ABSTRACT

This document is intended to help education and training institutions deliver the Machine Tool Advanced Skills Technology (MAST) curriculum to a variety of individuals and organizations. MAST consists of industry-specific skill standards and model curricula for 15 occupational specialty areas within the U.S. machine tool and metals-related industries. This volume provides the MAST standards and curriculum for the industrial maintenance technology specialty area. (An industrial maintenance mechanic uses mechanical, pneumatic, hydraulic, and electrical skills to maintain, repair, and install equipment and machinery used in industry.) This volume is organized in the following sections: (1) a profile of Augusta Technical Institute (Georgia), the development center that produced these standards and curriculum; (2) an industrial maintenance mechanic competency profile of job duties and tasks; (3) an industrial maintenance mechanic duty, task, and subtask outline; (4) a course curriculum outline and course descriptions; (5) a technical workplace competencies and course crosswalk; and (6) a Secretary's Commission on Achieving Necessary Skills (SCANS) proficiencies course crosswalk. Individual syllabi for the following courses are provided: Algebraic Concepts; Direct Current Circuits I; Industrial Maintenance Safety Procedures; Industrial Mechanics I; Introduction to Microcomputers; English; Alternating Current I-II, Pumps and Piping Systems; Industrial Hydraulics; Interpersonal Relations and Professional Development; Industrial Mechanics II; Industrial Pneumatics; Refrigeration Fundamentals; Metal Welding and Cutting Techniques; Lathe Operations I; and Industrial Maintenance-Mechanical Review. Each course syllabus includes the following: course hours, course descriptions, prerequisites, required course materials, teaching and evaluation methods, lecture and sboratory outlines, course objectives for technical and SCANS FRICompetencies, and suggested references. Two appendixes contain

Industry competency profiles and the pilot program narrative. (KC)

GRANT INFORMATION

Project Title:

Machine Tool Advanced Skills Technology Program

Grant Number:

V199J40008

Act under which

Carl D. Perkins Vocational Education Act

Funds Administered:

Cooperative Demo - Manufacturing Technology, CFDA84.199J

Source of Grant:

Office of Vocational and Adult Education

U.S. Department of Education

Washington, DC 20202

Grantee:

Texas State Technical College

Waco, Texas

Disclaimer:

This publication was prepared pursuant to a grant with the Office of Vocational and Adult Education, U.S. Department of Education. Grantees undertaking such projects under government sponsorship are encouraged to express freely their judgement in professional and technical matters. Points of view or opinions do not, therefore,

necessarily represent official U.S. Department of Education

position or policy.

Discrimination:

Title VI of the Civil Rights Act of 1964 states: "No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving

federal financial assistance." Title IX of the Education

Amendments of 1972 states: "No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education

program or activity receiving federal financial assistance."

Therefore, the Machine Tool Advanced Skills Technology (MAST) project, like every program or activity receiving financial assistance from the U.S. Department of Education, operated in compliance

with these laws.

ACKNOWLEDGMENTS

This project was made possible by the cooperation and direct support of the following organizations:

- U.S. Department of Education, Office of Vocational & Adult Education
- MAST Consortia of Employers and Educators

MAST PROJECT EVALUATORS

Dr. James Hales, East Tennessee State University and William Ruxton, National Tooling and Machine Association (NTMA)

SPECIAL RECOGNITION

Dr. Hugh Rogers recognized the need for this project, developed the baseline concepts and methodology, and pulled together industrial and academic partners from across the nation into a solid consortium. Special thanks and singular congratulations go to Dr. Rogers for his extraordinary efforts in this endeavor.

This report is primarily based upon information provided by the above companies, schools and labs. We sincerely thank key personnel within these organizations for their commitment and dedication to this project. Including the national survey, more than 3,000 other companies and organizations participated in this project. We commend their efforts in our combined attempt to reach some common ground in precision manufacturing skills standards and curriculum development.

FOREWORD

Advanced technology has changed forever the nature of employment in modern manufacturing. As traditional assembly operations are supplanted by automation or made redundant through streamlining of the manufacturing process, the inevitable result is a reduction in the number of workers employed in manufacturing and an increasing reliance on machines of ever greater complexity. In the past, if a worker became ill on a manufacturing line, he could be replaced by another worker at a cost of only a few more dollars per hour; in today's manufacturing environment, if a machine or process goes down or malfunctions it likely represents a potentially enormous loss in capital investment, time, and productivity. As the machine dominates more and more of the manufacturing enterprise, expert maintenance of industrial machinery becomes an increasingly crucial aspect of manufacturing success.

The task of installing and maintaining the machines that contribute to the final output of the manufacturing process falls on the **Industrial Maintenance Mechanic**. More than any other technician in the metals industry, the modern Industrial Maintenance Mechanic must be a jack of all trades. Akin to the millwright of the past era, the Industrial Maintenance Mechanic must understand the general operation of all machines, mechanical or electrical, conventional or computer controlled, that contribute to the manufacturing process. At the same time, as new employment opportunities in industrial maintenance begin to appear, efforts to find qualified applicants to fill the positions are often complicated by difficulty in defining the occupation and identifying standard entry-level skills.

Recognizing the need to increase the supply of new skilled workers in this and other occupations for the metal and metals-related industries, the U.S. Department of Education launched the Cooperative Demonstration Program (Manufacturing Technologies) as part of the National Skills Standards Act of 1994. The goal of the Department initiative was to foster the development and implementation of national skill standards and a training model for certificate and Associate of Science degree programs. In July 1994, a multi-state consortium of community colleges led by Texas State Technical College received a grant awarded by the Department under the initiative. The Machine Tool Advanced Skills Technology (MAST) consortium, which includes six of the nation's leading Advanced Technology Centers (ATCs), was formed to develop, test and disseminate industry-specific skill standards and model curricula for the U.S. machine tool industry over a two year period. As part of the MAST consortium, Augusta Technical Institute in Georgia was tasked with developing and piloting skill standards and model curricula in the technical area of Industrial Maintenance Mechanic.

While it is clear that the modern Industrial Maintenance Mechanic must know something about all aspects of modern industrial equipment, there has not been widespread agreement regarding the depth and extent of that knowledge. The present report provides the results of the Augusta project in creating the foundation for such agreement, through developing skill standards and a curriculum to guide the education of the modern Industrial Maintenance Mechanic. The skill standards and curriculum are the result of numerous interviews with practitioners from industry

(see Appendix A) and discussions with educators, managers, supervisors, and others involved with machine maintenance. Based on discussion with the other MAST consortium partners, the project presents the following definition of the new occupation:

<u>INDUSTRIAL MAINTENANCE MECHANIC</u>: The industrial maintenance mechanic uses mechanical, pneumatic, hydraulic, and electrical skills to maintain, repair and/or install equipment/machinery used in industry.

The Industrial Maintenance Mechanic program designed and offered by Augusta Technical Institute is structured as a 19-course, two-year course of study. The present volume provides the occupational skill standards, project documentation, and course syllabi for education and training recommended as minimum preparation for an individual desiring to become an industrial maintenance mechanic. Reflecting the diversity of skills needed to maintain modern manufacturing systems, the curriculum includes courses ranging from industrial mechanics and refrigeration fundamentals to an introduction to microcomputer operations and electrical systems.

PARTNER OCCUPATIONAL SPECIALITY ASSIGNMENTS

Although each of the six partner college development centers possessed detailed expertise in each of the MAST 15 occupational specialities, a division of work was still very necessary to ensure completion of the project due to the enormity associated with industrial assessment and complete curriculum revision for each of the areas of investigation.

Each Collegiate Partner was responsible for development of a specialization component of the overall model. Information for the future direction of this specialization area was obtained from NIST Manufacturing Centers and/or national consortia, professional societies, and industrial support groups addressing national manufacturing needs. Each Collegiate Partner tested its specialization model utilizing local campus resources and local industry. Information gained from the local experience was utilized to make model corrections. After testing and modification, components were consolidated into a national model. These events occurred during the first year of the Program. During the second year of the Program, the national model was piloted at each of the Collegiate Partner institutions. Experience gained from the individual pilot programs was consolidated into the final national model.

What follows is a profile of the MAST development center which had primary responsibility for the compilation and preparation of the materials for this occupational specialty area. This college also had the responsibility for conducting the pilot program which was used as one of the means of validation for this program.

Manufacturing in the Augusta Region

Augusta is the second largest city in Georgia and manufacturing represents the largest sector of the Augusta economy. The region is home to 810 manufacturers employing 89,717 people, an industrial base consisting of about 75% process control and 25% discrete parts production facilities. Major areas of emphasis for industry include technology transfer, factory floor training, and job certification programs. Growth of manufacturing in the region has been driven by Augusta's high tech development in electronics, process control, telecommunications, computers, medical services and instrumentation.

Augusta Technical Institute and Advanced Manufacturing Technology Center (AMTEC)

Augusta Technical Institute (ATI) is part of Georgia's Department of Technical and Adult Education system, serving a large percentage of the two-state Central Savannah River area through its main campus and satellite facilities. The student body includes vocational-technical and college prep students, as well as current workers seeking retraining or skills upgrade; ATI has long emphasized outreach and special attention to the needs of low income, rural and disadvantaged residents, as well as displaced workers, single parents, women in non-traditional fields, and the disabled. In 1983, the Institute used the opportunity to host one of Georgia's new regional advanced technology centers (ATC's) to streamline its technical programs and thereby help to ensure the future employability of its students. ATI's Advanced Manufacturing Technology Center (AMTEC) is designed to provide technology research and demonstration, industry assessments, technical consulting, and industry-specific contract training for the many established and emerging high tech companies in the Augusta region.

Development Team

- Project Director: Jim Weaver, PhD., Director of AMTEC, served as program director for the MAST project.
- Subject Matter Expert: Ronnie Lambert, MS, MAST Site Coordinator, had program responsibility for developing skill standards based on the industry skills verification process, as well as developing course curricula and program materials for the MAST pilot program in Industrial Maintenance Mechanic and Instrumentation Technician. Mr. Lambert has taught Industrial Maintenance Mechanic and Instrumentation for 32 years in colleges and industry across the Southeast.
- Subject Matter Expert: Bob Johnson, BS, Project Development, was responsible for developing skill standards for the MAST project. Mr. Johnson has 27 years of experience in process-related industry and training in both technical schools and industry; he is certified in many process-related specialty areas.

12

THE MAST COMPETENCY PROFILE

Development of Competency Profiles at each of the MAST sites began with visits to representative companies for the purpose of surveying expert workers within the industry and occupational areas under investigation. Each site began the survey process by asking a subject matter expert in the targeted technical area, generally a member of their faculty, to employ a modified version of the generally-accepted DACUM (Developing A Curriculum) method to categorize the major skills needed to work in the selected occupation. As source materials, the college instructors drew on their professional knowledge and experience of current and future industry requirements. The initial skill standards developed by the subject matter experts underwent numerous internal reviews and revisions within each site, assuming final form as a series of structured survey and interview statements designed to elicit a simple yes or no response.

To determine an appropriate survey sample, each site compiled a database of their region's small and medium-sized manufacturers and searched for companies likely to employ workers in the targeted occupational area. The resulting cross-industry samples were sorted further to achieve a balance of technological capability and workforce size; the sample companies within each region were then asked to participate in the project. Willing respondents were scheduled for interviews.

During the company interviews, MAST staff asked expert workers to identify the primary duties and tasks performed by a typical worker and to consider the special skills and knowledge, traits and attitudes, and industry trends that will have an impact on worker training, employability, and performance both now and in the future. The interview results were analyzed to create individual profiles identifying the most common duties and skills required of workers at each company. Copies of individual company competency profiles are provided in Appendix A of this volume. These individual company Competency Profiles served two purposes. First, they showed, in a format that could be easily understood by both industry and educators, a picture of the occupational specialty at a given company at that particular time. Second, these individual company Competency Profiles furnished the company with a document for which they could claim ownership. This, in effect, made them "real" partners in the work of MAST.

Data for all companies were then aggregated to develop a composite Competency Profile of industry skill standards within the selected occupational specialty area of, as shown in the following pages.

These same duties and tasks were then included in both the Texas and National Surveys for further validation (see Volume 1). As a result of the surveys, additional refinements were made to the Competency Profiles. These changes were then incorporated into the individual course syllabi which were used for the pilot program.

The MAST Competency Profile for this occupational specialty area has been included on the following pages.

THE MAST TECHNICAL WORKPLACE COMPETENCY OUTLINE

The Competency Profiles derived from the industry survey process were returned to industry and faculty members at each MAST partner college for review. Reviewers were asked to identify specific sub-tasks within each block of Duties and Tasks in the Profile; MAST staff at each college broke the sub-tasks down further into the detailed steps required to actually perform the duties and tasks of the manufacturing process. It is these detailed skill standards that were then incorporated into development of the curriculum and piloted as a training program by each of the MAST colleges. All results for the specific occupational specialty area have been organized as an outline of the duties, tasks, and sub-tasks required to demonstrate technical competency in the workplace, as shown in the following pages.

As a result of the Texas and the National Surveys, additional refinements were made to the Competency Outlines. These changes were then incorporated into the individual course syllabi.

The MAST Technical Workplace Competency Outline for this occupational specialty area has been included on the following pages.

BEST COPY AVAILABLE

INDUSTRIAL MAINTENANCE MECHANIC TECHNICAL WORKPLACE COMPETENCIES

INDUSTRIAL MAINTENANCE MECHANIC...uses mechanical, pneumatic, hydraulic, and electrical skills to maintain, repair and/or install equipment/machinery used in industry.

A. PRACTICE SAFETY

- 1. Follow Safety Manuals and All Safety Regulations/Requirements
 - a. Assume responsibility for the personal safety of oneself and others
 - b. Develop a personal attitude towards safety
 - c. Interpret safety manual directives
 - d. Comply with established company safety practices
- 2. Use Protective Equipment
 - a. Wear protective safety clothing as required
 - b. Maintain and use protective guards and equipment on machinery
 - c. Locate and properly use protective equipment
 - d. Use lifting aids when necessary
- 3. Follow Safe Operating Procedures for Hand and Machine Tools
 - a. Identify and understand safe machine operating procedures
 - b. Demonstrate safe machine operation
- 4. Maintain a Clean and Safe Work Environment
 - a. Keep work areas clean
 - b. Clean machine/hand tools when work is completed
 - c. Put tools away when work is finished
 - d. Keep aisles clear of equipment and materials
 - e. Perform preventative maintenance as required

B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, and divide whole numbers
 - b. Add, subtract, multiply, and divide fractions
 - c. Add, subtract, multiply, and divide decimals
- 2. Convert Fractions/Decimals
 - a. Convert fractions to decimal equivalents
 - b. Convert decimal values to nearest fractional equivalent
 - c. Use Decimal Equivalent Chart for conversions
- 3. Convert Metric/English Measurements
 - a. Convert English dimensions to Metric
 - b. Convert Metric dimensions to English
 - c. Use Metric/English conversion chart
- 4. Perform Basic Algebraic Operations
 - a. Express word statements as algebraic equations
 - b. Solve word statements as algebraic equations
- 5. Perform Basic Trigonometric Functions
 - a. Solve for unknown angles

- b. Solve for unknown sides
- c. Calculate bolt hole patterns
- 6. Calculate Speeds and Feeds for Machining
 - a. Calculate RPM for various metals and various tools
 - b. Calculate feed for various metals, tools, and depths of cut

C. INTERPRET ENGINEERING DRAWINGS AND CONTROL DOCUMENTS

- 1. Review Blueprint Notes and Dimensions
 - a. Explain basic blueprint terminology
 - b. Identify the types of dimensions
 - c. Identify general note symbols
 - d. Locate notes on a print
 - e. Interpret commonly used abbreviations and terminology
 - f. Determine tolerances associated with dimensions on a drawing
 - g. Determine the tolerance for a reference dimension
 - h. Determine the surface finish for a given part
 - i. List the essential components found in the general drawing notes
- 2. Identify Basic Layout of Drawings
 - a. Identify types of lines within a drawing
 - b. Identify item number symbols
 - c. Identify general note symbols
 - d. List the essential components found in the title block
 - e. Locate bill of materials in a drawing
 - f. List the components found in the revision block
- 3. Identify Basic Types of Drawings
 - a. Identify orthographic views
 - b. Identify positions of views (top, front, side, and auxiliary)
 - c. Visualize one or more views from a given view
 - d. Identify isometric views
 - e. Identify exploded isometric drawings
 - f. Identify assembly drawings
- 4. List the Purpose of Each Type of Drawing
 - a. Identify the purpose of orthographic (3 views) drawings
 - b. Identify the purpose of isometric drawing
 - c. Identify the purpose of exploded isometric drawing
 - d. Identify the purpose of assembly drawings
- 5. Verify Drawing Elements
 - a. Determine the scale of the view or section
 - b. Check for revisions
 - c. Recognize out-of-date blueprints
- 6. Practice Geometric Dimensioning and Tolerancing (GD&T) Methodology
 - a. Identify the purpose of GD&T
 - b. Identify symbols for controlling location (or true position) of part features
 - c. Identify symbols for controlling form (or alignment) of part features
 - d. Identify symbols for showing datums and basic dimensions on drawings

- e. Identify symbols for Maximum Material Size (MMS) and Regardless of Feature Size (RFS)
- 7. Describe the Relationship of Engineering Drawings to Planning
 - a. Discuss production schedule
 - b. Discuss Material Resource Planning (MRP)
 - c. Discuss inventory control records
 - d. Discuss shop floor routing documents
- 8. Use Standards to Verify Requirements
 - a. Discuss the purpose of standards
 - b. Discuss source locations for standards
- 9. Analyze Bill of Materials (BOM)
 - a. Discuss components found on BOM
 - b. Determine materials needed to produce the part
 - c. Determine quantities necessary to produce the part
 - d. Submit completed stock request form as required
 - e. Submit completed tool request form as needed
- 10. Read/Interpret Prints from Different Occupations
 - a. Interpret mechanical prints
 - b. Interpret electrical prints
 - c. Interpret pneumatic schematics
 - d. Interpret hydraulic schematics
 - e. Interpret welding prints
 - f. Interpret building prints
 - g. Interpret plumbing or piping prints
 - h. Interpret conveyor system prints
 - i. Understand bill of materials callouts

D. USE PRECISION MEASURING TOOLS

- 1. Identify Types of Measurement
 - a. Distinguish between direct and calculated measurements
 - b. Compute calculated measurements
 - c. Justify the use of precision measurements in manufacturing
 - d. Discuss the following: precision, reliability and accuracy
 - e. Demonstrate general measurement techniques
 - f. Demonstrate semi-precision measurement techniques
 - g. Demonstrate precision measurement techniques
 - h. Document results of measurement activities and calculations
- 2. Select Proper Measurement Tools
 - a. Match appropriate measurement tools with various types of measurement requirements
 - b. Demonstrate proper measurement tool usage
 - c. List steps of proper measurement
 - d. Explain rationale for each step
 - e. Identify error possibilities in measurement tool selection
 - f. Identify error possibilities within measurement procedures

