ABSTRACT

A core curriculum was developed as a result of the Utah State Board of Education's establishment of a policy requiring identification of specific core curriculum standards to be completed by all students in kindergarten through grade 12 as a requisite for graduation from secondary school. The core curriculum represents those standards of learning that are essential for all students. The standards relate to ideas, concepts, and skills that provide the foundation for subsequent learning. This document presents the core curriculum standards for kindergarten through grade 3. An introductory section explains various requirements of the state board of education pertaining to elementary and secondary education. The next sections are organized by the following subject areas: (1) arts; (2) information technology; (3) language arts; (4) library media; (5) mathematics; (6) responsible healthy lifestyles; (7) science; and (8) social studies. Each of these sections is further divided by grade level. For each grade level, core standards are stated and specific objectives related to the standards are listed. (TM)

INTRODUCTION

Action by the State Board of Education in January 1984 established a policy requiring the identification of specific core curriculum standards which must be completed by all students K-12 as a requisite for graduation from Utah's secondary schools. This action was followed by three years of extensive work involving all levels of the education family in the process of identifying, trial testing, and refining these core curriculum standards for Utah's schools.

The core curriculum represents those standards of learning that are essential for all students. They are the ideas, concepts, and skills that provide a foundation on which subsequent learning may be built.

The core should be taught with respect for differences in learning styles, learning rates, and individual capabilities without losing sight of the common goals. Although the core curriculum standards are intended to occupy a major part of the school program, they are not the total curriculum of a level or course.

THE ELEMENTARY AND SECONDARY SCHOOL PROGRAM OF STUDIES AND HIGH SCHOOL GRADUATION REQUIREMENTS

STATEMENT OF PHILOSOPHY

The primary goal of education is the development of individuals who possess the knowledge, skills, and human characteristics neccesary to enable them to live meaningfully as individuals and as positive contributors to society. To achieve this ultimate goal, the individual must be provided experiences to develop skills in language and thinking; scientific understanding; mathematics; historical perception; aesthetic appreciation; social interaction; movement, fitness, and health; and career competencies.

ELEMENTARY EDUCATION

The elementary school reaches the greatest number of students for a longer period of time during the most formative years of the school experience. This unparalleled responsibility makes it imperative that each elementary school be provided with effective leadership, meaningful standards, a balanced curriculum, sufficient means, and competent staff.

SECONDARY EDUCATION

The secondary school should provide the opportunity for every student to have a challenging educational experience which will prepare him/her to pursue a fulfilling and productive role in society, which both transmits and enhances our culture. A comprehensive curriculum with enough flexibility to strengthen individual talents and interests must be available for all students.

R300-700. The Elementary and Secondary School Core Curriculum and High School Graduation Requirements.

R300-700-1. Definitions.

- A. "Board" means the Utah State Board of Education.
- B. "IEP" means individual education program.
- C. "Special assignment teacher" means a teacher assigned to:
 - (1) alternative school settings with self-contained classrooms in which the teacher must teach several subjects;
 - (2) teach homebound students with the expectation that several subjects will be covered by the same teacher; or
 - (3) necessarily existent small or rural schools with limited faculty and enrollment in which teachers must teach more than three core subjects.

R300-700-2. Authority and Purpose.

- A. This rule is authorized under Article X, Section 3, of the Utah State Constitution which vests general control and supervision of the public education system in the State Board of Education, Section 53A-1-402(1) (b), U.C.A. 1953, which directs the Board to make rules regarding competency levels, graduation requirements, curriculum, and instruction requirements, and Section 53A-1-401(3), U.C.A. 1953, which allows the Board to adopt rules in accordance with its responsibilities.
- B. The purpose of this rule is to specify the minimum core curriculum for the public schools and high school graduation requirements.

R300-700-3. General Requirements - Course Standards.

The Board establishes minimum course description standards and objectives for each course in the required general core. Course descriptions for required and elective courses are developed cooperatively by local school districts and the Utah State Office of Education. The descriptions shall contain mastery criteria for the course and shall stress mastery of the criteria rather than completion of predetermined time allotments for subjects. Implementation and assessment procedures are the responsibility of local school districts.

R300-700-4. General Requirements - Teacher Qualifications.

Teachers may not be assigned to teach any course unless, for the subject area to which they are assigned, they hold a current Utah teaching certificate endorsed in the subject area, have completed an undergraduate or graduate major or minor in the subject area, have completed a Board approved inservice program, or have demonstrated competency in the subject area.

R300-700-5. General Requirements - Special Assignment Teachers.

- A. Special assignment teachers must hold a Basic or Standard Certificate with endorsement(s) for the course(s) which they are assigned to teach. In addition, personnel must have completed at least nine quarter hours of state approved college or inservice course work in each of the subject areas in which they are assigned.
- B. Special assignment teachers are temporarily authorized for the duration of their special assignment and do not receive a permanent endorsement for the subject area until they have completed the equivalent of a subject matter minor, at least 24 quarter hours of state approved college course work in the field, or have been

declared competent to teach the subject by the Utah State Office of Education Committee on Demonstrated Competency .

R300-700-6. General Requirements - Unit of Credit.

- A unit of credit or fraction thereof shall be given upon satisfactory completion of a course or learning experience in compliance with state course standards. Students also may complete a course on a performance basis in which case assessment of mastery will be the responsibility of the local boards of education. Credit can be awarded only once for a specific required course with the same content during the secondary school experience.
- B. Credit may be earned in any of the following ways:
 - (1) successful completion of a course;
 - (2) demonstrated proficiency, via pre-assessment;
 - (3) demonstrated mastery of approved courses outside of the school day or year;
 - (4) concurrent enrollment in approved post-secondary training institutions;
 - (5) demonstrated mastery of approved correspondence or extension courses; or
 - (6) upon application, demonstrated mastery in special experimental programs.

R300-700-7. General Requirements - Instructional Time.

School districts shall organize flexible time blocks for instruction which accommodate outcome-based curriculum. To help the Board keep apprised of instructional time variations, districts shall submit their instructional time schedule to the Utah State Office of Education for approval.

R300-700-8. General Requirements - Student Education Plan.

A student education plan is cooperatively developed by the student, the student's parents, and designated school personnel. This plan is guided by general requirements and individual student interests and goals. It is formally reviewed, at least, at the beginning of grade one, at the end of grades three and six, and annually thereafter. Each student's high school plan shall identify an area of concentration, which may be as many as four to five units, in a cluster related to the student's post-secondary goal.

R300-700-9. General Requirements - Diploma.

In Utah's public schools, a high school diploma is granted to a student who has met Board curriculum requirements and any additional requirements of the local school district.

R300-700-10. Requirements for Elementary Education.

A The Board shall establish standards for elementary education which include the identification of a general core curriculum. Implementation and formal assessment of student mastery of the general core curriculum are the responsibilities of the local boards of education. At a minimum, formal assessment shall occur during or at the completion of the primary grades, grade three, and again during or at the completion of the intermediate grades, grade six. Informal assessment should occur on a frequent ongoing basis to ensure continual student progress. Provision for remediation for all students who do not achieve mastery is required.

B. Required Elementary Core Curriculum:

REQUIRED ELEMENTARY CORE C GRADES K-6	JRRICULUM
GENERAL CORE Language Arts Reading Writing Speaking Listening Mathematics Science Social Studies Introductory Citizenship Principles and Practices	<u>OPTIONS</u> Foreign Language
The Arts Responsible Healthy Lifestyles Information Technology	

C. All handicapped students are required to demonstrate mastery of the core curriculum. If a student's handicapping condition precludes the successful demonstration of mastery, the IEP team, on a case by case basis, may exempt the student or modify the mastery demonstration to accommodate the student's handicap.

R300-700-11. Middle and High School Requirements.

- A. The Board provides general direction and standards in secondary education. Students in grades seven and eight must earn a minimum of 12 units of credit. Students in grades nine through twelve must earn a minimum of 24 units of credit. Districts may required additional units of credit. Formal assessment of student mastery of the general core courses shall occur as a minimum during or at the completion of grades eight, ten, and twelve. Implementation and assessment of student mastery of the core courses are the responsibility of the local board.
- B. Middle Education Core Curriculum:

GENERAL CORE - 10.5 Units PLUS	REQUIRED ELECTIVES - 1.5
SUBJECT AREAS	REQUIREMENTS
Language Arts	2.0 Local District Option
Mathematics	2.0
Science	1.5
Social Studies	1.5
The Arts	1.0
Responsible Healthy Lifestyles	1.5
Information Technology	Credit Optional
Applied Technology Education	1.0

- C. High School Core Curriculum:
 - (1) Required credits.

HIGH SCHOOL CORE CURRICULUM GRADES 9-12 -- 24 UNITS OF CREDIT REQUIRED

GENERAL CORE - 14.5 Units PLUS REQUIRED ELECTIVES - 9.5

SUBJECT AREAS	REQUIREMENTS
Language Arts	3.0
Mathematics	2.0
Science	2.5
1 Biological	
1 Physical	•
Social Studies	3.0
The Arts	1.5
Responsible Healthy Lifestyles	2.0
Information Technology	Credit Optional
Applied Technology Education	1.0
Selected Electives	9.5

- (2) Any state-approved applied technology course, or the applied technology core course fulfills the applied technology education requirement.
- (3) Selected electives units of credit provide a means for specialization related to student interest and post-secondary goals.

(a)	College Entry Cluster:	
` '	Foreign Language	2.0 units of credit
	Mathematics	1.0 unit of credit
	Science	1.0 unit of credit
	Electives	4.5 units of credit
(b)	Applied Technology job Entry Clusters:	•
	(Select one)	
	Technical Emphasis	4.0 units of credit
	Applied Technology Emphasis	5.0 units of credit
	Computer Science	.5 unit of credit
(c)	Electives:	4.0 - 5.0 units of credit

- D. Information Technology standards in the middle education and high school core curriculum may be taught either by integrating them into other areas of the curriculum or in a specific class. Integration requires the district to submit a plan detailing at what level and in which class each standard will be taught. Districts establishing a specific class may offer .5 unit of credit.
- E. All handicapped students are required to demonstrate mastery of the courses in the middle education and high school general core. If a student's handicapping condition precludes the successful demonstration of mastery, the IEP team, on a case by case basis, may exempt the student or modify the mastery demonstration to accommodate the student's handicap.

CORE COMPLETION GUARANTEES STUDENT ACCESS

- 1. Guarantees common experience which forms the foundation skills.
- 2. Guarantees access to jobs and entry into college or vocational-technical education through required course completion.
- 3. Permits intensive vocational-technical education, entry into research universities, and a released-time component through specialization options.

CORE CURRICULUM FOR THE ARTS

The arts in the core include visual arts, dance, drama, and music. Education in the arts should develop students' abilities in each of three roles -- participant, observer/listener, and critic. These roles are distinct, yet complementary. The student's education is limited if he/she masters only one role; furthermore, each role requires a set of distinct skills which taken by itself is limited. When these skills are integrated, they provide the necessary and complete background for informed response in the arts.

We take a participant role when we deal actively and directly with the medium of an art form; e.g., acting, painting, singing, or dancing. We take an observer/listener role whenever we actively respond to a work of art. We take a critic role whenever we make informed judgments about works of art.

It is the ability to work well in each of these roles that will encourage informed and appreciative responses to the arts. We risk prejudice and ignorance without programs designed to create skills and understanding in each of these roles. The roles of participant, observer/listener, and critic provide direction in establishing standards and objectives for each of the arts.

VISUAL ARTS COMPONENT

We are essentially visual beings who learn more by sight than by any other means. For this reason, art education is profoundly basic to both general education and implied education. It is difficult to imagine an activity or even a thought that does not involve perception and imagery. In addition to our preparations for life, visual arts have a significant influence on our culture and family life via such things as advertising, industrial design, packaging, architecture, and clothing design.

COURSE DESCRIPTION (Levels K-3)

The visual arts core covers 40 percent of the 206 foundation objectives found in the State Course of Study, Art Is Elementary. The lessons from Art is Elementary that correlate with the Visual Component are given in parenthesis after each objective. The focus of the core is threefold: (1) Providing students with experiences in making art, (2) helping them to develop observation skills for making aesthetic decisions, and (3) providing students with understanding that enables them to become art critics.

CORE STANDARDS OF THE COURSE

STANDARD The students will develop skills vital to making art by 1030-01 creating drawings that illustrate an understanding of unity, simple perspective concepts, cast shadows, and strategies for starting a picture. (Students' products may range from realistic to abstract application of the objectives.) (Participant)

OBJECTIVES

- 1030-0101. Create the appearance of depth by drawing objects smaller as they get farther away. (76)
- 1030-0102. Illustrate how cast shadows fall away from the light source. (82)
- 1030-0103. Use a pair of complementary colors, plus their tints or shades to create a design in which one hue is dominant. (93)
- 1030-0104. Draw distant objects more flat and with less detail. (89)
- 1030-0105. Draw a picture in which the relative sizes of different subjects and their parts are represented. (92)
- 1030-0106. Produce a three-dimensional form and give attention to every possible view; i.e., top, bottom, and inside. (95)
- 1030-01<u>07</u>. Begin a drawing with methods such as blocking in, simplifying as stick figures, and drawing the action.
- 1030-0108. Use a variety of media and materials in implementing the objectives of Standard I.

23

7

STANDARD The students will develop observation skills vital to 1030-02 looking at and discussing aesthetic form by demonstrating an understanding of how function influences design, how artists organize space, and how colors may be used to create contrast and optical weight. (Observer/Listener)

OBJECTIVES

- 1030-0201. Describe two or more ways that all of the space in an arrangement (art print) has been used. (77)
- 1030-0202. Describe how the function of an object influenced its form; i.e., an airplane's function influences its shape. (87)
- 1030-0203. Point to an example of a dominant hue in an art print or an advertisement. (94)
- 1030-0204. Point out an example of one color being more prominent than another in a picture; i.e., brighter, darker, or larger in area. (94)
- 1030-0205. Indicate parts of a picture in which objects that contrast with their backgrounds have more visual weight than those that blend with their backgrounds. (96)
- 1030-0206. Identify common objects whose forms resemble the cone, cube, cylinder, sphere, or pyramid. (88)

STANDARD The students will develop skills vital to analyzing and 1030-03 evaluating works of art and studying the artists who produced them by pointing out the use of contrast and focal points in an art print and identifying characteristics of the work or style of five new artists. (Critic)

OBJECTIVES

- 1030-0301. Compare ways in which artists have used contrast to create focal points. (74)
- 1030-0302. Describe how contrast between a subject and its background makes one of them seem closer to the viewer. (75)
- 1030-0303. Identify a characteristic of the work or style of Morrisot, Harnett, Picasso, Rembrandt, and Seurat.

MUSIC

MUSIC COMPONENT

The basic role of music should be the aesthetic and musical development of the individual. Music is a medium for the educational development of the student and should provide opportunity for individual growth and positive recognition. Music performance is also a medium for the educational development of the student and may be used for the purpose of strengthening public relations and providing entertainment in the community.

Experiences in music should provide a conceptual understanding of the basic properties of melody, harmony, timbre, dynamics, and form. If music is to achieve its basic role, there must be a well-balanced, sequential course of study. In addition to extensive, creative, and recreative opportunities that develop a functional understanding of music, there should also be experiences in listening, structural analysis, theory, and historical understanding of cultural development resulting in aesthetic appreciation.

Mastery of the music core is achieved when the student understands the concepts and demonstrates the skills contained in one level sufficiently to move to the next level. Please note that the core does not constitute the entire course at any level. It represents only the essential requirements that every student should master. Additional concepts and skills in music should be part of the music program in every grade level and course.

COURSE DESCRIPTION (Levels K-3)

The music program in the primary grades is designed for students to develop their musical awareness, interests, potentials, and appreciation. Experiences will include singing songs, both by rote and through musical notation; listening to music, both recorded and live; playing simple classroom melodic and percussion instruments; creating simple melodies for singing or playing on classroom instruments; and moving expressively to music.

CORE STANDARDS OF THE COURSE

	ents will develop vocal tec

	server/Listener,	

- 7520-0501. Express beat and rhythm patterns by clapping and moving body parts; i.e., accenting the first beat of a metric phrase, moving to a patterned verse.
- 7520-0502. Explore symmetrical and asymmetrical shapes with the body, alternating from one to the other, and move through space changing the level of the body.
- 7520-05<u>03</u>. Improvise a sequence of energy changes; i.e., moving from lyrical (floating, gliding) to percussive (sharp, quick).
- 7520-0504. Create new and unusual solutions to walking from here to there, changing direction, speed, size, sound, level, shape, or rhythm.
- 7520-0505. Perform traditional and creative singing games and dances such as "Round and Round The Village," "Bingo," "Here We Go Round the Mountain."
- 7520-0506. Express feelings generated by observing a dance performance-describing the impressions it creates and discussing what the choreographer wants the audience to think or feel.

LEVEL 3

STANDARD 7530- <u>05</u>	The students will create simple dances and discuss reasons for dance, combine introductory rhythm and dance movements that include time, space, energy, and shape. (DANCE: Participant, Observer/Listener, Critic)
OBJECTIVES	
7530-05 <u>01</u> .	Clap and move in 6/8 time, accenting the first beat of every measure, changing the body part, the direction, the level, or the energy.
7530-05 <u>02</u> .	Move appropriately to a piece of 4/4 music or to a steady beat; e.g., slowly to half notes, moderately to quarter notes, and quickly to eighth notes.
7530-05 <u>03</u> .	Discuss and express through movement the rhythms found in: (a) nature; e.g., wind, sea, and trees; (b) the body; e.g., breath, pulse, sneeze and tickle; (c) mechanical and nonmechanical objects; e.g., ball, feather, and eggbeater.
7530-05 <u>04</u> .	Create a series of shapes on different levels (low, medium, and high) and design transitions between them; e.g., slow-motion and sustained, sudden or percussive.
7530-05 <u>05</u> .	Improvise a sequence of energy changes such as percussive, sustained, lyrical, collapsing, and swinging and relate these energy changes to another curriculum area such as science.
7530-05 <u>06</u> .	Perform traditional and creative singing games or create a simple group dance based on a theme. The dance should include a beginning, middle, and end. (Games and dances might include: "Skip To My Lou," "Digga Doe," "Jim Along Josie," etc.)
7530-05 <u>07</u> .	Discuss why people dance and how this art form is used as a kind of nonverbal communication.

Information Technology William Technology

INTRODUCTION

The following core standards and objectives are written to allow each student to function effectively in the technological society as a competent, productive, caring, and responsible citizen.

The curriculum is written with the realization that significant effort may be necessary to fulfill the objectives. Not all schools will have sufficient hardware and software nor adequately-trained teachers. It is expected that schools will plan and initiate steps to reach a position where these standards and objectives can be fully implemented. Inservice training is essential to fully prepare teachers to competently convey the entire curriculum.

These standards are intended not only to teach information technology but to apply technology across the curriculum. The greatest educational success will come when technology reaches into all content areas. Many of the information technology objectives can be taught and mastered in other curriculum areas.

A keyboarding standard has been included for the first time in this curriculum. It is recommended that keyboarding first be taught as a concentrated course in third grade and reviewed in each succeeding grade to allow students to achieve a high degree of proficiency. Only when keyboarding skills improve will students become more productive in the use of computer applications.

The next page shows a scope and sequence for the Information Technology Core. The same standards are used at each grade level with similar objectives of increasing difficulty. The objectives listed on the scope and sequence chart are generalized from the numbered objectives appearing at each grade level in the core curriculum. Any objectives may be introduced earlier than specified grade level depending upon teachers' skills and students' readiness.

INFORMATION TECHNOLOGY STUDIES LEVEL 1

SIS NUMBER: 2010 SIS CODE: IT

COURSE DESCRIPTION

The information technology studies in Level 1 continue the introduction of basic components of a computer system, proper conduct around computers, and appropriate age-level software as begun in Level K.

CORE STANDARDS OF THE COURSE

2010-01	(technology) system correctly.
<u>OBJECTIVES</u>	
2010-01 <u>01</u> .	Demonstrate proper start-up and termination procedures for a software package.
2010-01 <u>02</u> .	Identify major hardware components of specific technologies being used in the classroom/lab.
2010-01 <u>03</u> .	Demonstrate the proper handling of diskettes.
2010-01 <u>04</u> .	Identify potential abuses to and proper care of hardware.

The students will use each component of a computer

OBJECTIVES

2030-02 <u>01</u> .	Demonstrate proper stroking technique for each letter of the alphabet.
2030-02 <u>02</u> .	Identify proper usage of SHIFT keys.
2030-02 <u>03</u> .	Keyboard word lists and sentences using correct posture and proper stroking.

	students will understand the major social and all issues in the field of information technology.
--	--

OBJECTIVES

2030-0301. Demonstrate appropriate conduct during technology work periods.

2030-0302. Identify services in the community which utilize computers.

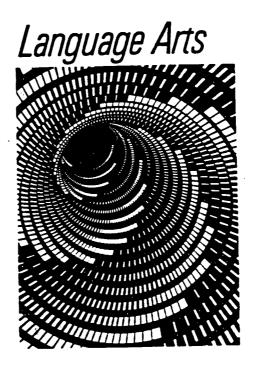

OBJECTIVES

2030-04 <u>01</u> .	Create a word processing file containing sentences.
2030-04 <u>02</u> .	Demonstrate proper letter/word deletion techniques on a word processor.

STANDARD The students	
2030- <u>05</u> solving skill:	

2030-05 <u>01</u> .	Use appropriate grade level simulation and problem-solving software.
2030-05 <u>02</u> .	Relate computer use to real-life, problem-solving situations at the level of the student's understanding.
2030-05 <u>03</u> .	Identify and put into proper sequence the steps of a familiar procedure.
2030-05 <u>04</u> .	Participate in a demonstration of the computer's ability to do repetitive, large tasks with speed and accuracy.

LANGUAGE ARTS

The purpose of the language arts core is to help students attain language skills that generate and communicate thinking. The core is the basic portion of the language arts curriculum required for all students and should be supplemented by the teacher. It is designed to provide students with maximum career opportunities and advancements, as well as provide a solid foundation for further education. The rationale for this document is based on research and represents a shift of emphasis from teaching isolated content and skills to a process-oriented program.

