## ABSTRACT

This report is a statistical analysis of trends in the participation of women in higher education and in the labor market from 1970-1994. In 45 figures and 14 tables, data on women's achievements are compared with those of men, with each chart accompanied by a short analysis of the data. The first section of the report presents demographic and educational data: population data covers the resident population of the United States. The second part of the report focuses on outcomes and covers individuals 16 years of age and older, residing in the 50 states and the District of Columbia (except inmates in institutions and those on active duty in the Armed Services) whether or not they are enrolled in school. Appendix A presents additional tables of population, dropout rates, school and enrollment, degree conferred, post-high school training, employment, earnings, employment and earnings in educational institutions. Appendix B lists sources of data and defines concepts and terms used in the report. (CH)

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

10. Employment status of the civilian noninstitutional population ages 25 to 64, by sex and educational attainment: 1993 . . . . .	53
11. Percentage distribution of employed persons 16 years old and over, by occupation and sex: 1982-94 . . . . .	55
12. Median annual earnings in current and constant dollars for year-round full-time workers, by sex: 1970-93 . . . . .	57
13. Employed educators 20 years old and over, by sex and type: 1982-93 . . . . .	60

## **Acknowledgments**

The authors wish to thank the reviewers of this report for their substantive comments and suggestions. Howard V. Hayghe of the Bureau of Labor Statistics suggested the general format of the report. Other reviewers are Susan W. Ahmed, Thomas M. Smith, Mary R. Rollefson, and Marilyn M. Mcmillen of the National Center for Education Statistics and Susan S. Klein of the Office of Reform Assistance and Dissemination. The authors also wish to thank Gerard Devlin, Phil Carr, and Simone Miranda for their editorial and graphical guidance.

## Introduction

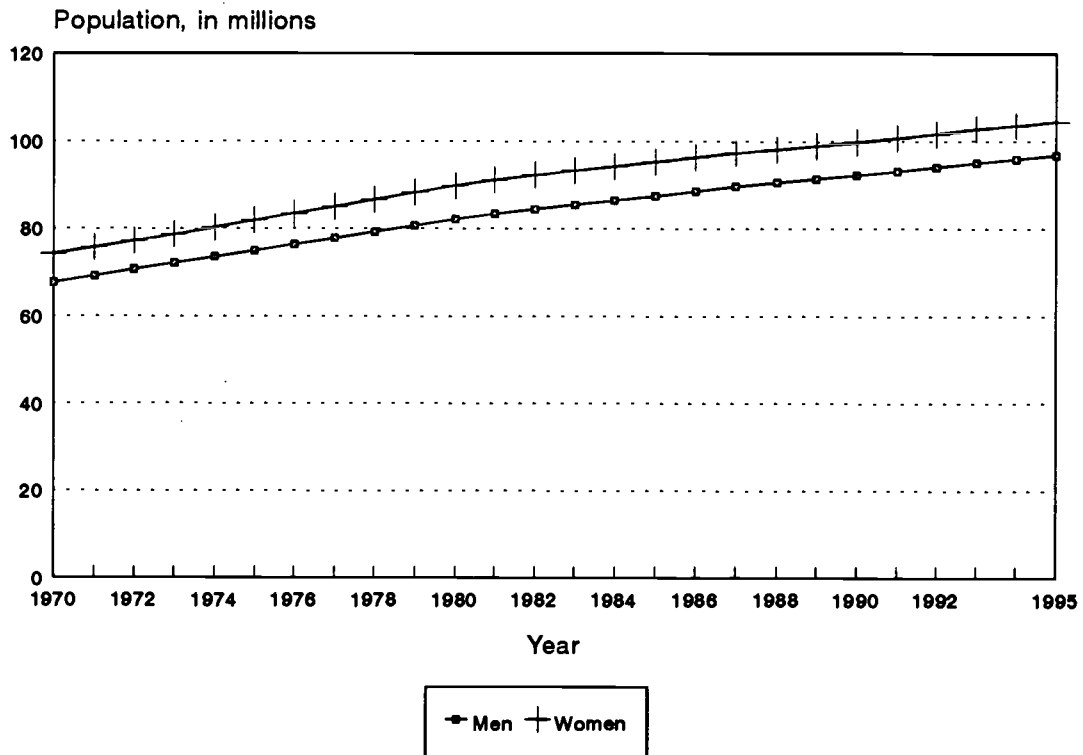

One of the remarkable phenomena of the last three decades has been the entrance of women into universities and the workplace in record numbers. Their increased presence in the corporate world, government, and politics is the result of many factors including the changing attitudes of society towards working women and, whether for social, economic or personal reasons, women have changed their roles in society through further education and increased participation in the labor market.

The purpose of this report is to show the trends in the participation of women in higher education and in the labor market from 1970 to 1994. Data on the achievements of women are compared with men's and are displayed in charts and tables. Each chart is accompanied by a short analysis of the statistics presented. Most of the charts have companion tables. Additional tables are included in appendix A.

Most of the tables focus on women, 16 years of age and older. A few tables include individuals who are 15 years old. This slight difference in coverage is due to availability of data.

The first part deals with demographics and education. The population covered is the resident population of the United States. The second part focuses on outcomes and covers persons 16 years of age and older residing in the 50 states and the District of Columbia who are not inmates of institutions and who are not on active duty in the Armed Forces, regardless of whether they are enrolled in school. See appendix B for a further description of the data and data sources.

16 years old and over: 1970-95

SOURCE: U.S. Department of Commerce, Bureau of the Census, Current Population Reports, Series P-25 and PLL-41, appendix A.

- o In 1970, more than half (52.3 percent) of the 16 years old and over resident population were women (table 1). This proportion did not change much during the past 25 years.

Figure 3.--College enrollment rates of high school graduates, ages 16 to 24, by sex: 1970-94

SOURCE: U. S. Department of Education, "Digest of Education Statistics: 1995," American College Testing Program, 1987, derived from statistics collected by the Bureau of the Census and U.S. Department of Labor, unpublished data.

- o In October 1970, 55 percent of men and 49 percent of women, ages 16 to 24, who graduated from high school during the preceding 12 months were enrolled in college (table 3). Since October 1988 the college enrollment rates of women high school graduates were consistently higher than the enrollment rates for men.