- g. Identify common conversion error possibilities
- h. Discriminate between accepted measurement procedures and improper measurement procedures
- 3. Apply Proper Measuring Techniques
 - a. Explain calibration requirements of various precision instruments
 - b. Illustrate measurement differences when taken with calibrated and non-calibrated instruments
 - c. Justify use of particular measurement tools based on tool characteristics
 - d. Discuss factors affecting accurate measurement (i.e., dirt, temperature, etc.)
- 4. Use Metric and English Standards of Measurement
 - a. Discuss the English system of measurement
 - b. Discuss the Metric system of measurement
- 5. Perform Measurements With Hand Held Instruments
 - a. Measure with steel rules (metric and inch)
 - b. Measure with micrometers
 - c. Measure with comparison measuring instruments (e.g., calipers, telescope gages)
 - d. Measure with direct measuring instruments (e.g., vernier, dial, and digital instruments)
 - e. Measure with fixed gages (go and not go gages)
- 6. Perform Measurements on Surface Plate
 - a. Describe care of surface plate
 - b. Use surface plate accessories correctly (sine bar, gage blocks, etc.)
 - c. Check for part squareness
 - d. Check part dimensions for accuracy
 - e. Align workpieces using height gage and dial indicators
- 7. Perform Inspections Using Stationary Equipment
 - a. Set up and use an Optical Comparator
 - b. Set up and use a Coordinate Measuring Machine (CMM)

E. USE HAND TOOLS

- 1. Use Proper Hand Tools
 - a. Use arbor and shop presses
 - b. Select necessary work-holding devices and hand tools as needed
 - c. Select and use hand files
 - d. Identify and use hand reamers
 - e. Correctly identify and use hand taps as required
 - f. Follow tapping procedures to produce internal threads
 - g. Use thread-cutting dies to produce external threads
 - h. Operate bench and pedestal grinders safely
- 2. Install helicoils
- 3. Use drill motors
- 4. Use impact wrenches
- 5. Use torque wrenches

- 6. Use gasket cutters
- 7. Install safety wire

F. OPERATE MACHINE TOOLS

- 1. Prepare and Plan For Machining Operations
 - a. Read and interpret blueprints
 - b. Perform basic semi-precision and precision layout as necessary
 - c. Plan machining operations
 - d. Understand machinability and chip formation
 - e. Calculate speeds, feeds, and depth of cut for various machine applications
 - f. Determine proper cutting fluids/coolants for machining
 - g. Use carbides and other tool materials to increase productivity
 - h. Use the Machinery's Handbook as a reference for machine applications
- 2. Operate Power Saws
 - a. Use reciprocating and horizontal band cutoff machines
 - b. Operate abrasive and cold saws
 - c. Prepare and use the vertical band saw
 - d. Weld a bandsaw blade
- 3. Operate Drill Presses
 - a. Describe the different types of drill presses found in the machine shop
 - b. Describe and use standard drilling tools
 - c. Sharpen a drill bit using a bench or pedestal grinder
 - d. Setup the drill presses for drilling, countersinking, counterboring, reaming, and tapping operations
 - e. Drill holes using drill jigs
- 4. Operate Vertical Milling Machines
 - a. Demonstrate the use of all controls on the vertical milling machine
 - b. Align the vertical milling machine head
 - c. Select, align and use work holding devices
 - d. Select milling tool holders
 - e. Select milling cutters
 - f. Perform all standard vertical milling operations
 - g. Bore a hole using the offset boring head
 - h. Machine angles using sine bar and gage blocks
 - i. Setup and use special vertical mill fixtures
 - j. Setup and machine dovetails
 - k. Machine keyways
- 5. Operate Horizontal Milling Machines
 - a. Discuss the difference in plain and universal horizontal milling machines
 - b. Discuss the types of spindles, arbors and adapters used on the horizontal milling machine
 - c. List several common work holding methods
 - d. Use plain milling cutters
 - e. Use side milling cutters
 - f. Use face milling cutters

- g. Setup and use special horizontal mill fixtures
- 6. Operate Metal Cutting Lathes
 - a. Demonstrate the use of all controls on the engine lathe
 - b. Discuss standard tools and toolholders for the lathe
 - c. Face and center drill parts correctly
 - d. Drill, ream and bore on the lathe
 - e. Turn between centers
 - f. Discuss alignment of lathe centers
 - g. Make all calculations, lathe adjustments and settings to machine sixty-degree internal and external threads
 - h. Discuss thread fit classifications
 - i. Make all calculations, lathe adjustments and settings to machine an Acme thread
 - j. Describe the common tapers used in the machine shop
 - k. Discuss taper cutting and calculations for the lathe
 - 1. Setup and use the taper attachment found on most lathes
 - m. Use follower rests and steady rests
 - n. Use HSS cutting tools
 - o. Use carbide cutting tools
 - p. Setup and operate tracer lathes
 - q. Setup and operate turret lathes
- 7. Operate Grinding/Abrasive Machines
 - a. Discuss the selection and identification of grinding wheels
 - b. Inspect, mount, true, dress, and balance grinding wheels
 - c. Discuss the selection of grinding fluids
 - d. Operate horizontal spindle reciprocating table surface grinders
 - e. Operate cylindrical grinders
 - f. Operate ID and OD grinders
 - g. Setup and operate tool and cutter grinders
 - h. Discuss common problems and solutions in surface grinding
 - i. Operate honing machine
 - j. Operate lapping machines
- 8. Operate Deburring Equipment
 - a. Debur parts using pneumatic Deburring tools
 - b. Debur parts using electric deburring tools
- 9. Operate metal shears
- 10. Operate brakes
- 11. Operate hydraulic/mechanical presses

G. PERFORM WELDING OPERATIONS

- 1. Weld With Shielded Metal Arc Welding (SMAW) Process
 - a. Identify factors for welding electrode selection
 - b. Adjust welding amperage setting for each application
 - c. Demonstrate proper use of safety equipment
 - d. Weld beads on plate (flat, horizontal, and vertical)

- e. Weld tee joints (flat, horizontal, and vertical)
- f. Weld pipe joints
- g. Identify weld inspection factors and techniques
- 2. Weld/Cut With Oxyacetylene
 - a. Setup and break down the oxyacetylene welding/cutting station
 - b. Properly adjust oxyacetylene regulators
 - c. Identify factors that determine torch welding and cutting tip selection
 - d. Demonstrate routine torch maintenance procedures
 - e. Weld beads on plate (with and without filler) in the flat and horizontal positions
 - f. Weld square groove butt joints in the flat and horizontal positions
 - g. Braze weld beads on plate in the flat position
 - h. Make square cuts to a straight line with the cutting torch
 - i. Demonstrate proper use of safety equipment
- 3. Weld With Gas Tungsten Arc Welding (GTAW) (Heliarc)
 - a. Set up GTAW welder for welding steel
 - b. Set up GTAW welder for welding aluminum
 - c. Weld beads on plate (steel) with appropriate filler rod in the flat position
 - d. Weld beads on plate (aluminum) with appropriate filler rod in the flat position
 - e. Weld lap joints in the horizontal position on steel plate
 - f. Weld lap joints in the horizontal position on aluminum plate
- 4. Weld With Gas Metal Arc Welding (GMAW)/(MIG) and Flux Core Arc Welding (FCAW)
 - a. Set up machine for gas metal arc welding
 - b. Set up machine for flux cored arc welding
 - c. Weld beads on plate with gas metal arc welding system in the flat position
 - d. Weld beads on plate with flux cored welding system in the flat position
 - e. Weld lap joints on steel plate with the gas metal arc welding system in the horizontal position
 - f. Weld lap joints on steel plate with the flux cored arc welding system in the horizontal position

H. TROUBLESHOOT EQUIPMENT AND SYSTEMS

- 1. Maintain air conditioning systems
- 2. Maintain electrical control circuits
- 3. Program PLCs
- 4. Maintain pneumatic control systems
- 5. Troubleshoot motors
- 6. Troubleshoot centrifugal pumps
- 7. Troubleshoot positive displacement pumps
- 8. Maintain compressors
- 9. Troubleshoot blowers
- 10. Understand turbines (gas, steam)
- 11. Install piping

I. REPAIR INDUSTRIAL POWER PLANT SYSTEMS

- 1. Troubleshoot small gasoline engines
- 2. Troubleshoot medium size gasoline engines
- 3. Troubleshoot medium size natural gas powered engines
- 4. Troubleshoot medium size diesel engines
- 5. Troubleshoot diesel and industrial power plants
- 6. Troubleshoot steam turbines
- 7. Troubleshoot gas turbines

J. REPAIR POWER TRANSMISSION SYSTEMS

- 1. Troubleshoot gear power transmission drives
- 2. Troubleshoot chain power transmission drives
- 3. Troubleshoot belt drive systems
- 4. Troubleshoot bearings (plane, journal, and antifriction)

K. FABRICATE/INSTALL SHEET METAL PARTS

- 1. Layout sheet metal parts
- 2. Form and/or bend sheet metal parts
- 3. Fasten sheet metal parts together

L. SELECT EQUIPMENT FOR MANUFACTURING APPLICATIONS

- 1. Evaluate/recommend condensing units
- 2. Evaluate/recommend furnaces
- 3. Evaluate/recommend chillers
- 4. Evaluate/recommend cooling towers
- 5. Evaluate/recommend pumps
- 6. Evaluate/recommend compressors
- 7. Evaluate/recommend hydraulic units
- 8. Requisition/order parts

M. JOIN PIPES

- 1. Solder metal pipes
- 2. Braze or silver solder metal pipes
- 3. Weld metal pipe joints
- 4. Flair metal tubing
- 5. Swage metal pipe/tubing
- 6. Join metal pipe with threads
- 7. Join metal pipe with cement
- 8. Join metal pipes with flange joint
- 9. Join plastic pipes with glue
- 10. Join plastic pipes with hot air welding process

N. CONSTRUCT AIR DISTRIBUTION SYSTEMS

- 1. Fabricate loop systems
- 2. Fabricate dead end systems

- 3. Fabricate branch systems
- 4 Fabricate pipe and duct supports

O. START-UP NEW AIR CONDITIONING SYSTEMS

- 1. Check for leaks
- 2. Check for safe operation
- 3. Evacuate and charge system
- 4. Perform safe reclamation
- 5. Troubleshoot systems
- 6. Fill hydraulic systems and set flow through coils
- 7. Install thermostats and low voltage wiring
- 8. Install diffusers

P. MAINTAIN BOILER AND STEAM SYSTEMS

- 1. Troubleshoot systems
- 2. Adjust systems for optimum performance

Q. MAINTAIN HYDRAULIC/PNEUMATIC DEVICES

- 1. Demonstrate working knowledge of hydraulic systems
- 2. Repair/replace pumps
- 3. Repair/replace valves
- 4. Repair/replace cylinders
- 5. Clean/replace filters
- 6. Replace seals
- 7. Clean/fill reservoirs
- 8. Replace hoses and couplers
- 9. Repair/replace motors
- 10. Perform PM and service as needed

R. PERFORM NON-DESTRUCTIVE TESTING

- 1. Make industrial x-ray inspection
- 2. Test using ultrasonic process
- 3. Test using vibration analysis

S. USE COMPUTERS

- 1. Use Lotus 1-2-3 or Quattro Pro
- 2. Use WordPerfect
- 3. Work in a Windows environment
- 4. Use AUTOCAD
- 5. Use maintenance programs
- 6. Program ladder logic for PLCs

T. ALIGN SHAFTS

- 1. Use feeler gauges
- 2. Use single indicator

- 3. Use double indicator
- 4. Use double reverse indicator
- 5. Use Laser

U. INSTALL/ALIGN MACHINES

- 1. Install electrical connections
- 2. Perform required pipe fitting tasks
- 3. Grout as necessary
- 4. Discuss mounting methods
- 5. Level and align machine components
- 6. Discuss finishing materials (i.e. paints, sealers)
- 7. Use stud gun
- 8. Perform electrical and pneumatic drilling operations

V. DEMONSTRATE KNOWLEDGE OF BUILDING CONSTRUCTION

- 1. Discuss wood framing techniques
- 2. Discuss metal framing techniques
- 3. Discuss sheeting processes
- 4. Discuss concrete forms and formula testing
- 5. Discuss grouting materials
- 6. Discuss surveying applications and methods

W. MAINTAIN ELECTRICAL DEVICES

- 1. Use Electrical Test Equipment
 - a. Measure resistance with an analog volt-ohm-milliamp meter
 - b. Measure voltage with volt-ohm-milliamp meter
 - c. Measure current with volt-ohm milliamp meter
 - d. Use wattmeter to measure power in a simple DC circuit
 - e. Use oscilloscope to observe AC signals of various wave-shapes and frequencies
- 2. Apply Specific Terms to Electrical Circuits
 - a. Define voltage, current, and resistance
 - b. Discuss power, power factor, and sine-waves
 - c. Define three phase, induction, and capacitance
- 3. Analyze Series, Parallel and Complex DC/AC Circuits
 - a. Define a series circuit
 - b. Define a parallel circuit
 - c. Define a complex DC circuit
 - d. Define an AC circuit
 - e. Apply Ohm's law to each of the above circuits
 - f. Apply Kirchoff's law to each of the above circuits
- 4. Check AC and DC Motors
 - a. List types of AC and DC motors
 - b. List characteristics of AC motors
 - c. List characteristics of DC motors

- d. Compare AC motors versus DC motors to job duty
- 5. Inspect Transformers and Generators
 - a. Define transformer construction and the principle of operation
 - b. List the different types of transformers
 - c. Define electro-magnetic induction
 - d. Describe the principle of operation of AC alternators and DC generators
- 6. Discuss Sensors and Feedback Technology
 - a. List the various types of feedback devices used in industrial controls
 - b. Apply the use of feedback systems in industrial control circuitry including AC, DC, and servo drive systems
 - c. Identify, hardwire, and troubleshoot electro-mechanical devices and electrical switching devices including proximity switches, infra-red, and magnetic sensors
- 7. Set up/Program PLC
 - a. Describe the function and operation of three basic components of programmable controllers
 - b. Revise electrical ladder control diagrams as reference diagrams to be programmed into the user memory of the programmable controller
 - c. Use the programming devices to program, monitor, and edit the programmable controller
 - d. Design and develop programs using standard functions and special standard functions of the programmable controller
 - e. Troubleshoot functional circuits using reference diagram, indication lights, and programming devices
- 8. Troubleshoot Electrical Devices
 - a. Discuss common methods of troubleshooting electrical systems
 - b. Follow a logical troubleshooting sequence to trace a problem to its origin
 - (1) Read a VOM test meter
 - (2) Read and use an amprobe
 - (3) Use a voltage tester
 - (4) Troubleshoot and repair 220-480 volts
 - (5) Bend conduit
 - (6) Run service from panels
 - (7) Connect electrical service to machines

Revised: 02/073096

THE MAST PILOT PROGRAM CURRICULUM AND COURSE DESCRIPTIONS

After completing the Competency Profile and Technical Workplace Competency Outline for each occupational specialty area, each MAST partner reviewed their existing curricula against the industry-verified skill standards in order to identify a suitable foundation for new pilot training programs. Because each college had to comply with the requirements of its respective college system and appropriate state agency, the resulting pilot curricula for occupational specialty areas tended to vary in format and academic requirements (e.g., some programs were based on the semester system, others on the quarter system). Despite differences in the curricula developed at the partner colleges, each of the pilot programs was designed to achieve the following two goals mandated in the MAST grant proposal:

- <u>Pilot Program:</u> "Conduct a one year pilot program with 25 or more selected applicants at each college or advanced technology center to evaluate laboratory content and effectiveness, as measured by demonstrated competencies and indicators of each program area."
- <u>Student Assessment:</u> "Identify global skills competencies of program applicants both at point of entrance and point of exit for entry level and already-employed technicians."

(Note: All occupational specialty areas were not pilot tested at all Development Centers; however, all partner colleges conducted one or more pilot programs.)

Included on the following pages is the curriculum listing for the pilot program which was used to validate course syllabi for this occupational specialty area. This curriculum listing included course names and numbers from the college which conducted the pilot program. The curriculum also shows the number of hours assigned to each of the courses (lecture, lab and credit hours). Also included is a description of each of the courses.

INDUSTRIAL MAINTENANCE TECHNOLOGY COURSE DESCRIPTIONS

- IMT 101 Industrial Maintenance Safety Procedures (2-1-2) Provides in-depth study of the health and safety practices required for maintenance of industrial production equipment. Topics include: traffic safety, ladder safety, fire safety, safe work in confined spaces, electrical safety, emergency procedures, an introduction to OSHA regulations,. MSDS Right-To-Know Law, hazardous materials safety, and safety equipment.
- IMT 108 Industrial Mechanics I (5-5-7) Provides instruction in basic physics concepts applicable to mechanics of industrial production equipment, teaches basic industrial application of mechanical principles with emphasis placed on power transmission and specific mechanical components. Topics include: mechanical tools, fasteners, basic mechanics, lubrication, bearings, and packings and seals.
- IMT 110 Industrial Mechanics II (3-7-6) Continues the application of mechanical principles to industrial production equipment with emphasis on power transmission and mechanical components. Emphasis is placed on alignment and tension. Topics include: mechanical drive systems, couplings and alignment,, clutches and brakes, linkage and levers, mechanical troubleshooting, and preventative maintenance.
- IMT 113 Industrial Hydraulics (6-4-8) Provides instruction in fundamental concepts and theories for the safe operation of hydraulic components and systems. Topics include: hydraulic theory, suction side of pumps, actuators, valves, pumps/motors, accumulators, symbols and circuitry, types of fluids, filters, servicing safety, preventative maintenance and troubleshooting.
- IMT 115 Industrial Pneumatics (3-2-4) Provides instruction in fundamental concepts and theories for the safe operation of pneumatic components and systems. Topics include: pneumatic theory, preventative maintenance, compressors, regulators, pneumatic valves, actuators, servicing safety and troubleshooting.
- Pumps and Piping Systems (1-4-2) Provides instruction in the operation of industrial pumps, valves, and piping/delivery systems with emphasis on installation procedures, maintenance and repair. Topics include: pump identification, pump operation, pump installation, maintenance, troubleshooting, piping systems, and installation and repair of piping systems.
- IMT 133 Industrial Maintenance-Mechanical Review (1-4-3) Summarizes and integrates all previous CMP, ELC, and IMT courses. Designed to assist Industrial Maintenance Technology students in assembly, troubleshooting, and repair of multi-system machinery and devices. Topics include: electrical, mechanical, and fluidic interfacing in complex and industrial equipment.

