each is described in detail below; copies are included in Appendix C.

Student Survey of Attitudes and Plans for Education. Two versions of a student survey of attitudes and plans for education were developed: E1, for students in Grades 2-6, and S1, for students in Grades 7-12.

Version E-1 consisted of 35 items, organized into three sections:

- **All About You** (Items 1-11)—items on gender, race or ethnic background, and primary language; a self-esteem scale made up of six items; and two items about the respondent's home environment: language spoken and household composition

- **What You and Others Do or Think (Items 12–27)**—two items on school-related behaviors (e.g., how often you get to class on time and do homework; and how present behavior compares to last year’s); three items on parent or guardian involvement in school (e.g., talking to teachers, attending school events, checking on students’ homework); six items on attitudes toward school and education in general (e.g., attitudes toward people who finish high school); and four items on future plans (e.g., plans for finishing high school, type of job desired)
- **About Your Family (Items 28–35)**—items about father and mother’s education and occupation

The E1 survey collected background, descriptive, and attitudinal information on students, and to facilitate comparative analyses with other databases it used items from the National Education Longitudinal Study of 1988 (NELS: 88). Any modifications of the NELS: 88 items were made solely to simplify wordings in light of the younger ages of the intended respondents. Data on self-esteem were collected using the six-item scale developed by Rosenberg and his colleagues in their work with educationally disadvantaged students in the elementary grades.¹

The S1 version of the student survey had 46 items. It included all of the 35 items from the E1 survey with the exception of the six self-esteem items. Replacing those items was a ten-item version of the self-esteem scale developed by Rosenberg in 1965. In addition were items about marital status, children, and smoking habits, three items related to work (number of hours, pay, quality of relationships with co-workers); and more in-depth items on school participation (e.g., participation in activities, consultation with counselors). Format and headings were adapted for older readers (e.g., “All About You” in E1 is “Personal Information” in S1, type is smaller), but the overall structure and intent of the two surveys were the same.

Teacher Ratings. Four of the 15 projects served students in Kindergarten or first grade (some treatment students in Cushing, Hannibal, and Shreveport; all treatment students in Los Angeles). Because they could not be expected to read a survey—or even reliably answer one read to them—brief Teacher Rating forms for teachers were developed. Teachers were asked to use a five-point scale to rate each of these seven student-related behaviors:

- classroom citizenship
- classroom participation
- language development
- math/pre-math development

¹ Rosenberg, M. (1965). *Society and the adolescent self-image*. Princeton, NJ: Princeton University Press. (Self-Esteem Scale, Appendix D, pp. 305-319).

- relationships with other students
- parent cooperation
- parent involvement

Teachers were asked to provide this information for two time points: the beginning of the 1989–90 school year and the end of the year.

Records forms. To gather data on actual school performance, a Records Form (ER1 for elementary students; SR1 for secondary students) was designed. Identical except for one SR1 item on credits earned toward graduation, the Records Forms included these items:

- birthdate
- address and telephone number
- name of parent or guardian
- previous grade completed
- average number of hours per week in project (1989–90)
- total days absent (1988–89 and 1989–90)
- standardized achievement test scores (two most current scores)
- yearly grade averages (1988–89 and 1989–90)
- total suspensions (1988–89 and 1989–90)

The birthdate, address, and parent data provided the means to track students when they moved. The last grade completed was to verify data for matching. The item on number of hours in project was to provide us with a measure of each student's exposure to the project, differentiating, for example, the student who attended one-hour group counseling sessions for a semester from the student who had three-hour individual counseling sessions for a school year. The attendance and disciplinary data gave us a means for comparing attendance and behavior before and during project participation, as well as between treatment and comparison students. Grades and achievement test scores provided measures of student achievement. The 1988–89 data were to provide baselines for students who entered projects in 1989–90. For students who participated in projects the previous year (1988–89), we developed Records Forms to gather their pre-treatment attendance, grade, and discipline data for 1987–88.

Site logs. To keep track of changes in student status—e.g., identify students who had moved or quit school—a Site Log was developed. This form was used to record *exceptions* to the patterns of school behavior one might typically expect of students: present in class each day with no behavior problems. The Site Log provided a means for monitoring attendance, discipline, and enrollment status on a monthly basis. When exits were recorded for students,

on-site data collectors were instructed to record the reasons for the exits and to provide the exit dates as shown on school records.

Exit surveys. The E and S Exit Forms collected locator information on students for use in future follow-up and information on why the student left the project (and/or school), who the student talked to about leaving, and what changes might have caused the student to remain enrolled. The forms also gathered information on the students' education plans.

On-Site Data Collection

Confidentiality was carefully maintained throughout the data collection. Each student in the sample—whether a program or comparison student—was assigned a seven-digit identification code. These numbers—not names—were used on all data collection instruments, and lists that linked student names and numbers were kept secure.

On-site data collectors were responsible for gathering all of the data. They either administered surveys themselves or supervised their administration by project and school personnel. For the surveys, they consulted with their students' teachers to determine if students could read well enough to complete the surveys independently. In cases where it was either felt that they could not or it was observed during a session that students were having difficulty, the survey administrators read the items aloud, waiting for students to fill in their responses. For the K-1 students, data collectors distributed and collected Teacher Ratings forms.

Data collectors completed one Records Form for each project and comparison student in each year of the evaluation. (For projects serving participants in 1988-89, the data collectors also completed a Records Form to gather pre-treatment (i.e., 1987-88) data for project participants and similar data for comparison students.) At some sites, we were able to make arrangements to obtain data from central computers; at others, data collectors went through individual student files. To conform with Federal requirements concerning collection of individual information for research purposes, a summary document was placed in every student's file, indicating what data had been gathered, when, and under what authorization. To assist with student tracking, folders with return postcards were also inserted into these files, asking schools to inform us if the student moved and to provide the new school name and address.