1/ Individuals age 16 to 24 who graduated from high school during the preceding 12 months.

2/ Enrollment in college as of October of each year for individuals age 16 to 24 who graduated from high school during the preceding 12 months.

NOTE—Data are based on sample surveys of the civilian population. High school graduate data in this table may differ from other publications because of varying survey procedures and coverage. High school graduates include GED recipients.

SOURCE: U.S. Department of Education, "Digest of Education Statistics: 1995," table 178, p. 188. American College Testing Program, unpublished tabulations, 1987, derived from statistics collected by the Bureau of the Census and U.S. Department of Labor, "College Enrollment of 1993 High School Graduates."

Figure 4a.--Associate degrees conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics:1995," table 236, p. 250 and Integrated Postsecondary Education Data System (IPEDS).

- o Of the 252,610 associate degrees conferred by institutions of higher education during the academic year 1970-71, 43 percent were awarded to women (table 4). Twenty three years later (1992-93) women received 59 percent of associate degrees.

Figure 4b.--Bachelor's degrees conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U. S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 236, p. 250 and Integrated Postsecondary Education Data System (IPEDS).

- o Forty-three percent of those who received baccalaureate degrees in the 1970-71 school year were women; in 1992-93, 54 percent of baccalaureate degrees were awarded to women (table 4). The number of women bachelor's degree recipients increased steadily until it surpassed the number of men receiving these degrees in 1981-82.

Figure 4c.--Bachelor's degrees in education conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 275, p. 297 and Integrated Postsecondary Education Data System (IPEDS).

- o Bachelor's degrees in education earned by women decreased steadily between 1972-73 and 1985-86; from 142,684 degrees in 1972-73 to 66,155 degrees in 1985-86.

Figure 4d.--Bachelor's degrees in engineering conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 276, p. 298 and Integrated Postsecondary Education Data System (IPEDS).

- o In 1970-71 there were only 400 bachelor's degrees in engineering awarded to women. The number peaked in 1986-87 at 12,714 degrees.

Figure 4e.--Bachelor's degrees in computer and information sciences conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U. S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 274, p. 297 and Integrated Postsecondary Education Data System (IPEDS).

- o For both men and women, the number of degrees in computer and information sciences increased dramatically from the seventies to the mid-eighties. From 1985-86 to 1992-93 the number of degrees awarded in this field has declined.

Figure 4f.--Master's degrees conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 238, p. 250 and Integrated Postsecondary Education Data System (IPEDS).

- o During school year 1970-71, four out of ten individuals who received a master's degree were women (table 4). By 1992-93, 54 percent of master's degree recipients were women.

Figure 4g.--Master's degrees in the health professions and related sciences conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 281, p. 300 and Integrated Postsecondary Education Data System (IPEDS).

- o The number of master's degrees in the health professions earned by women grew remarkably since the early seventies; 3,182 master's degrees in the health sciences were awarded to women in 1970-71 and 20,491 were awarded in 1992-93.

Figure 4h.--Master's degrees in education conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 275, p. 297 and Integrated Postsecondary Education Data System (IPEDS).

- o Fifty-six percent of the master's degrees in education were awarded to women in 1970-71. The gap between men and women widened in time and by 1992-93 the percent share of women receiving master's degrees in education was 77 percent.

Figure 4i.--Master's degrees in mathematics conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 262, p. 301 and Integrated Postsecondary Education Data System (IPEDS).

- o Although men are more likely than women to major in mathematics at the master's degree level, the difference in the number of master's degrees awarded to men and women narrowed between 1970-71 and 1992-93.

Figure 4j.--Doctor's degrees conferred by institutions of higher education by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 236, p. 250 and Integrated Postsecondary Education Data System (IPEDS).

- o The number of men receiving doctoral degrees peaked in 1972-73 and then declined for the ensuing 10 years at an annual average rate of almost 3 percent (table 4). In contrast, the number of doctoral degrees awarded to women rose slowly and steadily for the same period, at an average annual rate of 6 percent. In school year 1992-93, 38 percent of doctoral degree recipients were women.

Figure 4k.--Doctor's degrees in education conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 275, p. 297 and Integrated Postsecondary Education Data System (IPEDS).

- o Of the 6,041 doctoral degrees awarded in education in 1970-71 only 1,270 were awarded to women (table 4). The number of doctor's degrees in education awarded to women rose dramatically in the subsequent 13 years while the number awarded to men dropped. By 1983-84 there were more doctoral degrees in education awarded to women than to men (3,465 vs. 3,446). In 1992-93 women received 59 percent of the doctor's degrees awarded in education.

Figure 4I.--Doctor's degrees in engineering conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 276, p. 298 and Integrated Postsecondary Education Data System (IPEDS).

- o Women were awarded fewer than 11 percent of the doctoral degrees in engineering in 1992-93. This disparity between the proportion of men and women earning doctor's degrees in engineering is greater than at either the master's or bachelor's degree levels.

Figure 4m.--Doctor's degrees in the physical sciences\* conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest Education Statistics: 1995," table 283, p. 301 and Integrated Postsecondary Education Data System (IPEDS).

- o There were 246 doctor's degrees in the physical sciences awarded to women in 1970-71. This number almost quadrupled (961) by 1992-93. The number of doctor's degrees awarded to men decreased from 4,144 to 3,432 degrees (17 percent) during the same period.
- \* Physical sciences include degrees in astronomy, chemistry, geology, earth science, oceanography, physics, science technologies, and other physical sciences.

Figure 4n.-- Doctor's degrees in mathematics\* conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 282, p. 301 and Integrated Postsecondary Education Data System (IPEDS).

- o For every 100 doctor's degrees awarded in mathematics in 1970-71 only 8 were awarded to women. During school year 1992-93, almost one fourth of the doctor's degrees in mathematics were awarded to women.

\* Mathematics includes degrees conferred in statistics.

Figure 4o.--First-professional degrees\* conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 236, p. 250 and Integrated Postsecondary Education Data System (IPEDS).

o In 1992-93 as in 1970-71 the majority of first-professional degrees were awarded to men (table 4). However, since 1970-71 women have increased their share of first-professional degrees from 6 percent to 40 percent.

