Student Characteristics

ABSTRACT

The report summarizes information submitted by state education agencies (SEAs) on the survey of states' limited-English-proficient (LEP) persons and available educational services for the 1993-94 school year. Results indicate that enrollment of LEP students in public and private schools continued to increase, comprising 7 percent of public school enrollment in grades √-12. California enrolled the largest number; New Mexico and Alaska had the highest proportion of LEP students. Data on progress of these students was found to be incomplete, but they indicated that dropout and retention rates were 1.7 and 2.5 percent, respectively, among institutions providing data. Definition and methods of identification of LEP students varied between and sometimes within states. Almost 2.4 million LEP students were reported enrolled in special programs to meet their educational needs; in public schools this represented 78.5 percent and in private schools, 30.4 percent of LEP students. The largest proportion (72 percent) were served by state and local programs. (Author/MSE)

YEAR THREE ANNUAL REPORT

The Special Issues Analysis Center (SIAC), as a technical support center, provides assistance to the Office of Bilingual Education and Minority Languages Affairs (OBEMLA), U.S. Department of Education (ED). The purpose of the SIAC is to support OBEMLA in carrying out its mission to serve the needs of limited English proficient students. In this role, the SIAC carries out data analysis, research, and other assistance to inform OBEMLA decision-making. These activities are authorized under the Bilingual Education Act of 1988, Public Law 100-297.

The responsibilities of the SIAC are comprised of a variety of tasks. These tasks include data entry and database development, data analysis and reporting, database management design, design of project accountability systems, and policy-related research and special issues papers. This report describes activities carried out by the SIAC in Year Three. A full list of SIAC products for all three years of operation is presented in the Appendix.

This Annual Report consists of seven volumes, which include the overview report on the SIAC activities in Year Three plus six additional volumes. These volumes present copies of selected reports submitted to OBEMLA by the SIAC in the past year, including copies of all task order reports submitted. The contents of each volume are outlined below:

Volume I: Overview of SIAC activities in Year Three;

Volume II: Copies of Short Turnaround Reports (STRs) based on analyses of Title VII

application data and other data related to LEP students;

Volume III: The SEA Report/Task Seven;

Volume IV: Yask Order 12 and Task Order 13 Reports;

Volume V: Task Order 10 and Task Order 16 Reports;

Volume VI: Task Order 17 and Task Order 19 Reports; and,

Volume VII: Task Order 16 and Task Order 21 Reports.

Executive Summary

The purpose of this report is to summarize the information submitted by State Educational Agencies (SEAs) on the Survey of States' Limited English Proficient Persons and Available Educational Services (SEA Survey) for the 1993-94 school year.

The SEA Survey is specifically authorized by Section 7032(b) of the Bilingual Education Act (20 U.S.C. 3302) and SEA Program regulations (34 CFR 548.10). The explicit purpose of the SEA Survey is to collect information on the number of limited English proficient (LEP) persons in the state and the educational services provided or available to them. The results of this annual data collection activity are used to inform Congress and the U.S. Department of Education about the size of the LEP population and the services available for LEP persons.

As a result of careful examination and review of each SEA Survey, verification of potential problem entries with the SEAs, and machine editing procedures, the results presented in this report provide an accurate portrayal of what the SEAs were reporting in 1993-94. It should be noted, however, that these verification and editing exercises did not (and could not) address many of the concerns raised in a 1991 report to OBEMLA prepared by Atlantic Resources Corporation about the adequacies of within-state data collection procedures or lack of shared definitions across SEAs, either of which could lead to substantial inaccuracies.

Enrollment of LEP Students

The number of LEP students enrolled in public and nonpublic schools continued to increase in 1993-94. The 3,037,922 LEP students in 1993-94 represent an increase of over 400,000 students compared to the prior year, and nearly 1.5 million more LEP students in

^{&#}x27;Surveys were received from 47 states, the District of Columbia, American Samoa, the Northern Marianas, Palau. Puerto Rico, and the Virgin Islands. Pennsylvania, Virginia, West Virginia, Guam, and Micronesia did not participate in the SEA program. Unless otherwise noted "state" refers to states, the District of Columbia, and the territories.

comparison to data reported for 1986-87, just seven years earlier. As of 1993-94, LEP students comprised 7 percent of the public school enrollment of students in grades K-12.

California enrolls the largest number of public school LEP students, 1,215,000. More than one in five of the public school students in the state are LEP, and the state accounts by itself for about 40 percent of the nation's LEP students. New Mexico identifies 25 percent of its public school students as LEP students and Alaska identifies 22 percent; Arizona and Texas each identify about 12 percent; and eight other states identify between 5 and 7 percent of their public school students as LEP.

Educational Condition of LEP Students

Lack of full response by the SEAs to the SEA Survey and inadequacies of the SEA Survey form itself make it difficult to generate a national picture of the educational condition of LEP students. SEAs reportedly face substantial problems in obtaining data on student performance classified by LEP status, and such indicators of educational condition as the number of dropouts also generate definitional problems within and across states. Additionally, SEAs were apparently uncertain about the intent of some survey questions, and the format of other questions precluded obtaining sufficient information to interpret responses.

Twenty-three SEAs, which enroll a total of 440,523 LEP students, indicated that 11,101 LEP students, which is about 2.5 percent of the LEP students in those states, were retained in grade during 1993-94; 33 SEAs, enrolling 698,248 LEP students, reported 11,861 LEP students, or about 1.7 percent of their states' LEP students, dropped out during that year.

Data about the performance of LEP students on tests covering academic areas are particularly questionable because information is provided only about the number of LEP students who score below state norms. The total number of LEP students tested, the total number eligible for testing but who were not tested, and other contextual data (such as the basis of the state norm for those reporting) that are needed to interpret the number of students reported are not available. Results for reading are provided by 40 SEAs, for mathematics by 36 SEAs, for science by 17

SEAs, and for social studies by 15 SEAs. Those SEAs reported about 339,500 LEP students scored below state norms in reading, about 183,000 in mathematics, about 38,000 in science, and 28,000 in social studies.

Identifying LEP Students

Who is identified as a LEP student depends on the definition of limited English proficiency and the method used for assessment. Most of the 47 SEAs that reported a definition of LEP based it on a combination of a non-English language background and difficulties with speaking, reading, writing, and/or understanding English. This is not surprising since those criteria are at the heart of the federal definition of limited English proficious. Non-English background is cited by 51 SEAs, and problems with speaking, reading, writing, and/or understanding English are reported to be part of the definition of LEP status in 33 states. In 13 states, the SEA reported that defining LEP students was a local educational agency level concern.

All but one² of the 55 SEAs that provided information about the tests and other methods used to identify LEP students in their states indicated that multiple methods were used; with a range from 0 to 12 for the 12 methods listed on the SEA Survey. More specifically, 52 SEAs used home language surveys, 51 used language proficiency tests, 45 used teacher observation, 44 used information from parents and student records, 43 used achievement tests, and 40 or fewer SEAs used one of the 6 other methods listed on the SEA Survey.

Educational Programs for LEP Students

Nearly 2.4 million LEP students attending public or nonpublic schools were reported to be enrolled in special programs during the 1993-94 school year designed to meet their educational needs. Among public school students, 78.5 percent were enrolled in special programs, and 30.4 percent of nonpublic LEP students were enrolled in special programs.

The largest proportions of LEP students were served in state and local programs, with those programs reportedly serving about 72 percent of all LEP students. Among federal

² The Marshall Islands reported that they 'have no definition or criteria for identifying LEP students.'

programs, Chapter 1 enrolled about 31 percent of LEP students, special education enrolled about 6 percent, and the Chapter 1 Migrant Education Program enrolled about 11 percent. The State Survey data suggest that the federal Title VII bilingual education programs enrolled about 352,000 LEP students. State and local bilingual education programs were reported to enroll 1,440,000 students, and ESL-only programs enrolled 757,000 LEP students. The SEAs reported that about 640,000 public K-12 students, about 22 percent of public LEP students, were not enrolled in programs to meet their special educational needs during 1993-94.

Introduction

The purpose of this report is to summarize the information submitted by State Educational Agencies (SEAs) on the Survey of States' Limited English Proficient Persons and Available Educational Services (SEA Survey) for the 1993-94 school year. Data from earlier years' surveys are included as appropriate.

Submitting the SEA Survey is required of all SEAs participating in the State Educational Agency Program of the Office of Bilingual Education and Minority Languages Affairs (OBEMLA), U.S. Department of Education (ED). The State Educational Agency Program (SEA Program) is authorized by Part B, Title VII (Bilingual Education Act), Augustus F. Hawkins-Robert T. Stafford Elementary and Secondary School Improvement Amendments of 1988, P.L. 100-297.

Part B of the Bilingual Education Act provides for data collection, evaluation, and research activities. Funds shall be used for--

- (1) collecting data on the number of limited English proficient persons and the services available to such persons,
- (2) evaluating the operation and effectiveness of programs assisted under this subchapter,
- (3) conducting research to improve the effectiveness of bilingual education programs, and
- (4) collecting, analyzing, and disseminating data and information on bilingual education (section 3301).

The SEA Survey is one of the primary methods used to address these points, and it is specifically authorized by Section 7032(b) of the Bilingual Education Act (20 U.S.C. 3302) and

SEA Program regulations (34 CFR 548.10). The explicit purpose of the SEA Survey is to collect information on the number of limited English proficient (LEP) persons in the states and the educational services provided or available to them. The results of this annual data collection activity are used to inform Congress and the U.S. Department of Education about the size of the LEP population and the services available for LEP persons.³

Data requirements on the SEA Survey are focused on meeting the legislative mandate. SEAs must report the number of students and the number of LEP students separately for public and nonpublic schools. Other data for which the SEAs are responsible for collecting and reporting include: the methods used by their local educational agencies to determine limited English proficiency; educational condition of LEP students in terms of grade retention and dropout rates and relative achievement status of LEP students in math, science, reading, and other subjects; and the number of LEP students enrolled in special federal or state/local programs. The SEA Survey form also provides an opportunity for SEAs to provide explanations for wide (i.e., more than 10 percent) fluctuations in LEP enrollment compared to the prior school year. The 1993-94 SEA Survey Form is presented in Appendix D.

SEA Program

ED provides funds to the SEAs to assist them in carrying out the data collection, aggregation, analysis, and reporting of the data required in the SEA Survey. In addition, other activities can be carried out as long as the federal assistance supplements and, to the extent possible, increases the level of funds available for these activities. Other authorized activities may include:

(1) the planning and development of educational programs such as those assisted under [the Bilingual Education Act];

³The survey form itself is approved by the Office of Management and Budget with an expiration date of October 31, 1995.

- (2) the review and evaluation of programs of bilingual education, including bilingual education programs that are not funded under [the Bilingual Education Act];
- (3) the provision, coordination, or supervision of technical and other forms of nonfinancial assistance to local educational agencies, community organizations, and private elementary and secondary schools that serve limited English proficient persons;
- (4) the development and administration of instruments and procedures for the assessment of the educational needs and competencies of persons of limited English proficiency;
- (5) the training of state and local educational agency staff to carry out the purposes of [the Bilingual Education Act]; and
- (6) other activities and services designed to build the capacity of state and local educational agencies to serve the educational needs of persons of limited English proficiency (section 3302(c)).

SEA Program Funding

The SEA Program was originally authorized as part of the Bilingual Education Act during reauthorization of the Act in 1974. The amount of the SEA Program grant award for an individual SEA is based on the amount received by Local Educational Agencies (LEAs) with the provisions that no SEA can receive more than 5 percent of that amount, on one hand, or less than \$75,000 (\$50,000 in FY 1988) on the other. The total amount awarded in the 1988-1994 period has ranged from about \$5.0 million in FY 1988 to about \$6.9 million in FY 1994. Most SEAs (e.g., 42 of the 55 SEA grant recipients in FY 1994) receive the minimum award. Table 1.1 presents the amounts awarded to each participating SEA since F⁵. 1988.

Data not reported.

In recent years, SEA participation in the program has been high, but not universal. In both FY 1988 and FY 1989, 52 SEAs participated; 54 participated in FY 1990. For FY 1991, 1992 and 1993, 53 of 57⁴ SEAs participated. In 1994, 55 of 59 SEAs participated Two SEAs -- Pennsylvania and Virginia -- have not participated during the 1988-1994 period at all. Arkansas' initial participation came in FY 1992⁵ and Marshall Islands' in FY 1994. The only other nonparticipating SEAs during this five-year period have been Alabama and South Carolina (1988 and 1989), West Virginia (1988, 1992, 1993, and 1994), Micronesia (1989, 1990, 1991, 1992, and 1993), and Northern Marianas (1992).

Data Limitations

In 1990, OBEMLA contracted with Atlantic Resources Corporation (ARC) to assess the quality of data submitted by the SEAs. That study, entitled *An Analysis of Title VII State Educational Agency Grant Report Requirements*, uncovered problems in the collection and reporting of the data and made several suggestions for changes in procedures at the SEA and OBEMLA levels to improve data quality.⁶ OBEMLA acted on these recommendations by developing a new reporting form and providing training to SEA personnel to ensure that those completing the forms agreed upon procedures and definitions. The new form went into effect for the 1991-92 school year, so some of the data from that year have no direct match to prior years because of item clarifications and other changes.⁷

In preparing this report on data for the 1993-94 school year, each SEA survey was closely examined to ensure that entries were logical and appropriate. (A full description of these

⁷As an example of a data request that has been clarified, new directions state that the number of LEP students enrolled in programs to meet their educational needs (item I, A, 3) added to the number of LEP students not enrolled in such programs but who could benefit from participation (item I, A, 5) should sum to the total number of LEP students in the state reported in item I, A, 2. In years past, according to the ARC analysis, most SEAs interpreted this series of items quite differently and, therefore, provided non-equivalent data.

⁴F.S. Micronesia became independent in 1991.

⁵Because FY 1992 was the first year of funding for Arkansas, the state was not required to submit a SEA Survey until the 1992-93 reporting period.

⁶The findings and recommendations were presented to OBEMLA in 1991, and OBEMLA summarized them in the Condition of Bilingual Education, June 30, 1991.

procedures is provided in Appendix A.) When data were missing, illogical, or inappropriate, the SEA official responsible for submitting the SEA Survey was contacted, the potential problem was described, and the SEA was provided the opportunity to change its entry. Problems that involved errors in arithmetic were corrected as a step in data entry, and they were called to the attention of OBEMLA.

As a result of the close examination of each SEA Survey, verification of potential problem entries with the SEAs, and machine editing procedures, the results presented in this report provide an accurate portrayal of what the SEAs were reporting in 1993-94. It should be noted, however, that these verification and editing exercises did not (and could not) address many of the concerns raised in the ARC report about the adequacies of within-state data collection procedures or lack of shared definitions across SEAs, either of which could lead to substantial inaccuracies.⁸

This report also presents some data from earlier SEA Surveys⁹. As noted, the form was changed between the 1990-91 and 1991-92 reporting periods, therefore, trend analyses on some items can not be conducted. Further, it was not possible to verify potentially problematic entries on the earlier form with SEA officials, so the only adjustments made to the 1990-91 data involve correcting arithmetic errors or correcting for obvious misunderstandings of the respondents (such as adding the sum of all Title VII participants to the number of participants in each Title VII program, which results in a duplicated count).

During our efforts to verify reported figures on the 1993-94 SEA Survey, several states took the opportunity to update or correct data from earlier years' data as appropriate; their changes are documented in Appendix C.

⁸As an example, the ARC report indicated that many SEA officials felt that the process of obtaining data on private school enrollments of LEP students is not improving or improvable; ARC concluded "[t]hat the number of LEP students reported by the SEAs in private schools gives a false impression of accuracy and completeness where such is not the case" (1991, p. 4-26). As a result, OBEMLA now requires that public and nonpublic LEP student counts be reported separately. In 1993-94, all 55 participating SEAs reported public school LEP enrollments, but only 40 SEAs reported counts for nonpublic schools.

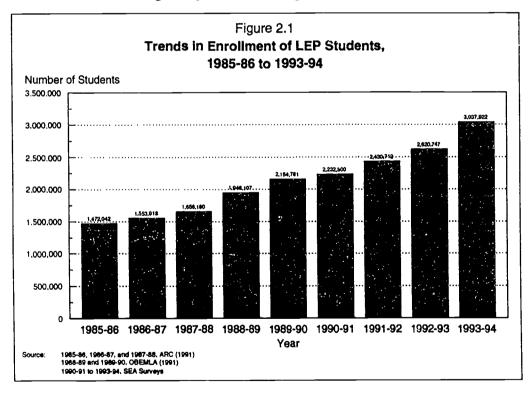

Structure of the Report

The balance of this report is presented in five sections. The first section highlights national data about the numbers of LEP students in grades K-12 identified by the SEAs. The second section describes the educational condition of LEP students in terms of retention rates, dropout rates, and levels of academic achievement. The procedures used to identify LEP students are the focus of the third section, with particular attention paid to differences in definitions of LEP status across states. The fourth section indicates how many LEP students are receiving special program services and provides a summary of the programs available to LEP students. The final section includes discussions of findings and their implications, with an emphasis on data limitations. Four appendices are included: Appendix A is a summary of the methods used to compile, review, and verify the SEA Survey data used in this report; Appendix B includes supplementary tables, by SEA, for all data summarized in the body of the report; Appendix C contains Data Notes; and, Appendix D contains a sample SEA Survey Form for 1993-94.

Enrollment of LEP Students

SEAs in the U.S. and territories reported that nearly 3,038,000 LEP students were enrolled in public or nonpublic elementary or secondary schools during the 1993-94 school year. This count is over 400,000 larger (16 percent) than the number reported for 1992-93 and continues an upward trend over the past several years, as illustrated by Figure 2.1. Since 1985-86, yearly increases in the number LEP students have ranged from a low of 3.6 percent from 1989-90 to 1990-91 to a high of 17.5 percent from 1987-88 to 1988-89. The average yearly increase in number of LEP students during this period will 9.6 percent.

