ABSTRACT

The news release and other documents in this packet report information about the nation's 1996 high school graduates who took the American College Testing Program (ACT) Assessment. The packet contains, in addition to the news release, the 1996 Summary Report of national data, "The High School Profile Report, Normative Data: A Description of the Academic Abilities and Nonacademic Characteristics of Your ACT Tested 1996 Graduates" (national report only), and "Cautions on the Use of State Aggregate ACT Scores." The national average composite score on the ACT, a college entrance examination taken by nearly 60% of America's entering college freshmen, increased to 20.9 in 1996, from 20.8 in 1995. This is the third year of the last four in which the national average has increased. This average was derived from the scores of the 925,000 high school graduates who took the ACT Assessment. The increase in the national average score for 1996 can be attributed in large part to the performance of female students. In addition, research has consistently shown that higher level preparation in the core courses is very strongly associated with higher achievement on the ACT Assessment. In turn, ACT scores relate directly to students' postsecondary performance. The relationship between increases in preparation and higher average scores can be clearly seen in the recent performance of Native American students. Although they have not caught up to the scores of the majority population, their increased core course completion is reflected in the largest overall gain among ACT-tested groups. Hispanic students, Mexican American students, and Asian American students increased their scores in 1996. African American students held their scores steady, with the exception of a slight decline in science reasoning. The relationship between advanced courses and overall performance on the ACT is especially apparent when the sequence of mathematics courses is examined. (SLD)

Summary Report

National

ACT ASSESSMENT RESULTS

National 1996

This report provides information about the performance of 1996 graduating seniors nationwide who took the ACT Assessment as juniors or seniors. As you review and interpret the information provided, please keep the following in mind:

- ACT-tested seniors may not be representative of the total population of graduating seniors.
- •This report provides selected information about the nation's ACT-tested graduating seniors. For more details, please refer to the 1996 national High School Profile Report.

Average ACT Scores

National 1996

To help policy-makers gain a better perspective on the association between coursework taken in high school and performance on the ACT Assessment, this report provides information about the graduating class according to type of high school program completed. Average scores are reported for 1996 graduating seniors who reported completing a core high school program (a **core or more** program is defined as a typical college preparatory program) and for those who reported not completing a high school core program. (Refer to following page).

The academic preparation a student receives in high school correlates with success in college. ACT research indicates that students who prepare academically by taking a core high school program consistently score higher on the ACT Assessment than those who do not. These same students also earn better grades in college. These facts underscore the value of a strong basic program of study in high school.

Types of High School Program

Core or More

A core or more program is defined as a typical college preparatory program including:

English (four years or more)

One year credit each for English 9, English 10, English 11, English 12

Mathematics (three years or more)

One year credit each for Algebra 1, Algebra II, Geometry
One-half year credit each for Trigonometry, Calculus (not Pre-Calculus), other Math
courses beyond Algebra II, Computer Math/Computer Science

Social Studies (three years or more)

One year credit each for American History, World History, American Government One-half year credit each for Economics, Geography, Psychology, other History (European, State, etc.)

Natural Sciences (three years or more)

One year credit each for General/Physical/Earth Science, Biology, Chemistry, Physics

Less Than Core

A less than core program refers to any high school program consisting of fewer courses than those included in core or more.

Average ACT test scores in English, Mathematics, Reading, Science Reasoning, and Composite for 1996 seniors who completed a core curriculum and those who did not are shown in Tables 1 and 2. In general, students who complete core coursework tend to earn higher average scores than students who do not complete core coursework. As Table 2 indicates, this association holds true across racial-ethnic groups. Table 3 shows that regardless of ethnic background, the average Composite score for students who completed core coursework has been consistently higher over the past five years than the average Composite scores of those who did not.

Each year ACT collects freshman course grades from hundreds of colleges and universities. Research has shown ACT-tested graduates typically have at least a 50 percent chance of receiving at least a "B" in the courses listed if they obtain the identified ACT score value or higher. The columns in the right side of the table present the percentages of ACT-tested graduates that earned a score at or above the typical cutoff score. For example, of those students who had core or more coursework, 76% had an ACT English score at or above 18.