In Levels K through 8, drama is included as a component of the language arts core. The core in drama should develop students' abilities in each of three roles -- participant, observer/listener, and critic. These roles are distinct, yet complementary. Students' education is limited if they master only one role; furthermore, each role requires a set of distinct skills which taken by itself is limited. When these skills are integrated, they provide the necessary and complete background for informed response in drama. In this portion of the core, students will take the participant and critical roles in drama in addition to the traditional observer/listener role. Students will participate in dramatic presentations, read, see, and hear other presentations, and evaluate them.

Rationale:

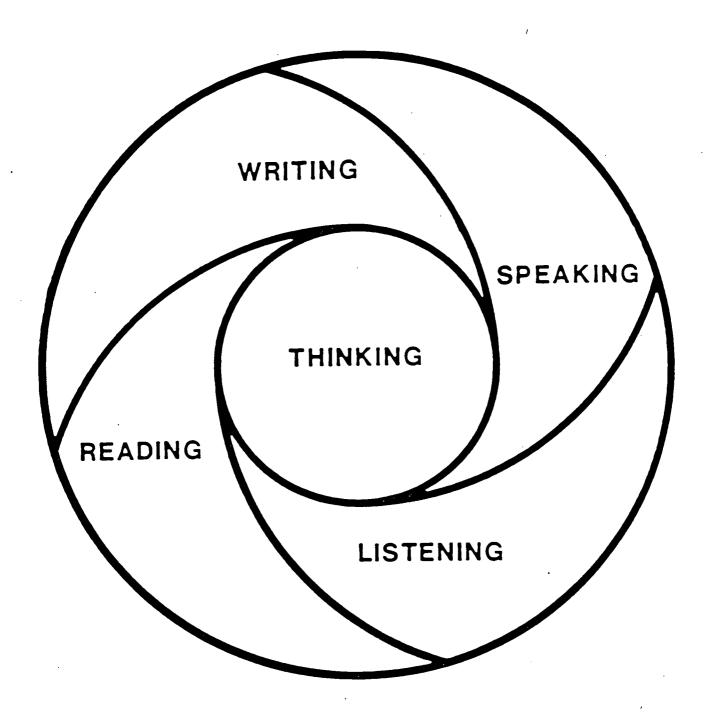

1. Thinking, reading, writing, speaking, and listening, all interrelated processes, are the core of the curriculum. They are also the most basic of all the skills.

These activities represent an integrated whole, parts of which are experienced in isolation, but which generally interrelate and act in concert. The thinking process is concerned with advancing levels of abstraction, maximizing concentration, focusing random knowledge, and synthesizing data into logical, coherent trains of thought. The speaking and listening processes focus and communicate thoughts. The reading and writing processes further refine thinking and communication. (Often, the writing process, which includes pre-writing, writing, responding, reviewing, editing, evaluation, and sharing, is the most substantive proof of learning.) Together, these processes are the foundations of all learning and humanity.

Research continually demonstrates (e.g., Odell and Goswami, 1983) that the average job requires workers to spend 70 percent of their time productively reading, writing, speaking, and listening. If thinking is added to the list, the figure will approach 100 percent in some occupations. Obviously, the most important career preparation we can give students is to develop these skills.

2. Language skills cannot be productively taught in isolation, particularly through the insular study of traditional, structural, or transformational grammar. Students need daily opportunities to develop related language skills. Students

develop skills by practicing them, but no skill or individual content material should be practiced in isolation. Spelling, mechanics, usage, and vocabulary study should generally be derived from and related to the literature selections and students' writing (Hillocks, 1984).

Traditionally, mechanics and usage have been taught for their own sake, apart from reading and writing. Research shows that mechanics, usage, spelling, and vocabulary are important as content when they are taught as an integral part of the writing process (Cooper, 1974; Cooper, 1983; Odell, 1974). When in the revising or editing stages, the need for correct usage, spelling, and mechanics emerges, the necessary skill can then be productively taught (Emig, 1971).

The instruction of formal grammar, unless directly related with the writing, reading, and speaking processes, does <u>not</u> help students develop communication skills. Furthermore, researchers have incontrovertibly concluded that in programs in which excessive time is devoted to the study of grammar, independent of the reading and writing processes, the effects are <u>negative</u>. It may be helpful for students to have a knowledge of grammatical terminology when it is taught in the context of their own writing, reading, and speaking. In the words of William Irmsher, past-president of the National Council of Teachers of English, "Few grammarians are writers, but all writers are grammarians." In summary, skill attainment through process is paramount, content is secondary.

- 3. Language skills stretch across all mastery levels and subject areas. The teaching of effective language skills is a shared responsibility, involving all teachers in all subject areas, administrators, and parents. These skills are taught, reinforced, and expanded repeatedly through all subject areas.
- 4. In general, the developmental sequence of language skills is: Fluency ---- Detail ---- Abstractions.

Students must be able to produce and comprehend ample amounts of language before detail can be effectively taught. Then students must learn to articulate and comprehend specific language before tackling abstractions in language. That is, when learning to write, students must first produce several paragraphs before moving to specific language that brings writing to life. From concrete, vivid language, the students can then go forward to language that has no physical referent (e.g., truth, justice, freedom) and employs calculated rhetorical strategies, including logic.

Although development of language skills is a lifelong process, students can demonstrate appropriate progress for each grade level.

ENGLISH/LANGUAGE ARTS CORE CURRICULUM

Thinking, Reading, Writing, Speaking, and Listening Skills

LANGUAGE ARTS LEVEL K

LA LEVEL K

SIS NUMBER: 4000 SIS CODE: LA

COURSE DESCRIPTION (Levels K-6)

The course of study for language arts will ensure that each student will have mastered the basic skills of listening, speaking, reading, spelling, and penmanship. Through oral and written language, students will develop and expand their concepts of themselves, people, places, and events in the world-around them. Skills in drama emphasize the role of the student as a participant, observer/listener, and critic, as well as enriching the language arts.

4020-03 <u>04</u> .	Read the sight words and basal vocabulary required by the reading program.
4020-03 <u>05</u> .	Know antonyms, synonyms, homonyms, and multiple meaning words on the students' instructional level.
4020-03 <u>06</u> .	Identify the referent for most pronouns in context.
4020-03 <u>07</u> .	Comprehend word and sentence meanings.
4020-03 <u>08</u> .	Discriminate between a statement and a question.
4020-03 <u>09</u> .	Read and follow directions.
4020-03 <u>10</u> .	Alphabetize up to second letter.

4020-04 <u>01</u> .	Read a variety of self-selected material.
4020-04 <u>02</u> .	Identify main ideas and note the supporting details.
4020-04 <u>03</u> .	Recall the sequence of events in a story.
4020-04 <u>04</u> .	Identify characters, events, and settings.
4020-04 <u>05</u> .	Tell whether a selection is fantasy or if it could really have happened and why.
4020-04 <u>06</u> .	Respond creatively to poems, stories, and books.

STANDARD The students will learn the correct spelling	
4020- <u>05</u> (SPELLING)	

4020-05 <u>01</u> .	Develop visual and auditory memory of words.
4020-05 <u>02</u> .	Make generalizations about common spelling patterns.
4020-05 <u>03</u> .	Spell a second grade basic word list.
4020-05 <u>04</u> .	Write words and sentences from dictation.
4020-05 <u>05</u> .	Discriminate between correct and incorrect spelling of words on the students' level.
4020-05 <u>06</u> .	Show understanding of spelling words by being able to tell what they mean or by using them in a sentence.

I STANDARD The stude	nts will print legibly. (PENMANSHIP)
4020- <u>06</u>	

OBJECTIVES

4020-06 <u>01</u> .	Demonstrate correct formation and spacing of manuscript letters, words, and numbers.
4020-06 <u>02</u> .	Write name, address, and telephone number correctly.
4020-06 <u>03</u> .	Correct their own handwriting.
4020-06 <u>04</u> .	Demonstrate neatness in written work.

STANDARD The		
4020- <u>07</u> wri		

4020-07 <u>01</u> .	Generate ideas for writing.
4020-07 <u>02</u> .	Write personal experiences, stories, poetry, friendly letters, etc.
4020-07 <u>03</u> .	Recognize complete sentences.
4020-07 <u>04</u> .	Share written work with others.
4020-07 <u>05</u> .	Use capital letters, periods, and question marks.

Level 6 4606	Resources needed for research process.	Reading and research materials.	Appropriateness, currency, and relevancy.	Reading and responding as well as reciting mythological tales.

LIBRARY MEDIA LEVELS K-3

COURSE DESCRIPTION

An effective school library media program depends on the collaborative efforts of all those who are responsible for student learning. The coordination of curriculum development and implementation with the resources of the school library media center and the application of principles of information access to the content of the curriculum provide the basis for an effective program.

Following are the library media standards and objectives developed and refined by library media leaders in the state. The course description emphasizes that library media specialists/teachers and classroom teachers plan and teach cooperatively to link the practice of library media skills with other core areas. This ensures that students become more effective users of information.

The using of information is a basic skill necessary for all students. Foundation skills must be introduced and reinforced throughout the elementary grades to assure competence. These skills will be needed for pursuit of information in core curriculum standards and objectives in various subject areas and throughout life.

The purpose of the library media program is to help students become self-motivated, successful, problem-solving learners. Students must have formal training and practice in using information and resources. They must learn to find, evaluate, and synthesize information. They also must learn to appreciate the value of reading material in their lives through a variety of activities that encourage continual growth as readers who choose to read.

The library media skills core curriculum is based on four essential strands:

- 1. Identifying and locating information and resources.
- 2. Selecting and using information and resources.
- 3. Evaluating information and resources.
- 4. Appreciating and evaluating children's literature.

PREFACE

The State Core for Mathematics has been written based on the <u>Curriculum and Evaluation Standards</u> (1989) from the National Council of Teachers of Mathematics (NCTM). There are 13 standards in the State Core which reflect the NCTM Standards.

Each standard has an accompanying purpose statement which establishes rationale for its inclusion in the State Core; objectives which are measurable outcomes; and, grade level specific strategies which provide a means of teaching the objective at the specific grade level.

Because new types of assessment are necessary for some of the measurable outcomes as well as the standard type of testing, an asterisk (*) may be noted after a strategy. This would indicate that the strategy may be evaluated using alternative assessment procedures. Other types of assessment for inclusion in a curriculum would be performance assessment, observation, questioning techniques, interviews, portfolios, journals, and traditional paper-and-pencil tests.

MATHEMATICS LEVEL K

MATH LEVEL K

SIS NUMBER: 5000 SIS CODE: MA

STANDARD The students will apply mathematical concepts and skills 5000-01 to solve problems they encounter in daily living.

<u>PURPOSE</u>: Problem solving should be the central focus of the mathematics curriculum. As such, it is a primary goal of all mathematics instruction and is an integral part of all mathematical activity. Problem solving is not a distinct topic, but a process that should permeate the entire program and provide the context in which concepts and skills can be learned. Students should have many experiences in creating problems from real-world activities, organized data, and equations.

OBJECTIVES

5000-01 <u>01</u> .	Develop and apply problem-solving approaches to investigate and understand mathematical content.
5000-01 <u>02</u> .	Formulate problems from everyday and mathematical situations.
5000-01 <u>03</u> .	Develop and apply strategies to solve a wide variety of problems.
5000-01 <u>04</u> .	Verify and interpret results with respect to the original problem.
5000-01 <u>05</u> .	Acquire confidence in using mathematics meaningfully.

SKILLS AND STRATEGIES

- 1. Act out a story involving appropriate kindergarten mathematical concepts.*
- 2. Apply the use of manipulatives to model and solve problems.*
- 3. Draw a picture to illustrate and solve problems.*

STANDARD The students will show understanding and application	of
to agree the transfer of the control	01

5000-02 mathematical concepts and justification of solutions to	
problems by communicating in oral, pictorial, and/or	
written form.	

<u>PURPOSE</u>: This standard highlights the need to involve students individually in cooperative learning groups actively doing mathematics. Exploring, investigating, describing, and explaining mathematical ideas promotes communication. Teachers facilitate this process when they pose probing questions and invite students to explain their thinking.

OBJECTIVES

5000-02 <u>01</u> .	Relate physical materials, pictures, and diagrams to mathematical ideas.
5000-02 <u>02</u> .	Reflect on and clarify thinking about mathematical ideas and situations.
5000-02 <u>03</u> .	Relate everyday language to mathematical language and symbols.
5000-02 <u>04</u> .	Represent, discuss, read, write, and listen to mathematical ideas as a vital part of learning and using mathematics.

SKILLS AND STRATEGIES

1. Talk about sets of objects, numbers, and shapes.*

STANDARD The students will explain and justify logical reasoning 5000-03 strategies when working through (learning) a				
mathematical concept or solving a problem.	5000- <u>03</u> st	rategies when wo	rking through (le	earning) a

<u>PURPOSE</u>: A climate should be established in the classroom that places critical thinking at the heart of instruction. Both teachers' and students' statements should be open to question, reaction, and elaboration from others in the classroom. Such climate depends on all members of the class expressing genuine respect and support for one another's ideas. Students need to know that being able to explain and justify their thinking is necessary and that how a problem is solved is as important as its answer. This climate is established when students have opportunities to apply their reasoning skills and when justifying one's thinking is an expected component of problem discussions.

OBJECTIVES

5000-03 <u>01</u> .	Draw conclusions about mathematics.
5000-03 <u>02</u> .	Apply models, known facts, properties, and relationships to explain their thinking.
5000-03 <u>03</u> .	Justify their answers and solution processes.
5000-03 <u>04</u> .	Develop patterns and establish relationships in order to analyze mathematical situations.
5000-03 <u>05</u> .	Recognize the interrelatedness of mathematical concepts (mathematics makes sense).

SKILLS AND STRATEGIES

- 1. Identify similar objects according to common attributes. (Both objects are round.)
- 2. Establish relationships between two objects or two sets of objects. (The blue ball is bigger than the red ball. There are more triangles than circles.)

STANDARD The students			
STANDARD The students			
5000- <u>04</u> mathematical			
well as throu			
apply to dail			

<u>PURPOSE</u>: Mathematics is often seen by young students as a collection of separate and unrelated ideas. They also see it as unrelated to the other curricular areas and to their own lives. Computation, measurement, statistics, and problem solving tend to be taught in isolation. Students need to recognize the relationships among these various topics. Mathematical ideas also need to be connected to the students' everyday experiences, both in and out of school, so they become aware of the usefulness of mathematics. A classroom in which mathematical situations are explored in all curricular areas, as well as in events from outside the classroom, provides students the opportunity to see that mathematics is a necessary and valuable discipline.

OBJECTIVES

5000-04 <u>01</u> .	Link conceptual and procedural knowledge.
5000-04 <u>02</u> .	Relate various representations of concepts or procedures to one another.
5000-04 <u>03</u> .	Recognize relationships among different topics in mathematics.
5000-04 <u>04</u> .	Employ mathematics in other curricular areas.
5000-04 <u>05</u> .	Employ mathematics in their daily lives.

SKILLS AND STRATEGIES

- 1. At appropriate grade levels, CONNECTIONS should:
 - Occur between and among physical models, pictorial representations, and abstract symbols.
 - Include relating addition and subtraction, multiplication and division, addition and multiplication, subtraction and division.

- Include relating geometric models to procedures with numbers such as relationships between measurement and the number line and area models for numbers, including fractions and decimals.
- 2. Additional CONNECTIONS exist and should be developed between math and other curricular areas. Students should:
 - Recognize and develop mathematical situations that arise in literature.
 - Recognize and develop mathematical application that occurs in social studies (graphs, tables, map skills, etc.).
 - Recognize and develop the use of math skills and concepts in science (measurement, graphs, data analysis, classification, etc.).
 - Recognize and develop relationships between math and art (shapes, proportion, scale, tessellations, etc.).
 - Recognize and develop the use of mathematics in music (rhythm patterns, time signatures, note values, etc.).
 - Develop and use mathematics in the study of health and physical education (heart rhythms, blood pressure, calories, scores and measurements in games, etc.).

	The students will e	
STANDARD T		
5000-05 t		
	o demonstrate flex	
	measurement as the	
	ives.	

<u>PURPOSE</u>: Estimation presents students with another dimension of mathematics. Terms such as "about," "near," "closer to," "between," and "a little less than" illustrate that mathematics involves more than exactness. Estimation interacts with number sense and spatial sense to help students develop insights into concepts and procedures, flexibility in working with numbers and measurements, and an awareness of reasonable results. Estimation skills and understanding enhance the abilities of students to deal with everyday quantitative situations.

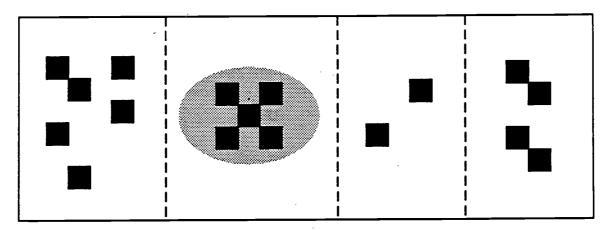

OBJECTIVES

5000-05 <u>01</u> .	Explore and develop estimation SKILLS AND STRATEGIES.
5000-05 <u>02</u> .	Recognize when it is appropriate to estimate.
5000-05 <u>03</u> .	Determine the reasonableness of results.
5000-05 <u>04</u> .	Apply estimation strategies in working with quantities, measurement, computation, and problem solving.

SKILLS AND STRATEGIES

1. Compare sets with less than ten members to a referent set using the terms "more than," "less than," and "about the same." (The set in the shaded area has five members. Without counting, classify the other sets as fewer than five, about five, or more than five.)*

STANDARD The s 5000- <u>06</u> numb			
	day world.	, , ,	· ·

<u>PURPOSE</u>: Students must understand numbers if they are to make sense of the ways numbers are used in their everyday world. They need to use numbers to quantify, identify location, identify a specific object in a collection, name, and measure. Furthermore, an understanding of place value is crucial for later work with numbers and computation concepts.

Students come to understand number meanings gradually. To encourage their understanding, teachers can offer classroom experiences in which students first manipulate physical objects and then use their own language to explain their thinking.

OBJECTIVES

5000-06 <u>01</u> .	Construct number meanings through real-world experiences and the use of physical materials.
5000-06 <u>02</u> .	Demonstrate an understanding of our numeration system by relating patterning, counting, grouping, and place-value concepts.
5000-06 <u>03</u> .	Develop number sense and interpret the multiple uses of numbers encountered in the real world.

SKILLS AND STRATEGIES

1. Classify objects by sorting into sets with similar attributes.

- 2. Construct models of numbers to ten.*
- 3. Apply counting strategies to determine the number of items in a set with less than ten elements.*
- 4. Identify which of two sets of objects has more or fewer elements.
- 5. Sort objects into groups of ten.*
- 6. Compare sets of objects to determine if they have the same number of objects.
- 7. Designate position of objects by using the ordinal numbers first, second, and third.
- 8. Identify examples of number usage in the environment (addresses, signs, room numbers).
- 9. Apply number skills to sets of objects in the environment. (Count the legs on your chair. Which family has more pets?)

operation on a pair or set of numbers.	Variation and a service of

<u>PURPOSE</u>: Understanding the fundamental operations of addition, subtraction, multiplication, and division is central to knowing mathematics. One essential component of what it means to understand an operation is recognizing conditions in real-world situations that indicate the operation would be useful in those situations. Other components include building an awareness of models and the properties of an operation, seeing relationships among operations, and acquiring insight into the effects of an operation on a pair of numbers. These four components are aspects of operation sense.

OBJECTIVES

5000-07 <u>01</u> .	Develop meaning for the operations by modeling and discussing a rich variety of problem situations.
5000-07 <u>02</u> .	Recognize and employ a wide variety of problem structures that can represent a single operation.
5000-07 <u>03</u> .	Relate the mathematical language and symbolism of operations to problem situations and informal language.
5000-07 <u>04</u> .	Develop operation sense.

SKILLS AND STRATEGIES

- 1. Identify conditions in real-world situations that would indicate joining or separating of sets.
- 2. Describe joining or separating of sets using informal language.*

STANDAR 5000- <u>0</u>	<u>8</u> techniques	through the	onstrate ability in use of paper and	pencil, mental
	math, esti	mation, and t	echnology to solve	e problems.

<u>PURPOSE</u>: The purpose of computation is to solve problems. While computation remains important in mathematics, as well as in the students' everyday lives, advances in technology require us to rethink how computation is done today. In many situations, answers are estimated or computed mentally, and we must prepare students to function in these situations. Students must also discover the usefulness of calculators in solving problems involving large numbers and tedious calculations. While proficiency with paper and pencil computation is still important, it cannot continue to dominate the mathematics curriculum. Other equally important mathematical topics and skills must also be learned to enable students to function as members of society in a highly technological world of the future and be prepared to pursue the careers of their choice.

The memorization of basic facts is necessary, but basic fact memorization should be incorporated into a truly rich curriculum rather than be its primary focus.

OBJECTIVES

5000-08 <u>01</u> .	Model, explain, and develop reasonable proficiency with basic facts and algorithms.
5000-08 <u>02</u> .	Employ a variety of mental computation and estimation techniques.
5000-08 <u>03</u> .	Demonstrate the ability to use calculators in appropriate computational situations.
5000-08 <u>04</u> .	Select and use computation techniques appropriate to specific problems and determine whether the results are reasonable.

SKILLS AND STRATEGIES

- 1. Model additional situations by joining sets of objects.*
- 2. Model subtraction situations by separating sets of objects.*

THE PROPERTY OF THE PARTY OF TH	er a legge Language et de galitik et sie		stern sthe relationship
STANDARD The	students will use	e geometry to exp	plore the relationship
5000- <u>09</u> of ot	hiects in the wor	ld in which we l	ve.
		and the state of t	Analysis and Challes source from the con-

<u>PURPOSE</u>: The study of geometry is an important part of the mathematics curriculum. Geometry helps us represent and describe the world in which we live. It should include investigations involving two- and three-dimensional models. In learning geometry, students need to investigate, experiment, and explore with everyday objects and with manipulatives.

OBJECTIVES

5000-09 <u>01</u> .	Describe, model, draw, and classify shapes.
5000-09 <u>02</u> .	Investigate and predict the results of combining, subdividing, and changing shapes.
5000-09 <u>03</u> .	Develop spatial sense.
5000-09 <u>04</u> .	Relate geometric ideas to number and measurement ideas.
5000-09 <u>05</u> .	Recognize and appreciate geometry in the world.