36

INDUSTRIAL MAINTENANCE TECHNOLOGY SUPPORT COURSES

- MAT 103

 Algebraic Concepts (5-0-5) Introduces concepts and operations which can be applied to the study of algebra. Topics include: use of variables, manipulation of algebraic expressions, solution of linear and quadratic equations, evaluation and graphing of linear and quadratic functions, and solution of systems of linear equations. Class includes lecture, applications, and homework to reinforce learning. (Prerequisite: MAT 098, Pre-Algebra, or entrance math score)
- ELC 106 <u>Direct Current Circuits I</u> (3-2-4) Introduces direct current (DC) concepts and applications. Topics include: fundamental electrical principles and laws; direct current test equipment; series, parallel, and combination circuits; and basic laboratory procedures and safety practices. (Preprequisites: MAT 103, Algebraic Concepts)
- CMP 101 Introduction to Microcomputers (1-4-3) Introduces fundamental concepts and operations necessary to utilize microcomputers. Emphasis is placed on basic functions and familiarity with computer use. Topics include: computer terminology; computer operating systems; data storage; file management; equipment care and operation; and an introduction to work processing, database, and spreadsheet application. (Prerequisite: Provisional admission)
- ENG 101 English (5-0-5) Emphasizes the development and improvement of written and oral communication abilities. Topics include: analysis of writing techniques used in selected readings, writing practice, editing and proofreading, research skills, and oral presentation skills. Homework assignments reinforce classroom learning.

 (Prerequisite: ENG 097, English III and RDG 097, Reading III, or the equivalent)
- Alternating Current I (3-2-4) Introduces the theory and application of varying sine wave voltages and current. Topics include: AC wave generation, oscilloscope operation, inductance, and capacitance. (Prerequisites/Corequisite: ELC 108, Direct Current Circuits, II, MAT 104, Geometry and Trigonometry, or MAT 105, Trigonometry)
- Alternating Current II (3-2-4) Continues development of AC concepts with emphasis on constructing, verifying, and troubleshooting reactive circuits using RLC theory and oscilloscopes. Topics include: simple RLC circuits, AC circuit resonance, passive filters, transformer theory and applications, and non-sinusoidal wave forms. (Prerequisite/Corequisite: ELC 109, Alternating Current II)
- PSY 100 Interpersonal Relations and Professional Development (3-0-3) Provides a study of human relations and professional development in today's rapidly changing world to prepare students for living and working in a complex society. Topics include: personal skills required for an understanding of self and others; projecting a professional image; job acquisition skills such as conducting a job search,

interviewing techniques, job applications, and resume preparation; and desirable job performance skills and attitudes necessary for job retention and advancement. (Prerequisite: Provisional admission)

- ACT 100 Refrigeration Fundamentals (3-2-4) Introduces basic concepts and theories of refrigeration. Topics include: the laws of thermodynamics, pressure and temperature relationships, heat transfer, the refrigeration cycle, and safety.
- Metal Welding and Cutting Techniques (2-3-3) Provides instruction in the fundamental use of the electric arc welder and the oxyacetylene cutting outfit. Emphasis is placed on safe set up and use of equipment. Topics include: safety practices, arc welding equipment and set up, oxyfuel welding, flame cutting equipment and set up, and welding and cutting procedures. (Prerequisite: Provisional admission)
- MCH 109 Lathe Operations I (4-6-7) Provides opportunities for students to develop skill in the sue of bench grinders and lathes. Topics include: lathes, bench grinders, bench grinder operations, lathe calculations, lathe set up, and lathe operations. (Prerequisite: Provisional admission)

THE MAST TECHNICAL WORKPLACE COMPETENCY/COURSE CROSSWALK

Upon development of appropriate curricula for the pilot programs, each MAST college began to develop individual course outlines for its assigned specialty area. The skill standards identified in the Competency Profile were cross walked against the technical competencies of the courses in the pilot curriculum. The resulting matrix provided a valuable tool for assessing whether current course content was sufficient or needed to be modified to ensure mastery of entry level technical competencies. Exit proficiency levels for each of the technical competencies were further validated through industry wide surveys both in Texas and across the nation.

The Technical Workplace Competency/Course Crosswalk in the following pages presents the match between industry-identified duties and tasks and the pilot curriculum for. Course titles are shown in columns, duties and tasks in rows. The Exit Level Proficiency Scale, an ascending scale with 5 the highest level of proficiency, includes marked boxes indicating whether the task is covered by the instructor during the course; the numbers 1-5 indicate the degree of attention given to the task and the corresponding proficiency expected on the part of the student. The crosswalk is intended to serve as an aide to other instructional designers and faculty in community college programs across the nation.

Included on the following pages is the Technical Workplace Competency/Course Crosswalk for the pilot program curriculum. This crosswalk validates the fact that the duties and tasks which were identified by industry as being necessary for entry level employees have been incorporated into the development of the course syllabi.

INDUSTRIAL MAINTENANCE MECHANIC TECHNICAL WORKPLACE COMPETENCIES EXIT LEVEL PROFICIENCY MATRIX

Industrial Maintenance Mechanic:

uses mechanical, pneumatic, hydraulic, and electrical skills to maintain, and/or install equipment/machinery used in industry.

The following matrix identifies the five exit levels of technical workplace competencies for the Industrial Maintenance Mechanic Certificate at Augusta Technical Institute, Augusta, Georgia.

	EXIT LEVEL OF PROFICIENCY											
Technical	1	2	3	4	5							
Workplace Competency	rarely	routinely with supervision	routinely with limited supervision	routinely without supervision	initiates/ improves/ modifies and supervises others

THE MAST SCANS/COURSE CROSSWALK

The Secretary's Commission on Achieving Necessary Skills (SCANS), U. S. Department of Labor, has identified in its "AMERICA 2000 REPORT' the following five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance:

COMPETENCIES:

Resources: Identifies, organizes, plans, and allocates resources

Interpersonal: Works with others

<u>Information</u>: Acquires and uses information

Systems: Understands complex inter-relationships
Technology: Works with a variety of technologies

FOUNDATION SKILLS:

Basic Skills: Reads, writes, performs arithmetic and mathematical operations,

listens and speaks

Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes,

knows how to learn and reasons

Personal Qualities: Displays responsibility, self-esteem, sociability, self-management,

and integrity and honesty

Recognizing the value of SCANS proficiencies to job performance, as well as the growing mandate in many states to include SCANS activities in course curricula, MAST asked survey respondents to review the SCANS skill sets in the context of the draft skill standards for each occupational specialty area. MAST also incorporated evaluation of SCANS competencies and foundation skills into its assessment of the pilot training curricula. The results were summarized in a crosswalk that allowed MAST staff to modify course content where needed to strengthen achievement of SCANS competencies.

The following pages present the SCANS/Course Crosswalk for the pilot curriculum in Courses are listed along the top and SCANS competencies and foundations are shown along the left side of the matrix. An exit level proficiency matrix for SCANS competencies and foundation skills is provided as well.

As "soft" skills, the SCANS competencies are inherently difficult to quantify. MAST realizes that some faculty will emphasize the SCANS more or less than others. The SCANS/Course Crosswalk matrix has been included with this course documentation to show the importance of these "soft skills" and the importance of their being addressed in the classroom (particularly in technical classes). In time, faculty will learn to make these types of SCANS activities an integral and important part of the teaching process.

Included on the following pages is the SCANS/Course Crosswalk for the pilot program curriculum. This crosswalk validates the fact that the "soft skills" (SCANS) which were identified by industry as being necessary for entry level employees have been incorporated into the development of the course syllabi. Also included is a matrix which defines the exit level of proficiency scale (1-5).

MAST/01/012296

THE MAST COURSE SYLLABI "PILOT PROGRAM"

MAST has produced a very unique set of course outlines, driven and validated by industry and encompassing the broad range of technologies covered by the MAST grant. The course outlines also include proposed SCANS activities that will be useful to an instructor in preparing students to enter the workforce of the future.

Included in the following pages are final course outlines developed and refined in the process of piloting the MAST training programs. The outlines include a brief course description; required course materials (e.g., textbook, lab manual, and tools, if available); proposed method of instruction; proposed lecture and lab outlines; and detailed course objectives for both Technical Workplace Competencies and SCANS Competencies.

These outlines were completed and revised during the second year of MAST, following completion of the pilot phase. The outlines are intended to serve as an aide to other instructional designers and faculty in community college programs across the nation.

Included on the following pages are the Course Syllabi for each of the courses which were taught during the pilot program.

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS ALGEBRAIC CONCEPTS

Prerequisite: PRE-ALGEBRA

MAST PROGRAM COURSE SYLLABUS ALGEBRAIC CONCEPTS

Lecture hours/week: 5 Lab hours/week: 0 Credit hours: 5

COURSE DESCRIPTION:

Introduces concepts and operations which can be applied to the study of algebra. Course content emphasizes: use of variable, manipulation of algebraic expressions, solution of linear and quadratic equations, evaluation and graphing of linear and quadratic functions, and solution of systems of linear equations. Class includes lecture, applications, and homework to reinforce learning.

PREREQUISITE: Pre-Algebra, or ent

Pre-Algebra, or entrance math scores in accordance with approved DTAE admission score levels

REQUIRED COURSE MATERIALS:

Textbook: Introduction to Technical Mathematics, Washington, A. J., & Triola, M.

F. (4th ed., 1988), Menlo Park, CA: Benjamin Cummings

Materials: Scientific calculator

Graph paper

Pencils

Straight edge

METHODS OF INSTRUCTION:

Lecture: Didactic presentations will include lecture and discussions.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- 1. satisfactorily perform on written, oral, and practical examinations
- 2. satisfactorily perform on outside assignments including writing assignments
- 3. contribute to class discussions
- 4. maintain attendance per current policy

LECTURE OUTLINE:

Lecture Topics Text Reference Page Contact Hrs.

Arithmetic Operations and Order of Operations Chapter 1

Units of Measurement and

Approximate Numbers Chapters 2-3

Signed numbers

TEST 1

Exponents, Roots, and Radicals Chapter 10

Introduction to Algebra,

Simple Equations and

Inequalities Chapters 4-5
Basic Algebraic Operations Chapter 7

TEST 2

Factoring Chapter 8
Algebraic Operations Chapter 9
Quadratic Equations Chapter 11

TEST 3

Graphs Chapter 13
Simultaneous Linear Equations Chapter 14

TEST 5

FINAL EXAM - Cumulative

Total Lecture Hours

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. APPLY MATHEMATICAL CONCEPTS

1. Perform Basic Algebraic Operations

B. SOLVE PROBLEMS WITH ARITHMETIC NUMBERS

- 1. Calculate Sums, Differences, Products, Quotients, Powers and Root Using Arithmetic Numbers, Scientific Notation and Order of Operations
- 2. Convert Radicals to Simplest Form and Use Them in Arithmetic Operations
- 3. Solve Arithmetic Problems Using a Scientific Calculator

C. SOLVE PROBLEMS USING BASIC ALGEBRAIC CONCEPTS

- 1. Calculate Sums, Difference, Products, Quotients, Powers, and Roots Using Integers, Absolute Value, and Order of Operations
- 2. Calculate Sums, Differences, Products, Quotients, Powers and Factors Using Polynomials and Algebraic Fractions
- 3. Solve and Apply Equations--linear, Quadratic, Fractional and Formula--by Use of Properties of Equality, Factoring, and Quadratic Formula

D. SOLVE PROBLEMS USING INTERMEDIATE ALGEBRAIC CONCEPTS

- 1. Convert an Expression to a Linear or Quadratic Function by Expressing One Variable as a Function of Another and Evaluate the Function for Specific Values of the Independent Variable
- 2. Translate a Function into a Linear or Quadratic Graph and Solve Applied Problems Using These Functions
- 3. Solve Systems of Linear Equations with 2 or 3 Variables Using Elimination, Substitution, Graphing, and Determinants

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - demonstrate knowledge of the following systems
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials
 - 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards

- 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
 - 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative

- a. identifies personal goals
- identifies actions required to accomplish personal goals
- 2. Problem Solving: Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
- 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
- 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
- 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly
- C Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time
 - d. develops a fine work-ethic
 - 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal

- c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
- 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
- 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

COURSE SYLLABUS DIRECT CURRENT CIRCUITS I

MAST PROGRAM COURSE SYLLABUS DIRECT CURRENT CIRCUITS I

Lecture hours/week: 3

Lab hours/week: 2

Credit hours: 4

COURSE DESCRIPTION:

Introduces direct current concepts and applications. Topics include: Fundamental electrical principles and laws; Direct current test equipment; Series, parallel, and combination circuits; and basic laboratory and safety practices.

PREREQUISITE: NONE

REQUIRED COURSE MATERIALS:

Textbook:

Electricity 1, Kubala, Delmar Publishing Co.

Hand Tools/Quantity Required:

Calculator

Tool box

Volt-Ohm meter

Safety shoes

Classroom supplies

Safety glasses

METHODS OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- 1 perform the manipulative skills of the craft as required to satisfactorily complete laboratory assignments
- 2. apply theory to laboratory assignments
- 3. satisfactorily perform on written, oral, and practical examinations
- 4. satisfactorily perform on outside assignments including writing assignments
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- 7. follow all shop rules and safety regulations as stated in the laboratory manual

LECTURE OUTLINE:

Lecture Topics	Text Reference Page	Contact Hrs
Review Basic Math	Chapters 1-3	3
Electron Theory and Ohm's Law		
Test 1		
Energy and Power	Chapter 4	3
Circuits, Symbols and Diagrams		
Test 2		
Measuring Electricity	Chapter 5	3

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Recognize OSHA Requirements
- 2. Demonstrate Use of Personal Protective Equipment

B. APPLY MATHEMATICAL CONCEPTS

- Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, divide whole numbers
 - b. Add, subtract, multiply, divide fractions
 - c. Add, subtract, multiply, divide decimal numbers
- 2. Convert Fractions / Decimals
- 3. Convert English to Metric Measurement
 - a. Use English to Metric conversion chart
 - b. Perform calculations to convert English to Metric measurement
- 4. Perform Basic Algebraic Operations
- 5. Perform Basic Trigonometric Functions

C. USE TOOLS

- 1. Identify and Use Shop Hand Tools
 - a. Use and care of wrenches
 - b. Use and care of screwdrivers
 - c. Use and care of pliers and cutters
 - d. Use and care of striking tools
 - e. Use and care of bearing pullers
 - f. Use and care of threading and reaming equipment
 - g. Use and care of files
- 2. Identify and Use Hand Held Power Tools
 - a. Use and care portable grinders
 - b. Use and care of portable drill motors
 - c. Use and care of portable band saws
 - d. Use and care of portable reciprocating saws

D. MAINTAIN ELECTRICAL DEVICES

- 1. Use Electrical Test Equipment
- 2. Apply Specific Terms to Electrical Circuits

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

59

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - 1. demonstrate knowledge of the following systems
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e systematic organization of training materials
 - 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.

- 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
- 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
- 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
- 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
- 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals
 - 2. **Problem Solving:** Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
 - 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information

- a. interprets technical drawings
- b. interprets technical illustrations and symbols
- c. understands both written and verbal instructions
- d. assimilates process during instructor demonstrations
- 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
- 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time
 - d. develops a fine work-ethic
 - 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
 - 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
 - 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control

- a. maintain a record of academic achievement (individual gradebook)
- b. make accommodations to laboratory schedules due to broken equipment/tools
- c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS INDUSTRIAL MAINTENANCE SAFETY PROCEDURES

MAST PROGRAM **COURSE SYLLABUS** INDUSTRIAL MAINTENANCE SAFETY PROCEDURES

Lecture hours/week: 2

Lab hours/week: 1

Credit hours: 2

COURSE DESCRIPTION:

Provides in-depth study of the health and safety practices required for maintenance of industrial production equipment. Topics include: traffic safety, ladder safety, fire safety, safe work in confined spaces, electrical safety, emergency procedures, an introduction to OSHA regulations,. MSDS Right-To-Know Law, hazardous materials safety, and safety equipment.

PREREQUISITE:

REQUIRED COURSE MATERIALS:

Textbook:

Safety & Health, School Craft Publishing

Hand Tools/Quantity Required:

Safety Glasses

1 pair

Classroom Supplies

1

Calculator

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture, video and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- perform the manipulative skills of the craft as required to satisfactorily complete 1. laboratory assignments
- 2. apply theory to laboratory assignments
- 3. satisfactorily perform on written, oral, and practical examinations
- satisfactorily perform on outside assignments including writing assignments 4.
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- follow all shop rules and safety regulations as stated in the laboratory manual 7.

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Follow Safety Manuals and All Safety Regulations/Requirements
 - a. Assume responsibility for the personal safety of oneself and others
 - b. Develop a personal attitude towards safety
 - c. Interpret safety manual directives
 - d. Comply with established company safety practices
- 2. Use Protective Equipment
 - a. Wear protective safety clothing as required
 - b. Maintain and use protective guards and equipment on machinery
 - c. Locate and properly use protective equipment

- d. Use lifting aids when necessary
- 3. Follow Safe Operating Procedures for Hand and Machine Tools
 - a. Identify and understand safe machine operating procedures
 - b. Demonstrate safe machine operation
- 4. Maintain a Clean and Safe Work Environment
 - a. Keep work areas clean
 - b. Clean machine/hand tools when work is completed
 - c. Put tools away when work is finished
 - d. Keep aisles clear of equipment and materials

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - l. demonstrate knowledge of the following systems
 - a laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials

- 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
 - 5. Speaking: Organizes ideas and communicates orally

- a. participates in classroom discussions
- b. organize ideas and communicate specific questions to the instructor
- c. verbally affirms understanding of a concept, procedure, or required skill
- d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals
 - 2. **Problem Solving:** Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
 - 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
 - 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
 - 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student

- b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
- c. develops an understanding good students know what they are going to do in class and does not waste time
- d. develops a fine work-ethic
- 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
- 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
- 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

COURSE SYLLABUS INDUSTRIAL MECHANICS I

MAST PROGRAM

COURSE SYLLABUS INDUSTRIAL MECHANICS I

Lecture hours/week: 5

Lab hours/week: 5

Credit hours: 7

COURSE DESCRIPTION:

Provides instruction in basic physics concepts applicable to mechanics of industrial production equipment, teaches basic industrial application of mechanical principles with emphasis placed on power transmission and specific mechanical components. Topics include: mechanical tools, fasteners, basic mechanics, lubrication, bearings, and packings and seals.

