ABSTRACT

In 1989, the Online Computer Library Center (OCLC) introduced a microcomputer-based evaluation tool called the Collection Analysis CD. In 1993, the SUNY Stony Brook Libraries used this tool to measure its collections against those of 27 Association of Research Libraries (ARL) peer libraries and of a "mythical" peer group. In 1996, the libraries of the State University of New York (SUNY) at Stony Brook used this CD-ROM to compare its collections to those of the SUNY University Center libraries at Albany, Binghamton, and Buffalo. Because these four libraries have formed a consortium for resource sharing and cooperative collection development, collection evaluation is seen as the first step toward drafting resource sharing agreements and assigning collection responsibilities. Five tables provide lists of subdivisions of ARL member institutions, a list of large academic libraries, and a list of priority academic programs at SUNY Stony Brook. Monograph purchases of each of the four consortium libraries are illustrated with 42 bar graphs. The consortium's total acquisitions are compared against totals from ARL members and large academic libraries; then the purchases of each individual library in various priority programs and other subject areas are compared to purchases in the same areas made by the other three members of the consortium. Data collectors found that while Stony Brook's capacity for acquisition did not compare favorably to the average ARL member, it was only slightly above or below Albany, Binghamton, and Buffalo in most disciplines. ABSTRACT

In 1989, the Online Computer Library Center (OCLC) introduced a microcomputer-based evaluation tool, the Collection Analysis CD (CACD). The tool is marketed and supported by AMIGOS, the independent OCLC network serving the southwestern United States. Since its introduction, the OCLC/AMIGOS CACD has been used by a number of individual libraries to measure their collections against those of peer libraries. In 1993, the SUNY Stony Brook Libraries used this tool to measure its collections against those of 27 Association of Research Libraries (ARL) peer libraries and of a "mythical" peer group. [1]

In 1996, the SUNY Stony Brook Libraries used the OCLC/AMIGOS CACD to compare its collections to those of the three other SUNY University Center Libraries (Albany, Binghamton, and Buffalo). This report presents the results of the 1996 OCLC/AMIGOS study.

INTRODUCTION

Libraries everywhere are facing the challenges of budgetary reductions, rapidly rising costs, reduced staffing, increased complexity, escalating user demands, rapid technological change, and increased demands for accountability from parent institutions. In response to these challenges, the libraries of the four graduate University Centers of the State University of New York (SUNY) formed a consortium for resource sharing and cooperative collection development.

Collection evaluation is the first step toward drafting resource sharing agreements and assigning collection responsibilities. The members of the SUNY consortium agreed to evaluate the overall strengths and weaknesses of their collections. The libraries identified overlap and evaluated use of their journal collections in 1991-92; in 1996 they evaluated and compared the monographic collections by using the OCLC/AMIGOS Collection Analysis CD.

BACKGROUND: SUNY CENTERS' COOPERATION

Created in 1948, the State University of New York (SUNY) is the youngest and largest state university system in the United States. SUNY evolved from a mixture of teachers colleges, private institutions, and technical schools into a complex public system. SUNY currently enrolls 391,706 students at 29 state-operated campuses that consist of 4 doctoral granting university centers (2 with medical schools), 13 liberal arts colleges, 3 specialized colleges, 2 stand-alone medical schools, 6 two-year colleges of technology and agriculture, and 1 upper division institute of technology. SUNY also encompasses 35 community colleges and 5 statutory colleges.

