## ABSTRACT

This report describes and analyses state support for higher education in fiscal year 1996. The report provides an analysis of funding trends nationwide; a national map showing percentages of 2-year gains for all states; a table showing appropriations amounts by state for the most recent 3 years as well as percentage changes; a table showing state tax appropriations per capita and per \$1,000 of personal income, local tax appropriations, and national rankings; and individual state tables showing total state tax appropriations for higher education. The report finds that growth of the national economy has favored state budgets. For the third year, state funding grew with an increase of \$1.4 billion in state support in fiscal year 1996. The total amount of state support for higher education now exceeds \$44 billion. Regionally, there was a north-south split, with northern states outpaced by gains made by southern states. Increasing tuition continues to be a concern as institutions use this as a means to moderate the impact of declining state support from earlier in the decade. (Contains 19 references.) (JLS)

# Preface

After the two most negative years on record (FY92 and FY93), state funding grew in FY96 for the third straight year with an increase of \$1.4 billion. The amount of support for higher education now exceeds \$44 billion. The 8.3% two-year gain was the largest since the recession began in 1991.

Nonetheless, the fiscal problems of the early part of the decade have left their mark on higher education. During this period, higher education leaders were focusing their efforts on reallocating resources or restructuring. As Ed Hines notes, the concern now is the *effect* of financial cutbacks and recisions. This concern is not likely to dissipate quickly as both state legislatures and Congress address such issues as tax cuts, efficiency in government, downsizing, and accountability.

This report serves as the document of record for state and local support for higher education. While we believe it is the most timely and thorough report currently available, readers should look beyond the data here for other factors affecting the total resources available to a state and its institutions. Enrollment trends and tuition increases continue to be relevant factors in the current environment. States with growing enrollment and stable or declining appropriations are providing less per-student support than institutions with stable or declining

enrollment. Increasing tuition continues to be a concern as institutions use this as a means to moderate the impact of declining state support from earlier in the decade.

In short, when drawing conclusions about the overall health of higher education in a given state, both enrollment and tuition trends must be combined with data on state and local appropriations. For the most recent data on tuition, we recommend the annual report by the Washington Higher Education Coordinating Board entitled, *Tuition and Required Fees: A National Comparison*. Readers will find that Kent Halstead provides an analysis of a variety of factors affecting the total per-student support available in his report, *State Profiles: Financing Public Higher Education*, published by Research Associates of Washington. His data also include an 18-year historical base.

We hope that this report on state appropriations, combined with other national sources of data, will provide the latest information available for our readers. We welcome your comments and suggestions for improvement.

# Acknowledgments

This publication relies upon a nationwide network of higher education and state government officials in the 50 states. These individuals report legislative appropriations for operating expenses of higher education, which are placed on the *Grapevine* Home Page site on WorldWide Web. In summary form, these data are published in an October issue of *The Chronicle of Higher Education*.

*State Higher Education Appropriations* is the most complete and accurate compilation of the data, reflecting total state tax effort for all of higher education. This report also relies upon material furnished by individuals in the states, and their contributions are acknowledged with appreciation.

Rusty Higham, doctoral candidate in higher education administration at Illinois State University, devoted much of his assistantship to this effort. His careful attention to detail and conscientious effort to check all of the figures "one more time" were invaluable. Special thanks to Rusty for collecting data related to local taxes, a relatively new addition to this report.

Gwen Pruyn, former Managing Editor of *Grapevine*, temporarily returned from retirement to share her wealth of experience by assisting with data tables construction and proofing the completed effort.

The many contributions of the *Grapevine* Advisory Committee, whose names are listed below, are recognized with gratitude. This group meets annually as part of the State Higher Education Finance Officers' annual meeting. In 1995, this meeting was held in Charleston, South Carolina.

# State Higher Education Appropriations: 1995-96

The 1990s have been tumultuous years for higher education. Two years (FY92 and FY93) were characterized by a national recession and deep reductions for colleges and universities. In FY93, for the first time on record, there was an absolute decline in the amounts provided to higher education nationally. In FY94 and FY95, there was a modest recovery. During this period there was also significant restructuring, reallocation and reengineering of academic programs, administrative services and support services on many campuses, both public and private. Placing the events of the current year, FY96, into context by reviewing the past few years will show their effect on higher education nationally.

## A Shift to the Political Right

Major political change at the state level can significantly affect higher education, as evidenced by the Republican landslide in the November 1994 mid-term elections. The *Chronicle of Higher Education* presaged uneasiness in higher education with the 24 Republican governors turning their interest to issues such as tax cuts, efficiency in government, downsizing and return on investment; in higher education this is manifested in concerns about accountability and productivity (Lively & Healy, 1995).

While the concerns of administrative and academic leaders were not directly on political actors and issues, there was a significant shift in campus leaders' attention from 1994 to 1995, as reflected in the annual *Campus Trends* survey of the American Council on Education (*Campus Trends 1993, 1994 and 1995* editions). In the early 1990s, financial issues were predominant. In 1993, the descriptor was "difficult financial conditions persist," but in 1994 the descriptor became "The financial picture: some stabilization." By 1994 "restructuring initiatives" began to occur along with a fundamental concern about finances. Well over half of the college leaders responding to this survey said that restructuring efforts included closer monitoring of expenditures, increased attention to fund raising, review of mission and academic programs, reorganization of administrative offices and reduction of budgets. Indeed, the "three R's" used

frequently in this report were "restructuring, reengineering and refocusing."

