ABSTRACT

A strategic planning model for planning and conducting outcomes assessment was developed and implemented at Wayland Baptist University in Lubbock, Texas. First, the Secretary's Commission on Achieving Necessary Skills (SCANS) model was used to survey 100 undergraduate students regarding their perceptions of skills they would need after graduation. The SCANS survey findings were used during implementation of the following seven-step model planning process: select planners for the outcomes assessment; assess strengths, weaknesses, opportunities, and threats; conduct a thorough needs assessment and identify desired outcomes; establish administrative, methodological, feedback, and component strategies; design and/or identify appropriate instruments, strategies, and methods of data collection; gain acceptance for the assessment agenda from partners and internal/external constituencies; and gain commitment of resources and establish joint planning processes for the future. After analysis of the assessment findings, plans were formulated to develop the following: student orientation course to prepare students for Wayland's degree program and for outcomes assessment; capstone course for all graduating seniors; and objectives and success criteria for the university and each of its units/divisions. The process of collecting and using outcomes assessment data to improve Wayland's programs has already begun. (Appended are transparency masters detailing the model and the survey findings and outcomes assessment surveys/checklists.) (MN)

ASSESSMENT PLANNING MODELS

The expanding interest in quality and accountability created a need for models from which to plan outcomes assessment. W. A. Shewhart of Bell Telephone Laboratories developed what may be considered the first model to problem-solving as it relates to quality--the PDCA (Plan, Do, Check, Act) Cycle. This model calls for planning to accomplish some goal, do the work, check effectiveness by gathering data, and acting to continue those things that were successful and refine those that were not. I have used this model to form a definition of Outcomes Assessment. Transparency 1.

Through the subsequent work of Deming, Juran, Crosby and others, Shewhart's basic thoughts have evolved into today's concept of total quality management, or other such terms as total quality curriculum, and continuous quality improvement.

"*What Work Requires of Schools-A SCANS Report for America 2000*," commonly known as "SCANS" was released in 1991. The SCANS document reports skills and competencies, identified by the Secretary of Labor's Commission on Achieving Necessary Skills, needed for a high school graduate or anyone (including a college graduate) who is entering the workforce, and especially those who wish to be successful.

The SCANS Report is divided into two categories. Category One, **Foundation Skills**, consists of Basic Skills, Thinking Skills, and Personal Qualities. Category Two, **Competencies**, consists of Resources, Interpersonal Skills, Information, Systems, and Technology. It is recommended that SCANS be used as a tool to identify applicable school to work transition skills, and as a basis for defining outcomes required by our graduates. I used the SCANS model to survey 100 of our undergraduate students in 1994 to determine their perceptions of the skills needed after graduating from our university. The average age of these students was 36 years, and approximately 95 percent were already in the workforce. What they revealed is shown in the next three transparencies. Transparencies 2, 3, 4.

Dr. Bobby Hall, Director of Research and Institutional Effectiveness at Wayland Baptist University, has determined that a strategic planning model is needed for assessment at our university. His model is composed of seven phases, as shown in this illustration. Transparency 5.

Strategic Planning for Outcomes Assessment should impact 8 areas, as shown in transparency 6. These planning models have enabled us to have better use of previous assessment data, and to develop new assessment tools.

Assessment leadership must begin with strong support of the chief academic officer, who must develop and sustain an environment conducive to outcomes assessment, according to Dr. Hall. Many committees and subcommittees are involved in the process of carrying the Wayland plan out to completion. The emphases on outcomes assessment and quality control are both directed at making our university more accountable and productive. The total process is complex, and involves much analysis and creative thought. Dr. Bobby Hall is providing great leadership for developing and implementing our outcomes assessment plan.

ASSESSMENT MEASURES

Our accrediting agency, the Southern Association of Colleges and Schools, mandated outcomes assessment two years ago. A comprehensive outcomes assessment program at Wayland Baptist University has been under development for a year. A portion of our efforts have been expended in reviewing various studies completed since 1989. Representative committees were formed in 1994 and questionnaires for current students, graduating seniors, alumni, and community leaders were developed. The majority of faculty and staff members have been involved in this development effort. The instruments have been pilot tested with focus groups, and surveys of target groups have been completed. A complete list of opinion surveys to be conducted are shown in transparencies 7 and 8. In addition, we have selected an ACT COMP (College Outcomes Measurement Program) test to measure the general education core, and administered this test to a sample of students early in 1995. This test is the most widely used measure of the academic foundation core in bachelor degree programs. We are using the objective test, which measures critical thinking, analytical, math, art appreciation, and other applied knowledge and skills. We will likely use this test for a period of time, and then develop our own exam to cover general education knowledge and skills. All Wayland graduates are also required to complete the Graduate Record Exam.

