TITLE Maryland's Kids Count Factbook 1995.
 INSTITUTION Advocates for Children and Youth, Baltimore, MD.
 SPONS AGENCY Annie E. Casey Foundation, Baltimore, MD.
 PUB DATE 95
 NOTE 163p.
 AVAILABLE FROM Maryland KIDS COUNT, Advocates for Children and Youth, Inc., 300 Cathedral Street, Suite 500, Baltimore, MD 21201 (\$15; make checks payable to "ACY-KIDS COUNT").
 PUB TYPE Statistical Data (110) -- Reports - Descriptive (141)

EDRS PRICE MF01/PC07 Plus Postage.
 DESCRIPTORS Child Abuse; Child Health; Child Neglect; *Children; Dropout Rate; Early Parenthood; Elementary Secondary Education; Family (Sociological Unit); Infant Mortality; Poverty; *Social Indicators; State Surveys; Statistical Surveys; Violence; *Well Being
 IDENTIFIERS *Indicators; *Maryland

ABSTRACT

This KIDS COUNT statistical report profiles the status of children in Maryland by tracking trends in economic well-being, health, safety, and education. The report is divided into four sections. Section 1, "Status of Our Children," presents a vision for Maryland's children, presents the key findings, ranks Maryland's counties, and examines trends in 14 benchmark indicators. Section 2, "Overview," presents county and statewide findings in four major areas: (1) economic well-being, including child poverty and child support; (2) good health, including births to teens, low birthweight infants, infant mortality, and lead poisoning; (3) safety, including child death rate, teen violent deaths, child abuse and neglect, juvenile violent crime arrests, and school violence; and (4) preparing for adulthood, including third grade reading achievement, on-time graduation, and high school program completion. Section 3, "County Fact Sheets," presents trends in these indicators for each county, as well as county data on children and family services, population, and family economics. Section 4, "Methodology and Sources," defines each indicator, describes how each indicator was measured, and presents references for each indicator. Findings indicate that Maryland ranks thirty-first in the nation on its children's well-being. Although 10 of 14 indicators have shown improvement in the past 2 to 6 years, the improvements have been slight. There has been a significant drop in infant mortality, but the increase in youth violence is cited as the most alarming and most significant change. (KDFB)

WHAT IS KIDS COUNT?

Maryland KIDS COUNT is a four-year project, begun in January 1993, funded by the Annie E. Casey Foundation. Maryland KIDS COUNT profiles the status of children in Maryland by tracking outcomes of economic well-being, health, safety and education. The five main goals of this project are to:

- develop a clear picture of the condition of children at state and local levels that can be used to guide efforts to improve the quality of life for children
- track data indicators over time to assess change
- educate the public and policy makers on the status of children and families in Maryland
- use KIDS COUNT data as a planning tool to identify priority issues which will assist decision-makers in effectively utilizing scarce public and private resources
- maximize collaborative efforts on behalf of children

Maryland KIDS COUNT Partnership is a collaborative effort of the following: Advocates for Children and Youth, Inc. (lead agency), Baltimore Urban League, Inc., Friends of the Family, Inc., Office for Children, Youth and Families, Maryland Association of Resources for Families and Youth, Maryland Alliance Against Family Violence, Maryland Business Roundtable for Education, Maryland Committee for Children, Inc., Maryland Education Coalition, Maryland Food Committee and Mental Health Association of Maryland.

Additional copies of the Maryland 1995 KIDS COUNT Factbook are available for a fee of \$15.00 (postage included).

ACKNOWLEDGMENTS

The Maryland KIDS COUNT project is funded by a grant from the Annie E. Casey Foundation. Without their dedication and commitment to the well-being of children, this project would not have been possible. Thanks to the national KIDS COUNT project staff - **BILL O'HARE** and **JENNIFER BARATZ** - for their technical assistance and encouragement.