SKILLS AND STRATEGIES

- 1. Classify objects according to attributes such as size, shape, and color.
- 2. Recognize circles, squares, rectangles, parallelograms, rhombi, and triangles; and find examples in the students' environment.
- 3. Combine shapes to create two- or three- dimensional figures by using blocks or other manipulatives; find examples in the students' environment.*

STANDARD The st			
5000- <u>10</u> compai		nonstandard and stand	
	s U.S. Common and		

<u>PURPOSE</u>: Measurement is of central importance to the curriculum because of its power to help students see that mathematics is useful in everyday life and to help them develop many mathematical concepts and skills. Measurement is a natural context in which to introduce the need for learning about fractions and decimals, and it encourages students to be actively involved in discussing and solving problems.

Instruction at the K-4 level emphasizes the importance of establishing a firm foundation in the basic underlying concepts and skills of measurement. <u>Students should understand</u> that measurement is never exact.

OBJECTIVES

5000-10<u>01</u>. Understand the attributes of length, capacity, weight, area, volume, time, temperature, and angle.

5000-1002. Develop the process of measuring and concepts related to units of measurement.

5000-1003. Make and use estimates of measurement.

5000-1004. Make and use measurements in problem and everyday situations.

SKILLS AND STRATEGIES

- 1. Measure the length of objects by using non-standard units. (My pencil is as long as seven paper clips.)*
- 2. Compare two objects by specified attributes such as length, weight/mass, capacity/volume, or temperature.
- 3. Name the days of the week in order.
- 4. Recognize that calendars and blocks can be used for measuring time.

		vill collect, organize, d	
		while making decisions	
	based on that of		

<u>PURPOSE</u>: Collecting, organizing, describing, displaying, and interpreting data, as well as making decisions and predictions on the basis of that information, are skills that are increasingly important in a society based on technology and communication. The study of statistics and probability highlights the importance of questioning, conjecturing, and searching for relationships when formulating and solving real-world problems.

OBJECTIVES

5000-11 <u>01</u> .	Collect, organize, and describe data.
5000-11 <u>02</u> .	Construct, read, and interpret displays of data.
5000-11 <u>03</u> .	Formulate and solve problems that involve collecting and analyzing data.
5000-11 <u>04</u> .	Explore concepts of chance.

SKILLS AND STRATEGIES

- 1. Collect and organize objects and information.*
- 2. Construct and interpret real graphs; i.e., graphs made from people, blocks, and other materials which have been sorted and placed on a grid.*

5000- <u>1.2</u> to	describe r		ons and decimals pply it to
p _i	roblems.		

<u>PURPOSE</u>: Fractions and decimals represent a significant extension of students' knowledge about numbers. When students possess a sound understanding of fraction and decimal concepts, they can use this knowledge to describe real-world phenomena and apply it to problems involving measurement, probability, and statistics. An understanding of fractions and decimals broadens students' awareness of the usefulness and power of numbers and extends their knowledge of the number system. It is critical in grades K-4 to develop concepts and relationships that will serve as a foundation for more advanced concepts and skills.

The K-4 instruction should help students understand fractions and decimals, explore their relationship, and build initial concepts about order and equivalence. It is crucial that physical materials, diagrams, and real-world situations in conjunction with ongoing efforts to relate their learning experiences to oral language and symbols be used in instruction.

OBJECTIVES

5000-12 <u>01</u> . Develop concepts of fractions, mixed number	rs, and decimals.
---	-------------------

5000-1202. Develop number sense for fractions and decimals.

5000-12<u>03</u>. Relate fractions to decimals and find equivalent fractions through the use of models.

5000-1204. Apply fractions and decimals to problem situations.

SKILLS AND STRATEGIES

- 1. Share objects equally.
- 2. Cut models to illustrate congruent regions.*

STANDARD The students will identify and w 5000-13 understand how mathematics ap	vork with patterns to plies to the real world)

PURPOSE: Patterns are everywhere. Students who are encouraged to look for patterns and to express them mathematically begin to understand how mathematics applies to the world in which they live. Identifying and working with a wide variety of patterns helps students to develop the ability to classify and organize information. Relating patterns in numbers, geometry, and measurement helps them understand connections among mathematical topics. Such connections foster the kind of mathematical thinking that serves as a foundation for the more abstract ideas studied in the later grades.

OBJECTIVES

5000-13 <u>01</u> .	Recognize, describe, extend, and create a wide variety of patterns.
5000-13 <u>02</u> .	Represent and describe mathematical relationships.
5000-13 <u>03</u> .	Explore the use of variables and open sentences to express relationships.

SKILLS AND STRATEGIES

1. Identify, duplicate, and create patterns using personal and physical objects.*

MATHEMATICS LEVEL 1

MATH LEVEL 1

SIS NUMBER: 5010 SIS CODE: MA

STANDARD The students will apply mathematical concepts and skills 5010-01 to solve problems they encounter in daily living.

PURPOSE: Problem solving should be the central focus of the mathematics curriculum. As such, it is a primary goal of all mathematics instruction and is an integral part of all mathematical activity. Problem solving is not a distinct topic, but a process that should permeate the entire program and provide the context in which concepts and skills can be learned. Students should have many experiences in creating problems from real-world activities, organized data, and equations.

OBJECTIVES

5010-01 <u>01</u> .	Develop and apply problem-solving approaches to investigate and understand mathematical content.
5010-01 <u>02</u> .	Formulate problems from everyday and mathematical situations.
5010-01 <u>03</u> .	Develop and apply strategies to solve a wide variety of problems.
5010-01 <u>04</u> .	Verify and interpret results with respect to the original problem.
5010-01 <u>05</u> .	Acquire confidence in using mathematics meaningfully.

SKILLS AND STRATEGIES

- 1. Demonstrate an understanding of a problem by restating it in the students' own words.*
- 2. Formulate a plan to solve a problem by using one or more of the following strategies:*

Act out a story. Use manipulatives or models. Draw a picture.

 Create a problem and state it orally when given a picture, a model, or a real-life situation.*

<u>PURPOSE</u>: This standard highlights the need to involve students individually in cooperative learning groups actively doing mathematics. Exploring, investigating, describing, and explaining mathematical ideas promotes communication. Teachers facilitate this process when they pose probing questions and invite students to explain their thinking.

OBJECTIVES

5010-02 <u>01</u> .	Relate physical materials, pictures, and diagrams to mathematical ideas.
5010-02 <u>02</u> .	Reflect on and clarify thinking about mathematical ideas and situations.
5010-02 <u>03</u> .	Relate everyday language to mathematical language and symbols.
5010-02 <u>04</u> .	Represent, discuss, read, write, and listen to mathematical ideas as a vital part of learning and using mathematics.

SKILLS AND STRATEGIES

- 1. Demonstrate an understanding of a problem by restating it in the students' own words. (This is also in problem solving.)*
- 2. Represent mathematical topics studied at this grade level by drawing pictures or using objects.*
- 3. Discuss, read, and write about mathematical topics presented at this grade level. (Write 12 things you know about the number 6.)*
- 4. Develop mathematical vocabulary and symbols appropriate to this grade level and relate them to the students' informal language.
- 5. Discuss and write about attitudes concerning mathematics topics and lessons. (Possible journal entries: What I liked best about this lesson. What was easy and what was difficult about this lesson.)*

	nd justify logical reasoning	
STANDARD The student		
	hen working through (learnin	
5010-03 SKILLS ANI		
	olving a problem.	

PURPOSE: A climate should be established in the classroom that places critical thinking at the heart of instruction. Both teachers' and students' statements should be open to question, reaction, and elaboration from others in the classroom. Such climate depends on all members of the class expressing genuine respect and support for one another's ideas. Students need to know that being able to explain and justify their thinking is necessary and that how a problem is solved is as important as its answer. This climate is established when students have opportunities to apply their reasoning skills and when justifying one's thinking is an expected component of problem discussions.

OBJECTIVES

5010-03 <u>01</u> .	Draw conclusions about mathematics.
5010-03 <u>02</u> .	Apply models, known facts, properties, and relationships to explain their thinking.
5010-03 <u>03</u> .	Justify their answers and solution processes.
5010-03 <u>04</u> .	Develop patterns and establish relationships in order to analyze mathematical situations.
5010-03 <u>05</u> .	Recognize the interrelatedness of mathematical concepts (mathematics makes sense).

SKILLS AND STRATEGIES

- Manipulate objects to justify the answer to a problem.* 1.
- Describe objects and patterns created from objects by using attributes such as 2. size, shape, and color.

	The students wil		
STANDARD			
5010- <u>04</u>	mathematical con		
	well as througho		
	apply to daily li		

PURPOSE: Mathematics is often seen by young students as a collection of separate and unrelated ideas. They also see it as unrelated to the other curricular areas and to their own lives. Computation, measurement, statistics, and problem solving tend to be taught in isolation. Students need to recognize the relationships among these various topics. Mathematical ideas also need to be connected to the students' everyday experiences, both in and out of school, so they become aware of the usefulness of mathematics. A classroom in which mathematical situations are explored in all curricular areas, as well as in

events from outside the classroom, provides students the opportunity to see that mathematics is a necessary and valuable discipline.

OBJECTIVES

5010-0405.

5010-04 <u>01</u> .	Link conceptual and procedural knowledge.
5010-04 <u>02</u> .	Relate various representations of concepts or procedures to one another.
5010-04 <u>03</u> .	Recognize relationships among different topics in mathematics.
5010-0404.	Employ mathematics in other curricular areas.

Employ mathematics in their daily lives.

SKILLS AND STRATEGIES

- 1. At appropriate grade levels, CONNECTIONS should:
 - Occur between and among physical models, pictorial representations, and abstract symbols.
 - Include relating addition and subtraction, multiplication and division, addition and multiplication, subtraction and division.
 - Include relating geometric models to procedures with numbers such as relationships between measurement and the number line and area models for numbers, including fractions and decimals.
- 2. Additional **CONNECTIONS** exist and should be developed between math and other curricular areas. Students should:
 - Recognize and develop mathematical situations that arise in literature.
 - Recognize and develop mathematical application that occurs in social studies (graphs, tables, map skills, etc.).
 - Recognize and develop uses of math skills and concepts in science (measurement, graphs, data analysis, classification, etc.).
 - Recognize and develop relationships between math and art (shapes, proportion, scale, tessellations, etc.).
 - Recognize and develop the use of mathematics in music (rhythm patterns, time signatures, note values, etc.).
 - Develop and use mathematics in the study of health and physical education (heart rhythms, blood pressure, calories, scores and measurements in games, etc.).

STANDARD The students will employ estimation strategies in order to demonstrate flexibility in working with numbers and measurement as they relate to the students' everyday lives.

<u>PURPOSE</u>: Estimation presents students with another dimension of mathematics. Terms such as "about," "near," "closer to," "between," and "a little less than" illustrate that mathematics involves more than exactness. Estimation interacts with number sense and spatial sense to help students develop insights into concepts and procedures, flexibility in working with numbers and measurements, and an awareness of reasonable results. Estimation skills and understanding enhance the abilities of students to deal with everyday quantitative situations.

OBJECTIVES

5010-0501. Explore and develop estimation strategies.

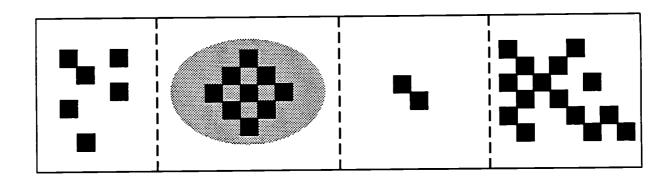

5010-0502. Recognize when it is appropriate to estimate.

5010-0503. Determine the reasonableness of results.

5010-0504. Apply estimation strategies in working with quantities, measurement, computation, and problem solving.

SKILLS AND STRATEGIES

1. Compare sets with less than 20 members to a referent set using the terms "more than," "less than," and "about the same." (Similar to grade K.)

2. Compare measurements of length with a referent. (Cut a string that will fit around the pumpkin. Is your string too long, too short, or just about right?)*

<u>PURPOSE</u>: Students must understand numbers if they are to make sense of the ways numbers are used in their everyday world. They need to use numbers to quantify, identify location, identify a specific object in a collection, name, and measure. Furthermore, an understanding of place value is crucial for later work with numbers and computation concepts.

Students come to understand number meanings gradually. To encourage their understanding, teachers can offer classroom experiences in which students first manipulate physical objects and then use their own language to explain their thinking.

OBJECTIVES

5010-06 <u>01</u> .	Construct number meanings through real-world experiences and the use of physical materials.
5010-06 <u>02</u> .	Demonstrate an understanding of our numeration system by relating patterning, counting, grouping, and place-value concepts.
5010-06 <u>03</u> .	Develop number sense and interpret the multiple uses of numbers encountered in the real world.

SKILLS AND STRATEGIES

- 1. Construct models of numbers to 100.*
- 2. Demonstrate an understanding of the concept of zero by using zero to designate the number of elements in the empty set.
- 3. Sort objects into groups of ten; tell how many tens and how many ones.*
- 4. Identify and write a two-digit numeral given a set of objects.
- 5. Identify and write a two-digit numeral given the number of tens and ones.
- 6. Identify the number of tens and ones when given a two-digit numeral.
- 7. Count orally by ones to 100, by twos to 20, by fives to 100, and by tens to 100.*
- 8. Write numbers to 99 in expanded form.*
- 9. Identify the whole number immediately before or after any number to 99.
- 10. Compare and order sets of objects according to the number of elements.

- 11. Identify examples of number usage in the environment (addresses, signs, license plates, phone numbers).
- 12. Apply number skills to sets of objects in the environment. (Count the number of people in your class; put your Valentine candy in sets of ten.)

<u>PURPOSE</u>: Understanding the fundamental operations of addition, subtraction, multiplication, and division is central to knowing mathematics. One essential component of what it means to understand an operation is recognizing conditions in real-world situations that indicate the operation would be useful in those situations. Other components include building an awareness of models and the properties of an operation, seeing relationships among operations, and acquiring insight into the effects of an operation on a pair of numbers. These four components are aspects of operation sense.

OBJECTIVES

5010-07 <u>01</u> .	Develop meaning for the operations by modeling and discussing a rich variety of problem situations.
5010-07 <u>02</u> .	Recognize and employ a wide variety of problem structures that can represent a single operation.
5010-07 <u>03</u> .	Relate the mathematical language and symbolism of operations to problem situations and informal language.
5010-0704.	Develop operation sense.

SKILLS AND STRATEGIES

- 1. Identify conditions in real-world situations that would indicate joining of sets, separating of sets, or comparison of sets.
- 2. Write an addition sentence for any given situation involving the joining of sets.
- 3. Write a subtraction sentence for any given situation involving the separation of sets, comparison of sets, or missing addend.
- 4. Develop and employ appropriate vocabulary and symbols to describe addition and subtraction--addition, plus, sum (+); subtraction, minus, difference (-); equal (=).
- 5. Demonstrate, through the use of manipulatives, that addition and subtraction are inverse operations. (Adding 3 apples and 4 apples gives you 7 apples.)*

- 6. Demonstrate, through the use of manipulatives, the commutative property of addition. (Adding 3 apples to 4 apples gives the same sum as adding 4 apples to 3 apples.)*
- 7. Recognize and employ the strategy that zero is the identity element for addition and subtraction. (3 + 0 = 3; 3 0 = 3)

PURPOSE: The purpose of computation is to solve problems. While computation remains important in mathematics, as well as in the students' everyday lives, advances in technology require us to rethink how computation is done today. In many situations, answers are estimated or computed mentally, and we must prepare students to function in these situations. Students must also discover the usefulness of calculators in solving problems involving large numbers and tedious calculations. While proficiency with paper and pencil computation is still important, it cannot continue to dominate the mathematics curriculum. Other equally important mathematical topics and skills must also be learned to enable students to function as members of society in a highly technological world of the future and be prepared to pursue the careers of their choice.

The memorization of basic facts is necessary, but basic fact memorization should be incorporated into a truly rich curriculum rather than be its primary focus.

OBJECTIVES

5010-08 <u>01</u> .	Model, explain, and develop reasonable proficiency with basic facts and algorithms.
5010-08 <u>02</u> .	Employ a variety of mental computation and estimation techniques.
5010-08 <u>03</u> .	Demonstrate the ability to use calculators in appropriate computational situations.
5010-08 <u>04</u> .	Select and use computation techniques appropriate to specific problems and determine whether the results are reasonable.

SKILLS AND STRATEGIES

- 1. Demonstrate knowledge of basic addition facts with sums to 12.
- 2. Demonstrate knowledge of basic subtraction facts with minuends to 12.
- 3. Add two and three addends with sums to 18 by using manipulatives and/or number lines.
- 4. Introduce addition of two-digit numerals using manipulatives.*

- 5. Select and use computation techniques appropriate to specific problems (paper and pencil algorithms, calculators, or mental computation) and determine whether the results are reasonable.*
- 6. Introduce the mental math strategy of matching up compatible numbers (7 + 4 + 3 + 6 = 10 + 10). Match the 7 and 3 to get 10 and match the 6 and 4 to get 10.*

			46 4 5 4

	a managements	"in the warta	in which we live
5010- <u>09</u> relations	11D #01 #UDICU13:		in which we live.
		95	

<u>PURPOSE</u>: The study of geometry is an important part of the mathematics curriculum. Geometry helps us represent and describe the world in which we live. It should include investigations involving two- and three-dimensional models. In learning geometry, students need to investigate, experiment, and explore with everyday objects and with manipulatives.

OBJECTIVES

5010-09 <u>01</u> .	Describe,	model,	draw,	and	classify	shapes.
---------------------	-----------	--------	-------	-----	----------	---------

5010-09 <u>02</u> .	Investigate and predict the results of combining, subdividing, and
	changing shapes.

5010-09 <u>03</u> . Develop	spatiai	sense.
-----------------------------	---------	--------

•	
5010-09 <u>04</u> .	Relate geometric ideas to number and measurement ideas.

5010-0905. Recognize and appreciate geometry in the world.

SKILLS AND STRATEGIES

- 1. Classify objects according to attributes such as size, shape, and color; describe these attributes by using the students' natural language.*
- 2. Identify and produce circles, squares, rectangles, trapezoids, parallelograms, rhombi, and triangles; find examples in the students' environment.*
- 3. Recognize a figure regardless of its orientation. (A triangle is still a triangle when rotated or flipped.)
- 4. Combine shapes to create two- or three-dimensional figures by using blocks or other manipulatives; find examples in the students' environment.*
- 5. Describe spatial relationships such as above, below, on, between, and behind by using pictures and manipulatives.*

21

		nderstand that measu	
STANDARD The			
5010- <u>10</u> com		s with nonstandard a	
	h as U.S. Commo		

<u>PURPOSE</u>: Measurement is of central importance to the curriculum because of its power to help students see that mathematics is useful in everyday life and to help them develop many mathematical concepts and skills. Measurement is a natural context in which to introduce the need for learning about fractions and decimals, and it encourages students to be actively involved in discussing and solving problems.

Instruction at the K-4 level emphasizes the importance of establishing a firm foundation in the basic underlying concepts and skills of measurement. <u>Students should understand</u> that measurement is never exact.

OBJECTIVES

5010-10 <u>01</u> .	Understand the attributes of length, capacity, weight, area, volume, time, temperature, and angle.
5010-10 <u>02</u> .	Develop the process of measuring and concepts related to units of measurement.
5010-10 <u>03</u> .	Make and use estimates of measurement.
5010-10 <u>04</u> .	Make and use measurements in problem and everyday situations.

SKILLS AND STRATEGIES

- 1. Estimate and measure the length, weight/mass, and capacity/volume of objects by using non-standard units. (My pencil is as long as seven paper clips. My eraser is as heavy as ____ lima beans.)*
- 2. Recognize and explain the need for uniform units of measurement.*
- 3. Determine appropriate devices for measuring length, weight/mass, capacity/volume, time, and temperature.
- 4. Compare objects by specified attributes such as length, weight/mass, capacity/volume, or temperature.
- 5. Estimate and measure the length of objects to the nearest centimeter and to the nearest inch.
- 6. Name the days of the week and the months of the year in order.
- 7. Tell time given clocks showing times in hours and half hours.
- 8. Identify pennies, nickels, dimes, and quarters and give the value of each.

PURPOSE: Collecting, organizing, describing, displaying, and interpreting data, as well as making decisions and predictions on the basis of that information, are skills that are increasingly important in a society based on technology and communication. The study of statistics and probability highlights the importance of questioning, conjecturing, and searching for relationships when formulating and solving real-world problems.

OBJECTIVES

5010-11 <u>01</u> .	Collect, organize, and describe data.
5010-11 <u>02</u> .	Construct, read, and interpret displays of data.
5010-11 <u>03</u> .	Formulate and solve problems that involve collecting and analyzing

5010-1104. Explore concepts of chance.

data.

SKILLS AND STRATEGIES

- 1. Collect and organize information from the students' environment.*
- 2. Construct and interpret real and picture graphs.
- 3. Given appropriate data, predict which outcomes are likely.*

	s will use knowledge of fractions a	
	real-world phenomena and apply i	
problems.		

PURPOSE: Fractions and decimals represent a significant extension of students' knowledge about numbers. When students possess a sound understanding of fraction and decimal concepts, they can use this knowledge to describe real-world phenomena and apply it to problems involving measurement, probability, and statistics. An understanding of fractions and decimals broadens students' awareness of the usefulness and power of numbers and extends their knowledge of the number system. It is critical in grades K-4 to develop concepts and relationships that will serve as a foundation for more advanced concepts and skills.

The K-4 instruction should help students understand fractions and decimals, explore their relationship, and build initial concepts about order and equivalence. It is crucial that physical materials, diagrams, and real-world situations in conjunction with ongoing efforts to relate their learning experiences to oral language and symbols be used in instruction.

OBJECTIVES

5010-1201. Develop concepts of fractions, mixed numbers, and decimals.

5010-1202. Develop number sense for fractions and decimals.

5010-1203. Relate fractions to decimals and find equivalent fractions through the

use of models.

5010-1204. Apply fractions and decimals to problem situations.

