IDENTIFIERS *South Carolina

ABSTRACT

This final report describes activities and accomplishments of a federally supported 3-year project in South Carolina which provided: (1) special education and related services to children with deaf-blindness for whom the State Education Agency was not obligated to make available a free appropriate public education, and (2) technical assistance to special education and related services personnel and parents of children with deaf-blindness for whom the State Education Agency is obligated to make available a free appropriate public education. The program involved two components: direct service to infants and toddlers, and systems change to provide equitable quality programs and coordinated services in the least restrictive environment through a regional resource model. Individual sections of the report address the project's purpose, goals and objectives, conceptual framework, accomplishments/outcomes, problems and how they were resolved, and impact. Attachments contain proposals for subcontracts, a manual for replication of regional services, agendas and evaluation summaries of conferences and workshops, and a plan of action for the Materials Resource Center. EXECUTIVE SUMMARY

The South Carolina Department of Education utilized the resources of the 307.11 grant, Services for Children and Youth with Deaf-Blindness, to provide services to infants and toddlers with deaf-blindness for whom the State Education Agency was not obligated to make available free appropriate public education and to provide technical assistance services to families and teachers of children with deaf-blindness (3-21) through the establishment of a regional resource model of technical assistance delivery.

At the time the project was funded, the State Education Agency was not mandated to serve children with disabilities ages birth through 2. During the first two years of the project, the South Carolina Department of Education established a memorandum of agreement with the South Carolina Department of Health Environmental Control, the lead agency for Part H, to identify infants and toddlers with deaf-blindness and provide technical assistance to their families. The preschool consultant with the South Carolina Department of Education coordinated the efforts with the part H agency to develop comprehensive child find systems and public awareness. Infants and toddlers who were identified as deaf-blind received evaluations and services through the INSITE program operated by the South Carolina School for the Deaf and Blind. The families of infants and toddlers with deaf-blindness received direct services from this program and participated in family workshops and other technical assistance activities.

There was a change in the focus of this goal for the third year of the project when the State mandated the provision of a free appropriate public education and related services for all children with disabilities ages birth through twenty one. As federal law prohibits the provision of direct services for infants and toddlers for which the state is obligated to make available a free appropriate education, it was necessary to revise the goal for serving this population. It was determined that since intensive technical assistance was available in the regional resource model project, additional awareness activities and technical assistance should be targeted to assist with identification of children and youth with deaf-blindness and provide technical assistance to families and teachers statewide. To achieve this goal, a subcontract was awarded to the South Carolina School for the Deaf and Blind to conduct technical assistance for families and professionals

The second initiative of the project was to provide equitable and effective programs in the least restrictive environment for children and youth with deaf-blindness through the establishment of a regional resource model for service delivery. The South Carolina Department of Education with assistance of the State Advisory Committee identified a critical need for equitable and quality service delivery to meet the wide array of needs of students with low incidence disabilities including deaf-blindness in rural areas. The findings of previous projects revealed that there were few individuals trained in the state to provide technical assistance to teachers and families of children and youth with deaf-blindness. This was of special concern in rural areas with limited resources for all children with low incidence disabilities. The project proposed to establish a regional resource model service delivery system that could be replicated statewide which encouraged school

districts in rural areas to share resources on a regional basis to insure that all children with low incidence disabilities including deaf-blindness received equitable and quality programs in the least restrictive educational environment. To achieve this goal, an RFP was awarded to a consortia of seventeen (17) school districts (Project SHARE) to operate a model project to demonstrate the effectiveness of the regional resource service delivery concept for serving children with low incidence disabilities.

Intensive training was provided to key personnel in the regional resource model project region in order to build capacity within the region to provide technical assistance to teachers and families. Specific information about the training activities and outcomes are included in this report. The benefits of providing training relative to specific strategies for working with children and youth with deaf-blindness to staff in a regional area was clearly demonstrated. The coordinator of the regional project as well as teachers of children with hearing impairments, visual impairments and severe profound disabilities and related services personnel were included in the training and are now available to assist teachers and families in the region. This concept of building local capacity formed the basis for the current project which utilizes these individuals to provide technical assistance to teachers and families in other regions of the state. Additionally this goal included an objective to develop a plan for a statewide materials resource center to insure that materials are readily available for this population. This plan of action became the design for the current materials resource center which is funded by the 1995-99 307.11 project and located in the Project SHARE consortia.

The school district consortia, (Project SHARE) and the South Carolina School for the Deaf and Blind sponsored a statewide conference to make districts and agencies aware of the needs of children and youth with deaf-blindness and the benefit of providing these services in regional resource model.

The specific activities and outcomes are provided in detail in this report. The result that is most apparent is the existence of a collaborative spirit among school districts and agencies currently serving children and youth with deaf-blindness. The child identification and awareness activities have resulted in an increase in the number of students reported for the Deaf-Blind census from 89 in 1992 to 333 in 1995 (a 270% increase) and numerous requests from families and teachers for technical assistance.

PURPOSE, GOALS AND OBJECTIVES OF THE PROJECT

Purpose

The South Carolina Department of Education, in the interest of effective and efficient services, designed this project to address two significant priorities related to services for children with deaf-blindness. The priorities were:

1. Provide special education and related services to children with deaf-blindness for whom the State Education Agency is not obligated to make available a free appropriate public education.
2. Provide technical assistance to special education and related services personnel and parents for children with deaf-blindness for whom the State Education Agency is obligated to make available a free appropriate public education.

Goals that this project accomplished were:

- I Developed the capability to identify and serve children with deaf-blindness, ages birth through 2.
- II. Provided effective and equitable programs and coordinated services in the least restrictive environment for children with deaf-blindness through a regional resource model.
- III. Provided technical assistance to families of children with deaf-blindness, ages birth through 21.
- IV. Coordinated all activities of the Title VI-C Grant for Services to Children With Deaf-Blindness.

These four goals evolved around two components: (1) direct service to infants and toddlers with deaf-blindness (ages birth through two) through a memorandum of agreement with the state's lead agency under Part H, the Department of Health and Environmental Control (DHEC) during the first two years of the project; and (2) a systems change component implemented through awarding a subcontract to a consortia of districts to provide equitable quality programs and coordinated services in the least restrictive environment through a regional resource model.

Goal I was revised during year three (3) of the project to accommodate a change in state mandate of services to all children with disabilities birth through 21. The change in this goal reflected a focus on delivery of statewide technical assistance for parents, teachers and other professionals.

Overall project supervision and implementation of goals and objectives were provided by four education program consultants employed by the Office of Programs for Exceptional Children, South Carolina Department of Education. These state employed consultants had expertise in the areas of deaf-blindness, appropriate early intervention techniques, appropriate educational programming for both children with hearing impairments and visual impairments, and proper grant coordination. Additionally, outside consultants provided expert technical assistance, assessment and evaluation services and information on developing family and agency support systems for children with deaf-blindness. The

goals were enhanced also by: (1) purchasing services from professionals with expertise and experience in education of children with deaf-blindness; (2) drawing upon resources of demonstration models; (3) requesting assistance from technical assistance projects such as Helen Keller and TRACES; and (4) developing interagency collaboration with education and/or related services agencies and non-profit parent organizations.

Objectives Established For Project:

Goal I: The project established the following objectives to develop the capability to identify and serve children with deaf-blindness, ages birth through two years old.

- 1) Develop a comprehensive child find system and public awareness program.
- 2) Implement a system to provide comprehensive evaluation of infants and toddlers who are likely to be diagnosed as having deaf-blindness.
- 3) Implement a system of service delivery to identified infants and toddlers with deaf-blindness. (this goal was revised for the third year of the program as it was not appropriate to continue providing direct services)

Goal II: The following objectives were established to provide effective and equitable programs and coordinated services for children in the least restrictive environment with deaf-blindness through regional resource models.

- 1) Establish a South Carolina Department of Education task force comprised of parents, superintendents, administrators of special education, principals, teachers, related service personnel, and representatives of other agencies to develop a statewide Strategic Plan for regionalization of resources for children with deaf-blindness and a Plan of Action to establish a statewide Instructional Materials & Technology Resource Center for children and youth with deaf-blindness.
- 2) Develop and issue to a consortium of school districts during year one a Request for Proposal (RFP) to design and implement a comprehensive pilot regional resource model.
- 3) Implement, through the subgrant award, a comprehensive pilot regional resource model for children and youth with deaf-blindness during year two.
- 4) Reassemble the South Carolina Department of Education task force for two meetings during year two.
- 5) Continue implementation, through the subgrant award, a comprehensive pilot regional resource model for children and youth with deaf-blindness during year three.

- 6) Conduct awareness activities relative the replication of the regional resource model for children and youth with deaf-blindness.
- 7) Propose State Board of Education adoption and implementation of the statewide Strategic Plan for regionalization of services for children and youth with deaf-blindness and the Plan of Action to establish a statewide Instructional Materials & Technology Resource Center for children and youth with deaf-blindness.

Goal III: The following objectives were developed to provide technical assistance to families of children with deaf-blindness.

- 1) Provide training to parents based on needs assessment (Part H component).
- 2) Provide training to parents based on needs assessment (Regionalization component).
- 3) Assist parents with the integration of children with deaf-blindness with other children with other disabilities or without disabilities.
- 4) Assist parents with the development of IFSPs, IEPs, and Transition Plans for their children with deaf-blindness.
- 5) Assist parents with the transition of their children from toddler to public school and from public school to post school services.

Goal IV: The following objectives were designed to coordinate activities of the 307.11 Grant for services to children and youth with deaf-blindness.

- 1) Determine current status for activities funded with 307.11 funds.
- 2) Update Census Report for children with deaf-blindness.
- 3) Coordinate information/activities of Part H, P.L. 100-297 and state agencies.

CONCEPTUAL FRAMEWORK

This project was designed to address concerns identified in South Carolina relative to the provision of a free appropriate public education and related services for children and youth with deaf-blindness birth to twenty-one.

Children with deaf-blindness are among the most expensive and difficult disability populations to serve appropriately in the public schools. Owing to their unique educational needs which frequently prohibit their access to the core curriculum and owing to their need for costly and often unavailable supplementary aids, supplementary services, and related services, children with deaf-blindness are often deprived of the opportunity to fully and equally participate in the educational system.

In South Carolina equality and excellence in the provision of special education and related services to the children and youth with deaf-blindness is far from becoming a reality in the majority of school districts. In a few of the larger school districts (i.e., those located in more densely populated metropolitan areas) the instructional models, related/supplementary services, special equipment/aids, and other resources needed by children with deaf-blindness are generally available either through school-based programs or contractual arrangements. However, in smaller school districts and in rural remote areas, where the base pupil population is relatively small, these programs and services are generally unavailable or extremely expensive to provide.

Federal and State laws mandate that public school systems provide for the education of all children with deaf-blindness. Because deaf-blindness occurs in the general population so infrequently, it is often economically not feasible for school districts, especially small, rural and remote systems, to offer appropriate programs and services for children with this disability.

The lack of sufficient numbers of children with deaf-blindness at all age and severity levels limits what an individual school district can do to provide appropriate services. In smaller school districts, the problems of educating such students are magnified in relation to the ability to solve them. In fact, it often becomes an economic impossibility to provide effective and comprehensive services for the entire range of children with deaf-blindness.

Research and surveys of other states indicated that one of the most cost effective methods for advancing equal educational services for the children and youth with deaf-blindness is through a coordinated and cooperative regional resource model. Many states have turned to regionalization to appropriately address the needs of children with deaf-blindness.

Regionalization is a logical and widely accepted means of aiding school systems to ameliorate the numerous barriers to providing appropriate special education and related services for children with deaf-blindness. By viewing service delivery to the children and youth with deaf-blindness on a regional rather than a district-by-district basis, more appropriate instructional programming, supplementary aids, supplementary services, and related services can be provided at a greatly reduced cost. By sharing the educational responsibility and financial obligation via a regional approach, school districts can collectively achieve equality and excellence in meeting the needs of this frequently unserved or underserved population.

During the 1990-91 school year, a task force consisting of teachers of the visually impaired and administrators of special education was convened by the South Carolina Department of Education to identify weaknesses in services provided to pupils with visual disabilities (another underserved low-incidence population). The task force recommended that the state develop a plan for

regionalization of services and develop an instructional materials/technology resource center to support the regions with technical assistance.

The recommendations of this Task Force appear to be consistent with strategic plans being developed and initiated in other states to meet the needs of the low-incidence disability populations by enhancing the services provided to these children through regional models. By utilizing the regionalization concept, the population base of children with deaf-blindness can be increased, thus, creating a more equitable, efficient, and effective use of resources.

Based on these findings and theories, the goals, objectives, and yearly activities were proposed for implementing regional resource models throughout South Carolina for children with deaf-blindness to ensure that these pupils received equitable quality programs designed to meet their unique educational needs.

The efficacy of early intervention services for young children with disabilities has been documented through numerous research projects. In recognition of the need to provide appropriate services to infants and toddlers with disabilities, the United States Congress passed P. L. 99-457 which was later incorporated in IDEA as part H.

The original focus of this project was to support the state efforts and the lead agency for Part H to strengthen the statewide initiative for coordinated services for children and youth with deaf-blindness and other low incidence populations. This project was initially designed to provide evaluation and special education and related services for children and youth with deaf-blindness for whom the State Education Agency was not responsible. In order to assure statewide linkages, the Babynet program coordinated by the Department of Health and Environmental Control was selected as the appropriate subcontract site to deliver these services. Family involvement and support are key to later success. This program was designed to support families in their efforts to meet the needs of their children and youth with deaf-blindness. Based on these findings, the project was designed to provide direct serves for infants and toddlers, child identification and evaluation and family training.