In 1995, there were still concerns about financial matters, but the emphasis was on the *effects* of financial cutbacks and reductions, not the actions themselves. Furthermore, financial concerns were eclipsed by academic issues such as course redesign, technology, accreditation, assessment and international initiatives. Faculty issues were close to center stage, along with enrollment, changing student characteristics, underrepresentation of students of color, student finances and affordability. Cost and affordability were described as "a looming crisis."

## Competition for Scarce Resources

There are five principal areas of state general revenue spending that together comprise approximately two-thirds of state budgets. In descending order of magnitude these five areas are public schools, health care, higher education, corrections and welfare (i.e., Aid to Families with Dependent Children). In 1994, spending on health care surpassed higher education for the first time. Of these five areas, however, only higher education remains one of discretionary spending by state governments. The other four are areas of mandatory spending because of state laws requiring certain levels of expenditure, or because of court rulings mandating changes in the law. Legislators do not have to maintain levels of appropriations to higher education. Instead, higher education may be the means by which state general revenues can be increased to other areas, including the funding of public schools. Steven Gold, formerly of the Nelson A. Rockefeller Institute of Government, described the dilemma for higher education in the following manner:

Higher education took the worst beating of any major spending category, with spending virtually unchanged over the three-year period. Appropriations in 1992-1993 were less than 1% higher than in 1989-1990 (Gold, 1995, p. 25).

*The Fiscal Crisis of the States*, a new book by Gold (1995), contains an analysis of the fiscal crisis

experienced by states in the early 1990s. Gold examined in detail six states that had experienced especially stressful fiscal conditions. The states — California, Connecticut, Florida, Massachusetts, Michigan and Minnesota — were chosen both because of the severity of their fiscal problems and because of “high-profile governors who were prominent on the national stage” (Ibid., p. 4). Gold’s book has 13 major findings, including (1) the economy is the most important influence on state fiscal conditions; (2) various programs (including higher education) vary in strength as they compete for scarce budget resources; (3) states have discretion in how they respond to fiscal crises with governors and legislators serving key roles; and (4) reforms are occurring in many states. Reforms might include tax structure improvements, spending limits, privatizing a service, or utilizing performance budgeting (Ibid., p. 373).

In looking to the future, Gold had some sage advice. He outlined four possible “agendas” for state finances: an efficiency agenda, an equity agenda, a “do less” agenda, and a “do more” agenda. Efficiency involves changes made slowly over time, and might include reducing or eliminating “sacred budgetary cows.” Equity can involve distributing services more fairly or increasing services to the less affluent. “Doing less” involves downsizing government or privatizing services. “Doing more,” which Gold admits will be difficult in the current environment, can involve tax increases and increasing services (usually accompanied by tax increases).

### Other Issues in 1995

While major political change and competition for scarce state dollars explain much of the context underlying state higher education support in 1995-96, other issues emerged as major focal points for higher education. First, there was a continuing series of budget disagreements between the Clinton administration and Congress, especially over desired levels of support to higher education and student financial aid. There were continuing attempts to reduce both the scope and number of education programs:

The scope of the House plan is vast. Education is involved in almost half of the 284 programs that would be terminated. Most serve elementary and secondary education, but many focus on higher education (Cordes & Zook, 1995, p. A31).

A second set of issues was associated in many states with political changes, revenue problems and major changes in higher education structure. In Virginia, a politically conservative governor endeavored to carry out

“an ideological drive to reduce taxes, trim government, reform welfare, and take a tougher line on crime” (Lively, 1995a, p. A23). There was an attempt to reduce the budget by \$41 million, limit tuition increases to inflation, and restructure public colleges to create monetary savings. In the initial year of restructuring under the leadership of the state coordinating agency, Virginia public institutions agreed to enroll more students without a budget increase; more attention was given to undergraduates; low-enrollment programs were eliminated; instructional costs were reduced through the use of computers; and administrative costs were reduced by contracting with private vendors for student services such as food, housing and health care (Trombley, 1995a). In the face of gubernatorial criticism, the state coordinating board took the lead in making Virginia higher education more efficient, and maintained “its delicately balanced role as higher education advisor to the governor, to the Legislature, and to the public colleges and universities” (Trombley, 1995b, p. 5).

Oregon has struggled with education reform since passage of a referendum in 1990 that “capped” property taxes. (California and Oregon were examined in more detail in this report one year ago; see Hines, 1995.) Early in the 1995 legislative session, Oregon conservatives expressed opposition to a 1991 state law, the Oregon Educational Act for the 21st Century, requiring high school students to earn “Certificates of Mastery,” an outcomes-based approach linking academic courses, critical thinking skills and work habits. The conservatives preferred elementary-secondary education focusing on traditional subjects (Lively, 1995b). In higher education, Oregon moved to create a new public corporation by passing The Higher Education Administrative Efficiency Act for the 21st Century, which would enable public colleges to be free from state bureaucratic requirements and governed by a more autonomous board. Proponents claim \$20 million would be saved in the initial two years. In opposition, however, a former Oregon faculty member, now legislator, remarked, “[Higher education] wants all the perks that go with a public agency, such as access to funds, but the advantages of the private sector; it doesn’t give much accountability either way” (Lively, 1995c).

Late in 1995, there was furor over “Pennsylvania’s new higher-education power broker” who, as a fiscal conservative, led an investigation of higher education in the state (Healy, 1995a). Chair of a new House of Representatives committee that was created on the premise that colleges are “ripping off taxpayers,” the state legislator sought a new relationship between the state and

higher education that will be characterized by fewer tuition waivers for children of higher education employees, no state support for sabbatical leaves and greater accountability over higher education by the state.