Data collectors completed Site Logs on a regular basis, usually monthly. They made arrangements to obtain these data, either from attendance clerks or counselors at the individual schools or from central computer systems. Sometimes this required monthly visits to as many as 26 schools; in other cases, it required only a one-time contact with a local evaluator who then provided monthly printouts with the needed information. The most

common arrangement involved visits to only a few schools where office staff, informed about what was needed, directed the data collectors toward source materials.

Transformation of Data

As data were collected from surveys and records, they were key-taped or key-entered, transformed into common metrics (in the case of records data), and checked to detect anomalous values.

Transformations of records information were relatively straightforward in most cases, i.e., grades were converted to four-point scales, and excused and unexcused absences and in-school and out-of-school suspensions were summed (and total absences were divided by total days of attendance). Data from standardized tests presented a somewhat more complex set of problems, namely that scores on various subscales (e.g., reading) had to be converted to national percentiles and then to normal curve equivalents. This process proved sufficiently difficult that analyses of test score data are not included in the present report. Checking and resolving of out-of-range values required many follow-up telephone calls to the demonstration projects. In the majority of cases, problems were resolved by correcting errors made during extraction of the data or in the recording/reporting of the data by school officials. Cases that could not be resolved by these means were set to missing.

Non-Response Adjustments

To provide a means for minimizing the possible effects of achieving less than a 100% response rate of collected data, missing data values were imputed and all analyses were performed on both the unadjusted and the adjusted files. To carry out the imputations, we used PROC IMPUTE, a procedure initially developed by AIR for the National Center for Education Statistics in 1980, with many capabilities added over the last 10 years.

PROC IMPUTE implements a variant of the *hot-deck* imputation method and consists of three steps. In the first step, linear relations are estimated among the variables based on data that are present. That is, the variables are arranged in an *optimal* order, and the best linear predictor of each successive variable in terms of a subset of the preceding (already imputed) variables is computed. To ensure that all significant bivariate relations are captured, a second set of predictions is also included using the results after all variables have been imputed once.

Because of the qualitative differences between Kindergarten, elementary, and secondary students involved in this evaluation, non-response adjustments were carried out separately for these three school levels. Due to the fact that the databases for each of the sites were too small to provide reliable bases for imputation, data for all the demonstration sites at each school level were used in the imputation procedure. The linear prediction equations are then based on the data combined across sites.

The second step in the imputation methodology is the generation of frequency distributions of the data available, for each variable, for each of several values of the linear predictor of that variable. Clearly, the number of values depends on the amount of data available for estimation. For variables that are well-predicted by other variables in the dataset, the frequency distributions will differ across values of the predictor: high values of the predictor will correspond to high values of the predicted variable. For variables not well-predicted, the frequency distributions will be similar across values of the predictor.

To account for the fact that frequency distributions of some variables may vary substantially across sites, the frequency distributions are computed separately for each site. For variables with a small number of values, the entire frequency distribution is generated. For variables that could take on a large number of values, the frequency distributions are approximated by continuous distributions. The family of continuous distributions used for the imputations are *triangular* histograms. That is, the range of values is divided into a series of discrete categories, and the distribution then characterized by (a) the percentage of cases in each category and (b) the mean of the values within each category. Within each category, the density is constructed as a non-negative linear function with the appropriate height and slope.

The third step in the imputation is to sample values from the appropriate constructed frequency distributions to fill in missing data. Thus, any missing value would be filled in from the distribution of responses of students whose critical characteristics (i.e., those that are included in the best linear predictor of the target variable) are most similar to the target student.

In the case of multiple missing responses, the imputations are carried out sequentially, using the relations computed in the first step, with the imputed value for the first variable included in the imputation of later variables.

To account for site-to-site variations in *project* characteristics for determining imputed values, implementation data in the form of ratings of programmatic emphases in each of the sites (i.e., academic instruction, self-esteem development, school affiliation, and parent involvement) were added to the files and used in estimating values for a *core* set of variables. These five-point ratings were provided by members of the implementation study teams who had visited the sites.

This core set of variables, which was subsequently used in the imputation of all other missing values, included variables describing site-to-site variations in student characteristics, and the variables describing site-to-site variations in programmatic emphasis. With some variations depending on the database being imputed, the student variables included in the core were: race/ethnicity, gender, grade level, socioeconomic status (a composite measure based on parents' educational and occupational status), age differential (i.e., the difference

between a student's age and the nominal age of children in the same grade level), percent days absent in 1989-90, grade average in 1989-90, and score on (one of) Rosenberg's self-esteem scales. To impute any missing values among the core student variables, we used several related variables. For example, the racial/ethnic distribution of the school district of enrollment taken from the Common Core of Data was added to the files. There were no missing values for the core programmatic variables. Table D-1 lists the steps taken to impute missing values in the secondary school database.

Throughout imputation, no distinction was made between students in the treatment or control group. Not including group membership ensured that a response would be selected from the same distribution whether the student was in the treatment or control group. That is, imputation would not artificially create significant differences between the two focal groups.

Analyses have been conducted both on the imputed and non-imputed data. However, whenever more than half the data on a variable were missing at a site, the results from these analyses should not be relied on for inference.

