## ABSTRACT

This paper discusses the implications of the enactment of legislation in Florida in 1995 mandating the standardization of requirements for baccalaureate degree programs within the state university system. The paper also describes the tools and methodology created by that state's university system for addressing the tasks of implementing the new requirements. These requirements mandate that all baccalaureate degree programs be reduced to 120 credit hours, that general education requirements be reduced at all state institutions to 36 hours, and that common degree program prerequisites be standardized, offered, and accepted by all of Florida's 9 public universities and 28 community colleges within 1 calendar year of enactment. A consequence of the new law is that course offerings, which may differ among state institutions, must be acceptable to all institutions with respect to transferability. This reduction in coursework and a pending tuition surcharge on hours taken beyond the degree requirements has met with generally negative assessments from students. The ultimate outcome of these changes is presently unclear. Appendices provide an inventory of bachelor's degree programs by credit hours to degree and a list of work templates for standardizing prerequisites. (CK)

## **Introduction**

Accountability in the United States has gone hand in hand with a decrease both in resources and in confidence that universities are responding to their tripartite missions of teaching, research, and service in a manner that can be construed as client-driven. One facet of this phenomenon has been a keen interest in the timely completion of undergraduate degrees. In an effort to save dollars, legislatures are looking at every means necessary to streamline the undergraduate experience.

This is particularly true in a state such as Florida, where many of these conversations are driven by a chronic access problem. Most of the interest in time to completion has centered around the provision of coursework in three key areas: General Education requirements at the lower level, prerequisites for entering a major, and the total number of credit hours required for the degree.

In 1995, legislation was passed in Florida requiring that all baccalaureate degree programs be reduced to 120 credit hours, that general education requirements be reduced at all state institutions to 36 hours, and that common degree program prerequisites would be standardized, offered, and accepted by all of that state's nine public universities and twenty-eight community colleges. The time line for completing this monumental task of standardizing was one calendar year. This paper will discuss implications of such standardization, and will share the tools and methodology created by that state's university system for addressing these tasks.

## **General Background on Higher Education in Florida**

Florida is comprised of nine (soon to be ten) operating state universities of various sizes and missions. They range from the large to the small, from the urban to the semi-rural, and from those whose primary interest is in serving undergraduates to those who are primarily research institutions. There is, in addition, one Historically Black University. Another SUS institution, in Miami, has a student population which is nearly 50% minorities, taking African-Americans and Hispanics together. In sum there are over 200,000 students by headcount in the State University System.

As importantly, Florida relies on a two-plus-two system with its 28 community colleges. In fact, Florida has one of the more carefully articulated and stringent two-plus-two systems in the United States, whereby any student who accomplishes the 60 hour Associate of Arts degree is guaranteed admittance into the State University System. This results in an enrollment pattern unlike many other institutions. The major stress point in the SUS with respect to enrollments is at the junior year, where first time in college students and community college transfers are competing for slots in degree programs, and where the legislature and the two systems (the universities and the community colleges operate under different oversight) strive to provide for even playing grounds between the two types of students.

This articulation agreement, combined with the changing demographics of Florida, has created an enormous access problem. It has now become more difficult to enter the state universities as a First Time In College student than virtually any other public system in America.

Additionally, Florida pays for education, and other of its services, primarily through a sales tax which rides on the winds of the economy of the past year. Florida lawmakers are adamant in saying that their constituents tell them that they do not wish to pay more taxes. Thrown into this peculiar mix is that two of Florida's major economic engines are tourism and agriculture, both of which are highly susceptible to external forces. Florida's tourism, as one example, took a sharp downturn in the aftermath of several murders of international tourists.

All of this is to say that, when it has come to educational reform, Florida has seen the creation of highly visible pressure points, most of which have had to do with the manipulation of the curriculum, for the universities as well as for the community colleges. This is significant, as, elsewhere, the focus has been on the reformation of operational infrastructure in order to increase effectiveness and accountability.

### **The Standardization of General Education Requirements**

By General Education, the authors refer to a core of coursework which is required of all students at the lower level and during the first two years of higher education. In Florida, students usually take and have room for the General Education coursework, and for any prerequisites to their intended major. Historically, there has been little room for anything else; it is now the case that General Education and prerequisites constitute the 60 hour A.A. degree in virtually all cases.

Prior to 1995, general education requirements varied across Florida's state universities and 28 community colleges. Within the State University System alone, the range of credit hours

associated with general education ranged from 36 to 58. All universities and community colleges were charged by Florida Statute with reducing general education requirements to no more than 36 credit hours. (Prior to the new law, 36 hours was mandated as a minimum.)

Predictably, this charge was seen by the institutions as a major intrusion into what had heretofore been the domain of the faculty, or, at the least, of the institution. In order to cope with the standardization of General Education, certain parameters were immediately established. First, the reduction to 36 hours was not negotiable. But more importantly, each institution would still have control over its General Education. There were, in other words, two ways to go: Florida would either be bound by a single 36 hour experience identical from institution to institution, or else the 36 hours might be different from institution to institution, so long as transferability was guaranteed. It was the latter which was quickly chosen as the better path.

Consequently, it has become understood that, while the course offerings may and probably will be different from institution to institution, they must be acceptable to all institutions with respect to transferability, given that the majority of Florida's public university students begin their higher education in a community college. So long as a student finished the General Education requirements at a particular institution, transferability was guaranteed. For those students who completed only a portion of their requirements, it was agreed that the need for further coursework, and the type of coursework would be determined by the institution accepting the transfers. This is currently the policy in Florida.