Perhaps no problem in higher education was as revealing as the criticisms and debate of systems of structure and governance. Patrick Callan, executive director of the California Higher Education Policy Center, commenting on the failed search by the University of California regents to select a new president, said that the failure was "yet another symptom of the regents' declining competence, of their insular decision-making processes and their growing distance from the people of California" (Callan, 1995, p. B9). In a "Point of View" published in *The Chronicle of Higher Education*, former university president James Fisher lambasted state higher education coordinating agencies, claiming they result in unnecessary bureaucracy. Fisher opined that public higher education has become more politicized; decisions are compromises to the mean; board staff quality is low; and, in sum, state higher education coordinating boards and multicampus university systems should be eliminated. In defense of coordinated systems, SHEEO executive director James R. Mingle wrote that higher education systems have strategic assets, including size (smaller is not necessarily better), the ability to "partner" together in solving problems cooperatively, the ability to serve as "utilities" for constituent members (such as delivering telecommunications services), and, perhaps most important, the capacity for building trust, thereby reducing the "transaction costs" among individuals and institutions otherwise left to their own devices in

problem solving (Mingle, 1995). Mingle recommended that coordinating boards and system heads should establish accountable funding systems that are responsive to students and employers.

Finally, a sitting university president wrote that presidents and academic leaders spend too much time on symptoms, rather than solving higher education's actual problems (Lovett, 1995). She claimed that academicians have created their own "academic gridlock," characterized by finger pointing at others rather than working together to solve core problems. She recommended that students and families can reduce tuition increases by reducing or eliminating costly support and recreational services. Faculty can help by becoming effective institutional partners rather than insulated and protective about issues such as maintaining low-enrollment courses, assuring sabbatical leaves and even retaining tenure. Administrators can be more effective by sharing planning and budget information with faculty. Trustees need to be in touch with changing student demographics and needs. Legislators can help by making decisions on educational grounds, rather than short-term political expediency. The results of two national opinion studies about higher education are instructive. Immerwahr & Harvey (1995) found that the general public's knowledge of higher education is limited: the primary purpose of going to college is to obtain a good job; tuition is too high; and colleges could be operated more efficiently. Indeed, those who know very little, as well as a lot, about higher education believe that higher education should "solve [its] own financial problems before seeking more help from government" (Ibid., p. B2).

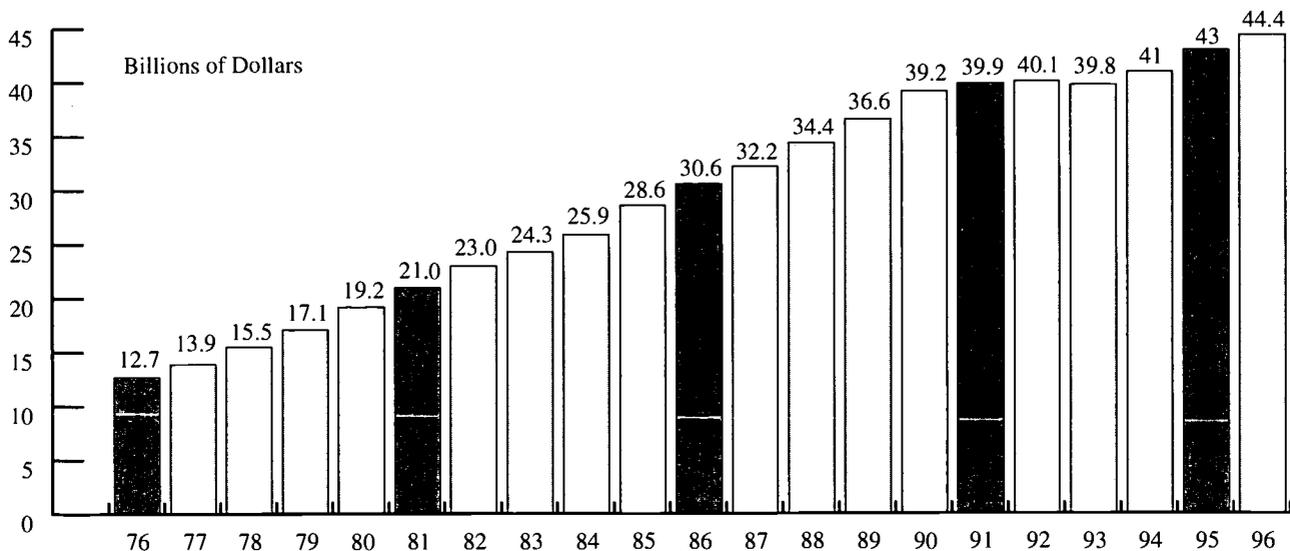

Figure 1  
State Appropriations for Higher Education, 1976-1996

## A Retrospective of Fiscal Year 1996

In FY96, for the first time on record, states appropriated more than \$44 billion to higher education, a gain of \$1.4 billion from the previous year. Six states (Alabama, Hawaii, Montana, New Hampshire, New York and Wisconsin) reported a one-year percentage decline from the previous year. The State of Washington joined the dozen that appropriate more than \$1 billion to higher education.

## Current Trends in Dollar and Percentage Gains

Despite the \$1.4 billion increase in FY96, this amount was less than the \$2.0 billion gain from 1994 to 1995. Further, the \$1.4 billion figure is only equal to the average gain reported between 1986 and 1996. The details are shown in **Table 1**. While the one-year gain of 3.3% was the second highest reported since 1990, it lagged behind the 4.9% gain reported the previous year. On a more positive note, the 8.3% two-year gain, the gain traditionally used by *Grapevine* to “even out” the sharper gains or losses experienced in any single year, was the largest percentage gain over two years reported since 1991.