\* First-professional degrees include degrees in law, dentistry, medicine, optometry, pharmacy (Doctor of Pharmacy) podiatry, chiropractic and osteopathic medicine, veterinary medicine, and theology.

Figure 4p.--First-professional degrees in law conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 251, p. 278 and Integrated Postsecondary Education Data System (IPEDS).

- o During school years 1970-71 and 1971-72, only 7 percent of first-professional degrees in law were awarded to women. In 1992-93, 42 percent of law degrees were awarded to women.

Figure 4q.--First-professional degrees in medicine conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 251, p. 278 and Integrated Postsecondary Education Data System (IPEDS).

- o In school year 1970-71, 10 percent of medical degree recipients were women. By 1992-93, women's percent share rose to 38 percent.

Figure 4r.--First-professional degrees in dentistry conferred by institutions of higher education, by sex: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 251, p. 278 and Integrated Postsecondary Education Data System (IPEDS).

- o The total number of degrees in dentistry dropped by 4 percent from 1970-71 to 1992-93 because of the precipitous drop in the number of men receiving these awards. The number of women receiving first-professional degrees in dentistry increased dramatically, from 42 in 1970-71 to 1,222 in 1992-93.

Table 4. -- Earned degrees conferred by institutions of higher education, by level of degree and sex of student: 1970-71 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 234, p. 245 and Integrated Postsecondary Education Data System (IPEDS).

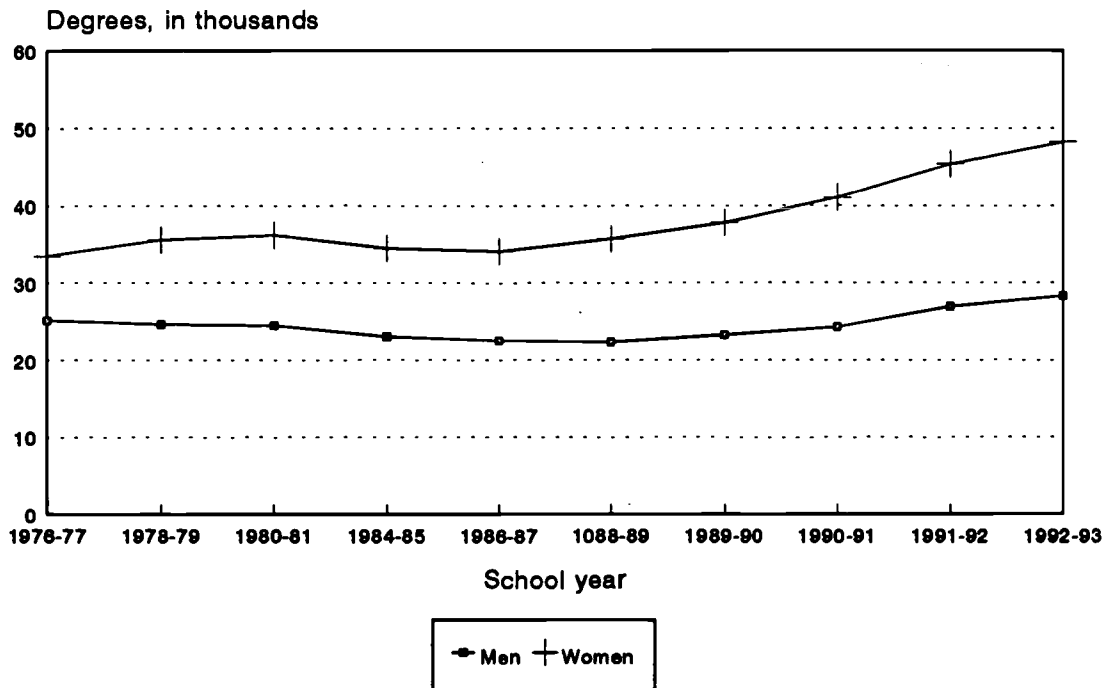

Figure 5a.--Bachelor's degrees conferred by institutions of higher education to non-Hispanic whites, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 256 p. 283 and Integrated Postsecondary Education Data System (IPEDS).

- o In 1976-77, there were 438,161 bachelor's degrees awarded to non-Hispanic white men; 68,634 more than to non-Hispanic white women (table 5). After 17 years, the picture changed considerably with non-Hispanic white women receiving 77,141 more bachelor's degrees than non-Hispanic white men.

Figure 5b.--Bachelor's degrees conferred by institutions of higher education to non-Hispanic blacks, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 256 p. 283 and Integrated Postsecondary Education Data System (IPEDS).

- o During the entire period from 1976-77 to 1992-93, non-Hispanic black women were more likely to earn a bachelor's degree than non-Hispanic black men (table 5). Furthermore, during this time the difference in the number of degrees awarded to non-Hispanic black men and women has been widening. In school year 1992-93, non-Hispanic black women received 63 percent of the bachelor's degrees awarded to non-Hispanic blacks.

**Figure 5c.--Bachelor's degrees conferred by institutions of higher education to Hispanics, by sex: 1976-77 to 1992-93**

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 256 p. 283 and Integrated Postsecondary Education Data System (IPEDS).

- o In 1976-77 out of the 18,743 bachelor's degrees awarded to Hispanics, 45 percent were awarded to women (table 5). Four years later, in 1980-81, the number of awards to Hispanic women exceeded the number awarded to men. In 1992-93, 56 percent of baccalaureate degrees conferred to Hispanics were awarded to women.

Figure 5d.--Bachelor's degrees conferred by institutions of higher education to Asians or Pacific Islanders, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 256 p. 283 and Integrated Postsecondary Education Data System (IPEDS).

- o From 1976-77 to 1989-90, more baccalaureate degrees were awarded to Asian or Pacific Islander men than to Asian or Pacific Islander women (table 5). Beginning in 1990-91, there were more bachelor's degrees awarded to Asian or Pacific Islander women than to Asian or Pacific Islander men.