Gain Score Analyses and Estimation of Mean Gains

Some dropout prevention projects may have had effects on rates of absence and on classroom grades, as well as on dropout rates. Therefore, absences and grades were measured as outcomes. In order to estimate a standard for absences and grades, the absences and grades of a comparison group of students were also recorded. However, because the comparison groups were not randomly determined, there was no assurance that the levels of absences and grades in the comparison group would be a sufficient standard. Therefore, to represent the effects of the program on individual students, absences and grades for students in the year before entry into the dropout prevention program were also recorded, and gains from the baseline year to the first or second follow-up were measured.

There are three major alternative analytical methods for taking pre-treatment measures and comparison group measures into account in computing a standard expectation for absences and grades: (1) an analysis of variance, measuring gains as a function of membership in the treatment group; (2) an analysis of variance of standardized gains, in which pre- and post-measures are divided by their standard deviations; and (3) an analysis of covariance, treating the pre-treatment measure as a covariate. Because the pre-treatment measure was no more free of measurement error than the follow-up measures, analysis of covariance was rejected because of the bias introduced into the analysis by the pre-treatment measurement error.

In fact, however, *raw* absences were not used. An analysis was conducted of the relations between baseline absences and absences during the follow-up period(s), to determine the most stable transform of this measure (i.e., the transform which would maximize the correlation between the measures in different years). As a result of this analysis, an adjusted absence measure was used that (a) truncated the distribution by treating all absence rates greater than 30% as 30%, and (b) rounded down as follows:

21% – 29% -> 20%;
16% – 19% -> 15%;
11% – 14% -> 10%;
6% – 9% -> 5%; and
1% – 4% -> 0%.

This transform, which had the effect of reducing random variation, increased the correlation substantially between baseline absences and absences during follow-up periods.

Finally, the actual analyses that were performed also controlled for differences in demographic characteristics, because of the imperfect match between treatment and control groups, accentuated by their different attrition rates. Thus, all analyses were performed within demographic groups and the results pooled across all groups to obtain an overall result for each evaluation program.

The demographic characteristics used to define the matched groups were race/ethnicity, age, and gender. Age was categorized as a dichotomy as more than one year older than the modal age for the grade, or not, and race as white or not. In each site, the three dichotomies could indicate as many as eight demographic categories. If some category were represented in the treatment group at a site but not in the comparison group, or vice versa, that category was deleted from the analysis for that site. This led to the elimination of some cases to avoid bias created by the over-representation of one demographic category in one of the comparison groups. For example, at one site, the treatment group contained only nonwhite students, while the comparison group was about one-third white—at that site, only data for nonwhite students were used in the comparative analysis. The reader can be assured that the reported means for the treatment and comparison groups at each site are not contaminated by different proportions of *old* students, white students, or males in the treatment and comparison groups. This standardization of means was carried out only within site because the projects at different sites were dealing with qualitatively different populations. Therefore, differences in outcomes across sites may reflect differences in student populations across sites.

Data Collection Instruments

Appendix E: Part One
Implementation Study Instruments

SCHEDULE AND PURPOSE

INTERVIEW GUIDE FOR DISTRICT/SCHOOL ADMINISTRATORS

Interviewer:

Senior researcher responsible for all site observations at the project

Respondent:

District superintendent or designee

Schedule for administration:

Spring 1990

Purpose:

To collect community and school district information on the environment in which the demonstration operates, including level of support for education, trends in school reform, availability of services and resources for at-risk students.

To examine district policies and practices relevant to at-risk students.

To obtain policy-level perspectives on the demonstration project: its strengths and weaknesses, plans for institutionalization of the model or variations thereof for improving services to at-risk students.

To obtain perspectives on the potential of the model for replication or adaptation in other settings.

**EVALUATION OF PROJECTS FUNDED BY THE SCHOOL DROPOUT
DEMONSTRATION ASSISTANCE PROGRAM**

INTERVIEW GUIDE FOR DISTRICT/SCHOOL ADMINISTRATORS

SITE: _____

DATE: _____

**RESPONDENT
POSITION:** _____

SITE VISITOR: _____

A. Project Context

1. Overview of school district (or host organization), including trends in school innovation and reform
2. Level of community support for schools generally
3. Level of host school support for project

B. District and School Policies and Practices for At-Risk Students

1. Policies on attendance, performance, suspension, expulsion
 - For all students
 - For at-risk students, if different
2. Availability of special programs other than the dropout demonstration project
3. Where the project fits in the overall scheme of services to at-risk students
4. Extensiveness of reentry activities for dropouts
5. District/school policies on parental involvement

C. Host Organization (If Other than School District)

1. Organizational type and size
2. Governance
3. Linkages with employers
4. Linkages with other community agencies

5. Linkages with other levels of schools (e.g., elementary to middle)
6. Linkages with postsecondary education/training institutions
7. Commitment of resources to the project

D. The Dropout Demonstration Project

1. Perceptions concerning implementation of the demonstration (issues, problems and their resolution)
2. Effectiveness of the project as it is currently implemented in addressing each of its goals (list goals)
3. Long-term plans for institutionalizing, expanding the demonstration project
4. Project's strengths and weaknesses
5. Strategies for improving the project

E. Replication Issues

1. Potential for replication or adaptation of the model in other settings
2. Fiscal and staff resources required
3. Key components of the model that must be included in adaptation
4. Strengths and weaknesses of the model
5. Barriers to replication/adaptation; their resolution

536

SCHEDULE AND PURPOSE

INTERVIEW GUIDE FOR PROJECT DIRECTORS

Interviewer:

Senior researcher responsible for all site observations at the project

Respondent:

Director of the dropout demonstration project

Schedule for administration:

Spring 1990

Purpose:

To obtain detailed information on the project: principal intervention, goals, configuration of services, expectations for students, project management, resources, and facilities, quality and commitment of staff.

To collect information on factors that affect the project's implementation, including barriers to operation of the project as planned, factors that have affected the success of the project in meeting its student-level objectives, internal and external problems that must be resolved to ensure project success.

To collect information useful for replication or adaptation of the project in other settings, depending on its demonstrated effectiveness in improving the educational experiences and outcomes of participants.

**EVALUATION PROJECTS FUNDED BY THE SCHOOL DROPOUT
DEMONSTRATION ASSISTANCE PROGRAM**

INTERVIEW GUIDE FOR PROJECT DIRECTORS

SITE: _____

DATE: _____

RESPONDENT NAME: _____

SITE VISITOR: _____

A. Overview of the Project

1. Principal treatment focus
2. Project goals
3. Main project components
4. Primary emphasis (e.g., basic skills remediation, participant self-esteem)
5. Ancillary services
6. Key policies: attendance, performance, suspension, expulsion

B. Participants

1. Overall characterization
 - Ability, interest, enthusiasm
 - Achievement levels
 - Special target groups, if any
 - Post-school plans or aspirations
 - Before participation in the project
 - After participation in the project
2. Efficacy of recruitment strategies

C. Project Organization and Management

1. Governance structure
2. Level of decisionmaking autonomy
3. Advisory Committee, if any
 - Membership, responsibilities, relationship to project staff, frequency of meetings
4. Adequacy of project resources

D. Project Staff

1. Selection
2. Project-related training
3. Attitudes toward participants
4. Relationships between project staff and other school (or host organization) staff
5. Relationships with parents or families of participants

E. Implementation, Appropriateness, and Effectiveness of Project Components

1. Academic/basic skills components
 - Required classes
 - Teacher/participant ratio
 - Instructional strategies (i.e., computer-assisted, tutoring, etc.)
 - Integration with other components of participants' educational programs
 - Performance levels
 - Appropriateness and effectiveness of academic components
2. Counseling
 - Personal
 - Group
 - Individual
 - Family
 - Career
 - Academic
 - Vocational assessment
 - Appropriateness and effectiveness of counseling
3. Parental involvement
 - Purposes of involvement
 - Types of participation
 - Parent education
 - Parental involvement in project activities
 - Efforts to encourage participation
 - % of parents who participate
 - Appropriateness and effectiveness
 - Other

4. Vocational education components (if any)
 - Exploratory versus skill-specific focus
 - Vocational programs available to participants
 - Curricular approach (i.e., competency-based education)
 - Quality of equipment and facilities
 - Teacher/participant ratio
 - Appropriateness and effectiveness of vocational components
5. Work experience and job placement (if any)
 - Work-related experiences available, including sequences of experiences
 - Post-project placement and follow-up
 - Sources of placements
 - Mentoring
 - Appropriateness and effectiveness of work-related components
6. Other services
 - Student incentive/reward system
 - Child care
 - Transportation
 - Health (in school and/or out)
 - Social services
 - Appropriateness and effectiveness

F. Implementation Issues

1. Key actors
2. Coordination among staff at multiple project sites
3. Materials, equipment, other resources required
4. Timeframes and milestones
5. Barriers and their removal
6. Strengths and weaknesses of the project

G. Evaluation

1. Student assessment: interim and final
2. Ongoing project assessment
3. Improvements/adjustments planned

4. Student satisfaction, attitudes, self-esteem
5. Teacher assessment
6. Teacher satisfaction, attitudes about the project
7. Follow-up activities
8. Perceptions about the federal evaluation (help, hindrance, suggestions)

H. Linkages

1. Business and industry
2. Postsecondary institutions
3. Other service providers

I. Replication Issues

1. Potential for replication or adaptation of the model in other settings
2. Fiscal and staff resources required
3. Other resources (e g., business partners, volunteers)
4. Key components of the model that must be included in an adaptation
5. Strengths and weaknesses of the model
6. Barriers to replication/adaptation; their resolution

SCHEDULE AND PURPOSE

INTERVIEW GUIDE FOR PROJECT TEACHERS

Interviewer:

Senior researcher responsible for all site observations at the project

Respondent:

Project instructional staff

Schedule for administration:

Spring 1990

Purpose:

To investigate the instruction provided, including scope and sequence of content, instructional strategies, amount of student contact time, coordination and linkages with other staff in the school, parents, business partners, and the like

To collect information on teacher perceptions concerning the efficacy of the intervention

To obtain information on the quality and commitment of teachers to the project and to meeting the educational and other needs of at-risk students

To assess the strengths and weaknesses of the model and identify potential areas for improvement

To analyze factors that may influence the replication or adaptation of the model in other settings

A. Project Implementation

1. Primary and subsidiary goals of the project
2. Project cohesiveness/planning strategies
3. Interactions with other departments/teachers in the school (host)
4. Class size
5. Relationships with individual students
6. Overall perceptions on project implementation
 - Appropriateness of goals and components
 - Effectiveness in meeting each goal
 - Problems and solutions
7. Primary strengths and weaknesses
8. Suggestions for improvement
9. Integration of staff in multiple project settings
10. Strengths and weaknesses of the project

B. Project Curriculum

1. Scope of content to be covered
2. Adequacy of materials and texts
3. Adequacy of equipment and facilities
4. Types of testing and evaluation used
5. Extra- or co-curricular aspects of the project
6. Curricular approach (e.g., competency-based education)
7. Instructional strategies (e.g., individualized)

C. Students

1. Overall characterization
2. Ability, interest, and enthusiasm
3. Progress and achievement (program impact)
4. Availability of formal and informal support services, including remediation
5. Retention and attrition
6. Student aspirations and plans
7. Similarities and differences from other students respondent is currently teaching (or has recently taught)

E. Intended Outcomes in Addition to Retention and Graduation

1. Employment
2. Postsecondary enrollment
3. Attendance
4. Grades
5. Attitudes
6. Self-esteem
7. Aspirations
8. Educational investment behaviors
9. Parental involvement

F. Context and Linkages

1. Contacts with parents: purpose, frequency, utility
2. Other contacts
 - Employers
 - Community at large
 - Postsecondary institutions
 - Local Advisory Committees
 - Other service providers

G. Replication Issues

1. Key components in adaptation
2. Strengths and weaknesses of the model
3. Barriers to replication/adaptation; their resolution

SCHEDULE AND PURPOSE

INTERVIEW GUIDE FOR ANCILLARY STAFF

Interviewer:

Senior researcher responsible for all site observations at the project

Respondent:

Ancillary staff assigned to the project, particularly counselors

Schedule for administration:

Spring 1990

Purpose:

To describe the responsibilities of ancillary staff, including types of interactions with students, amount of student contact time, role in student screening and selection, job placement, and career and other counseling

To examine other responsibilities of ancillary staff, including involvement with parents, other service providers, and the business community

A. Description of In-school Responsibilities

1. Direct contact with students
2. Types of interactions with students
3. Amount of time spent with individual students
4. Role in student selection
5. Role in student counseling/advising
6. Role in student job placement
7. Other responsibilities

B. Description of Responsibilities Beyond the School

1. Contact with families
2. Contact with postsecondary institutions
3. Contact with employers
4. Contact with community-based organizations
5. Contact with health, mental health, or public assistance agencies
6. Other

SCHEDULE AND PURPOSE

STAFF TRAINING/EXPERIENCE RECORD

Administrator:

Self-administered by project staff

Respondent:

Project staff

Schedule for administration:

Spring 1990

Purpose:

To obtain information on the staff qualifications and experience relevant to their specific assignments in the project, including whether they are assigned to the project full time or split their time between the project and other assignments

To examine extent to which staff are experienced in working with at-risk children and youth, nature and amount of inservice training associated with their assignment to the project, and types of involvement with students or parents beyond the school environment

The following information should be obtained for all staff persons working on the project.

A. Personal Background Information

1. Training/preparation

- Degrees
- Years awarded
- Certification or licenses
- Type and amount of preparation for assignment to the project

2. Experience (number of years)

- Teaching
- Counseling
- Administration
- Primary responsibilities prior to assignment to the project
- Work with at-risk children and youth or their families
- Other relevant work experience (specify)

B. Project Responsibilities

1. Teaching (specify subjects and proportion of overall current assignment)
2. Counseling (proportion of overall current assignment)
3. Administration (proportion of overall current assignment)
4. Liaison with community organizations or families
5. Other (specify) _____
6. Project-related responsibilities beyond the school (specify nature and average number of hours per week--e.g., home visits)

C. Other Current Assignments

1. Teaching
2. Counseling
3. Administration
4. Other (specify) _____

SCHEDULE AND PURPOSE

BUSINESS PARTNER INTERVIEW GUIDE

Interviewer:

Senior researcher responsible for all site observations at the project

Respondent:

Private sector representatives who are actively involved in the project as business partners

Schedule for administration:

Spring 1990

Purpose:

To explore the types of activities the business partners undertake in support of the project.

To obtain the private sector's perspectives on the strengths and weaknesses of the project as implemented in terms of preparing students for the labor market (job skills, academic and critical thinking skills, employability skills) or for further education or training.

PROJECT RESOURCE QUESTIONNAIRE

SITE: _____

DATE: _____

The purpose of this form is to identify the types and sources of the resources that contribute to this project, including funding, personnel, facilities, and the like. Collection of this information is important for analyzing the context in which student outcomes are achieved by each of the projects participating in the evaluation. Information provided will be confidential and will not be used for any purpose other than the analytic needs of the evaluation. Please provide information for the 1989-90 school year.

A. Project Participation

1. Total number of students currently served by the project: _____
2. Total number of slots available in the 1989-90 school year: _____
(slots: maximum number of youth that the project can serve at any one time)
3. Average length of time (in weeks) participants receive services from the project: _____
4. Expected length of project participation (e.g., semester, year): _____
5. Hours per week per student of contact with the project: _____
6. Number of students who applied for the project: _____

B. Project Funding

1. Average per-pupil expenditures for this school during the 1989-90 school year: _____
2. Average per-pupil expenditures for project participants during the 1989-90 school year: _____

3. In the following chart, please indicate the sources, amounts, and uses of the funds available for operation of the (project name) during school year 1989-90.

Funding source	Amount	Uses of funds
Regular funds	\$ _____	
Salaries/fringe	\$ _____	_____
Equipment	\$ _____	_____
Supplies	\$ _____	_____
etc.	\$ _____	_____
Demonstration grant		
Salaries/fringe	\$ _____	_____
Equipment	\$ _____	_____
Supplies	\$ _____	_____
etc.	\$ _____	_____
Private funds	\$ _____	_____
Other (specify)	\$ _____	_____

C. Project Personnel

In the following chart, please indicate the numbers and categories of staff assigned to the project.

Category	Total FTE	# Full Time	# Part Time
Administrators	_____	_____	_____
Certified teachers			
Vocational	_____	_____	_____
Academic	_____	_____	_____
Counselors	_____	_____	_____
Paraprofessionals/ aides	_____	_____	_____

Secretarial _____
Parents _____
Other (specify) _____

6. Please indicate the types of contributions made by volunteers:

Advisory Committee _____
Task Force _____
Speakers _____
Mentors _____
Tutors _____
Job supervisors _____
Curriculum development _____
Staff development _____
Other (specify) _____

7. Please estimate the total number of full-day equivalents contributed to the project by volunteers: _____

OMB Clearance No:
1875-0040 exp. 12/92

Public reporting burden for this collection of information is estimated to average 45 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the U.S. Department of Education, Information Management and Compliance Division, Washington, D.C. 20202-4651; and to the Office of Management and Budget, Paperwork Reduction Project 1875-0040, Washington, D.C. 20503.