DESCRIPTION OF PROJECT ACCOMPLISHMENTS/OUTCOMES

Goal I: To develop the capability to identify and serve children with deaf-blindness, ages birth through two years old.

Objectives

- 1) Develop a comprehensive child find system and public awareness program.
- 2) Implement a system to provide comprehensive evaluation of infants and toddlers who are likely to be diagnosed as having deaf-blindness.
- 3) Implement a system of service delivery to identified infants and toddlers with deaf-blindness (*this goal was revised for the third year of the program owing to change in state statute*).

Outcomes/Accomplishments

To address this goal, a memoranda of agreement was developed with the lead agency for Part H which coordinated the child find activities and provided comprehensive evaluations for children suspected of having dual sensory impairments. The children who were identified through comprehensive evaluation were referred to the South Carolina School for the Deaf and Blind for services through the INSITE project. This is a curriculum designed to deliver home based early intervention services to families of children with deaf-blindness and children who are visually impaired and multiply impaired. At the beginning of the project period, there were six (6) children, birth through two who were identified as having dual sensory impairments. At the end of the first year of funding, 23 children had been identified and were receiving services. At the end of the second year of funding, 34 children (birth through two) with deaf-blindness were receiving direct services through the project. **Child identification and evaluation increased the number of children (birth-2) from six (6) to thirty-four (34) over the first two years of the grant period. This represents an increase of 460%.**

For funding year 1994-95, Goal I was revised to comply with legislation mandating provision of free appropriate public education and related services to children with disabilities from birth to 21. Although funding from the project ceased, services were continued to these students through other funding sources provided by the State. Owing to the demonstration of needs, number of students identified and the efficacy of the services delivered, the State was able to support requests to continue the services through other resources.

An RFP was developed and approved by the State Advisory Committee for an agency to expand these services to include statewide awareness activities and parent training during the final year of the project. The South Carolina School for the Deaf and Blind was

awarded the subgrant in January 1995 (*Attachment A*). The proposal included developing and providing statewide awareness activities and a family training component to include a Family Learning Vacation.

The South Carolina School for the Deaf and Blind requested a no cost extension to conduct the Family Learning Vacation owing to the maternity leave of the director of this activity. The activity was held on the campus of the South Carolina School for the Deaf and Blind November, 3-5, 1995. Sixteen families from across the state participated in the weekend experience and the project received very positive feedback in the satisfaction survey. The agenda and satisfaction survey are attached in *Attachment B*. One hundred percent of the participants reported that the Family Learning Vacation met their expectations and all requested additional training.

The second activity that the South Carolina School for the Deaf and Blind included in the proposal related to statewide training and awareness for professionals regarding the unique needs of children and youth with deaf-blindness. The accomplishments of this activity will be addressed in Goal III.

Goal II: To provide effective and equitable programs and coordinated services for children in the least restrictive environment with deaf-blindness through regional resource models.

Objectives

- 1) Establish a South Carolina Department of Education task force comprised of parents, superintendents, administrators of special education, principals, teachers, related service personnel, and representatives of other agencies to develop a statewide Strategic Plan for regionalization of resources for children with deaf-blindness and a Plan of Action to establish a statewide Instructional Materials & Technology Resource Center for children and youth with deaf-blindness.
- 2) Develop and issue to a consortium of school districts during year one a Request for Proposal (RFP) to design and implement a comprehensive pilot regional resource model.
- 3) Implement, through the subgrant award, a comprehensive pilot regional resource model for children and youth with deaf-blindness during year two.
- 4) Reassemble the South Carolina Department of Education task force for two meetings during year two.
- 5) Continue implementation, through the subgrant award, a comprehensive pilot regional resource model for children and youth with deaf-blindness during year three.

- 6) Conduct awareness activities relative the replication of the regional resource model for children and youth with deaf-blindness.
- 7) Propose State Board of Education adoption and implementation of the statewide Strategic Plan for regionalization of services for children and youth with deaf-blindness and the Plan of Action to establish a statewide Instructional Materials & Technology Resource Center for children and youth with deaf-blindness.

Outcomes/Accomplishments

A Task Force was named by the Superintendent of Education to develop a strategic plan for regionalization of resources. The Task Force (*Attachment C*) which was comprised of parents, superintendents, administrators of special education, principals, teachers, related service personnel, and representatives of other agencies met June 7 and 8, 1993 to develop the strategic plan. Mr. Jack Hazecamp, Consultant with the California Department of Education provided the task force with information on the regionalization initiative in California. Mr. David Sexton from the University of New Orleans facilitated the meeting and consultation was provided by TRACES. The Task Force recommended developing a model regional service delivery project and identified the components to be addressed in developing the model. The components were incorporated in an RFP which was reviewed and approved by the Task Force prior to dissemination. The RFP was disseminated statewide to encourage a group of school districts to design a model services delivery system to meet the unique needs of children and youth with deaf-blindness. The RFP was awarded to a consortia of school districts (Project SHARE) on March 31, 1994.

The Project SHARE proposal was selected based on the extensive experience this consortia had relative to serving low incidence disabilities in a regional model. Much of the infrastructure was in place to allow the model to serve as resource to other districts regarding the technical aspects of regionalization. A project coordinator was employed to design a model that could replicated relative to services for children and youth with deaf-blindness and to conduct technical assistance. At the time of the grant award, three (3) children and youth with deaf-blindness had been identified in the consortia region. Following the technical assistance and awareness activities provided through the project, eighteen (18) additional students were identified for the 1995 annual census. *Attachment D* contains a description of the proposal and the consortia comprised of 17 school districts.

A steering committee was appointed to provide local input to the project. Several teachers and related services personnel were identified as key personnel to receive in-depth training and provide intensive technical assistance within the region.

The project coordinator developed a manual (*Attachment E*) on the strategies necessary to develop an effective regional service delivery system to meet the needs of children and youth with deaf-blindness. Classroom teachers had the opportunity to participate in a variety of workshops including: a two part series on communication with children and youth with deaf-blindness with Carolyn Monaco, Coordinator of Deaf-Blind Services at W. Ross McDonald School, Ontario, Canada. Key Personnel were involved in a number of training initiatives which are described in *Attachment F*. The training was designed to increase capacity in the region to provide technical assistance for families and teachers. Included in the training were related services personnel such as Orientation and Mobility specialists, audiologists, teachers of hearing impaired and visually impaired. Satisfaction Surveys indicated that the training activities met the needs of the participants. Consultation was provided on site for some classroom teachers and a number of visits were made to classrooms and teacher by the TRACES consultant.

Awareness activities relative to replication of the project were conducted through a statewide conference September 17-19, 1995. An outcome of the interaction of the two projects resulted in the development of a jointly sponsored conference to provide training to professionals and awareness of the efficacy of the regional resource model. The South Carolina School for the Deaf and Blind and the Project SHARE consortia co-hosted the conference which drew approximately one hundred (100) professionals from agencies and school districts. *Attachment G* includes the agenda and satisfaction survey. The rating of this conference was extremely high with one hundred per cent of the respondents indicating that it met their expectations. Additional comments from participants requested that this type of conference be continued on an annual basis.

A subcommittee of the task force met to develop a plan of action for an Instructional Materials and Technology Resource Center for children and youth with deaf-blindness. An ad hoc committee was formed to include individuals with special expertise in this area. The committee surveyed other states and state agencies to determine the feasibility of the development of a plan for a materials resource center (*Attachment H*). The results of the research of the committee and the plan of action supported the funding of a materials center in the 1995-99 307.11 grant.

Goal III: To provide technical assistance to families of children with deaf-blindness.

Objectives

- 1) Provide training to parents based on needs assessment (Part H component).
- 2) Provide training to parents based on needs assessment (Regionalization component).
- 3) Assist parents with the integration of children with deaf-blindness with other children with other disabilities or without disabilities.

- 4) Assist parents with the development of IFSPs, IEPs, and Transition Plans for their children with deaf-blindness.
- 5) Assist parents with the transition of their children from toddler to public school and from public school to post school services.

Outcomes/Accomplishments

As indicated in the review of accomplishments in Goal 1, this objective was accomplished through the parent advisor component of the INSITE Project conducted by the South Carolina School for the Deaf and Blind during the first two years of the grant. Year three, the South Carolina School for the Deaf and Blind conducted a Family Learning Vacation for parents of young children with deaf-blindness.. Sixteen families from across the state attended the weekend conference. Satisfaction surveys of the services indicate that needs were met. Additionally parent training and assistance was provided through the regional model component.

A parent brochure was developed and parent meetings conducted in the Project SHARE region. Parents of young children responded well to the parent/family initiatives, however, families of older students were not as receptive. It was determined that this goal should be addressed in the 1995-96 project to more appropriately meet family needs. Copies of program agenda, satisfaction surveys and awareness products are included in *Attachment F*.

Goal IV: To coordinate activities of the 307.11 Grant for services to children and youth with deaf-blindness.

Objectives

- 1) Determine current status for activities funded with 307.11 funds.
- 2) Update Census Report for children with deaf-blindness.
- 3) Coordinate information/activities of Part H, P.L. 100-297 and state agencies.

The consultant for deaf-blindness for the South Carolina Department of Education was responsible for overall grant administration. Responsibilities included: the selection of individuals to serve on the Task Force, comprised of parents, administrators of special education, principals, teachers, related service personnel, and representatives of other agencies, making all arrangements for the initial Task Force meeting and the meetings of the State Advisory Committee, meeting routinely with the two subcontract coordinators to assure continuity of the project. The outcome was statewide input relative to the scope and progress of the project and increased interagency collaboration among agencies

currently serving this population. The jointly sponsored conference demonstrated the effectiveness of interagency sharing of resources, as well as, among school districts and supported the concept of an interagency collaboration project which was funded for the 1995-99 project.

The census data increased during the grant period from 89 children (birth to 21) reported in 1992 to 333 children reported in 1995. The areas of significant increase directly related to the child identification and awareness activities of the grant are reflected in the birth through two (2) population and the public school count. Twenty-nine (29) public school students were reported in the census prior to initiation of the project and the 1995 count includes forty-four (44) public school students which is an increase of 35%. Twenty-one (21) children from birth through age five were identified in the 1992 census as compared to seventy-two (72) in the 1995 count. Two hundred and forty five (245) are reported by the Department of Disabilities and Special Needs. Although a number of these children are institutionalized, the majority are served in community programs, either through early intervention services or other day programs. Discrepancies in eligibility criteria may have some bearing on the way students are identified and reported among agencies. An objective of the currently funded project is to review the cases reported by Department of Disabilities and Special Needs regarding eligibility criteria and documentation as the numbers indicate that there may be some over identification. An outcome of this discussion with the Department of Disabilities and Special Needs was the inclusion of this agency in the interagency collaboration and identification of significant training needs which will be addressed in the 1995-99 project.

Summary

There was consensus among the agency and school representatives that one agency or school district could not adequately provide for all of the special education and related services of children and youth with deaf-blindness, but through coordinating resources in a regional resource model and/or through interagency collaboration, the State could devise technical assistance for children and youth with deaf-blindness to assure comprehensive services are provided in the least restrictive environment. This spirit evolved over time and became the philosophical tenet for the 1995-99 proposal.

The outcome which may provide the most long range benefit to children and youth with deaf-blindness in South Carolina was the cooperative spirit that was developed among school districts and other state agencies relative to sharing resources and expertise to better serve this very unique population.

A DISCUSSION OF PROBLEMS AND HOW THEY WERE RESOLVED INCLUDING DEPARTURES FROM THE ORIGINAL OBJECTIVES OR PLANNED ACTIVITIES .

Problems/Resolutions

Issue 1

An issue which required a refocus in project goals was a change in statute relative to the obligation of the state to extend provision of special education and related services to infants and toddlers. During the third year of the project, South Carolina extended the mandate for services for children with disabilities to include children from birth through age 21.

The project director in consultation with the Advisory Committee and other consultants including TRACES reviewed the options regarding this change in focus and determined that the focus should be on provision of awareness and child identification as well as technical assistance for teachers and families statewide. The rationale for this decision related to the impact that was apparent in the regional service delivery system. A request for proposal was disseminated and the South Carolina School for the Deaf and Blind was awarded a grant to provide statewide technical assistance and awareness activities. The proposal included a family learning vacation and training and awareness activities for professionals.

This proposal was selected as it was an appropriate linkage with the previous services for the following reasons: this agency employs the parent advisors with the INSITE project and these individuals are familiar with the families and their training needs; additionally, the project coordinator for the agency holds a masters degree in deaf-blindness and the director of the family learning vacation has extensive experience as a teacher of students with visual impairment a parent advisor with families of children with deaf-blindness and as a national INSITE trainer. The agency has a responsibility to serve this population which increased the likelihood of the availability of ongoing services.

As indicated in the section relating to accomplishments and outcomes, the South Carolina School for the Deaf and Blind developed an excellent program for parents and co-hosted the statewide awareness conference which was so well received.

Issue 2

There were changes in personnel which effected continuity and timelines, but did not result in a major change in goals and objectives. Owing to a variety of circumstances there were personnel changes both at the state level in project administration and within the subgrant to the regional model. The project requested a no cost extension to complete the activities and met the intent of the project goals.