**Table 5. -- Bachelor's degrees conferred by institutions of higher education, by race-ethnicity and sex:  
1976-77 to 1992-93**

Year	Total	White non- Hispanic	Black, non- Hispanic	Hispanic	Asian or Pacific Islander	Am Indian, or Alaskan Native	Non- resident alien

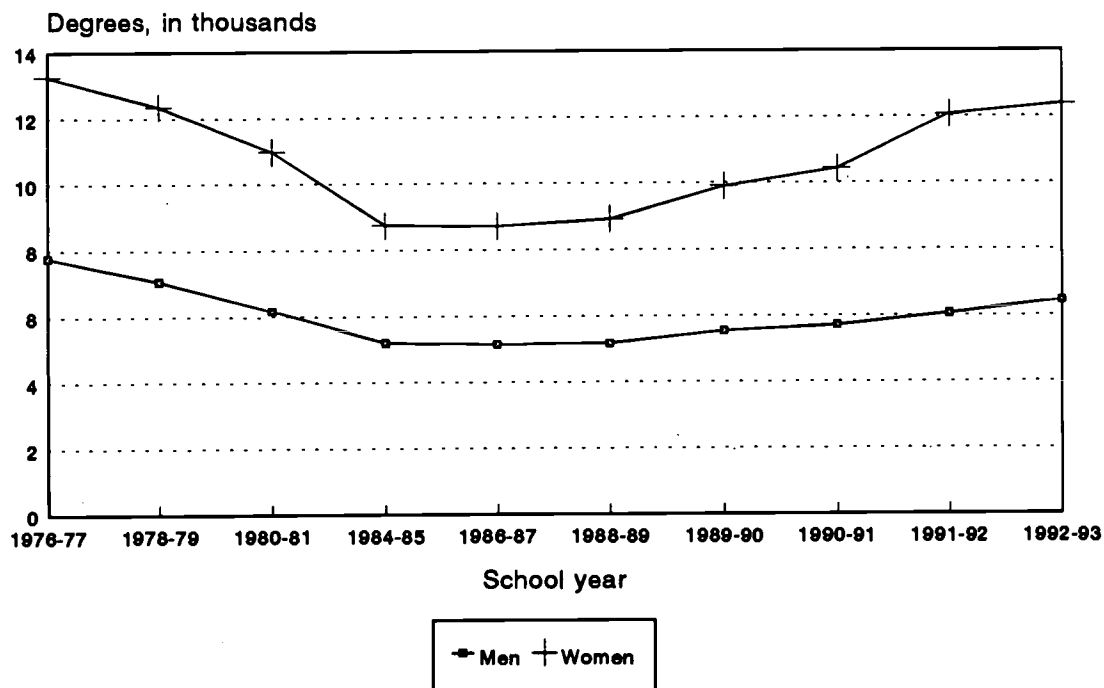

Figure 6a.--Master's degrees conferred by institutions of higher education to non-Hispanic whites, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 259 p. 286 and integrated Postsecondary Education Data System (IPEDS).

- o Like bachelor's degrees, there were more master's degrees awarded to non-Hispanic white men than to non-Hispanic white women in 1976-77, a difference of more than 12 thousand (table 6). By school year 1978-79, there were more master's degrees awarded to non-Hispanic white women than to non-Hispanic white men (125 vs. 124 thousand).

Figure 6b.--Master's degrees conferred by institutions of higher education to non-Hispanic blacks, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 259 p. 288 and Integrated Postsecondary Education Data System (IPEDS).

- o As with baccalaureate degrees, non-Hispanic black women were more likely than non-Hispanic black men to earn a master's degree over the period from 1976-77 to 1992-93 (table 6).

Figure 6c.--Master's degrees conferred by institutions of higher education to Hispanics, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, national Center for Education Statistics, "Digest of Education Statistics: 1995," table 259 p. 286 and Integrated Postsecondary Education Data System (IPEDS).

- o In 1978-79, the number of master's degrees awarded to Hispanic men and women was almost equal (table 6). Since the mid-eighties the number of Hispanics receiving master's degrees has grown steadily, although Hispanic women have had a higher rate of growth in master's degrees received than Hispanic men.

Figure 6d.--Master's degrees conferred by institutions of higher education to Asians or Pacific Islanders, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 259 p. 286 and Integrated Postsecondary Education Data System (IPEDS).

- o Asian or Pacific Islander men are more likely to earn a master's degree than Asian or Pacific Islander women (table 6). In 1976-77, two out of five (39 percent) master's degrees awarded to Asians or Pacific Islanders were awarded to women. In 1992-93, 46 percent of master's degrees conferred to this minority group were awarded to women.

Figure 7a.--Doctor's degrees conferred by institutions of higher education to non-Hispanic whites, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 262 p. 289 and Integrated Postsecondary Education Data System (IPEDS).

- o Twenty-five percent of non-Hispanic white doctoral degree recipients were women in school year 1976-77 (table 7). Slowly but consistently the number of non-Hispanic white women earning doctoral degrees increased between 1976-77 and 1992-93. In 1992-93, 44 percent doctoral degrees awarded to non-Hispanic whites were awarded to women.

Figure 7b.--Doctor's degrees conferred by institutions of higher education to non-Hispanic blacks, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest Education Statistics: 1995," table 262, p. 269 and Integrated Postsecondary Education Data System (IPEDS).

- o In school year 1976-77, six out of ten doctoral degrees awarded to non-Hispanic blacks, were awarded to men (table 7). Since 1984-85 there have been more non-Hispanic black women who received doctoral degrees than non-Hispanic black men.

Figure 7c.--Doctor's degrees conferred by institutions of higher education to Hispanics, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 262 p. 289 and Integrated Postsecondary Education Data System (IPEDS).

- o Hispanic men are more likely to earn a doctor's degree than Hispanic women (table 7). However, the gap in the number of doctor's degrees awarded to Hispanic men and women narrowed in time. By school year 1992-93, the difference shrank to just 48 doctoral degrees.

Figure 7d.--Doctor's degrees conferred by institutions of higher education to Asians or Pacific Islanders, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics:1995," table 262, p. 269 and Integrated Postsecondary Education Data System (IPEDS).

- o Men received the majority of doctor's degrees awarded to Asians or Pacific Islanders since 1976-77 although the numbers for both sexes are increasing (table 7). In 1992-93, 34 percent of doctor's degrees awarded to Asians or Pacific Islanders were awarded to women.

**Table 7.—Doctor's degrees conferred by institutions of higher education, by race—ethnicity and sex:  
1976–77 to 1992–93**

Figure 8a.--First-professional degrees conferred by institutions of higher education to non-Hispanic whites, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 265, p. 292 and Integrated Postsecondary Education Data System (IPEDS).

