IDENTIFIERS Alaska

## ABSTRACT

This report summarizes American Indian and Alaska Native (AI/AN) population statistics from the 1990 Census. In 1990 there were about 2 million persons who identified themselves as American Indians in the United States, a 38 percent increase over the 1980 census. More than half of the Indian population lived in six states, with Oklahoma having the largest Indian population. In 1990, 66 percent of the 1 million Indians 25 years old and over were high school graduates or higher, compared with 56 percent in 1980. In 1989, about 31 percent of American Indians were living below the poverty level. Most of this report consists of data tables and bar graphs that present the following data from the 1990 census: the 10 largest American Indian tribes; AI/AN population in each state; AI/AN population by age and sex; American Indian population of selected cities; Alaska's census count by race; largest American Indian tribes for 1980 and 1990 including the percent change in population during this time period; AI/AN population for 1970, 1980, and 1990; numerical growth and percent growth of the AI/AN population, 1970-80 and 1980-90; the 10 states with the largest AI/AN population; numerical growth of the AI/AN population in these 10 states for 1980-90; the 10 reservations with the largest AI/AN population; states with the highest percentage of AI/AN population; percent growth of the 10 states with the largest AI/AN population for 1980-90; distribution of the AI/AN population inside and outside AI/AN areas; AI/AN population for the Alaska Native Regional Corporations in Alaska; the 10 Alaska Native village statistical areas with the largest AI/AN population; and information on American Indians with disabilities, aged 15-64. # Overview of the American Indian Population

## Demographics

**Population:** There are about two million Indian people in the U.S.  
1990 Census: 1,959,234 American Indians & Alaska Natives  
(1,878,285 American Indians, 57,152 Eskimos, and 23,797 Aleuts)

This is a 38% increase over the 1980 census of 1,420,285.  
Since this large increase is not possible based on known birth rates and death rates, the increase is probably due to improved census taking and more self-identification during the 1990 count.

### States with highest Indian population:

Oklahoma, California, Arizona, New Mexico, Alaska, Washington, North Carolina, Texas, New York.

About one-half of American Indians live west of the Mississippi River, and one-half live east of it.

More than half the Indian population lives in just 6 states.

Oklahoma has 252,000 Indian people; California 242,000; Arizona 204,000; New Mexico 134,000; Alaska 86,000; Washington 81,000; North Carolina 80,000.

### Number of Tribes:

510 federally-recognized tribes (including about 200 village groups in Alaska).  
36 state-recognized tribes.

Note: there are additional tribes which have not received state or federal recognition. Some have not sought it.

<b>Largest tribes:</b>	Cherokee	(308,000 people)	16% of total
	Navajo	(219,000 people)	11% of total
	Chippewa	(104,000 people)	5% of total
	Sioux	(103,000 people)	5% of total
	Choctaw, Pueblo, Apache, Iroquois, Lumbee		

Note: These are U.S. Census figures, which are based on self-identification. Although the Cherokee tribe is listed as the largest, its official enrollment is less than the Navajo, and Cherokee tribal officials acknowledge the Navajo as the largest tribe.

**Languages:** 149 different tribal languages and dialects are still spoken today.

**Reservations:** 278 federal reservations in the U.S.  
209 Alaska Native Villages  
Largest: Navajo (16 million acres)  
Many are less than 1000 acres in size.

Note: there are additional tribal lands, rancherias, colonies, and historic Indian areas which are not federally recognized.

**Place of residence:**

22% of Indian people live on reservations and trust lands  
10% live in tribal jurisdiction areas in Oklahoma  
3% live in other tribal jurisdiction areas  
2% live in or near Alaska Native villages  
11% live in non-reservation rural areas  
52% live in urban areas

Half of all reservation residents live on just 10 of the 278 reservations, and 6 of these are in Arizona.

**Who is an Indian?**

"American Indian" is the only race in the U.S. for which there are legal definitions. However, no single federal or tribal criteria establishes a person's identity as an Indian. Different government agencies use different criteria. Tribes also have varying eligibility criteria for membership.

Four different legal definitions:

1. Bureau of Indian Affairs: blood quantum must be at least one-fourth; must be a member of a federally recognized tribe.
2. Federal Department of Education: the person must be registered by a tribe.
3. Bureau of the Census: self-identification (without verification).
4. Tribal governments: usually based on blood quantum (the degree of blood quantum required varies widely among tribes. Navajo must be at least one-fourth; Cherokee must have a Cherokee ancestor, no matter how remote).

**Multiracial Indians:**

A new "multiracial" category in the census would subtract people from the standard minority groups. The more people there are who are multiracial, the fewer there are who are Indian or Black.

70% of American Indians marry outside their ethnic group.