Student Survey of Attitudes and Plans for Education

Version E1

Please mark your answers by coloring the circles using a dark pen or pencil. If you change your answer, erase your answer carefully or put an "X" through it. Then, mark the answer you want to give by coloring in the circle(s). If there is a question that you would rather not answer, put an "X" through it and go to the next question.

This is not a test, but we do want you to give the answers that best describe you. Take your time and think about each question before you answer.

The answers you give will be kept confidential. They will not be shown to anyone at school or to your parents. They will only be used with the answers of other students to describe the general attitudes and plans of students across the country.

All About You

(MARK ONE)

1. Are you a boy or a girl?	
Boy.....	O 1
Girl.....	O 2
2. Which best describes you?	
Asian or Pacific Islander.....	O 1
Hispanic, regardless of race.....	O 2
Black, not of Hispanic origin.....	O 3
White, not of Hispanic origin.....	O 4
American Indian or Alaskan Native.....	O 5

3. A kid told me: "There's a lot wrong with me."
Do you ever feel like this?

Yes, a lot	O 1
Yes, a little	O 2
No.....	O 3

4. Another kid said: "I'm not much good at anything."
Do you ever feel like this?

Yes, a lot	O 1
Yes, a little	O 2
No.....	O 3

5. Everbody has some things about him or her which are good and some things about him or her which are bad.
Are more of the things about you

Good.....	O 1
Bad.....	O 2
Both about the same.....	O 3

6. Another kid said: "I am no good."
Do you ever feel like this?

- Yes, a lot O 1
- Yes, a little O 2
- No..... O 3

7. How happy are you with the kind of person you are?

- Very happy..... O 1
- Pretty happy..... O 2
- A little happy..... O 3
- Not at all happy..... O 4

8. Another kid said: "I think I am no good at all."
Do you ever feel like this?

- Yes, a lot O 1
- Yes, a little O 2
- No..... O 3

9. What language, other than English, do you currently use most often?

- Spanish O 1
- Chinese O 2
- Japanese O 3
- Korean..... O 4
- Vietnamese O 5
- Cambodian O 6
- A Filipino language O 7
- Italian O 8
- French O 9
- German O10
- Greek O11
- Polish O12
- Portuguese O13
- Not applicable: I use only English..... O14
- Other _____ O15

10. What language do the people in your home usually speak?

- English..... O 1
- Spanish..... O 2
- Chinese..... O 3
- Japanese..... O 4
- Korean..... O 5
- Vietnamese..... O 6
- Cambodian..... O 7
- A Filipino language..... O 8
- Italian..... O 9
- French..... O10
- German..... O11
- Greek..... O12
- Polish..... O13
- Portuguese..... O14
- Other _____..... O15

(MARK ALL THAT APPLY)

11. Which of the following people live in the same household with you?

- I live alone..... O 1
- Father..... O 2
- Other male guardian
 - stepfather..... O 3
 - foster father..... O 4
 - other(specify):_____ O 5
- Mother..... O 6
- Other female guardian
 - stepmother..... O 7
 - foster mother..... O 8
 - other(specify):_____ O 9
- Brother(s) (including step- or half-)..... O10
- Sister(s) (including step- or half-)..... O11
- Grandparent(s)..... O12
- Other relative(s)--children..... O13
- Other relative(s)--adults..... O14
- Non-relative(s)--children..... O15
- Non-relative(s)--adults..... O16

What You and Others Do or Think

(MARK ONE FOR EACH)

12. How often do you do the following things?

	Often	Sometimes	Rarely	Never
Get to class on time	<input type="radio"/> 1	<input type="radio"/> 2	<input type="radio"/> 3	<input type="radio"/> 4
Work on class projects.....	<input type="radio"/> 1	<input type="radio"/> 2	<input type="radio"/> 3	<input type="radio"/> 4
Help friends with classwork.....	<input type="radio"/> 1	<input type="radio"/> 2	<input type="radio"/> 3	<input type="radio"/> 4

Public reporting burden for this collection of information is estimated to average 45 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the U.S. Department of Education, Information Management and Compliance Division, Washington, D.C. 20202-4651; and to the Office of Management and Budget, Paperwork Reduction Project 1875-0040, Washington, D.C. 20503.

Student Survey of Attitudes and Plans for Education

Version S1

Please mark your answers by coloring the circles using a dark pen or pencil. If you change your answer, erase your answer carefully or put an "X" through it. Then, mark the answer you want to give by coloring in the circle(s). If there is a question that you would rather not answer, put an "X" through it and go to the next question.

This is not a test, but we do want you to give the answers that best describe you. Take your time and think about each question before you answer.

The answers you give will be kept confidential. They will not be shown to anyone at school or to your parents. They will only be used with the answers of other students to describe the general attitudes and plans of students across the country.

Public reporting burden for this collection of information is estimated to average 45 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the U.S. Department of Education, Information Management and Compliance Division, Washington, D.C. 20202-4651; and to the Office of Management and Budget, Paperwork Reduction Project 1875-0040, Washington, D.C. 20503.

Student Survey of Attitudes and Plans for Education

Version EExit

This interview form is designed for use with students who have left the demonstration project or have left the school from which they were selected for this study. It may be administered as an in-person interview or as a telephone interview.