- o Although non-Hispanic white men are more likely than non-Hispanic white women to receive a first-professional degree, the gap between the sexes has narrowed consistently since 1976-77 (table 8). In 1992-93, 39 percent of first-professional degrees awarded to non-Hispanic whites, were awarded to women.

Figure 8b.--First-professional degrees conferred by institutions of higher education to non-Hispanic blacks, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 265, p. 292 and Integrated Postsecondary Education Data System (IPEDS).

- o Although there were more first-professional degrees awarded to non-Hispanic black men than to non-Hispanic black women up to the late eighties the number of women receiving these degrees increased steadily and by 1989-90 the number of black women receiving a first-professional degree exceeded the number of black men first-professional degree recipients (1,738 vs. 1,672) (table 8).

Figure 8c.--First-professional degrees conferred by institutions of higher education to Hispanics, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 265, p. 292 and Integrated Postsecondary Education Data System (IPEDS).

- o First-professional degrees awarded to Hispanics were predominantly awarded to Hispanic men (table 8). However, the percentage share of Hispanic women receiving first-professional degrees has increased, from 17 percent in 1976-77 to 41 percent in 1992-93.

Figure 8d.--First-professional degrees conferred by institutions of higher education to Asians or Pacific Islanders, by sex: 1976-77 to 1992-93

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Digest of Education Statistics: 1995," table 265, p. 292 and Integrated Postsecondary Education Data System (IPEDS).

- o Asian or Pacific Islander men are more likely to earn a first-professional degree than Asian or Pacific Islander women (table 8). However, Asian or Pacific Islander women have increased their percent share of first-professional degrees from 25 percent in 1976-77 to 45 percent in 1992-93.

Figure 9.--Labor force participation rates\* of men and women, 25 to 54 years old, annual averages: 1970-93

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, "Trends in Labor Force Participation of Major Population Groups, 1965-92" July 1993, table 2, 3, 11, 18 and "Employment and Earnings" January 1995, table 3, 164.

- o The proportion of women, ages 25 to 54, working or looking for work rose from 50 percent in 1970 to 75 percent in 1993 (tables 9a and 9b). Over the same period the labor force participation rate of men declined from 96 to 92 percent.

\* Labor force participation rate is calculated as the ratio of the number of individuals in the labor force to the corresponding civilian, noninstitutional population.

**Table 9a. -- Labor force participation rates of men 16 years old and over, by age: 1970-94**

Year	Total	16 to 24 years		25 to 54 years			55 years and over			
		16-19	20-24	Total	25-34	35-44	45-54	Total	55-64	65 & over
1970	79.7	56.1	83.3	95.8	96.4	96.9	94.3	55.7	83.0	26.8

Figure 10a.--Labor force participation rates of men and women with a bachelor's degree and above, ages 25 to 64, by degree: 1993

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, derived from unpublished tables, 1993.

- o There is a significant upward trend in the labor force participation rate of women with increasing levels of degree attainment (table 10).

Figure 10b.--Unemployment rates of men and women with a bachelor's degree and above, ages 25 to 64, by degree: 1993

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, derived from unpublished tables, 1993.

- o In 1993, men ages 25 to 64 with a first-professional degree were less likely to be unemployed than their female counterparts (table 10).

Figure 10c.--Unemployment rates of men and women, 16 years old and over, annual averages: 1970-93

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, "Employment and Earnings: January 1995," table 2, p. 163.

- o From 1970-81, women 16 years old and over, were more likely to be unemployed than men. Since that time, the unemployment rates of men have either been about the same or the unemployment rate for women was less than men for 7 out of 25 years.

Figure 12.--Median annual earnings in constant dollars for year-round full-time workers, by sex: 1970-93

SOURCE: U.S. Department of Labor, Women's Bureau "1993 Handbook on Women Workers: Trends and Issues," table 1, p. 32.

- o In 1970, the median annual earnings of women who worked full-time for the whole year was \$13,719 in constant dollars or 59 percent of men's earnings (table 12). While a disparity in earnings after 24 years still exists between men and women, the ratio of women's to men's earnings ranged from 70 to 72 percent between 1990 and 1993.

NOTE: The consumer price index (CPI) is a measure of the average change in the prices paid by urban consumers for a fixed market basket of goods and services. The CPI is used as a deflator of several economic series (e.g. earnings, retail sales, gross national product (GNP), personal consumption expenditures) to adjust these series for price changes and to translate these series into inflation-free dollars. The base year, average of 1982, 1983 and 1984 (1982-1984 = 100), is based on the spending patterns of urban consumers from the 1982-84 Consumer Expenditure Survey.

- o In 1982, there were 207,000 women teachers in colleges or universities (table 13). Between 1982 and 1993, this number grew by 57 percent. During the same period the number of men in this occupational category increased from 382,000 to 440,000, a rise of 15 percent.

Figure 13b.--All teachers except college and university teachers 20 years old and over, by sex: 1982-93

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, "Employment and Earnings," derived from January issues, 1984 through 1995.

- o Teaching other than college and university teaching including kindergarten, elementary, secondary, and special education teaching is still dominated by women. In fact, in 1982, 7 out of 10 individuals employed in this area were women and in 1993, 3 out of 4 individuals employed in this field were women (table 13).

## Sources of Data and Definitions

## Sources of Data and Definitions

### Sources

The information presented in this report was obtained from many sources, including federal and state agencies, private research organizations, and professional associations. The sources are as follows:

#### Decennial Census

The U.S. Constitution provides for a census of the population every 10 years, primarily to establish a basis for apportionment of members of the House of Representatives among the States. The census of population is a complete count. An attempt is made to account for every person, for each person's residence, and for other characteristics (sex, age, family relationships, etc.).

#### Current Population Survey

Current estimates of school enrollment, as well as social and economic characteristics of students, are based on data collected in the Census Bureau's monthly household survey of about 60,000 households. The monthly Current Population Survey (CPS) sample consists of 729 areas comprising 1,973 counties, independent cities, and minor civil divisions throughout the 50 states and the District of Columbia. The sample was initially selected from the 1980 census files and is periodically updated to reflect new housing construction.