SKILLS AND STRATEGIES

1. Identify regions divided into congruent parts.

2. Divide regions into congruent parts.*

3. Specify a shaded portion as " _____ out of ____ parts" when given a region divided into six or fewer congruent parts.

4. Specify a subset as "_____ out of_____ parts" when given a set of six or fewer objects.

STANDARD The students will identify and work with patterns to 5.01.0-1.3 understand how mathematics applies to the real world.

<u>PURPOSE</u>: Patterns are everywhere. Students who are encouraged to look for patterns and to express them mathematically begin to understand how mathematics applies to the world in which they live. Identifying and working with a wide variety of patterns helps students to develop the ability to classify and organize information. Relating patterns in numbers, geometry, and measurement helps them understand connections among mathematical topics. Such connections foster the kind of mathematical thinking that serves as a foundation for the more abstract ideas studied in the later grades.

OBJECTIVES

5010-1301. Recognize, describe, extend, and create a wide variety of patterns.

5010-1302. Represent and describe mathematical relationships.

5010-13<u>03</u>. Explore the use of variables and open sentences to express relationship.

SKILLS AND STRATEGIES

1. Identify, duplicate, create, and describe patterns using objects with attributes such as size, shape, and color.*

- 2. Extend a repeating pattern.*
- 3. Label the repeating pattern (ABAB, ABBA, etc.).
- 4. Create a number pattern by skip counting.*
- 5. Identify patterns in the real world. (Days of the week, months of the year)

MATHEMATICS LEVEL 2

MATH LEVEL 2

SIS NUMBER: 5020 SIS CODE: MA

STANDARD The students will apply mathematical concepts and skills 5020-01 to solve problems they encounter in daily living.

<u>PURPOSE</u>: Problem solving should be the central focus of the mathematics curriculum. As such, it is a primary goal of all mathematics instruction and is an integral part of all mathematical activity. Problem solving is not a distinct topic, but a process that should permeate the entire program and provide the context in which concepts and skills can be learned. Students should have many experiences in creating problems from real-world activities, organized data, and equations.

OBJECTIVES

5020-01 <u>01</u> .	Develop and apply problem-solving approaches to investigate and understand mathematical content.
5020-01 <u>02</u> .	Formulate problems from everyday and mathematical situations.
5020-01 <u>03</u> .	Develop and apply strategies to solve a wide variety of problems.
5020-01 <u>04</u> .	Verify and interpret results with respect to the original problem.
5020-01 <u>05</u> .	Acquire confidence in using mathematics meaningfully.

SKILLS AND STRATEGIES

- 1. Solve a variety of problems (application, puzzle problems, open-ended, patterning, multi-step, etc.).
- 2. Demonstrate an understanding of a problem by restating it in the students' own words.*
- Formulate a plan to solve a problem by using one or more of the following strategies:*

Act out a story.
Use manipulatives or models.
Draw a picture.
Look for a pattern.

4. Create a problem and state it orally when given a picture, a model, or a real-life situation.*

5. Determine if the answer to a problem is reasonable.*

<u>PURPOSE</u>: This standard highlights the need to involve students individually in cooperative learning groups actively doing mathematics. Exploring, investigating, describing, and explaining mathematical ideas promotes communication. Teachers facilitate this process when they pose probing questions and invite students to explain their thinking.

OBJECTIVES

5020-02 <u>01</u> .	Relate physical materials, pictures, and diagrams to mathematical ideas.
5020-02 <u>02</u> .	Reflect on and clarify thinking about mathematical ideas and situations.
5020-02 <u>03</u> .	Relate everyday language to mathematical language and symbols.
5020-02 <u>04</u> .	Represent, discuss, read, write, and listen to mathematical ideas as a vital part of learning and using mathematics.

- 1. Demonstrate an understanding of a problem by restating it in the students' own words. (This is also in problem solving.)*
- 2. Represent mathematical topics studied at this grade level by drawing pictures or using objects.*
- 3. Discuss, read, and write about mathematical topics presented at this grade level. (Demonstrate to another student how to use base ten materials to model addition.)*
- 4. Develop mathematical vocabulary and symbols appropriate to this grade level and relate them to the students' informal language.
- Discuss and write about attitudes concerning mathematical topics and lessons.
 (Possible journal entries: What I liked best about this lesson. What was easy and what was difficult about this lesson.)*

STANDARD The students will explain and justify logical reasoning	
	2000 L P.
5020-03 strategies when working through (learning) a	achd ide
mathamatical concent of solution a nicolem.	5
mathematical concept or solving a problem.	

PURPOSE: A climate should be established in the classroom that places critical thinking at the heart of instruction. Both teachers' and students' statements should be open to question, reaction, and elaboration from others in the classroom. Such climate depends on all members of the class expressing genuine respect and support for one another's ideas. Students need to know that being able to explain and justify their thinking is necessary and that how a problem is solved is as important as its answer. This climate is established when students have opportunities to apply their reasoning skills and when justifying one's thinking is an expected component of problem discussions.

OBJECTIVES

5020-03 <u>01</u> .	Draw conclusions about mathematics.
5020-03 <u>02</u> .	Apply models, known facts, properties, and relationships to explain their thinking.
5020-03 <u>03</u> .	Justify their answers and solution processes.
5020-03 <u>04</u> .	Develop patterns and establish relationships in order to analyze mathematical situations.
5020-03 <u>05</u> .	Recognize the interrelatedness of mathematical concepts (mathematics makes sense).

- 1. Manipulate objects or drawings to justify the answer to a problem.*
- 2. Describe the relationship between numbers in a skip counting pattern. (You add two to each number when counting by twos.)
- 3. Compare and contrast circles, squares, rectangles, triangles, parallelograms, and rhombi.
- 4. Compare and contrast the characteristics of equilateral triangles with isosceles triangles, equilateral triangles with scalene triangles, and isosceles triangles with scalene triangles.

PURPOSE: Mathematics is often seen by young students as a collection of separate and unrelated ideas. They also see it as unrelated to the other curricular areas and to their own lives. Computation, measurement, statistics, and problem solving tend to be taught in isolation. Students need to recognize the relationships among these various topics. Mathematical ideas also need to be connected to the students' everyday experiences, both in and out of school, so they become aware of the usefulness of mathematics. A classroom in which mathematical situations are explored in all curricular areas, as well as in events from outside the classroom, provides students the opportunity to see that mathematics is a necessary and valuable discipline.

OBJECTIVES

5020-04 <u>01</u> .	Link conceptual and procedural knowledge.
5020-04 <u>02</u> .	Relate various representations of concepts or procedures to one another.
5020-04 <u>03</u> .	Recognize relationships among different topics in mathematics.
5020-04 <u>04</u> .	Employ mathematics in other curricular areas.
5020-04 <u>05</u> .	Employ mathematics in their daily lives.

- 1. At appropriate grade levels, CONNECTIONS should:
 - Occur between and among physical models, pictorial representations, and abstract symbols.
 - Include relating addition and subtraction, multiplication and division, addition and multiplication, subtraction and division.
 - Include relating geometric models to procedures with numbers such as relationships between measurement and the number line and area models for numbers, including fractions and decimals.
- 2. Additional CONNECTIONS exist and should be developed between math and other curricular areas. Students should:
 - Recognize and develop mathematical situations that arise in literature.
 - Recognize and develop mathematical application that occurs in social studies (graphs, tables, map skills, etc.).

- Recognize and develop uses of math skills and concepts in science (measurement, graphs, data analysis, classification, etc.).
- Recognize and develop relationships between math and art (shapes, proportion, scale, tessellations, etc.).
- Recognize and develop the use of mathematics in music (rhythm patterns, time signatures, note values, etc.).
- Develop and use mathematics in the study of health and physical education (heart rhythms, blood pressure, calories, scores and measurements in games, etc.).

STANDARD The students will employ estimation strategies in order 5020-05 to demonstrate flexibility in working with numbers and measurement as they relate to the students' everyday lives.

<u>PURPOSE</u>: Estimation presents students with another dimension of mathematics. Terms such as "about," "near," "closer to," "between," and "a little less than" illustrate that mathematics involves more than exactness. Estimation interacts with number sense and spatial sense to help students develop insights into concepts and procedures, flexibility in working with numbers and measurements, and an awareness of reasonable results. Estimation skills and understanding enhance the abilities of students to deal with everyday quantitative situations.

OBJECTIVES

5020-0501. Explore and develop estimation strategies.
5020-0502. Recognize when it is appropriate to estimate.
5020-0503. Determine the reasonableness of results.
5020-0504. Apply estimation strategies in working with quantities, measurement, computation, and problem solving.

- 1. Estimate quantities to 100 using a referent set. (Here are ten Valentine candies. About how many candies are in this jar?)
- 2. Compare measurements of length with a referent. (The garden is four paces wide. About how many paces wide is the lawn?)

STANDARD The	students will demonstrat		
		they apply to the students	
5020- <u>06</u> กบท			
	ryday world.		

<u>PURPOSE</u>: Students must understand numbers if they are to make sense of the ways numbers are used in their everyday world. They need to use numbers to quantify, identify location, identify a specific object in a collection, name, and measure. Furthermore, an understanding of place value is crucial for later work with numbers and computation concepts.

Students come to understand number meanings gradually. To encourage their understanding, teachers can offer classroom experiences in which students first manipulate physical objects and then use their own language to explain their thinking.

OBJECTIVES

5020-06 <u>01</u> .	Construct number meanings through real-world experiences and the use of physical materials.
5020-06 <u>02</u> .	Demonstrate an understanding of our numeration system by relating patterning, counting, grouping, and place-value concepts.
5020-06 <u>03</u> .	Develop number sense and interpret the multiple uses of numbers encountered in the real world.

- 1. Identify, read, and write a three-digit numeral given a physical model or an illustration of a place value model.*
- 2. Identify and write a three-digit numeral when given the number of hundreds, tens, and ones.*
- 3. Identify the place value position of hundreds, tens, and ones when given a three-digit numeral.
- 4. Write numbers to 999 in expanded form.*
- 5. Identify even and odd numbers to 20 using a physical model.*
- 6. Count by ones, twos, fives, and tens and recognize these counting patterns in numbers to 1,000.
- 7. Designate position by using ordinal numbers first through tenth.
- 8. Order a set of numerals from smallest to largest using numbers to 99.
- 9. Identify the whole number immediately before or after any number to 999.

- 10. Identify the number that is ten more or ten fewer than any number to 999.
- 11. Compare any two numbers from 0 to 99 using the symbols greater than (>) less than (<), and equal to (=).
- 12. Manipulate objects to demonstrate multiple ways of representing a number. (Fourteen can be represented as 10 and 4 ones, 2 sevens, one less than 15, or an even number.)*
- 13. Apply number skills to sets of objects in the environment. (Use "counting" by twos to determine the number of eyes in the classroom.)

		umbers to other
STANDARD The studen		
	y establishing re	
5020- <u>07</u> numbers b		
		of performing an
	on a pair or set i	

<u>PURPOSE</u>: Understanding the fundamental operations of addition, subtraction, multiplication, and division is central to knowing mathematics. One essential component of what it means to understand an operation is recognizing conditions in real-world situations that indicate the operation would be useful in those situations. Other components include building an awareness of models and the properties of an operation, seeing relationships among operations, and acquiring insight into the effects of an operation on a pair of numbers. These four components are aspects of operation sense.

OBJECTIVES

5020-07 <u>01</u> .	Develop meaning for the operations by modeling and discussing a rich variety of problem situations.
5020-07 <u>02</u> .	Recognize and employ a wide variety of problem structures that can represent a single operation.
5020-07 <u>03</u> .	Relate the mathematical language and symbolism of operations to problem situations and informal language.

5020-07<u>04</u>. Develop operation sense.

- Identify conditions in real-world situations that would indicate joining or separating of sets.
- 2. Construct models which relate counting patterns (twos, threes, and fives) to repeated addition of an equal number of objects.*
- 3. Organize sets of objects into smaller sets containing equal amounts.*

- 4. Write an addition sentence for any given situation involving the joining of sets.
- 5. Write a subtraction sentence for any given situation involving the separation of sets, comparison of sets, or missing addend.
- 6. Develop and employ appropriate vocabulary and symbols to describe addition and subtraction--addition, plus, sum, addends (+); subtraction, minus, difference (-); equals (=).
- 7. Demonstrate through the use of manipulatives that addition and subtraction are inverse operations. (Adding 7 blocks and 4 blocks gives you 11 blocks. If you have 11 blocks and you give 4 away, you will have 7 blocks.)*
- 8. Demonstrate, through the use of manipulatives, the commutative and associative properties of addition.

$$\Delta\Delta\Delta$$
 + $\Delta\Delta$ = $\Delta\Delta$ + $\Delta\Delta\Delta$, commutative

$$(\bullet \bullet + \bullet \bullet \bullet) + \bullet \bullet \bullet \bullet = \bullet \bullet + (\bullet \bullet \bullet + \bullet \bullet \bullet \bullet),$$
 associative

9. Recognize and employ the strategy that zero is the identity element for addition. (3 + 0 = 3; 3 - 0 = 3)

		chnology to solve	

PURPOSE: The purpose of computation is to solve problems. While computation remains important in mathematics, as well as in the students' everyday lives, advances in technology require us to rethink how computation is done today. In many situations, answers are estimated or computed mentally, and we must prepare students to function in these situations. Students must also discover the usefulness of calculators in solving problems involving large numbers and tedious calculations. While proficiency with paper and pencil computation is still important, it cannot continue to dominate the mathematics curriculum. Other equally important mathematical topics and skills must also be learned to enable students to function as members of society in a highly technological world of the future and be prepared to pursue the careers of their choice.

The memorization of basic facts is necessary, but basic fact memorization should be incorporated into a truly rich curriculum rather than be its primary focus.

OBJECTIVES

- 5020-0801. Model, explain, and develop reasonable proficiency with basic facts and algorithms.
- 5020-0802. Employ a variety of mental computation and estimation techniques.

5020-0803. Demonstrate the ability to use calculators in appropriate computational situations.

5020-0804. Select and use computation techniques appropriate to specific problems and determine whether the results are reasonable.

SKILLS AND STRATEGIES

- 1. Demonstrate knowledge of basic addition facts with sums to 18.
- 2. Demonstrate knowledge of basic subtraction facts with minuends to 18.
- 3. Determine the missing addend in a given problem.
- 4. Demonstrate algorithms for addition and subtraction of two-digit numerals through the use of manipulatives.*
- 5. Add and subtract two-digit numerals with and without regrouping.
- 6. Select and use computation techniques appropriate to specific problems (paperand-pencil algorithms, calculators, or mental computation) and determine whether the results are reasonable.*
- 7. Introduce the mental math strategy of matching up compatible numbers (27 + 34 + 13 + 46 = 40 + 80). Match the 27 and 13 to get 40 and match the 46 and 34 to get 80.*

5020-09 of objects in the world in which we live.

<u>PURPOSE</u>: The study of geometry is an important part of the mathematics curriculum. Geometry helps us represent and describe the world in which we live. It should include investigations involving two- and three-dimensional models. In learning geometry, students need to investigate, experiment, and explore with everyday objects and with manipulatives.

OBJECTIVES

5020-0901. Describe, model, draw, and classify shapes.

5020-0902. Investigate and predict the results of combining, subdividing, and changing shapes.

5020-09<u>03</u>. Develop spatial sense.

5020-0904. Relate geometric ideas to number and measurement ideas.

5020-0905. Recognize and appreciate geometry in the world.

SKILLS AND STRATEGIES

- 1. Identify, describe, and make circles, squares, rectangles, parallelograms, rhombi, trapezoids, and triangles; and find examples in the students' environment.*
- 2. Recognize a figure regardless of its orientation. (A triangle is still a triangle when rotated or flipped.)
- 3. Fold and cut geometric shapes into equal parts.*
- 4. Combine shapes to create two- or three-dimensional figures by using blocks or other manipulatives; describe the resulting figure.*
- 5. Identify and describe spheres, cubes, cylinders, and cones; find examples in the students' environment.*
- 6. Relate cubes and cylinders to the two-dimensional shapes from which they were created.*

STANDARD The stu			
5020- <u>10</u> compar			
	s U.S. Common and n		

<u>PURPOSE</u>: Measurement is of central importance to the curriculum because of its power to help students see that mathematics is useful in everyday life and to help them develop many mathematical concepts and skills. Measurement is a natural context in which to introduce the need for learning about fractions and decimals, and it encourages students to be actively involved in discussing and solving problems.

Instruction at the K-4 level emphasizes the importance of establishing a firm foundation in the basic underlying concepts and skills of measurement. Students should understand that measurement is never exact.

OBJECTIVES

5020-10 <u>01</u> .	Understand the attributes of length, capacity, weight, area, volume, time, temperature, and angle.
5020-10 <u>02</u> .	Develop the process of measuring and concepts related to units of measurement.
5020-10 <u>03</u> .	Make and use estimates of measurement.
5020-10 <u>04</u> .	Make and use measurements in problem and everyday situations.

- 1. Estimate and measure the length, weight/mass, and capacity/volume of objects by using non-standard units. (My pencil is as long as seven paper clips. My scissors are as heavy as _____ lima beans.)*
- Develop the concept of area by covering surfaces. (My desk can be covered with 16 tiles.)*
- 3. Determine appropriate devices for measuring length, weight/mass, capacity/volume, time, and temperature.
- 4. Compare objects and measurements to a given reference point using attributes such as length, weight/mass, capacity/volume, or temperature. (My bed is about two meters long. A quart is less than a gallon.)
- 5. Estimate and measure the length of objects or line segments to the nearest inch or foot and to the nearest centimeter or meter.
- 6. Measure the perimeter of regions in the environment using non-standard units.*
- 7. Estimate and measure weight/mass of objects to the nearest pound and to the nearest kilogram.*
- 8. Estimate and measure capacity/volume using cups, pints, and quarts and using liters.*
- 9. Measure time in hours, half-hours, quarter-hours, days, weeks, months, and years.
- 10. Determine the value of combinations of pennies, nickels, dimes, and/or quarters which total a dollar or less.
- 11. Determine if an item of a given price can be purchased with a given combination of coins.
- 12. Identify the value of dollars.
- 13. Use the cent (¢), dollar (\$), and decimal (.) symbols when writing values of money.
- 14. Read a thermometer using the Fahrenheit and Celsius scales.

PURPOSE: Collecting, organizing, describing, displaying, and interpreting data, as well as making decisions and predictions on the basis of that information, are skills that are increasingly important in a society based on technology and communication. The study of statistics and probability highlights the importance of questioning, conjecturing, and searching for relationships when formulating and solving real-world problems.

OBJECTIVES

5020-11 <u>01</u> .	Collect, organize, and describe data.
5020-11 <u>02</u> .	Construct, read, and interpret displays of data.
5020-11 <u>03</u> .	Formulate and solve problems that involve collecting and analyzing

5020-1104. Explore concepts of chance.

data.

SKILLS AND STRATEGIES

- 1. Collect data from the students' environment.*
- 2. Construct and interpret picture graphs, tally sheets, and bar graphs.*
- 3. Write a story problem using information from a graph.*
- 4. Explore games of chance and probability. (If the bag contains one red marble and two blue marbles, which color will most likely be chosen?)

PURPOSE: Fractions and decimals represent a significant extension of students' knowledge about numbers. When students possess a sound understanding of fraction and decimal concepts, they can use this knowledge to describe real-world phenomena and apply it to problems involving measurement, probability, and statistics. An understanding of fractions and decimals broadens students' awareness of the usefulness and power of numbers and extends their knowledge of the number system. It is critical in grades K-4 to develop concepts and relationships that will serve as a foundation for more advanced concepts and skills.

The K-4 instruction should help students understand fractions and decimals, explore their relationship, and build initial concepts about order and equivalence. It is crucial that physical materials, diagrams, and real-world situations in conjunction with

ongoing efforts to relate their learning experiences to oral language and symbols be used in instruction.

OBJECTIVES

5020-1201. Develop concepts of fractions, mixed numbers, and decimals.

5020-12<u>02</u>. Develop number sense for fractions and decimals.

5020-12<u>03</u>. Relate fractions to decimals and find equivalent fractions through the use of models.

5020-12<u>04</u>. Apply fractions and decimals to problem situations.

SKILLS AND STRATEGIES

- 1. Name and write a fraction to represent an indicated portion when given a region divided into ten or fewer congruent parts.*
- 2. Name and write a fraction to represent a subset when given a set of ten or fewer objects.*
- 3. Explore with manipulatives the relative size of fractions less than one using 1/2 and 1 as reference points.*
- 4. Illustrate a given fraction using sets and/or models with congruent regions.*

STANDARD The students will identify and work with patterns to 5020-13 understand how mathematics applies to the real world.

<u>PURPOSE</u>: Patterns are everywhere. Students who are encouraged to look for patterns and to express them mathematically begin to understand how mathematics applies to the world in which they live. Identifying and working with a wide variety of patterns helps students to develop the ability to classify and organize information. Relating patterns in numbers, geometry, and measurement helps them understand connections among mathematical topics. Such connections foster the kind of mathematical thinking that serves as a foundation for the more abstract ideas studied in the later grades.

OBJECTIVES

5020-13<u>01</u>. Recognize, describe, extend, and create a wide variety of patterns.

5020-1302. Represent and describe mathematical relationships.

5020-13<u>03</u>. Explore the use of variables and open sentences to express

relationship.

SKILLS AND STRATEGIES

- 1. Identify, duplicate, create, and describe patterns using objects and pictures.*
- 2. Identify and extend a growing pattern.*
- 3. Continue a number pattern by using addition (7, 10, 13 . . .).
- 4. Investigate skip counting and other number patterns by using the constant feature on a calculator.*
- 5. Identify patterns in the real world (water cycle, seasons).

MATHEMATICS LEVEL 3

MATH LEVEL 3

SIS NUMBER: 5030 SIS CODE: MA

STANDARD The students will apply mathematical concepts and skills 5030-01 to solve problems they encounter in daily living.

<u>PURPOSE</u>: Problem solving should be the central focus of the mathematics curriculum. As such, it is a primary goal of all mathematics instruction and is an integral part of all mathematical activity. Problem solving is not a distinct topic, but a process that should permeate the entire program and provide the context in which concepts and skills can be learned. Students should have many experiences in creating problems from real-world activities, organized data, and equations.

OBJECTIVES

Develop and apply problem-solving approaches to investigate and understand mathematical content.
Formulate problems from everyday and mathematical situations.
Develop and apply strategies to solve a wide variety of problems.
Verify and interpret results with respect to the original problem.
Acquire confidence in using mathematics meaningfully.