The figures in **Table 1** need to be placed in context by understanding the effect that any “megastate” can have on the national figures in a single year. In FY96, New York experienced a decline of nearly \$300 million, 9%, from FY95. Nationally, this decline caused a one percentage point drop from what would have been experienced without New York. In other words, by recalculating the percentage change without New York, the one-year change increased from 3% to 4%, and the two-year change also increased from 8% to 9%.

This year, six states experienced a decline in appropriations from the previous year. Three were significant (Alabama, Hawaii and New York), and three were smaller in magnitude (Montana, New Hampshire and Wisconsin). Over a two-year period, only four states

reported declines (Alaska, Hawaii, Montana and New York). In 1995, five states had declines over one year and nine states reported declines over two years.

The 10-year changes in percentages of gain now begin to reveal the effect of continued fiscal difficulties in the states. The most notable decline was in Alaska, a 28% loss of the amount appropriated for higher education 10 years earlier. No state had single-digit increases, but four states (Louisiana, Montana, New York and Wyoming) had 10-year gains of 10% to 19%. Another 15 states experienced 10-year gains of 50% or less, including the megastates of California, Illinois, Michigan and

Texas. Within the megastates group, Georgia demonstrated the largest 10-year increase at 84%, followed by New Jersey at 73%.

**Table 2** displays the 50 states in descending order of two-year gain. The states in the top quartile range from the 44% gain in Mississippi to 13% in Arizona. The remaining 11 states had two-year gains in the “teens.” Four out of the thirteen second quartile states had two-year gains of 10%. In the lowest quartile, four states had declines over two years. The remaining nine states had small increases ranging from 1% to 4%.

**Table 3** displays changes in two-year gains over the most recent eight years. The table shows the number of

states reporting increases, decreases, or identical two-year gains from the year before. The impact of the recession in the early 1990s is evident beginning in 1991 with a smaller number of states having increases in gains, and continuing through 1993. In 1994, the trend reversed and continued so in 1995. In FY96 the trend reversed again with a smaller number of states reporting increases in two-year gains.

## The “Megastates”

Thirteen states comprise the “megastates,” which are those that appropriate more than \$1 billion each to their education systems. These states have large resident

Year	Appropriations (\$Billions)	1-Year Gain (\$Billions)	1-Year Gain (Percent)	2-Year Gain (Percent)
1986	30.6	2.0	7.0	18.1
1987	32.2	1.6	5.2	12.6
1988	34.4	2.2	6.8	12.4
1989	36.6	2.2	6.4	13.7
1990	39.2	2.6	7.1	14.0
1991	39.9	0.7	1.8	9.0
1992	40.1	0.2	0.5	2.3
1993	39.8	-0.3	-0.7	-0.3
1994	41.0	1.2	3.0	2.2
1995	43.0	2.0	4.9	8.0
1996	44.4	1.4	3.3	8.3

populations, significant industrial wealth and business activity, and large systems of higher education. In 1995 Alabama became a megastate, however, this year, with a decline in appropriations, it fell out of the megastate grouping. The State of Washington joined the megastates this year.

Because of the relative sizes of their higher education appropriations, one might hypothesize that "as go the megastates, so goes the nation" in state higher education support. As shown in **Table 4**, these states represent approximately 60% of the nation's higher education appropriations by state government.

Among the megastates, California once again leads the nation with an appropriation over \$5 billion. Texas and New York follow with \$3.2 billion and \$2.8 billion respectively. Six of the 13 megastates are clustered between \$1.6 billion and \$1.9 billion each. Illinois leads this group, followed in descending order by Florida, North Carolina, Ohio, Michigan and Pennsylvania. Four states are closer to \$1 billion each including New Jersey, Georgia, Minnesota and Washington.

In one-year percentage gains, Georgia and New Jersey lead the group at 9%. Only New York experienced a decline of 9%. In two-year changes, five states had increases of 10% or larger with Georgia in the lead at 18%. Six states had single-digit gains; only New York had a two-year decline of 4%.

### Regional Variations

One comparison that can be made between and among states is the extent of variation in higher education by region of the country. This can be demonstrated by ordering the states by quadrants and quartiles, as shown in **Figure 2**, with the Mississippi River dividing East from West. Dividing North from South is the Ohio River and southern Pennsylvania border, and in the West, the northern borders of Missouri, Kansas, Wyoming, Utah, Nevada and California are a dividing line. There are 11 states in the Northwest, including Alaska, and 13 in the Southwest, including Hawaii. Fourteen states are in the Northeast quartile, and 12 in the Southeast. The top, second and bottom quartiles include 13 states each and the third quartile has 11 states.

In FY96, a north-south "split" occurs, as shown in **Figure 2**; in 1995 the split was between eastern and western states. Nine southwestern and eight southeastern states are in the two quartiles. Only four northwestern states and five northeastern states are in the top half. In the Northwest, only one state (Idaho) appears in the top quartile; conversely, Alaska, Montana, Washington and Wyoming are all bottom quartile states. Similarly, Ohio and Rhode Island are the only northeastern states in the top quartile, while Connecticut, Maine, New Hampshire, New York and Wisconsin are in the bottom quartile.

Among the Southwest states, six are top quartile, and only Hawaii, Oklahoma and Texas are bottom quartile. In the Southeast, there are five top quartile states, and only Virginia is in the bottom quartile.