Table 5
Summary of Course Placement
Cutoff Scores

		_	Percent At or Above The Typical Cutoff Score			
Course Type	ACT Assessment Test Variable	Typical Cutoff Score	Those with Core Coursework	Those With Less than Core Coursework		
English Standard Composition Advanced Composition Literature	English English English	18 21 21	76 56 56	54 33 33		
Mathematics Elementary Algebra Intermediate Algebra College Algebra Calculus	Mathematics Mathematics Mathematics Mathematics	19 22 23 26	70 46 39 21	40 21 17 8		
Science Chemistry Physics	Science Reasoning Science Reasoning	23 20	43 69	23 46		

Academic success at specific colleges/universities depends on many factors, including the selectivity of the institution and the institution's grading practices. Based on the information presented above, the percentage of ACT-tested students who would likely receive at least a "B" in the identified courses is higher for those who completed the recommended core coursework. Students who earn ACT scores below those listed may need additional academic preparation to be successful in these typical college entry level courses.

Table 6 compares percentages of students choosing selected academic majors in 1992, 1994, and 1996. Overall the interest in most majors has been consistent during this period, with the exception of the interest in Business and Health professions.

Table 7 presents the average ACT Composite scores for various racial-ethnic groups from 1992 to 1996. Trend information is provided for each reference group represented by 500 or more ACT-tested graduates each year. Over the five-year period, the national average composite score for all graduates has increased from 20.6 to 20.9. African-American and Asian-American scores have remained stable while American Indian/Alaskan Native scores have increased from 18.1 to 18.8.

APPENDIX

INSTRUCTIONS FOR USING THE DATA PRESENTED IN THIS REPORT ARE PROVIDED IN THE INTERPRETIVE GUIDE, <u>YOUR COLLEGE-BOUND STUDENTS</u>. IF YOU NEED A COPY OF THIS GUIDE, PLEASE WRITE TO ACT RESEARCH SERVICES, AMERICAN COLLEGE TESTING, P.O. BOX 168, IOWA CITY, IOWA 52243.

THE DATA PRESENTED IN THIS REPORT ARE BASED ON ALL STUDENTS WHO GRADUATED FROM HIGH SCHOOL IN THE SPRING OF 1996, AND WHO TOOK THE ACT ASSESSMENT DURING THEIR JUNIOR OR SENIOR YEAR IN HIGH SCHOOL. IF A STUDENT TOOK THE TEST MORE THAN ONE TIME, ONLY THEIR MOST RECENT SCORES ARE USED. THOSE STUDENTS WHO TESTED RESIDUALLY OR WHO FAILED TO LIST A VALID HIGH SCHOOL CODE ARE NOT INCLUDED IN THIS REPORT.

IT SHOULD BE NOTED THAT COLLEGE-BOUND STUDENTS WHO TAKE THE ACT ASSESSMENT ARE NOT REPRESENTATIVE, IN SOME RESPECTS, OF COLLEGE-BOUND STUDENTS NATIONALLY. FIRST, STUDENTS WHO LIVE IN THE MIDWEST, ROCKY MOUNTAINS AND PLAINS, AND THE SOUTH ARE OVERREPRESENTED AMONG ACT-TESTED STUDENTS AS COMPARED TO COLLEGE-BOUND STUDENTS NATIONALLY. SECOND, ACT-TESTED STUDENTS TEND TO ENROLL IN PUBLIC COLLEGE AND UNIVERSITIES MORE FREQUENTLY THAN DO COLLEGE-BOUND STUDENTS NATIONALLY.

CAUTION SHOULD BE USED IN MAKING COMPARISONS BETWEEN STATE AND NATIONAL NORMS. STATE NORMS MAY DIFFER FROM NATIONAL NORMS FOR NON-EDUCATIONAL REASONS SUCH AS REPRESENTATIVENESS OF THE ACT-TESTED POPULATION AND THE DEMOGRAPHIC MAKE-UP OF A STATE.