SKILLS AND STRATEGIES

- 1. Solve a variety of problems (application, puzzle problems, open-ended, patterning, multi-step, etc.).
- 2. Demonstrate an understanding of a problem by restating it in the students' own words.*
- 3. Formulate a plan to solve a problem by using one or more of the following strategies:*

Use manipulatives or models. Draw a picture or diagram. Look for a pattern. Choose the operation. Guess and check.

4. Write a number sentence to solve a problem involving addition or subtraction.

- 5. Use a calculator in appropriate problem-solving situations.
- 6. Recognize when a problem is similar to others previously solved.
- 7. Write a problem for others to solve when given a picture, a model, or a real life situation.*
- 8. Determine if the answer to a problem is reasonable.*

		and application of
STANDARD The stu		
5030- <u>02</u> mathem		on of solutions to
		pictorial, and/or
written		

<u>PURPOSE</u>: This standard highlights the need to involve students individually in cooperative learning groups actively doing mathematics. Exploring, investigating, describing, and explaining mathematical ideas promotes communication. Teachers facilitate this process when they pose probing questions and invite students to explain their thinking.

OBJECTIVES

5030-02 <u>01</u> .	Relate physical materials, pictures, and diagrams to mathematical ideas.
5030-02 <u>02</u> .	Reflect on and clarify thinking about mathematical ideas and situations.
5030-02 <u>03</u> .	Relate everyday language to mathematical language and symbols.
5030-02 <u>04</u> .	Represent, discuss, read, write, and listen to mathematical ideas as a vital part of learning and using mathematics.

SKILLS AND STRATEGIES

- 1. Demonstrate an understanding of a problem by restating it in the students' own words. (This is also in problem solving.)*
- 2. Represent mathematical topics studied at this grade level by drawing pictures or diagrams or by using objects.*
- Discuss, read, and write about mathematical topics presented at this grade level.
 (Demonstrate to another student how to use tiles to build an array to represent a multiplication fact.)*
- 4. Develop mathematical vocabulary and symbols appropriate to this grade level and relate them to the students' informal language.

5. Discuss and write about attitudes concerning mathematics topics and lessons. (Possible journal entries: What I liked best about this lesson. What was easy and what was difficult about this lesson.)*

STANDARD The students will explain and justify logical reasoning 5030-03 strategies when working through (learning) a mathematical concept or solving a problem.

<u>PURPOSE</u>: A climate should be established in the classroom that places critical thinking at the heart of instruction. Both teachers' and students' statements should be open to question, reaction, and elaboration from others in the classroom. Such climate depends on all members of the class expressing genuine respect and support for one another's ideas. Students need to know that being able to explain and justify their thinking is necessary and that how a problem is solved is as important as its answer. This climate is established when students have opportunities to apply their reasoning skills and when justifying one's thinking is an expected component of problem discussions.

OBJECTIVES

5030-03 <u>01</u> .	Draw conclusions about mathematics.
5030-03 <u>02</u> .	Apply models, known facts, properties, and relationships to explain their thinking.
5030-03 <u>03</u> .	Justify their answers and solution processes.
5030-03 <u>04</u> .	Develop patterns and establish relationships in order to analyze mathematical situations.
5030-03 <u>05</u> .	Recognize the interrelatedness of mathematical concepts (mathematics makes sense).

- 1. Manipulate objects, drawings, or diagrams to justify the answer to a problem.*
- 2. Compare and contrast geometric figures.
- 3. Employ knowledge of addition or subtraction to describe the relationship between numbers in a pattern (8, 13, 18, 23 . . . is a pattern created by adding 5 to each number.)

STANDARD The st	udents will recognize	the interrelatedness	of www.iii
- ANY (ATT) AT LOST COLOS CONTRACTOS DE C			
	natical concepts within		
well as	throughout other dis	ciplines, especially	as they
apply	to daily living.		

<u>PURPOSE</u>: Mathematics is often seen by young students as a collection of separate and unrelated ideas. They also see it as unrelated to the other curricular areas and to their own lives. Computation, measurement, statistics, and problem solving tend to be taught in isolation. Students need to recognize the relationships among these various topics. Mathematical ideas also need to be connected to the students' everyday experiences, both in and out of school, so they become aware of the usefulness of mathematics. A classroom in which mathematical situations are explored in all curricular areas, as well as in events from outside the classroom, provides students the opportunity to see that mathematics is a necessary and valuable discipline.

OBJECTIVES

5030-04 <u>01</u> .	Link conceptual and procedural knowledge.
5030-04 <u>02</u> .	Relate various representations of concepts or procedures to one another.
5030-04 <u>03</u> .	Recognize relationships among different topics in mathematics.
5030-04 <u>04</u> .	Employ mathematics in other curricular areas.
5030-04 <u>05</u> .	Employ mathematics in their daily lives.

- 1. At appropriate grade levels, CONNECTIONS should:
 - Occur between and among physical models, pictorial representations, and abstract symbols.
 - Include relating addition and subtraction, multiplication and division, addition and multiplication, subtraction and division.
 - Include relating geometric models to procedures with numbers such as relationships between measurement and the number line and area models for numbers, including fractions and decimals.
- 2. Additional **CONNECTIONS** exist and should be developed between math and other curricular areas. Students should:
 - Recognize and develop mathematical situations that arise in literature.
 - Recognize and develop mathematical application that occurs in social studies (graphs, tables, map skills, etc.).

- Recognize and develop uses of math skills and concepts in science (measurement, graphs, data analysis, classification, etc.).
- Recognize and develop relationships between math and art (shapes, proportion, scale, tessellations, etc.).
- Recognize and develop the use of mathematics in music (rhythm patterns, time signatures, note values, etc.).
- Develop and use mathematics in the study of health and physical education (heart rhythms, blood pressure, calories, scores and measurements in games, etc.).

STANDARD The students will employ estimation strategies in order to demonstrate flexibility in working with numbers and measurement as they relate to the students' everyday lives.

PURPOSE: Estimation presents students with another dimension of mathematics. Terms such as "about," "near," "closer to," "between," and "a little less than" illustrate that mathematics involves more than exactness. Estimation interacts with number sense and spatial sense to help students develop insights into concepts and procedures, flexibility in working with numbers and measurements, and an awareness of reasonable results. Estimation skills and understanding enhance the abilities of students to deal with everyday quantitative situations.

OBJECTIVES

5030-0501. Explore and develop estimation strategies.

5030-0502. Recognize when it is appropriate to estimate.

5030-0503. Determine the reasonableness of results.

5030-0504. Apply estimation strategies in working with quantities, measurement, computation, and problem solving.

- 1. Determine when it is appropriate to estimate.
- 2. Determine when an estimate is reasonable.
- 3. Estimate quantities using a referent set. (Here are 100 nails. About how many nails are in this package?)
- 4. Employ estimation strategies to determine if results are reasonable when solving word and real-life problems requiring computation.*

- 5. Employ estimation strategies to determine if results obtained when using a calculator are reasonable.
- 6. Employ the following strategies when estimating sums and differences:
 - Making tens (3 + 4 + 7 = 10 + 4).
 - Compatible numbers for addition and subtraction (30 + 47 + 70 = 100 + 47).
 - Front-end estimation (24 + 47 might be estimated by thinking: 20 and 40 are 60, 4 and 7 are over 10, so the sum is a little more than 70).
 - A flexible use of rounding (43 is just under 45 and 21 is just over 20, so the sum is about 65).

STANDARD The students		
5030- <u>06</u> numbers (nur		
everyday wo		

<u>PURPOSE</u>: Students must understand numbers if they are to make sense of the ways numbers are used in their everyday world. They need to use numbers to quantify, identify location, identify a specific object in a collection, name, and measure. Furthermore, an understanding of place value is crucial for later work with numbers and computation concepts.

Students come to understand number meanings gradually. To encourage their understanding, teachers can offer classroom experiences in which students first manipulate physical objects and then use their own language to explain their thinking.

OBJECTIVES

- 5030-0601. Construct number meanings through real-world experiences and the use of physical materials.
- 5030-0602. Demonstrate an understanding of our numeration system by relating patterning, counting, grouping, and place-value concepts.
- 5030-06<u>03</u>. Develop number sense and interpret the multiple uses of numbers encountered in the real world.

- 1. Construct models of numbers to 10,000.*
- 2. Identify and write a four-digit numeral when given a physical model or an illustration of a place value model.*

- Identify and write a four-digit numeral when given the number of thousands, hundreds, tens, and ones.*
- 4. Identify the place value position of thousands, hundreds, tens, and ones when given a four-digit numeral.
- 5. Write numbers '> 9,999 in expanded form.*
- Identify even and odd numbers to 100.
- 7. Identify the number that is 10 more or 10 fewer than any number to 9,999.
- 8. Identify the number that is 100 more or 100 fewer than any number to 9,999.
- 9. Compare numbers between 1 and 9,999 using the symbols greater than (>), less than (<), and equal to (=).
- 10. Demonstrate multiple ways to represent a number by using manipulatives. (Fifty can be represented as 5 tens, 2 groups of 25, or 4 tens, and 10 ones.)*
- 11. Interpret the relative magnitude (size) of numbers. (Thirty-one is large compared to 4, about half as big as 60, close to the number 27.)
- 12. Apply number skills to sets of objects in the environment. (One brand of dog food costs more than another brand.)

	nations of numbers to other
mbers by establishing relati d by acquiring insights into	the effects of performing an
eration on a pair or set of r	

<u>PURPOSE</u>: Understanding the fundamental operations of addition, subtraction, multiplication, and division is central to knowing mathematics. One essential component of what it means to understand an operation is recognizing conditions in real-world situations that indicate the operation would be useful in those situations. Other components include building an awareness of models and the properties of an operation, seeing relationships among operations, and acquiring insight into the effects of an operation on a pair of numbers. These four components are aspects of operation sense.

OBJECTIVES

- 5030-07<u>01</u>. Develop meaning for the operations by modeling and discussing a rich variety of problem situations.
- 5030-07<u>02</u>. Recognize and employ a wide variety of problem structures that can represent a single operation.

5030-07<u>03</u>. Relate the mathematical language and symbolism of operations to problem situations and informal language.

5030-0704. Develop operation sense.

SKILLS AND STRATEGIES

- 1. Develop models (number lines, manipulatives) and pictures to represent multiplication as repeated addition and arrays.*
- 2. Develop models (number lines, manipulatives) and pictures to represent division as sharing and repeated subtraction.*
- 3. Determine which operation (addition, subtraction, or multiplication) can be used to solve problems involving computation.
- 4. Represent any given situation involving the separation of sets, comparison of sets, or missing addend as subtraction.
- 5. Write a multiplication sentence for any given situation involving repeated addition and arrays.
- 6. Develop and employ appropriate vocabulary and symbols to describe addition, subtraction, and multiplication--addition, plus, sum, addends (+); subtraction, minus, difference (-); equal (=); equation, multiplication, factor, products (x).
- 7. Demonstrate through the use of manipulatives that multiplication and division are inverse operations. $(3 \times 4 = 12; 12 + 4 = 3)^*$
- 8. Demonstrate through the use of manipulatives the commutative and associative properties of multiplication. $[3 \times 4 = 4 \times 3; 3 \times (4 \times 5) = (3 \times 4) \times 5]^*$
- 9. Recognize and employ the strategy that one is the identify element for multiplication and division. $(7 \times 1 = 7; 7 \div 1 = 7)^*$
- 10. Recognize and employ the strategy that when zero is a factor, the product is zero.*

STANDARD The students will demonstrate ability in computational techniques through the use of paper and pencil, mental math, estimation, and technology to solve problems.

<u>PURPOSE</u>: The purpose of computation is to solve problems. While computation remains important in mathematics, as well as in the students' everyday lives, advances in technology require us to rethink how computation is done today. In many situations, answers are estimated or computed mentally, and we must prepare students to function in these situations. Students must also discover the usefulness of calculators in solving problems involving large numbers and tedious calculations. While proficiency with paper and pencil computation is still important, it cannot continue to dominate the

mathematics curriculum. Other equally important mathematical topics and skills must also be learned to enable students to function as members of society in a highly technological world of the future and be prepared to pursue the careers of their choice.

The memorization of basic facts is necessary, but basic fact memorization should be incorporated into a truly rich curriculum rather than be its primary focus.

OBJECTIVES

5030-08 <u>01</u> .	Model, explain, and develop reasonable proficiency with basic facts and algorithms.
5030-08 <u>02</u> .	Employ a variety of mental computation and estimation techniques.
5030-08 <u>03</u> .	Demonstrate the ability to use calculators in appropriate computational situations.
5030-08 <u>04</u> .	Select and use computation techniques appropriate to specific problems and determine whether the results are reasonable.

- 1. Demonstrate algorithms for addition and subtraction of three-digit numerals by using manipulatives.*
- 2. Add and subtract any two numbers less than 1000, including monetary amounts.
- 3. Demonstrate knowledge of basic multiplication facts through 9 x 9.
- Provide the missing factor in a multiplication sentence by using basic facts (7 x = 28).
- Illustrate multiplication of a two-digit numeral by a one-digit multiplier by using manipulatives and pictures.*
- 6. Select and use computation techniques appropriate to specific problems (paperand-pencil algorithms, calculators, or mental computation) and determine whether the results are reasonable.*
- 7. Introduce the mental math strategy of matching compatible numbers (27 + 34 + 46 + 13 = 40 + 80). Match the 27 and 13 to get 40 and match the 46 and 34 to get 80.*
- 8. Introduce the mental math strategies of front-end estimating, rounding, and thinking money to solve problems.*

STANDARD The		plore the relationship
5030- <u>09</u> of ot	ejects in the world	

<u>PURPOSE</u>: The study of geometry is an important part of the mathematics curriculum. Geometry helps us represent and describe the world in which we live. It should include investigations involving two- and three-dimensional models. In learning geometry, students need to investigate, experiment, and explore with everyday objects and with manipulatives.

OBJECTIVES

5030-09 <u>01</u> .	Describe, model, draw, and classify shapes.
5030-09 <u>02</u> .	Investigate and predict the results of combining, subdividing, and changing shapes.
5030-09 <u>03</u> .	Develop spatial sense.
5030-09 <u>04</u> .	Relate geometric ideas to number and measurement ideas.
5030-09 <u>05</u> .	Recognize and appreciate geometry in the world.

- 1. Identify, describe, and make rhombi and kites and find examples in the students' environment.*
- 2. Describe two-dimensional figures by using the following terms: point, line, and line segment.*
- 3. Identify and describe angles.*
- 4. Determine if an angle is equal to, greater than, or less than a right angle by using the corner of a rectangle to make a comparison.
- 5. Compare and contrast two figures to determine if they are congruent.
- 6. Fold and cut figures into equal parts to demonstrate symmetry.
- 7. Combine shapes to create two- or three-dimensional figures by using blocks or other manipulatives; describe the resulting figure.*
- 8. Identify, make, and describe cubes, pyramids, and cylinders; relate them to the two-dimensional shapes from which they were created.*
- 9. Identify and describe spheres, and relate them to objects in the students' environment.*

<u>PURPOSE</u>: Measurement is of central importance to the curriculum because of its power to help students see that mathematics is useful in everyday life and to help them develop many mathematical concepts and skills. Measurement is a natural context in which to introduce the need for learning about fractions and decimals, and it encourages students to be actively involved in discussing and solving problems.

Instruction at the K-4 level emphasizes the importance of establishing a firm foundation in the basic underlying concepts and skills of measurement. Students should understand that measurement is never exact.

OBJECTIVES

5030-10 <u>01</u> .	Understand the attributes of length, capacity, weight, area, volume, time, temperature, and angle.
5030-10 <u>02</u> .	Develop the process of measuring and concepts related to units of measurement.
5030-10 <u>03</u> .	Make and use estimates of measurement.
5030-10 <u>04</u> .	Make and use measurements in problem and everyday situations.

- Recognize that two systems of standard measurement are used: metric and U. S. Common.
- Determine appropriate devices and units for measuring length, weight/mass, capacity/volume, time, and temperature.
- 3. Estimate and measure the length of objects or line segments to the nearest half-inch, foot, or yard and to the nearest centimeter or meter.*
- 4. Describe the relationship of centimeter to meter.*
- 5. Estimate and measure the perimeter of regions in the environment and the perimeter of two-dimensional figures using non-standard or standard units.*
- 6. Estimate and measure the area of a surface by covering with tiles or other non-standard units.*
- 7. Estimate and measure weight/mass of objects to the nearest ounce or pound and to the nearest gram or kilogram.*

- 8. Estimate and measure capacity/volume using cups, pints, quarts, or gallons and using milliliters or liters.*
- 9 Tell time to the nearest minute.
- 10. Determine the value of combinations of coins and bills which total five dollars or less.
- 11. Determine if an item of a given price can be purchased with a given combination of coins and bills.
- 12. Use the cent (¢), dollar (\$), and decimal (.) symbols when writing values of money.
- 13. Read a thermometer using the Fahrenheit and Celsius scales; make decisions based on this information. (I will or will not need a coat today.)

00000000000000000000000000000000000000	that data.	

<u>PURPOSE</u>: Collecting, organizing, describing, displaying, and interpreting data, as well as making decisions and predictions on the basis of that information, are skills that are increasingly important in a society based on technology and communication. The study of statistics and probability highlights the importance of questioning, conjecturing, and searching for relationships when formulating and solving real-world problems.

OBJECTIVES

5030-11 <u>01</u> .	Collect, organize, and describe data.
---------------------	---------------------------------------

5030-1102. Construct, read, and interpret displays of data.

5030-1103. Formulate and solve problems that involve collecting and analyzing data.

5030-1104. Explore concepts of chance.

- 1. Collect data from the students' environment.*
- 2. Construct and interpret picture graphs, tally sheets, and bar graphs.*
- 3. Write a story problem using information from a graph.*

4. Explore games of chance and probability. (If the bag contains two red marbles and five blue marbles, which color will most likely be chosen. This should involve the concept of with and without replacement.)*

STANDARD The students will use knowledge of fractions and decimals 5030-12 to describe real-world phenomena and apply it to problems.

<u>PURPOSE</u>: Fractions and decimals represent a significant extension of students' knowledge about numbers. When students possess a sound understanding of fraction and decimal concepts, they can use this knowledge to describe real-world phenomena and apply it to problems involving measurement, probability, and statistics. An understanding of fractions and decimals broadens students' awareness of the usefulness and power of numbers and extends their knowledge of the number system. It is critical in grades K-4 to develop concepts and relationships that will serve as a foundation for more advanced concepts and skills.

The K-4 instruction should help students understand fractions and decimals, explore their relationship, and build initial concepts about order and equivalence. It is crucial that physical materials, diagrams, and real-world situations in conjunction with ongoing efforts to relate their learning experiences to oral language and symbols be used in instruction.

OBJECTIVES

5030-12 <u>03</u> .	Relate fractions to decimals and find equivalent fractions through the use of models.
5030-12 <u>02</u> .	Develop number sense for fractions and decimals.
5030-12 <u>01</u> .	Develop concepts of fractions, finized flumbers, and decimals.

5030-12<u>04</u>. Apply fractions and decimals to problem situations.

- 1. Name and write a fraction to represent a portion of a unit when given congruent line segments or regions divided into congruent parts.*
- Name and write a mixed numeral when given a model of a problem.*
- Name and write a fraction to represent a subset when given a set of objects.*
- 4. Identify and generate equivalent fractions by using models or diagrams.*
- 5. Determine which is larger or smaller by using physical models or illustrations when given a pair of fractions.*

6. Name and write a decimal fraction and a common fraction to represent tenths when given physical models such as base ten materials and/or money.*

4 out of
$$10 = 0.4 = 4/10^{\circ}$$

7. Count and continue patterns using decimal fractions to tenths when given models and illustrations. (...0.5, 0.6, 0.7...)*

STANDARD The students will identify and work with patterns to 5030-13 understand how mathematics applies to the real world.

<u>PURPOSE</u>: Patterns are everywhere. Students who are encouraged to look for patterns and to express them mathematically begin to understand how mathematics applies to the world in which they live. Identifying and working with a wide variety of patterns helps students to develop the ability to classify and organize information. Relating patterns in numbers, geometry, and measurement helps them understand connections among mathematical topics. Such connections foster the kind of mathematical thinking that serves as a foundation for the more abstract ideas studied in the later grades.

OBJECTIVES

- 5030-1301. Recognize, describe, extend, and create a wide variety of patterns.
- 5030-1302. Represent and describe mathematical relationships.
- 5030-13<u>03</u>. Explore the use of variables and open sentences to express relationship.

- 1. Identify, duplicate, extend, create, and describe geometric and numerical patterns.*
- 2. Create and use tables as a technique for analyzing and reporting patterns.*
- 3. Continue a number pattern by using addition or subtraction (8, 13, 18, 23 . . and 98, 95, 92 . . .).
- 4. Investigate addition, subtraction, and other number patterns by using the constant feature on a calculator.*
- 5. Identify patterns in the real world (traffic patterns, patterns in nature).

CONCEPTS/SKILLS

- The students manipulate objects to justify the answer to a problem.
- The students describe objects and patterns created from objects by using attributes such as size, shape, and color.
- Sets (with less than 20 members) can be compared to a referent set using the terms "more than," "less than," and "about the same."
- Measurement of length can be compared with a referent.
- Numbers (up to 100) can be represented by numerals.
- Zero designates the number of elements in the empty set.
- Objects can be sorted into groups of ten.
- Groups of ones and tens can demonstrate place value.
- The place value of a digit can be identified by its position in the ones or tens place.
- Place value (to 99) can be expressed using expanded notation (99 = 90 + 9; 99 = 9 tens + 9 ones).
- Numbers can be counted orally by 1s (to 100), by 2s (to 20), by 5s (to 100), and by 10s (to 100).
- "One more than" and "one less than" can be determined for numbers (to 99).
- The students use objects to order and compare numbers.
- Numbers are used in the student's environment.
- The joining, separating, and comparison of sets occurs in real-world situations.
- An addition sentence can be written for any given situation involving the joining of sets.
- A subtraction sentence can be written for any given situation involving the separation of sets, comparison of sets, or missing addends.
- Addition may be described with the words addition, plus, and sum, and with the symbol (+).
- Subtraction may be described with the words subtraction, minus, and difference, and with the symbol (-).
- Equality may be described with the word equal and the symbol (=).