Technical assistance from TRACES was extremely valuable in assisting the new project director to analyze the situation and adjust activities to insure goals were met.

Issue 3

Owing to budgetary constraints in the South Carolina Department of Education and the State, it was not feasible to propose the strategic plan for regionalization of other areas of the state to the State Board of Education. However, the regional project did develop written guidelines to assist others in developing regional services and the staff continues to be available to provide consultation and assistance to districts who indicate interest in developing a regional services delivery concept.

December 5 and 6, 1995 an onsite evaluation of the project was conducted by Marianne Riggio and Jean Prickett. In the evaluation report, the consultants concurred that at this time there was not sufficient support for the statewide initiative to establish additional regional models. At the final meeting of the Advisory Committee in September 1995 the consensus of the committee was that although the merits of a regional project were well documented, additional resources were not available to support this initiative. It was recommended that the project expand the interagency collaboration initiative utilizing existing resources and expertise to meet statewide needs. Additionally it was recommended that the regional resource model that was currently operating become a statewide resource for technical assistance on regionalization and relative to the needs of children and youth with deaf-blindness.

Summary

The accomplishments of this project, including the decisions regarding changes in focus, all served to strengthen the proposal for the currently funded project and insured ongoing statewide technical assistance was available to families and teachers of children and youth with deaf-blindness.

PROJECT IMPACT

Products

Attachment E includes a copy of the manual developed by the Project SHARE consortia relative to procedures for establishing regional resource services through coordinating services and costs among several districts.

Attachment F includes brochures developed by the project to assist with awareness activities.

Indicators of Project's Effect

The number of children identified during the project period indicates the effectiveness of the child identification and awareness activities:

- 460% increase in the number of children (birth-2) identified between October 1, 1992 and September 30, 1994
- 500% increase in the number of children identified in the regional model
- 270% increase in the number of children identified statewide

The number of parents and teachers receiving training and the satisfaction ratings of training activities:

- 64 families participated in training activities.
- 30 teachers in the regional resource model received training on evaluation and programming for children with deaf-blindness.
- 20 administrators participated in awareness training relative to the needs of children and youth with deaf-blindness and the advantages of and process for developing regionalized services.
- 4 classroom teachers who were not a part of the regional resource project attended a summer institute at Georgia State University relative to instructional strategies for serving children and youth with deaf-blindness.
- 5 key individuals were identified within the Project SHARE region to participate in in-depth training in order to build capacity within the region. These included a teacher of the visually impaired, two teachers of hearing impaired, an orientation and mobility specialist and an audiologist. These individuals participated in training activities including the Hilton Perkins National Deaf-Blind Training Project, Georgia State University workshops and summer institute. Additionally, onsite consultation was provided by nationally recognized experts according to assessed needs of professionals.

Attachment F includes the satisfaction surveys agenda and other information relative to training activities.

A materials resource center was established to support parents and professionals statewide based on the plan of action developed by the project. Initial funding was provided through the current funding cycle to establish a materials resource center. Additionally private funds have been donated to increase the holdings. Information regarding the availability of materials is disseminated through a quarterly newsletter.

Dissemination Activities

- The request for proposal for the regional resource project and the statewide family and professional training projects were disseminated statewide.
- Information on training was disseminated to all coordinators of special education in and to state agencies that serve children and youth with deaf-blindness South Carolina.
- The project director addressed statewide meetings of special education coordinators regarding services and child identification.
- A copy of the regional resource manual was disseminated to each district in the state.
- A copy of the monograph Etiology of Deaf-Blindness was disseminated to each district reporting students with deaf-blindness.

ASSURANCE STATEMENT

The final report had been submitted to ERIC and further information may be found in the ERIC system.

SECTION II- Project Abstract

The project will consist of two components. One will provide training for families in the form of a Family Learning Vacation. Through this activity, parents will be better prepared to assist their child as he/she progresses through the education system. Parents will also receive training on stress management and developing coping skills. The objectives of the overall training will be accomplished through presentations, panel discussions, and by simply providing parents an opportunity to interact with other families dealing with similar issues.

The second component will be directed toward professionals and paraprofessionals who serve deaf-blind children. Through this training, participants will be better able to deliver appropriate instruction and support services to this population of students. The objectives for this activity will be accomplished through presentations at a statewide conference.

To evaluate the effectiveness of both components, specific evaluation forms will be developed and utilized to gauge success and determine if our objectives have been met.

SECTION III- Statement of Goals and Objectives

The project will consist of two components. One will provide training for families in the form of a Family Learning Vacation. Through this activity, parents will be better prepared to assist their child as he/she progresses through the education system. Parents will also receive training on stress management and developing coping skills. The objectives of the overall training will be accomplished through presentations, panel discussions, and by simply providing parents an opportunity to interact with other families dealing with similar issues.

The second component will be directed toward professionals and paraprofessionals who serve deaf-blind children. Through this training, participants will be better able to deliver appropriate instruction and support services to this population of students. The objectives for this activity will be accomplished through presentations at a statewide conference.

To evaluate the effectiveness of both components, specific evaluation forms will be developed and utilized to gauge success and determine if our objectives have been met.

SECTION IV- Description of Content\Activities\Timelines

PARENT TRAINING:

By February 1, 1995, families of deaf-blind children will be identified through the Deaf-Blind Register, Babynet, and local schools.

By March 1, 1995, questionnaires will be developed and sent to parents of deaf-blind children asking them to identify possible areas of training they would be interested in. At this time, they will also be informed of the dates and locations of the training.

From the feedback received, a program schedule will be developed by April 15, 1995.

Presenters will be identified and the Family Learning Vacation will be held in July 1995.

Areas of possible training may include, but are not limited to:

- * stress management
- * coping skills
- * independent living skills development
- * preparing for life beyond age 21
- * leisure activities
- * advocacy issues
- * legal rights
- * communication
- * sexual issues
- * behavior management

DAY 1

4:00 - 7:00 Registration
5:00 - 6:30 Supper
7:00 - 9:00 Welcome
Information Dissemination
Icebreakers

DAY 2

8:00 - 8:45 Breakfast
9:00 - 12:00 Training Session
12:00 - 1:00 Lunch
1:15 - 4:30 Training Session
6:30 - 8:00 Family Sharing/
Panel Discussion

DAY 3

8:00 - 8:45 Breakfast
9:00 - 12:00 Training Session
12:00 - 1:00 Lunch
1:00 - 4:30 Training Session
5:00 - 6:30 Dinner
6:30 - 8:00 Parent Mental Health Break
(parents on their own & child
care provided)

DAY 4

8:30 - 9:15 Breakfast
9:30 - 11:00 Training Session
11:00 - 12:00 Wrap-up
12:00 - 1:00 Lunch
1:00 Depart

SECTION IV- Description of Content\Activities\Timelines

TRAINING FOR PROFESSIONALS:

By April 1, 1995, topics for a statewide conference for professionals serving deaf-blind children will be finalized.

By June 1, 1995, a list of presenters for the conference will be developed and confirmed.

By July 1, 1995, announcements will be developed and distributed to service providers working with deaf-blind children.

By August 15, 1995, a list of conference attendees will be finalized and confirmation distributed.

The conference will be scheduled for the first half of September 1995.

Areas of training may include, but are not limited to:

- | | |
|---|----------------------------------|
| * communication | * behavior management |
| * vocational training | * leisure activities |
| * independent living skills training | * classroom techniques |
| * related services (P.T./O.T., O&M, etc.) | * medical issues |
| * psychology of deaf-blindness | * developing a service continuum |

TRAINING FOR PROFESSIONALS TENTATIVE AGENDA

DAY 1:

8:00 - 10:00	Registration
10:00 - 12:00	Welcome
	Opening Announcements
	Presentation
12:00 - 1:00	Lunch
1:00 - 5:00	Training Sessions

DAY 2:

7:30 - 8:30	Breakfast
8:30 - 12:00	Training Sessions
12:00 - 1:00	Lunch
1:00 - 4:00	Training Sessions
4:00 - 5:00	Wrap-up

SECTION V - Evaluation Plan

For both training components, participants will be asked to complete evaluation forms for each activity. The results will be reviewed and summarized.

The evaluation tool used will address each session presented during either the Family Learning Vacation or the Conference. Each presentation will be related to the goals and objectives as stated in Section III. A numerical rating system will be utilized to measure how effectively each objective had been met.

SECTION VI - Quality of Key Personnel

Ms. Kathy Rivers and Mr. Craig Jacobs will assume primary responsibility for the development and coordination of both training programs. Presentations will be made by those who have past experiences and expertise in serving deaf-blind individuals. Those asked to make presentations will be identified with input from current service providers as well as the regional offices of the Helen Keller National Center in Atlanta.

Ms. Rivers' and Mr. Jacobs' vitae is attached for review.

COMMENTS: (see next page)

Family Learning Weekend

November 3 - 5, 1995

Comments:

- * May want to include therapists in future weekends by sending info to them.
- * I enjoyed it. Also the food was good. Parents of kids w/ disabled kids speaking (such as on a forum or platform) would be nice addition (to hear from "the horses mouth"), with Q & A time throughout, etc.
- * No comments. Work was well done. I enjoyed my time taking workshop. I can not say that I did not have anything to do, because you offered plenty this weekend. My son really enjoyed his weekend and was not ready to go home.
- * This was a very informative weekend. I hope to attend another weekend fling like this. We, as a family, truly enjoyed the hospitality and family atmosphere we felt when we arrived, down to the last drop.
- * I was very impressed. The staff was very helpful. I learned a lot this weekend. I would like to see more about stress. Thanks for a very enjoyable weekend.
- * This was a great weekend. Would like to hear from other parents.
- * The one thing that I would like to see changed for future meetings is the food for the children. Some things on your menu were not able to be enjoyed by the children.
- * The weekend as a whole was great. Saturday's schedule a little long for sitting and listening even though it was much needed info. A little unfair to the speaker. Next year, beach trip.
- * Very informative information provided. Shorter to 1 1/2 - 1 day only.
- * I really enjoyed this weekend. Also, thanks for having us.
- * I have learned a lot about the program and more about my child. I would like to attend if you didn't have child care but we haven't gotten anyone to attend to them.
- * I enjoyed this weekend and the information helped me out. I had time to talk and meet with other parents and caregivers that let me know that I am not in this fight alone. This is a fight for me, I fight every day to make my son's life enjoyable, happy and as livable as possible. Again, thanks and God bless.
- * Other suggested topics: meeting the needs of siblings of children with disabilities, adaptive & assistive materials, sexual needs of a child with multiple disabilities, more time with computer lab, more time for behavior management classes. The next communication class maybe include communication skills with the family, therapists, etc.
- * Thank you for having the conference. I gained much. Suggestions: Allow each family to bring one therapist or Parent Advisor to go over valuable information & concerns that other parents have. The speakers were so knowledgeable everyone would benefit. Also, all caregivers could use stress management etc. Also, I enjoyed touring this building & getting ideas to use that were available in this school setting.
- * Tell more about IEP's. I enjoyed the weekend & I'd enjoy coming again.
- * Very educational, informative weekend. One suggestion would be hands on with actual child/children in session examples. Suzanne Morris from VA would be another suggestion for speaker. All speakers this weekend were excellent. Enjoyed entire conference, facilities and accommodations great.
- * Let me know when there are more seminars. They are great learning tools.
- * Very informative. Thanks.
- * Everyone was very helpful. Hope we can visit again. Laura's aunt enjoyed very much also. We wish to thank everyone for making our visit most enjoyable.
- * I enjoyed this weekend.

ADVISORY COMMITTEE RESPONSE\QUESTIONS

State Advisory Meeting for Children and Youth with Deaf-Blindness

Minutes of September 6, 1995 Meeting

The State Advisory Committee for Services for Children and Youth with Deaf-Blindness met Wednesday, September 6, 1995, at Bradbury Suites in Columbia.

Members present included: Charles Branch, Al Eads, Deborah McPherson (for Susan Thompson), Craig Jacobs, Sharon Tindal, Bob Scott, Suzann Long, Marvin Efron, Emmala Barnette, Cindy Clark and Suzanne Swaffield. Marianne Riggio, consultant with the Hilton Perkins Deaf-Blind Project attended as a special guest.

Absent included: Dill Gamble, Evelyn Heyward, Maureen Irons, Mike Kelly, Alva Lewis, Luna Mack, Charles McKinney, Kathy Purnell, Juanita Wilson, Jerry Francis, Linda Young, and Roselyn Young.

Suzanne Swaffield welcomed the group and provided a brief overview of the background and status of the project. She advised the committee that she was the new Project Director since Mary Ginn had left the Agency. She explained that the current project funded by the 307.11 grant, Services to Children and Youth with Deaf-Blindness, was designed to develop a system of technical assistance for children and youth with deaf-blindness through a regional service delivery system and to provide technical assistance to families statewide. The South Carolina Department of Education let a Request for Proposal for a consortia of districts to implement the regional service delivery system of the project. The proposal was based on the recommendations of the State Advisory Committee from the June 1993, meeting. Project SHARE, a consortia of school districts in the Pee Dee area, was awarded the project and has provided technical assistance for children and families and teachers and related service personnel throughout the region. Originally, the grant funded Babynet to provide direct services to children with deaf-blindness ages birth through two. When South Carolina became mandated to serve children birth through two, the Department of Education was unable to continue funding direct services for the children and youth with deaf-blindness through this grant. An RFP was let for the development of services for children and families. The South Carolina School for the Deaf and Blind was awarded this grant.