### Revenue Variations

The ability of states to support higher education is highly dependent on their capacity to raise revenue and the willingness of state lawmakers to appropriate funds for higher education. The amount of revenue available depends on tax capacity systems and the overall health and level of activity in the economic system. State appropriations take place in a political system characterized by trade-offs and choices. At a time when states' finances are under strain by increasing demands on state services, the willingness of lawmakers to appropriate

funds to one area may mean lawmakers will be unable to support another area of need.

These two critical variables, revenue capacity and lawmaker willingness, along with higher education effort, are presented in **Table 5**. Each of these variables is measured by the percentage of increase from last year. Revenue capacity is the percentage of increase expected in the state's general revenue fund, using data gathered by the National Conference of State Legislatures. Lawmaker willingness is measured by the projected increase in total state appropriations

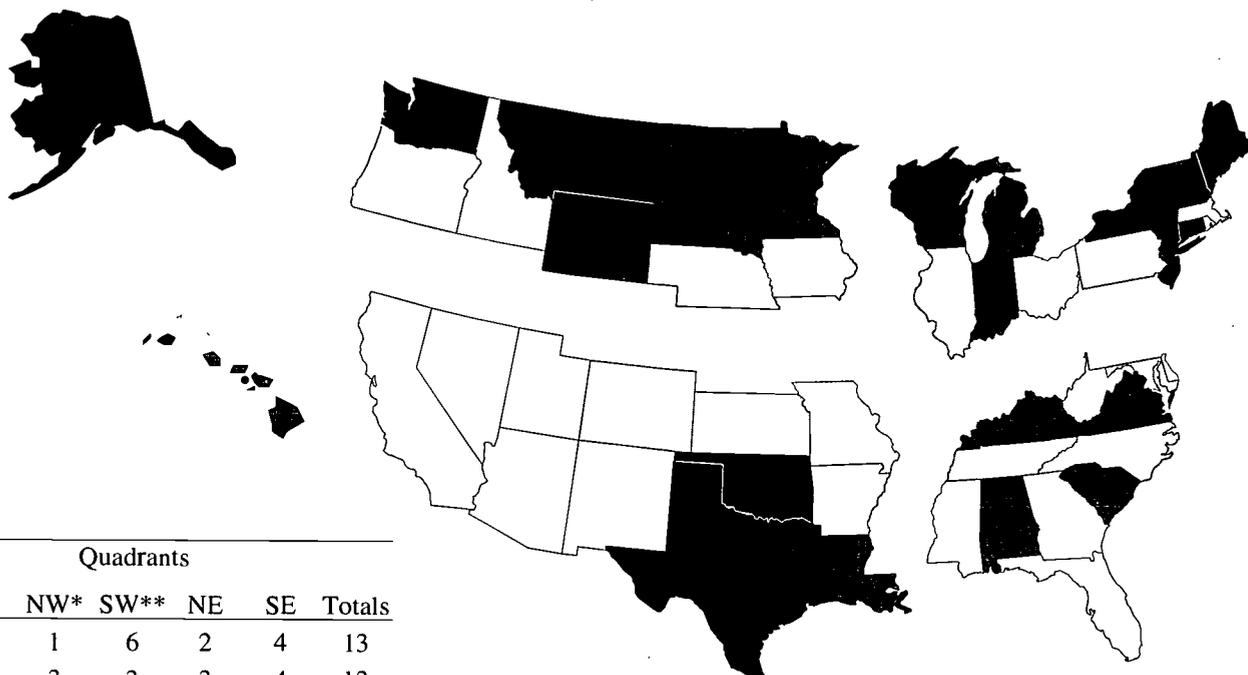

Fiscal Year	1989	1990	1991	1992	1993	1994	1995	1996

from the previous to the current fiscal year. Higher education effort, measured by *Grapevine* data, is indicated by the actual increase in

state tax appropriations for higher education from the previous to the current year.

**Table 5** was constructed and based on the top nine and bottom nine states in one-year changes for higher education. The top states had one-year gains ranging from 6.8% to 15.0% with Nevada at the top; Nevada was the only state with a one-year gain greater than 10%. Six of

the nine bottom states had actual declines (Alabama, Connecticut, Montana, New Hampshire, Nevada and Wisconsin).

The differences among the columns of data in **Table 5** are striking. States' revenue capacity did not appear to be a large factor in whether a state made relatively more or less effort for higher education. In FY96 many states made a greater effort to support higher education, even in the absence of excess revenue capacity.

In the willingness of lawmakers to make appropriations to services, there is a greater disparity between the top 10 and the bottom 10 states. In FY96, the top 10 states demonstrated a 3.0% increase in appropriations over one year, while the bottom 10 states had only a 0.6% one-year gain.

There has been a significant difference in higher education effort between the top and bottom states. In FY96, the top 10 states gained 8.5% over one year in increased higher education support, while the bottom states actually declined 2.2%.

The states in **Table 5** that present anomalies may generate the most interest. For example, both Nevada and Oregon suffered declines in overall state appropriations, yet made significant effort for higher education. At the

opposite end, Alabama, Connecticut, Tennessee and Wisconsin had modest percentage gains in revenue capacity, but at least two states (Alabama, Wisconsin) provided additional support to areas of state spending other than higher education.

### Sector Variations

Two specific areas that have received more attention in recent years are state support to student financial aid and community colleges. Student financial aid was identified as a discrete item in 34 states. The weighted two-year percentage gain for student financial aid in these states was 16.9%. This amount is significantly larger than the 8.3% two-year gain for the nation. In 24 of the 34 states (71%), there was a greater two-year gain for student financial aid than for higher education generally.