70% of the people who identified themselves as American Indian in the Census were seen as White by the census taker.

### **Education:**

66% of American Indians age 25 and older were high school graduates in 1990 (compared to 75% of the total population).

9% of American Indians completed a college degree in 1990 (compared to 20% of the total population).

### **Income and Employment:**

In 1990, the median family income of Indian people was \$21,750 (\$13,475 less than the national average).

In 1990, 27% of all Indian families were maintained by a female with no husband present, with a median income of \$10,742.

In 1989, 31% of all American Indians were living below the poverty level (compared to 13% of the total population).

In 1989, 51% of Indian people living on reservations and trust lands were living below the poverty level.

In 1990, 20% of all Indian homes on reservations lacked plumbing facilities. The rate on the Navajo reservation was 49%. The unemployment rate of Indian people ranges from 27% in urban areas to 80% on some reservations.

### **Mental Health of Indian People:**

Most common health/mental health problem:  
alcohol abuse and addiction.

Other common disorders:

anxiety, depression, adjustment disorders.

Suicide rate of Indian teenagers: twice the national average.

Suicide rate of Alaska Natives age 20-24: 10 times the national average.

### **Alcoholism:**

Tribes vary greatly in use of alcohol. Some tribes have an almost zero rate of alcoholism. Many Indians do not drink at all. However, as a whole, the alcoholism rate of Indian people is three times the rate in the general population. Indian people are 10 times more likely to die due to alcoholism. Alcohol is a factor in:

90% of crimes for which Indian people are jailed

80% of suicides of Indian people

75% of fatal accidents involving Indian people

### **Service Providers:**

Of all graduate students who earn doctorates in psychology in the U.S. each year, only 0.4% are American Indian. There are a total of about 250 American Indian mental health workers at any degree level (one for every 8000 Indians). There are a total of about 230 Indian people who have a masters or doctoral degree in psychology. Some of these practice psychology, but many are in research or education. There is only one psychologist (of any race) for every 43,000 American Indians. There are less than 1000 traditional Indian healers. It is estimated that about half of these live on the Navajo reservation (where there is one traditional healer per 286 people).

## Census Publishes Data on American Indians

The Bureau of the Census has published the American Indian and Alaska Native data it collected during the 1990 census year. *We, the First Americans*, is a 17-page booklet divided into three sections that provides a wealth of data on the two million people who identified themselves as American Indian or Alaska Native in the census. Although the booklet is no longer available from the Bureau of the Census, it can be ordered from the American Indian Rehabilitation Research and Training Center, P.O. Box 5630, Flagstaff, AZ, 86011 for \$2,00 (order #AI 1). Most of the information in the booklet has been released separately, but the new booklet brings all the data together in a format that lists the ten largest American Indian tribes in the country, the states with the largest Indian populations, education and poverty rates, labor force information, family income, Indian reservations, and family household sizes. Section 3 of the booklet is devoted to Alaska Native populations in Alaska.

According to the Census, which uses self-identification for census-data purposes, the ten largest American Indian tribes or groups of people who identified themselves as members of tribes are Cherokee (308,000), Navajo (219,000), Chippewa (104,000), Sioux (103,000), Choctaw (82,000), Pueblo (53,000), Apache (50,000), Iroquois (49,000), Lumbee (48,000), and Creek (44,000). The ten states with highest numbers of people who identified themselves as Indian include Oklahoma, California, Arizona, New Mexico, Alaska, Washington, North Carolina, Texas, New York, and Michigan. Two of every three American Indians live in the 10 states and more than half live in just six states, Oklahoma, California, Arizona, New Mexico, Alaska, and Washington.

Thirty-nine percent of the American Indian and Alaska Native population was under 20 years of age in 1990 compared with 29 percent of the Nation's total population. About eight percent of all American Indians were 60 years old and over, about half of the 17 percent proportion for the total population. In 1990, 66 percent of the one million American Indians 25 years old and over were high school graduates or higher compared with only 56 percent in 1980. Some 27.3 percent of the American Indian families are maintained by a female householder without a husband present. Sixty-two percent of the 1.4 million American Indians and Alaska Natives 16 years old and over were in the labor force in 1990, only three percent below the percentage for the total population. The median family income was \$21,750 compared with \$35,225 for the total population. In 1989, about 603,000 or 31 percent of American Indians were living below the poverty level. The national poverty rate was about 13 percent.

The Census Bureau says the ten Indian reservations with the largest number of American Indians, Eskimos, and Aleuts, six of which are located partly or fully in Arizona, were Navajo (Arizona, New Mexico, and Utah), Pine Ridge (North and South Dakota), Fort Apache (Arizona), Gila River (Arizona), Papago (now known as Tohono O'Odham, Arizona), Rosebud (South Dakota), San Carlos (Arizona), Zuni Pueblo (New Mexico), Hopi (Arizona), and Blackfeet (Montana). Only Navajo has more than 100,000 population while Pine Ridge is the only other to have more than 10,000 residents. An additional eight reservations had more than 7,000.