For their contribution, we acknowledge **ANNE E. PRICE** for collecting and analyzing the data and **LATANYA BAILEY JONES** for authoring and editing the factbook. We also thank **REGINA MITOS** and **JAN SCHMIDT** for their support.

It is with our appreciation that we would like to thank the following individuals for their contribution to the Maryland KIDS COUNT project.

Thanks to the Data Committee for their effort in helping us collect the various data sources used in this book. They are: **MARGARET FOWLER** (Child Support Enforcement Administration, Department of Human Resources), **SHARON HAYNIE** and **RICHARD ARNOLD** (Income Maintenance Administration, Department of Human Resources), **RICKA MARKOWITZ** (Maryland State Department of

Education), **ARNA GRIFFITH** (Maryland Committee for Children, Inc.), **DEBORAH MORGAN** (Maryland Department of Health and Mental Hygiene), **JOHN FOLKEMER** (Maryland Department of Health and Mental Hygiene), **LAKSHMI IYENGAR** (Department of Juvenile Services), **ESTELLE APPLEBURG** (Maryland Department of Health and Mental Hygiene), **KAY LEVITT** (Department of Economic and Employment Development), **DENISE SHEARER** (Uniform Crime Reporting Program, Maryland State Police) **DEE REEVER** (Maryland Department of Human Resources) and **BEVERLY GAMMAGE** (Maryland Department of the Environment). We would like to extend a special thanks to **JULIA ELIZABETH DAVIDSON-RANDALL** and **ISABELLE HORON** of the Maryland Department of Health and Mental Hygiene.