A significant amount of state support is appropriated to two-year community colleges. The *Grapevine* database recognizes two fundamental types of community college funding, one termed "state" and the other "state-aided." Community colleges may be funded primarily by the state, along with student tuition, or community colleges may utilize a combination of state and local tax sources. In state-aided community colleges, therefore, local taxes become a critical source of revenue in calculating the total amount of tax effort.

<sup>2</sup>*Grapevine*

Forty-one states appropriated funds specifically for community colleges. In 28 of the 41 states (68%), the two-year gain in state support to community colleges exceeded the two-year gain for higher education generally. The two-year gain for community colleges for the nation was an impressive 16%.

### Data Revisions

By law, states may not go into deficit spending. This means that states must stay within budgets built on existing taxation systems and revenue projections. As revenue flow changes, forecasts are updated. These revenue forecasts and the flow of revenue control a state's ability to appropriate general revenue dollars to areas of spending, including higher education. When revisions to original legislative appropriations began occurring in the late 1970s and picked up speed in the 1980s, the revisions were nearly always downward, because adjustments in revenue projections turned downward as tax income turned out to be less than originally expected.

In Fiscal Year 1996, 36 of the 50 states (72%) had revisions to their original appropriation. Of these 36 revisions, 26 (72%) actually increased their appropriation to higher education while only ten states revised their appropriation downward.

### Local Tax Appropriations

Local taxes represent an important supplement to *Grapevine's* fundamental state tax database; they extend the *Grapevine* data beyond the state tax effort to total tax effort exerted by a state for higher education. Local funds are most often used for community college operating expenses. **Table 8** shows the local tax amounts reported by the 26 states that collect local taxes to be used for higher education. Note that many of the data for FY95 and FY96 are estimates, not actual revenue statistics.

Local and state taxes are not combined in any of the measures of this report. The reader is invited to make those calculations if appropriate or useful.

### Conclusions

This report is written at the completion of the first half of the 1990s. This period has been marked by significant fluctuations in state support for higher education. In 1990, state support to colleges and universities surged ahead with a dollar gain larger than had been experienced in several years. The following year the slide downward began. In FY93, state appropriations for

---

higher education declined nationally for the first time. Since 1993, states have experienced modest levels of recovery, and that trend has continued in FY96.

- In FY96, state support for higher education exceeded \$44.4 billion for the first time.
- The increase in support over FY95 was smaller than one year ago and approximately the same size as experienced two years ago (FY94 over FY93).
- Regionally, there was a north-south split, with northern states outpaced by gains made by southern states.

- The “megastate” group remained at 13.

The anxiety and uncertainty experienced in most states this year will likely continue, due to the major shift in the political composition of state legislatures and the continued efforts by Congress to achieve major reductions in educational programs. Institutions will have to continue to respond to the new fiscal reality by evaluating programs and services and targeting available resources to areas of specific need.

# National Tables and Comparative Measures

This section contains a figure and five tables of nationwide scope. A national map (Figure 3) shows percentages of two-year gains for all states. Table 6 shows the states in alphabetical order, with appropriations for the most recent three years, as well as percentage changes for one, two and 10 years.