¹⁰This reported count is not a national count of LEP students for several reasons. First, several SEAs do not participate in the SEA Program or the SEA Survey, and we can assume there are LEP students who reside in those states. Second, it is likely that some LEP students are not counted in some of the states simply because they are missed. Third, in previous years, according to the ARC report, SEA officials conceded that nonpublic school LEP students were probably undercounted. Fourth, the definition of LEP students varies across SEAs such that children counted in one state may not be considered as LEP and therefore not be counted if they moved to another state.

From 1990-91 -- the first year that comparable SEA Survey data were available -- to 1993-94, the number of LEP students increased by 38 percent. In these four years, nine states reported decreases in LEP student enrollment while over one-quarter of the states (15 states) reported increases in LEP students enrollment of more than 50 percent. Seven states, Alabama, Alaska, Arkansas, Nebraska, North Carolina, Oregon, and Puerto Rico report increases of over 100% in the number of LEP students¹¹ for the years between 1990-91 and 1993-94. In the two years between 1991-92 and 1993-94, eight states reported decreases in LEP student enrollment while almost one-quarter of the states (12 states) reported increases in LEP students enrollment of more than 40 percent. From 1992-93 to 1993-94, twelve states reported decreases or no change in LEP student enrollment while over one-quarter of the states (14 states) reported increases in LEP students enrollment of at least 20 percent. (Table 2.1)

Out of the 45,443,000 total public and nonpublic students reported by the SEAs in 1993-94, 3,038,000 (7 percent) were LEP. LEP students constituted more than 7 percent of public student enrollment, and LEP students comprised about 1.4 percent of nonpublic students. (Table 2.2)

As s'own in Figure 2.2, the western and southwestern states generally have higher proportions of LEP students than do states in other regions of the country. Alaska, California, and New Mexico had the highest proportions of LEP students, with 21.3, 20.8 and 22.8 percent, respectively, of their total enrollments identified as LEP. Two states; Arizona and Texas; reported LEP student enrollments of approximately 11 percent of their total enrollments. About one half reported LEP enrollments of 3 percent or less of their total student enrollments, and fourteen of these states reported proportions of less than one percent.

For the 1993-94 school year, California reported by far the largest number of LEP students (1,215,000). In fact, LEP students enrolled in schools in California account for about 40 percent of the U.S. total LEP student enrollment. Texas had the second larges number of LEP students with 422,700, and New York had the third largest with 216,400. (Table 2.1 and B1)

Educational Condition of LEP Students

The Bilingual Education Act calls for grant recipients to report data on "evidence of the educational condition of the limited English proficient students, such as reading, mathematics, and subject matter test scores, and, where available, data on grade retention rates and student dropout rates" (section 7021(c)(2)(c)(iii)). Providing these data has long been a problem for SEAs; according to the ARC analysis, these items generally have had the lowest response rates. For the years that ARC analyzed, SEA response rates to the questions about dropout and retention rates were less than 50 percent. At the same time, however ARC's survey results indicated all SEA Title VII offices collected these data. The SEA respondents to the ARC survey also rated these data as being of the poorest quality of any of the SEA Survey data elements. ARC concluded their analysis of the educational condition items as follows: "[a]s currently reported the data appear to be incomplete, difficult to aggregate or interpret, and potentially misleading" (ARC, 1991, pp. 4-29, 4-30).

For the 1993-94 SEA Survey, low response rates continue to be a concern, with 33 SEAs providing data on dropouts, 23 on retention, and 40 on test performance. Lack of full response by the SEAs to the SEA Survey makes it difficult to generate a national picture of the educational condition of LEP students. SEAs reportedly face substantial problems in obtaining data on student performance classified by LEP status, and such indicators of educational condition as the number of dropouts also generate definitional problems within and across states.

Retention and Dropout Rates¹²

Table 3.1 presents a summary across responding SEAs of the number and percentage of LEP students who were retained or dropped out of school in 1990-91 through 1993-94. In 1993-94, the 23 SEAs providing data on retention enrolled a total of 440,523 LEP students (fewer than 15 percent of the number reported by all SEAs). These SEAs indicated that 11,101 students were reported as being retained in grade; that number is equivalent to about 2.5 percent of the total number of LEP students in their states. (Table 3.1) On an SEA-by-SEA basis, the percentage of retentions ranged from 0.5 percent to 6.2 percent (see table B2); it is not clear whether this difference reflects real differences between retention patterns among states or reporting differences. The interpretation of the data for 1993-94 is less clear due to a textual error in the phrasing of this question in the revised report form. The 1993-94 form asks for the "number of LEP students in one or more grades" rather than the number of LEP students retained in one or more grades.¹³

Table 3.1

Number and Percentage of LEP Students Who Were Retained or Who Dropped Out of School
1990-91 through 1993-94 at

	LEP Students

Retained in one or more grades ^{b/}	8,162	2.1	9,642	2.3	10,685	2.3	11,101	2.5	
Dropped out of school ^{c'}	12,679	2.5	11,864	2.0	10,858	1.5	11,861	1.7	

Includes the U.S., D.C., and the Territories

¹³The LEP student retention rate responses for Delaware, Maine, Montana, and Northern Marianas were eliminated because it is assumed that the 100% of the LEP students reported were probably not retained.

Number of SEAs responding: 1990-91 = 33; 1991-92 = 28; 1992-93 = 31; 1993-94 = 23.

^{et} Number of SEAs responding: 1990-91 = 33; 1991-92 = 31; 1992-93 = 37; 1993-94 = 33.

¹²SEAs reporting a retention or dropout rate of 0 were excluded from this analysis. It was not possible to ascertain whether these were true 0s or missing data. However, it is unlikely that an SEA would actually have no dropouts or students retained in grade.

Table 3.1 also provides a summary of dropout data, indicating that 11,861 LEP students were reported to have dropped out in 1993-94. The 33 SEAs that reported dropout information enrolled 698,248 LEP students or less than one-fourth of the nation's LEP students. The number of reported LEP student dropouts constitutes about 1.7 percent of the responding states' LEP students. Across SEAs, the LEP dropout rate ranged from a low of 0.1 percent to a high of 7.5 percent. From 1990-91 to 1993-94, the overall LEP dropout rate declined slightly from 2.5 to 1.7 percent. As is the case for retentions, it is not possible to determine from the SEA Survey data whether these dropout rate differences reflect actual patterns or reporting differences.

Academic Test Performance

Data about the performance of LEP students on tests covering academic areas are also questionable because of the low SEA response rates: in 1993-94, results for reading were provided by 40 SEAs, for mathematics by 36 SEAs, for science by 17, and for social studies by 15 SEAs. In addition, even from the reporting SEAs, too little information is asked for by the SEA Survey form to interpret the results. More specifically, information is provided only about the number of LEP students who score below state norms; information on the total number of LEP students tested, the total number eligible for testing but who were not tested, and such other contextual data as the basis of the state norm, what grade levels of students are commonly tested, level of the test, and so forth are not provided. States may use the results of pre-existing state or local testing programs for the academic test performance data, some of which test a sample of students rather than the universe. Since states are not required to report the type of methodology used to report the performance data, it is not possible to know how many states rely on sample data for this information, nor whether the sample data are weighted or unweighted.

¹⁵The 1990-91 SEA Survey also asked the SEA to indicate how many students who were tested were above state norms, below state norms, or at the state norm; presumably, those three categories sum to the number of 'EP students tested and for whom data are available at the SEA level.

¹⁴The number of LEP students included in the achievement analyses is a small fraction of the total LEP population. For example, reading information was collected on only 11 percent of the total number of identified LEP students and mathematics information for 6 percent.

Table 3.2 summarizes SEA-reported data on the number of LEP students scoring below state norms. The 40 SEAs responding for reading reported that about 339,500 LEP students scored below state norms. For mathematics, 36 SEAs reported that about 183,000 scored below the state norm. For science, 17 states reported that about 38,000 LEP students scored below the state norm while 28,000 LEP students scored below the state norm for social studies in 15 states. Appendix Table B3 provides state-by-state information about the number of LEP students who score below state norms.

Number and Percentage of LEP Students Scoring Below State Norms,

By Subject

1991-92 through 1993-94 at ...

	LEP Students Scoring Below State Norms						
	1991-	-92	1992-93		1993	3-94	
Subject Tested	Number	Percent	Number	Percent	Number	Percent	
English Reading ^{b/}	273,689	29.8	312,811	27.7	339,493	23.2	
Mathematics ^{c/}	178,300	20.2	226,272	20.4	182,944	12.9	
Science ^d	112,394	26.7	82,007	14.6	37,931 ^{ti}	15.1	
Social Studies ^e	111,738	26.5	81,541	14.8	28,101"	11.8	

These data should be interpreted with caution because it is not known (1) how many LEP students were tested; (2) how many LEP students were eligible for testing; and (3) what was the basis of the state norm.