The University Centers (SUNY Albany, SUNY Binghamton, SUNY Buffalo, and SUNY Stony Brook) are doctoral granting institutions with distinct academic strengths and research missions. The combined holdings of their libraries totals approximately 8,190,176 volumes. The distance between the Centers (100 to 500 miles) makes it a challenge for the libraries to cooperate or even to bring staff together to discuss cooperation. In 1989, the directors of the four University Center libraries developed a set of shared goals and published them in a January 1990 document, Strategic Directions for Cooperation Among the SUNY University Center Libraries, that has served as the framework for the cooperative projects. The document includes the principles the directors agreed upon and their philosophical commitment to work together to articulate achievable goals. [2] The document also enabled the four Centers to secure outside funding from the Council on Library

Resources (CLR) for several projects that provided practical experience and the basis for further cooperation. [3]

In 1991-92 four studies were undertaken to provide supporting data for planning and policy development. Two studies focused on the libraries' journal collections; the others examined interlibrary loan and faculty need for electronic information resources. The final report, Policy Issues in Cooperative Collection Development and Resource Sharing, and articles by SUNY Center librarians [4] provide detailed information on each study. This report presents the results of a 1996 study of the monograph collections.

EVALUATION OF THE MONOGRAPH COLLECTIONS

Until 1996, little effort had been devoted to evaluation of the monograph collections of the four SUNY University Center libraries. In the late 1970s Glyn Evans and others used OCLC archival tapes to conduct overlap studies of all SUNY libraries. [5] In 1993 Dole used the OCLC/AMIGOS CACD to evaluate SUNY Stony Brook's monograph collection against the collections of a set of 27 Association of Research Libraries peer libraries and of a "mythical" peer group. [6] The evaluation was conducted to investigate whether the Stony Brook libraries' collecting patterns matched University priorities.

Although there is a growing body of literature on overlap studies [7] and electronic collection analysis tools [8] such as the OCLC/AMIGOS CACD, there is little published on the use of the OCLC/AMIGOS CACD in evaluating consortium holdings. The literature contains no serious studies on the use of the OCLC/AMIGOS CACD in comparing the collections of a consortium with holdings the size of the SUNY University Centers for the purpose of cooperative collection development.

SUNY CENTERS COOPERATIVE COLLECTION DEVELOPMENT

Collection Development Officers of the four University Centers meet on a regular basis to plan and conduct resource sharing and cooperative collection development projects. In May 1995, the group formalized its structure and goals as follows:

1. Membership includes the collection development officer from each institution.
2. A volunteer leader is selected by the consensus of the group. This position rotates. Each term is a fiscal year only and leaders may not serve consecutive terms.
3. A recorder for the group is selected in the same way and follows the same term.

The group began discussing methods for evaluation of the monographic collections in September 1994. They discussed the Conspectus, a collection analysis instrument developed in the late 1970s by the Research Libraries Group (RLG). Libraries use this instrument to evaluate their collections, subject by subject, and assign rankings of from 0 to 5 to approximately 7,000 subjects, usually corresponding to small segments of the Library of Congress (LC) classification. Dole rejected the use of the Conspectus as a tool for evaluating the collections of the SUNY Center libraries because it was labor-intensive and subjective. At her suggestion, the group discussed the OCLC/AMIGOS CACD as an alternative method, examined demonstration copies, and met with representatives

of AMIGOS.

At a January 1995 meeting, they agreed that the OCLC/AMIGOS CACD project would enable the four University Center libraries to compare monographic holdings in much the same way that the CLR grant had enabled them to compare journal holdings. They expressed belief that the project would "inform collection development efforts by providing an objective measure of collections -- strengths and weaknesses --across the centers;...[and] help to unite the centers by providing them with both a common and comparative body of data that can be updated at regular intervals."

In April 1995, the group wrote to the directors of the SUNY Center libraries recommending that each campus invest approximately \$6,000 in the OCLC/AMIGOS Collection Analysis database and software. They based their recommendation on the conviction that this comparison of ten years of monographic purchases at the four centers would identify subject areas where they could target future resource sharing efforts and would assist them in reassessment of local collecting policies and fiscal allocations by comparing individual collection investments with program data already obtained from SUNY Central.

In the fall of 1995 three member libraries (Albany, Buffalo and Stony Brook) purchased the system; Binghamton chose not to participate in the study.