Suzanne Swaffield reviewed the handouts which included an overview of the activities for the third year of the current project and the abstract and activities planned for the new grant which has been approved for funding beginning October 1, 1995 through September 30, 1999. She reported that the new project involves statewide interagency collaboration to build capacity within the state to appropriately serve children and youth with deaf-blindness. Suzanne provided an overview of the plans for the new grant cycle. The agencies involved with the project include: Project Share, the School for the Deaf and Blind, the Commission for the Blind and the University of South Carolina. The Department of Education will direct the project and coordinate the staff development activities. Project SHARE will continue to provide technical assistance within the region,

but will expand the role to include statewide technical assistance also. Additionally, SHARE will maintain a materials resource center for families and professionals working with students with deaf-blindness and produce a statewide newsletter. This initiative is to address the concern expressed in both the project evaluation and the comments from the Office of Special Education relative to the need to provide services statewide.

Bob Scott, Director of the Pee Dee Education Center and Suzann Long, Coordinator of the Low Incidence Disabilities Project provided an overview of the status of the regional project. They emphasized that the project is a resource for the districts on working with children and youth with deaf-blindness and that the Project SHARE staff are available to provide assistance with child find and technical assistance. They advised the committee of the upcoming awareness conference which will be the last major activity of the grant. It is to be held September 17th through the 19th at Springmaid Beach at Myrtle Beach. The South Carolina School for the Deaf and Blind project and the Share Deaf-Blind Project are co-sponsoring it.

Craig Jacobs provide an overview of the School for the Deaf and Blind project. The project was funded to provide technical assistance to families of children and youth with deaf-blindness state wide. The project staff planned a family learning vacation, but had to postpone it owing to some scheduling issues. It has been tentatively re-scheduled for November if a ninety day extension is approved by the United States Department of Education.

Suzanne thanked Bob, Suzann and Craig for their reports and their hard work on this project. She also acknowledged TRACES for providing technical assistance throughout the project.

Suzanne Swaffield reported on the Census of Children and Youth with Deaf-Blindness which is collected as of December 1, each year. The 1993 census of children and youth with deaf-blindness reported 77 children in South Carolina. The 1995 census identified 293 children. Of this total, the Department of Disabilities and Special Needs (DDSN) reported 224 students. There was some discussion relative to analyzing the data relative to duplication or overlapping of reporting. Some reasons for the increase included the child identification efforts on the part of Project SHARE and the School for the Deaf and Blind. The Committee was also advised of the difference in numbers reported for the census and the December 1 count of students in special education. No children are placed as Deaf-Blind for December 1 count. The reasons for this were discussed. Marianne advised the committee that this is generally true, nationally, and further indicates the need for clarification of eligibility criteria.

Marianne Riggio reported on the Program Evaluation that she and Jean Prickett had conducted in December, and on the final evaluation that she is conducting during this visit. An outside Project Evaluation is required by the Federal Agency that administers the grant. The recommendations from the December visit included: developing a strong central base so that there is someone to call who knows who is responsible for what, and insuring that the program is statewide and not regional.

Discussion following her report included a recommendation from Dr. Efron to consider a statewide assessment team. Deborah McPherson agreed with this

recommendation and suggested investigating the possibility of coordinating with the new DDSN assessment project. There was some concern expressed about logistics of central assessment, but all agreed with the concept of a state assessment team.

Marianne recommended that the team not get bogged down in process, but that we need to clear up census information, and look at definition and eligibility criteria then, address early identification and follow-up with the training piece.

Deborah McPherson provided information on the new Midlands Center office which includes Babynet, University Affiliated Programs(UAP), University of South Carolina Medical School(USCMS), the Greenwood Genetics Center, Vocational Rehabilitation(VR), and the Autism program. She suggested tapping into with this project.

Dr. Spann joined the group to express her appreciation for the efforts of the Committee and to share her interest in the future of services for children and youth with deaf-blindness.

It was suggested that additional individuals be added to the Committee and that the current membership be polled to determine if they are still interested in participating. It was pointed out that several current members have retired or changed jobs.. It was suggested that there be more parental involvement on the committee. Suzann and Craig agreed to identify families that would be interested in participating. Additional suggestions include: someone from the State Museum Total Access Project, Barry Critchfield from Department of Mental Health, Gaye Clements from University Affiliated Programs(UAP), contacting Family Connections, a representative of the Usher Syndrome interest area, Cheryl Rhodes or Steve Rhodes (President of the of Association for the Deaf).

It was recommended that the Advisory Committee meet more frequently in order to provide ongoing advice and guidance to the project. January of 96 will be targeted for the next meeting.

Marianne Riggio indicated that she felt the meeting had gone well and the project was on the right course for the new funding period. She emphasized the importance of the role and the input of the members of the Advisory Committee in the success of the project.

Recommendations:

- Analyze Census data for trends and needs.
- Identify parents to serve on the State Advisory Committee.
- Review makeup of committee to insure all interests are represented.
- Investigate possibility of developing statewide assessment team.
- Contact DDSNUCSMS evaluation unit.

PROJECT SHARE PROPOSAL

SOUTH CAROLINA DEPARTMENT OF EDUCATION
Office of Programs for Exceptional Children
Rutledge Office Building
1429 Senate Street
Columbia, South Carolina 29201

Proposals are due by 5:00 pm on January 14, 1994

Project Identification: Services for Children with Deaf-Blindness Program

Title of Project: Regional Resource Model for Low Incidence Disabilities

Applicant: Project SHARE
Lee County School District (LEA)

Contact Person:
Name: Robert C. Scott, Jr. - Director SHARE
Address: Pee Dee Education Center
142-B South Dargan Street, Florence, SC 29503
Phone: (803) 669-3391

Federal ID Number: 57-0484604
CFDA Number: 84.025A

Type of Application (Check one)

Initial Application: X
Continuation Project:

Estimated Budget: \$ 127,600

Budget Period:
From: February 1, 1994 To: September 30, 1994
Project Period:
From: February 1, 1994 To: September 30, 1995

Authorized Signature
Robert C. Scott, Jr.
Authorized Agent Robert C. Scott, Jr.
Lee County School District Project Director
Date January 14, 1994 Date January 14, 1994

Return Original and three copies of completed application to:

Carolyn C. Knight
S.C. Department of Education
Office of Programs for Exceptional Children
Room 504
1429 Senate Street
Columbia, South Carolina 29201

NARRATIVE DESCRIPTION

BACKGROUND:

Project SHARE (Serving the Handicapped through Associated Regional Effort) was established in 1977 because the small, rural and remote school districts throughout the Pee Dee Region of South Carolina acknowledged that, individually, they were unable to provide effective programming for all students with low-incidence impairments-hearing impaired (HI), visually impaired (VI), and/or orthopedically impaired (OI). They had neither the students nor the means to provide adequate services within each district. This substantiated the need to provide a coordinated regional program.

An initial federal grant included publication of numerous guides detailing Project SHARE's structure. A bibliography of these documents is listed as Appendix A. An overview (User Guide) of these manuals is Appendix B. Since then, the basic structure has changed very little, but has expanded to serve students itinerantly. The Project SHARE region has also changed in size.

Project SHARE now services sixteen different school districts varying in size, location and wealth with a total number of 82,222 school-aged children. Within Project SHARE, seven itinerant personnel provide direct service to low-incidence impaired students in a multi district model. Two host districts in Florence and Darlington provide resource or self-contained program needs for HI, VI, and/or OI students. Project SHARE has a sixteen year proven track record in providing quality education through an established system for children with low-incidence impairments through a regional model. We will focus our funds on initiating a systems change effort in expanding the structure of our regional model to better include children with deaf/blindness.

PROPOSAL:

In this proposal we would like to change our current system for purposes of improved accessibility and quality of education within the Pee Dee Region for children and youth with deaf/blindness and their families. Secondly, we would like to create a manual detailing how to develop a region-wide system to better serve children with deaf/blindness and their families. At the present time, we lack reasonable accessibility to a variety of instructional options. We have a very inadequate child find system. Available professional and support personnel have not been trained in specific areas of the educational and other needs of the deaf/blind population. There have been no coordinated efforts to involve and educate parents of our students. We also need to determine the actual cost of educating children with deaf/blindness. Therefore, our objectives are as follows:

OBJECTIVE 1:

Establish two resource centers hereafter referred to as South and East. South would service Florence 3 - 5, Clarendon 1 - 3, Lee County, Sumter 2, and Williamsburg. It would be located in Lake City. East would service Marion 1 - 4, Dillon 1 - 3, and Marlboro. It would be located in Latta. (See Appendix C.)

RATIONALE:

This system's change objective is designed to build or increase the capacity of local education agencies (LEAs) to provide educational and related services in the least restrictive environments in compliance with state and federal guidelines. We need to increase parent partnership, community involvement, educational options, and above all, basic program accessibility. Distance is too great for everyone involved. Parents are more likely to take an active role in their child's education program if the educational site is within or near their own community. These resource centers will house parent training workshops, instructional and professional materials for educators, parents, and the community.

Activity 1: Coordinator will establish contact with agencies/persons comprising the Steering Committee and interagency council. The Steering Committee will include: Project Coordinator, Project Secretary, SHARE Representative, teacher representative, District Superintendents from Florence 3 and Dillon 3, Special Services Directors from Florence 3 and Dillon 3, Representatives from each of the following agencies: State Department of Education, South Carolina Commission for the Blind, South Carolina School for the Deaf and Blind, Baby Net, Vocational Rehabilitation, and Department of Mental Retardation. The interagency council will include the same representatives from the aforementioned agencies and the project coordinator.

Activity 2: Convene Steering Committee and interagency council which will

develop the project and its policies. This committee will meet at least monthly. The Project Coordinator will chair the meetings.

Activity 3: Project Coordinator and host district will agree upon a site for these centers.

Resource center should include the following:

- geographically centered
- easily accessible
- in close proximity to future school sites
- moderate size to accommodate groups of parents and professionals
- telephone line at each site

Activity 4: Provide transportation/reimbursement of traveling costs for:

personnel to and from sites/training/home visits

parents to/from medical

appointments/meetings/training

Project Coordinator to sites/meetings/training/home visits

Steering Committee/meetings/in-services

Training speakers to and from training

Activity 5: Identify candidates for training for itinerant and self-contained

teachers and teacher assistants.

Activity 6: Identify needs for supplementary adaptive aids and technology for

classrooms to recommend to districts for acquisition for future

classrooms.

OBJECTIVE 2:

Establish a child find system to ensure location, identification and evaluation of children with deaf/blindness ages 3 - 21.

RATIONALE:

Our present child find system is both formal and informal. We rely on teachers, special education coordinators, and parents in our school districts to refer new children with possible hearing, visual, or orthopedic impairments. We have created a Procedures and Referral form to assist districts. (See Appendix C.) This form has streamlined referring new low-incidence students with some success.

Secondly, through an informal tally of the 4 itinerant teachers, we have presently identified only six (6) children already being served in educational programs in the entire Pee Dee Region with both hearing and visual impairments. Not one of these students is listed on the State list for deaf/blind.

We are grossly under the national norm of two (2) children with deaf/blindness per 1000 students enrolled in our target geographical area. Obviously, this child find system is inadequate. Through these activities, we hope to improve this system.

Activity 1: Revise current referral procedures and referral form to:

- a. include children with deaf/blindness
- b. include additional districts and agencies within the target geographical area of this grant.
- c. increase clarification.

Activity 2: Share referral form and procedures with special education coordinators of member districts by project coordination.

Activity 3: Initiate communication with relevant agencies, organizations, and individuals having responsibility to deliver services to students with deaf/blindness for purposes of coordinating agency efforts and services

preventing duplication.

Activity 4: Maintain an ongoing interagency council through monthly meetings and weekly communication. Members would include representatives from agencies on Steering Committee and Project Coordinator.

Activity 5: Place already identified students on the State list for deaf/blind.

Activity 6: Disseminate information detailing Project SHARE program for servicing children with deaf/blindness and other low-incidence handicaps through informal and formal means such as newspapers and brochures, regional tv and radio, partnerships with and financial contributions from businesses.

OBJECTIVE 3:

Recruit and train all personnel in the characteristics of deaf/blind persons and the educational implications of this dual sensory impairment.

RATIONALE:

Most teachers are unaware of the characteristics and educational implications of deaf/blindness. There is a need for staff specifically trained for meeting the particular needs of the deaf/blind. This lack necessitates staff development for all professionals and classified personnel. There is a need for development in the areas of evaluation, instruction and program implementation, adaptive technology and related services.

Activity 1: During February and March recruit program coordinator. Advertise the position in educational periodicals, local and state newspapers, mail recruitment bulletin to universities with programs for the deaf/blind, Job Bank, and district office personnel in the Pee Dee area.

Activity 2: Recruit additional personnel during the months of March, April, and May to assist in the implementation of the program. A full-time administrative assistant should be hired by the coordinator as soon as possible. Itinerant teachers, teacher assistants, self-contained teachers can be secured for training.

Activity 3: Organize and provide staff development for all personnel involved in providing services to deaf/blind students prior to September 1, 1994.