Number of SEAs responding: 1991-92 = 30; 1992-93 = 33; 1993-94 = 40.

 $^{^{\}circ}$ Number of SEAs responding: 1991-92 = 26; 1992-93 = 30; 1993-94 = 36.

W Number of SEAs responding: 1991-92 = 11; 1992-93 = 17; 1993-94 = 17.

Number of SEAs responding: 1991-92 = 11; 1992-93 = 14; 1993-94 = 15.

The large decrease between 1992-93 and 1993-94 can partially be explained with the exclusion of 1993-94 data for Texas which reported around 54,000 LEP students scoring below state norms in a conceand social studies in 1992-93.

Educational Condition Data Limitations

The data collected through the SEA Survey may not provide a valid picture of the educational condition of LEP students for four reasons. First, the SEA response rate is too low to provide confidence that the reported data are typical of all states. This is compounded by the fact that, while a slight majority of SEAs may actually provide a response, those states enroll no more than about one-fourth of the nation's LEP students, so most LEP students' educational conditions are not reflected in the SEA Survey data.

Second, SEA reports of dropout and retention rates and test results are based on locally generated data that are reported to the SEA directly or collected from LEAs by the SEAs via surveys. The magnitude of the variations across states in the percent of LEP retention and dropouts, which appear greater than would be expected based on actual local patterns (particularly once local data are aggregated at the state level), suggests that within-state data reporting problems may be common.

The third reason is a particular problem for dropout data: determining whether a student has in fact dropped out (rather than transferred, deceased, stopped out, etc.) is subject to different interpretations at the local and state levels. As a consequence, SEAs are likely basing their counts on different approaches to determining dropout status. Although the SEA Survey form's directions tell the SEAs not to count stopouts or transfers, determining the actual status of an individual child is not that easy.

The fourth reason is specific to the test data: too little information is provided to interpret the data that are provided. As a result, no one can look at the data on the number of LEP students scoring below state norms and draw any conclusions about the educational condition of LEP students. At a minimum, three additional data elements are needed: (1) how many LEP students were tested; (2) how many were eligible for testing; and (3) what was the basis of the state norm.

Identifying LEP Students

There is no federally mandated definition of limited English proficiency, therefore who is determined to be LEP depends largely on state and local agencies. The lack of a uniform definition of limited English proficiency has led to a wide range of identification methods and procedures used to identify students for LEP services across states, districts, and schools, and to inconsistent reporting of information on LEP students within and across states.

The federal definition of "limited English proficiency" is found in Section 7003 of the Title VII Act:

- (1) The terms "limited English proficiency" and "limited English proficient" when used with reference to individuals means:
 - (A) individuals who were not born in the United States or whose native language is other than English;
 - (B) individuals who come from environments where language other than English is dominant; and
 - (C) individuals who are American Indian and Alaskan Natives and who come from environments where language other than English has had a significant impact on their level of English language proficiency; and who, by reason thereof, have sufficient difficulty speaking, reading, writing, or understanding the English language to deny such individuals the opportunity to learn successfully in classrooms where the language of instruction is English or to participate fully in our society.

The SEA Survey requests that states describe the criteria/definitions used to identify LEP students. These criteria/definitions are not necessarily state mandated, and in many states, LEAs have the authority to set identification criteria and procedures. Several states (and/or localities) have elected to use all or part of the federal LEP definition. Table 4.1 summarizes the type of

criteria used by states to identify LEP students. In 1993-94, 51 SEAs (and/or their LEAs) used the non-English background provision, 33 used the difficulties with the four language proficiencies (speaking, reading, writing, and/or understanding English) provision, and 33 used both. Twenty-seven states used various percentile cutoffs on standardized tests as a criteria for determining limited English proficiency. Other factors, which were used by 16 states to identify LEP students, include grade reports and teacher judgment.

Table 4.1

Type of Criteria Used by States to Identify LEP Students
1993-94
(n=55)

Criteria	Number of States	Percent of States
Non-English Language Background	51	92.7
Difficulty with the Four Proficiencies	33	60.0
Percentile Cutoff	27	49.1
Local Determination	13	23.6
Other	16	29.1

OBEMLA believes that a thorough identification process first should involve a home language survey to determine if any other language other than English is spoken in the home. If the survey produces a positive response, OBEMLA recommends that at least one objective and one subjective measure of English proficiency should be employed. The objective measure could be a standardized achievement test. Scoring below a certain percentile ranking would signify LEP status. Subjective measures could include recommendations from parents, classroom teachers, counselors, or others with direct knowledge of the student's ability to learn and perform in an all English class (OBEMLA, The Condition of Bilingual Education in the Nation: A Report to Congress and the President, 1992).

During the 1993-94 school year, all but three of the reporting SEAs used a home language survey as a factor in identifying LEP students, although it is not possible to ascertain from the SEA Survey whether it formed the basis of determining limited English proficiency. Of the subjective criteria that may have been used by states, most used teacher observation (45 states), parent information (44 states), and student records (44 states). About two-thirds of the states also relied on referrals, teacher interviews, student grades, and informal assessments. All but four states used at least one language proficiency test as an objective measure of limited English proficiency, with the Language Assessment Scales (LAS) and the Language Assessment Battery (LAB) most commonly reported across states. Achievement tests were used in 43 states (including the CTBS, ITBS, SAT, and CAT), and criterion referenced tests were used by 21 states (and/or their LEAs) (Table 4.2 and Figure 4.1).

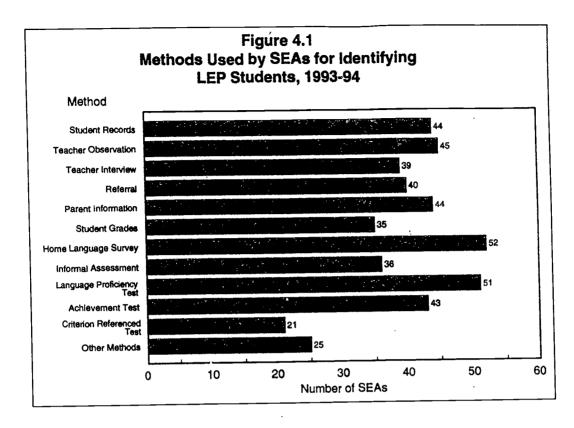

Table 4.2

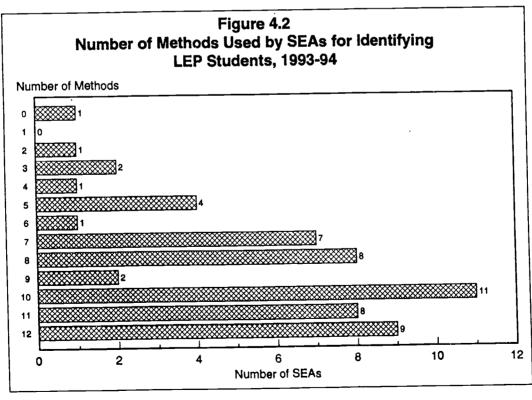

Type of Tests Used to Identify LEP Students
1993-94
N=55

Type of Test	Number of States	Percent of States
Language Proficiency Test	51	92.7
Achievement Test	43	78.2
Criterion Referenced Test	21	38.2
Other	25	45.5

In general, states use multiple criteria in identifying LEP students. In 1993-94, all but two of the states reported using at least three criteria, and about 50 percent of the states reported using ten or more criteria. Nine states (and/or their LEAs) used all twelve criteria. (Figure 4.2)

Educational Programs for LEP Students

Federal, State, and Local Programs

LEP students may receive services through one or more of a variety of federal, state, and local educational programs. With the passage of the Bilingual Education Act in 1968, the federal government directly addressed the educational needs of LEP students, primarily through the provision of English language instruction to low-income LEP students. As the program evolved, Congress eliminated the poverty requirements and allowed states to include instruction in the children's native language. Currently, there are five major programs designed to serve LEP children funded under Title VII (Part A)¹⁶:

- The Transitional Bilingual Education (TBE) Program--assists LEP students in elementary and secondary schools to acquire English language, mathematics, and science skills and also to meet the promotion and graduation standards by providing content area instruction in the native language to the extent necessary;
- The Developmental Bilingual Education (DBE) Programs—are full-time instructional programs which provide structured English language instruction and instruction in a second language. These programs must help students achieve competence in English and a second language while mastering subject matter skills;
- The Special Alternative Instructional Program (SAIP)—offers specially designed curricula to meet the linguistic and instructional needs of LEP students in elementary and secondary schools. In such programs the native language of the LEP students need not be used;
- The Family English Literacy Program (FELP)—assists LEP adults and out-of-school youth to achieve competence in English. Classes may be conducted in English only or in English and the students' native language. Preference for inclusion in the program is given to the parents and immediate family of LEP students assisted under the Bilingual Education Act; and

¹⁶A sixth Part A program, the Academic Excellence Program, is a demonstration/dissemination program that is not designed to provide direct services to children.