SINCE THE ACT ASSESSMENT IS DESIGNED FOR THOSE STUDENTS WHO PLAN TO ATTEND COLLEGE, THE FOCUS IS ON THE STUDENTS WHO COMPLETED THE RECOMMENDED COLLEGE PREPARATORY COURSES. THE RECOMMENDED COLLEGE CORE COURSES (AS DEFINED BY ACT) INCLUDE:

ENGLISH (FOUR YEARS OR MORE)
ONE YEAR CREDIT EACH FOR ENGLISH 9, ENGLISH 10, ENGLISH 11, ENGLISH 12

MATHEMATICS (THREE YEARS OR MORE)

ONE YEAR CREDIT EACH FOR ALGEBRA I, ALGEBRA II, GEOMETRY

ONE-HALF YEAR CREDIT EACH FOR TRIGONOMETRY, CALCULUS (NOT PRE-CALCULUS),

OTHER MATH COURSES BEYOND ALGEBRA II, COMPUTER MATH/COMPUTER SCIENCE

SOCIAL SCIENCES (THREE YEARS OR MORE)
ONE YEAR CREDIT EACH FOR AMERICAN HISTORY, WORLD HISTORY, AMERICAN GOVERNMENT
ONE-HALF YEAR CREDIT EACH FOR ECONOMICS, GEOGRAPHY, PSYCHOLOGY, OTHER HISTORY

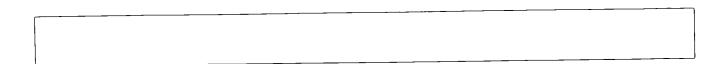

NATURAL SCIENCES (THREE YEARS OR MORE)

ONE YEAR CREDIT EACH FOR GENERAL/PHYSICAL/EARTH SCIENCE, BIOLOGY,

CHEMISTRY, PHYSICS

VALIDITY STUDIES COMPLETED BY ACT HAVE SHOWN THAT STUDENTS REPORT THEIR HIGH SCHOOL GRADES ACCURATELY 85% OR MORE OF THE TIME.

46255-RA2

American College Testing 2201 North Dodge Street, P.O. Box 168 Iowa City, Iowa 52243

EMBARGOED FOR USE UNTIL 12:01 A.M. EDT THURSDAY, AUG. 15, 1996

Hold for release:

12:01 a.m. EDT Thursday, August 15, 1996

Contact:

Kelley Hayden

NOTE TO EDITORS/REPORTERS: This news release and other documents in the packet report information about the nation's 1996 high school graduates who took the ACT Assessment. States, districts and schools receive similar information about their students. However, ACT releases only national and selected state data; ACT does not provide local district or school data to the media.

ACT is a nonprofit organization that provides assessment-driven programs and services designed to inform individuals' decision-making at key transition points in their educations and careers.

ACT NATIONAL AVERAGE UP FOR THIRD TIME IN FOUR YEARS

- * Females Increase Scores, Narrow "Gap" Again
- * Continued Increase in Graduates' Readiness for College-Level Work
- * Native Americans Lead Improvements in Minority Group Scores
- * Advanced High School Courses Directly Connected to Better Performance

Iowa City, Iowa, August 15 -- The national average composite score on the ACT, the entrance examination taken by nearly 60 percent of America's entering college freshmen, increased to 20.9 this year, from 20.8 in 1995. This is the third year in the last four that the national average has increased.

ACT News -- Page 2 Embargoed for August 15

The ACT score range is 1 to 36, and the nation's 1996 average was derived from the individual scores of the 925,000 high school graduates in all 50 states who took the ACT Assessment.

According to an announcement today from ACT president Richard L. Ferguson, this is only the second time since ACT scores were first reported in 1960 that the national composite average has increased as often as three times in a four-year period. In one earlier period, 1984-86, the average increased in each of three consecutive years.

"An increase in three of four years may not guarantee continued increases," Ferguson said, "but it is certainly a positive--and virtually unprecedented--development.