The questions shown may be phrased so as to be most understandable to the students being interviewed. What is important is that we learn why the students have left, who they talked with about leaving, any changes they would recommend in the program, and what their future plans are for school.

You do not need to review every response option when you ask a question. We have included a large number of options simply to help in recording what the students report.

Teacher's Guide to Student Rating Form

Please complete the following ratings for the students whose names are shown at the top of each page. As indicated, your first rating should be of student behaviors and parent attitudes and behaviors as they were at the beginning of this school year. Your second rating should be of student behaviors and parent attitudes and behaviors as they are at the present time.

We understand that ratings always involve subjective judgments. We also know that trying to remember how students acted several months in the past can be difficult. All we can say is for you to try your best. The information you provide is very important for helping us to understand the progress being made by your students.

Thank you for your help!

Definitions of Rating Scales

Classroom Citizenship

Classroom citizenship refers to how well the student behaves in the classroom with respect to other students and to you, the teacher. If he or she often fights with others or is always "acting out," you should rate the student low (i.e., 4 or 5) on this dimension. Conversely, if the student is respectful of others' things and is willing to work and play cooperatively, then you should rate the student high (i.e., 1 or 2). A rating of 3 indicates that, on average, the student has some good days and some bad days with respect to his or her interactions with other students and you in the classroom.

Classroom Participation

Classroom participation refers to how willing and enthusiastic the student is to join in classroom activities (e.g., individual work or group projects). If he or she pretty much daydreams in class and often does not seem to follow classroom discussions or assignments you have made, you should rate the student low (i.e., 4 or 5) on this dimension. Conversely, if the student is eager to get involved in discussions and is enthusiastic about classroom activities, a high rating (e.g., 1 or 2) would be most appropriate. A rating of 3 again indicates that, on average, the student is sometimes enthusiastic and attentive and sometimes not.

Language Development

Language development refers to how well the student does in producing and responding to written and spoken communication. If the student seems to have considerable problems answering questions or making him/herself understood, you should rate the student low (i.e., 4 or 5). In contrast, if the student is usually able to answer questions and follow directions, as well as express him/herself clearly, then you should rate the student high (i.e., 1 or 2). A rating of 3 indicates that the student's behavior, on average, is uneven.

Math (or Pre-Math) Development

Math or pre-math development refers to how well the student does in counting and other number skills. If he or she is doing poorly or very poorly, a rating of 4 or 5 would be appropriate. If he or she is doing well, a rating of 1 or 2 would be the one to give.

Relationships with Other Students

Relationships with other students refers to in class and outside relationships (e.g., on the playground). Does the student have friends? Is he or she able to play with others without arguing, fighting, or crying? If so, then a rating of 1 or 2 would seem most appropriate. However, if the student seems to be alone much of the time, is a bully, or is always crying or fighting with others, then a rating of 4 or 5 would seem best.

Parent Cooperation with School

Parent cooperation refers to how supportive a student's parents or guardians seem with respect to what the school is trying to do for their child. For example, if when you ask a parent or guardian to come for a conference they almost never respond, your rating should be a 4 or a 5. In contrast, if a letter home almost always produces a quick response, in the form of a visit or telephone call, then your rating might be a 1 or a 2.

Parent Involvement in School

Parent involvement refers to active participation of parents or guardians in school activities—e.g., helping out in the classroom, going on fieldtrips. If you and the school hardly see the parents or guardians of your children, then many of your ratings will likely be 4 or 5. If some parents make it a point to volunteer their time or to attend "back to school nights" on a regular basis, then your ratings may be higher (i.e., 1 or 2).

Rating for _____
(Student Name)

At the beginning of this school year, how would you have rated the behavior of this student on the following dimensions:

1. Classroom Citizenship
1 (Excellent) 2 3 (So-So) 4 5 (Poor)
2. Classroom Participation
1 (Excellent) 2 3 (So-So) 4 5 (Poor)
3. Language Development
1 (Excellent) 2 3 (So-So) 4 5 (Poor)
4. Math/Pre-Math Development
1 (Excellent) 2 3 (So-So) 4 5 (Poor)
5. Relationships with Other Students
1 (Excellent) 2 3 (So-So) 4 5 (Poor)
6. Parent Cooperation
1 (Excellent) 2 3 (So-So) 4 5 (Poor)
7. Parent Involvement
1 (Excellent) 2 3 (So-So) 4 5 (Poor)

At the present time, how would you have rated the behavior of this student on the following dimensions:

- | | | | | | | |
|-----|-----------------------------------|------------------|---|--------------|---|-------------|
| 8. | Classroom Citizenship | 1
(Excellent) | 2 | 3
(So-So) | 4 | 5
(Poor) |
| 9. | Classroom Participation | 1
(Excellent) | 2 | 3
(So-So) | 4 | 5
(Poor) |
| 10. | Language Development | 1
(Excellent) | 2 | 3
(So-So) | 4 | 5
(Poor) |
| 11. | Math/Pre-Math Development | 1
(Excellent) | 2 | 3
(So-So) | 4 | 5
(Poor) |
| 12. | Relationships with Other Students | 1
(Excellent) | 2 | 3
(So-So) | 4 | 5
(Poor) |
| 13. | Parent Cooperation | 1
(Excellent) | 2 | 3
(So-So) | 4 | 5
(Poor) |
| 14. | Parent Involvement | 1
(Excellent) | 2 | 3
(So-So) | 4 | 5
(Poor) |

Site Observation Form

Date: _____ Time: _____ to _____

Site: _____ Grade(s): _____ Teacher: _____

No. Teachers present: Teachers _____ Aides _____

No. Students present: Girls _____ Boys _____

CONTENT OF LESSON(S) OBSERVED:

(MARK ONE OR MORE THAN ONE)

- | | |
|--------------------------|----------------------------------|
| Reading.....O | Word Attack, Language Arts.....O |
| Written Expression.....O | Oral Expression.....O |
| Mathematics.....O | Science.....O |
| Social Studies.....O | Other:_____ |

Instructions: Observe for 25-30 minutes, focusing on the teacher behaviors and student behaviors listed below. First rate teacher behavior on the five dimensions, using the scales shown. Then rate students on the three dimensions listed. If possible, observe for an additional 25 to 30 minutes and repeat the teacher and student ratings.