The monthly CPS deals primarily with labor force data for the civilian noninstitutional population (i.e., excluding military personnel and their families living on post and inmates of institutions). In addition, in October of each year, supplemental questions are asked about highest grade completed, level and grade of current enrollment, attendance status, number and type of courses, degree or certificate objective, and type of organization offering instruction for each member of the household. In March of each year, supplemental questions on income are asked. The responses to these questions are combined with answers to two questions on educational attainment: highest grade of school ever attended, and whether that grade was completed.

#### School Enrollment

Each October, the Current Population Survey (CPS) includes supplemental questions on the enrollment status of the population 3 years old and over. The main sources of nonsampling variability in the responses to the supplement are those inherent in the survey instrument. The question of current enrollment may not be answered accurately for various reasons. Some respondents may not know current grade information for every student in the household, a problem especially prevalent for households with members in college or in nursery school. Confusion over college credits or hours taken by a student may make it difficult to determine the year in which the student is enrolled. Problems may occur with the definition of nursery school (a group or class organized to provide educational experiences for children), where respondents' interpretations of "educational experiences" vary.

## Educational Attainment

Data on years of school completed are derived from two questions on the Current Population Survey (CPS) instrument. Formal reports documenting educational attainment are produced by the Bureau of the Census using March CPS results. The latest report is *Educational Attainment in the United States, March 1993 and 1992*, Series P-20, No. 476, which is available from the Government Printing Office.

In addition to the general constraints of the CPS, some data indicate that the respondents have a tendency to overestimate the educational level of members of their household. Some inaccuracy is due to a lack of the respondent's knowledge of the exact educational attainment of each household member and the hesitancy to acknowledge anything less than a high school education. Another cause of nonsampling variability is the change in the numbers in the armed services over the years. In 1970, 25 percent of all males 20 and 21 years old were in the armed services. By 1974, this had decreased to less than 10 percent. The exclusion of members of the armed services appears to increase the proportion of the CPS population with some college and decrease the proportion of those who finished high school but went no further. After 1974, there was more stability in the proportion of young men in the military.

## **Integrated Postsecondary Education Data System**

The Integrated Postsecondary Education Data System (IPEDS) surveys all postsecondary institutions, including universities and colleges, as well as institutions offering technical and vocational education beyond the high school level. This survey, which began in 1986, replaced the Higher Education General Information Survey (HEGIS).

IPEDS consists of eight integrated components that obtain information on who provides postsecondary education (institutions), who participates in it and completes it (students), what programs are offered and what programs are completed, and both the human and financial resources involved in the provision of institutionally based postsecondary education. Specifically, these components include: Institutional Characteristics, including instructional activity; Fall Enrollment, including age and residence; Enrollment in Occupationally Specific Programs; Completions; Finance; Staff; Salaries of Full-Time Instructional Faculty; and Academic Libraries.

The higher education portion of this survey is a census of accredited 2- and 4-year colleges, while data from less than 2-year private technical and vocational institutions were collected through a sample survey from 1986 to 1992. In 1993, IPEDS surveyed all postsecondary institutions eligible for participation in Title IV financial aid programs. However, some portions of the historical data will be subject to sampling and nonsampling errors, while some portions will be subject only to nonsampling errors.

Prior to the establishment of IPEDS in 1986, HEGIS acquired and maintained statistical data on the characteristics and operations of institutions of higher education. Implemented in 1966, HEGIS was an annual universe survey of institutions accredited at the college level by an agency recognized by the Secretary of the U.S. Department of Education. These institutions were listed in NCES's *Education Directory, Colleges and Universities*.

### Institutional Characteristics

This survey provides the basis for the universe of postsecondary institutions in the United States. The universe of higher education institutions comprises institutions that met certain accreditation criteria and offered at least a 1-year program of college-level studies leading toward a degree. All of these institutions were certified as higher education institutions by the U.S. Department of Education's Division of Eligibility and Agency Evaluation. Each fall, institutions listed in the previous year's IPEDS universe are asked to update a computer printout of their information. Newly identified postsecondary institutions are asked to complete an Institutional Characteristics Survey so they can be added into the IPEDS institutional universe. The survey collects basic information necessary to classify the institutions including control, level, and kinds of programs; information on tuition, fees, and room and board charges; and unduplicated full-year enrollment counts and instructional activity.

### Fall Enrollment

This survey has been part of the HEGIS and IPEDS series since 1966. The enrollment survey response rate is relatively high; the 1992 response rate was 86.9 percent. Major sources of nonsampling error for this survey as identified in a 1979 report, were classification problems, the unavailability of needed data, interpretation of definitions, the survey due date, and operational errors. Of these, the classification of students appears to have been the main source of error. Institutions had problems in correctly classifying first-time freshmen, other first-time students, and unclassified students for both full-time and part-time categories. These problems occurred most often at 2-year institutions (private and public) and private 4-year institutions. In the 1977-78 HEGIS validation studies, the classification problem led to an estimated overcount of 11,000 full-time students and an undercount of 19,000 part-time students. Although the ratio of error to the grand total was quite small (less than 1 percent), the percentage of errors was as high as 5 percent for detailed student levels and even higher at certain aggregation levels.

Beginning with fall 1986, the survey system was redesigned with the introduction of the Integrated Postsecondary Education Data System (IPEDS) (see above). The IPEDS system comprises all postsecondary institutions, but also maintains comparability with earlier surveys by allowing HEGIS institutions to be tabulated separately. The survey also collects (in alternating years) age and residence data from higher education institutions only.

### Salaries, Tenure, and Fringe Benefits of Full-Time Instructional Faculty

This institutional survey has been conducted for most years from 1966-67 to 1987-88, and annually since 1989-90. The survey form changed a number of times during those years.

Between 1966-67 and 1985-86 this survey differed from other HEGIS surveys in that imputations were not made for nonrespondents. Thus, there is some possibility that the salary averages presented in this report may differ from the results of a complete enumeration of all colleges and universities. Beginning with the surveys for 1987-88, the IPEDS data tabulation procedures included imputations for survey nonrespondents. The response rate for the 1992-93 survey was 85.4 percent for public higher education institutions, or 82.9 percent overall. Because of the higher response rate for public colleges, it is probable that the public colleges' salary data are more accurate than the data for private colleges. Although data from these surveys are not subject to sampling error, sources of nonsampling

error may include computational errors and misclassification in reporting and processing. NCES reviews individual colleges' data for internal and longitudinal consistency and contacts the colleges to check inconsistent data.