ACT News -- Page 3
Embargoed for August 15

"It's good news for our universities and colleges. Increases in ACT Assessment scores signal better preparation on the part of students for their freshman-year courses. And it also speaks well of secondary education. By challenging students to take more rigorous courses and get more out of their high school experience, educators are preparing them for higher achievement in college and beyond."

Ferguson attributed the higher scores to more students, especially females and minorities, taking higher-level courses in English, math, social studies and science. The ACT Assessment includes four achievement tests that measure the educational development of college-bound students in those academic areas.

* Females Increase Scores, Narrow "Gap" Again

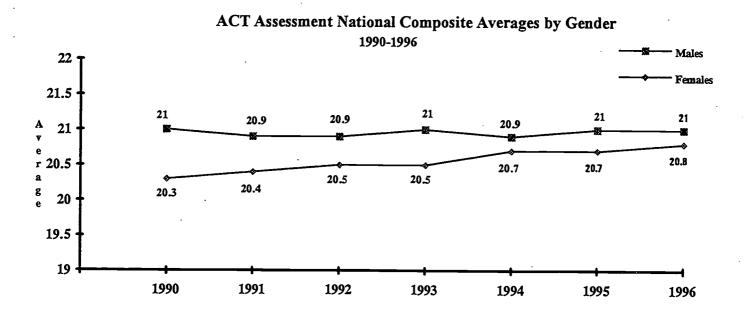

"The increase in the national average score this year can be attributed particularly to the performance of female students, who now take the ACT in greater numbers than their male counterparts," Ferguson said. "The average composite score for females has risen four times in six years, while the average composite score achieved by males during that period has remained stable."

Not only have males historically had higher average composite scores than females, but, until recently, the scores of the two groups had always fluctuated, the divergence often as

ACT News -- Page 4 Embargoed for August 15

wide as 1.5 points and never narrower than 0.4. Then, in 1994, the composite average for females increased by 0.2 point, and the difference between male and female composite score averages also shrunk to that same margin, the narrowest ever. It widened to 0.3 point last year, but in 1996 it has closed to 0.2 once more.

"The divergence between the overall scores of male and female students has never before been as narrow as it has been for the last three years," Ferguson said. "And, if we look at the increased preparation of females in core courses, we can see one reason why."

ACT News -- Page 5
Embargoed for August 15

To complete ACT's definition of a core curriculum, students must take at least four years of English and three or more of social sciences, of natural sciences and of mathematics (algebra and higher). The number of college-bound students following such a curriculum, once disturbingly low, has been rising annually for a decade.

"The percentages of males and females who report taking a core curriculum are now exactly equal," Ferguson said. "As recently as four years ago, significantly higher proportions of males took core courses, especially in math and science."

Research consistently has shown that higher-level preparation in the core courses is very strongly associated with higher achievement on the ACT Assessment. And ACT scores relate directly to students' postsecondary performance. Large differences between the scores of those who have followed a core curriculum and those who haven't are evident in all racial/ethnic groups and at all socioeconomic levels. This association results because the ACT measures higher-order thinking skills--skills students should have learned in their high school courses and that they need to succeed in college. In other words, it measures what they can do with what they know, not their general "aptitude" or their ability to recall factual material.

ERIC

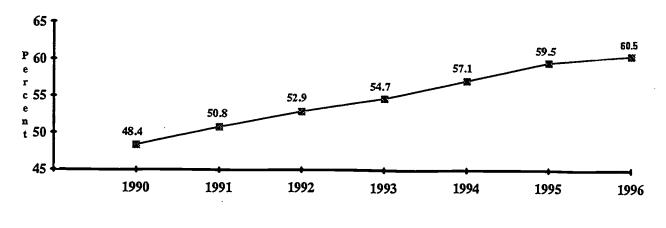

* Continued Increase in Graduates' Readiness for College-Level Work

About 60.5 percent of the ACT-tested 1996 graduates who provided information on their high school courses reported that they followed a core curriculum.