This staff development should include some of the following areas:

- a. Identification and evaluation of students with a documented hearing and visual impairment.
- b. Skills and methods in teaching the deaf/blind.
- c. Methods for teaching language to the deaf/blind
- d. Teacher orientation to writing Individual Educational Programs and working with parents to set proper goals and objectives.

20h

- e. Provide teachers with input from various local, regional, and state agencies on the services they provide to students, parents, and teachers.
- f. Adaptive aid and technology training.
- g. Provide training and access to EduServe or comparable computer bulletin board for teachers.
- h. Life Skills
- i. Task Analysis
- j. Multi-handicapped
- k. Pre-school

Activity 4: Provide inservice for teacher assistants in methods and skills in dealing with the deaf/blind and other low-incidence impairments, classroom management skills, methods of positioning, and restraints for severe behavior problems.

Activity 5: Provide inservice for the project administrative assistant on the proper use of various forms and technology, etc., especially in completing an Individual Educational Program.

Activity 6: Provide current literature/periodicals for parents and professional staff.

Activity 7: Workshop participants will be compensated with a per diem amount of \$ See Budget.

OBJECTIVE 4:

Involve parents in the education of their children and inform them of the special needs of the deaf/blind.

RATIONALE:

Because the needs of children with deaf/blindness are so specialized and the numbers are so limited, parents need to be aware of the educational implications and take an active role in the education of their own child. In our experience as educators, we have found parents are often misinformed and uninformed regarding the special needs of their children. This training and support is designed to increase family participating in decision making and active involvement in all aspects of the intervention process.

- Activity 1: Inform parents of deaf/blind programs presently available through newspaper ads, media, brochures, presentations at PTO meetings, school district newsletters, home visits, etc.
- Activity 2: Provide workshops/presentations for parents on parenting skills and methods to assist their children to grow up in a positive environment. Instructional resources will be purchased and made available for parent use.
- Activity 3: Provide emotional support to the families of the deaf/blind by ongoing and facilitating family support groups, making home visits, frequent written and verbal communication, and on site contact person to field questions.
- Activity 4: Provide refreshments, baby sitters, toys for the children and parents during workshops, presentations, and meetings.
- Activity 5: Inform parents of the various agencies and services available on the local, regional, and state levels such as counseling services and parent organizations.

OBJECTIVE 5:

Collect expenditure data from other programs servicing children with deaf/blindness to determine the estimated cost of educating children with deaf/blindness in our area and to propose adjustments to state funding formula.

RATIONALE:

Owing to the ever increasing mandate that services for children with disabilities be provided within the least restrictive environment and owing to the new technologies which are being made available to meet the communication and instructional needs of children with sensory impairments, the State funding formula no longer meets the diverse needs of these unique children. The current funding weights were based on actual expenditures obtained many years ago from school districts with minimal services and less than adequate programs. There are no current expenditures data from programs where all the services needed are actually provided. We will collect such current data from established programs and propose adjustments to the State Department of Education.

- Activity 1: Project Coordinator will create budget sheets to send to a variety of programs which will include but not limited to the following information: monies spent by district for staffing and housing of students, supplementary aids, supplementary services, related services, transportation, parent and staff training, and other costs.
- Activity 2: Distribute budget sheet to appropriate sources for completion.
- Activity 3: Gather, compile, and interpret information received from appropriate sources.
- Activity 4: Generate reportable data.
- Activity 5: Disseminate information to State Department of Education, professional journals, interested states, colleges with deaf/blind programs. Helen Keller National Center, local, regional, state, federal, and international organizations.

Activity 6: Develop a manual detailing how to develop a region-wide system to better serve children with deaf/blindness and their families.

NEEDS ASSESSMENT

While Project SHARE has been serving children with low-incidence impairments successfully for 16 years, needs have been identified. These needs include decentralizing the Project SHARE structure to provide educational services closer to the students' home community, identifying students with deaf/blindness, providing teachers, staff, and parents with current information on the education of students with deaf/blindness, and disseminating information about Project SHARE services to others around the state.

Visually impaired students are being serviced in Florence and hearing impaired students are being served in Darlington for those needing a resource or self-contained educational setting. Our Pee Dee Region is so large that several students are being bussed over two hours each way to school. This is unacceptable. Not only does it make a very long day for the children, but it substantially interferes with parental involvement. Parents often do not participate in school assemblies, career days, open house, parent-teacher conferences, or PTA meetings because it is so far for them to drive. It may not be so difficult for some parents to be involved in their children's education if the child was educated closer to home.

Presently, Project SHARE has identified and is servicing only six (6) students with both visual and hearing impairments. None of these students are identified as children with deaf/blindness. According to national statistics, approximately two in 1000 students have deaf/blindness. In our region, there are 82,222 students. With these numbers we estimate there are 165 students with deaf/blindness. According to statistics, economic deprivation is one of the highest contributing causes of developmental disabilities. Because 21.6% of families in the Pee Dee Region are below the poverty level as compared to 11.9% for the entire State of South Carolina, our numbers should be even higher. We need to develop a child find system for children with deaf/blindness. Due to a lack of instructional options, the most likely scenarios we can expect to find in the rural and remote areas are: there are no teachers, no programs, and no services available so the child is placed in a residential setting far from his home and family, or the student is misplaced in the educational setting with little support until he or she ages out or drops out.

Project SHARE is proud of its enthusiastic professional staff. However, there is a need for them

to be trained in meeting the particular needs of the deaf/blind population. Through this grant we will provide teachers, staff, and parents with current information on deaf/blindness through workshops and inservices. We want to access expert sources for workshops through a computer bulletin board for satisfying additional staff questions.

We want to foster the philosophy that parents are our best partners. Because the needs of children with deaf/blindness are so specialized and the numbers are so limited, parents need to be aware of the educational implications and take a more active role in the education of their own child. The more a parent is involved, the better the child's needs are met. We want to offer parents support, relevant information.

Project SHARE will disseminate information about our program serving those with deaf/blindness to Federal, State, and local agencies and schools associated with low-incidence impairments. This could facilitate more appropriate identification of and subsequent service to previously unidentified students with deaf/blindness. By sharing information, all involved would be more educated in the special needs of children with deaf/blindness and of the increased options desired in our region. As the project progresses, additional needs will arise through formal and informal needs assessments and will be addressed accordingly. We plan to use state and local agencies to help us identify these infants, children, and youth in need of our services. These agencies, administrators, and teachers will help us develop a child find system and educational service structure and will guide us in coordinating the delivery and development of services where gaps exist.

STRATEGIES:

We will initiate communication with relevant agencies, organizations, and individuals having responsibility to deliver services to children with deaf/blindness for purposes of coordinating agency efforts and services. We will also maintain an ongoing interagency council through monthly meetings and regular communication. For discussion of strategies planned for identification, see Interagency Coordination Section.

INTERAGENCY COORDINATION

Project SHARE currently participates in an interagency network system through serving low-incidence students in 16 school districts of the Pee Dee Region in both itinerant and resource models. We also have enjoyed active cooperation with agencies including South Carolina Commission for the Blind, SCI-HI and Insight Programs of the South Carolina School for Deaf and Blind, South Carolina Department of Vocational Rehabilitation, McLeod Regional Medical Center, and South Carolina Department of Education.

Regarding this proposal, Project SHARE has already initiated communication with relevant agencies, organizations and individuals having responsibility to deliver services to deaf/blind population to inform them of our project and request letters of support. Presently, we have received letters expressing commitment from various school districts to provide support. (See attachments.) Verbal commitments have been received.

If funded, we will provide information on our project to selected relevant agencies and individuals and survey them for determining effectiveness of delivery systems for serving children with deaf/blindness. We will compile survey results and share them with selected relevant agencies and individuals. We will invite selected agencies and individuals to collaborate with Project SHARE in establishing a steering committee and ongoing Interagency Council. These selected agencies will be a representative body of school districts, agencies, and related persons.

Steering Committee and interagency council objectives would include:

1. Create informational material and activities for target groups (i.e. general public, parent groups, education/school-related community) to:
 - a. increase awareness of deaf/blindness and needs unique to deaf/blind persons.
 - b. outline services of the interagency council and Project SHARE's program for students with deaf/blindness.
 - c. encourage involvement in identifying and referring school-aged children with deaf/blindness in coordination with the interagency council.
2. Disseminate information and conduct activities at selected locations accessible to target groups.
3. Utilize media sources for additional information activities.

EVALUATION DESIGN

OBJECTIVE 1:

Establish two satellite programs.

1. Steering Committee and interagency council meetings will be held with Project Coordinator.
2. Steering Committee will develop project and policies.
3. A site will be established in these 2 geographical areas of the Pee Dee Region.
4. Through a Travel Request Form or Travel Reimbursement Form, all travel will be reimbursed according to Steering Committee guidelines.
5. Candidates for positions are named.
6. Documentation is produced of recommendations for supplementary adaptive aids and technology for classrooms for districts to acquire.

OBJECTIVE 2:

Establish a child find system.

1. Revision of current referral procedures and form will be created.
2. Special Education Coordinator will review new referral procedures and form.
3. Documentation of verbal and written communication with relevant agencies and organizations.
4. Project secretary maintains minutes of meetings of interagency council and Steering Committee.
5. Already identified students are on the State list for deaf/blind.
6. Documentation of dissemination of information.

OBJECTIVE 3:

Recruit and train staff.

1. Program Coordinator is approved by Pee Dee Education Center's Board of Directors on Mr. Scott's recommendation..
2. Additional personnel is hired.
3. Staff development will be held prior to September 1, 1994.
4. Inservice is held for all teacher assistants.
5. Project Administrative Assistant will receive inservice training on forms and technology for completing LEP's.
6. Current periodicals and literature is provided in the resource centers.
7. Participants of workshops are compensated.

OBJECTIVE 4:

Involve parents in the education of their children and inform them of the special needs of the deaf/blind.

1. Documentation that parents are informed of current deaf/blind programs presently available.
2. Parents receive workshops and training.
3. Family support group will be formulated. Home visits and written communication are documented.
4. Baby sitters, refreshment and toys are provided. Costs are documented.
5. Parents are informed of various agencies and services. This will be documented.

OBJECTIVE 5:

Collect expenditure data.

1. Budget sheets will be created.
2. All budget sheets will be distributed to appropriate sources.
3. Information received from appropriate sources will be gathered, compiled and interpreted.
4. Data will be written in a reportable form.
5. Documentation on dissemination of information.
6. A manual will be produced.

QUALITY OF KEY PERSONNEL

I. Deaf/Blind Project Coordinator

A. Job Description

Responsible for working as the coordinator of a recently received federal grant to develop a systems change for the purposes of improving accessibility and quality of comprehensive services within the Pee Dee Region of South Carolina for children and youth with deaf/blindness and their families.

B. Education Qualifications

1. Masters in Education in Administration and Supervision.
2. Minimum of 5 years teaching experience in Special Education.
3. Shown leadership capability.
4. Demonstrated ability to work with local, regional, and state agencies.
5. Demonstrated familiarity with current developments in dual-sensory education desired.
6. Ability to organize and administer preparations for workshops.
7. Enthusiastic team player and leader.

C. Duties

1. Cooperate with and oversee coordination of Steering Committee, Interagency council, other agencies, school districts, and parents.
2. Recruit and supervise training of staff.
3. Oversee deaf/blind operation in two resource centers.
4. Ensure that grant objectives are implemented.
5. Report monthly and chair meetings of the Steering Committee and Interagency Council. Interface periodically with other relevant agencies and individuals.
6. Write follow up grant for continuation of project.

II. Training

1. Attend all initial workshops.
2. Attend inservice workshops.

20r

C1

ASSURANCES

Note: Certain of these assurances may not be applicable to your project or program. If you have questions, please contact the South Carolina Department of Education (SDE).

As the duly authorized representative of the applicant, I certify that the applicant:

1. Has the legal authority to apply for State assistance, and the institutional, managerial and financial capability (including funds sufficient to pay the non-State share of project costs) to ensure proper planning, management and completion of the project described in this application.
2. Will give the SDE access to and the right to examine all records, books, papers, or documents related to the award and will establish a proper accounting system in accordance with generally accepted accounting standards or agency directives.
3. Will initiate and complete work within the applicable time frame after receipt of approval of the SDE.
4. Will not discriminate against any employee or applicant for employment because of race, color, religion, age, sex, national origin, or disability. Grantee will take affirmative action to ensure that applicants for employment and the employees are treated during employment, without regard to their race, color, religion, age, sex, national origin, or disability.
5. Will comply with the Ethics, Government Accountability, and Campaign Reform Act, S.C. Code Ann. Sections 2-17-10 et. seq. and Sections 8-13-100 et. seq.
6. Will comply with the Drug Free Workplace Act, S.C. Code Ann. Sections 44-107-10 et. seq. if the amount of this award is \$50,000 or more.
7. Will comply with audit requirements as prescribed by OMB Circular A-128 or OMB Circular A-133 as appropriate.

JUSTIFICATION OF BUDGET EXPENDITURES

OBJECTIVE CLASS CATEGORIES

I. Personnel

- A. Coordinator: A person will be hired and placed at the SHARE office in the Pee Dee Education Center. The Coordinator's salary will be based on the LEA's salary schedule for 12 month employees.

The minimum qualifications for the Coordinator will be:

- a. Master's Degree
- b. Shown leadership capability.
- c. Familiarity with current developments in dual-sensory education.
- d. Five years teaching experience with low-incidence students desirable.