Level 1

- · Addition and subtraction are inverse operations.
- Addition is commutative.
- · Zero is the identity element for addition and subtraction.
- The students know basic addition facts (with sums to 12).
- The students know basic subtraction facts (with minuends to 12).
- Manipulatives may be used to add two and three addends (with sums to 18).
- Manipulatives may be used to add two-digit numerals.
- The students select and use computation techniques appropriate to specific problems and determine whether the results are reasonable.
- The students use the mental math strategy of matching up compatible numbers [7 + 4 + 3 + 6 = (7 + 3) + (6 + 4) = 10 + 10].
- The students classify objects according to attributes such as size, shape, and color and describe these attributes.
- The students identify and produce circles, squares, rectangles, triangles, trapezoids, parallelograms and rhombi, and find examples in the environment.
- The students recognize a figure regardless of its orientation.
- The students combine shapes to create two- or three-dimensional figures by using manipulatives and find examples in the environment.
- Spatial relationships such as above, below, on, between, and behind can be described by using pictures and manipulatives.
- · Measurement is never exact.
- The length, weight/mass, and capacity/volume of objects can be estimated and measured by using non-standard units. (My pencil is as long as 7 paper clips.)
- The students recognize and explain the need for uniform units of measurement.
- The students determine appropriate devices for measuring length, weight/mass, capacity/volume, time, and temperature.
- Objects can be compared by specified attributes such as length, weight/mass, capacity/volume, or temperature.
- The students estimate and measure the length of objects to the nearest centimeter and to the nearest inch.
- The students name the days of the week and the months of the year in order.
- · The students tell time with clocks showing times in hours and half hours.
- The students identify pennies, nickels, dimes, and quarters and give the value of each.
- · Information from the student's environment can be collected and organized.
- · The students construct and interpret real graphs and picture graphs.
- Given appropriate data, the students predict which outcomes are likely.
- The students identify regions divided into congruent parts.
- The students divide regions into congruent parts.
- The students specify a shaded portion as "_____ out of____ parts" when given a region divided into 6 or fewer congruent parts.
- The students specify a subset as "_____ out of ____ parts" when given a set of 6 or fewer objects.

Level 1

- · The students identify, duplicate, describe, and create patterns with attributes such as size, shape, and color.
- The students extend a repeating pattern.
- The students label the repeating pattern (ABAB, ABBA, etc.).
- The students create a number pattern by skip counting.
- · Patterns exist in the real world (days of the week, months of the year).

(Content Areas, Concepts/Skills, Processes)

CONTENT AREAS

Logical Reasoning
Estimation
Number Meanings
Number Operations
Computation
Geometry
Measurement
Data Sets
Fractions and Decimals
Patterns

CONCEPTS/SKILLS

- · The students manipulate objects or drawings to justify an answer to a problem.
- · The students describe the relationship between numbers in a skip counting pattern.
- The students compare and contrast circles, squares, rectangles, triangles, parallelograms, and rhombi.
- The students compare and contrast the characteristics of equilateral triangles with isosceles triangles, equilateral triangles with scalene triangles, and isosceles triangles with scalene triangles.
- Quantities (to 100) can be estimated using a referent set. (Here are 10 Valentine candies. About how many candies are in this jar?)
- Measurements of length can be compared with a referent. (The garden is 4 paces wide. About how many paces wide is the lawn?)
- The students identify, read, and write a three-digit numeral given a physical model or illustration of a place value model.
- The students identify and write a three-digit numeral when given the number of hundreds, tens, and ones.
- The place value position of hundreds, tens, and ones can be identified when given a three-digit numeral.
- · The students write numbers to 999 in expanded form.
- The students identify even and odd numbers (to 20) using a physical model.
- The students count by ones, twos, fives, and tens and recognize these counting patterns in numbers (to 1,000).
- · Position can be designated by using ordinal numbers (first through tenth).
- The students order a set of numerals from smallest to largest (to 99).
- The students identify the whole number immediately before or after any number (to 999).
- The students identify the number that is 10 more or 10 fewer than any number (to 999).
- Any two numbers (0 to 99) can be compared using the symbols greater than (>), less than (<), or equal to (=).

i

- Objects can be manipulated to demonstrate multiple ways of representing a number.
 (Fourteen can be represented as 10 and 4 ones, 2 sevens, one less than 15, or an even number.)
- Number skills can be applied to sets of objects in the environment. (Use counting by twos to determine the number of eyes in the classroom.)
- Conditions exist in real-world situations that indicate joining or separating of sets.
- The students construct models which relate counting patterns (twos, threes, and fives) to repeated addition of an equal number of objects.
- · Sets of objects can be organized into smaller sets containing equal amounts.
- An addition sentence can be written for any given situation involving the joining of sets
- A subtraction sentence can be written for any given situation involving the separation of sets, comparison of sets, or missing addends.
- Addition can be described by the words addition, plus, sum, addends, and the symbol
 (+).
- Subtraction can be described by the words subtraction, minus, difference, and the symbol (-).
- Equality can be described by the word equal and the symbol (=).
- Addition and subtraction are inverse operations, and this can be demonstrated with manipulatives. (Adding 7 blocks and 4 blocks gives you 11 blocks. If you have 11 blocks and you give 4 away, you will have 7 blocks.)
- The commutative and associative properties of addition can be demonstrated through the use of manipulatives.
- · Zero is the identity element for addition.
- The students know basic addition facts (sums to 18).
- The students know basic subtraction facts (minuends to 18).
- The students determine the missing addend in a given problem.
- The students demonstrate algorithms for addition and subtraction of two-digit numerals with manipulatives.
- · The students add and subtract two-digit numerals with and without regrouping.
- The students select and use computation techniques appropriate to specific problems and determine whether the results are reasonable.
- The students use the mental math strategy of matching up compatible numbers [27 + 34 + 13 + 46 = (27 + 13) + (46 + 34) = 40 + 80 = 120].
- The students identify, describe, and make circles, squares, rectangles, parallelograms, rhombi, trapezoids, and triangles, and find examples in the environment.
- · The students recognize a figure regardless of its orientation.
- Geometric shapes can be folded and cut into equal parts.
- Shapes can be combined to create two- or three-dimensional figures with manipulatives, and the students can describe the resulting figure.
- The students identify and describe spheres, cubes, cylinders, and cones, and find examples in the environment.
- The students relate cubes and cylinders to the two-dimensional shapes from which they were created.
- · Measurement is never exact.

iί

- The length, weight/mass, and capacity/volume of objects can be estimated and measured by using non-standard units. (My pencil is as long as 7 paper clips.)
- · The concept of area is illustrated by covering surfaces.
- There are certain appropriate devices for measuring length, weight/mass, capacity/volume, time, and temperature.
- Objects and measurements can be compared to a given reference point using attributes such as length, weight/mass, capacity/volume, or temperature. (My bed is about 2 meters long.)
- The students estimate and measure the length of objects or line segments to the nearest inch or foot and to the nearest centimeter or meter.
- The perimeter of regions in the environment can be measured using non-standard units.
- The weight/mass of objects can be estimated and measured to the nearest pound and to the nearest kilogram.
- · Capacity/volume can be estimated and measured using cups, pints, quarts, and liters.
- Time can be measured in hours, half hours, quarter hours, days, weeks, months, and years.
- The value of combinations of pennies, nickels, dimes, and/or quarters (totaling a dollar or less) can be determined.
- The students determine if an item of a given price can be purchased with a given combination of coins.
- · The students identify the value of dollars.
- The students use the cent (¢), dollar (\$), and decimal (.) symbols when writing values of money.
- The students read a thermometer using the Fahrenheit and Celsius scales.
- · The students collect data from the environment.
- · The students construct and interpret picture graphs, tally sheets, and bar graphs.
- · The students write a story problem using information from a graph.
- The students explore games of chance and probability. (If the bag contains one red marble and two blue marbles, which color will most likely be chosen?)
- A fraction can be named and written to represent an indicated portion when given a region divided into 10 or fewer congruent parts.
- A fraction can be named and written to represent a subset when given a set of 10 or fewer objects.
- The students explore with manipulatives the relative size of fractions less than one using 1/2 and 1 as reference points.
- The students illustrate a given fraction using sets and/or models with congruent regions.
- The students identify, duplicate, create, and describe patterns using objects and pictures.
- The students identify and extend a growing pattern.
- The students continue a number pattern by using addition (7, 10, 13, . . .).
- Skip counting and other number patterns can be investigated by using the constant feature on a calculator.
- Patterns can be identified in the real world (water cycle, seasons).

Logical Reasoning Estimation Number Meanings **Number Operations** Computation Geometry Measurement Data Sets Fractions and Decimals Patterns

CONCEPTS/SKILLS

- The students manipulate objects, drawings, or diagrams to justify the answer to a problem.
- The students compare and contrast geometric figures.
- · The students use knowledge of addition and subtraction to describe the relationship between numbers in a pattern. (8, 13, 18, 23, . . . is a pattern created by adding 5 to each number.)
- The students determine when it is appropriate to estimate.
- The students determine when an estimate is reasonable.
- Quantities can be estimated using a referent set. (Here are 100 nails. About how many nails are in this package?)
- Estimation strategies can be employed to determine if results are reasonable when solving word and real-life problems requiring computation.
- Estimation strategies can be employed to determine if results obtained when using a calculator are reasonable.
- The students employ the following strategies when estimating sums and differences:
 - Making tens (3 + 4 + 7 = 10 + 4).
 - Compatible numbers for addition and subtraction (30 + 47 + 70 = 100 +
 - Front-end estimation (24 + 47 might be estimated by thinking: 20 and 40 are 60, 4 and 7 are over 10, so the sum is a little more than 70).
 - Flexible use of rounding (43 is just under 45 and 21 is just over 20, so the sum is about 65).
- The students construct models of numbers (to 10,000).
- A four-digit numeral can be identified when given a physical model or an illustration of a place value model.
- A four-digit numeral can be identified and written when given the number of thousands, hundreds, tens, and ones.
- The students identify the place value position of thousands, hundreds, tens, and ones when given a four-digit numeral.
- The students write numbers (to 9,999) in an expanded form.

- The students identify even and odd numbers (to 100).
- The students identify the number that is 10 more or 10 fewer than any number (to 9.999).
- The students identify the number that is 100 more or 100 fewer than any number (to 9.999).
- Numbers (between 1 and 9,999) can be compared using the symbols greater than
 (>), less than (<), and equal to (=).
- There are many ways to represent a number by using manipulatives. (Fifty can be represented as 5 tens, 2 groups of 25, or 4 tens and 10 ones.)
- The students interpret the relative magnitude (size) of numbers. (31 is large compared to 4, about half as big as 60, and close to the number 27.)
- Models (number lines, manipulatives) and pictures can be used to represent multiplication as repeated addition and arrays.
- Models (number lines, manipulatives) and pictures can be used to represent division as sharing and repeated subtraction.
- The students determine which operation (addition, subtraction, or multiplication) can be used to solve problems involving computation.
- Any given situation involving the separation of sets, comparison of sets, or missing addend can be represented as subtraction.
- A multiplication sentence can be written for any given situation involving repeated addition and arrays.
- Addition can be described by the words addition, plus, sum, addends, and the symbol
 (+).
- Subtraction can be described by the words subtraction, minus, difference, and the symbol (-).
- Equality can be described by the words equation and equals, and the symbol (=).
- Multiplication can be described by the words multiplication, factor, products, and the symbol (x).
- Multiplication and division are inverse operations and can be demonstrated through use of manipulatives.
- Manipulatives can demonstrate the commutative and associative properties of multiplication.
- One is the identity element for multiplication and division.
- · When zero is a factor, the product is zero.
- The students demonstrate algorithms for addition and subtraction of three-digit numerals by using manipulatives.
- The students add and subtract any two numbers (less than 10,000), including monetary amounts.
- The students know basic multiplication facts through 9 x 9.
- The students provide the missing factor in a multiplication sentence by using basic facts.
- The students illustrate multiplication of a two-digit numeral by a one-digit multiplier by using manipulatives and pictures.
- The students select and use computation techniques appropriate to specific problems and determine whether the results are reasonable.
- The students use the mental math strategy of matching compatible numbers [27 + 34 + 46 + 13 = (27 + 13) + (46 + 34) = 40 + 80 = 120].

151 ii

- The students use the mental math strategies of front-end estimating, rounding, and thinking money to solve problems.
- The students identify, describe, and make rhombi and kites, and find examples in the environment.
- Two-dimensional figures can be described by using the terms point, line, and line segment.
- The students identify and describe angles.
- It can be determined if an angle is equal to, greater than, or less than a right angle by using the corner of a rectangle to make a comparison.
- The students compare and contrast two figures to determine if they are congruent.
- Figures can be folded and cut into equal parts to demonstrate symmetry.
- Shapes can be combined to create two- or three-dimensional figures by using manipulatives; the students describes the resulting figure.
- The students identify, make, and describe cubes, pyramids, and cylinders, and relate them to the two-dimensional shapes from which they were created.
- The students identify and describe spheres and relate them to objects in the environment.
- · Measurement is never exact.
- Two systems of standard measurement are used: metric and U.S. Common.
- Appropriate devices and units exist for measuring length, weight/mass, capacity/volume, time, and temperature.
- The students estimate and measure the length of objects or line segments to the nearest half-inch, foot, or yard, and to the nearest centimeter or meter.
- · The students describe the relationship of centimeter to meter.
- The students estimate and measure the perimeter of regions in the environment and the perimeter of two-dimensional figures using non-standard or standard units.
- The students estimate and measure the area of a surface by covering with tiles or other non-standard units.
- The students estimate and measure weight/mass of objects to the nearest ounce or pound and to the nearest gram or kilogram.
- The students estimate and measure capacity/volume using cups, pints, quarts, or gallons and use milliliters or liters.
- The students tell time to the nearest minute.
- The students determine the value of combinations of coins and bills (totaling \$5 or less).
- The students determine if an item of a given price can be purchased with a given combination of coins and bills.
- The symbol for cents (¢), for dollars (\$), and the decimal symbol (.) are used when writing values of money.
- The students read a thermometer using the Fahrenheit and Celsius scales and makes decisions based on this information. (I will or will not need a coat today.)
- The students collect data from the environment.
- · The students construct and interpret picture graphs, tally sheets, and bar graphs.
- The students write a story problem using information from a graph.
- The students explore games of chance and probability. (If the bag contains 2 red marbles and 5 blue marbles, which color will most likely be chosen? This should involve the concept of with and without replacement.)

iii

- The students name and write a fraction that represents a portion of a unit when given congruent line segments or regions divided into congruent parts.
- The students name and write a mixed numeral when given a model of a problem.
- The students name and write a fraction to represent a subset when given a set of objects.
- Equivalent fractions can be identified and generated by using models and diagrams.
- The students determine which is larger or smaller by using physical models or illustrations when given a pair of fractions.
- A decimal fraction and a common fraction can be named and written to represent tenths when physical models such as base ten materials and/or money are given (4 out of 10 = 0.4 = 4/10).
- The students count and continue patterns using decimal fractions to tenths when given models and illustrations (. . . 0.5, 0.6. 0.7 . . .).
- The students identify, duplicate, extend, create, and describe geometric and numerical patterns.
- · Tables can be created and used as a technique for analyzing and reporting patterns.
- A number pattern can be continued by using addition or subtraction (8, 13, 18, 23, . . . and 98, 95, 92, . . .).
- The students investigate addition, subtraction, and other number patterns by using the constant feature on a calculator.
- · Patterns exist in the real world (traffic patterns, patterns in nature).

Responsible Healthy Lifestyles

RESPONSIBLE HEALTHY LIFESTYLES

The responsible healthy lifestyles curriculum integrates into a meaningful whole, medical, scientific, behavioral and ethical knowledge, values, and practices which enhance a healthy life. It deals with issues and concerns of the whole person--intellectual, social, emotional, physical, ethical--and integrates findings from medicine, space exploration, science, social science, etc.

A tremendous number of each person's daily decisions directly or indirectly influence the quality and health of one's life. From growth and development to substance abuse, from micro-organism caused illness to positive healthy lifestyles, from childhood through adolescence, responsible healthy lifestyles education focuses on positive health lifestyle choices.

Personal decisions about one's health and the quality of one's life are inescapable. Such decisions must be made every day. They affect the individual, the family, the community, the state, the nation, and the world. Helping children and youth to make wise and wholesome decisions about a wide variety of personal, family, and societal health issues is of paramount importance.

Many decisions made in childhood and youth make a tremendous difference in one's emotional health: selection of foods; respect for the body; respect for birth and the miracle of life; involvement or non-involvement in the use of alcohol, tobacco, and drugs; decisions regarding prevention of diseases; utilization of safety and survival skills; in one's role as a consumer of goods, services, and information; perception of and involvement in community health issues; and in one's maintenance of physical fitness. The school can and should play a significant role in helping students prepare to make such decisions.

The human body was made to move. The technological age of labor- saving devices and sedentary living often detracts from the biological necessity for movement. Many degenerative diseases plaguing Americans have a portion of their roots in sedentary, inactive lifestyles. The vegetative, physically bland life leaves both the young and old susceptible to heart disease, obesity, muscular atrophy, and decreased life expectancy. Thus, living a physically active lifestyle is important to health and wellness.

A school's responsible healthy lifestyles program can and should help students be involved in and adopt a personal lifestyle of regular physical activity. This along with other positive health practices contributes to the quality of life, not only as a student, but also as a future adult.

RESPONSIBLE HEALTHY LIFESTYLES HEALTH EDUCATION LEVEL K

HEA LEVEL K

SIS NUMBER: 7000 SIS CODE: HL

COURSE DESCRIPTION (Levels K-3)

Health education actively involves students in coping with many of the problems encountered in life. These problems are identified through five strands: life skills, growing and developing, positive health practices, community health, and safety. Each student will be assessed regarding their knowledge and practice related to these five strands.

NOTE: To comply with state school law, teachers are encouraged to use the teaching resource files for the Alcohol and Drug Prevention Education Program in helping students achieve these standards.

CORE STANDARDS OF THE COURSE

STANDARD The stud		
7000-01 role of		

7000-01 <u>01</u> .	Recognize that individuals have personal characteristics that make them special.
7000-01 <u>02</u> .	Recognize different feelings.
7000-01 <u>03</u> .	Identify and demonstrate ways to get along with others.
7000-01 <u>04</u> .	Understand that the family is the basic social unit of life, and that everyone is a part of a family.
7000-01 <u>05</u> .	Identify persons in their lives with whom they can share feelings.

STANDARD 7000- <u>02</u>	The students will learn about their own physical growth and development.
<u>OBJECTIVES</u>	
7000-02 <u>01</u> .	Recognize that individuals are different in looks, size, appearance, and ability.
7000-02 <u>02</u> .	Describe how their bodies change in height and weight as they get older.
7000-02 <u>03</u> .	Monitor personal growth.
STANDARD 7000- <u>03</u>	The students will understand how a person's choices and habits lead to a happy, healthy life.
<u>OBJECTIVES</u>	
7000-03 <u>01</u> .	Understand that nutritious foods, including the eating of breakfast regularly, contributes to health and well-being.
7000-03 <u>02</u> .	Tell ways exercise helps keep people healthy.
7000-03 <u>03</u> .	Recognize that regular sleep and rest contribute to health and well-being.
7000-03 <u>04</u> .	Understand that cleanliness is important to health.
7000-03 <u>05</u> .	Learn to brush their teeth.
7000-03 <u>06</u> .	Know that drugs, alcohol, and tobacco can hurt their bodies.
STANDARD 7000-04	The students will learn that the environment can make a difference in one's health.
OBJECTIVE	
7000-04 <u>01</u> .	Identify several reasons for keeping homes and schools orderly and clean.
STANDARD	The students will learn ways to be responsible for their

STANDARD The students will learn ways to be responsible for their 7000- <u>05</u> own personal safety and for the safety of others at home
and school.

7000-05<u>01</u>. Describe how to cross a street safely.

7000-05 <u>02</u> .	List several ways to be safe at home and school.
7000-05 <u>03</u> .	Identify people who help them maintain safety; e.g., firemen, policemen, crossing guards, teachers.
7000-05 <u>04</u> .	Explain the importance of being in charge of their own bodies.
7000-05 <u>05</u> .	Know their own phone number, address, guardian's name, and emergency number.

HEA LEVEL 3

SIS NUMBER: 7030 SIS CODE: HL

CORE STANDARDS OF THE COURSE

STANDARD 7030- <u>01</u>	The students will recognize how association with others affects self-esteem and personal behavior.
OBJECTIVES	
7030-01 <u>01</u> .	Tell why liking one's self is important for the development of a positive self-image and good mental health.
7030-01 <u>02</u> .	Discuss the importance of congenial relationships with other students and adults.
7030-01 <u>03</u> .	List ways personal habits and attitudes determine, in part, how we feel about ourselves and how others feel about us.
7030-01 <u>04</u> .	Identify basic steps in making responsible choices.
7030-01 <u>05</u> .	Discuss different ways people deal with feelings.
STANDARD 7030- <u>02</u>	The students will evaluate growth and development patterns.
OBJECTIVES	

7030-02 <u>01</u> .	Understand that their bodies are made of many cells which divide and make them grow.
7030-02 <u>02</u> .	Indicate some of the growth characteristics they inherited from their father and mother.
7030-02 <u>03</u> .	Identify personal physical abilities and ways to improve them.

STANDARD 7030- <u>03</u>	The students will accept responsibility for their own health and practices.
OBJECTIVES	
7030-03 <u>01</u> .	Describe how daily health practices make a difference in their appearance, health, and feelings of well-being.
7030-03 <u>02</u> .	Identify foods in the four food groups and explain the need for a balanced diet.
7030-03 <u>03</u> .	Define basic nutrients that come from the four basic food groups.
7030-03 <u>04</u> .	Discuss causes of plaque and cavities and the benefits of brushing, flossing, fluoride treatments, and dental checkups.
7030-03 <u>05</u> .	Discuss the health implications of using drugs, alcohol, and tobacco.
7030-03 <u>06</u> .	Classify different types of alcohol distinguishing between positive and negative uses.
STANDARD	The students will identify a variety of community services
7030-04	and environmental pollutants.
<u>OBJECTIVES</u>	
7030-04 <u>01</u> .	Discuss the many services provided by the community such as ambulances, poison control centers, paramedics, and rescue teams.
7030-04 <u>02</u> .	Discuss various types of pollution and their effect on health.
	- Little for their own safety
7030- <u>05</u>	The students will show responsibility for their own safety and learn ways to respond in emergencies.
OBJECTIVES	
7030-05 <u>01</u> .	Explain how carelessness, hurrying too fast, anger, and upset feelings increase one's chance for having an accident.
7030-05 <u>02</u> .	Practice safe principles when riding a bicycle, when in an automobile, or on a school bus.
7030-05 <u>03</u> .	Identify and observe traffic signs and signals.
7030-05 <u>04</u> .	Recognize that getting adult help is one of the first things to do in an emergency.