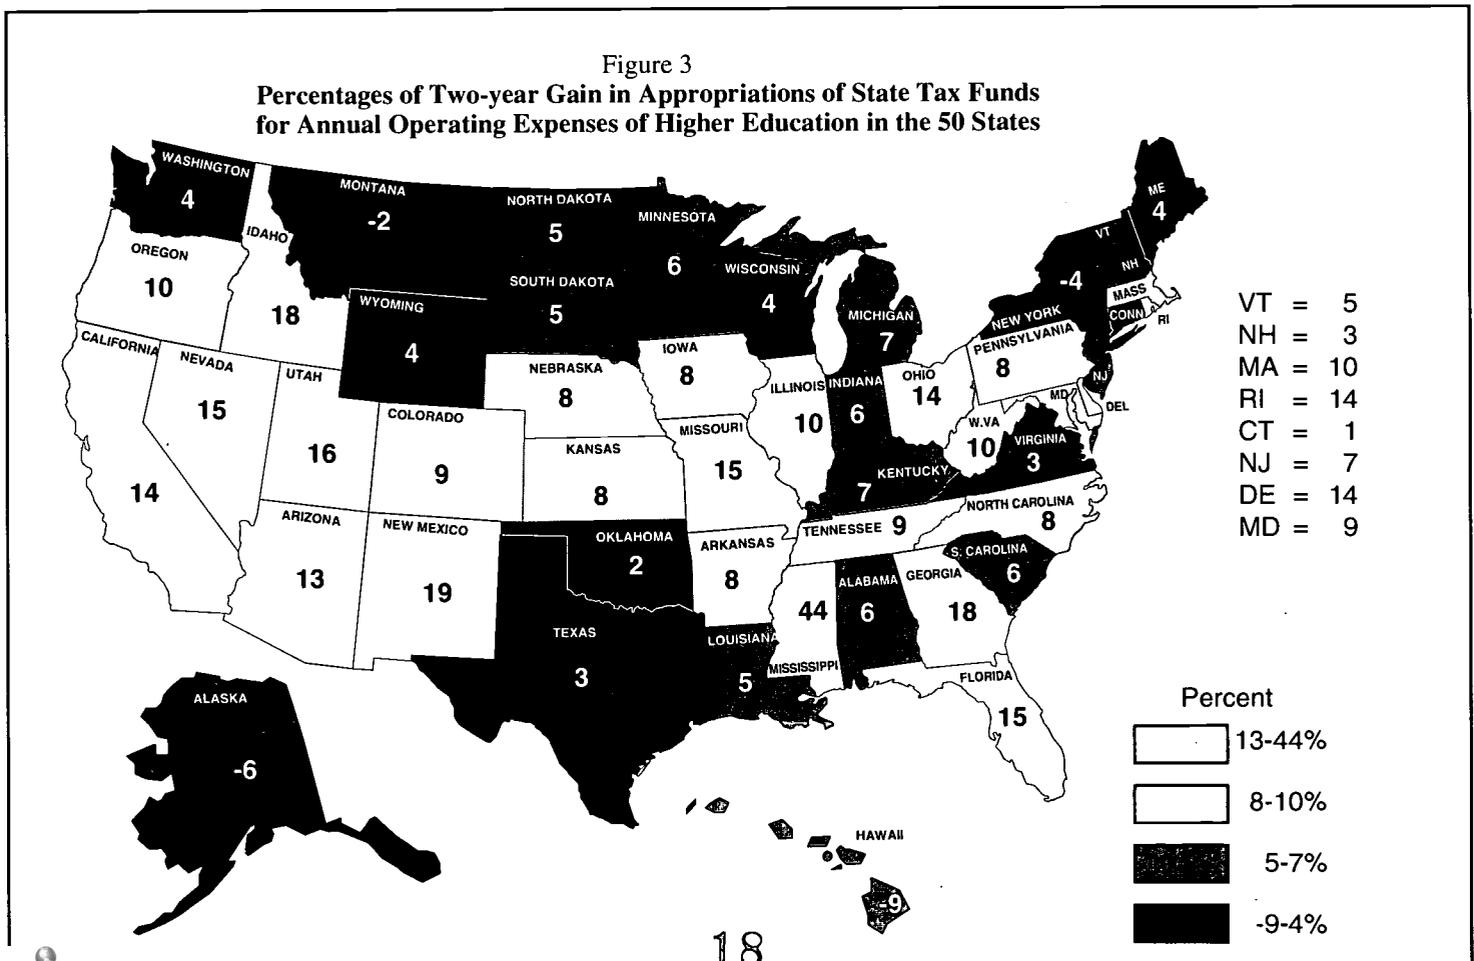

Table 7 shows state tax appropriations per capita and per \$1,000 of personal income, along with national rankings. Analysts and researchers frequently use these two measures when computing state effort for higher education. The per capita measure enables comparison among states with differing resident population sizes. Otherwise total appropriations are skewed by demographic figures reflecting the size of the population served. The income measure reflects a state's basic wealth or economic capacity using a standard indicator of personal income. Both the per capita and personal income measures re-

flect state effort, in this case total state tax effort, for higher education.

Table 8 shows the local tax amounts reported by the 26 states that collect local taxes to be used for higher education. Adjacent to the table are two pages of narrative which provide background information about the collection of local tax data as well as a more detailed explanation of the instructions given to states regarding their furnishing local tax data to *Grapevine*.

Tables 9 and 10 contain state tax appropriations to community colleges. *Grapevine* has conceptualized community colleges of two types, reflecting differences in how community colleges are financed. The "state" community colleges receive most of their governmental support from state tax appropriations, while the "state-aided"

ces: Appropriations, *Grapevine*; Population and Personal Income, U.S. Department of Commerce, Bureau of the Census.

community colleges receive local tax appropriations as well as state taxes from appropriate local and state governmental units. Please note, however, that the data in the table for state-aided community colleges include only state tax appropriations, and not local tax appropriations. *Grapevine* now collects local taxes, but publishes

a separate table of local taxes (**Table 8**, described above). We have not yet combined the state and local data bases, but invite analysts to do so depending on their purposes. A few states have both types of community colleges, and thus these states are found in both tables. Also included is a trend chart showing percentages

\*Although some support comes from local funds, the North Carolina community colleges receive most of their funds from the state; therefore, they are included here with the "state" community colleges.

\*\*States having both "local" and "state" community colleges.

\*\*\*For FY95-96, the amount is estimated because the 13 community colleges were included in the appropriations with the state universities and the technical colleges.

+For Vincennes University which is now supported by the state.

++For Delgado Community College which is part of the Trustees System.

of two-year gain in appropriations for community colleges and for all higher education for the most recent 10 years.

**Tables 11 and 12** are the "system" tables, which always are popular among readers of this report. Multi-campus universities have the oldest or largest entity in the system as the main campus. Other campuses within multi-campus universities may include four-year universities, two-year colleges or a medical campus. Multi-campus universities have single, systemwide governing boards, y associated or even located on the main campus.

The other system entity, generally more recent in origin, is the consolidated system of higher education, which also has a number of individual campuses as separate units. These separate campuses may include those that existed prior to the formation of the system, as well as newer campuses that came into existence as the result of the creation of the system. These various campus entities may be located at considerable distances from one another. Consolidated systems have one governing board for each system, and this governing board often is located in the state capital. The importance of both multi-

# State-by-State Appropriations

## The Nature of the Data

The individual state tables in this section reflect decisions made by legislatures in the 50 states about the amount of state tax to be appropriated in FY96 for operating expenses of colleges and universities.

State tax appropriations are a major source of revenue and are the focus of this report (local taxes, federal funds and student tuition are excluded). These data sometimes are referred to as *total state tax effort* for higher education. Thus, funds are included if legislatures made appropriations to higher education using state taxes as the revenue source.

These figures include not only campus operating funds, but also amounts for state scholarship programs, even if the funds go to students attending private or independent institutions; to private or independent colleges and universities if appropriated from state tax funds; to state-wide coordinating and governing boards; and to state agencies as long as the funds are destined to be allocated to higher education.