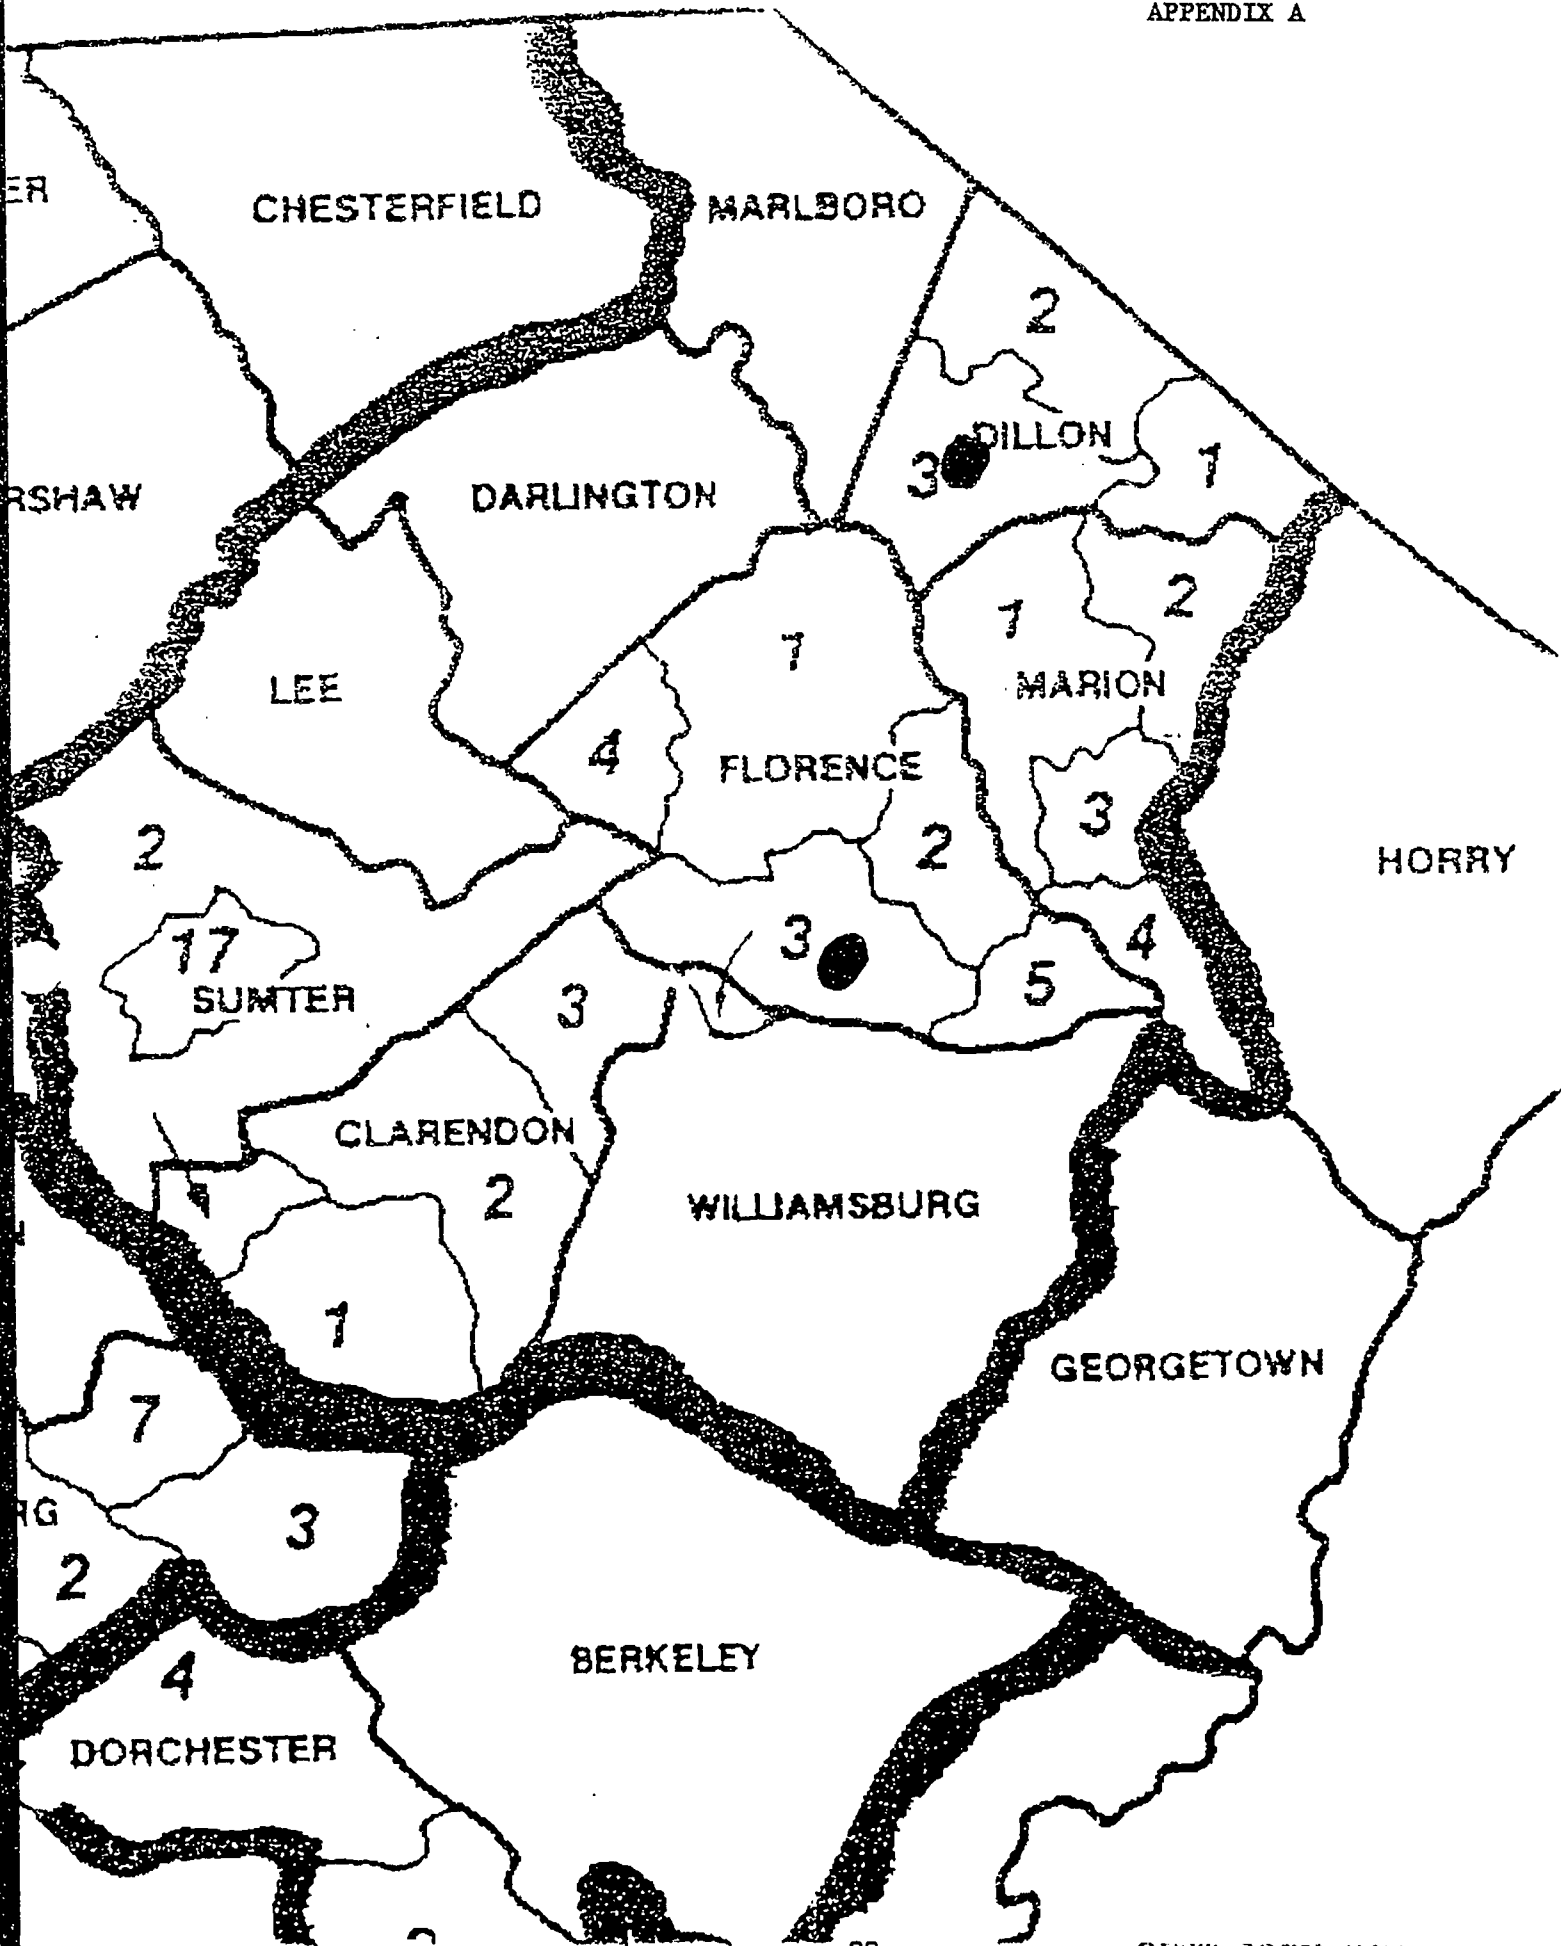

- B. Administrative Assistant: \$20,000 plus approximately \$8,000 fringe benefits

- a. Computer knowledgeable
- b. Good people skills
- c. Excellent organizational skills
- d. Willingness to travel to centers

- II. Fringe Benefits - \$10,538 (health, dental, and retirement)

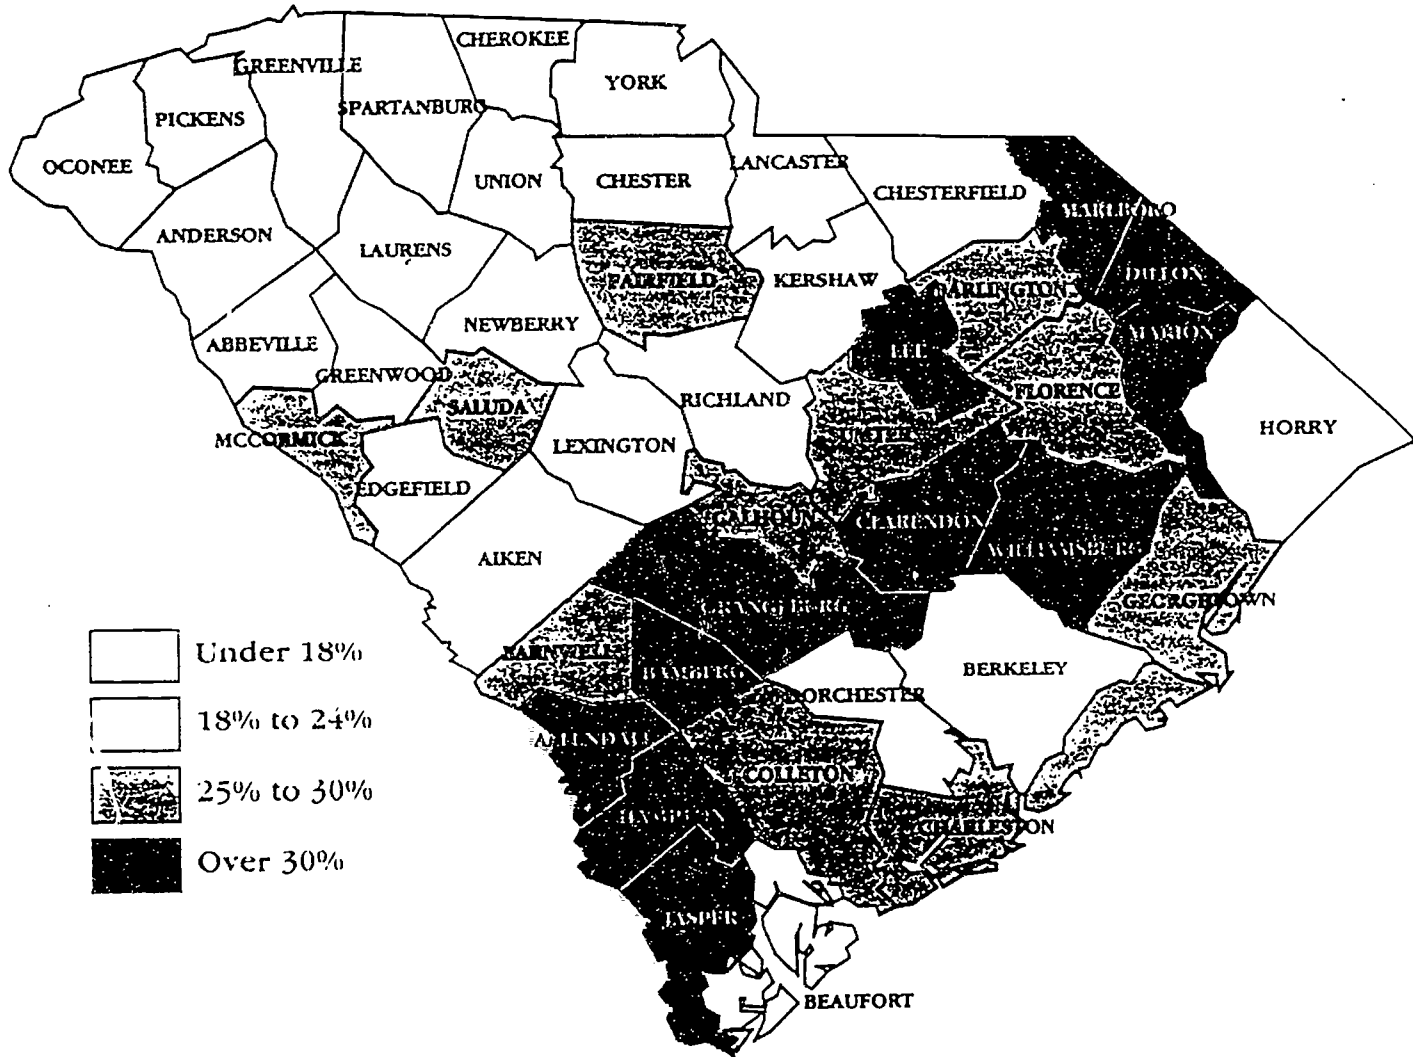

III. Travel

- a. Coordinator - \$8,000 - Provide transportation/reimbursement of traveling costs for:
travel to and from centers, schools, homes, Steering Committee meetings, state, regional, and national meetings or workshops.
- b. Objective 1 - Activity 4 - \$2,000: Provide transportation/reimbursement of traveling costs for:
personnel to and from sites/training/home visits
Steering Committee to and from meetings/in-services

Project SHARE
Post Office Box 829
Florence, South Carolina 29503

Dear Mr. Scott:

I applaud your work in leading our organization of Project SHARE to expand services in this region for improvement of the scope and quality to children with low-incident handicapping conditions. We heartily endorse the concept of the expansion of local services for deaf/blind children/youth and their families for improved access through the proposed satellite programs.