PREREQUISITE: NONE

REQUIRED COURSE MATERIALS:

Textbook:

Millwrights & Mechanics Guide

Lab Manual:

Millwrights & Mechanics Guide

Hand Tools/Quantity Required:

Safety Glasses

1 pair

Classroom Supplies

1

Calculator

1

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- perform the manipulative skills of the craft as required to satisfactorily complete 1. laboratory assignments
- 2. apply theory to laboratory assignments
- satisfactorily perform on written, oral, and practical examinations 3.
- 4. satisfactorily perform on outside assignments including writing assignments
- 5. contribute to class discussions
- maintain attendance per current policy 6.
- follow all shop rules and safety regulations as stated in the laboratory manual 7.

LECTURE OUTLINE:

Lecture Topics	Text Reference Page	Contact Hrs.
Drawings, Sketching, Machinery		
Instructions, Power		
Transmission	•	5
V-Belt Drives, Flat Belts		5
Chains, Couplings, Bearings		5
Packing and Seals		5
Mechanical Fasteners		5
Wood Fasteners	•	5
Gears		5

Lubrication	Handouts	_5
	Total Lecture Hours	50

LAB OUTLINE:

Lab Topics	Contact Hrs.
Sketch Pillow Block, Label Drawing	5
Connect V-Belt Drive, Connect Flat Belt Drive	5
Demonstrate Chain Replacement	5
Demonstrate Removal and Installation of Mechanical Seals	5
Demonstrate Tightening Threaded Fasteners	5
Demonstrate Proper Installation of Nails, Wood Screws and Lag Screws	5
Demonstrate Installation of Spur, Helical and Worm Gears	5
Demonstrate Thread Tapping (English and Metric)	5
Demonstrate Lubrication Using Grease and Oil	5
Complete all Labs, Review	5
Total Lab Hours	50

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PERFORM MEASUREMENT/INSPECTION

- 1. Identify Types of Measurement Used in the Machine Shop
 - a. Distinguish between direct and calculated measurements
 - b. Compute calculated measurements
 - c. Justify the use of precision measurements in manufacturing
 - d. Discuss the following: precision, reliability, and accuracy
 - e. Demonstrate general measurement techniques
 - f. Demonstrate semi-precision measurement techniques
 - g. Demonstrate precision measurement techniques
 - h. Document results of measurement activities and calculations
- 2. Select Proper Measurement Tools
 - Match appropriate measurement tools with various types of measurement requirements

- b. Demonstrate proper measurement tool usage
- c. List steps of proper measurement
- d. Explain rationale for each step
- e. Identify error possibilities in measurement tool selection
- f. Identify error possibilities within measurement procedures
- g. Identify common conversion error possibilities
- h Discriminate between accepted measurement procedures and improper measurement procedures
- 3. Apply Proper Measuring Techniques
 - a. Explain calibration requirements of various precision instruments
 - b. Illustrate measurement differences when taken with calibrated and non-calibrated instruments
 - c. Justify use of particular measurement tools based on tool characteristics
 - d. Discuss factors affecting accurate measurement (i.e., dirt, temperature, etc.)
- 4. Use Metric and English Standards of Measurement
 - a. Discuss the English system of measurement
 - b. Discuss the Metric system of measurement
- 5. Perform Measurements With Hand Held Instruments
 - a. Measure with steel rules (metric and inch)
 - b. Measure with micrometers
 - c. Measure with comparison measuring instruments (i.e., calipers, telescope gages)
 - d. Measure with direct measuring instruments (i.e., vernier, dial, and digital instruments)
 - e. Measure with fixed gages (go and not go gages)
- 6. Perform Measurements on Surface Plate
 - a. Describe care of surface plate
 - b. Use surface plate accessories correctly (sine bar, gage blocks, etc.)
 - c. Check for part squareness
 - d. Check part dimensions for accuracy
 - e. Align workpieces using height gage and dial indicators

B. REPAIR POWER TRANSMISSION SYSTEMS

- 1. Belt Drives
 - a. Characteristics of pulley, sheaves, and belts
 - b. Safety precautions associated with inspecting pulleys, sheaves, and belts
 - c. Inspection criteria for pulleys/sheaves and belts
 - d. Adjustment of pulleys/sheaves and belts
 - e. Remove, inspect and install pulleys, belts and sheaves
 - f. Determine direction of rotation of the output shaft
- 2. Gear Drives
 - a. List inspection criteria for a gear assembly
 - b. Remove, clean, inspect and install a gear assembly
- 3. Chain Drives
 - a. List inspection criteria for a gear assembly
 - b. Remove, clean, inspect and install a chain drive assembly
 - c. Set tension on a chain drive assembly

C. BEARING MAINTENANCE

- 1. Remove and Install a Journal Bearing
- 2. Remove and Install an Anti-friction (Roller) Bearings
- 3. Install and Remove a Thrust Bearing
- 4. Identify Typical Cause of Bearing Failure
- 5. Gather Vibration Analysis Data
 - a. Determine sources of vibration
 - b. Determine vibration specifications
 - c. Determine vibration test points
 - d. Obtain vibration readings using vibration analysis equipment

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - 1. demonstrate knowledge of the following systems
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process

- d. dimensioning and measurement systems
- e. systematic organization of training materials
- 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations

- d. seek and receive individualized instruction in the laboratory
- 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals
 - 2. Problem Solving: Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
 - 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
 - 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
 - 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student

- b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
- c. develops an understanding good students know what they are going to do in class and does not waste time
- d. develops a fine work-ethic
- 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
- 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
- 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS INTRODUCTION TO MICROCOMPUTERS

MAST PROGRAM

COURSE SYLLABUS INTRODUCTION TO MICROCOMPUTERS

Lecture hours/week: 1

Lab hours/week: 4

Credit hours: 3

COURSE DESCRIPTION:

Introduces fundamental concepts and operations necessary to utilize microcomputers. Emphasis is placed on basic functions and familiarity with computer use. Topics include: Computer terminology; operating systems; data storage; file management; equipment care and operation; and an introduction to word processing, database, and spreadsheet applications.

PREREQUISITE: NONE

REQUIRED COURSE MATERIALS:

Textbook:

Learning to Use Microcomputer Applications (WordPerfect 5.1),

Shelly, Cashman, Markowicz

Lab Manual:

Learning to Use Microcomputer Applications (WordPerfect 5.1),

Shelly, Cashman, Markowicz

Materials/Quantity Required:

Classroom Supplies

1

Computer

1

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- perform the manipulative skills of the craft as required to satisfactorily complete 1. laboratory assignments
- 2. apply theory to laboratory assignments
- satisfactorily perform on written, oral, and practical examinations 3.
- satisfactorily perform on outside assignments including writing assignments 4.
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- follow all shop rules and safety regulations as stated in the laboratory manual 7

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. USE COMPUTERS

- 1. Perform Basic Word Processing
- 2. Perform Basic Spread Sheet Operations

88

B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, divide whole numbers
 - b. Add, subtract, multiply, divide fractions
 - c. Add, subtract, multiply, divide decimal numbers
- 2. Convert Fractions / Decimals
- 3. Convert English to Metric Measurement
 - a. Use English to Metric conversion chart
 - b. Perform calculations to convert English to Metric measurement
- 4. Perform Basic Algebraic Operations
- 5. Perform Basic Trigonometric Functions
- 6. Perform Basic Geometric Calculations
 - a. Calculate area

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required

Lecture hours/week: 5

Lab hours/week: 0

Credit hours: 5

COURSE DESCRIPTION:

Emphasizes the development and improvement of written and oral communication abilities. Topics include: analysis of writing techniques used in selected readings, writing practice, editing and proofreading, research skills, and oral presentation skills. Homework assignments reinforce classroom learning.

PREREQUISITE/COREQUISITE:

English III and Reading III, or the equivalent.

REQUIRED COURSE MATERIALS:

Textbook:

English Skills, Langan, J. (Fifth Ed., 1993), New York: McGraw-Hill

Materials:

Loose leaf paper Loose leaf binder Blue or black pen

Pencil Highlighter

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture and discussions.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- 1. satisfactorily perform on written, oral, and practical examinations
- 2. satisfactorily perform on outside assignments including writing assignments
- 3. contribute to class discussions
- 4. maintain attendance per current policy

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in it's "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. **COMPETENCIES**

- Resources: Identifies, organizes, plans, and allocates resources
 - follows a schedule to complete assigned tasks on time 1.
 - determine the initial cost of materials and "value added" as result of work 2.
 - 3. domplete a stock request form for required material
 - provide a self-evaluation of performance based on the time and quality of 4. work
- В. Interpersonal: Works with others
 - complete assigned responsibilities within the shop floor serving as a 1. member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - perform basic semi-precision and precision layout as necessary 3.
- D. Systems: Understands complex inter-relationships 1.
 - demonstrate knowledge of the following systems
 - laboratory organization structure: physical and social a.
 - organization of personnel and facilities on the shop floor b.
 - systematic approach to the mechanical process C.
 - dimensioning and measurement systems d.
 - systematic organization of training materials
 - 2. monitors and corrects performance during
 - the practical process a.
 - b. adjustments of individual laboratory work schedule

- c. constantly evaluating the quality of work to achieve acceptable standards
- d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
 - 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor

- c. verbally affirms understanding of a concept, procedure, or required skill
- d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals
 - 2. Problem Solving: Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
 - 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
 - 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
 - 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly.
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time

- d. develops a fine work-ethic
- 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
- 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
- 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS ALTERNATING CURRENT I

MAST PROGRAM

COURSE SYLLABUS ALTERNATING CURRENT I

Lecture hours/week: 3

Lab hours/week: 2

Credit hours: 4

COURSE DESCRIPTION:

Introduces the theory and application of varying sine wave voltages and current. Topics include: A.C. wave generation factors such as peak, peak to peak, average, and RMS values; frequency and phase relationships in R, RL, RC, and RLC circuits; and impedance admittance, and conductance power factors calculated from given and/or measured values.

PREREQUISITE: Direct Current Circuits

REQUIRED COURSE MATERIALS:

Textbook:

Electricity 2, Kubala, Delmar Publishing

Lab Manual:

Lab Manuals are issued as a text and must be returned before Final Exam is

taken

Hand Tools/Quantity Required:

Safety Glasses Classroom Supplies Calculator

Volt-Ohm Meter w/Test Leads

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture, video and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- perform the manipulative skills of the craft as required to satisfactorily complete laboratory assignments
- apply theory to laboratory assignments 2.
- 3. satisfactorily perform on written, oral, and practical examinations
- 4. satisfactorily perform on outside assignments including writing assignments
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- 7. follow all shop rules and safety regulations as stated in the laboratory manual

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Recognize OSHA Requirements
- 2. Demonstrate Use of Personal Protective Equipment

B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, divide whole numbers
 - b. Add, subtract, multiply, divide fractions

- c. Add, subtract, multiply, divide decimal numbers
- 2. Convert Fractions / Decimals
- 3. Convert English to Metric Measurement
 - a. Use English to Metric conversion chart
 - b. Perform calculations to convert English to Metric measurement
- 4. Perform Basic Algebraic Operations
- 5. Perform Basic Trigonometric Functions

C. INTERPRET ENGINEERING DRAWINGS

- 1. Identify the Purpose of Listed Notes and Dimensions
 - a. Interpret the notes on a blueprint or mechanical drawing
 - b. Identify scale on a blueprint or mechanical drawing
 - c. Identify methods of dimensioning objects
 - 1) Cylinders
 - 2) Arcs
 - 3) Holes
 - 4) Counter bored Holes
 - 5) Countersink Holes
 - 6) Angles
 - 7) Circle Centers
 - d. Define tolerance as used in interpretation of mechanical drawings
 - e. Identify document identification code.
 - f. Drawing abbreviations and acronyms
 - g. Interpret symbols used to illustrate surface finishes on a blueprint
- 2. Identify Basic Layout of Drawings
 - a. Alphabet of lines
 - b Types of lines used on blueprints and mechanical drawings
 - c. Identify drawings views
- 3. Make a Drawing Using Each of the Basic Types of Drawings Listed
 - a. Simple isometric sketch
 - b. Single line symbols for pipe and fittings
 - c. Piping and Instrumentation Diagram (P&ID)
 - d. Orthographic drawing

D. USE TOOLS

- 1. Identify and Use Shop Hand Tools
 - a. Use and care of wrenches
 - b. Use and care of screwdrivers
 - c. Use and care of pliers and cutters
 - d. Use and care of striking tools
 - e. Use and care of bearing pullers
 - f. Use and care of threading and reaming equipment
 - g. Use and care of files
- 2. Identify and Use Hand Held Power Tools

E. MAINTAIN ELECTRICAL DEVICES

- 1. Use Electrical Test Equipment
- 2. Apply Specific Terms to Electrical Circuits
- 3. Analyze Series, Parallel and Complex Circuits
- 4. Check AC & DC Motors for Proper Operation
- 5. Troubleshoot Electrical Devices

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - Demonstrate knowledge of the following systems
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials
 - 2. Monitors and corrects performance during a the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. Chooses procedure, tools and equipment required to perform the task
 - 2. Applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards

- 3. Maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
 - 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals

- b. identifies actions required to accomplish personal goals
- 2. **Problem Solving:** Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
- 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
- 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
- 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly.
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time
 - d. develops a fine work-ethic
 - 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee

- 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
- 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

ELC 109 02/081196

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS ALTERNATING CURRENT II

MAST PROGRAM

COURSE SYLLABUS ALTERNATING CURRENT II

Lecture hours/week: 3

Lab hours/week: 2

Credit hours: 4

COURSE DESCRIPTION:

Introduces the theory and application of varying sine wave voltages and current. Topics include: A.C. wave generation factors such as peak, peak to peak, average, and RMS values; frequency and phase relationships in R, RL, RC, and RLC circuits; and impedance admittance, and conductance power factors calculated from given and/or measured values.

PREREQUISITE:

Alternating Current I

REQUIRED COURSE MATERIALS:

Textbook:

Electricity 2, Kubala, Delmar Publishing.

Lab Manual:

Lab Manuals are issued as a text and must be returned before Final Exam is

taken.

Hand Tools/Quantity Required:

Tools

Safety Glasses

Classroom Supplies

Calculator

Volt-Ohm Meter w/test leads

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture, video and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- 1. perform the manipulative skills of the craft as required to satisfactorily complete laboratory assignments
- 2. apply theory to laboratory assignments
- 3. satisfactorily perform on written, oral, and practical examinations
- 4. satisfactorily perform on outside assignments including writing assignments
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- 7. follow all shop rules and safety regulations as stated in the laboratory manual

LECTURE OUTLINE:

Lecture Topics	Text Reference Page	Contact Hrs.
AC Power - Single Phase	126	3
Resonance - Series and Parallel	132	3
AC Power - Three Phase	Textbook 2 - 111	3
Impedance Matching	148	3
Transformer - Single Phase	Textbook 2 - 135	3

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Recognize OSHA Requirements
- 2. Demonstrate Use of Personal Protective Equipment

B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, divide whole numbers
 - b. Add, subtract, multiply, divide fractions
 - c. Add, subtract, multiply, divide decimal numbers
- 2. Convert Fractions/Decimals
- 3. Convert English to Metric Measurement
 - a. Use English to Metric conversion chart
 - b. Perform calculations to convert English to Metric measurement
- 4. Perform Basic Algebraic Operations

- 5. Perform Basic Trigonometric Functions
- 6. Perform Basic Geometric Calculations
 - a. Calculate area, per

C. INTERPRET ENGINEERING DRAWINGS

- Identify the Purpose of Listed Notes and Dimensions
 - a. Interpret the notes on a blueprint or mechanical drawing
 - b. Identify scale on a blueprint or mechanical drawing
 - c. Identify methods of dimensioning objects
 - 1) Cylinders
 - 2) Arcs
 - 3) Holes
 - 4) Counter bored Holes
 - 5) Countersink Holes
 - 6) Angles
 - 7) Circle Centers
 - d. Define tolerance as used in interpretation of mechanical drawings
 - e. Identify document identification code.
 - f. Drawing abbreviations and acronyms
 - g. Interpret symbols used to illustrate surface finishes on a blueprint
- 2. Identify Basic Layout of Drawings
 - a. Alphabet of lines
 - b Types of lines used on blueprints and mechanical drawings
 - c. Identify drawings views
- 3. Make a Drawing Using Each of the Basic Types of Drawings Listed
 - a. Simple isometric sketch
 - b. Single line symbols for pipe and fittings
 - c. Piping and Instrumentation Diagram (P&ID)
 - d. Orthographic drawing

D. USE TOOLS

- 1. Identify and Use Shop Hand Tools
 - a. Use and care of wrenches
 - b. Use and care of screwdrivers
 - c. Use and care of pliers and cutters
 - d. Use and care of striking tools
 - e. Use and care of bearing pullers
 - f. Use and care of threading and reaming equipment
 - g. Use and care of files
- 2. Identify and Use Hand Held Power Tools
 - a. Use and care portable grinders
 - b. Use and care of portable drill motors
 - c. Use and care of portable band saws
 - d. Use and care of portable reciprocating saws

E. MAINTAIN ELECTRICAL DEVICES

- 1. Use Electrical Test Equipment
- 2. Apply Specific Terms to Electrical Circuits
- 3. Analyze Series, Parallel and Complex Circuits
- 4. Check AC& DC Motors for Proper Operation
- 5. Troubleshoot Electrical Devices

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in it's "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - demonstrate knowledge of the following systems
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials
 - 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards

- 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
 - 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals

- b. identifies actions required to accomplish personal goals
- 2. **Problem Solving:** Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
- 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
- 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
- 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly.
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time
 - d. develops a fine work-ethic
 - 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee

- 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
- 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS PUMPS & PIPING SYSTEMS

MAST PROGRAM

COURSE SYLLABUS PUMPS AND PIPING SYSTEMS

Lecture hours/week: 1

Lab hours/week: 4

Credit hours: 2

COURSE DESCRIPTION:

Provides instruction in the fundamental concepts of industrial pumps and piping systems. Topics include: pump identification, pump operations, pump installation, maintenance, troubleshooting, piping systems and installation of piping systems.

PREREQUISITES:

Industrial Mechanics I **Industrial Pneumatics**

REQUIRED COURSE MATERIALS:

Textbook 1:

Pumps. Schoolcraft Publishing

Textbook 2:

Piping Systems, Schoolcraft Publishing

Lab Manual:

Fluid Power, Parker. (Lab manuals are issued as a text and must be

returned before Final Exam is taken.)