"Although this is only 1 percent more than in 1995," Ferguson said, "the total increase in the percentage of students taking the core since ACT began recording and reporting on high school students' course-taking patterns has been a substantial 22.6 percent.

"In 1987 we pointed out that a large majority, some 62 percent, of the nation's college-bound students were underprepared, and no more than 38 percent were ready for college-level work. Today, too many students still are not taking the core courses. But at least the sizes of the prepared and underprepared groups have been reversed."

Percentages of ACT-Tested Students Reporting Core Coursework, 1990-1996

ACT News -- Page 7
Embargoed for August 15

Those reporting a college-preparatory curriculum on the ACT Assessment this year outnumbered those reporting lower levels of preparation by 187,000.

* Native Americans Lead Improvements in Minority Group Scores

"The relationship between increases in preparation and higher average scores can readily be seen in the recent performance of Native American students," Ferguson said.

"Although just over half of them report core preparation, and they have some distance to go to catch up to the majority population, they have increased the size of their core-completing contingent nearly 8 percent since 1992, from 43.4 to 51.1 percent.

"And that has translated into composite score increases in every one of the last four years. No other ACT-tested group, minority or majority, has made comparable overall gains over this period."

College-bound Native Americans have also raised their average English and mathematics scores in each of the last four years and their reading and science reasoning scores in all but one. All the while, larger numbers of them have been tested each year, making their accomplishments, according to Ferguson, "even more significant than if their numbers had remained level or dropped."

ACT Performance of Native American Students, 1992-96

	1992	1993	1994	1995	1996
Number Tested	9,784	10,384	11,026	11,361	11,580
English Average	17.3	17.5	17.6	17.7	17.9
Mathematics Average	17.8	17.9	18.0	18.1	18.2
Reading Average	18.4	18.8	18.8	19.1	19.2
Science Reasoning Average	18.6	18.9	19.1	19.1	19.4
Composite Average	18.1	18.4	18.5	18.6	18.8

"I'm happy to report that Native Americans are not the only minority racial/ethnic-group members to improve their performance this year," Ferguson said. "Hispanic students of other than Mexican origin, for instance, raised all four of their scores: math and science by 0.1 point each, reading by 0.3 point, and English by 0.2, resulting in a composite score increase of 0.2 as well."

In addition to the gains made by Hispanic and Native American students, Mexican American graduates raised their English and reading scores by 0.1 each, which boosted them to a like increase in their composite score. College-bound Asian Americans, historically the minority group with the highest levels of preparation and highest scores, raised their English and math scores by 0.1 point each, but remained at last year's levels in other scores.

Among minority group scores this year, the only decline in any test average was one of 0.1 in the science reasoning score for African American students, which influenced a similar decline in their composite average. African Americans' marks in English, math and reading equaled last year's. Two factors related to the lower science reasoning score are that a lower than average percentage of African American students completed science courses through physics, and a higher than average percentage took less than three years of science. African Americans reported 34.4 percent taking physics and 27.1 percent with less than three years of science. The national averages were 41.5 and 23.6.

Of those 1996 ACT-tested graduates reporting their racial/ethnic status, 23.0 percent identified themselves as members of a minority group. This is just a slight increase over last year's 22.8 percent, but 2.7 percent over five years ago and an all-time high.

* Advanced High School Courses Directly Connected to Better Performance

Graduates in 1996 achieved the same ACT reading and math scores as in 1995 and improved performance on both the English and science reasoning tests by 0.1 point, resulting in the composite score increase. Science is the subject in which ACT-tested students have made the greatest improvement over the last five years, and the ACT science reasoning test provides the only national measure of the science skills of college-bound students.

"Achievement on the science reasoning test has been rising as the percentages of females and minorities taking higher-level math and science courses in secondary school have increased," Ferguson said. "Just last year, for instance, we reached the point where as many girls as boys are taking algebra II and chemistry.

"But courses more advanced than geometry or chemistry are necessary for the highest levels of achievement. So the questions now are: Why are so many college-bound students still not taking all the core courses? and What can be done to influence more to do so?"