You can count on Clarendon District One and our personnel for support as we work together to enhance needed services to our special children.

Sincerely,

Milton Marley, Ph.D.

Dear Bob,

Dillon School District 3 (Latta) wholeheartedly supports the satellite program concept to increase the access to and improve the quality of comprehensive services within the Pee Dee Region for deaf/blind children and their families. We support a proposal as such by Project S.H.A.R.F. for submission to the State Department of Education.

Our district additionally could physically support such a need of building space in as much as we have a four classroom pod kindergarten building not being used now. This has occurred because of recent restructuring of our schools/grades. This building is modern with all necessary access features and there are no plans for permanent use of these rooms by the district in our ten year educational plan. Furthermore, the building has its own playground and is directly beside our administrative offices which would provide for excellent monitoring.

Sincerely,

John M. Kirby
Superintendent

Dear Bob,

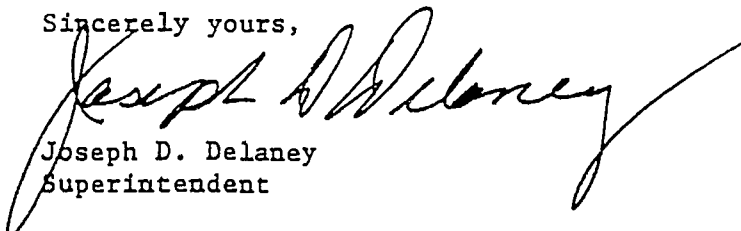

On behalf of the School District of Marlboro County, I am honored to write in support of your grant application to provide services for children with deaf-blindness afflictions.

Marlboro County cannot provide these services without financial assistance, such as that provided by this grant. We have a large number of students who would also qualify for services in a consortium-type agreement that would be more cost-effective for other districts in the Pee Dee Region like Marlboro County.

We will be happy to cooperate in any way to provide additional information and you have our pledge to work with the grant staff to properly implement any approved programs.

Thank you for your leadership in this exciting program.

Sincerely yours,

Joseph D. Delaney
Superintendent

Serving Children & Youth with Deaf-Blindness

DEAF-BLINDNESS

Deaf-blindness is a combination of vision and hearing loss, not necessarily complete deafness and complete blindness. There is a wide range of thinking and developmental ability among deaf-blind individuals who are gifted to profoundly multiple disabled. Deaf-blindness creates additional problems in the areas of mobility and communication, as well.

Estimates indicate that there are approximately 40,000 people in the United States who are deaf/blind. A study by Teaching Research Division at Western Oregon State College has identified over 5,000 children and youth. It is estimated that this number could be as high as 11,000. It is generally believed that dual sensory impairment occurs in three of 100,000 births. There are many causes of deaf-blindness; Rubella, CHARGE Association, Usher's Syndrome, genetic disorders, accident and illness are some of the more common ones.

Federal legislation defines children with deaf-blindness as individuals between the ages of birth and 21 years of age who have "auditory and visual impairments, the combination of which creates such severe communication and other developmental and learning needs that they cannot be appropriately educated without special education and related services, beyond those that would be provided solely for children with hearing impairments, visual impairments, or severe disabilities, to address their educational needs due to those concurrent disabilities."

Individuals who are deaf-blind need early intervention and personal attention to stimulate their understanding and interest in the world around them. The information that most children pick-up naturally must be deliberately introduced to children with dual sensory impairments.

Communication and mobility are often the most affected areas of life for a person with deaf-blindness causing feelings of isolation and loneliness. Development of compensatory skills can help bridge this gap. Training and instructional strategies are available to parents and educators relative to communication and mobility.

Adapted from Deaf-blindness: A Fact Sheet, Gallaudet University

The information contained in this fact sheet is from California Deaf-Blind Services. The purpose of the fact sheet is to give general information on a specific topic. More specific information for an individual student can be provided through individualized technical assistance by contacting Suzann Long, Coordinator of LID at the Pee Dee Education Center, (803)669-3391. The fact sheet is a starting point for further information.

"EDUCATION CAN NOT EXCEED OUR EXPERIENCE," MARK TWAIN

We as educators are faced with new challenges and opportunities as we continue to provide appropriate educational programs for individuals with unique abilities. The Low Incidence Disabilities Grant has provided the Pee Dee Region the opportunity to enhance the education for students with deaf-blindness - Linking Individuals with Destinations - LID.

These unique individuals are an extremely low prevalence disability group with highly specialized instructional needs. There is an alarming shortage of qualified personnel to serve these students. The students' abilities are all different.

A concern for many school districts is identifying and providing appropriate education for these students. Generally few students per district, a lack of trained teachers, and limited resources affect options for educational settings.

The Pee Dee Education Center is a resource center for training, supporting, and providing materials for the parents and school districts of deaf-blind students. Based on the success of the Pee Dee Education Center Consortium, districts will receive assistance in developing a similar consortium to meet the educational needs of the deaf-blind students.

Throughout the nation, education for students of unique abilities has proven to be costly and in many instances inappropriate. The support for families has been limited and inconsistent. Too often the disability has become the focus of educational placement with the lack of knowledge and understanding of students' abilities.

Support from the LID Grant allows districts to receive services from the Pee Dee Education Center. These services include:

- I. Staff Development
- II. Technical Assistance
 1. Assist in assessments, evaluations, and students' IEPs
 2. Observation of teachers and students
 3. Demonstrative teaching techniques
- III. Indirect services
 1. Teacher consulting
 2. In-service training
 3. Collaborative teaming and advocacy for high quality services
- IV. Parent and family training and support

LID - LOW INCIDENCE DISABILITIES

Look
Initiate
Discover

A *consortium* is an agreement and a partnership of several school districts and/or agencies joining together in a common goal.

**LOOK and you can see the unique abilities of
the
deaf-blind student . . .**

LOOK

- ▶ How many students are now being placed in programs that are not set-up to address specialized needs?
- ▶ How many teachers on staff have been trained to assist and plan programs to meet the needs of students who are deaf-blind?
- ▶ How much in-service training is provided for staff working with students who have vision and hearing impairments?
- ▶ Has the district provided a consistent and supportive parent and family program?
- ▶ Are the behaviors of students who have dual sensory impairments understood?
- ▶ Does the school staff understand and utilize different communication modes?
- ▶ Are the Individual Education Program (IEP) goals relevant to the students developing functional life skills?

Many school districts are now addressing these questions. These students are not deaf with vision impairments, nor are they blind with hearing impairments. A dual sensory impaired student requires the specialized training and assessment abilities of all team members. To make the best use of the qualified teachers who do exist, local school districts must collaborate to meet the unique abilities of students who are deaf-blind. Effective educational programs for these students require instructional staff who understand the impact of deaf-blindness on learning, have skills in deaf-blind communication techniques, and have skill in orientation and mobility instruction. These students' exceptional learning needs must be addressed by those with specialized training.

A consortium of several districts can train staff, assess students, and provide family support in an economical and quality program. It is most difficult for each district to service these students in a systematic and consistent environment alone. A collaborative plan can be productive for all.

Together we can seek solutions which can maximize the use of available resources at the most reasonable costs.

**INITIATE a program that will link all
individuals with destination for
functional living . . .**

95

21J

INITIATE

A consortium comes together through a mutual concern, interest, and common goal.

It is an agreement among districts to provide quality teachers, programs, related services, family support, and a continuum of education for the students. One district can initiate an educational bond by calling neighboring districts to discuss the educational assessments, IEP goals, and classroom placement for students now being served. This contact can lead to a formal agreement. The participating districts write policies, procedures, and membership regulations.

A formalized consortium should appoint a person(s) to serve as a liaison or chairperson to coordinate staff, in-service trainings, and resources. The responsibilities of this person is relevant to the service delivery plan the consortium chooses.

The delivery services will be decided by the districts' individual schools, and/or agencies as a member of a consortium. This service may include a cluster school that consists of centrally located schools - elementary, junior high-middle, high school, and vocational. The cluster school provides a continuum of services throughout the student's education years and the consolidation of those students who are dual sensory impaired. This delivery service will effectively utilize trained personnel, special equipment, materials, and support. This service provides sensory impaired students the opportunity to interact with fellow schoolmates who are sensory impaired and who are not sensory impaired.

A planning/training resource center is another option for a delivery service. The resource center houses specialized staff and materials for training and support to meet the students' unique needs and abilities. An update and review of achievements is a necessary component of the educational goals. The resource center will be available for staff and parents.

School districts' decide which delivery service and the appropriate placement of the student who is deaf-blind. These districts join together for teacher training, resource material, and/or special equipment to development the unique communication mode of the student. These students' functional and educational potentials are often assessed as underachievers. Continual evaluations and program adaptations are a must for these students.

To guide, assist, and support the staff, a team of individuals is selected to serve as a resource, mediator, consultant, and steward. This team is a vital link to the program. It is a representation of professionals from the districts, state agencies, local agencies, ophthalmologists, optometrists, audiologists, parents, early interventionists, and others serving sensory impaired individuals. The number will be decided by the consortium.

Individual members **must** be a **team player** who --

1. understands deaf-blindness
2. is committed to providing a program appropriate to meet the complicated needs of these students

3. has a knowledge of the abilities of these students
4. understands the inseparable education of both student and family
5. anticipates the success of these students

As a member of a consortium, districts will multiply resources, increase staff preparations, provide for a continuing parent support system, and be a part of local and state professionals who are knowledgeable of deaf-blind needs. The students will be receiving the necessary training to develop their skills to be functional individuals. Specialized training for personnel will be continuously provided. Educational costs will be minimized for **all**.

As districts begin to LOOK - INITIATE -
they will DISCOVER . . .

DISCOVER - How to Link Individuals with Destinations.

Many districts are now serving these students who are deaf-blind in other existing programs. The limited number of trained individuals has often placed these students in programs for students with multiple disabilities, severely mental disabilities, or emotional disabilities. The deaf-blind student is one who is most often misunderstood through assessments, placements, and educational goals. The inability to see and hear has given the student little communication and mobility in the environment. The behaviors of self-stimulation and frustration are only characteristics from the limited use of vision and hearing. These characteristics are often misunderstood as the limited ability of these students. These characteristics are merely learned responses to an insecure and unidentifiable world.

The cost of education, the unique abilities and special needs of students, and the limited availability of specialized, trained staff challenge you more than ever before. As a member of a consortium, each district/agency will be able to provide trained staff, appropriate assessments, parent/family support, community and agency cooperations, and functional individuals who are dual sensory impaired.

Education is not a means to an end. It is a process of learning, growing, and functioning. It is an interrelationship of all individuals with the world. It is the ability to see that which is unseen and to hear that which is unheard. Students' rights, student crime,

family dysfunction, and social pressures are just a few of the added responsibilities of the 21st Century educator. Support and training are necessary elements for all models of service. There is no one way that works. A multi-district/agency effort provides the deaf-blind students a total developmental, functional, and successful program.

L I F T

It has been said "Parenting is not for Cowards." Being a parent is a most rewarding, exciting, and a non-stop journey of human perseverance. No other title requires so much of individuals, and yet is acquired with little or no preparation.

Parents of children who are dual-sensory impaired are bestowed with uncertainty, insecurity, and a vast emptiness of unanswered questions. So often we, as professionals, are quick to demand, require, and judge what these parents "should" do to help this complex bundle of chaos. With the special needs of these children, come special needs and support for the family.