7030-05<u>05</u>. Identify ways of being in charge of their own bodies and not allowing others to abuse them.

The students will de the immune system a	iding of diseases and se AIDS compares
 with other diseas	

OBJECTIVES	
7030-06 <u>01</u> .	Discuss ways that the disease AIDS is similar to other diseases.
7030-06 <u>02</u> .	Describe how HIV is difficult to contract and usually does not affect children.
7030-06 <u>03</u> .	List ways that people cannot contract HIV.
7030-06 <u>04</u> .	Explain how the scientific community is working hard to find a cure for HIV/AIDS.
7030-06 <u>05</u> .	Describe strategies for HIV/AIDS prevention such as decision-making skills and refusal skills in responding to negative pressure from peers.

MOVEMENT AND FITNESS

RESPONSIBLE HEALTHY LIFESTYLES

MOVEMENT AND FITNESS LEVEL K

M&F LEVEL K

SIS NUMBER: 7500 SIS CODE: HL

COURSE DESCRIPTION (Levels K-3)

The core program in movement and fitness for the primary grades contains developmental activities which focus on body/space awareness, motor fitness, rhythmic awareness, play skills, object manipulation and control, and dance skills. Students will gain knowledge about, understanding of, and appreciation for movement and physical activities. They will learn communicative expression through movement--one of humanity's fundamental languages.

Education in and through dance should develop students' abilities in each of three roles: participant, observer/listener, and critic. These roles are distinct yet complimentary. When these skills are integrated, they provide the necessary and complete background for informed response to dance.

NOTE: Dance is contained in the Responsible Healthy Lifestyles Movement and Fitness component because it meets the goals and objectives of that component in reference to physical activity: body awareness, motor skills, rhythmic awareness, and physiological development. Dance also meets the goals and objectives of the Fine Arts Dance component in reference to the development of aesthetic perception, understanding of the creative process, kinesthetic awareness, and critical response.

CORE STANDARDS OF THE COURSE

STANDARD T 7500- <u>01</u> a	rate personal space and body	

7500-01 <u>01</u> .	Move in and maintain personal space, including starting and stopping on command.
7500-01 <u>02</u> .	Identify body parts used in a movement task.
7500-01 <u>03</u> .	Explore spatial concepts such as high-low, in-out, large-small, forward-backward, sideward, and turning.

7500-01 <u>04</u> .	Explore locomotor movement including walking, running, jumping, and hopping.
7500-01 <u>05</u> .	Move over a hoop, carpet square, rope, or line in various ways.
7500-01 <u>06</u> .	Invent or create different shapes the body can make (round, straight, curled, long, etc.).
7500-01 <u>07</u> .	Explore a variety of non-locomotor movements (bending, stretching, twisting, etc.).
7500-01 <u>08</u> .	Explore a variety of movements which involve maneuvering weight (pushing, pulling, lifting, etc.).

STANDARD The students will begin to develop health related	
7500-02 and motor fitness.	

OBJECTIVES	
7500-02 <u>01</u> .	Run in different directions.
7500-02 <u>02</u> .	Jump up and down several times.
7500-02 <u>03</u> .	Swing the arms back and forth and make giant circles.
7500-02 <u>04</u> .	Pull the body from a lying position to a sitting position several times using some assistance such as a climbing rope, wand, or a partner.
7500-02 <u>05</u> .	With arms crossed on chest, hands on shoulders, perform several curl-ups with knees bent and feet on the floor.
7500-02 <u>06</u> .	Hop on one foot several times without losing balance.
7500-02 <u>07</u> .	Walk on a rope or line (10 feet or longer) maintaining balance.
7500-02 <u>08</u> .	Briskly walk or run around the multipurpose room and/or the playground.
7500-02 <u>09</u> .	Run as fast as possible for 20 yards.

OBJECTIVES

7500-03<u>01</u>. Participate in a variety of play activities requiring cooperation and playing by simple rules.

171

7500-0302. Contribute to safety by respecting the personal space of others.

7500-03<u>03</u>. Treat classmates and others courteously.

7510-04 <u>01</u> .	Roll, bounce, throw, catch, strike, and kick objects such as yarn, fleece, sponge, and playground balls.
7510-04 <u>02</u> .	Explore a variety of movements using objects such as bean bags, yarn balls, hula hoops, wands, ropes, and different sized balls.
7510-04 <u>03</u> .	Use carpet squares, mats, boxes, and benches in exploratory movements.
STANDARD 7510- <u>05</u>	The students will continue to express feelings by observing and participating in introductory rhythm and dance movements that include time, space, energy, and shape. (DANCE: Participant, Observer/Listener, Critic)
OBJECTIVES	
7510-05 <u>01</u> .	Clap and move, accenting the first beat of every measure in 4/4 time.
7510-05 <u>02</u> .	Clap and move to simple rhythmic patterns based on such things as phrases or whole sentences.
7510-05 <u>03</u> .	Create symmetrical (in which the two sides look alike) and asymmetrical (in which the two sides do not look alike) shapes with the body.
7510-05 <u>04</u> .	Through movement, explore over/under, above/below, near/far, in front/behind, inside/outside, and around/through.
7510-05 <u>05</u> .	Move through space in various directions; e.g., walking, running, leaping, hopping, jumping, skipping, galloping, and sliding.
7510-05 <u>06</u> .	Improvise a sequence of energy (motion) changes; i.e., moving from lyrical (floating, gliding) to percussive (sharp, quick).
7510-05 <u>07</u> .	Perform traditional and creative singing games and dances or create simple group dances using basic locomotor steps. (Games and dances might include "Bear Growl," "Statue Games," "Jolly is the Miller," "Muffin Man," etc.)

7510-05<u>08</u>.

Express the feelings generated after observing a dance (live, film, or video); i.e., mood, patterns, and movement.

		lionships (with body parts,
7520- <u>01</u> (personal		
		and exploratory movement.

OBJECTIVES

7520-01 <u>01</u> .	Move in general space changing directions and pathways.
7520-01 <u>02</u> .	Perform movement activities at different levels with a partner.
7520-01 <u>03</u> .	Combine various locomotor steps in a movement pattern changing speed and levels.
7520-01 <u>04</u> .	Place three parts of the body inside a space (hoop, carpet square, etc.) and two parts of the body outside.
7520-01 <u>05</u> .	Mirror the movements of a partner while changing body shapes.
7520-01 <u>06</u> .	Bend and stretch different parts of the body with a partner using varying speeds; e.g., stretch arm up slowly, then bend it back to original position slowly.
7520-01 <u>07</u> .	Explore a variety of movements involving maneuvering weight (pushing, pulling, lifting, etc.) with a partner.

STANDARD Th		
7520- <u>02</u> an		
	d/reaction_time	

OBJECTIVES

7520-02<u>01</u>. Demonstrate **strength** by:

a. sustaining an arm hang, using an overhand grip, from an overhead ladder or chinning bar for 8 seconds, and

b. doing a standing long jump equal to one's height.

7520-0202. Demonstrate agility by:

- a. jumping in, out, over, and around hoops, mats, or other obstacles several times in a row, and
- b. jumping a rope or hoop turned by self 10 times.

7520-02<u>03</u>. Demonstrate **balance** by:

- a. walking the length of a balance beam, turning around, and walking back, and
- b. balancing an object on different parts of the body while performing different locomotor movements.

7520-0204. Demonstrate flexibility by:

- a. grasping the fingers in the middle of the upper back for 5 seconds with one arm over the shoulder and the other behind the back, and
- b. holding a stick or wand with both hands (palms down) and stepping through and back 3 times without letting go.

7520-02<u>05</u>. Demonstrate **speed/reaction time** by:

- a. running as fast as possible for 40 yards, and
- b. changing directions upon a visual or verbal signal while doing a variety of locomotor movements.

7520-0206. Demonstrate endurance by:

- a. jogging 600 yards, and
- b. jogging an accumulated total of 5 miles during one month.
 (NOTE: This might be done by jogging a minimum of a quarter of a mile a day, 440 yards.)

	simple rules a

7530-0201. Demonstrate strength by:

- a. hand walking an overhead ladder, and
- b. jumping and reaching 12 inches beyond their standing reach.

7530-0202. Demonstrate agility by:

- a. running in (front door) and jumping a turning rope 10 times and running out (back door), and
- b. moving through a simple obstacle or challenge course.

7530-02<u>03</u>. Demonstrate balance by:

- a. hopping twice on one foot and then the other, staying within a 2-foot circle for 30 seconds, and
- b. performing a stork stand, with the eyes open for 10 seconds, on each foot.

7530-0204. Demonstrate flexibility by:

- a. bending forward and touching the toes while keeping the legs slightly bent, and
- b. interlocking fingers, stepping through the hands one foot at a time forward and backward.

7530-0205. Demonstrate speed/reaction time by:

- a. running as fast as possible for 50 yards, and
- b. moving through a simple obstacle or challenge course.

7530-0206. Demonstrate endurance by:

- a. jogging or running 600 yards, and
- b. jogging an accumulated total of 10 miles during two months.
 (NOTE: This might be done by jogging a minimum of a quarter of a mile a day, 440 yards.)

7530- <u>04</u> using a varie	

OBJECTIVES

7530-04 <u>01</u> .	Invent several different ways to throw an object into the air and catch
	it.

7530-0402. Kick stationary and moving objects.

7530-04<u>03</u>. Strike a ball or similar object with the hand or a short-handled bat or racket.

7530-04<u>04</u>. In groups of four, explore a variety of movements using different objects such as balls, sticks, bean bags, yarn balls, and hoops.

7530-04<u>05</u>. In exploratory movement, use some of the following: mats, boxes, benches, risers, scooters, balance beams, ropes, balance boards, ladders, and parachutes.

	ents will create simple dances and discuss
STANDARD The stud	
7530- <u>05</u> reasons	for dance; combine introductory rhythm and
	ovements that include time, space, energy, and
	DANCE: Participant, Observer/Listener, Critic)

OBJECTIVES

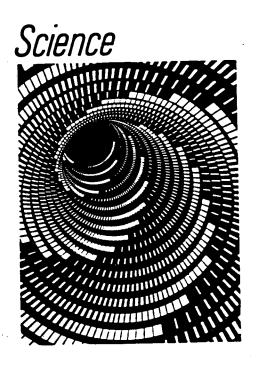

7530-0501. Clap and move in 6/8 time, accenting the first beat of every measure, changing the body part, the direction, the level, or the energy.

7530-05<u>02</u>. Move appropriately to a piece of 4/4 music or to a steady beat; e.g., slowly to half notes, moderately to quarter notes, and quickly to eighth notes.

- 7530-0503. Discuss and express through movement the rhythms found in:
 - a. nature; e.g., wind, sea, and trees;
 - b. the body; e.g., breath, pulse, sneeze, and tickle;
 - c. mechanical and non-mechanical objects; e.g., ball, feather, and eggbeater.
- 7530-0504. Create a series of shapes on different levels (low, medium, and high) and design transitions between them; e.g., slow-motion and sustained, sudden or percussive.
- 7530-0505. Improvise a sequence of energy changes such as percussive, sustained, lyrical, collapsing, and swinging and relate these energy changes to another curriculum area such as science.
- 7530-0506. Perform traditional and creative singing games or create a simple group dance based on a theme. The dance should include a beginning, middle, and end. (Games and dances might include: "Skip To My Lou," "Digga Doe," "Jim Along Josie," etc.)
- 7530-05<u>07</u>. Discuss why people dance and how this art form is used as a kind of nonverbal communication.

SCIENCE

The need to impart to all students some familiarity with modern science has come to assume major importance beyond the traditional education. Even if their future goals and occupations should be far removed from scientific fields, all of today's students will have to live in a world increasingly dominated by the rapid proliferation of its technological consequences. Furthermore, they will often be called upon to make decisions involving scientific considerations which could significantly affect the quality of life in our society.

Science should help students to live meaningfully and responsibly in a changing world, to perceive that there is order in the universe--that cause and effect relationships are present everywhere, to learn to search for answers and to question the accuracy and validity of those answers, to understand the importance of living their lives in harmony with all of nature's other creatures, and to relate the concepts of science to the practical application in future employment choices and careers.

The science core may be taught in a variety of ways and the scope and sequence within a level or course is not "sacred." The approach has been to give students instruction in the life, earth-space, and physical sciences in a spiral format in grades K-6; in grades 7-8 these areas are covered in semester courses; and in grades 9-12 the requirement is for one biological science course and one physical science course from a selected group of core options.

Critical to the science instruction given Utah students is the need to involve active science inquiry. The processes of science--observing, classifying, inferring, predicting, measuring, communicating, using space/time relations, defining operationally, formulating hypotheses, experimenting, recognizing variables, interpreting data, formulating models--are as essential to student learning as the content and concepts. The laboratory and outdoor classroom are excellent settings for instructing these process skills.

To teach science effectively, it must be taught **safely**. Instruction and practice in safe handling of materials and equipment is a paramount responsibility of the science teacher. Safety is preventing an accident which might result in injury, not merely dealing with the accident after it has occurred.

The science core focuses on the "what" not the "how" or "when." Teachers should note that the core does not constitute the whole content of any grade level or course and represents a minimal requirement. The teacher develops the sequence for instruction and determines methodology, subject matter, resources, references, projects, and media for students.

*In the event that a student's SEP indicates the intent to specialize in an area of science in which training in both areas -- biological and physical -- would not be essential, the district may approve on an individual basis, two biological or two physical science courses to fulfill the high school science core requirements.

**Successful completion of BOTH "Animal Science and Technology" and "Plant and Soil Science and Technology" is required to satisfy the core requirement in biological science. Two units of credit will be granted, one in biological science and one in vocational education.

SCIENCE LEVEL K

SCI LEVEL K

SIS NUMBER: 3000 SIS CODE: SI

COURSE DESCRIPTION (Levels K-3)

The students' learning experiences in Levels K-3 are derived from their interests and investigations of the environment. Real or contrived, the environment must be one that interests them and one in which they are active participants. Learning experiences are equally drawn from the areas of life science, physical science, and earth science. Students, using their five senses, investigate some observable and inferential characteristics and phenomena of plants and animals, matter and energy, earth and space, natural resources, ecology, weather, and seasons. The students' learning activities in each of the levels should be centered around concrete experiences. By the end of Level 3, most of the students should be able to demonstrate the ability to use the basic process skills of observing, classifying, inferring, recognizing and controlling variables, predicting and interpreting data, and experimenting and communicating.

CORE STANDARDS OF THE COURSE

STANDARD The students		
3000- <u>01</u> compare info	ormation about their	natural environment.

OBJECTIVES

3000-01 <u>01</u> .	Determine the shape, size, and texture of a common object; e.g., rulerrectangle, nesting blockslarge and small, sandpaper-rough, cottonsoft.
3000-01 <u>02</u> .	Compare the color, shape, size, texture, and location of common objects; e.g., toothwhite, peak of housetriangle, treelarge, leafsmooth, mountainfar.
3000-01 <u>03</u> .	Identify and distinguish some common sweet, sour, salty, and bitter foods; e.g., marshmallowsweet, lemonsour, pretzelsalty, bitter chocolate or whole clovesbitter.
3000-01 <u>04</u> .	Recognize some common scents and odors; e.g., pine needles, perfume, cinnamon stick, onion.
3000-01 <u>05</u> .	Students will identify sounds and sources of sounds; e.g., telephone, whistle, vacuum.

3000-01<u>06</u>. Infer which sense or senses are used to make an observation; e.g., fingers--touch, eyes--sight, nose--smell, tongue--taste, ears--hear.

STANDARD 3000- <u>02</u>	The students will categorize animals according to similarities and differences.
<u>OBJECTIVES</u>	•
	Opposited that there are many different kinds of animals

<u> </u>	u
3000-02 <u>01</u> .	Conclude that there are many different kinds of animals.
3000-02 <u>02</u> .	Compare how animals differ in size, shape, and color.
3000-02 <u>03</u> .	Group animals as domestic and wild animals.
3000-02 <u>04</u> .	Recognize different body coverings of animals; e.g., fur, shell, feathers, hair.
3000-02 <u>05</u> .	Show how animals move; e.g., snailscrawl, sea gullsfly, kangaroosjump.
3000-02 <u>06</u> .	Distinguish likenesses and differences between young animals and their parents.

STANDARD The students will observe and des	cribe variations in
3000- <u>03</u> plants.	
300-00-00-00-00-00-00	

3000-03 <u>01</u> .	Recognize different kinds of plants; e.g., grass, bushes, flowers, trees.
3000-03 <u>02</u> .	Observe that different plants grow at different rates.
3000-03 <u>03</u> .	Show that some plants have seeds and discover that seeds differ in size, shape, and color.
3000-03 <u>04</u> .	Discover that a seed is a living thing and can grow into a plant.
3000-03 <u>05</u> .	Demonstrate that plants have many parts; some parts grow above the ground and some underground.

STANDARD 3000- <u>04</u>	The students will use magnets and identify objects that are affected by magnets.
<u>OBJECTIVES</u>	
3000-04 <u>01</u> .	Use magnets and describe what they look and feel like.
3000-04 <u>02</u> .	Find objects that are attracted by a magnet and objects that are not.
STANDARD 3000- <u>05</u>	The students will observe and describe some basic components of weather.
<u>OBJECTIVES</u>	
3000-05 <u>01</u> .	Compare the characteristics of sunny days, rainy days, cloudy days, windy days, snowy days, and foggy days, or a combination of these.
3000-05 <u>02</u> .	Recognize that clouds affect the weather and have different shapes.
· 3000-05 <u>03</u> .	Discover that the sun warms the earth, air, and objects and helps determine the weather.
3000-05 <u>04</u> .	Demonstrate that wind is moving air.
STANDARD	The students will describe and compare seasonal changes
3000- <u>06</u>	in plants, animals, and people.
<u>OBJECTIVES</u>	
3000-06 <u>01</u> .	Identify some characteristics of each season.

3000-06 <u>01</u> .	Identify some characteristics of each season.
3000-06 <u>02</u> .	Investigate how trees and other plants look during the different seasons.
3000-06 <u>03</u> .	Compare and contrast the habits and activities of animals and people during the different seasons.

SCIENCE LEVEL I

SCI LEVEL I

can detect particular sensations.

OBJECTIVES

3010-02 <u>01</u> .	Investigate a variety of animals and discuss some likenesses and differences among them.
3010-02 <u>02</u> .	Group animals as those that hatch and those that are born alive.
3010-02 <u>03</u> .	Identify and name some common animals; describe the places where they live and why they live there.
3010-02 <u>04</u> .	Infer that all animals need food, air, water, and shelter.
3010-02 <u>05</u> .	Recognize that animals need proper care and handling.

STANDARD The students will describe and group plants and	
STANDARD The students will describe and group plants and	
3010-03 categorize plant parts; identify plants as living	
organisms; and experiment with seeds.	

3010-03 <u>01</u> .	Describe similarities and differences in plants and seeds.
3010-03 <u>02</u> .	Discover that seeds and plants differ in size, color, shape, texture, and outer covering.
3010-03 <u>03</u> .	Identify seeds, leaves, roots, stems, and flowers as being common to most plants.
3010-03 <u>04</u> .	Find out what is inside a seed; e.g., peanut or bean shows example of leaf and root; and determine conditions needed for seeds to sprout; e.g. warmth, moisture, air.
3010-03 <u>05</u> .	Investigate variations in the ways that plants produce and disperse seeds.
3010-03 <u>06</u> .	Recognize that seeds develop into the same kind of plant that the seed came from and both are living organisms.

	compare the three states of matter
3010- <u>04</u> and cite examples	of matter changing from one state to
anothet.	

OBJECTIVES

3010-04 <u>01</u> .	Identify materials in the environment as solids, liquids, or gases.
3010-04 <u>02</u> .	Describe similarities and differences among the three states of matter.
3010-04 <u>03</u> .	Observe that the state of matter can be changed; e.g., water to ice, shortening to oil, clouds to rain, sugar to syrup, candle to wax.
3010-04 <u>04</u> .	Investigate what happens over several hours to water in a sponge, towel, or shallow pan.

STANDARD The students will identify characteristic	
3010-05 its uses.	

OBJECTIVES

3010-0501. Investigate water as a solid (ice), liquid, and gas (water vapor).

3010-05 <u>02</u> .	Demonstrate that some common materials dissolve in water and some do not.
3010-05 <u>03</u> .	Discover some common objects that float in water and some that sink in water.
3010-05 <u>04</u> .	Describe ways that people have fun with water.
3010-05 <u>05</u> .	Discuss that water is a limited resource and should not be wasted.

3010-06 <u>01</u> .	Observe air directly with the sense of touch and indirectly with the senses of sight, hearing, and smell.
3010-06 <u>02</u> .	Conclude that air is all around them, has weight, and takes up space; e.g., inflated and deflated ball or balloon.
3010-06 <u>03</u> .	Discover that air can make objects move.
3010-06 <u>04</u> .	Identify ways that people use air and the problems of air pollution.
3010-06 <u>05</u> .	Infer that all plants and animals need air to stay alive.

STANDARD The students	will identify sources of	energy and
3010- <u>07</u> describe way	s to conserve energy.	

3010-07 <u>01</u> .	Observe the wind as a source of energy; e.g., sailboats, windmills.
3010-07 <u>02</u> .	Describe ways that coal and wood are sources of energy; e.g., fireplaces, furnaces, campfires.
3010-07 <u>03</u> .	Recognize gasoline as a source of energy; e.g., cars, trucks, lawnmowers.
3010-07 <u>04</u> .	Discuss food as a source of energy; e.g., hamburgers for people, hay for cows.
3010-07 <u>05</u> .	Identify the sun and water as sources of energy; e.g., heat, light, electricity.