### Completions

This survey was part of the HEGIS series throughout its existence. However, the degree classification taxonomy was revised in 1970-71, 1982-83, and 1991-92. Collection of degree data has been maintained through the IPEDS system.

Though information from survey years 1970-71 through 1981-82 is directly comparable, care must be taken if information before or after that period is included in any comparison. Degrees-conferred trend tables arranged by the 1991-92 classification are included in the *Digest of Education Statistics* to provide consistent data from 1970-71 to 1991-92. Data in this edition on associate and other formal awards below the baccalaureate, by field of study, cannot be made comparable with figures prior to 1982-83. The nonresponse rate is not a significant source of nonsampling error for this survey. The return rate over the years has been high, with the higher education response rate for the 1991-92 survey at 94.1 percent. The overall response rate including the noncollegiate institutions is 84.5 percent. Because of the high return rate for the institutions of higher education, nonsampling error caused by imputation is also minimal.

The major sources of nonsampling error for this survey were differences between the NCES program taxonomy and taxonomies used by the colleges, classification of double majors, operational problems, and survey timing. In the 1979 HEGIS validation study, these sources of nonsampling contributed to an error rate of 0.3 percent over reporting of bachelor's degrees and 1.3 percent over reporting of master's degrees. The differences, however, varied greatly among fields. Over 50 percent of the fields selected for the validation study had no errors identified. Categories of fields that had large differences were business and management, education, engineering, letters, and psychology. It was also shown that differences in proportion to the published figures were less than 1 percent for most of the selected fields that had some errors. Exceptions to these were: master's and Ph.D. programs in labor and industrial relations (20 percent and 8 percent); bachelor's and master's programs in art education (3 percent and 4 percent); bachelor's and Ph.D. programs in business and commerce, and in distributive education (5 percent and 9 percent); master's programs in philosophy (8 percent); and Ph.D. programs in psychology (11 percent).

### **Classification of Instructional Programs (CIP)**

The disciplines and specialties (fields of study) are based on the 1990 version of CIP.

### **High School and Beyond**

High School and Beyond (HS&B) is a national longitudinal survey of 1980 high school sophomores and seniors. The base-year survey was a probability sample of 1,015 high schools with a target number of 36 sophomores and 36 seniors in each of the schools. A total of 58,270 students participated in the base-year survey. Substitutions were made for noncooperating schools—but not for students—in those strata where it was possible. Overall, 1,122 schools were selected in the original sample and 811 of these schools participated in the survey. An additional 204 schools were drawn in a replacement sample. Student refusals and absences resulted in an 82 percent completion rate for the survey.

Several small groups in the population were over sampled to allow for special study of certain types of schools and students. Students completed questionnaires and took a battery of cognitive tests. In addition, a sample of parents of sophomores and seniors (about 3,600 for each cohort) was surveyed.

HS&B first follow-up activities took place in the spring of 1982. The sample design of the first follow-up survey called for the selection of approximately 30,000 persons who were sophomores in 1980. The completion rate for sophomores eligible for on-campus survey administration was about 96 percent. About 89 percent of the students who left school between the base year and first follow-up surveys (dropouts, transfer students, and early graduates) completed the first follow-up sophomore questionnaire.

### **National Education Longitudinal Study of 1988**

The National Education Longitudinal Study of 1988 (NELS:88) is the third major longitudinal study sponsored by the National Center for Education Statistics. The two studies that preceded NELS:88, the National Longitudinal Study of the High School Class of 1972 (NLS-72) and High School and Beyond (HS&B) in 1980, surveyed high school seniors (and sophomores in HS&B) through high school, postsecondary education, and work and family formation experiences. Unlike its predecessors, NELS:88 begins with a cohort of 8th-grade students. In 1988, some 25,000 eighth graders, their parents, their teachers, and their school principals were surveyed. Follow-ups were conducted in 1990 and 1992 when a majority of these students were in 10th and 12th grades, respectively.

### **National Household Education Survey**

The National Household Education Survey (NHES) is a data collection system that is designed to address a wide range of education-related issues. Surveys were conducted in the spring of 1991, 1993, and 1995.

The NHES targets specific populations for detailed data collection. While the survey is not designed to develop an in-depth research database, it is intended to provide more detailed data on the topics and populations of interest than are collected through supplements to other household surveys.

The NHES is designed as a telephone survey of the noninstitutional civilian population of U.S. households are selected for the survey using random digit dialing (RDD) methods. Data are collected using computer assisted telephone interviewing (CATI) procedures.

### **National Survey of Postsecondary Faculty**

The 1992-93 National Study of Postsecondary Faculty (NSOPF-93), a survey of instructional faculty in higher education institutions, was conducted for the first time in the 1987-88 academic year. It had a sample of 480 2-year, 4-year doctoral-granting and other colleges and universities, over 3,000 department chairs, and 11,000 faculty. The NSOPF-93 was limited to surveys of faculty and institutions, but with a substantially expanded sample of 974 public and private nonproprietary higher education institutions and 31,354 faculty. The institution universe included institutions in the traditional sector of postsecondary education: that is, institutions whose accreditation at the college level is recognized by the U.S. Department of Education, that provide formal instructional programs of at least 2-years duration, that are public or private nonprofit, and that are designed primarily for students who have completed the requirements for a high school diploma or its equivalent.

Unlike NSOPF-88, which was limited to faculty whose regular assignment included instruction, the

faculty universe for NSOPF-93 was expanded to include anyone who was designated as faculty, whether or not their responsibilities included instruction, and other (non-faculty) personnel with instructional responsibilities. Under this definition, researchers and administrators and other institutional staff who hold faculty positions, but who do not teach, were included in the sample. Instructional staff without faculty status were also included.