OCLC/AMIGOS CACD

The OCLC/AMIGOS Collection Analysis CD is a microcomputer-based collection analysis tool developed by OCLC and marketed and supported by the AMIGOS Bibliographic Council (the independent OCLC network serving the southwestern United States). The standard package includes one compact disc with a database of 2.1 million short bibliographic records drawn from the OCLC Online Union Catalog for a ten year publication period (usually two years behind the current date). The records are based on the Library of Congress (LC) classification schedule.

The tool includes holdings records for 14 standard peer groups, software for statistical analysis, and the subscriber's holdings data on 5-1/4 and 3-1/2 inch high density diskettes, and a printed User Guide. Hardware requirements include an IBM-compatible microcomputer (386 or higher) with 640K of random access memory (300K ram is needed to run CACD) and a compact disc drive. The standard package requires a hard-disk drive with 10.5MB free space for the 14 standard peer groups; the standard plus package requires 42.5MB free space for the 14 standard peer groups and four user-defined peer groups. Software requirements include IBM or Microsoft MS-DOS 3.1 or higher, Microsoft MS-DOS CD-ROM extensions 2.0, or higher and a device driver for the CD-ROM.

The edition used in the SUNY Centers project included book titles published between 1984 and 1994. Serials, government documents, and dissertations are excluded. Each record

selected for the database must contain an LC classification number and be held by at least one academic or research library.

The 14 pre-defined peer groups included in the standard version are OCLC-member academic and research libraries that have actively cataloged during the decade covered by the database. The peer groups are based on factors such as collection size and academic degree programs.

The Standard Plus package includes the standard package and one to four user-defined peer groups. The three SUNY Center libraries participating in the study each purchased a Standard Plus package and added four peer groups: the three other consortium members individually and an aggregate of those three. For Stony Brook, the peer groups were: Albany, Binghamton, Buffalo, and SUNY Centers (the combined records for Albany, Binghamton, and Buffalo).

The CACD system provides three levels of analysis: collection metrics, subcollection metrics, and bibliographic lists. The collection metrics level is structured on the 33 divisions of the Library of Congress (LC) classification schedule. The subcollection metrics level corresponds to the National Shelf List 500 count, a subcomponent of the LC class divisions. In both the collection and subcollection levels, there are six statistical reports or tables. The system is menu-driven and simple to use. In addition to standard reports generated by the system, customized reports can be produced by transferring data to spreadsheets or other

programs.

The participating libraries (Albany, Buffalo and Stony Brook) met in December 1995 to plan studies based on CACD and assign responsibility for those studies. Studies completed to date include:

1. Albany produced a preliminary spreadsheet combining the Collection Metrics for all four Center libraries.
2. Stony Brook produced this study, a comparison at the Subcollections level and produced charts based on subject field or allocation unit. As a result of the 1993 OCLC/AMIGOS CACD study, Stony Brook had examined the units used in its acquisitions and access budget and correlated those units with Library of Congress classification numbers.

REPORTING RESULTS

The authors spent February and March 1996 using OCLC/AMIGOS CACD to compare Stony Brook's collecting patterns with those of the other Center libraries. They used the Subcollection Counts mode of the OCLC/AMIGOS CACD to compare specific call number ranges of Stony Brook's 1984-1994 acquisitions to those of the other Center libraries.

They input these figures in a spreadsheet program and produced graphs for:

1. total acquisitions (Graphs 1-3)
2. acquisitions by broad discipline: sciences, social sciences and humanities (Graph 4-6)
3. acquisitions according to Stony Brook priorities: academic departments ranked as primary, secondary and tertiary in importance to the university (Graphs 7-9)
4. acquisitions by department or library allocation unit (Graph 10-42).

Total acquisitions

1. SUNY Centers. The conclusion we draw from the comparison of the 1984-1994 acquisitions is that the total number of titles acquired by Stony is similar that acquired by Albany and Buffalo, but less than acquired by Binghamton (the only non-ARL library of the four SUNY Centers). Graph 1.
2. ARL Libraries in OCLC (Table 1). Stony Brook does not fare as well when compared to ARL libraries. Stony Brook acquired fewer titles than the average ARL library, the average first quartile ARL libraries (Table 1), and the

average second quartile ARL library (Table 3). Graph 2.