Hand Tools/Quantity Required:

Safety Glasses

1 pair

Classroom Supplies

1

Calculator

1

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture, video and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- perform the manipulative skills of the craft as required to satisfactorily complete 1. laboratory assignments
- apply theory to laboratory assignments 2.
- satisfactorily perform on written, oral, and practical examinations 3.
- satisfactorily perform on outside assignments including writing assignments 4.
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- follow all shop rules and safety regulations as stated in the laboratory manual 7.

LECTURE OUTLINE:

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Recognize OSHA Requirements
- 2. Demonstrate Use of Personal Protective Equipment

B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, divide whole numbers
 - b. Add, subtract, multiply, divide fractions
 - c. Add, subtract, multiply, divide decimal numbers
- 2. Convert Fractions/Decimals
- 3. Convert English to Metric Measurement
 - a. Use English to Metric conversion chart
 - b. Perform calculations to convert English to Metric measurement

112

C. USE TOOLS

1. Identify and Use Shop Hand Tools

- a. Use and care of wrenches
- b. Use and care of screwdrivers
- c. Use and care of pliers and cutters
- d. Use and care of striking tools
- e. Use and care of bearing pullers
- f. Use and care of threading and reaming equipment
- g. Use and care of files
- 2. Identify and Use Hand Held Power Tools
 - a. Use and care portable grinders
 - b. Use and care of portable drill motors
 - c. Use and care of portable band saws
 - d. Use and care of portable reciprocating saws

D. MAINTAIN/TROUBLESHOOT EQUIPMENT AND SYSTEMS

- 1. Maintain Air Conditioning System
 - a. Describe the refrigeration cycle
- 2. Maintain Pneumatic Control Circuit
 - a. Troubleshoot a pneumatic circuit
- 3. Maintain Centrifugal Pumps
 - a. Perform disassembly, inspection and assembly of couplings purpose of coupling types of rigid couplings types of mechanical flexible coupling types of material flexible coupling parts of a coupling
 - b. Remove, install and set seal assemblies Mechanical seals Packing assemblies
 - c. Perform disassembly, inspection, repair and assembly of centrifugal pumps
- 4. Maintain Positive Displacement Pumps
 - a. Identify types of positive displacement pumps
 - 1) Piston
 - 2) Gear
 - 3) Vane
 - 4) Screw
 - 5) Diaphragm
 - 6) Plunger
 - b. Perform disassembly, inspection, repair and assembly of positive displacement pumps
- 5. Maintain Gate, Globe, Ball and Plug Valves
 - Identify component parts
 - b. Perform dissemble, inspection, repair and assembly
- 6. Maintain Check Valves and Relief Valves
 - a. Identify component parts
 - b. Perform disassembly, inspection, repair and assembly of check valve
- 7. Maintain Fans & Blowers
 - a. Identify different types of fans and blowers
 - b. Describe typical maintenance required on fans and blowers
- 8. Maintain Hydraulics System
 - a. Identify ANSI hydraulic system drawing symbols
 - b. Perform disassembly inspection and reassemble of hydraulic system components

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - demonstrate knowledge of the following systems:
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials
 - 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment

- a. applies appropriate preventative maintenance
- b. when operating machines
- c. reports all malfunctions of equipment to supervisor/instructor
- d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
 - 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals

- 2. **Problem Solving:** Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
- 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
- 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
- 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time
 - d. develops a fine work-ethic

1

- 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
- 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings

116

- a. assist classmates in improving technical skills
- b. assist students with special needs as a peer mentor
- c. share laboratory resources (machines, tools and instructor's individual attention)
- 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

IMT 128 02/081396

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS INDUSTRIAL HYDRAULICS

MAST PROGRAM COURSE SYLLABUS INDUSTRIAL HYDRAULICS

Lecture hours/week: 6

Lab hours/week: 4

Credit hours: 8

COURSE DESCRIPTION:

Provides instruction in fundamental concepts and theories for the safe operation of hydraulic components and systems. Topics include: hydraulic theory, suction side of pumps, actuators, valves, pumps/motors, accumulators, symbols and circuitry, types of fluids, filters, servicing safety, preventative maintenance and troubleshooting.

PREREQUISITE:

NONE

REQUIRED COURSE MATERIALS:

Textbook:

Industrial Hydraulics Manual

Lab Manual:

Fluid Power, Parker; Lab Manuals are issued as a text and must be

returned before Final Exam is taken.

Hand Tools/Quantity Required:

Tools

Safety Glasses

1 pair

Classroom Supplies

1

Calculator

1

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture, video and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- 1. perform the manipulative skills of the craft as required to satisfactorily complete laboratory assignments
- 2. apply theory to laboratory assignments
- 3. satisfactorily perform on written, oral, and practical examinations
- 4. satisfactorily perform on outside assignments including writing assignments
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- 7. follow all shop rules and safety regulations as stated in the laboratory manual

LECTURE OUTLINE:

Lecture Topics	C	ontact H
Hydraulic Theory		5
Definition of Terms		
Principles		
Operational Conditions		
Computing Units of Measure		
Power Transmission		
Suction Side of Pumps		7
Cavitation		
Atmospheric Pressure		
Actuators		6
Inspection		
Alignment		
Valves		16
Inspection		
Pressure		
Flow Rate		
Null Procedure		
Replacement and Adjustment		
Pumps/Motors		6
Inspection Accumulators		2
Testing		_

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, divide whole numbers
 - b. Add, subtract, multiply, divide fractions
 - c. Add, subtract, multiply, divide decimal numbers
- 2. Convert Fractions/Decimals
- 3. Convert English to Metric Measurement
 - a. Use English to Metric conversion chart
 - b. Perform calculations to convert English to Metric measurement

B. INTERPRET ENGINEERING DRAWINGS

- I. Identify the Purpose of Listed Notes and Dimensions
 - a. Interpret the notes on a blueprint or mechanical drawing
 - b. Identify scale on a blueprint or mechanical drawing
 - c. Identify methods of dimensioning objects:
 - 1) Cylinders
 - 2) Arcs
 - 3) Holes
 - 4) Counter bored Holes
 - 5) Countersink Holes
 - 6) Angles
 - d. Simple isometric sketch
 - e. Single line symbols for pipe and fittings
 - f. Piping and Instrumentation Diagram (P&ID)
 - g. Orthographic drawing

C. USE MEASURING TOOLS

- 1. Record Dimensions Using the Coarse Measuring Tools Provided
 - a. Rigid rules
 - b. Folding rules
 - c. Tape rules

D. USE TOOLS

- 1. Identify and Use Shop Hand Tools
 - a. Use and care of wrenches
 - b. Use and care of screwdrivers
 - c. Use and care of pliers and cutters
 - d. Use and care of striking tools
 - e. Use and care of bearing pullers
 - f. Use and care of threading and reaming equipment
 - g. Use and care of files
- 2. Identify and Use Hand Held Power Tools
 - a. Use and care portable grinders
 - b. Use and care of portable drill motors
 - c. Use and care of portable band saws
 - d. Use and care of portable reciprocating saws

E. MAINTAIN/TROUBLESHOOT EQUIPMENT AND SYSTEMS

- 1. Maintain Positive Displacement Pumps
 - a. Identify types of positive displacement pumps
 - 1) Piston
 - 2) Gear
 - 3) Vane
 - 4) Screw
 - 5) Diaphragm
 - 6) Plunger
 - b. Perform disassembly, inspection, repair and assembly of positive displacement pumps
- 2. Maintain Gate, Globe, Ball and Plug Valves
 - a. Identify component parts
 - b. Perform dissemble, inspection, repair and assembly
- 3. Maintain Hydraulics System
 - a. Identify ANSI hydraulic system drawing symbols
 - b. Perform disassembly inspection and reassemble of hydraulic system components

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in it's "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - demonstrate knowledge of the following systems:
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials
 - 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual

- b. interprets blueprints and technical drawings
- c. read/studies textbook
- d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
- 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
- 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course.
- 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
- 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals
 - 2. Problem Solving: Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
 - 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions

- d. assimilates process during instructor demonstrations
- 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
- 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly.
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time
 - d. develops a fine work-ethic
 - 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
 - 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
 - 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools

- c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

COURSE SYLLABUS INTERPERSONAL RELATIONS AND PROFESSIONAL DEVELOPMENT

MAST PROGRAM

COURSE SYLLABUS INTERPERSONAL RELATIONS AND PROFESSIONAL DEVELOPMENT

Lecture hours/week: 3

Lab hours/week: 0

Credit hours: 3

COURSE DESCRIPTION:

Provides a study of human relations and professional development in today's rapidly changing world that prepares students for living and working in a complex society. Topics include: personal skills required for understanding the self and others; projecting a professional image; job acquisition skills such as conducting a job search, interviewing techniques, job applications, and resume preparation; desirable job performance skills; and desirable attitudes necessary for job retention and advancement.

PREREQUISITE:

Provisional Admission

REQUIRED COURSE MATERIALS:

Textbook:

Human Relations For Success

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture and discussions.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- satisfactory perform on written, oral examinations 1.
- 2. satisfactory perform on outside assignments including writing assignments
- 3. contribute to class discussions
- 4. maintain attendance per current policy

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - I. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - 1. demonstrate knowledge of the following systems:
 - laboratory organization structure: physical and social

- b. organization of personnel and facilities on the shop floor
- c. systematic approach to the mechanical process
- d. dimensioning and measurement systems
- e. systematic organization of training materials
- 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction

- c. observe laboratory demonstrations
- d. seek and receive individualized instruction in the laboratory
- 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals
 - 2. Problem Solving: Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
 - 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
 - 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
 - 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student

131

- b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
- c. develops an understanding good students know what they are going to do in class and does not waste time
- d. develops a fine work-ethic
- 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
- 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
- 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS INDUSTRIAL MECHANICS II

MAST PROGRAM

COURSE SYLLABUS INDUSTRIAL MECHANICS II

Lecture hours/week: 3

Lab hours/week: 7

Credit hours: 6

COURSE DESCRIPTION:

Continues the application of mechanical principles to industrial production equipment with emphasis on power transmission and mechanical components. Emphasis is placed on alignment and tension. Topics include: mechanical drive systems, couplings and alignment, clutches and brakes, linkage and levers, mechanical troubleshooting, and preventative maintenance.

PREREQUISITE:

Industrial Mechanics I

REQUIRED COURSE MATERIALS:

Textbook 1:

Pumps, Schoolcraft Publishing

Textbook 2:

Fluid Power, Parker

Lab Manual:

Lab Manuals are issued as a text and must be returned before Final Exam is

taken.

Hand Tools/Quantity Required:

Tools

Safety Glasses

1 pair

Classroom Supplies

Calculator

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture, video and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- perform the manipulative skills of the craft as required to satisfactorily complete laboratory assignments
- 2. apply theory to laboratory assignments
- satisfactorily perform on written, oral, and practical examinations 3.
- 4. satisfactorily perform on outside assignments including writing assignments
- 5. contribute to class discussions
- maintain attendance per current policy 6.
- 7. follow all shop rules and safety regulations as stated in the laboratory manual

134

•	Total Lab Hours	70

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Recognize OSHA Requirements
- 2. Demonstrate Use of Personal Protective Equipment

B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, divide whole numbers
 - b. Add, subtract, multiply, divide fractions
 - c. Add, subtract, multiply, divide decimal numbers
- 2. Convert Fractions/Decimals

135

- 3. Convert English to Metric Measurement
 - a. Use English to Metric conversion chart
 - b. Perform calculations to convert English to Metric measurement

C. INTERPRET ENGINEERING DRAWINGS

- 1. Identify the purpose of listed notes and dimensions
 - a. Interpret the notes on a blueprint or mechanical drawing
 - b. Identify scale on a blueprint or mechanical drawing
 - c. Identify methods of dimensioning objects
 - 1) Cylinders
 - 2) Arcs
 - 3) Holes
 - 4) Counter bored Holes
 - 5) Countersink Holes
 - 6) Angles
 - d. Define tolerance as used in interpretation of mechanical drawings
 - e. Identify document identification code
 - f. Drawing abbreviations and acronyms
 - g. Interpret symbols used to illustrate surface finishes on a blueprint
- 2. Identify Basic Layout of Drawings
 - a. Alphabet of lines
 - b. Types of lines used on blueprints and mechanical drawings
 - c. Identify drawing views
- 3. Make a Drawing Using Each of the Basic Types of Drawings Listed
 - a. Simple isometric sketch
 - b. Single line symbols for pipe and fittings
 - c. Piping and Instrumentation Diagram (P&ID)
 - d. Orthographic drawing

D. USE MEASURING TOOLS

- 1. Record Dimensions Using the Coarse Measuring Tools Provided
 - a. Rigid rules
 - b. Folding rules
 - c. Tape rules
 - d. Framing square
 - e. Combination square set
 - f. Feeler gage
 - g. Fixed gages
 - h. Wire and sheet metal gages
 - i Gage blocks
 - j. Plasti-gage
 - k. Pitch gage
- 2. Record Dimensions Using the Precision Measuring Tools Provided
 - a. Outside calipers
 - b. Inside calipers
 - c. Dividers
 - d. Vernier calipers
 - e. Inside micrometer
 - f. Outside micrometer
 - g. Depth micrometer

- h. Hole gage
- i. Telescoping gage
- j. Thread micrometer
- k. Dial indicators
- 1. Torque wrenches
- m. Devices used to measure temperature
- n. Bourdon tube
- o. Inspection of a torque wrench
- 3. Use Metric and English Standard of Measurement

E. USE TOOLS

- 1. Identify and Use Shop Hand Tools
 - a. Use and care of wrenches
 - b. Use and care of screwdrivers
 - c. Use and care of pliers and cutters
 - d. Use and care of striking tools
 - e. Use and care of bearing pullers
 - f. Use and care of threading and reaming equipment
 - g. Use and care of files
- 2. Identify and Use Hand Held Power Tools
 - a. Use and care of portable grinders
 - b. Use and care of portable drill motors
 - c. Use and care of portable band saws
 - d. Use and care of portable reciprocating saws

F. OPERATE MACHINE TOOLS

- 1. Use and Care of Pressure Tools
- 2. Use and Care for Horizontal and Vertical Band Saws
- 3. Use and Care for Pedestal Grinders
- 4. Use and Care for Surface Grinders
- 5. Use and Care for Lathes
- 6. Use and Care for Radial Arm Drill Press

G. REPAIR POWER TRANSMISSION SYSTEMS

- 1. Belt Drives
 - a. Characteristics of pulley, sheaves, and belts
 - b. Safety precautions associated with inspecting pulleys, sheaves, and belts
 - c. Inspection criteria for pulleys/sheaves and belts
 - d. Adjustment of pulleys/sheaves and belts
 - e. Remove, inspect and install pulleys, belts and sheaves
 - f. Determine direction of rotation of the output shaft
- 2. Gear Drives
 - a. List inspection criteria for a gear assembly
 - b. Remove, clean, inspect and install a gear assembly
- 3. Chain Drives
 - a. List inspection criteria for a gear assembly
 - b. Remove, clean, inspect and install a chain drive assembly
 - c. Set tension on a chain drive assembly

H. BASIC RIGGING

- 1. Rigging Fundamentals
- 2. Demonstrate Basic Rigging Skills

I. OPERATE HOISTING EQUIPMENT

- 1. Demonstrate proper use of hoisting equipment
 - a. Monorail hoist
 - b. Chain falls
 - c. Tuggers/Come-alongs

J. BEARING MAINTENANCE

- 1. Remove and install a journal bearing
- 2. Remove and install an anti-friction (roller) bearings
- 3. Install and remove a thrust bearing
- 4. Identify typical cause of bearing failure
- 5. Gather vibration analysis data
 - a. Determine sources of vibration
 - b. Determine vibration specifications
 - c. Determine vibration test points
 - d. Obtain vibration readings using vibration analysis equipment

K. ALIGN SHAFTS

- 1. Define terms relative to shaft alignment
 - a. alignment
 - b. misalignment
 - c. running clearance
 - d. shaft run out
 - e. soft foot
 - f. shaft torsion play
 - g. electrical center
 - h. total indicator reading
 - i. 00 alignment
 - j. target
 - k. tolerance
 - 1. rough alignment
 - m. non-repeating misalignment
- 2. Perform alignment using feeler gauges and straight edge
- 3. Perform alignment using single and reverse indicators

L. MAINTAIN ELECTRICAL DEVICES

Use electrical test equipment

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - 1. demonstrate knowledge of the following systems:
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials
 - 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings

- c. read/studies textbook
- d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
- 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
- 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
- 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
- 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals
 - 2. Problem Solving: Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
 - 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations

- 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
- 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time
 - d. develops a fine work-ethic
 - 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
 - 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
 - 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
 - 5. Integrity/Honesty: Chooses ethical courses of action

- a. accept the responsibility for own actions
- b. exhibit personal honesty at all times
- c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
- d: understand the consequences of unethical behaviors

IMT 110 02/081396

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS INDUSTRIAL PNEUMATICS

MAST PROGRAM COURSE SYLLABUS INDUSTRIAL PNEUMATICS

Lecture hours/week: 3

Lab hours/week: 2

Credit hours: 4

COURSE DESCRIPTION:

Provides instruction in fundamental concepts and theories for the safe operation of pneumatic components and systems. Topics include: pneumatic theory, preventative maintenance, compressors, regulators, pneumatic valves, actuators, servicing safety and troubleshooting.

PREREQUISITE: Industrial Hydraulics

REQUIRED COURSE MATERIALS:

Textbook:

Industrial Pneumatic Technology, Parker Fluid Power.

Lab Manual:

Industrial Pneumatic Technology, Parker Fluid Power. Lab Manuals are

issued as a text and must be returned before Final Exam is taken.

Hand Tools/Quantity Required:

Tool Box

Safety Glasses

1 pair

Classroom Supplies

Calculator

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture, video and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- perform the manipulative skills of the craft as required to satisfactorily complete 1. laboratory assignments
- 2. apply theory to laboratory assignments
- 3. satisfactorily perform on written, oral, and practical examinations
- satisfactorily perform on outside assignments including writing assignments 4.
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- follow all shop rules and safety regulations as stated in the laboratory manual 7.