All parents want the best for their children. All parents want their children to learn to be independent and happy. These families are the primary care providers. Instead of telling parents what they need to do or should have done, let's work with families to learn what we can do to provide the opportunity for this child to communicate and respond to the family. Each step for this child who is deaf-blind is a slow, but a major accomplishment.

Together families can see this child of unique abilities. Together these families will learn the development of this child is not a textbook of developmental sequences. This child cannot be expected, nor can be limited to perceive the world as a child with sight and hearing. We (educators, service agencies, and families) can link these individuals to destinations.

"Milestones for these children are irrelevant because their developmental route may be 'cross-country.' A milestone does not tell you if you are on the best road, but simply

how far you have come or how far you have to go. Too often milestones have been confused with destinations.", A Mervyn Fox, M.B, B.S., F.R.C.P., D.C.H., Associate Professor of Peadiatrics - The University of Western Ontario.

To provide parents with resources, new ideas, and a word of encouragement the Low Incidence Disabilites grant housed at the Pee Dee Education Center will have a quarterly newsletter, Linking Individuals, Families, Teachers (LIFT).

Districts, teachers, and agencies are all encouraged to contribute information to be included in the newsletter.

October 3, 1994

Ms. Stiney Gardner
Special Education Coordinator
Williamsburg County School District
416 Lexington Avenue
Kingstree, SC 29151

Dear Ms. Gardner:

As we discussed on the phone last week, Cathy Browder, Consultant for the Deafblind Program, will be assisting in Mrs. Butler's and Mrs. Nelson's classes on the following dates:

Monday, October 17, 1994
Friday, October 28, 1994
Friday, November 11, 1994
Wednesday, November 30, 1994
Friday, December 9, 1994

During Cathy's visits, she will assist the teachers in setting up an activity based curriculum and arrange the classrooms so there is maximum stimulation for the students with deafblindness. If you have any questions regarding Cathy's role, etc., please call me at 669-3391.

Sincerely,

Ellen J. Mackie, Coordinator
Low Incidence Disabilities

DEAF-BLIND AWARENESS CONFERENCE

September 17 - 19

The Conference met my expectations?	52	Yes	0	No
The information provided will help me with my daily responsibilities?	49	Yes	0	No
The conference was well planned and organized?	52	Yes	0	No
I would like to see more training opportunities related to the deaf-blind child?	52	Yes	0	No

<i>Please mark your appropriate response:</i>	Excellent		Average		Poor
	1	2	3	4	5
WHO IS THE DEAF-BLIND CHILD (Blaha)	36	13	2	0	0
COMMUNICATION ISSUES (Blaha)	39	11	2	0	0
FUNCTIONAL VISION (Efron)	39	10	2	0	0
TRANSITION (Steveley)	16	24	8	0	0
UNDERSTANDING BEHAVIORS (Glenn)	33	13	4	1	0
Overall, I would rate this conference as:	36	15	1	0	0

Comments:

- ◆ As a new person in this state and new to deaf-blind, I would have liked an opportunity to “formally mingle” a little more with maybe a little more social structure to meet more people - I’m not as out-going as I should be when I am alone! But the information was “superb” and ideal for someone starting from scratch. I am taking back so much - I just hope I can spread it around as effectively!!! My needs were met.
- ◆ Excellent! I really learned a lot. Please continue the good work which you have provided during this conference. Excellent team work and personalities.
- ◆ Extremely well thought out and executed. Speakers were excellent, facilities were great!

Deaf-Blind Awareness Conference Survey Results

- ◆ As a VR counselor (Adult Care Services), I continue to have a greater appreciation for individual educators who teach my clients as children. What they provide to my clients as children helps me in providing services to them as adults. Thank you.
- ◆ Great speakers! Look forward to next year's 2nd Annual. Great contact information! Thanks!
- ◆ Good, informative speakers and nice accommodations, well-planned..let's do another one.
- ◆ Tremendous conference--thanks to everyone who helped get this together.
- ◆ I enjoyed the conference very much. Also, I would like to participate in any future conferences and/or trainings.
- ◆ Well organized--appreciate being kept on schedule. Hand-out and materials are great--Keep them coming.
- ◆ The accommodations were excellent and all information will be useful.
- ◆ Very informative--in future please stick to schedule.
- ◆ Bravo!!! Encore-encore-such a well organized Awareness workshop on deaf-blindness. Presenters were superb and brought excellent first-hand knowledge and expertise to participants. Thanks for linking us into this unique and special network. Looking forward to going back and applying new awareness. Great accommodations!
- ◆ The conference met its objective of making me aware of the problems of the deaf-blind.
- ◆ Excellent conference, location was great, staying on time and task was great, the presenters were well informed and able to get their message over in an understandable way. Looking forward to this kind of conference again to inform some more folks from our school district.
- ◆ As a new director of special services, the awareness conference was an eye-opener as well as informative. I anxiously await the next conference as well as newsletter and any information that is disseminated through the center.
- ◆ Excellent.
- ◆ Thank you for giving me the opportunity to expand horizons, open new doors of learning, to network out with other agencies (need CRS, Babynet too). To clarify purpose and leaving with a better awareness of deaf-blind and thanking you for opportunity to wake up in a.m. and experience a most beautiful sunrise. Very organized, wonderful accommodations, will be looking forward to future training.
- ◆ More training please.
- ◆ Very informative! The Deaf-Blind Awareness Conference needs to be a yearly event. Always, more training needed.
- ◆ Thanks for the opportunity to attend! I am new to the field and found much helpful information in this conference. The speakers were excellent. Food and lodging was great also.
- ◆ As a service coordinator for M.R. population 5-death, the issues addressed will help me better meet the needs of individuals I serve. I believe this would benefit others who have my same position with disabilities boards.
- ◆ I enjoyed the part I attended very much. Should have another one soon.
- ◆ I am going away with ideas of how to work with a new student. Thank you.
- ◆ Wonderful opportunity to meet people from many school districts and agencies statewide.
- ◆ Thank you--the sessions were wonderful as were the accommodations.

Deaf-Blind Awareness Conference
Survey Results

- ◆ Excellent conference. Would have liked to hear more from Steveley and Plaha, especially Steveley.
- ◆ The sessions were very informative.
- ◆ Very well planned, excellent.
- ◆ Good location/facilities, good time of year, next conference could we get some technology information?
- ◆ Very informative.
- ◆ Very interesting and informative!
- ◆ I would love to see another conference with more on communications issues and include more techniques. Also more on understanding behaviors. Efron's part on Functional Vision was very informative. I can't wait until the next one. I love this site also.
- ◆ Most speakers seem to go over time limits--still uncertain of level definitions--would be helpful to have copies--conference did a good job raising awareness of issues in identifying and education of deaf-blind students; will take a closer look at who identify as PMH vs DB.
- ◆ Would like to see a conference on Usher's Syndrome for hearing impaired teachers.

SUBJECT: Proceedings of Subcommittee, State Advisory Committee for Services to
Children and Youth Who Are Deaf-Blind

DATE: January 11, 1995

The subcommittee of the State Advisory Committee for Services to Children and Youth with Deaf-Blindness to address the development of a Plan of Action for an Instructional Materials and Technology Resource Center met January 9, to review existing services in the state and to develop a plan to present to the State Advisory Committee. Please find attached a summary of the proceedings of the meeting.

Since several individuals were unable to attend the meeting, it was determined that a brief survey of existing services should be conducted to capture information about services currently available in the state in the area of instructional materials and technology for students with deaf-blindness and other low incidence disabilities. It would be very helpful if you would complete this survey and return it to this office by **January 27, 1995**.

Thank you for your assistance with this project and I appreciate your continued interest in improving services for children and youth with deaf-blindness in the State.

Proceedings of Subcommittee Meeting
Advisory Committee for Services for Children
and Youth with Deaf-Blindness

January 9, 1995

Members in attendance: Dr. Dennis Cates, Mr. Jon Dubose, Ms. Ellen Mackie, Ms. Cindy Clark, and Ms. Jean Schwartz

Members absent: Mr. Jerry Francis, Ms. Brenda Shirley, and Dr. Susan White

One component of the 300.11 grant, Services for Children and Youth with Deaf-Blindness, is for the State Advisory Committee to develop a Plan of Action for an Instructional Materials/Technology Resource Center to support the regional initiatives for serving children and youth with deaf-blindness and other low incidence disabilities.

The subcommittee met and reviewed the data collected relative to Instructional Materials and Technology Resource Centers throughout the United States. Twenty three states responded to the survey and provided information on staffing, budgets, population served, and organizational structure. This information indicates that for the states responding, resource centers are in place to provide textbooks, instructional materials and technology to blind and visually impaired students and in some states students with low incidence disabilities including deaf-blindness. The issue to be considered relates to the need for such a facility in South Carolina and the structure of such a center.

The individuals representing agencies involved in the delivery of technology services for individuals with disabilities described the current services available. Ellen Mackie reported the needs of students for technology and instructional materials identified in the Project SHARE area. A brief summary of the services and needs is included for your information.

The South Carolina Assistive Technology Project provides recommendations relative to assistive devices to families and school districts on request. They have regional offices in Florence, and Greenville and are planning another office for the Low Country. The equipment is housed in the central office in Columbia. Additionally, the project is providing summer institutes in the use of assistive devices for teachers.

The University of South Carolina operates the Center for Excellence within the ETC and provides training to teachers relative to assistive technology for students with disabilities.

The needs identified, so far, by the Project Share Deaf-Blind project relate primarily to low tech devices.

Needs for a more effective system to support the regions in delivery of instructional materials and assistive devices to students who are deaf-blind were identified:

a facility to house, inventory and recycle assistive devices that are no longer being used by a district;

equipment and assistive technology to be available on a loan basis;

trained personnel within the districts or regions to assess student needs and assistive devices;

a system for providing funds for maintenance of equipment that is purchased by local school districts;

a system for fiscal coordination among agencies in recycling devices no longer needed in an agency/district;

training for teachers working with students with deaf-blindness regarding the use and production of low tech devices;

more resources for purchase of equipment\devices for individuals.

It was the consensus of the subcommittee that some systems relative to assistive technology are currently in place within the state and that it would be appropriate to investigate available resources prior to developing recommendations to the State Advisory Committee regarding the development of a Plan of Action for an Instructional Materials/Technology Resource Center.

It was determined that information is needed regarding services of the School for the Deaf and Blind and the Commission for the Blind relative to provision of instructional materials and technology and the recommendations of the Instructional Technology Task Force of the Department of Education. These programs will be surveyed regarding the assistive technology services in place or planned. The Subcommittee will review the information, identify any gaps, and develop recommendations for the State Deaf-Blind Advisory Committee at the next meeting.

Other Agencies identified by the group to be surveyed regarding provision of instructional materials and technology include:

USC Speech and Hearing Clinic
DDSN
Medicaid
CRS

At this meeting the subcommittee addressed instructional technology and assistive devices rather than the other instructional materials needs as the Department of Education is seeking input from the field about needs related to instructional materials for students who are blind and visually impaired and deaf-blind. This information will be provided to the subcommittee when available.

A meeting will be scheduled in February to review the information collected regarding existing resources and to develop recommendations for the State Advisory Committee for Children and youth who are Deaf-Blind.

State Superintendent of Education

MEMORANDUM

TO: Dr. Dennis Cates, Mr. Jon Dubose, Mr. Jerry Francis,
Ms. Brenda Shirley, Ms. Ellen Mackie, Ms. Cindy Clark,
Ms. Jean Schwartz, Dr. Susan Smith White

FROM: Suzanne G. Swaffield *Swaffield*
Education Associate

SUBJECT: Plan for Developing Statewide Instructional Materials and Technology Resource
Center for Children with Deaf-Blindness

DATE: December 13, 1994

The South Carolina Department of Education established a Task Force in 1992 to provide input to the Agency on development and implementation of services for children and youth with deaf-blindness, funded through a grant from the United States Department of Education. As you may recall, it was decided at the June Task Force Meeting, that a subcommittee of the Task Force would address the issue of developing a Plan of Action for establishing an instructional materials/technology resource center to support the regional service delivery system for serving children and youth with deaf-blindness and other low incidence disabilities.

I am requesting that you serve on this subcommittee to assist with the development of the plan of action.

The Task Force requested that a survey be conducted of other states relative to the mechanisms in place for providing expensive and difficult to obtain specialized instructional materials and assistive technology for this population. The survey has been completed.

There will be a meeting of the subcommittee on January 9, 1995 at 10:00 PM in room 310 of the Rutledge Building, 1429 Senate Street to review the results of the survey and to develop initiatives to complete the Action Planning Process with the full Task Force.

Please find attached, the information from the grant proposal about the activities related to the Plan of Action for the statewide Instructional Materials and Technology Resource Center. Please let me know if you have any questions or will be unable to attend this meeting. You can reach me at 803-734-8222.

Thank you for your continued interest in the Task Force activities and services for children and youth with deaf-blindness.

- loan of equipment (some)
- funding
- storage
- other, please describe _____

Please add any additional comments that may be helpful in determining a plan for assuring appropriate support in the area of instructional materials and technology for children and youth who are deaf-blind.

The agency has an Assistive Devices Center on the main campus with samples of assistive devices on display.

The agency is in the midst of a capital campaign to enhance the availability of technology (primarily computers) for students that will be centered around the Learning Resource Center (LRC). Construction of the LRC is scheduled to begin in March of this year with completion in early 1996. The intent is for this facility to be a state-wide resource for those who serve the sensory disabled.