3. Large Academic Libraries (non-ARL academic libraries with over 1 million volumes , (Table 4). Graph 3

Acquisitions by broad discipline

Humanities: Stony Brook acquired more titles than Albany or Buffalo, but less than Binghamton (Graph 4). Social

Sciences: Stony Brook acquired slightly more titles than Albany, but less than Buffalo and Binghamton (Graph 5).

Sciences: Stony Brook acquired more titles than the other three libraries, but only slightly more than Binghamton (Binghamton acquired 29,010 titles; Stony Brook, 29,557).

Graph 6.

Acquisitions according to Stony Brook priorities

During the 1992-93 Stony Brook Libraries Collection Analysis Project (CAP), the Task Force on Collection Analysis divided university programs into primary, secondary, and tertiary on the basis of doctoral programs and the number of research faculty. The Task Force defined primary programs as those with highly ranked doctoral programs, high enrollment, and relatively high numbers of active research faculty. Secondary programs also have doctoral programs but lower enrollment and lower numbers of active research faculty than primary programs. Tertiary programs are those without doctoral programs and with low enrollment and fewer faculty. The rankings suggested by this Task Force are supported by the

recommendations of the 1996 Academic Plan for the West Campus academic units. Following the suggestions of the CAP Task Force, LC classification numbers (later refined to National Shelf List 500 classes) were linked to the prioritized lists of programs (Table 5).

For first priority programs, Stony Brook acquired more titles than Albany, but less than Buffalo and Binghamton. (Graph 7). For second priority programs, Stony Brook acquired more than Albany and Buffalo, but less than Binghamton (Graph 8). For third priority programs, Stony Brook acquired more titles than any of the other Center libraries (Graph 9). This pattern of acquiring more monographs in supporting third priority programs than first and second priority programs was noted in the 1993 OCLC/AMIGOS CACD study.

Acquisitions by department or library allocation unit

See Graphs 10 - 42 for department by department comparison.

CONCLUSIONS

As soon as the first charts from the OCLC/AMIGOS CACD project were printed, it was possible to see how the project could meet the goals the SUNY University Center Collection Development Officers set. It can:

1. identify subject areas where the Centers can target future resource sharing efforts;
2. assist in reassessment of local collecting policies and fiscal allocations by comparing individual collection investments with those of the other Center libraries and with SUNY Central program data describing all four universities curricula;
3. confirm the Center Collection Development Officers' belief that cooperation among research libraries improves individual library success in fulfilling local needs by identifying the amount of unique resources quickly available at the other libraries using Empire Express (an interlibrary loan services between the SUNY Centers).

TABLE 5

NSL 500 Range

1st Priority

Biology (QH-QR)
Chemistry (QD)
Engineering (T-TP)
English (PE,PN1-1590,PN3311-6790,PR,PS)
History (C,D,E,F)
Math (QA)
Music (M)
Physics (QC)
Psychology (BF)
Sociology (HM-HX)

2nd Priority

Anthropology (GF-GV)
Art (N-NX)
Earth & Space Science (GB,QE)
Economics (HI,HJ)
Hispanic Languages (PC5001-5498,PQ6001-9999)
Linguistics (P-PB)
Management (HF-HJ)
Marine & Atmospheric Sciences (GC,QC)
Philosophy (B-BD)
Political Science (J)
Theater (PN2200-3300, PN1560-1590)
Women's Studies

3rd Priority

Africana Studies (E140-200)
Classics (PA)
Comparative Studies (PNH441-1000)
French (PC2001-3761,PQ1-3999)
German (PD,PF,PT)
Italian (PC1001-1977,PQ4001-5999)
Russian/Slavic Languages (PG,PH)
Religious Studies (BL-BX)