ACT has long had the data necessary to relate achievement on the ACT Assessment and, subsequently, in college to courses taken in general terms. Information has been collected on groups of courses: for example, three or more years of science, or two or more years of math. More recently, ACT has been collecting the information to make the connection in terms of specific courses like chemistry or physics.

"Not everyone wants or needs to take physics, of course," Ferguson said. "But those students who take science courses through physics in high school do, as a group, achieve a significantly higher average, not only on the ACT science reasoning test, but also in their composite score. On the other hand, those who haven't taken physics score, on average, below the national mean on both measures. And ACT scores are directly related to later performance in college."

1996 Average ACT Science Reasoning and Composite Scores by High School Science Courses Taken

Natural Science Course Sequence	% of Students	Science Reasoning	Composite
General Science, Biology, Chemistry, Physics	41.5	23.0	22.9
General Science, Biology, Chemistry	32.2	20.3	20.1
Other Combinations of Three or More Years' Courses	2.7	20.9	20.6
Less Than Three Years of Natural Science	23.6	18.9	18.5

"The same relationship between advanced courses and overall performance on the ACT is seen when we examine various sequences of math courses," Ferguson said. "Those students who take trigonometry and calculus score, on average, well above those who stop at geometry or before."

1996 Average ACT Mathematics and Composite Scores by High School Math Courses Taken

Mathematics Course Sequence	% of Students	Math	Composite
Algebra I & II, Geometry, Trig, Calculus	6.4	24.7	24.5
Algebra I & II, Geometry, Trig, Other Advanced Math	9.9	22.0	22.5
Other Combinations of Three or More Advanced Math	28.1	22.6	22.8
Algebra I & II, Geometry, Trigonometry	11.7	20.4	21.1
Algebra I & II, Geometry, Other Advanced Math	9.0	20.3	21.1
Algebra I & II, Geometry	21.5	17.7	18.8
Less Than Three Years of Mathematics	13.4	16.0	17.0

"The sequence of math courses is like the rungs of a ladder students can climb for better preparation and higher achievement in the freshman year of college and beyond,"

Ferguson said, "as well as on the ACT Assessment itself. And our 1996 National High School Profile Report contains similar, though not quite so dramatic, pictures of the relationships between specific English and social studies courses and ACT composite scores.

"With these tables, individual students can see quite clearly the choices they need to make to prepare themselves for college and, especially, to achieve the kinds of scores that will provide them the most options and the best chances for scholarships. At the same time, given this evidence, teachers and administrators can determine exactly what steps they want to take to prepare their students for success in college."

Cautions on the Use of State Aggregate ACT Scores

The ACT Assessment comprises four curriculum-based achievement tests designed to assess critical reasoning and higher-order thinking skills in English, mathematics, reading and science. These tests reflect students' skills and achievement levels as products of their high school experience and serve as critical measures of their preparation for academic coursework beyond high school. ACT Assessment results are used by postsecondary institutions across the nation for admissions, academic advising, course placement and scholarship decisions.

The accompanying list of average scores should not be interpreted as providing grounds for an explicit or implicit ranking of the various states' educational systems. Students who take the ACT Assessment are self-selected and do not represent the entire student population. Further, the percentages of students taking the ACT Assessment vary a great deal from state to state, as do those students' backgrounds and characteristics. Many factors-among them, motivation and the desire to learn, parental support, the quality of teaching, socioeconomic status and extracurricular experiences--contribute to individual and group student achievement. However, a core college-preparatory program can be identified as one significant precondition to success on the ACT Assessment and in postsecondary studies. ACT defines a core college-preparatory program as four years of English and three or more years each of mathematics (starting with Algebra I), science and social studies courses.

For a state with a high percentage of ACT-tested graduates, comparing the percentages and average composite ACT scores of the core and non-core completers reveals, in general, large differences in overall student achievement and postsecondary preparation. For a state with a low percentage of ACT-tested graduates, however, the differences between core and non-core completers are not as definitive.