■ The Special Populations Program (SPP)--assists preschool, special education, and gifted and talented programs serving LEP students.

LEP students may also be served under several federally funded programs other than Title VII that are targeted to educationally and/or economically disadvantaged students. These programs include:

- Chapter 1, Title I, ESEA--provides instructional and support services to educationally disadvantaged students in school districts with high concentrations of low-income children;
- Chapter 1, Migrant--provides financial assistance to SEAs to establish and improve programs to meet the special needs of migratory children of migratory agricultural workers or fishers through instructional and support services;
- **Even Start**—supports family centered educational programs that involve parents and children in a cooperative effort to help parents become full partners in the education of their children and to assist children in reaching their full potential as learners;
- Emergency Immigrant Education Assistance Act Program--assists SEAs and LEAs in providing supplementary education services and offsetting costs for immigrant children enrolled in elementary and secondary public and nonpublic schools;
- Special Education--provides formula grants to SEAs to help meet the costs of providing special education and related services to address the needs of children with disabilities; and
- **Vocational Education**—assists states' efforts to expand and improve their programs of vocational education and provide equal opportunity in vocational education for traditionally underserved populations.

While the federal government has been playing an increasing role in serving LEP students over the last two decades, states have traditionally provided some formal education programs to provide English-language instruction to immigrant populations from as early as the mid-1800s. Today, about two-thirds of the states provide bilingual education programs (37 states), and over four-fifths of the states operate English as a second language (ESL) programs (45 states).

LEP Enrollment in Programs Designed to Meet Their Educational Needs

In 1993-94, nearly 78 percent (2.4 million) of LEP students reported by SEAs received services through programs specifically designed to meet their educational needs. The percentage of public school LEP students (78.5 percent) receiving services was significantly greater than for LEP students enrolled in nonpublic schools (30.4 percent). Of the 55 states and outlying areas that reported information on the number of LEP students served, over one-half reported serving 80 percent or more of their LEP student population. (Table B6)

Number and Percentage of Public and Nonpublic School LEP Students Enrolled in Programs Designed to Meet their Educational Needs

Table 5.1

1990-91 through 1993-94

	LE	P Students	Enrolled in Pr	ograms Des	igned to Meet	Their Educ	cational Needs	
	1990	-91	1991	-92	92 1992-93			94

Nonpublic School Students	12,851	26.5	13,216	26.5	13,345	23.3	17,490	30.4
Total	1,745,105	78.2	1,899,754	78.2	2,117,283	80.8	2,355,858	77.5

LEP Enrollment in Federal Programs

At the national level, 352,068 LEP students were provided services through the Title VII funded programs, constituting 12 percent of all LEP students. Eight percent of LEP students were enrolled in the TBE program, 2 percent in SAIP, and less than 1 percent in each of the remaining Title VII programs. Thirty-five states and outlying areas reported serving LEP students through the TBE program, 38 through SAIP, 14 through SPP, 13 through DBE programs, and 11 through FELP. (Table 5.2 and Table B8)

Report on SEA Survey: 1993-94 Page 27

Of the non-Title VII federal programs, the Chapter 1 program was the most common program for service delivery to LEP students. Nationally, about 31 percent of LEP students were enrolled in Chapter 1, and over 80 percent of the states and territories reported serving LEP students through the program. The Emergency Immigrant Education Assistance Act program enrolled 25 percent of the LEP students and was offered in 36 states. Relatively few LEP students were reported as being served through Chapter 1 Migrant (11 percent), Special Education (6 percent), Vocational (6 percent), and Even Start (less than 1 percent). LEP students were also served in a handful of other federally funded programs, including Chapter 2, Head Start, and Title V Indian Education. See Table B8 for the types of other federal programs by state that enrolled LEP students during the 1993-94 school year.

LEP Enrollment in State and Local Programs

LEP students were more likely to participate in a state or local bilingual education program than in a federal program. Almost one-half of all LEP students received services through a state bilingual program, with three-quarters of the states serving LEP children through state-operated bilingual programs. About 25 percent of LEP students served in special programs received services through a state ESL-only program. (Tables 5.2 and B8.)

There were few changes in program participation between 1990-91 and 1993-94. For example, within the Title VII programs, TBE participation decreased from 8.7 to 8.2 percent. Small increases in participation occurred in the DBE and SAIP programs, while participation decreased slightly in the Family English Literacy and Special Population Programs. The most significant changes occurred within the other federal program categories. LEP participation in the Emergency Immigrant Education Assistance Act Program more than doubled, while Chapter 1 LEP participation declined from 52 to 31 percent in the period. (Table 5.2)

Table 5.2

a/ Due to new survey forms, data were not widely collected in 1993-94 for Recent Arrivals and Magnet Schools.

b/ The Family English Literacy Program was designed to serve the parents of Title VII students and out-of-school youth.

c/ 1992-93 Chapter 1 data were revised for California.

d/ Data not collected in 1990-91.

e/ Data not collected in same format as the 1991-92 through 1993-94 data.

Findings and Implications

Enrollment of LEP Students

For the 1993-94 school year, 55 SEAs in the U.S. and territories reported that about 3,038,000 LEP students were enrolled in public or nonpublic elementary or secondary schools. This count reflects an upward trend over the past several years: since 1985-86, yearly increases in the number of LEP students have averaged 9.6 percent. It is not known what proportion of this high rate of increase is due to actual growth in the LEP population, better reporting, or changes in definitions of LEP status, but the consistency of the increase argues for a large proportion being due to population change.

Only 40 SEAs reported on the number of LEP students in nonpublic schools and the percentage of LEP students for the reporting SEAs is much lower than for public schools. It is not clear how much of the difference in LEP percentages between public and nonpublic schools is due to actual differences in the populations served or to inadequate reporting procedures within states. It is clear, however, that there is a nonpublic LEP student undercount because about one-fourth of the SEAs do not provide any data on the numbers of nonpublic students.

Educational Condition of LEP Students

The data provided on the SEA Survey do not provide a valid basis for making judgments about the educational condition of LEP students. Too few SEAs respond to the specific items to produce a national pattern and insufficient supporting information is provided to interpret the data that are provided.

Identifying LEP Students

The SEA Survey requests that states describe the criteria/definitions used to identify LEP students. These criteria/definitions are not necessarily state mandated, and in many states, LEAs have the authority to set identification criteria and procedures. Several states (and/or localities) have elected to use all or part of the federal LEP definition. In 1993-94, 51 states and outlying areas (and/or their LEAs) used the non-English background provision, 33 used the difficulties with the four language proficiencies (speaking, reading, writing, and/or understanding English) provision, and 33 used both.

In general, states use multiple criteria in identifying LEP students. In 1993-94, all but two states used at least three criteria, and about 50 percent of the states used ten or more. Nine states (and/or their LEAs) used all twelve of the criteria listed on the SEA Survey form. During the 1993-94 school year, all but 3 of the reporting SEAs used a home language survey as a factor in identifying LEP students. Most reported use of teacher observation (45 states), parent information (44 states), and student records (44 states). About two-thirds of the states also relied on referrals, teacher interviews, student grades, and informal assessments. All but four states used at least one language proficiency test as an objective measure of limited English proficiency, with the Language Assessment Scales (LAS) and the Language Assessment Battery (LAB) most commonly reported across states. Achievement tests were used in 43 states (including the CTBS, ITBS, SAT, and CAT) and criterion referenced were used by 21 states (and/or their LEAs).

Educational Programs for LEP Students

Among public school students, 78.5 percent were enrolled in special programs, while 30.4 percent of nonpublic students were enrolled in special programs. The largest proportions of LEP students are served in state and local programs, with those programs reportedly serving about 72 percent of all LEP students. Since state and local programs are not commonly available to students in nonpublic schools, the large difference between public and nonpublic LEP student participation is understandable, particularly when coupled with the generally poorer quality of data concerning nonpublic school LEP students. Chapter 1 is the largest federal program serving LEP students; it enrolls 31 percent of LEP students. Title VII programs enroll about 12 percent.

Appendix A

SEA Survey Data Review Procedures

This appendix describes the procedures used to review data provided by the SEAs on the SEA Survey for 1993-94 and for earlier years, as appropriate. The purpose of the review procedures and the activities following from them was to ensure the data summarized in this report are as free from error as possible.

Review Procedures for SEA Survey Data

OBEMLA received the State Surveys for 1993-94 during the summer months of 1995. Westat was subcontracted to by OBEMLA through Developmental Associates to prepare the data files and to review, correct, summarize the Survey data, and prepare this report.

When reviewing the data, Westat preformed some basic internal consistency checks including:

- 1) that the sum of the parts agreed with reported totals;
- 2) that the sum of items 3 (total LEPs served) and 5 (total LEPs not served) agreed with the total reported for item 2 (total LEPs enrolled);
- 3) that the total LEP enrollment did not exceed the total K-12 enrollment; and
- 4) that the number of LEPs student enrolled in federal, state, and local programs did not exceed the number of LEP students served.