## American Indians - 1990 Census Data

The Bureau of the Census has released the first set of Indian population counts from the 1990 census for all 50 states. The figures are part of the data furnished to state Legislatures for use in the reapportionment of congressional seats, as well as the drawing of state and local voting district boundaries.

The figures show that Oklahoma once again is the state with the largest number of Indian people, a distinction that it lost to California in 1980. According to the figures, Oklahoma gained nearly 83,000 Indian people between the 1980 and 1990 census, while Arizona and California gained the second and third largest numbers.

In percentage terms, the state with the biggest proportional increase in the Indian population was Alabama. Its percentage increase from 1980 to 1990 was 118 %. Tennessee gained 97 % and Florida 89 %, according to the figures. While the Indian and Native Alaskan population grew by nearly 38 % nationally from the 1980 Census to the 1990 Census, some areas grew considerably faster than others.

A preliminary analysis by the Information Office of the Indian and Native American Employment and Training Coalition of the population figures for various types of Indian Land Areas shows that the highest rate of growth over the decade was registered in the Indian areas of Oklahoma. These areas (consisting primarily of former reservation lands) increased their Indian population from roughly 116,000 in 1980 to nearly 201,000 in 1990 for a growth rate of 72.5%.

The Indian population in other Indian and Native Alaskan land areas also grew significantly, but at a much slower rate. The Indian population in reservation areas and within trust outside reservation boundaries grew from 370,000 to about 437,000 over the decade - a growth rate of 18%. The Native Alaskan population in Native Alaskan villages increased by 20% from about 39,000 to 47,000.

The largest change in the Indian and Native Alaskan population occurred in areas outside the reservations, the former reservations in Oklahoma and the native villages in Alaska. In terms of numbers, the other parts of the United States grew from nearly 900,000 Indian and Native Alaskan people in 1980 to 1,275,000 in 1990, and overall rate of growth of 42%. This portion of the Indian and Native Alaskan populations in what might loosely be referred to as "off-reservation" areas now accounts for 65% of the total number of the Indian and Native Alaskan people counted by the census. In 1980, this percentage was 63%.

## Alaska's 1990 Census Counts by Race

The Alaska Department of Labor, State Data Center, has released the population counts by race from the 1990 census. All racial categories gained population in the past decade as the state grew from 401,851 in 1980 to 550,043 in 1990. Both white and native racial groups made up smaller percentages of the total population than in 1980. The Asian and Pacific Islander category grew by the largest percentage with the Black population also growing at a faster rate than the state as a whole. Persons of Hispanic origin are spread across all racial groups, but were also tallied separately in the 1990 census. The percentage of Hispanics grew from 2.4% in 1980 to 3.2% in 1990.

## Largest American Indian Tribes for the United States: 1990 and 1980

(Data are based on a sample)

Tribe	1990 Census		1980 Census		Change	
	Number	Percent	Number	Percent	Number	Percent
All American Indians.....	1,937,391	100.0	1,478,523	100.0	458,868	31.0

## Demographics of American Indians with Disabilities

According to the 1990 US..... Census Bureau, the category *American Indian/ Eskimo/ Aleut* has a significantly higher rate of disability than the other "races," among persons 15-64 years old.

1991-92 Race/Ethnicity	PERSONS 15 TO 64 YEARS OLD	
	Severe Disability	Overall Disability
American Indian, Eskimo, or Aleut	11.7%	26.9%
Black	12.7%	20.8%
White	7.4%	17.7%
Hispanic origin	9.1%	16.9%
Asian or Pacific Islander	4.5%	9.6%

In other words, about one in four (26.9%) American Indian/Eskimo/Aleut persons in the labor force have a disability. The *American Indian/ Eskimo/ Aleut* category does not differ significantly from Blacks and Whites in the other disability categories shown. There are considerable differences in age structures between these groups. For example, among Whites, 13% of the population was at least 65 years of age, compared with 4.7% of the American Indian/Eskimo/Aleut population .

# REPRODUCTION RELEASE

(Specific Document)

## I. DOCUMENT IDENTIFICATION:

Title: American Indian Population Statistics	
Author(s): Timothy C. Thomason, Editor	
Corporate Source: Northern Arizona University	Publication Date: 1996

## II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic/optical media, and sold through the ERIC Document Reproduction Service (EDRS) or other ERIC vendors. Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce the identified document, please CHECK ONE of the following options and sign the release below.

Sample sticker to be affixed to document