We must also determine how students who complete technical-vocational education programs from community colleges will be measured. Will the community college provide their documentation on outcomes assessment of the students' technical field, or must we re-evaluate them using national or locally prepared exams?

We are also reviewing the Education Testing Service exams over major fields of study for possible use in our assessment program.

Assessment also involves a measure of entering student skills. We will likely adopt the TASP exam, which is the standard exam administered to all entering Freshmen at Texas Public colleges and universities. At present, we require the Nelson-Denny test for Reading and Comprehension, and a locally pre-algebra test. We will also emphasize writing across the curriculum, with writing samples provided by teachers and scored by English faculty.

ACCOMPLISHING THE TASK OF ASSESSMENT

A one semester-hour new student orientation course will be used to prepare students for their degree program at Wayland, and for outcomes assessment. This transparency shows what will be covered in the 15 classroom hour course. Transparency 9. Special emphasis will be provided on how to maintain a portfolio of student accomplishments during their program. This portfolio will include documentation of the mastery of SCANS skills. This portfolio will be extremely useful during the capstone course, in which students will demonstrate their writing, speaking, interpersonal and other skills. Items to be included in the portfolio are shown in Transparency 10.

Students must score 70 or above on an orientation test. To assist in passing this test, we have developed a computer-assisted self-study module, using the Microsoft Powerpoint slide show viewer.

A two semester hour capstone course will be completed by each graduating senior. Much of the assessment data will be collected during this course. Transparency 11 shows what will be accomplished during the course. Again, students will demonstrate what they know and can do. Grades on coursework will not be enough evidence that graduates are prepared for career entrance or advancement. We will also collect data on SCANS competencies mastered by our students on the job and in the college/university curricula.

As part of strategic planning, we are currently developing objectives and success criteria for the university and for each unit/division within the university. External evaluators will be invited to review our assessment data in relation to criteria for success.

USING THE DATA

We must show evidence that assessment data collected is used to change or improve programs. This is the most difficult task, but with great benefits. We have already begun to use the data collected, including upgrading the computer laboratory to meet the specific needs of the working adult student, revising the computer curriculum, developing the capability for our students to use Internet, and developing the capability for our faculty to use the latest computerized presentation systems. We are stressing computer competencies across the curriculum. Access to computer technology is a must.

Turn-a-round time for student degree plans, grades, student accounts, and financial aid processing was too long. Quality is getting more than you expect, so we implemented a plan to have a response to a student's request within four hours and developed a new credo "whatever it takes." Students who are not getting the service they expect are encouraged to call the chief academic officer.

Students wanted real coffee in the lounge, and we provided Folger's coffee! We added new signs to the building to enhance the appearance of our facility, which students said "were nice but somewhat crude" for the progressive area of our city in which it is located. We changed our working hours to be in the office more in the evening to accommodate student needs for counseling, phone

calls, paying accounts, grievances, and enrollment. Finally, we started giving students more attention in the classroom by visiting classes more often, and having them express their concerns for their program. One student told me that the "Hawthorn Effect" was much in evidence after our visits to the classes. I attribute much of the growth for our current Winter Term to special attention given in staff meetings to student service, and to addressing student concerns in the classes.

We are contacting organizations where our students work, and offering to do counseling, registration and courses on site. Employers are enthusiastic about this kind of commitment to service.

Assessment data can also be perplexing. A survey of new students who started with Wayland in 1994 revealed that our retention rate was less than 40 percent. We plan to contact these students to determine why they are no longer enrolled.

EXAMPLE ASSESSMENT FORMS

In your packet are several assessment forms we have developed and have begun to use. These include forms used for surveying current students, graduating seniors, and community leaders. I hope these may be of some assistance. If I could do this talk next year, we would have a much greater record of assessment activities. We intend to have answers for any question that our accrediting agency might ask during their visit with us in 1998. Wayland has over 3,000 students in extension centers in 5 states. The quality of the extension center programs must equal or exceed those provided at our main campus in Plainview, TX.

SUMMARY

I trust the information I have provided about assessment models, measures used to assess outcomes, and how to gather and use assessment data will be helpful to you.

GRADUATING STUDENT SURVEY

As a graduating student, you are a valuable source of information about Wayland. Please give us the benefit of your experience while at Wayland by indicating responses to the following items. Only about 15 minutes will be required to complete the survey, and the information you give will be invaluable to those of us who work to provide the best possible education and personal development climate for Wayland students.

Because Wayland students graduate each year from eight different locations, some questions may not apply to you. In such cases, mark "not rated." If you have specific complaints, compliments, or suggestions, feel free to write them anywhere on the questionnaire or attach additional pages. Thank you for your help, and best wishes as you move into an exciting future.