RATINGS OF TEACHER BEHAVIOR

1. **Manages classroom effectively:** Rating #1 _____ Rating #2 _____
1=very low; lessons are slow and diffuse; allows or is unable to control disruptive behavior
2=low effectiveness
3=moderate; classroom operates with average effectiveness
4=high effectiveness
5=very high; maximizes time on task; gives clear instructions; deals with disruptive students promptly and fairly with little disturbance to rest of class; demonstrates control of classroom at all times.

2. **Gives positive reinforcement:** Rating #1 _____ Rating #2 _____
1=very low; does not praise correct responses or neglects to correct incorrect responses; gives negative reactions to student responses
2=low;
3=moderate positive reinforcement; usually listens and acknowledges
4=high positive reinforcement
5=very high; always praises student responses and comments, when warranted; does not criticize incorrect responses but re-phrases response or questions again until correct response comes.

3. **Teacher enthusiasm:** Rating #1 _____ Rating #2 _____
1=very low; behavior is dull, routine; appears bored
2=low enthusiasm
3=moderate; sometimes seems interested and involved; but sometimes lacks vigor
4=high enthusiasm
5=very high; energetic, alert, and involved; expresses interest in topic and in children's comments

4. **Provides opportunities for responses:** Rating #1 ____ Rating #2 ____
 1=very low; seldom asks questions; calls on 2 or 3 students and ignores others
 2=low
 3=moderate; provides fair and adequate response opportunities about half the time
 4=high
 5=very high; seeks student input actively; asks open-ended questions that require problem solving, critical thinking, and imagination; speaks slowly and clearly.
5. **Shows personal regard/respect:** Rating #1 ____ Rating #2 ____
 1=very low; keeps physically distant from students, seldom addresses by name;; appears impersonal and disinterested; touches students roughly; is rude to students
 2=low regard or respect
 3=moderate; occasionally demonstrates personal interest but also is occasionally impersonal;
 4=high personal regard and respect
 5=very high; shows knowledge of students' interests and backgrounds; addresses students courteously.

RATINGS OF STUDENT BEHAVIOR

6. **Student Enthusiasm and Participation:** Rating #1 ____ Rating #2 ____
 1=very low; most of the time (e.g. 75%), more than half the students are lethargic, gazing around the room; talking off the topic; not participating in discussion or activity
 2=low, half to three-quarters of the students are bored or inattentive; only a few students appear to be involved
 3=moderate; most of the students are attentive and display enthusiasm, but several (4 to 6) are inattentive or disruptive
 4=high; nearly all (all but 1 to 2) are attentive and enthusiastic
 5=very high; most of the time, all the students are watching the teacher or speaker, raise hands to answer or ask questions or volunteer information; are concentrating on assigned tasks.
7. **Student Cooperation:** Rating #1 ____ Rating #2 ____
 1=very low; no instance noted of students helping one another; students "put down" each other, criticizing wrong answers, withholding help
 2=low; 1 to 3 instances of cooperation, and more of competitive behavior
 3=moderate; 4 to 6 instances of cooperative behavior; fewer of competitive
 4=high; 7 to 10 instances of cooperative behavior; fewer than 3 of competitive
 5=very high; numerous instances of mutual assistance, praise, support, and cooperation; students show each other how to do things; take turns; encourage shy or slower children.
8. **Student Responsibility and Initiative:** Rating #1 ____ Rating #2 ____
 1=very low; no evidence of individual student decision making or leadership; when task is finished, students either do nothing or "fool around"
 2=low; 1 to 3 examples of students taking individual or group responsibility or initiative
 3=moderate; 4 to 6 examples
 4=high; 7 to 10 examples
 5=very high; numerous examples of students individually or as a group making decisions and suggestions about their own work (selecting writing topics, books to read, games to play, etc.); numerous opportunities and examples of students showing leadership and expressing opinions.

PHYSICAL ENVIRONMENT:
(MARK ONE OR MORE THAN ONE)

1. Seating patterns:

- Individual desks and chairs
- Large tables with several chairs
- Seating in rows facing one direction.....
- Seating in clusters
- Other _____

2. Comfort:

- | | Superior | Adequate | Inadequate |
|---------------------------------|-----------------------|-----------------------|-----------------------|
| Lighting..... | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Temperature..... | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Work space per child..... | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| External noise level..... | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Internal noise level..... | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Cleanliness..... | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| State of repair..... | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Overall appearance of room..... | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Bulletin boards & displays..... | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Other _____ | | | |

3. Classroom Displays:

- | | Present | Referred to
today |
|---|-----------------------|-----------------------|
| Children's artwork..... | <input type="radio"/> | <input type="radio"/> |
| Written work of every child..... | <input type="radio"/> | <input type="radio"/> |
| Shelves of books for supplementary reading..... | <input type="radio"/> | <input type="radio"/> |
| Phonics cards..... | <input type="radio"/> | <input type="radio"/> |