### **Schools and Staffing Survey**

The Schools and Staffing Survey (SASS) was first conducted for the National Center for Education Statistics by the Bureau of the Census during the 1987-88 school year. SASS surveys also were conducted in 1990-91 and in 1993-94, and are scheduled to be conducted at four year intervals. SASS is a mail survey that collects data on the Nation's public and private elementary and secondary teaching force, aspects of teacher supply and demand, teacher workplace conditions, characteristics of school administrators, and school policies and practices. The SASS data are collected through a sample survey of school districts, schools, school administrators, and teachers. The 1990-91 SASS surveys of schools and school principals were based on the 9,336 public and 3,279 private schools in the school samples. From these schools, 56,051 public school teachers and 9,166 private school teachers were selected for the 1990-91 SASS sample of teachers.

### **American College Testing Program**

The American College Testing (ACT) Assessment is designed to measure educational development in the areas of English, mathematics, social studies, and natural sciences. The ACT Assessment is taken by college-bound high school students and the test results are used to predict how well students might perform in college.

Prior to the 1984-85 school year, national norms were based on a 10 percent sample of the students taking the test. Since then, national norms are based on the test scores of all students taking the test. Moreover, beginning with 1984-85, these norms have been based on the most recent ACT scores available from students scheduled to graduate in the spring of the year. Duplicate test records are no longer used to produce national figures.

Separate ACT standard scores are computed for English, mathematics, social studies, science reasoning, and, as of October 1989, reading. ACT standard scores are reported for each subject area on a scale from 1 to 36. The four ACT standard scores have a mean (average) of about 19 and a standard deviation of about 6 for college-bound students nationally. A composite score is obtained by taking the simple average of the four standard scores and is an indication of student's overall academic development across these subject areas. Beginning with the October 1989 test date, a new version of the ACT was introduced.

It should be noted that college-bound students who take the ACT Assessment are not representative of college-bound students nationally. First, students who live in the Midwest, Rocky Mountains and Plains, and the South are overrepresented among ACT-tested students as compared with college-bound students nationally. Second, ACT-tested students tend to enroll in public colleges and universities more frequently than do college-bound students nationally.

## Concepts and Definitions

**Civilian labor force** comprises all civilians classified as employed or unemployed.

**Civilian labor force participation rate** is the ratio of the civilian labor force to the civilian noninstitutional population.

**Unemployment rate** represents the number unemployed as a percent of the civilian labor force.

## Academic Degrees

### Associate

A degree that normally requires at least two but less than four years of full-time equivalent college work.

### Bachelor's

A degree that normally requires at least four but not more than five years of full-time equivalent college-level work. This includes all bachelor's degrees conferred in a 5-year cooperative (work-study plan) program. A cooperative plan provides for alternate class attendance and employment in business, industry, or government: thus, it allows students to combine actual work experience with their college studies. Also includes bachelor's degrees in which the normal four years of work are completed in three years.

### Master's

A degree that requires the successful completion of a program of study of at least the full-time equivalent of one but not more than two academic years of work beyond the bachelor's degree.

### Doctor's

The highest degree a student can earn for graduate study. The doctor's degree classification includes such degrees as Doctor of Education, Doctor of Juridical Science, Doctor of Public Health, and Doctor of Philosophy degree in any field such as agronomy, food technology, education, engineering, public administration, ophthalmology, or radiology. For the Doctor of Public Health degree, the prior degree is generally earned in closely related professional field of medicine or in sanitary engineering.

### First-Professional

A degree that requires completion of a program that meets all of the following criteria: (1) completion of the academic requirements to begin practice in the profession; (2) at least 2 years of college work prior to entering the program; and (3) a total of at least 6 academic years of college work to complete the degree program, including prior required college work plus the length of the professional program itself.

## Vocational Education

Organized educational programs, services, and activities that are directly related to the preparation of individuals for paid or unpaid employment or for additional preparation for a career, requiring other than a bachelor's or an advanced degree. The types of vocational education at the secondary level are:

**Consumer and homemaking education**

Includes courses intended to prepare students for roles outside the paid labor market. Topics covered include child care, meal preparation, nutrition, and household management.

**General labor market preparation**

Includes courses that teach general employment skills, but do not as their primary objective prepare students for paid employment in a specific field. These courses include introductory typewriting, introductory industrial courses, work experience or career exploration courses, and general labor market skills courses such as agricultural math or business English.

**Specific labor market preparation**

Includes courses that teach skills and provide information required in a particular vocation.

**Vocational program areas (Secondary)****Agriculture:**

Includes courses that prepare students for employment in farming, horticulture, fishing, or forestry. In addition, courses in natural resources teach skills in conservation, wildlife, forestry, logging, and paper production.

**Business:**

Includes training in business support and business management, including data processing, accounting, advanced typing, and record keeping, as well as finance, investments, personnel, and other aspects of management. Courses in library sciences and security services are also included.

**Marketing and distribution:**

Includes courses related to the selling and distribution of goods and services, teaching skills ranging from cash register operation to marketing and management research.

**Health:**

Includes courses intended to prepare students for careers in the health professions, such as those that train students to become nurses and dental assistants, lab technicians, and ambulance operators.

**Occupational home economics:**

Includes courses intended to prepare students for employment in the service sector, such as child care, food preparation, cleaning services, plant maintenance, and protection services. Unlike consumer and homemaking education, occupational home economics emphasizes skills and training for the paid labor force.

**Trade and industry:**

Includes coursework in construction, mechanics and repairs, precision production, and transportation. Construction includes courses in carpentry, plumbing, electrical wiring, and welding. Mechanics and repairs include courses in repairing a variety of consumer goods. Precision production includes courses that teach students how to design and manufacture goods, such as woodworking, graphic design, printing, sheet metal, and architecture.

**Technical and communication:**

Includes courses related to skills used in television and radio, as well as computer courses such as programming.

**Occupational categories****Managerial and professional specialty**

Includes: executive, administrative, managerial, and professional specialty.

**Technical, sales, and administrative support**

Includes: technicians and related support, sales occupations, and administrative support including clerical.

**Service occupations**

Includes: private household, protective service, and all other service workers.

**Precision production, craft and repair**

Includes: mechanics and repairers, construction trades, and other precision production, craft and repair.

**Operators, fabricators and laborers**

Includes: machine operators, assemblers, inspectors, transportation and material moving occupations, handlers, equipment cleaners, helpers and laborers.

**Farming, forestry, and fishing occupations**

Includes: farmers and farm managers, farm occupations except managerial, forestry and logging occupations, fishers, hunters, and trappers.