Westat verified any data inconsistencies with OBEMLA and the SEA. In some cases, SEAs revised their initial submission, which Westat entered into the master data base. In other instances, the State provided explanations as to why the data were not reported in the required format.

Review Procedures for SEA Survey Data for 1990-91 and Prior Years

Limited attention in this report is paid to data for 1990-91 and earlier years. The primary reasons for this are (1) that the data prior to the 1991-92 SEA Survey could not be reviewed and verified or corrected and (2) significant changes were made by OBEMLA in the SEA Survey form for the 1991-92 school year. These two topics are addressed in this section.

Reviewing 1990-91 SEA Survey Data

Westat received both the SEA Surveys and a dBase file containing the 1990-91 data from OBEMLA and cross checked each SEA Survey against the entered data. In cases where the data were not in agreement, Westat entered the number provided on the SEA survey, unless documentation for a change was provided by OBEMLA. Because Westat changed some of the data provided by OBEMLA, the 1990-91 data presented in this report may not agree with data presented in previous reports, graphs, or other tabular presentations. Westat also performed the same internal consistency checks that were performed on the 1991-92 data, although the SEAs were not contacted if a discrepancy was detected.

Changes in SEA Survey Form

The SEA Survey form has gone through two revisions in the last five years of the report. The form revisions between 1990-91 and 1991-92 had significant impacts on the data collection process and the comparability of data for years prior to and following the change. The revisions made between the 1992-93 and 1993-94 forms were primarily made in response to programmatic changes which made some data irrelevant.

SEA Survey form revisions: 1991-1992. The most obvious change in the 1991-92 survey form is the addition of a page and one-half of item-by-item instructions designed to clarify acceptable response patterns; no instructions were provided on the form in prior years. Other changes ranged from minor wording changes to significant changes in item substance. The following list describes the changes made in 1991-92 compared to 1990-91:

Part I

Item IA1 - No changes Item IA2 - No changes

Item IA3 - Minor wording changes

Item IA4 - Added Chapter 1 Migrant Education Program, Vocational Education and added specific types of programs (i.e., bilingual education program, ESL only program, other) to state and/or local programs

Item IA5 - Minor wording changes

Item IB1 - Added Science and Social Studies under areas tested and deleted request for number of LEP students above local norm or at local norm (and changed the normative reference to state from local)

Item IB2 - Minor wording changes
Item IB3 - Minor wording changes

Part II No changes

Part III

Item IIIA- Minor wording changes and added an "other" response category
Item IIIB- Changed item reference to be used in responding from IA3 to IA4

Responses to items on which no changes were made (i.e., IA1, IA2, IIA, IIB) can be compared; while significant changes on several of the items (i.e., IA4, IB1, and IIIB) effectively preclude comparing the SEAs' responses for the two years. In terms of the items on which minor wording changes were made, it appears to be reasonable to compare the results under some circumstances. In this report, however, these comparisons are not made because the data on the 1990-91 SEA Surveys could not be verified.

SEA Survey form revisions: 1993-1994. The 1993-94 survey form was revised to accommodate programmatic changes. The form was adapted to eliminate the collection of data for two programs which were no longer funded: Recent Arrivals and Magnet Schools. An unintended change was also made in the wording of the LEP retention question. The complete list of changes from 1992-93 to 1993-94 includes:

Part I

Item IA4 - Eliminated Recent Arrivals and Magnet Schools programs

Item IB2 - Changed wording from "Number of LEP students retained in one or more grades" to "Number of LEP students in one or more grades"

Appendix B

Supplementary Tables, by State Educational Agency

The following data tables contain supporting information on each SEAs LEP population. Please note that, for all tables, Puerto Rico has responded with numbers of Limited **Spanish** Proficient (LSP) students instead of LEP students. Please refer to Appendix C for further supporting (information including explanations of data changes for earlier years).

Total U.S., D.C.,								

a/ Percentage was calculated based on totals from only those states responding to the specific data item and the total LEP enrollment.

b/ Data not "sported.
c/ SEA did n./t participate.
d/ Puerto Rico reported total participation counts in the federal program categories rather than LSP counts; therefore these data have been eliminated from this analysis.

a/ The LEP count in Oregon is for LEP participating and is therefore an undercount of the actual LEP in the state.

BEST COPY AVAILABLE

a/ Percentage was calculated based on totals from only those states responding to the specific data item and the total LEP enrollment.

b/ Data not reported.

c/ SEA did not participate.

d/ Puerto Rico reported total participation counts in the federal program categories rather than LSP counts; therefore these data have been eliminated from this analysis.

e/ The LEP count in Oregon is for LEP participating and is therefore an undercount of the actual LEP in the state.

Appendix C

Data Notes

The following are explanations from SEAs on changes in 1992-93 data and large increases/decreases between 1992-93 and 1993-94.

Alabama

Fluctuations in LEP Student data explained by:

Very few LEAs in Alabama qualify for federal assistance to serve LEP students. However, more Hispanic migrant farm workers are entering the state than ever before.

Mobile County, located on the gulf, continues to have an increasing influx of refugees mostly Vietnamese and Cambodians.

Alaska

Fluctuations in LEP Student data explained by:

Title VII, Sec.75.01 (1)(C) allow for services to Alaska Native and American Indian students to be served, however, Alaska's definition of limited English proficient currently does not allow many of these students to qualify for state services. The number in IA2 reflects the approximate number of these students, 13,327, plus the total number of bilingual students funded and served. These students do not appear to have been counted in previous reports.

Arizona

IA2. Public School LEP

The 1992-93 data did not include a count of some schools.

Non-public School LEP

The decrease in non-public LEP enrollement results from the voluntarily submission of these data. Some schools did not give an LEP count.

IA3. LEP in Special Programs: Non-public School

This figure was calculated using the data reported for IA2 and IA5 for non-public LEP students.

IA5. LEP Not Enrolled: Public Schools

Some school districts did not give a count in 1992-93, but were included in the 1993-94 data.

17/ v

Arkansas

IA3. LEP in Special Programs: Public Schools

By including migrant program participants, all LEP students participate in at least one special program.

IA4a. Transitional Bilingual

Arkansas has no Transitional Bilingual Program.

IA4b. State ESL only

The increase in LEP participation in ESL only resulted from better data collection methods that are more effective at providing ESL to LEP students.

IA5. LEP Not Enrolled: Public Schools

See data clarification for IA3.

California

IA4a. Chapter 1, Title 1, ESEA

1992-1993 data were changed from 391,618 LEP students to 471,263

Colorado

IA4b. State Bilingual Education & State ESL only

The SEA is defining LEP more than they have had to in the past, so the numbers are much larger.

Connecticut

IA3. LEP in Special Programs: Public Schools

The 1992-93 figure was changed from 15,390 to 12,897.

IA4a. Transitional Bilingual

This data count includes Federal funded and State funded TBE.

Developmental Bilingual

Development Bilingual is a new program in 1993-94.

Special Alternative Instruction

SAIP is a new program in 1993-94.

IA5. LEP Not Enrolled in Special Programs: Public Schools

1992-93 figure was changed from 2,247 to 4,470.

The SEA reported that they are doing a better job with their data collecting and that the population is increasing. They have a more diverse population that is being spread out

Fluctuations in LEP student data explained by:

1993-1994 was the first year in which full reporting of LEP students in Connecticut was implemented. Therefore, the number of LEP students identified in the state was 20,622 and the total number served in state mandated bilingual education programs was 12,893.

77.

Delaware

IB2. LEP Retained:

The data were reported at 100% retention. This figure was eliminated because it is assumed that the SEA misunderstood the question which called for the number of "number of LEP students in one or more grades" rather than the number of LEP students retained in one or more grades.

Fluctuations in LEP students data explained by:

The SEA reported that they have a decrease in the number of LEP students possibly due to:

- 1. A change in the data collection procedures, which have increased quality control.
- 2. Migration patterns.

District of Columbia

IA4a. Vocational Education

During the 1992-93 SY, enrollment was reported only for students enrolled in career focused high schools. During 1993-94 SY, enrollment was reported for students in all vocational courses and programs inclusive of comprehensive high schools. This change was made to more precisely reflect the depth of participation.

IA4b. State Bilingual Education and State ESL only

The Bilingual title has taken on a new meaning. The 1992-93 figures (total) are very close to the 1993-94 totals, but are more defined. It specifically develops both languages as opposed to a program where native language was used until the student was able to be transitioned in an English program.

Fluctuations in LEP student data explained by:

Comparing 1992-93 and 1993-94, LEP student enrollment in Public Schools varies by less than 10%. For the same periods, the 97% decrease in LEP enrollment in nonpublic schools may be attributed to either or all of the following:

- 1. Transfers from nonpublic schools into Public Schools;
- 2. Out migration;
- 3. Variations in response to the Annual Survey from nonpublic school administrators.

Instruments were disseminated to 96 nonpublic schools; 65 responded. Non-respondents may in part account for the extreme variance.