Complete Practical Exercise on Compressors	2
Complete Practical Exercise on Air Distribution System	2
Complete Practical Exercise on Cylinders	2
Complete Practical Exercise on Directional Control Valves	2
Complete Practical Exercise on Sequence Valves	2
Complete Practical Exercise on Air Preparation	2
Total Lab Hours	20

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Follow Safety Manuals and All Safety Regulations/Requirements
 - a. Assume responsibility for the personal safety of oneself and others
 - b. Develop a personal attitude towards safety
 - c. Interpret safety manual directives
 - d. Comply with established company safety practices

- 2. Use Protective Equipment
 - a. Wear protective safety clothing as required
 - b. Maintain and use protective guards and equipment on machinery
 - c. Locate and properly use protective equipment
 - d. Use lifting aids when necessary
- 3. Follow Safe Operating Procedures for Hand and Machine Tools
 - a. Identify and understand safe machine operating procedures
 - b. Demonstrate safe machine operation
- 4. Maintain a Clean and Safe Work Environment
 - a. Keep work areas clean
 - b. Clean machine/hand tools when work is completed
 - c. Put tools away when work is finished
 - d. Keep aisles clear of equipment and materials

B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply and divide whole numbers
 - b. Add, subtract, multiply, and divide fractions
 - c. Add, subtract, multiply, and divide decimals
- 2. Convert Fractions/Decimals
 - a. Convert fractions to decimal equivalents
 - b. Convert decimal values to nearest fractional equivalent
 - c. Use Decimal Equivalent Chart for conversions
- 3. Convert Metric/English Measurements
 - a. Convert English dimensions to Metric
 - b. Convert Metric dimensions to English
 - c. Use Metric/English conversion chart

C. INTERPRET ENGINEERING DRAWINGS AND CONTROL DOCUMENTS

- 1. Review Blueprint Notes and Dimensions
 - a. Explain basic blueprint terminology
 - b. Identify the types of dimensions
 - c. Identify general note symbols
 - d. Locate notes on a print
 - e. Interpret commonly used abbreviations and terminology
 - f. Determine tolerances associated with dimensions on a drawing
 - g. Determine the tolerance for a reference dimension
 - h. Determine the surface finish for a given part
 - i. List the essential components found in the general drawing notes
- 2. Identify Basic Layout of Drawings
 - a. Identify types of lines within a drawing
 - b. Identify item number symbols
 - c. Identify general note symbols
 - d. List the essential components found in the title block
 - e. Locate bill of materials in a drawing
 - f. List the components found in the revision block
- 3. Identify Basic Types of Drawings
 - a. Identify orthographic views
 - b. Identify positions of views (top, front, side, and auxiliary)
 - c. Visualize one or more views from a given view

- d. Identify isometric views
- e. Identify exploded isometric drawings
- f. Identify assembly drawings
- 4. List the Purpose of Each Type of Drawing
 - a. Identify the purpose of orthographic (3 views) drawings
 - b. Identify the purpose of isometric drawing
 - c. Identify the purpose of exploded isometric drawing
 - d. Identify the purpose of assembly drawings
- 5. Verify Drawing Elements
 - a. Determine the scale of the view or section
 - b. Check for revisions
 - c. Recognize out-of-date blueprints
- 6. Describe the Relationship of Engineering Drawings to Planning
 - a. Discuss production schedule
 - b. Discuss Material Resource Planning (MRP)
 - c. Discuss inventory control records
- 7. Use Standards to Verify Requirements
 - a. Discuss the purpose of standards
 - b. Discuss source locations for standards
- 8. Analyze Bill of Materials (BOM)
 - a. Discuss components found on BOM
 - b. Determine materials needed to produce the part
 - c. Determine quantities necessary to produce the part
 - d. Submit completed stock request form as required
 - e. Submit completed tool request form as needed

D. RECOGNIZE DIFFERENT MANUFACTURING MATERIALS AND PROCESSES

- 1. Identify Materials With Desired Properties
 - a. Discuss classification system for metals

E. PERFORM MEASUREMENT/INSPECTION

- 1. Identify Types of Measurement Used in the Shop
 - a. Distinguish between direct and calculated measurements
 - b. Compute calculated measurements
 - c. Justify the use of measurements in manufacturing
 - d. Discuss the following: precision, reliability, and accuracy
 - e. Demonstrate general measurement techniques
 - f. Demonstrate semi-precision measurement techniques
 - g. Demonstrate precision measurement techniques
 - h. Document results of measurement activities and calculations
- 2. Select Proper Measurement Tools
 - a. Match appropriate measurement tools with various types of measurement requirements
 - b. Demonstrate proper measurement tool usage
 - c. List steps of proper measurement
 - d. Explain rationale for each step
 - e. Identify error possibilities in measurement tool selection
 - f. Identify error possibilities within measurement procedures
 - g. Identify common conversion error possibilities

- h. Discriminate between accepted measurement procedures and improper measurement procedures
- 3. Apply Proper Measuring Techniques
 - a. Explain calibration requirements of various precision instruments
 - b. Illustrate measurement differences when taken with calibrated and non-calibrated instruments
 - c. Justify use of particular measurement tools based on tool characteristics
 - d. Discuss factors affecting accurate measurement (i.e., dirt, temperature, etc.)
- 4. Use Metric and English Standards of Measurement
 - a. Discuss the English system of measurement
 - b. Discuss the Metric system of measurement
- 5. Perform Measurements With Hand Held Instruments
 - a. Measure with steel rules (metric and inch)
 - b. Measure with micrometers
 - c. Measure with comparison measuring instruments (i.e., calipers, telescope gages)
 - d. Measure with direct measuring instruments (i.e., vernier, dial, and digital instruments)
 - e. Measure with fixed gages (go and not go gages)

F. MAINTAIN/TROUBLESHOOT EQUIPMENT AND SYSTEMS

- 1. Maintain Pneumatic Control Circuit
 - a. Troubleshoot a pneumatic circuit
- 2. Maintain Gate, Globe, Ball and Plug Valves
 - a. Identify component parts
 - b. Perform dissemble, inspection, repair and assembly

G. REPAIR POWER TRANSMISSION SYSTEMS

- 1. Belt Drives
 - a. Characteristics of pulley, sheaves, and belts
 - b. Safety precautions associated with inspecting pulleys, sheaves, and belts
 - c. Inspection criteria for pulleys/sheaves and belts
 - d. Adjustment of pulleys/sheaves and belts
 - e. Remove, inspect and install pulleys, belts and sheaves
 - f. Determine direction of rotation of the output shaft

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - demonstrate knowledge of the following systems:
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials
 - 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings

149

- c. read/studies textbook

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS REFRIGERATION FUNDAMENTALS

MAST PROGRAM

COURSE SYLLABUS REFRIGERATION FUNDAMENTALS

Lecture hours/week: 3

Lab hours/week: 2

Credit hours: 4

COURSE DESCRIPTION:

This course introduces the basic concepts and theories of refrigeration. Topics include: the laws of thermodynamics, pressure and temperature relationships, heat transfer, the refrigeration cycle and safety.

PREREQUISITE:

NONE

REQUIRED COURSE MATERIALS:

Textbook 1

Modern Refrigeration and Air Conditioning, Althouse et al.

Textbook 2

Study Guide for Modern Refrigeration and Air Conditioning,

Althouse et al.

Hand Tools/Quantity Required:

3 ring notebook

#2 pencil

Goggles-flexible fitting

Hooded ventilation

Pocket thermometer - 40 to 60 degrees Fahrenheit

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- 1. perform the manipulative skills of the craft as required to satisfactorily complete laboratory assignments
- 2. apply theory to laboratory assignments
- 3. satisfactorily perform on written, oral, and practical examinations
- 4. satisfactorily perform on outside assignments including writing assignments
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- 7. follow all shop rules and safety regulations as stated in the laboratory manual

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Recognize OSHA Requirements
- 2. Demonstrate Use of Personal Protective Equipment
- B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, divide whole numbers
 - b. Add, subtract, multiply, divide fractions
 - c. Add, subtract, multiply, divide decimal numbers
- 2. Convert Fractions / Decimals
- 3. Convert English to Metric Measurement
 - a. Use English to Metric conversion chart
 - Perform calculations to convert English to Metric measurement
- 4. Perform Basic Algebraic Operations
- 5. Perform Basic Geometric Calculations
 - a. Calculate area, per

C. USE TOOLS

- 1. Identify and Use Shop Hand Tools
 - a. Use and care of wrenches
 - b. Use and care of screwdrivers
 - c. Use and care of pliers and cutters
 - d. Use and care of striking tools
 - e. Use and care of bearing pullers
 - f. Use and care of threading and reaming equipment
 - g. Use and care of files
- 2. Identify and Use Hand Held Power Tools
 - a. Use and care portable grinders
 - b. Use and care of portable drill motors
 - c. Use and care of portable band saws
 - d. Use and care of portable reciprocating saws

D. MAINTAIN/TROUBLESHOOT EQUIPMENT AND SYSTEMS

- 1. Maintain Air Conditioning System
 - a. Describe the refrigeration cycle

E. FABRICATE/INSTALL SHEET METAL PARTS

- 1. Layout Sheet Metal Parts
 - a. Precautions associated with handling sheet metal
 - b. Sheet metal tools and materials
 - c. Gauge scale used for material thickness
 - d. Characteristics/applications of metals used in sheet metal fabrication:
- 2. Form/Bend Sheet Metal Parts
 - a. Use a metal brake
 - b. Use a roller
 - c. Use a nibbler
- 3. Fasten Sheet Metal Parts
 - a. Use a seamer
 - b. Select and use proper fasteners

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These

are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - 1. demonstrate knowledge of the following systems:
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials
 - 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
 - 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals
 - 2. Problem Solving: Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility

- 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
- 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
- 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly.
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time
 - d. develops a fine work-ethic
 - 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
 - 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
 - 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)

- b. make accommodations to laboratory schedules due to broken equipment/tools
- c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

ACT 100 02/081296

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS METAL WELDING & CUTTING TECHNIQUES

Prerequisite: Provisional Admission

MAST PROGRAM

COURSE SYLLABUS METAL WELDING AND CUTTING TECHNIQUES

Lecture hours/week: 2

Lab hours/week: 3

Credit hours: 3

COURSE DESCRIPTION:

Provides instruction in the fundamental use of the electric arc welder and the oxyacetylene cutting outfit. Emphasis is placed on safe setup and use of equipment. Topics include: arc welding, flame cutting, safety practices, oxyfuel welding, and brazing.

PREREQUISITE:

Provisional Admission

REQUIRED COURSE MATERIALS:

Textbook:

Welding Principles & Applications

Lab Manual:

Welding Principles & Applications

Hand Tools/Quantity Required:

Welding Hood

Safety Gloves for Welding

Safety Vest for Welding

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- perform the manipulative skills of the craft as required to satisfactorily complete laboratory assignments
- 2. apply theory to laboratory assignments
- 3. satisfactorily perform on written, oral, and practical examinations
- 4 satisfactorily perform on outside assignments including writing assignments
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- 7. follow all shop rules and safety regulations as stated in the laboratory manual

LECTURE OUTLINE:

Lec	ture Topics	Text Reference Page	Contact Hrs.

Applications Safe Operating Procedures Metal Joints and Preparation Arc Weld Flame Cutting 5 Principles and Terminology **Applications** Safe Operating Procedures Work Preparation Flame Cutting **Safety Practices** 6 General Arc Welding Applications First Aid Oxyfuel Welding 3 Principles and Terminology **Applications** Safe Operating Procedures Metal Joints and Preparation Oxyfuel Weld Brazing 2 Principles and Terminology **Applications** Safe Operating Procedures Metal Joints and Preparation Braze Metal **Total Lecture Hours** 20

Lab Topics		Contact Hrs.
Arc Welding		8
Flame Cutting		7
Safety Practices		1
Oxyfuel Welding		7
Brazing	•	_7
_	Total Lab Hours	30

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Recognize OSHA Requirements
- 2. Demonstrate Use of Personal Protective Equipment

B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, divide whole numbers
 - b. Add, subtract, multiply, divide fractions

- c. Add, subtract, multiply, divide decimal numbers
- 2. Convert Fractions/Decimals
- 3. Perform Basic Algebraic Operations
- 4. Perform Basic Trigonometric Functions
- 5. Perform Basic Geometric Calculations
 - a. Calculate area

C. INTERPRET ENGINEERING DRAWINGS

- 1. Identify the Purpose of Listed Notes and Dimensions
 - a. Interpret the notes on a blueprint or mechanical drawing
 - b. Identify scale on a blueprint or mechanical drawing
 - c. Identify methods of dimensioning objects
 - 1) Cylinders
 - 2) Arcs
 - 3) Holes
 - 4) Counter bored Holes
 - 5) Countersink Holes
 - 6) Angles
 - 7) Circle Centers
 - d. Define tolerance as used in interpretation of mechanical drawings
 - e. Identify document identification code.
 - f. Drawing abbreviations and acronyms
 - g. Interpret symbols used to illustrate surface finishes on a blueprint
- 2. Identify Basic Layout of Drawings
 - a. Alphabet of lines
 - b Types of lines used on blueprints and mechanical drawings
 - c. Identify drawings views
- 3. Make a Drawing Using Each of the Basic Types of Drawings Listed
 - a. Simple isometric sketch
 - b. Single line symbols for pipe and fittings
 - c. Piping and Instrumentation Diagram (P&ID)
 - d. Orthographic drawing

D. USE MEASURING TOOLS

- 1. Record Dimensions Using the Coarse Measuring Tools Provided
 - a. Rigid rules
 - b. Folding rules
 - c. Tape rules
 - d. Framing square
 - e. Combination square set
 - f. Feeler gage
 - g. Fixed gages
 - h. Wire and sheet metal gages
 - i Gage blocks
 - j. Plasti-gage
 - k. Pitch gage
- 2. Record Dimensions Using the Precision Measuring Tools Provided
 - a. Outside calipers
 - b. Inside calipers
 - c. Dividers
 - d. Vernier calipers

- e. Inside micrometer
- f. Outside micrometer
- g. Depth micrometer
- h. Hole gage
- i Telescoping gage
- j. Thread micrometer
- k. Dial indicators
- 1. Torque wrenches
- m. Devices used to measure temperature
- n. Bourdon tube
- o. Inspection of a torque wrench
- 3. Use Metric and English Standard of Measurement

E. USE TOOLS

- 1. Identify and Use Shop Hand Tools
 - a. Use and care of wrenches
 - b. Use and care of screwdrivers
 - c. Use and care of pliers and cutters
 - d. Use and care of striking tools
 - e. Use and care of bearing pullers
 - f. Use and care of threading and reaming equipment
 - g. Use and care of files
- 2. Identify and Use Hand Held Power Tools
 - a. Use and care portable grinders
 - b. Use and care of portable drill motors
 - c. Use and care of portable band saws
 - d. Use and care of portable reciprocating saws

F. OPERATE MACHINE TOOLS

- 1. Use and Care for Surface Grinders
- 2. Use and Care for Lathes

G. PERFORM WELDING OPERATIONS

- 1. Weld with Shielded Metal Arc Welding (SMAW)
 - a. Set up a welding machine for (SMAW) operation
 - b. Prepare weld joint
 - c. Weld flat plate in any position
 - d. Weld pipe from 45 degree position
 - e. Recognize a weld defect
 - f. Properly clean a weld joint for inspection
- 2. Weld and Cut with Oxyacetylene
 - a. % of different gases found in the atmosphere
 - b Oxy/acetylene welding components and their function
 - c. Safely handle, transport, and secure gas cylinders
 - d. Cause of regulator creep
 - e. Identify safe withdrawal rate of acetylene from gas cylinder
 - f. Recognize indications of overheating of ferrous and nonferrous materials
 - g. Use temperature sticks
 - h. List inspection criteria for the oxy/acetylene outfit
 - i. Properly setup and adjust oxy/acetylene system
 - j. Use oxy/acetylene to cut and weld
- 3. Gas Soldering

- a. Specialized tools used with soldering
- b. Purpose of fluxes
- c. Temperature range for soldering
- d. Purpose of tinning
- e. Safety precautions associated with sweat soldering

H. PIPEFITTING OPERATIONS

- 1. Perform Basic Pipefitting Calculations
- 2. Cut and Thread Pipe Using Hand Operated Pipe Cutter, Reamer and Die
- 3. Assemble Pipe with Threaded Flanges
- 4. Install and Adjust Pipe Support
- 5. Use Flaring Equipment
- 6. Bend Metal Tubing
- 7. Join Plastic Pipe Using Cement

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in it's "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - 1. demonstrate knowledge of the following systems:
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor

- c. systematic approach to the mechanical process
- d. dimensioning and measurement systems
- e. systematic organization of training materials
- 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory

- 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals
 - 2. Problem Solving: Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
 - 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
 - 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
 - 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly.
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work

- c. develops an understanding good students know what they are going to do in class and does not waste time
- d. develops a fine work-ethic
- 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
- 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
- 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS LATHE OPERATIONS I

MAST PROGRAM COURSE SYLLABUS LATHE OPERATIONS I

Lecture hours/week: 4

Lab hours/week: 6

Credit hours: 7

COURSE DESCRIPTION:

Provides opportunities for students to develop skill in the use of bench grinders and lathes. Topics include: lathes, bench grinders, bench grinder operations, lathe calculations, lathe setup, and lathe operations.

PREREQUISITE:

Provisional Admission

REQUIRED COURSE MATERIALS:

Textbook:

Technology of Machine Tools

Lab Manual:

Technology of Machine Tools

Hand Tools/Quantity Required:

Hand Tools Calculator

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture, video and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- 1. perform the manipulative skills of the craft as required to satisfactorily complete laboratory assignments
- 2. apply theory to laboratory assignments
- 3. satisfactorily perform on written, oral, and practical examinations
- 4. satisfactorily perform on outside assignments including writing assignments
- 5. contribute to class discussions
- 6. maintain attendance per current policy
- 7. follow all shop rules and safety regulations as stated in the laboratory manual

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Recognize OSHA Requirements
- 2. Demonstrate Use of Personal Protective Equipment

B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply, divide whole numbers
 - b. Add, subtract, multiply, divide fractions
 - 2. Add, subtract, multiply, divide decimal numbers
- 2. Convert Fractions/Decimals
- 3. Convert English to Metric Measurement
 - a. Use English to Metric conversion chart
 - b. Perform calculations to convert English to Metric measurement

4. Perform Basic Algebraic Operations

C. USE MEASURING TOOLS

- 1. Record Dimensions Using the Coarse Measuring Tools Provided
 - a. Rigid rules
 - b. Folding rules
 - c. Tape rules
 - d. Framing square
 - e. Combination square set
 - f. Feeler gage
 - g. Fixed gages
 - h. Wire and sheet metal gages
 - i. Gage blocks
 - j. Plasti-gage
 - k. Pitch gage
- 2. Record Dimensions Using the Precision Measuring Tools Provided
 - a. Outside calipers
 - b. Inside calipers
 - c. Dividers
 - d. Vernier calipers
 - e. Inside micrometer
 - f. Outside micrometer
 - g. Depth micrometer
 - h. Hole gage
 - i. Telescoping gage
 - i. Thread micrometer
 - k. Dial indicators
 - 1. Torque wrenches
 - m. Devices used to measure temperature
 - n. Bourdon tube
 - o. Inspection of a torque wrench

D. USE TOOLS

- 1. Identify and Use Shop Hand Tools
 - a. Use and care of wrenches
 - b. Use and care of screwdrivers
 - c. Use and care of pliers and cutters
 - d. Use and care of striking tools
 - e. Use and care of bearing pullers
 - f. Use and care of threading and reaming equipment
 - g. Use and care of files
- 2. Identify and Use Hand Held Power Tools
 - a. Use and care portable grinders
 - b. Use and care of portable drill motors
 - c. Use and care of portable band saws
 - d. Use and care of portable reciprocating saws

E. OPERATE MACHINE TOOLS

- 1. Use and Care of Pressure Tools
- 2. Use and Care for Pedestal Grinders

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1 complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - 1. demonstrate knowledge of the following systems:
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials
 - 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment

174

- a. applies appropriate preventative maintenance
- b. when operating machines
- c. reports all malfunctions of equipment to supervisor/instructor
- d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings
 - c. read/studies textbook
 - d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
 - 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
 - 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
 - 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
 - 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals

- 2. **Problem Solving:** Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
- 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations
- 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
- 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time
 - d. develops a fine work-ethic
 - 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee

- 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
- 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual gradebook)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
- 5. Integrity/Honesty: Chooses ethical courses of action
 - a. accept the responsibility for own actions
 - b. exhibit personal honesty at all times
 - c. accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments
 - d. understand the consequences of unethical behaviors

Machine Tool Advanced Skills Technology Program

COURSE SYLLABUS INDUSTRIAL MAINTENANCEMECHANICAL REVIEW

MAST PROGRAM

COURSE SYLLABUS

INDUSTRIAL MAINTENANCE-MECHANICAL REVIEW

Lecture hours/week: 1

Lab hours/week: 4

Credit hours: 3

COURSE DESCRIPTION:

Provides an instructional review of the Industrial Maintenance course of study with a comprehensive assessment of each area. The assessment will consist of a written, identification, and hands on examination. Topics include: Math, alternating current, direct current motors, refrigeration, pumps and piping systems, hydraulics, pneumatics, lathe operations, mechanics, welding and safety.

PREREQUISITE/COREQUISITE:

All Program Courses

REQUIRED COURSE MATERIALS:

Textbook:

All previous books

Lab Manual:

All previous books

Hand Tools/Quantity Required:

Tools

1 set

Safety Glasses

1 pair

Classroom Supplies

METHOD OF INSTRUCTION:

Lecture:

Didactic presentations will include lecture, video and demonstrations.

Laboratory: Laboratory will be a "hands-on" process.

Method of Evaluation: A student's grade will be based on multiple measures of performance. The assessment will measure development of independent critical thinking skills and will include evaluation of the student's ability to:

- perform the manipulative skills of the craft as required to satisfactorily complete 1 laboratory assignments
- 2. apply theory to laboratory assignments
- 3. satisfactorily perform on written, oral, and practical examinations
- satisfactorily perform on outside assignments including writing assignments 4.
- 5. contribute to class discussions
- maintain attendance per current policy 6.
- 7. follow all shop rules and safety regulations as stated in the laboratory manual

LECTURE OUTLINE:

COURSE OBJECTIVES: TECHNICAL COMPETENCIES

After the successful completion of this course the student will be able to:

A. PRACTICE SAFETY

- 1. Follow Safety Manuals and All Safety Regulations/Requirements
 - a. Assume responsibility for the personal safety of oneself and others
 - b. Develop a personal attitude towards safety
 - c. Interpret safety manual directives
 - d. Comply with established company safety practices
- 2. Use Protective Equipment
 - a. Wear protective safety clothing as required
 - b. Maintain and use protective guards and equipment on machinery
 - c. Locate and properly use protective equipment
 - d. Use lifting aids when necessary
- 3. Follow Safe Operating Procedures for Hand and Machine Tools

- a. Identify and understand safe machine operating procedures
- b. Demonstrate safe machine operation
- 4. Maintain a Clean and Safe Work Environment
 - a. Keep work areas clean
 - b. Clean machine/hand tools when work is completed
 - c. Put tools away when work is finished
 - d. Keep aisles clear of equipment and materials

B. APPLY MATHEMATICAL CONCEPTS

- 1. Perform Basic Arithmetic Functions
 - a. Add, subtract, multiply and divide whole numbers
 - b. Add, subtract, multiply, and divide fractions
 - c. Add, subtract, multiply, and divide decimals
- 2. Convert Fractions/Decimals
 - a. Convert fractions to decimal equivalents
 - b. Convert decimal values to nearest fractional equivalent
 - c. Use Decimal Equivalent Chart for conversions
- 3. Convert Metric/English measurements
 - a. Convert English dimensions to Metric
 - b. Convert Metric dimensions to English
 - c. Use Metric/English conversion chart
- 4. Perform Basic Trigonometric Functions
 - a. Solve for unknown angles
 - b. Solve for unknown sides
- 5. Calculate Speeds and Feeds for Machining
 - a. Calculate RPM for various metals and various tools
 - b. Calculate feed for various metals, tools, and depths of cut
- 6. Locate Machining Points from a Datum Point
 - a. Identify points using the Cartesian coordinate system
 - b. Identify points using the absolute dimensioning system
 - c. Identify points using the incremental dimensioning system

C. INTERPRET ENGINEERING DRAWINGS AND CONTROL DOCUMENTS

- 1. Review Blueprint Notes and Dimensions
 - a. Explain basic blueprint terminology
 - b. Identify the types of dimensions
 - c. Identify general note symbols
 - d. Locate notes on a print
 - e. Interpret commonly used abbreviations and terminology
 - f. Determine tolerances associated with dimensions on a drawing
 - g. Determine the tolerance for a reference dimension
 - h. Determine the surface finish for a given part
 - i. List the essential components found in the general drawing notes
- 2. Identify Basic Layout of Drawings
 - a. Identify types of lines within a drawing
 - b. Identify item number symbols
 - c. Identify general note symbols
 - d. List the essential components found in the title block
 - e. Locate bill of materials in a drawing
 - f. List the components found in the revision block

- 3. Identify Basic Types of Drawings
 - a. Identify orthographic views
 - b. Identify positions of views (top, front, side, and auxiliary)
 - c. Visualize one or more views from a given view
 - d. Identify isometric views
 - e. Identify exploded isometric drawings
 - f. Identify assembly drawings
- 4. List the Purpose of Each Type of Drawing
 - a. Identify the purpose of orthographic (3 views) drawings
 - b. Identify the purpose of isometric drawing
 - c. Identify the purpose of exploded isometric drawing
 - d. Identify the purpose of assembly drawings
- 5. Verify Drawing Elements
 - a. Determine the scale of the view or section
 - b. Check for revisions
 - c. Recognize out-of-date blueprints
- 6. Practice Geometric Dimensioning and Tolerancing (GD&T) Methodology
 - a. Identify the purpose of GD&T
 - b. Identify symbols for controlling location (or true position) of part features
 - c. Identify symbols for controlling form (or alignment) of part features
 - d. Identify symbols for showing datums and basic dimensions on drawings
 - e. Identify symbols for Maximum Material Size (MMS) and Regardless of Feature Size (RFS)
- 7. Describe the Relationship of Engineering Drawings to Planning
 - a. Discuss production schedule
 - b. Discuss Material Resource Planning (MRP)
 - c. Discuss inventory control records
- 8. Use Standards to Verify Requirements
 - a. Discuss the purpose of standards
 - b. Discuss source locations for standards
- 9. Analyze Bill of Materials (BOM)
 - a. Discuss components found on BOM
 - b. Determine materials needed to produce the part
 - c. Determine quantities necessary to produce the part
 - d. Submit completed stock request form as required
 - e. Submit completed tool request form as needed

D. RECOGNIZE DIFFERENT MANUFACTURING MATERIALS AND PROCESSES

- 1. Identify Materials With Desired Properties
 - a. Discuss classification system for metals

E. PERFORM MEASUREMENT/INSPECTION

- 1. Identify Types of Measurement Used in the Machine Shop
 - a. Distinguish between direct and calculated measurements
 - b. Compute calculated measurements
 - c. Justify the use of precision measurements in manufacturing
 - d. Discuss the following: precision, reliability, and accuracy
 - e. Demonstrate general measurement techniques
 - f. Demonstrate semi-precision measurement techniques

- g. Demonstrate precision measurement techniques
- h. Document results of measurement activities and calculations
- 2. Select Proper Measurement Tools
 - a. Match appropriate measurement tools with various types of measurement requirements
 - b. Demonstrate proper measurement tool usage
 - c. List steps of proper measurement
 - d. Explain rationale for each step
 - e. Identify error possibilities in measurement tool selection
 - f. Identify error possibilities within measurement procedures
 - g. Identify common conversion error possibilities
 - h. Discriminate between accepted measurement procedures and improper measurement procedures
- 3. Apply Proper Measuring Techniques
 - a. Explain calibration requirements of various precision instruments
 - b. Illustrate measurement differences when taken with calibrated and non-calibrated instruments
 - c. Justify use of particular measurement tools based on tool characteristics
 - d. Discuss factors affecting accurate measurement (i.e., dirt, temperature, etc.)
- 4. Use Metric and English Standards of Measurement
 - a. Discuss the English system of measurement
 - b. Discuss the Metric system of measurement
- 5. Perform Measurements With Hand Held Instruments
 - a. Measure with steel rules (metric and inch)
 - b. Measure with micrometers
 - c. Measure with comparison measuring instruments (i.e., calipers, telescope gages)
 - d. Measure with direct measuring instruments (i.e., vernier, dial, and digital instruments)
 - e. Measure with fixed gages (go and not go gages)
- 6. Perform Measurements on Surface Plate
 - a. Describe care of surface plate
 - b. Use surface plate accessories correctly (sine bar, gage blocks, etc.)
 - c. Check for part squareness
 - d. Check part dimensions for accuracy
 - e. Align work pieces using height gage and dial indicators

F. PERFORM CONVENTIONAL MACHINING OPERATIONS

- 1. Prepare and Plan For Machining Operations
 - a. Read and interpret blueprints
 - b. Perform basic semi-precision and precision layout as necessary
 - c. Plan machining operations
 - d. Understand machinability and chip formation
 - e. Calculate speeds, feeds, and depth of cut for various machine applications
 - f. Determine proper cutting fluids/coolants for machining
 - g. Use carbides and other tool materials to increase productivity
 - h. Use the Machinery's Handbook as a reference for machine applications
- 2. Use Proper Hand Tools

- a. Use arbor and shop presses
- b. Select necessary work-holding devices and hand tools as needed
- c. Select and use hand files
- d. Identify and use hand reamers
- e. Correctly identify and use hand taps as required
- f. Follow tapping procedures to produce internal threads
- g. Use thread-cutting dies to produce external threads
- h. Operate bench and pedestal grinders safely
- 3. Operate Power Saws
 - a. Use reciprocating and horizontal band cutoff machines
 - b. Prepare and use the vertical band saw
- 4. Operate Drill Presses
 - a. Describe the different types of drill presses found in the machine shop
 - b. Describe and use standard drilling tools
 - c. Sharpen a drill bit using a bench or pedestal grinder
 - d. Setup the drill presses for drilling, countersinking, counter boring, reaming, and tapping operations
- 5. Operate Vertical Milling Machines
 - a. Demonstrate the use of all controls on the vertical milling machine
 - b. Align the vertical milling machine head
 - c. Select, align and use work holding devices
 - d. Select milling tool holders
 - e. Select milling cutters
 - f. Perform all standard vertical milling operations
- 6. Operate Metal Cutting Lathes
 - a. Demonstrate the use of all controls on the engine lathe
 - b. Discuss standard tools and toolholder for the lathe
 - c. Face and center drill parts correctly
 - d. Drill, ream and bore on the lathe
 - e. Make all calculations, lathe adjustments and settings to machine sixtydegree external threads
 - f. Discuss thread fit classifications
 - g. Use HSS cutting tools
 - h. Use carbide cutting tools

COURSE OBJECTIVES: SCANS COMPETENCIES

The Secretary's Commission on Achieving Necessary Skills (SCANS), U.S. Department of Labor, has identified in its "AMERICA 2000 REPORT" that all students should develop a new set of competencies and foundation skills if they are to enjoy a productive, full and satisfying life. These are in addition to the Technical Workplace Competencies required by industry. SCANS is made up of five competencies and a three-part foundation of skills and personal qualities that are needed for solid job performance.

The following activities will be performed by each student for successful completion of this course:

I. COMPETENCIES

- A. Resources: Identifies, organizes, plans, and allocates resources
 - 1. follows a schedule to complete assigned tasks on time
 - 2. determine the initial cost of materials and "value added" as result of work
 - 3. complete a stock request form for required material
 - 4. provide a self-evaluation of performance based on the time and quality of work
- B. Interpersonal: Works with others
 - 1. complete assigned responsibilities within the shop floor serving as a member of the team
 - 2. provide individual assistance/direction to peers as requested
 - 3. perform work to acceptable levels of quality as required
 - 4. works well with all members of the class
- C. Information: Acquires and uses information
 - 1. read and interpret blueprints
 - 2. organize and apply theories of machine tool operation
 - 3. perform basic semi-precision and precision layout as necessary
- D. Systems: Understands complex inter-relationships
 - 1. demonstrate knowledge of the following systems:
 - a. laboratory organization structure: physical and social
 - b. organization of personnel and facilities on the shop floor
 - c. systematic approach to the mechanical process
 - d. dimensioning and measurement systems
 - e. systematic organization of training materials
 - 2. monitors and corrects performance during
 - a. the practical process
 - b. adjustments of individual laboratory work schedule
 - c. constantly evaluating the quality of work to achieve acceptable standards
 - d. maintains record of evaluations and sets individual goals
- E. Technology: Works with a variety of technologies
 - 1. chooses procedure, tools and equipment required to perform the task
 - 2. applies appropriate procedures and uses appropriate tools and equipment to perform the mechanical task to acceptable standards
 - 3. maintains and troubleshoots equipment
 - a. applies appropriate preventative maintenance
 - b. when operating machines
 - c. reports all malfunctions of equipment to supervisor/instructor
 - d. perform clean-up assignments of equipment and shop floor at the end of the laboratory

II. FOUNDATION SKILLS

- A. Basic Skills: Reads, writes, performs arithmetic and mathematical operations, listens and speaks.
 - 1. Reading: Locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules
 - a. studies student laboratory manual
 - b. interprets blueprints and technical drawings

- c. read/studies textbook
- d. follow a daily laboratory schedule to maintain appropriate time-line and task completion
- 2. Writing: Communicates thoughts, ideas, information, and messages in writing; and creates documents such as letters, directions, manuals, reports, graphs, and flow charts
 - a. outline the steps necessary to perform a mechanical task
 - b. maintain a lecture notebook
 - c. submit written responses to chapter question assignments
 - d. complete all written assignments
- 3. Arithmetic/Mathematics: Perform basic computations and approaches practical problems by choosing appropriately from a variety of mathematical techniques
 - a. keeps a running computation of individual grade
 - b. performs mathematical computations necessary to understand course
- 4. Listening: Receives, attends to, interprets, and responds to verbal messages and other cues
 - a. assimilate classroom instruction
 - b. interpret and assimilate video instruction
 - c. observe laboratory demonstrations
 - d. seek and receive individualized instruction in the laboratory
- 5. Speaking: Organizes ideas and communicates orally
 - a. participates in classroom discussions
 - b. organize ideas and communicate specific questions to the instructor
 - c. verbally affirms understanding of a concept, procedure, or required skill
 - d. communicates with peers to ensure the smooth and safe operation of the laboratory
- B. Thinking Skills: Thinks creatively, makes decisions, solves problems, visualizes, knows how to learn and reasons.
 - 1. Decision Making: Specifies goals and constraints, generates alternatives, considers risks, and evaluates and chooses best alternative
 - a. identifies personal goals
 - b. identifies actions required to accomplish personal goals
 - 2. **Problem Solving:** Recognizes problems and devises and implements plan of action
 - a. makes daily accommodations to stay on schedule
 - b. seeks additional instruction/clarification for assignment completion
 - c. balances social and academic life/responsibilities
 - d. accepts responsibility
 - 3. Seeing Things In the Mind's Eye: Organizes, and processes symbols, pictures, graphs, objects, and other information
 - a. interprets technical drawings
 - b. interprets technical illustrations and symbols
 - c. understands both written and verbal instructions
 - d. assimilates process during instructor demonstrations

- 4. Knowing How to Learn: Use efficient learning techniques to acquire and apply new knowledge and skills
 - a. demonstrate mastery of the basic skills and techniques
 - b. use these sequential skills to support mastery of new skills
 - c. understand the sequential nature of acquired skills and the subsequent knowledge application of new skills and techniques
- 5. Reasoning: Discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem
 - a. understands that practice may not make it perfect but it certainly will improve the skill of the operator
 - b. understands that the quality of the product is a function of the time of the operation and the attitude and skill of the machinist
 - c. understands the relationship between different metals and the tool applied to the metal surface and adjusts machining parameters accordingly
- C. Personal Qualities: Displays responsibility, self-esteem, sociability, self-management, and integrity and honesty.
 - 1. Responsibility: Exerts a high level of effort and perseveres towards goal attainment
 - a. develops an understanding that in order to be successful you must be a "good" student
 - b. develops an understanding that a "good" student is the one who is prompt to every class and has prepared for the day's work
 - c. develops an understanding good students know what they are going to do in class and does not waste time
 - d. develops a fine work-ethic
 - 2. Self-Esteem: Believes in own self-worth and maintains a positive view of self
 - a. learns to take pride in his or her work through positive reinforcement
 - b. sees himself or herself as an asset to the class through continued contributions to the group and a shared common goal
 - c. understands that an individual with a positive attitude and the belief in their own abilities will systematically seek solutions and be a valuable employee
 - 3. Sociability: Demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings
 - a. assist classmates in improving technical skills
 - b. assist students with special needs as a peer mentor
 - c. share laboratory resources (machines, tools and instructor's individual attention)
 - 4. Self-Management: Assesses self accurately, sets personal goals, monitors progress, and exhibits self-control
 - a. maintain a record of academic achievement (individual grade book)
 - b. make accommodations to laboratory schedules due to broken equipment/tools
 - c. accept the responsibility for self-management
 - 5. Integrity/Honesty: Chooses ethical courses of action

- accept the responsibility for own actions exhibit personal honesty at all times a.
- b.
- accept the challenge of doing your own work in the laboratory, during examination, and on outside assignments understand the consequences of unethical behaviors c.
- d.

IMT 133 02/081396

APPENDIX A - INDUSTRY COMPETENCY PROFILES

The following pages contain the individual Competency Profiles for each of the companies surveyed by the MAST development center for the occupational specialty area of. These Competency Profiles/skill standards were used to develop the curriculum for the pilot program.

The participation of the companies as partners in the MAST effort is greatly appreciated. Each company has approved the use of its logo in MAST materials. None of the participating companies shall be held responsible or liable for any of the findings of the project.

Electrical Systems Technician COMPETENCY PROFILE

Machine Tool Advanced Skills **Technology Program** Consortia Partners Conducted By (V.199J40008) M.A.S.T.

ELECTRICAL SYSTEMS TECHNICIAN....uses knowledge and skills to install, maintain, and troubleshoot electrical/electronic equipment in residential. commercial, and industrial environments.

Dut	Duties	+		2	sidential,	commerci	residential, commercial, and industrial environments. Tasks ———————————————————————————————————	dustrial e . Tasks –	environme	ints.			•	
∢	Practice Electrical Safety	A-I Keep one hard free when possible	A-2 Wear n designated safety equip- ment	A-3 Use tag lock and try procedures	A-4 Maintain CPR certifica- tion	A-5 When possible, turn off power when testing devices	A-6 Keep metal tools from high voltage areas	A-7 Work with a partner on high voltage obs	A-8 Practice ladder safety	A-9 Use full protection equipment as requested				
m	Perform Basic Mathematical Skills	B-1 Perform basic arithmetic functions	B-2 Calculate ic perimeters, areas and volumes	B-3 Use measurement conversion tables	B4 Solve basic algebraic equations	B-5 Solve basic Boolian algebra problems	B-6 Solve digital math problems	B-7 Perform light calculus problems	·					
C	Perform Basic Electrical Functions	C-1 Measure/ calculate DC resistance, current and voltages	C-2 Measure/ calculate power in DC circuits	C-3 Read wire tables and find amperage/ resistance	C-4 Measure/ calculate AC currents, voltages and impedance	C-5 Under- stand and use NEC for installation and repair								
Α	Use Basic Hand and Power Tools	D-1 Measure with inch and metric rulers	D-2 Use screwdrivers, regular and ball peen hammers	D-3 Use crescent wrench, socket drives and lineman pliers	D-4 Use hacksaws, wre stripper, try square, and nut driver	D-5 Use tie wrap gun, hex wrenches and charnel lock pliers	D-6 Use diagonal cutting pliers and sheet metal snips	D-7 Use hole cutters	D-8 Use drills and reamers					
E	Maintain DC Motors	E-1 Use a tachometer to check speed	E-2 Understand differences between series, shunt & com- pound connect- ed DC motors		E-4 Inspect brushes and replace if necessary	B-5 Trouble- shoot motors using name plate data	E-6 Discon- nect and reconnect motors to the power source	E-7 Identify frame type	E-8 Repair and maintain motor controls	E-9 Diagnose faults with DC variable speed motors	E-10 Under- stand and diag- nose faults with positional and positional ve-			
	Maintain Single Phase AC Motors	F-1 Use a tachometer to check speed	F-2 Understand split phase induction motors	F-3 Understand capacitor start induction motors	F-4 Understand capacitor run induction motors	F-5 Under- stand shaded pole induction motors	F-6 Understand I squirrel cage induction motors	F-7 Understand wound rotor induction motors	F-8 Understand synchronous motor opera- tion	F-9 Inspect motor for signs of damage and wear	F-10 Trouble- shoot motors using name plate data	F-11 Discon- nect and reconnect motors	F-12 Identify frame and type	F-13 Repair and maintain motor controls
	Maintain Three Phase AC Motors	G-1 Recognize the Wye and Delta configu- rations	G-2 Trouble- shoot motors using name plate data	G-3 Connect and disconnect motors, includ- ing dual volt- age nine lead machines	G-4 Identify frame type	G-5 Repair and maintain variable speed drives	0-6 Repair and maintain motor controls							
	Read Basic Blueprints, Drawings and Schematics	H-1 Read circuit diagram schematics	H-2 Read wiring dia- grams, includ- ing single line diagrams	88	H-4 Read digital logic diagrams									
210	Use Basic Electrical Metering Equipment	I-1 Use digital and analog ammeters	I-2 Use clampon anumeters	I.3 Use digital and analog voluneters and wattmeters	I-d Use meggers and insulation testers	I-5 Calibrate and repair electronic scales, loadcells	I-6 Use variable I power supplies	I.7 Use digital and analog os-cilloscopes	I-8 Trouble- shoot all elec- tricyclectronic equipment to board level					
, , , , , , , , , , , , , , , , , , ,	Test Common Parts and Replace If Necessary	J-1 Test and replace single and three phase confactors	J-2 Test and replace motor starters	I-3 Test and replace overload devices	J-4 Test and replace relays and timers	J.5 Test and replace limit switches, i.e., SPST/SPDT/ DPST/DPDT	Je Test and re- J place switches, r i.e., micro, pushbutton,	1.7 Test and replace respectively switches, i.e., level and flow of the respective respectively.	1-8 Test and replace capacitors, coils and control transformers	1-9 Test and replace starting resistors, wire crurs, lights, and switch gear	J-10 Test and replace fuses, circuit breakers and disconnects	I-11 Test and replace diodes, transistors and SCRs	J-12 Test and J replace measur- r ing instru- n ments, i.e., a varmeters and wattmeters	J-13 Test and replace volt. meters and annmeters

NEEDEST PAS MAST 011995

		L-II Understand encoders; resolv- ers, positional m- dexing enuip- licops, & linear licops, & linear metsurement de- vices			·
		L-10 Under- stand and apply basic numerical control programming required to test in			
		L-9 Trouble- shoot numeri- cal controls		N-9 Under- stand logic gates	0-9 Use E-mail
		L-8 Trouble- shoot multi- processing equipment		N.8 Under- stand and use Boolian logic needed for troubleshooting	O-8 Use computer to interrogate control systems
- Tasks -		L-6 Read PLC L-7 Test input timer and and output modules and information replace if necessary		N-7 Test all types of switches and switch components	O-7 Search/ clear alarms
		L-6 Read PLC timer and counter information	M-6 Maintain video monitor equipment	N-6 Use isola- tion to identify problem area	O-6 Make inquiry via PC
:		L-5 Read PLC line inputs and output condi- tions	M-5 Use PROCOMM diagnostic software for systems test	N-5 Analyze possible causes of problem us- ing schematic diagram	O-5 Input data
	K-4 Disconnect and connect transformers from the	L-4 Use PLCs to test input contacts and sensors	M-4 Under- stand and use interface de- vices (RS-232 and RS-422A)	N-4 Check wring against diagram	O-4 Print out data report
	K-3 Replace/ repair trans- former coils and taps	L-3 Use computer software to interrogate PLCs	M-3 Install co-axial cable	N-3 Check voltage/current levels against specifications	O-3 Use DOS and Windows
	K-2 Measure transformer voltages and currents	L-2 Understand ladder logic and digital programming	M-2 Install twisted pair cable	N-2 Use ohmmeter for continuity checks	0-2 Operate power system via PC
	K-1 Under- stand basic transformer operation	L-I Understand L-2 Under- PLC status stand ladder indicators logic and digital programmit	M-1 Install M-2 Install fiber optic cable twisted pair cable	N-1 Follow power source to final device operation	O-1 Calibrate metal sensors
ies	Maintain Transformers	Troubleshoot PLCs and Control Systems	Test/Repair Communication Systems	Understand Basic Trouble- sbooting Techniques	Use Computer

GENERAL MECHANIC....uses mechanical, pneumatic, hydraulic, and electrical skills to maintain, repair and/or install equipment/machinery used in industry.

		1					,			- Am	4
↑					B-13 Calculate, layout, cut & cement PVC pipe to proper lengths	E-26 Maintain a/c systems for overhead cranes		F-13 Inspect and/or replace hoses		C	
					B-12 Solder and/or braze stainless stoel tubing	B-25 Discuss safety hazards in- volved with po- table & waste		F-12 Check fluid levels and/or replenish			
					E-11 Calculate, layout & cut stainless steel tubing for braze/solder fit-times	E-24 Discuss safety hazzards involved with the Leschate System (Cysnide & Arsenic)		F-11 Adjust, repair/replace regulators			
		B-9 Use dial indicator, dial caliper, feeler gauges, etc.			E-10 Solder and/ or braze copper tubing	B-23 Adjust and/or repair/ replace other chlorine system components		F-10 inspect and/or clean/ replace filters/ strainers			
		B-8 Use punches, band saws, chop saws, micrometer			B-9 Calculate, layout & cut copper tubing for braze/solder fittings	B-22 Maintain/ replace chlorine regulators and valves		F-9 inspect, repair/replace compressors			
		B-7 Use squares, levels, files, brushes, plumb bob, chisels	C-8 Draw en isometric sketch		E-8 Solder and/or braze aluminum tubing	B-21 inspect and/or replace heat exchanger tubes		F-8 Inspect, repair/replace motors		G-8 Inspect/ replace wire rope cable as needed	
- Tasks		B-7 Use hand held pipe threading tools, taps and dies	C-7 Trouble- shoot electrical schematics for hydraulic systems	D-7 Know Chlorine Safety Hazards	E-7 Calculate, layout & cut aluminum tubing for braze/solder fittings	E-20 Maintain and/or repair/ replace steam traps		F-7 inspect, repair/replace fans, blowers		G-7 Check for minimum number of cable wraps on cable drum	
		B-6 Use pipe cutting and threading ma- chines	C-6 Interpret steam system blueprints	D-6 Use self contained breathing apparatus correctly	B-6 Calculate, layout & bend stainless steel tubing for flare & compression fittings	E-19 inspect, repair/replace Bailey valves		F-6 Inspect, repair/replace pumps		G-6 Select and use proper size cable clamps correctly	
		B-5 Use torque wrenches, grinders, sand- ers	C-5 Interpret weld symbols	D-5 Use ALCOA issue safety equip- ment properly	B-5 Calculate, layout & bend aluminum tubing for flare & compression fittings	E-18 Maintain and/or repair/ replace steam system boiler components		F-5 Adjust, repair/replace actuators	F-18 Maintain correct air pres- sure & air flow thru Dense Phase Unit	O-5 Select and use proper size shackles per load	
	A-4 Solve basic algebraic equations	B-4 Use adjust- able wrenches and pliers, allen wrenches	C-4 Interpret structural blue- prints	D-4 Be sware of special safety procedures in various work areas	B-4 Calculate, layout & bend copper tubing for flare & com- pression fittings	B-17 Inspect and/or clean/ replace filters/ strainers	B-30 Maintain cooling tower systems	F-4 Adjust, repairteplace cylinders	F-17 Service water strainers for prevention of overheating of hy- drautic systems	O-4 Select proper shings in single & multiple leg use for various load lifts	
•	A-3 Use measurement conversion tables	B-3 Use socket drives, pliers, hack saws, pipe wrenches	C-3 Interpret combustion gas systems schematics	D-3 Recognize and compre- hend safety tags and lock- outs	E-3 Calculate, cut and thread pipe to proper lengths	E-16 Adjust and/or repair/ replace regulators and sight glasses	E-29 Maintain commercial water and air cooled condernser a/c systems	F-3 Adjust, repair/teplace valves	F-16 Maintain Phosphate Ester systems to proper temperature	G-3 Use wire rope, nylon rope, chains in proper mærner	
	A-2 Calculate perimeters, areas and volumes	B-2 Use drill, intracts, ham- mers, screw drivers, end wrenches	C-2 Interpret piping blue- prints	D-2 Recognize and compre- hend safety signs and em- blems	B-2 Calculate, layout and cut pipe to proper angle for joint/fitting makeup	E-15 Adjust and/or repair/ replace valves	E-28 Maintain a/c systems for cab type pieces of equipment	F-2 Trouble-shoot systems	F-15 Substitute Viton O-rings in Phosphate Ester systems	G-2 Determine proper line parts, sheave size, and cable size per load	
	A-1 Add, sub- tract, multiply and divide num- bers	B-1 Read rulers in inches or metric	C-1 Interpret hydraulic and preumatic schematics	D-1 Recognize and comprehend safety literature	E-1 Calculate, layout and cut pipe to proper lengths	E-14 Calculate, layout, cut & cement D-W-V pipe to proper lengths	B-27 Maintain a/c systems for pot diggers	F-I Know nomenclature of systems	F-14 Check and solve system leakages	G-I Perform hand signals correctly	
Duties	Perform Basic Mathematical Skills	Use Basic Hand and Power Tooks	Read Blue prints and Schematics	Practice Safety	Perform Pipe Fitter Skills			Troubleshoot Hydraulic and Pneumatic Devices		Perform Rigging Operations	
Ď	∀	æ	ŭ	Q	ഥ			Ħ		218

	A-4 Demon- strate en under- rtanding of proper hazard- own material	B-4 Follow the Quality Plan and recommend improvements in work methods or tooling		D-4 Be able to prepare recommendations for continuous improvement	E-4 Facilitate the work effic by completing tasks on time and accurately	F-4 Inter- convert Metric/ Engish measure- ments	G-4 Demon- strats ability to list the purpose of each type of drawing	H-4 Demon- strate use of Metric and English Standards of Measurement	I-4 Demonstate use of pipe threading applications, internal and external	
	A-5 Know first aid and CPR	B-5 Establish methods, plans and procedures to maintain quality	C-5 Practice careful use and maintenance of tools and equipment	D-5 Summarize and prioritize work responsibilities	E-5 Be involved with problem solving	F-5 Perform practical math- ematical applica- tions relevant to area of work	G-5 Demon- etreto ability to verify drawing elements	H-5 Perform measurements with hand held instruments	1-5 Demonstrate use of pneumatic and hydraulic hose fittings and sasembly, sealing techniques	
	A-6 Practice safety in the use of tools		C-6 Be commit- ted to excellence and quality	D-6 Be able to give and follow directions and eccept construc- tive criticism	E-6 Apply creative thinking	F-6 Use applied statistics, graphs, and charts for purposes of smalysis and problem-solving	O-6 Practice geometric dinen- sioning and tolerancing methodology	H-6 Verify measuring instruments are cultivated and in cultivation schedule	I-6 Demonstrate use of shop presses to removefustall bearings, etc.	
Tasks -	A-7 Wear personal safety equipment		C-7 Present a good company image in attire and attitude	D-7 Be able to verbally commu- nicate with co-workers and management	E-7 Support a positive attitude		O-7 Exhibit ability to read and interpret prints from different occupations		1-7 Exhibit use and cleanup of caulting gans, and proper disposed of waste materials	
	A-8 Maintain rate work station		C-8 Support a positive work environment		E-8 Encourage good Selings and morels					
	A-9 Protect from ARC flash		C-9 Practice a positive attitude		E-9 Understand purpose and goals of the organization					
	A-10 Demon- strate eye safety precautions				E-10 Plan and expanies work as a team					
	A-11 Perform grinding and brushing technique safety				E-11 Be willing to lead in areas of Incorbedge and expertise					
	A-12 Meintein adequate ventilation				E-12 Demon- strate wiling- ness to learn new methods and stills					3
	A-13 Mark "hot-work"				E-13 Demon- strate good per- sonal relations skills

APPENDIX B - PILOT PROGRAM NARRATIVE

What follows is a narrative of the pilot program which was conducted for this particular occupational specialty.

BEST COPY AVAILABLE

September 16, 1996

Mr. Wallace Pelton
Site Coordinator
Texas State Technical College
3801 Campus Drive
Waco, TX 76705

Dear Wallace:

Every effort was and is being made to fulfill the expectations of the Machine Tool Advanced Skills Technology (MAST) Program with respect to the pilot program. After reviwing the parameters needed to meet the requirements for the MAST prgram, the following areas were addressed: 1) need of conducting a year pilot program during the school year 1995-1996; 2) need of using two pilot programs at this partnering location; and 3) need for 25 students. The original expectation from Augusta Technical Institute was to conduct industrial assessment, curriculum development, pilot program, student assessment and project deliverables in CADD and CNC technical specialty area. However, after consulting with related curriculum areas at Tech here, local industry, and other MAST partners, it was decided to change our emphasis at Augusta Technical Institute to the Instrumentation and Industrial Maintenance Mechanic technical specialty areas.

We have spent many hours conducting the initial phases of the project for the CNC and CADD technical specialty areas. This change caused us to start the five-step process for Instrumentation and Industrial Maintenance Mechanic this year. This resulted in insufficient time to conduct a high quality pilot program with 25 students for one year (between 1995 and 1996) in Instrumentation and Industrial Maintenance Mechanic specialty areas.

Plans have been implemented to conduct the pilot program during the 1996-1997 school year. Recruiting has begun. The pilot program will be conducted in both Instrumentation and Industrial Maintenance Mechanic curriculum areas. The \$6,000 scholarship from MAST will be distributed with \$3,000 distributed among 15 Instrumentation students and \$3,000 distributed among 15 Industrial Maintenance Mechanic students. Students are applying for the MAST pilot programs now. Industrial assessment and industrial validation have taken place for both Instrumentation and Industrial Maintenance Mechanic areas. Curriculum development is actively under way. Student assessment is written and planned with great care. Project deliverables are being prepared. There is a lot of enthusiasm about the two pilot programs. Augusta Technical Institute is excited about these ventures.

Industrial Maintenance Mechanic is a one-year diploma program; and the pilot program will cover the entire year. The Instrumentation program is a two-year associate degree program. Our emphcais for the pilot program for the Instrumentation curriculum will be on the second year students with a GPA of 2.5 or higher.

Enclosed are an information sheet and application for both the instrumentation and Industrial Maintenance Mechanic pilot programs. Please feel free to call me if you require further information.

Sincerely,

Ronnie Lambert MAST Site Coordinator - Augusta Technical Institute

MAST Program INDUSTRIAL MAINTENANCE MECHANIC

The Machine Tool Advanced Skills Technology (MAST) Program, a U.S. Department of Education sponsored grant funded through the Office of Vocational and Adult Education (award #V199J40008) includes funds for student scholarships. The money will be available for tuition, fees, and books for students. Students applying for scholarships will need to meet our normal entrance requirements as outlined in the ATI catalog. As part of the terms of the scholarship, achievements of each student will be followed as they progress through the curriculum and into the workplace.

We can fund 15 students in Industrial Maintenance Mechanic and 15 students in Instrumentation Technology. The monetary amount available for each curriculum is \$3,000 to be distributed among 15 students.