Describe ways to conserve energy; e.g., turning off lights, televisions, and radios not in use; closing doors in heated and air conditioned buildings; recycling aluminum cans.

STANDARD The stude		record weather related
3010-08 information		opriate activities for
	inds of weather.	

OBJECTIVES

3010-08 <u>01</u> .	Describe different kinds of weather.
3010-08 <u>02</u> .	Observe, describe, and record the weather on a given day(s).
3010-08 <u>03</u> .	Distinguish between two very different temperatures with and without the aid of a thermometer.
3010-08 <u>04</u> .	Describe appropriate activities and clothing for different kinds of weather.

STANDARD The students will identify time categories, name and 3010-09 sequence the four seasons, and describe seasonal changes.

3010-09 <u>01</u> .	Classify what they might do according to time categories such as morning, noon, night, day of the week, or season of the year.
3010-09 <u>02</u> .	Name each season and identify its typical characteristics.
3010-09 <u>03</u> .	Place in proper order the seasons of the year.
3010-09 <u>04</u> .	Observe and describe changes in the local seasons.
3010-09 <u>05</u> .	Conclude that seasons vary in temperature, length of day, and effect on plant and animal life.

SCIENCE LEVEL 2

SCI LEVEL 2

SIS NUMBER: 3020 SIS CODE: SI

CORE STANDARDS OF THE COURSE

3020- <u>01</u>	The students will discover that animals differ in different stages of their lives.
<u>OBJECTIVES</u>	
3020-01 <u>01</u> .	Describe some different kinds of animals and their young found in the students' environment.
3020-01 <u>02</u> .	Identify some baby animals and speculate as to what changes will take place as these animals grow.
3020-01 <u>03</u> .	Infer how animals care for their young.
3020-01 <u>04</u> .	Conclude that life is a cycle which includes birth, growth, and death; and that animals are capable of different activities at different stages in their life cycle

NAME OF THE OWNER OWNER OWNER.

1 3 C E O E SINDS D	etween validus nunt soulc	es allu silauuws.
The state of the s		

OBJECTIVES

3020-02 <u>01</u> .	Identify light sources; e.g., sun, light bulbs, fire, stars.
3020-02 <u>02</u> .	Show that when an object blocks the path of light, a shadow of the object is formed.
3020-02 <u>03</u> .	Change the size and shape of a shadow by moving the object that casts it.
3020-02 <u>04</u> .	Demonstrate the sun's position using an object and its shadow.

3020-03 production and transmission.

3020-03 <u>01</u> .	Demonstrate that sound is produced when materials vibrate; e.g., rubber band, guitar string, tuning fork, drum, tambourine.
3020-03 <u>02</u> .	Demonstrate that the faster an object vibrates, the higher the pitch of the sound produced.
3020-03 <u>03</u> .	Observe that sound requires something to carry it from one place to another; e.g., simple string-cup phone, and describe their

observations.

STANDARD The students will demonstrate and describe some	
3020-04 properties and uses of magnets.	

OBJECTIVES

3020-04 <u>01</u> .	Discover, by experimenting, that magnets vary in strength and which objects are attracted to magnets.
3020-04 <u>02</u> .	Locate the north and south poles on a magnet and demonstrate that the magnetic field is strongest at the poles.
3020-04 <u>03</u> .	Identify some materials through which magnetism will pass.
3020-04 <u>04</u> .	Create a "picture" of a magnetic field; e.g., place a piece of paper over a magnet and sprinkle iron filings on the paper.
3020-04 <u>05</u> .	List some uses of magnets.

STANDARD The students will investigate and measure some 3020-05 observable properties of heat.	
3020-05 observable properties of fleat.	.0000000

OBJECTIVES

	Demonstrate that objects in the sunlight are warmer than the same objects placed in the shade.
3020-05 <u>02</u> .	Show that heat causes some things to melt.

3020-0503. Explain that the red line goes up or down because the liquid in the thermometer expands or contracts.

3020-0504. Determine the temperature of objects such as liquids, air, and solids (ice) by using a thermometer.

3020- <u>06</u> 0	he students will classify bservable characteristics	s and identify where	
8	re used in their commu	inity.	

OBJECTIVES

3020-06 <u>01</u> .	Collect rocks and discover that they are found in many different places.
3020-06 <u>02</u> .	Identify rocks by observable characteristics; e.g., hard-soft, shiny-dull, smooth-rough, single color-multicolored.
3020-06 <u>03</u> .	Locate places in the community where rocks are used and describe how and where they are used.
3020-06 <u>04</u> .	Select rocks that have crystals in them and describe the crystals.

STANDARD The students	\\{\text{\$\frac{1}{2}}\$\fr	Sources, and uses
3020-07 of water and I	ahal tha bacin ctappe of	the water cycle
	avel tile vasic stages vi	

3020-07 <u>01</u> .	Describe the importance of water in their daily lives.
3020-07 <u>02</u> .	Demonstrate that water can change from one state to another.
3020-07 <u>03</u> .	Discover that water evaporates and condenses.
3020-07 <u>04</u> .	Explain how water comes from the clouds in the form of rain, snow, sleet, and hail.
3020-07 <u>05</u> .	Label and discuss the basic stages of the water cycle.
3020-07 <u>06</u> .	Classify materials into two groups: those that absorb water and those that do not.
3020-07 <u>07</u> .	Evaluate the importance of reservoirs and irrigation practices.

		describe the moon as a

3020-00 Hatula	gatemite, and compan	
man_m	ade satellites.	
	auc salemies.	

3020-08 <u>01</u> .	Identify and describe the moon as a natural satellite of the earth.
3020-08 <u>02</u> .	Use a model to show that the moon is visible because it reflects light from the sun.
3020-08 <u>03</u> .	Conclude that it takes 24 hours for the earth to make one complete turn and four weeks for the moon to move around the earth once.
3020-08 <u>04</u> .	Infer why the moon looks bigger than the sun and the stars.
3020-08 <u>05</u> .	Compare man-made and natural satellites; e.g., launched, size, purpose.

SCIENCE LEVEL 3

SCI LEVEL 3

SIS NUMBER: 3030 SIS CODE: SI

CORE STANDARDS OF THE COURSE

OBJECTIVES

OBJECTIVES	
3030-01 <u>01</u> .	Compare an artificial habitat in a zoo, farm, home, or school with the natural habitat of an animal.
3030-01 <u>02</u> .	Compare several kinds of animals to see how their methods of gathering food and finding shelter are different.
3030-01 <u>03</u> .	Explain how environmental factors (color, shading, cover) help an animal protect itself.
3030-01 <u>04</u> .	Recognize that some animals seem to have built-in "clocks" that tell them when to do certain things such as hibernate, migrate, or spawn. Investigate an animal that does each of these.
3030-01 <u>05</u> .	Differentiate between animals that are active during the day and those that are active during the night and discuss reasons for the nighttime activity of some animals.
3030-01 <u>06</u> .	Discover how plants and animals in an ecosystem interact with each other.

STAND	ARD The	tudents will grow and o	roup plants and explain
3030.	·02 the e	Hects of the environmen	t on plants.
		de de la final de la company d	

OBJECTIVES

3030-02 <u>01</u> .	Observe and record on a graph the growth of a plant.
3030-02 <u>02</u> .	Compare and contrast the characteristics of the major plant groups; e.g., those with stems and those without.
3030-02 <u>03</u> .	Classify plants into sets and subsets of similar characteristics using

	leaves or flowers; e.g., group flowers by size and then color, or leaves by size and then shape.
3030-02 <u>04</u> .	Experiment with different parts of mature plants; e.g., roots, stems, leaves, flowers to determine which parts will grow into new plants.
3030-02 <u>05</u> .	Explain the effects of the environmental elements on plants; e.g., seasons, pollution, water, and the time of day.
3030-02 <u>06</u> .	Distinguish between evergreen and deciduous plants.

STANDARD The students will identify natural resou	
3030-03 are used, and how to conserve them.	

3030-03 <u>01</u> .	Identify some commonly used natural resources; e.g., soil, water, wind, oil, trees.
3030-03 <u>02</u> .	Describe and demonstrate ways these natural resources are used.
3030-03 <u>03</u> .	Determine ways to conserve these natural resources.

STANDARD The students will illustrate	
3030-04 categorized, weighed, and	

OBJECTIVES

3030-04 <u>01</u> .	Identify matter as anything that occupies space and has weight.
3030-04 <u>02</u> .	Identify things that are not matter because they do not occupy space or have weight; e.g., heat, sound, light, electricity.
3030-04 <u>03</u> .	Observe that matter can be either a solid, a liquid, or a gas and can change from one state to another. Record observations.

	strate how static	
STANDARD The studen		
3030- <u>05</u> can be pro	gate its properties	
	example of static	

OBJECTIVES

3030-0501. Demonstrate that static electricity can often be produced by rubbing two different kinds of material together.

3030-05 <u>02</u> .	Identify materials that are charged with static electricity by observing that they attract things; e.g., nylon and cotton threads, dry hair, small bits of paper.
3030-05 <u>03</u> .	Demonstrate that some charged objects attract each other and other charged objects repel each other.
3030-05 <u>04</u> .	Explain what causes lightning and thunder; discuss some safe and unsafe places to be when there is lightning.

		ns and determine the
STANDARD The student		
3030- <u>06</u> relationship		surface features and the
	are constantly changin	

3030-06 <u>01</u> .	Discover that the earth's surface has a variety of landforms; e.g., mountains, deserts, plains, lakes, rivers, oceans.
3030-06 <u>02</u> .	Compare the place where they live to a pictured area which may show mountains, deserts, plains, lakes, rivers, etc.
3030-06 <u>03</u> .	Identify factors that cause changes in landforms; e.g., erosion, weathering, volcanoes.

STANDARD The students will demonstrate the earth's motions in
3030-07 space and describe events that occur regularly because of
these motions.

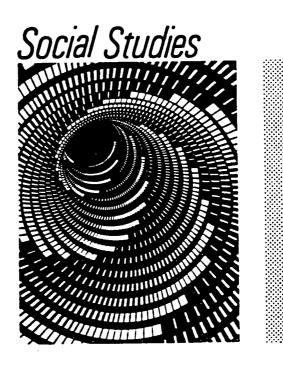

OBJECTIVES

3030-07 <u>01</u> .	Use a globe as a representation of the earth and locate the north and south poles.
3030-07 <u>02</u> .	Demonstrate how the earth and everything on it rotates and also revolves around the sun.
3030-07 <u>03</u> .	Use the measurements of time; e.g., hour, day, year and relate them to the earth's motion.
3030-07 <u>04</u> .	Discuss how the movements of the earth and moon cause the moon to appear in different shapes.

STANDARD 3030- <u>08</u>	The students will be able to identify and describe simple machines, and give an example of each machine's use.
<u>OBJECTIVES</u>	
3030-08 <u>01</u> .	Identify a simple machine as a machine with few or no moving parts.
3030-08 <u>02</u> .	Describe a lever and demonstrate its uses; e.g., hammer, seesaw, can opener.
3030-08 <u>03</u> .	Describe an inclined plane and demonstrate its uses; e.g., wedge, ax, ramp, screw.
3030-08 <u>04</u> .	Describe and demonstrate a wheel and axle; e.g., pulley, egg beater, roller skates, bicycle.

SOCIAL STUDIES

People are social beings who need wholesome human relationships and productive problem-solving skills. Social studies helps to fulfill these needs and is the major area in the school's general education program which is concerned with the preparation of students in becoming responsible, rational, participating citizens in a pluralistic, democratic society and in a world which is becoming increasingly interdependent.

Citizenship/character education is a particular focus of social studies and is also a subject which fosters an interdisciplinary approach in the curriculum. Development of the means whereby the essential processes, values, and capabilities undergirding our society can be perpetuated and improved is one of the major reasons for the existence of schools.

To the social sciences (history, geography, sociology, psychology, anthropology, economics, and political science) new fields of study have been added which include studies in law-related, values, career, international, multicultural, and free enterprise education. All of these subjects are integrated at each level/course in the core curriculum.

A primary goal for all students and teachers is increasing their ability to be more productive, which contributes to acquiring and maintaining a higher standard of living.

The social studies core curriculum at each level/course begins with the identification of higher level thinking standards and objectives; i.e., listening, speaking, reading, writing, thinking, and citizenship/character skills, which can be incorporated in teaching strategies with all other standards and objectives.

One of the most commonly accepted principles of learning that has been incorporated in the social studies core curriculum is the importance of integration--of emphasizing the understanding of concepts and processes over the mere acquisition of isolated facts.

Stressing the mastery of integrated knowledge helps students to move from what is known to an understanding of the unknown, to see relationships and patterns and begin to make generalizations, to understand the interrelatedness of the subject and skills areas, and to succeed in learning. An integrated curriculum helps students learn how to learn.

In conclusion, the social studies core curriculum at all levels emphasizes:

- 1. Higher level thinking and process skills.
- 2. Citizenship/character practices and principles.
- 3. Basic American values.
- 4. Economic literacy.
- 5. American Democratic governance.
- 6. Global awareness and geographic skills.

NOTE: Numbers in parenthesis following objectives in the core curriculum refer to resource file activities.

COURSE DESCRIPTION, (Levels K-3)

The students will be introduced to the study of self and their relationship to each individual's family, school, neighborhood, and community; basic citizenship/ character behaviors; the interdependence of individuals and groups in different cultures and environments; the world of work; and the use and care of natural resources, community governments, and local history will be emphasized. In addition, the students will begin a study of the earth, its size, shape, land masses, oceans, climates, directions, and its relation to the universe. All social studies experiences will develop listening, speaking, reading, writing, and citizenship/ character skills.

CORE STANDARDS OF THE COURSE

OBJECTIVES

6000-01 <u>01</u> .	Participate in group discussions.
6000-01 <u>02</u> .	Participate in group role-playing experiences.
6000-01 <u>03</u> .	Examine a variety of ideas.

6000-0104. Follow simple directions.

e students will un	
oups and their life	
d traditions.	

OBJECTIVES

6000-02 <u>01</u> .	Identify different kinds of groups (family, school, neighborhood) to which they belong. (300-303)
6000-0202	Discuss ways that people are alike and ways they are unique, and that

each individual has self-worth. (300-101)

6000-02 <u>03</u> .	Identify values, traditions, and customs that are learned from families. (300-201)
6000-02 <u>04</u> .	Identify why special events are sometimes celebrated through various national holidays. (300-501)
6000-02 <u>05</u> .	Compare ways that various cultures celebrate holidays. (300-502)

CORE STANDARDS OF THE COURSE

STANDARD The s		
		in completing social
	es activities.	

OBJECTIVES

<u>OPOLOTITES</u>	
6020-01 <u>01</u> .	Identify ways to resolve conflict when opinions differ.
6020-01 <u>02</u> .	Participate in group writings, charts, diaries, and letters.
6020-01 <u>03</u> .	Discuss alternative solutions to classroom problems.
6020-01 <u>04</u> .	Locate and use social studies materials in the classroom library and/or media center.
6020-01 <u>05</u> .	Use a variety of resources to study their community.
6020-01 <u>06</u> .	Recall facts from stories or reports in sequence.
6020-01 <u>07</u> .	Demonstrate that through group participation one develops citizenship/character values.

STANDARD			
6020- <u>02</u>			
	re develop		

- 6020-02<u>01</u>. Identify cultural traits and values that are inherited and acquired; i.e., family, religious, and cultural traditions, physical characteristics, etc. (302-202)
- Show ways in which individuals learn behavior and values from groups in the community; i.e., honesty, respect, responsibility, etc. (302-301)
- 6020-02<u>03</u>. Identify talents of self and others and discuss how they can be developed. (302-303)

6020-02<u>04</u>. Show ways in which the talents of others have influenced the community. (302-102)

6020-0205. Identify aspirations for using their own talents. (302-103)

OBJECTIVES

6020-0301. Locate oceans and continents on a map and a globe. (302-801)

6020-0302. Compare the size of the United States with Utah on a map and a globe. (302-802)

6020-03<u>03</u>. Compare differences of an area's size and shape as shown on a flat map with the way they are illustrated on a globe. (302-803)

6020-03<u>04</u>. Find the directions of north, south, east, and west on a map. (302-804)

Describe how the equator divides the earth into the northern hemisphere and the southern hemisphere, and identify the hemisphere in which they live. (302-805)

6020-0306. Show the direction of sunrise and sunset. (302-817)

6020-03<u>07</u>. Identify important sites of the community on an area map. (302-819)

6020-03<u>08</u>. Describe how geographic features vary in different communities. (302-401)

STANDARD The students will understand that because change is 6020-04 constant, life in any community differs from the past.

OBJECTIVES

6020-04<u>01</u>. Identify community events of the past, present, and future. (302-502)

6020-0402. Describe the contributions of various cultures that have influenced life in the community. (302-203)

10

6020-0403. Identify some important local historical sites. (302-501)

6020-0404. Tell about the history of their local community. (302-502)

6020-04<u>05</u>. Describe different factors that influence change, in the community. (302-503)

STANDARD The students will identify basic consumer needs and 6020-05 the interdependence to occupations.
--

OBJECTIVES

6020-05 <u>01</u> .	Define goods, services, productivity, supply, and demand. (301-602)
6020-05 <u>02</u> .	Categorize products into "goods" and "services." (301-602)
6020-05 <u>03</u> .	Conclude that when individuals make choices they must give up something (opportunity cost). (301-601)
6020-05 <u>04</u> .	Explain that some needs may not be satisfied. (301-603)
6020-05 <u>05</u> .	Identify some skills needed for community jobs that provide goods and services. (302-604)
6020-05 <u>06</u> .	Describe the effect of supply and demand on jobs. (303-605)
6020-05 <u>07</u> .	Explain that with improved skills people become more productive. (301-605)

	ents will understand that grou procedures for enforcement	
6020- <u>0 6 rules and</u>	procedures for emorcement	ı.

6020-06 <u>01</u> .	Name people who help in establishing order and developing values within the community. (302-102)
6020-06 <u>02</u> .	Identify how acceptance of individual responsibility increases the degree of fairness and freedom in the community, school environment, and classroom. (302-706)
6020-06 <u>03</u> .	Participate in patriotic activities and understand their meaning except when against religious beliefs. (302-707, 8, 9)

SOCIAL STUDIES LEVEL 3

SS LEVEL 3

SIS NUMBER: 6030 SIS CODE: SS

CORE STANDARDS OF THE COURSE

s will practice a variety of	
riting, and reading skills ir	
ies activities.	

OBJECTIVES

6030-01 <u>01</u> .	Participate in a variety of activities such as creating stories that
	promote thinking and problem-solving skills.

6030-01 <u>02</u> .	Develop a model for making an effective solution to common
	problems.

6030-0104. Write original answers to current issues/problems.

• **December 2000 **Decembe	students will understand the cul- prical development of their loca	
6030- <u>02</u> mst	oncai development of their loca	i community.

OBJECTIVES

6030-02 <u>01</u> .	Discuss different cultures in their local community and the
	contributions made from each culture. (301-202)

6030-02 <u>02</u> .	Identify the past and present contributions of women and minorities
	to their community. (303-202, 305)

OBJECTIVES

6030-0301. Identify different environments in which groups live. (303-401)

6030-03 <u>02</u> .	Illustrate ways groups use natural resources in the environment to meet their basic needs. (303-402)
6030-03 <u>03</u> .	Describe how groups modify the environment to use and increase the supply of resources. (303-403)
6030-03 <u>04</u> .	Identify reasons for the location of a city. (303-405)

6030-04 <u>01</u> .	Identify	land and water forms on a map such as islands, bays, lakes	,
	etc.	(303-801)	

6030-04<u>02</u>. Locate the eastern and western hemispheres, the prime meridian, and the 180th meridian. (303-804)

6030-04<u>03</u>. Using a simple grid, show how a grid system works and identify local places on a map. (303-803)

- 6030-04<u>04</u>. Use scales and legends on maps. (303-807)
- 6030-0405. Use symbols for landscape features on a simple map. (303-808)
- 6030-04<u>06</u>. Identify the differences between people-drawn boundaries and natural boundaries (those which follow natural features such as mountains or rivers). (303-811)
- 6030-04<u>07</u>. Distinguish between towns, cities, states, countries, and continents using maps. (303-817)
- 6030-04<u>08</u>. Using north as a reference, identify on a map, globe, or with a compass the directional terms--left, right, north, south, east, and west. (303-818)
- 6030-0409. Locate places as being north or south of the equator on a map or globe.

STANDARD The students will understand the interplay of 6030-05 economics in their daily lives.

- 6030-0501. Define wages, prices, producer, consumer, specialization, division of labor, profit, loss, and productivity.
- 6030-05<u>02</u>. Explain reasons for spending and saving money.

6030-05 <u>03</u> .	Identify the relationship between supply and demand and its effect on the price of a product. (302-605)
6030-05 <u>04</u> .	Identify the advantage of division of labor (job specialization which increases productivity and creates interdependence). (303-601)
6030-05 <u>05</u> .	Identify the natural resources that determine the types of jobs in your community in the past, present, and future. (303-604)
6030-05 <u>06</u> .	Identify the role of profits as being the primary reason for production. (304-602)
6030-05 <u>07</u> .	Identify how inventions influence change in society.

STANDARD The students will understand that the purpose of 6030-06 government is to protect and serve the needs of citizens in their community.

6030-06 <u>01</u> .	Explain the need for government in a society.
6030-06 <u>02</u> .	List some simple ways that government resolves conflicts in their community. (303-701)
6030-06 <u>03</u> .	Compare ways that groups or societies determine how they will be governed in their community. (303-702)
6030-06 <u>04</u> .	Discuss responsibilities that individuals have in making a community a better place to live. (303-703)
6030-06 <u>05</u> .	Discuss their responsibility in making and following class rules. $(303-707)$
6030-06 <u>06</u> .	Identify how laws are established, and how they relate to individuals, families, and communities. (303-705)
6030-06 <u>07</u> .	Identify the purpose of patriotic holidays and how citizens participate (Veteran's Day, Law Day, Independence Day, etc.).
6030-06 <u>08</u> .	Explain how participating in and contributing to government develops good citizenship/character behavior.
6030-06 <u>09</u> .	Identify acts of honesty, morality, and citizenship they have observed in their classmates, teachers, and other adults.