<u>Florida</u>

IA4b. ESL only

The increase in the number of ESL only students results from: school Data base was checked for more accurate reporting, and additional students.

IA5. LEP Not Enrolled: Public Schools

Numbers were changed to 0. They changed the way of collecting the data. Next year it will go back to 1992-93 levels. Data element that was used to capture this info has become a compliance item and requires school district to provide the justification for the lack of service.

Georgia

Fluctuations in LEP student data explained by:

Entry or exit migration. Growth in LEP population.

Kansas

Fluctuations in LEP student data explained by:

a) Entry or exit migration:

In Dodge City, Great Bend, Liberal and Garden City the beef and pork packing industries continue to draw new immigrants from Mexico and Texas. A Federal refugee resettlement program (Planned Secondary Resettlement) ion Garden City plans to expand to Liberal, bringing more Lao students.

- b) State redefinition of LEP
- c) Other:

One large district (Dodge City) reported a 50% drop in LEP numbers but their student identification process is presently under review; their numbers probable reflect only oral proficiency data.

There is real growth exceeding statewide growth in mainstream students by 5 to 20 percent in some districts. Many districts with only a few LEP students do not report at all; a few districts with reported LEP students do not use any systematic identification process.

Kentucky

Fluctuations in LEP student data explained by:

Kentucky's increase in population is due to economic factors which have brought new migrant workers into Kentucky. Additionally, Kentucky's immigrant and refugee population continues to increase.

Louisiana

Fluctuations in LEP student data explained by:

Although we did not experience a 10 percent increase, we did experience a 6 percent increase (an increase of 387 LEP students). Increases have been noted from the following countries: Vietnam 248, Mexico 103, Honduras 97, Haiti 33, Laos 30, China 24, Jordan 18, Philippines 14, and Israel 11.

On the other hand, increases were off-set by significant decreases in number of LEP students from Cambodia, Costa Rica, El Salvador, and Guatemala.

Maine

IB2. LEP Retained:

The data were reported at 100% retention. This figure was eliminated because it is assumed that the SEA misunderstood the question which called for the number of "number of LEP students in one or more grades" rather than the number of LEP students retained in one or more grades.

Massachusetts

Note: In 1993-94 he sought info on LEP state wide and the 1992-93 figures were based on LEP/Title 7, this is why there are such discrepancies.

IA4a. Chapter 1, Migrant

Enrollment levels have decreased because summer school enrollment is not included. Special Alternative Instruction

This program no longer exists.

Michigan

Fluctuations in LEP student data explained by:

Continued immigration and baby boom have contributed to an increase in the number of LEP students in Michigan.

Minnesota

IA4a. Transitional Bilingual

This program no longer exists.

Fluctuations in LEP student data explained by:

The increase in LEP population is mainly a result of four factors:

- 1) Minnesota continues to have an in migration of immigrants and refugees. This year's greatest number of arrivals were from Laos (Hmong), The former Soviet Union, Vietnam, Bosnia, Iraqi, Somalia, Zaire, and Sudan;
- 2) Hispanic migrant families who have been employed primarily in the southern, west central, and northern Red River Valley region of the state, continue to settle in Minnesota. The children, many of whom are classified as LEP, are part of the changing school population;
- 3) High birthrates among some of the refugee populations also contribute to this increase; and
- 4)Improved data collection procedures. In addition to the Final Reports required by the Limited English Proficiency Education Unit, data is also being collected in collaboration with the central data collection system used by the state. The combination of these methods results in more accurate student counts.

Mississippi

Fluctuations in LEP student data explained by:

There is not a 10% or more variance in the number of LEP students from 1992-1993 to 1993-1994.

1992-1993 LEP Count		1993-1994 LEP Count	
Public and non-public	1,924	Public and non-public	1,910
Choctaw Tribal School	1,298	Choctaw Tribal School	<u>1,349</u>
System	3,222	System 3	3,259

Missouri

Fluctuations in LEP student data explained by:

The data show that the number of students enrolled in public schools increased 15% last year, while the number enrolled in nonpublic schools decreased by almost a third. Because of this, the total change was an increase of 9%.

The decrease in nonpublic numbers may be due to lower enrollment in nonpublic schools by LEP children, or may simply be an artifact of data collection (Particularly since last year a 17% increase was reported), or both.

The increase in public school numbers is significant and reflects the continued growth of non-English-speaking populations in several areas of the state, most notably St. Louis and the rural southwest and southeast. An emphasis on more accurate identification and reporting of LEP students in schools has also influenced the count.

Montana

IB2. LEP Retained:

The data were reported at 100% retention. This figure was eliminated because it is assumed that the SEA misunderstood the question which called for the number of "number of LEP students in one or more grades" rather than the number of LEP students retained in one or more grades.

Nebraska

IA4a. Chap 1, Title 1, ESEA

Data not collected in 1992-93. The data for this program are dependent on which schools report each year.

Chap 1, Migrant

Data not collected in 1992-93.

Form revised to collect more accurate data.

Emergency Immigrant Education Assistance

The increase in the data resulted from: Lincoln school district finally had enough kids to qualify, larger district now qualified, and OBEMLA didn't have a form.

Fluctuations in LEP student data explained by:

Nebraska meat packing industry has been growing in the State. In addition, Lincoln and Omaha still receive numerous immigrants and refugees from Southeast Asia and the former Soviet Union. Thus, changes in entry migration account for the 42.5% increase in LEP students.

<u>Nevada</u>

Fluctuations in LEP student data explained by:

While student enrollment increased 5.8% in FY94 (1993-94), the LEP enrollment increased 19.4%. Gaming and related services industries, as well as resurgence in mining, accounts for the increase of LEP students. Also, SEA sponsored technical assistance has resulted in more accurate identification at the local level.

New Hampshire

Fluctuations in LEP student data explained by:

State redefinition of LEP:

Numbers of LEP students identified in 1993-94 appear to be approximately the same as those identified in 1990-91. The variation in numbers from 1992-93 may be due to problems with local identification procedures or with survey questions. The survey form for 1994-95 has been revised and the definition of LEP clarified.

Other factors:

In 1993-94, a total of 75% of all schools returned the LEP ID survey. In 1992-93, 65% did. This indicates a greater awareness among LEAs regarding the need to report. An increase in population and/or awareness of LEP issues generally could have caused this increase in reporting.

In 1993-94, 293 schools reported having over all plans to address LEP issues and 253 have plans to assess the adequacy of those plans. In 1992-93, 262 and 253 respectively reported on the same two issues of having plans and having assessment plans in place.

New Jersey

IA4a. Title 1, ESEA, Chapter 1, Migrant, and Even Start

The increase in data resulted from new data collection methods.

Developmental Bilingual

Developmental Bilingual is a new program in 1993-94.

Special Alternative Instruction

No districts were funded this program.

IA4b. State Bilingual Education

1992-93 numbers were total number of programs.

1993-94 numbers were total number of students.

New Mexico

IA4a. Special Populations

Special Populations is a new program in 1993-94.

IA4b. State ESL only

Decreases in participation resulted from funding cuts.

New York

IA4a. Vocational Education

This is not a new program. The 1992-1993 figure was changed from 0 to unknown.

Transitional Bilingual

Increases in participation resulted from expanded enrollments and increases in grants.

Family English Literacy and Special Populations

Figures reflect grants awarded.

IA4b. State Bilingual Education and State ESL only

1992-93 figures for both were not accurate. The SEA cannot differentiate between the two program counts.

Fluctuations in LEP student data explained by:

The total number of LEP students in New York State increased by over 12 percent in 1993-94. This is due primarily to the increased numbers of immigrant children entering New York State schools for the first time in 1993-94. This is supported by the dramatic increase of LEP students eligible for EIEA funding in 1993-94. This is supported by the dramatic increase of LEP students eligible for EIEA funding in 1993-94 (130,424) as compared to those eligible in 1992-93 (113,387). To some extent, the number has also increased as a result of school districts; applying the State's definition of LEP more appropriately.

North Carolina

Fluctuations in LEP student data explained by:

In 1992-93 North Carolina reported an enrollment of 8,900 for limited English proficient students. As shown on the first page of this survey, the numbers for 1993-94 are 12,428. This represents an increase of 39.64% over the previous year. While school administrators report a number of reasons for this increase, there are several which are most frequently reported. First, large numbers of migratory families are choosing to settle in the state, rather than to more on to follow the growing season. The settlement of these families results in the relocation of extended family members and friends to the area.

Secondly, a number of industries such as textiles, poultry, and furniture have expanded production and have been active in encouraging ne workers to settle in the State.

Thirdly, North Carolina served as a resettlement center during the Gulf War. As these families become more established, extended family members and friends are likely to emigrate as well.

Oklahoma

Fluctuations in LEP student data explained by:

Oklahoma's survey report for 1992-93 indicated 19,714 LEP students; the 1993-94 survey indicated 26,653 LEP students which represents an increase of 6,939 students.