The section entitled, "What the Figures Are Intended to Mean," includes the specific instructions sent to each state for the purpose of clarifying data collection and reporting.

## Major Data Characteristics

The state tax appropriations data have fundamental characteristics that help define their nature and use. In states with community colleges funded by local taxes, rather than or in addition to state taxes, these data reflect only the state's share, not the local tax share or the share represented by student tuition. During the 1980s, the level of student tuition charged by public colleges and universities began to rise rapidly after decades of a typically low-tuition policy in the public sector in most states. In fact, the rate of rising tuition levels in the public sector in the mid- to late-1980s outpaced the rate at which tuition increased at private colleges and universities. This caused considerable anxiety among students, parents and state lawmakers, whose concern about tuition increases resulted in legislative hearings at both state and federal levels.

Another fundamental characteristic is that these data represent appropriations and not expenditures. Appropria-

tions data reflect legislative decisions and include revisions to the extent that revisions represent appropriations, rather than expenditures. Expenditures generally are made at the campus level after legislative appropriation. Expenditure data are used in the U.S. Government publication, *State Higher Education Profiles*. Expenditure data generally are not available until approximately three years after appropriations data are published.

After the initial legislative decisions are made for higher education, supplementary decisions may be made either by a legislature or by a governor. These later decisions are termed data revisions, and, if reported by states to the *Grapevine* monthly research report, they are included in this publication. Two columns of data appear in each state table: one column reflects legislative decisions made in the previous fiscal year, the other those made in the current year. The designation "(R)" following the heading for fiscal year 1995 indicates that a revision was made in the initial legislative decision.

When states report these higher education appropriations to the *Grapevine* monthly research report, they include campus figures as well as amounts allocated to agencies and organizations other than individual campuses. These agencies include statewide coordinating boards, also known as state higher education agencies, as well as governing boards for individual campuses or for systems of higher education, such as consolidated systems and multi-campus systems. State tax funds allocated to state scholarship programs and agencies are included in these figures, regardless of whether recipients attend public campuses or private institutions. Also included are state tax dollars appropriated by the legislature to another state agency, such as the state treasurer or state health department, to be used for such things as faculty and staff fringe benefits or funds for medical and health education.

These appropriations data also include sums destined for agricultural extension and for research. The key is whether colleges and universities expend the funds as part of their campus operating budgets. Also considered is whether or not the students being educated are ranked at higher and postsecondary education levels for the purposes of enrollment, versus enrollment at other education levels such as a vocational-technical program that educates students at levels below the 13th grade.

In spite of all these definitions, exclusions and caveats, it must be recognized that some states have unique budget-

ing and accounting practices, meaning that these data can only begin to approach comparability. These data, however, are timely because they are published as soon as possible after legislative decisions are made. They are accurate because they include revisions, and they are comprehensive because they reflect the total amount of state taxes either appropriated or destined for the operations of colleges and universities.

### **What the Figures Are Intended to Mean**

Listed below are the ground rules used to achieve uniform reporting. Different practices among the 50 states make it impossible to eliminate all inconsistencies and to ensure absolute comparability among states and institutions. We emphasize that comparisons are useful only if the data are correctly interpreted.

1. Report only appropriations, not actual expenditures.
2. Report only sums appropriated for annual operating expenses.
3. For state tax appropriations in complex universities, set out separately the sums appropriated for (or allocated to) the main campuses, branch campuses and medical centers (even if on the main campus). The medical center item should include operation of colleges of medicine, dentistry, pharmacy and nursing, and teaching hospitals, either lumped as one sum or set out separately as preferred.
4. Include:

- Sums appropriated for state aid to local public community colleges and for operation of state-supported community colleges, and for vocation-technical two-year colleges or institutes that are predominantly for high school graduates and adult students.
  - Sums appropriated to statewide coordinating boards or governing boards, either for board expenses or for allocation by the board to other institutions or both.
  - Sums appropriated for state scholarships or other student financial aid.
  - Sums destined for higher education but appropriated to some other state agency. Examples: funds intended for faculty fringe benefits may be appropriated to the state treasurer and disbursed by that office; certain funds for medical and health education may be appropriated to the state department of health and disbursed from that department. Sometimes these sums have to be estimated because the exact amount disbursed cannot be known until after the end of the fiscal period.
  - Appropriations directed to private institutions of higher education at all levels.
5. Exclude:
    - Appropriations for capital outlays and debt service.
    - Appropriations of sums derived from federal sources, student fees, auxiliary enterprises and other non-tax sources.

<b>Total . . . . .</b>	<b>\$1,568,004</b>	<b>\$1,679,546</b>

\*This is a subsidy to a private university for medical education.

\*\*Five technical colleges became community colleges in FY94 and FY95. Community college increases and technical college decreases are in part attributable to these appropriation changes.

\*\*\*Beginning in FY96, some subsidy previously attributed to universities is now attributed to branch campuses.

+Provides aid to students attending independent non-profit institutions and proprietary schools, as well as to students attending state-assisted colleges and universities.

++Provides aid to students attending independent non-profit institutions only.

<b>Total</b>	<b>\$434,654</b>	<b>\$471,892</b>

NOTE: Oregon is now in the final phase of the implementation of Measure 5, the Constitutional Amendment passed in 1990 limiting property taxes. This has resulted in the replacement of local property taxes by General Fund dollars, rather than by Lottery dollars, for community colleges, resulting in an inflated increase in General Fund dollars to community colleges in FY1995-96.