## **Reducing Programs to 120 Credit Hours**

Prior to 1995, the SUS had approximately 600 degree programs and a policy whereby programs, with exception, were not to exceed 128 credit hours to degree. Of the 600 programs, approximately 300 were at 120 hours to degree, another 100 had been granted exceptions to exceed 120 hours, and 200 programs were under negotiation with respect to credit hours to degree. However, all this became a moot point when 1995 legislation required that all programs, again with exception, would be required to require no more than 120 hours to degree.

Within six months the entire inventory of degree programs by credit hours had been reduced by a grand total of 1,571 credit hours. Given that 300 programs were already at 120 hours, this meant that, for the remaining programs, reductions were, on average, six credit hours. The SUS now has approximately 500 programs at 120 hours, with another 100 exceptions. Most exceptions have fallen in the areas of allied health, engineering, and visual and performing arts programs.

Along the way, two important things took place. First, as an aid to its deliberations, the SUS created a national survey of degree programs by credit hours to degree. The SUS surveyed a total of 100 programs from all 50 of the United States. The results of that survey are available as a handout appendix to this paper.

Also, the credit hour to degree exercise resulted in a standardization of programs across disciplines. For example, nursing programs in the SUS heretofore had varied from institution

to institution; they now all sit at 124 hours. Likewise, physical therapy, which had ranged from 128 to 167 now sits at 135 hours at all SUS institutions.

The current array of SUS degree offerings, by credit hours to degree, is provided as Appendix One to this paper.

### **Standardizing Prerequisites**

Prior to 1995, prerequisites for the same undergraduate degree programs in the nine public universities in Florida differed across institutions. In addition, there were many courses offered in Florida's public universities and community colleges which were not "leveled," i.e., they were offered at the upper level at some universities and at the lower level at other universities and at the community colleges, thus contributing to the lack of continuity, particularly for community college transfers.

In 1995, legislation was passed which required (1) that common degree program prerequisites were to be offered and accepted by all of that state's universities and community colleges, and (2) that a single level, either upper or lower, was to be assigned to each course. The time line for having this work done was less than one calendar year. Given that time line, it was necessary to develop a fairly stringent and meticulous methodology.

In order to effect this task, 23 committees were created representing the various degree offerings in the SUS. These committees were comprised of equal numbers of SUS and community college faculty, since the community colleges also had a stake in and were involved in the offering of prerequisite coursework. These committees met on various

campuses, sometimes with pilot committees which provided recommendations for them as a starting point in the discussion. In addition, the State University System central office created and provided a number of work templates which were necessary in order to provide the committees with some sense of what kind of product would ultimately be needed, and to ensure that there were similar kinds of products being produced by the various committees. Those work products are included in this paper as Appendix Two.

Amazingly, the bulk of the work was effected, evaluated by an oversight committee comprised of SUS and community college central administrators, and a rough working handbook of standardized prerequisites across the state was provided to all institutions within approximately an eight month period. While it is clear that there are some loose ends to the product, it appears that there is a much greater level of standardization than was the case a year ago. This information will be available to all students and prospective students in the form of a handbook which will move in due course from hard copy to a computer-assessable product.

## **Conclusion**

Moving degree programs downward to 120 credit hours, and standardizing General Education and individual prerequisites for 600 degree programs across 37 institutions was a project of monumental proportions which required the very best of tools, communication, and methodology. Such lengths toward standardization could well have far-reaching implications for the types of graduates produced in Florida. It is also the case that, irrespective of the possible effects, if Florida could do it, other states may be directed to follow.

From the student perspective, the reduction of coursework has met with generally negative assessments. Students want more, not less hours and education. Adding to the students' anxiety on this score is another legislatively initiated change which is developing, i.e. instituting a tuition surcharge on hours taken beyond the degree requirements. It is too soon to tell whether the standardizing of prerequisites will have the positive intended effect: to move students, especially transfers, through the system more quickly, thereby creating more access to incoming students.

It is important to note, though, that any of the possible implications of standardization were not at the forefront of the exercise, nor were they barely discussed. If a strength of the SUS had been the diversity of its offerings, that situation has now changed. If the SUS was a place where students could explore the curriculum or, at the least, not worry about the (very likely) possibility of changing majors, that has also changed. If these changes will have unintended negative consequences for working students, or for minorities, we will not know until time has played out more of the answer.

In short, the assumptions of what type of product we want in Florida has not driven any of the conversations, and it is likely that in five, ten, or fifteen years we will see a cadre of graduates unlike those of today. Whether they are in any way better, or even if these changes will have the superficially intended effect, remains to be seen.

## REPRODUCTION RELEASE

(Specific Document)

### I. DOCUMENT IDENTIFICATION:

Title: Standardizing Across Institutions: Now That We All look Alike, What Do We Look Like?	
Author(s): Dr. R. E. LeMon and Dr. Gita Wijesinghe Pitter	
Corporate Source:	Publication Date:

### II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic/optical media, and sold through the ERIC Document Reproduction Service (EDRS) or other ERIC vendors. Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce the identified document, please CHECK ONE of the following options and sign the release below.

← Sample sticker to be affixed to document

Sample sticker to be affixed to document →

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but neither box is checked, documents will be processed at Level 1.

"I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce this document as indicated above. Reproduction from the ERIC microfiche or electronic/optical media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries."	
Signature:	Position: Director, Program Review
Printed Name: Dr. R. E. LeMon	Organization: Florida Board of Regents
Address: 325 West Gaines Street, Suite 1554, Florida Education Ctr Tallahassee, Florida 32399-1950	Telephone Number: ( 904 ) 488-7702
	Date: September 5, 1996

### III. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)

Publisher/Distributor:
