ABSTRACT

The Maryland Higher Education Commission surveyed more than 2,500 employers in the state to learn what programs at various degree levels were desired by employers. The results were examined along with labor market data about the projected number of job openings in specific occupational areas. It was concluded that nearly 60 percent of job openings in Maryland through the year 2005 will require some form of education or training beyond high school and nearly one-third of all job openings will require a two- or four-year college degree with approximately 26,000 Maryland job openings each year through 2005 requiring a college degree. General managers and registered nurses are projected to represent the largest number of job openings. Other occupations projected to have a large number of vacancies are bankers, sales workers, accountants, physicians, computer programmers, food/lodging managers, teachers and college faculty, electronic data processors, and electrical engineers. Certificate and degree programs most frequently named as not producing adequate numbers of qualified graduates were the health professions and business management. The highest demand bachelor's degrees were in business, the health professions, engineering, and computer science with a similar demand for master's and doctoral degrees. Tables include demand by region and county. The survey form and list of employers who responded are appended. (JLS)

EXECUTIVE SUMMARY

Higher education can play a key role in making Maryland more competitive in recruiting and retaining high performance businesses and organizations. One way is to identify the unmet needs of employers--the academic programs for which they have strong demand but have not been able to attract a sufficient number of qualified applicants to fill job vacancies.

The Maryland Higher Education Commission surveyed more than 2,500 employers in all regions of the state to learn what programs at various degree levels have not been readily available to firms and organizations. The findings of this survey were examined along with labor market data about the projected number of job openings in specific occupational areas, especially those requiring a college education. Policy questions arising from the study also are included.

The highlights of the study:

Labor Market Projections

- Nearly six of every 10 job openings in Maryland through the year 2005 will require some form of education or training beyond high school. Nearly one-third of all job openings will require a two- or four-year college degree. Put another way, there will be approximately 26,000 job openings each year in Maryland through 2005 requiring persons with a college degree.
- In every county and region of the state, general managers and registered nurses headed the list of professional and technical occupations which are expected to have the largest number of job openings by 2005. Other occupations which are projected to experience a large number of job vacancies are bankers, sales workers, teachers, accountants, physicians, computer programmers, food/lodging managers, college faculty, electronic data processors, and electrical engineers.

Unmet Needs of Maryland Employers

- The community college certificate and degree programs most often named by employers as not producing adequate numbers of qualified graduates were the health professions (notably nursing, which was among the most frequently cited two-year programs in every county and region) and business management (particularly business administration, accounting and hospitality services). Business fields were mentioned repeatedly by employers in Baltimore City and in the large suburban counties surrounding Baltimore and Washington, D.C.
- The bachelor's degree programs listed by the largest number of employers were in business (especially business administration, accounting, hospitality services, and

financial management), the health professions (notably rehabilitation/therapeutic services, and nursing), engineering (chiefly electrical engineering), and computer sciences. Demand for more qualified applicants in business administration was expressed by many employers in the Baltimore and Washington, D.C. areas. Hospitality services management was mentioned numerous times by firms in Baltimore City and County, the Lower Shore, Mid Maryland, and the Washington, D.C. suburbs. Rehabilitation services was cited by employers in all regions of the state. Graduates of baccalaureate programs in electrical engineering and computer science were among the most needed employees in Anne Arundel County, Baltimore County, Southern Maryland, Mid Maryland, and the Washington, D.C. suburbs.

- The most commonly mentioned master's degree programs by employers were engineering (particularly electrical engineering), business management, the health professions (mainly rehabilitation services), computer sciences, and social work. Electrical engineering and computer science were needed strongly in the Washington, D.C. area. Many Baltimore County firms expressed interest in masters-level graduates from several types of engineering programs--general, electrical, civil and mechanical.
- Doctoral programs for which employers reported having a difficult time attracting qualified job applicants were the health professions and high technology fields (especially engineering and the sciences).
- There generally was little difference between the unmet needs of large employers (those with 500 or more workers) and smaller firms.

INTRODUCTION

One of the major goals of state government during the administration of Gov. Parris N. Glendening has been to make Maryland more “business friendly”, thereby enhancing efforts to create new jobs and to attract and retain employers.

Maryland higher education is equipped to play a central role in achieving this goal. Its institutions can contribute in several ways to making the state more competitive in recruiting and keeping high performance businesses and organizations. They can:

- Identify the unmet needs of employers--the academic fields for which they have strong demand but are not getting a sufficient number of applicants to fill job openings.
- Provide business with information concerning the availability of higher education resources in the state.
- Meet the continuing education and job training needs of workers in the state, including the development of customized programs for employers.
- Improve the preparation of elementary and secondary school teachers and strengthen partnerships between K-12 education, postsecondary education, and the business community.
- Improve the general analytical and communication skills of college graduates.
- Assist marginal workers and the unemployed in becoming competitive in the labor market.
- Use the research and expertise of Maryland campuses to assist businesses and industry to support new commercial development.
- Help Maryland’s businesses to function more effectively in the global economy.

This report will address the first of these issues. Maryland’s colleges and universities offer a wide assortment of academic programs to provide the skills that employers are seeking in job candidates. However, anecdotal information from employers has suggested that some companies have been frustrated in locating employees with the education needed to fill job openings. Hence, the Maryland Higher Education Commission has conducted a survey of employers in the various regions of the state to identify those academic fields in which businesses and organizations are not getting an

adequate number of qualified applicants. This study is an appropriate undertaking for the Commission, which has responsibility for statewide higher education planning as well as for the approval of new academic programs at the state's public colleges and universities.

The results of the survey will be examined along with data from the Maryland Office of Labor Market Analysis and Information about the projected number of new jobs in specific occupational areas, particularly those requiring education beyond high school, in the major counties and regions of Maryland or "service delivery areas":

Anne Arundel County
Baltimore City
Baltimore County
Frederick County
Lower Shore (Somerset, Wicomico and Worcester Counties)
Mid-Maryland (Carroll and Howard Counties)
Montgomery County
Prince George's County
Southern Maryland (Calvert, Charles and St. Mary's Counties)
Susquehanna Region (Cecil and Harford Counties)
Upper Shore (Caroline, Dorchester, Kent, Queen Anne's and Talbot Counties)
Western Maryland (Allegany, Garrett and Washington Counties)

The information from this study is intended to be used to assess higher education needs in the various parts of Maryland as an element of the development of a new state plan for postsecondary education.

SURVEY METHODOLOGY

The questionnaire developed by the Commission staff asked employers to indicate the specific academic fields for which 1) they have a strong current need for employees with a college education and 2) they have not been able to attract a sufficient number of qualified applicants with an academic background in these areas. Employers were asked to identify, for each academic program, the appropriate level or levels of study for which employees are needed: a community college degree or certificate, bachelor's degree, master's degree, and/or doctoral or professional degree. A copy of the questionnaire appears in Appendix A.

The Commission contracted with the Maryland Office of Labor Market Analysis and Information to administer the questionnaire. This office has one of the most extensive listings of private firms and organizations in Maryland which it uses for numerous surveys of its own. The questionnaire was mailed in October 1995 to all 2,503 Maryland employers with 100 or more employees on this data base, with

accompanying letters from the Secretary of Higher Education and the Director of the Office of Labor Market Analysis and Information. Follow-up mailings to non respondents were conducted the following December and February. Employers were urged to return the questionnaire even if they had not experienced difficulty in recruiting ample numbers of college-educated employees. Replies were received from 917 companies for a participation rate of 37 percent. Of these, 500 reported that they had trouble attracting sufficient workers in at least one academic field. A listing by jurisdiction of the firms and organizations which answered the survey is in Appendix B.

The survey respondents were roughly similar in terms of location to all of the employers to whom the questionnaire was mailed. The respondent group contained a higher percentage of employers from Baltimore County and a lower proportion from Baltimore City and Montgomery County than would have been expected if all firms and organizations returned the questionnaire.

County/Region	% of Survey Respondents	% of All Employers
Anne Arundel	5.9%	7.7%
Baltimore City	12.7%	17.3%
Baltimore County	21.8%	17.7%
Frederick County	3.6%	2.9%
Lower Shore	2.8%	2.5%
Mid Maryland	6.6%	6.9%
Montgomery County	16.3%	19.6%
Prince George's County	15.0%	13.9%
Southern Maryland	3.4%	2.6%
Susquehanna Region	3.2%	2.6%
Upper Shore	2.8%	1.6%
Western Maryland	5.9%	4.7%
Total	100.0%	100.0%

THE LABOR MARKET PICTURE IN MARYLAND IN 2005

By the year 2005, Maryland's workforce will number more than 2.6 million--up 22 percent from 1992 (Table 1). During this period, there will be more than 1 million job openings in the state. About half of these (475,000) will be new jobs created as a result of growth, while the remainder will result from separations due to such circumstances as retirements, promotions, and transfers.

Developments in the labor market, such as increased competition for jobs, corporate consolidations and downsizings, the advent of the global marketplace, emergence of a

service and information based economy, and technological advancements, have placed a premium on workers with higher educational attainment and advanced skill levels. Nearly one-third of all job openings in Maryland (32 percent) by 2005 will require a community college degree, a bachelor's degree or higher. These positions will come in managerial, administrative, professional and technical employment, notably in business, engineering, education, health and computer science. An additional 27 percent of job openings will require a person with some education or training beyond high school, whether in college, a private career school or at the workplace. Most of these will come in service occupations or in precision production, craft and repair occupations.

Hence, nearly six of every 10 job openings in Maryland through 2005 will require some form of education or training beyond high school. Put another way, there will be approximately 26,000 job openings each year in Maryland requiring persons with a college degree and about 22,000 additional job openings annually in which applicants will need to have some education or training beyond high school.

Professional and Technical Occupations with Largest Projected Openings

Statewide, general managers and registered nurses topped the list of professional and technical occupations which are expected to have the largest number of projected job openings in Maryland through 2005 (Table 2). These occupations were projected to have among the largest projected openings in every service delivery area in the state.

Tables 3 through 14 show the professional/technical occupations with the largest projected employment and total job openings in each service delivery area. Other occupations which ranked among the top 10 in terms of predicted total job openings in at least half of the service delivery areas or in half of those with the largest population--Montgomery County, Prince George's County, and Baltimore City and County:

Bankers (All except Montgomery)

Sales workers (All except Prince George's and Southern Maryland)

Elementary and Secondary School Teachers (All except Baltimore City and Montgomery)

Accountants (Anne Arundel, Baltimore City and County, Upper and Lower Shore, Montgomery, Prince George's, Susquehanna)

Physicians (Baltimore City and County, Upper and Lower Shore, Mid Maryland, Southern Maryland, Susquehanna, Western Maryland)

Computer Programmers (Anne Arundel, Baltimore County, Mid Maryland, Montgomery, Prince George's, Southern Maryland)

Food/Lodging Managers (Frederick, Upper and Lower Shore, Southern Maryland, Susquehanna, Western Maryland)

College Faculty (Baltimore City, Frederick, Lower Shore, Prince George's, Western Maryland)

Electronic Data Processors (Baltimore City and County, Montgomery, Prince George's)

Electrical Engineers (Mid Maryland, Montgomery, Prince George's)

PROGRAMS FOR WHICH EMPLOYERS CANNOT FIND SUFFICIENT APPLICANTS

Tables 15 to 18 display the particular academic fields cited by employers statewide as being in strong current demand, but for which they have been unable to attract sufficient numbers of qualified applicants with a background in these areas. Table 19 presents this information for large firms and organizations (those with 500 or more employees). Tables 20 through 31 show the specific academic programs most often mentioned by employers in each of Maryland's service delivery areas. The disciplines were organized on the basis of the U.S. Department of Education's Classification of Instructional Programs, the most comprehensive taxonomy available. There are separate breakdowns for the various levels of degrees: community college, bachelor's, master's, and doctoral/first professional.

Community College Certificate and Degree Programs

The community college certificate and degree programs most frequently named by employers as not producing adequate numbers of qualified graduates were the health professions (notably nursing) and business management (particularly business administration and management, accounting, general business, and hospitality services management). These same fields were predominate among the largest employers, except that health and medical assistants were mentioned as often as nursing.

Nursing was among the most frequently cited community college programs in every Maryland county or region. Business administration was mentioned often by employers in Anne Arundel, Baltimore County, Frederick, Mid Maryland, Montgomery, Prince George's and Susquehanna. General business was named many times by firms and organizations in Anne Arundel, Baltimore City, and Prince

George's County. Accounting was brought up repeatedly by employers in Baltimore County and City, Frederick, Montgomery, Prince George's, and Susquehanna.

Bachelor's Degree Programs

The bachelor's degree programs listed by the largest number of employers were in business management (especially business administration, accounting, hospitality services management, general business, and financial management), the health professions (notably rehabilitation/therapeutic services and nursing), engineering (chiefly electrical or electronic engineering and general engineering), and computer and information sciences. These same fields were also the most frequently selected by the largest firms and organizations.

Bachelor's programs in business administration were mentioned most often by employers in Anne Arundel, Baltimore County, Frederick, Mid Maryland, Prince George's County, Southern Maryland, Susquehanna and Western Maryland. Accounting was named regularly by companies in Baltimore County and City, Frederick, Montgomery, Prince George's, and Susquehanna. Hospitality services management was cited many times by employers in Baltimore County and City, Lower Shore, Mid Maryland, Montgomery, and Prince George's.

Rehabilitation and therapeutic services, which include such programs as physical therapy and occupational therapy, were listed repeatedly by employers in Baltimore County and City, Lower Shore, Montgomery County, Southern Maryland, and Western Maryland. Nursing was mentioned by multiple employers in all service delivery areas except Anne Arundel and Frederick Counties.

Baccalaureate programs in electrical/electronic engineering were among the most commonly cited by firms and organizations in Anne Arundel, Baltimore County, Lower Shore, Mid Maryland, Montgomery County, Prince George's County, and Southern Maryland. Computer and information sciences was one of the most frequently selected academic fields by employers in Anne Arundel, Baltimore County, Frederick, Mid Maryland, Montgomery, Prince George's, and Southern Maryland.

Master's Degree Programs

The programs at the master's degree level that were mentioned by the largest number of employers as being in strong demand but not producing enough qualified applicants were engineering (notably electrical/electronic engineering), business management, the health professions (especially rehabilitation/therapeutic services), computer and information sciences, and social work. The first four of these fields were among the most commonly cited by the largest firms and organizations in the survey.

Electrical/electronic engineering was one of the master's programs mentioned most often by employers in Anne Arundel, Baltimore County (where general, civil and

mechanical engineering also were named), Mid Maryland, Montgomery County, and Prince George's County. Academic fields in business management were among the most cited by firms in Anne Arundel, Baltimore City, Frederick, Prince George's, Southern Maryland, and Susquehanna. Computer and information sciences were identified most frequently by employers in Anne Arundel, Montgomery, and Prince George's. Master's programs in rehabilitation/therapeutic services were named by multiple employers in Anne Arundel, Baltimore County and City, Lower Shore, Montgomery, and Western Maryland. Social work was one of the programs raised the most by employers in Baltimore City, Montgomery County, and Western Maryland.

Doctoral and First Professional Programs

The academic programs for which Maryland employers had greatest need for, but were not getting, qualified applicants with a doctorate were the health professions and high technology fields (chiefly engineering and the physical and biological sciences). The physical sciences were cited most by the largest firms and organizations in the survey.

POLICY QUESTIONS ARISING FROM THE STUDY

Because of the close relationship between economic development and higher education, the needs of employers and the projected openings in certain occupations play an important role in determining the types of new academic programs created and where they are located. The cyclical nature of student interest, changes in the demand for particular kinds of jobs by employers, shifts in the economy in the various regions of the state, and the cost to taxpayers of creating new college-level programs make it imperative that the addition of new educational offerings be taken only after careful consideration. The inability of employers to attract sufficient numbers of qualified applicants in specific fields may reflect as much on the nature of the supply of graduates available as it does on the presence or quality of programs in these disciplines.

These are policy questions and issues emerging from the workforce needs study:

Are Maryland colleges and universities producing sufficient graduates in academic fields strongly in demand among employers in the state?

Statewide, large numbers of Maryland employers expressed frustration at their inability to attract an adequate supply of applicants for jobs requiring some type of college education in the health professions, business, engineering and computer science. This raises the question of whether enough Maryland students are majoring in these fields and earning the requisite degrees. In the 1994-1995 academic year, Maryland community colleges awarded 1,899 associate degrees and certificates in the health services technologies and 1,655 in business and commerce technologies.

Undergraduates at public and independent four-year colleges and universities in the state earned 2,957 baccalaureates in business, 1,358 in health professions, 905 in engineering, and 742 in computer and information systems. There were 2,171 master's degrees in business, 800 in health, 682 in engineering, and 478 in computer science.

Are these figures sufficient to meet the needs of today's employers and will there be an adequate supply in the years ahead? Labor market projections in the state show that there will be nearly a quarter of a million job openings by 2005 in the occupations corresponding to these fields of study.

Are Maryland's college-bound high school graduates informed about the nature of the state's current and projected work force?

Many college freshmen do not select a major right away, much less develop long-term occupational goals. As a result, information about present and future job market conditions is both of limited interest to many students and is not often provided by counselors and academic advisors. Nevertheless, students are unwise to ignore trends in the labor force. Follow-up surveys of community college graduates and bachelor's degree recipients conducted by the Maryland Higher Education Commission have found consistently that graduates who majored in high demand fields like engineering, computer science, business and health tend to have lower unemployment rates, are more likely to find a job directly related to their academic discipline, are more apt to earn a higher annual salary, and express greater happiness in their selection of a field of study than have other students. Hence, while students are best advised to tailor their academic and vocational choices to fields and jobs which coincide with their interests and talents, they (and their parents and counselors) need to keep an eye on present and emerging trends in the labor market.

Are additional or improved degree programs in hospitality management services needed in Maryland?

Hospitality services management was among the most frequently cited business fields for which Maryland employers found it difficult to recruit ample employees with either a community college or bachelor's degree. The need for baccalaureate recipients in this major was mentioned particularly by firms in Baltimore County and City, Montgomery County, Prince George's County, the Eastern Shore counties, and Mid Maryland (Howard and Carroll Counties). These areas make up a large majority of the state's population. Further, food and lodging manager is one of the professional occupations with the largest projected number of openings by 2005 in Maryland, especially in Frederick County, the Eastern Shore, Southern and Western Maryland, and the Susquehanna region (Cecil and Harford Counties).

Maryland currently offers two bachelor's degree programs in hospitality management at University of Maryland Eastern Shore and at Morgan State University. The UMES

program produced 27 graduates in the 1994-1995 academic year; the Morgan program is new. Further, only five public community colleges (Allegany, Anne Arundel, Harford, Montgomery and Wor Wic) and Baltimore International Culinary College offer certificate and/or associate degree programs in this area. In the 1994-1995 academic year, these community colleges awarded one certificate and 48 associate degrees in this field.

Note: Western Maryland includes Allegany, Garrett and Washington Counties.

Source: MHEC Survey of the Needs of Maryland Employers for College-Educated Employees

APPENDICES

SURVEY OF THE NEEDS OF MARYLAND EMPLOYERS FOR COLLEGE-EDUCATED EMPLOYEES

Please indicate below the specific academic fields for which both of the following are true for your firm or organization.

- Your firm has a strong current need for employees with a college education in these fields.
- Your firm or organization has not been able to attract a sufficient number of qualified applicants with an academic background in these fields.

For each academic field you list, please also place an "x" in the column(s) representing the appropriate level(s) of study for which employees are needed. **Please base your responses on actual hiring experiences at your firm or organization.**

Academic Field	Level of Study			
	Community College Degree or Certificate	Bachelors Degree	Masters Degree	Doctorate or Professional Degree

What is the name and address of your organization:

What is the size of your workforce in Maryland: _____

THANK YOU FOR PARTICIPATING IN OUR SURVEY. PLEASE DIRECT QUESTIONS ABOUT THE SURVEY TO DR. MICHAEL KELLER AT (410) 974-2971.