448 public and nonpublic schools responded to the 1993-94 survey; 218 returned their forms indicating no LEP students. Of the 173 who responded with a count, those indicating their 1992-93 count exceeded their 1992-92 count by 10% or more cited the following reasons: In or out migration, a more formal identification process at the LEA level and the state data collection process, which has been redesigned and streamlined over the last three years.

The 35% increase on a statewide level is probably the result of a combination of all these factors. In addition, SEA project efforts to apprise districts of the benefit/necessity of counting their LEP students (A) to receive funding through a special weight in the state's funding formula and (b) to exempt LEP students from the state mandated testing program have resulted in increases each hear in the counts turned in through the survey process.

Oregon

Fluctuations in LEP student data explained by:

Oregon;s LEP data indicate an increase greater than 10% for 1993-94 enrollment over 1992-93 for two reasons:

1. There is significant in-migration for all population groups in Oregon, but especially for families with students with limited English proficiency. The Center for Population Studies at Portland State University reported that the state's total population rose to over 3 million by early 1994, a significant increase over the 1990 census data which were gathered in 1989, five years earlier. The increase is continuing. In comparison to the 1970-71 data for student enrollment, there was, by 1993-94, a nearly 9% increase in total minority student enrollment in the state, from 4.7% to 13.3%. 2. All language minority groups have shown significant increases during that period, from a 92% increase in Russian students, a 305% increase in Hispanic, to a 390% increase in Asian/Pacific Islander Students. The Asian and Russian in-migrations have peaked and the annual increases are in tenths of a percent: the increase in Hispanic students continues at a very consistent 1 percent per yea. We anticipate that the increase of Hispanic students will continue strongly, in part because of passage of Proposition 187 in California in November 1994. An attempt to introduce a similar measure in Oregon in Oregon's 1995 Legislative Assembly failed to even come out of the committee where it was first proposed. We do not anticipate that there will be the "hordes of people" that proposers of that measure indicated, however we do know, from information from the Oregon Department of Employment, that skilled agricultural workers are coming to Oregon because of the need for their services here. The intrastate mobile farmworker population is fairly stable and the interstate population of skilled harvest workers continues at a stable level as well. There is a marked increase in work in plant and tree nurseries that continues to require additional workers in Oregon.

Rhode Island

IA2. Non-Public School

This count only includes those LEP students identified by the non-public schools.

South Dakota

Fluctuations in LEP student data explained by:

Responses to the Bilingual Survey were very poor this year. Schools that have local or federally funded programs did not return the survey, which lowered our numbers by approximately 3,000 students. Data were not included from Shannon County, Little Wound, Wounded Knee, and Rapid City School District.

Tennessee

Fluctuations in LEP student data explained by:

There has been a 28% increase of identified LEP students throughout the 139 school districts from the 1992-93 school year. This increase is primarily a result of two factors. First, the Hispanic population immigrating into the state has increased dramatically. Seventy percent of the districts identify non-English language background students at this time. Most of the smaller and rural districts have received an increase in Hispanic students. The unemployment rate in Tennessee is below the national average and has served as a magnet for Hispanic workers. Secondly, Tennessee has been identified as a preferred refugee resettlement site by the federal government. In particular, Nashville has received a relatively high proportion of refugees and expects that this trend will continue.

The limited English proficient student population is undercounted in Tennessee because there have been no required statewide procedures for identification. However, the State Department is developing these guidelines at this time and expects that the identification of LEP students will be more accurate.

Texas

IA4a. Chapter 1, Title 1, ESEA and Chapter 1, Migrant

The increase in participations resulted from expanded enrollments.

Developmental Bilingual

Developmental Bilingual is a new program in 1993-94.

Special Alternative Instruction

The SEA submitted numbers of proposal, then call districts to see how many actual students will be serviced. These are actual numbers.

Special Populations

This program does not exist. Gifted and talented not funded any longer.

IA4b. LEP Not Enrolled: Public Schools

Reduced the number of parent denials.

Fluctuations in LEP student data explained by:

The 18% increase of LEP students from 1992-1993 to the present is due in part with the large immigrant population on the southern border and that texas demographics are changing.

<u>Utah</u>

IA3. LEP in Special Programs: Public School

1992-93 districts did not have identification and assessment procedures for identifying LEP students. The use of these procedures in 1993-94 made the figures more accurate.

IA4b. State Bilingual Education

1992-93 districts did not have identification and assessment procedures for identifying LEP students.

State ESL only -

Redefined definition of alternative language programs.

IA5. LEP Not Enrolled: Public Schools

The participation levels changed becuase of OCR statutes.

Fluctuations in LEP student data explained by:

The State continues to receive students from Mexico, Central America, California and Texas. Our LEP population continues to increase.

Vermont

Fluctuations in LEP student data explained by:

1. Vermont is the site for a federally funded resettlement program of various nationalities (i.e. Bosnian, Vietnamese, etc.). Also there has been an increase in the adoption of immigrant children of school age.

2. The dissemination of a state guide to all school/districts addressing the needs of limited English proficient children entitled: Serving Students Learning English as a Second Language: A Guide for Vermont Educators.

3. A Statewide data collection project which resulted in better understanding of the identification, screening and placement of limited English proficient students in Vermont schools.

Washington

Fluctuations in LEP student data explained by:

Increase in the rumber of LEP students is the result of new imaggrations and better identification procedures. The numbers of LEP students have had a continuous increase since 1985.

American Samoa

IA4b. State Bilingual Education

American Samoa's State Reading Program has continued and had a 1993-94 enrollment of 4,983 as compared to 4,987 in 1992-1993. This program is best categorized as an ESL program.

It is difficult to differentiate between "State" and "local" programs in American Samoa as the Department of Education operates as both the SEA and the LEA for the territory.

Northern Marianas

IB2. LEP Retained:

The data were reported at 100% retention. This figure was eliminated because it is assumed that the SEA misunderstood the question which called for the number of "number of LEP students in one or more grades" rather than the number of LEP students retained in one or more grades.

Puerto Rico

Note: Data were revised for 1992-93. The data submitted for 1992-93 were ane data for 1993-94.

Fluctuations in LEP student data explained by:

Last year some schools provided the information, and others did not. This year they went school-to-school and got numbers. For the most part, the numbers are valid. Additionally, the SEA reports that the data were tabulated by computer this year. In the past, data collection tabulations were done manually.

Virgin Islands

IA2. Public School LEP and Non-public School Enrollment

Home language survey done and combined with Emergency Immigrant grant count gave actual figures.

IA4b. State Bilingual Education

Received Title VII grant for schools in St. Thomas. Population is increasing.

State ESL only

The decrease in participation was due to schools not reporting. Trying to get students in full bilingual service.

Fluctuations in LEP student data explained by:

Approximately 25% reflects the majority of migrating students from the Dominican Republic and some of the other islands with French/Patios language background.

Appendix D SEA Survey Form for 1993-94

SURVEY OF STATE'S LIMITED ENGLISH PROFICIENT STUDENTS AND AVAILABLE EDUCATIONAL PROGRAMS AND SERVICES

NOTE: This form must be completed by applicants under the following program:

o State Grant Program

This survey is a part of the activities required under Section 7134 of the Bilingual Education Act (20 U.S.C. 7454). The purpose of this survey is to collect information on the number of limited English proficient (LEP) students in the State and on the educational programs and services provided or available to them.

General Instructions

- All items of this survey form must be completed.
- Include the name of the State on every page.
- Use additional sheets when necessary, and reference the appropriate page number and survey item.
- Part I of this survey should be sent to all local educational agencies (LEAs) in the State. Completed Part I forms should be returned by the LEAs to the State educational agency (SEA). The SEA should compile the results and include this information in the application.
- Part II of the survey should be completed by the SEA only.

Part I Instructions

A. Student Enrollment

items A1-A2 Self-explanatory.

item A3 Count LEP students only once even if they are served by more than one Federal, State, or local program.

Self-explanatory. For ESL-only programs under the category of Item A4

> State and Local Education Programs, indicate the type of program (i.e., ESL pullout, ESL self-contained classroom, etc.)

> as well as the number of LEP students enrolled in the program.

Item A5 Enter the total number of LEP students who are not being served

> in the specified programs. If State law mandates that all LEP students are to be served, provide this information under this

itam.

Educational Condition of LEP Students B.

Provide the number of LEP students who tested below the State Item B1

> norm in the listed subject areas and in other areas you have tested. If State norms are not used, describe the alternate

criteria used in addressing this item.

Self-explanatory. Item B2

Provide the number of LEP students who did not finish an Item B3

> elementary or secondary grade level in schuz! year 1993-1994. if available. Do not include students who dropped out of school during the year and returned to school later in the year. Do not

include students who transferred to other schools.

Part II Instructions

Identification Criteria

Item A1 Provide the State definition for LEP, if available. If the State has

no LEP definition, please so indicate in this item.

Item A2 Seif-explanatory.

Description of Programs for LEP Students B.

Item B1 Self-explanatory.

C. Changes in LEP Student Data

Item C1 If the total number of LEP students provided in item A2 of Part