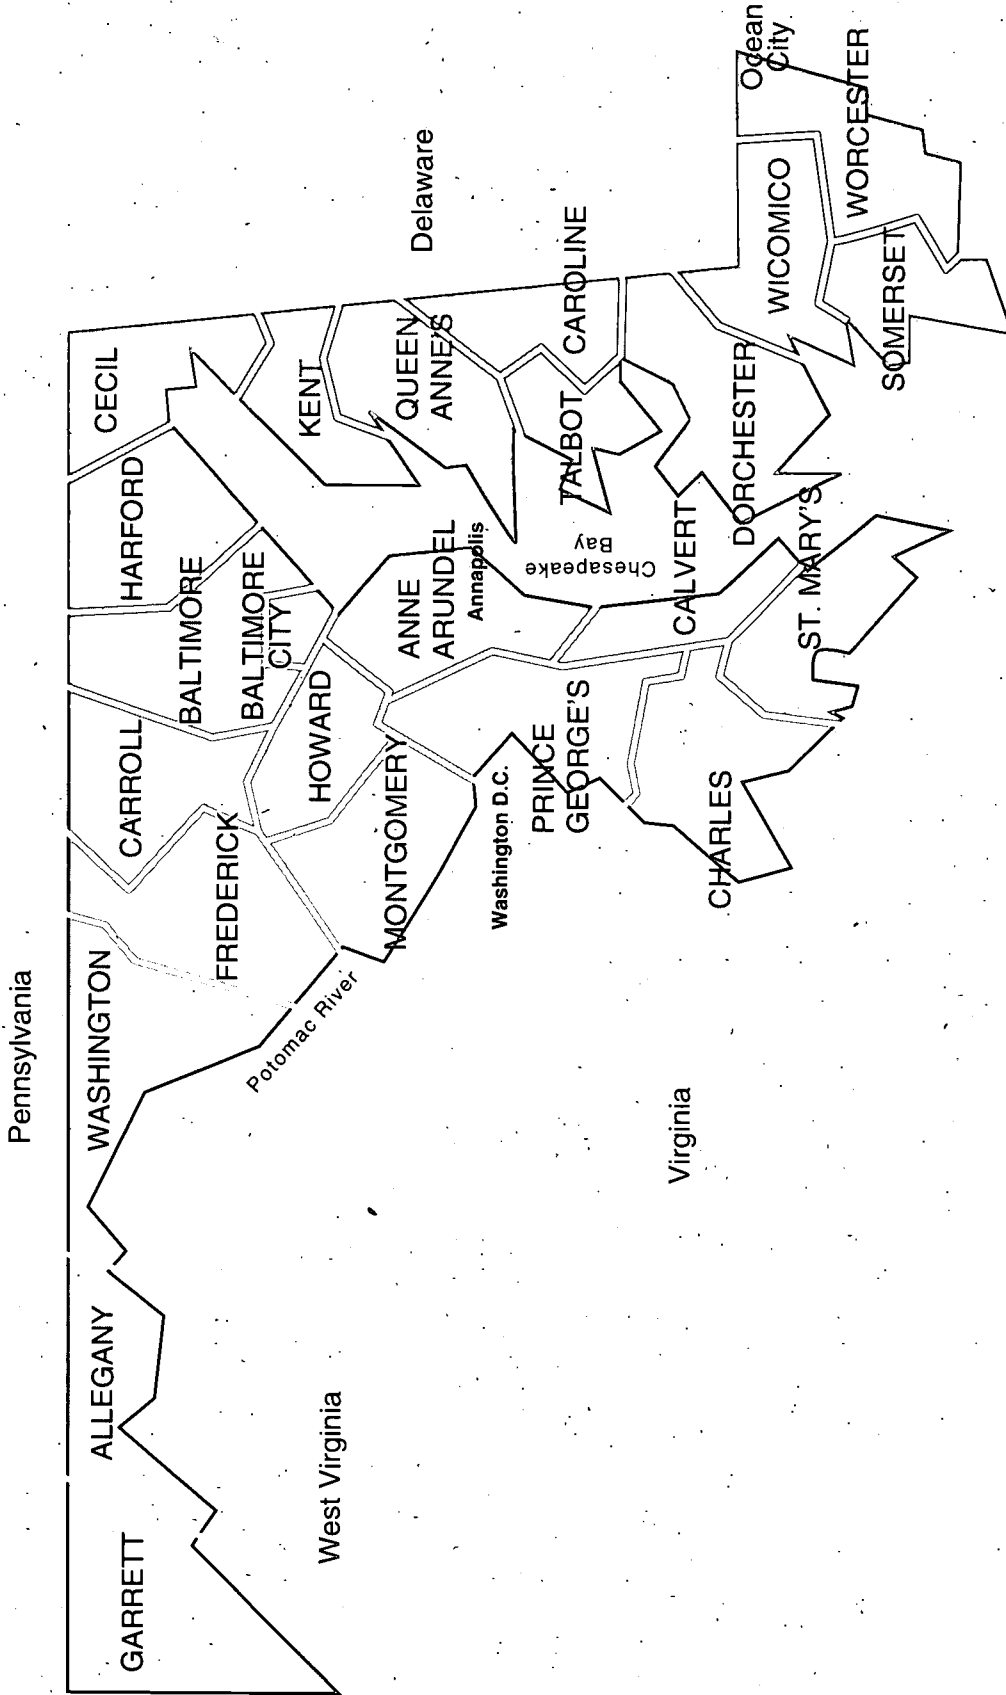

We thank the **ABELL FOUNDATION**, **THE BALTIMORE COMMUNITY FOUNDATION**, and the **LOUIS AND HENRIETTA BLAUSTEIN FOUNDATION** for their generous support of the KIDS COUNT Partnership and this publication.

MARYLAND

WHY THIS BOOK?

The Maryland 1995 KIDS COUNT Factbook presents the third comprehensive look at the conditions of children and families in Maryland. This factbook measures how well of how poorly children are doing by providing fourteen baseline outcome measures of child health, education and socio-economic well-being in each Maryland county. These measures are categorized under four BASIC areas—Economic Well-Being, Good Health, Safety and Preparing for Adulthood. This factbook also provides a detailed, county-by-county picture of the social condition of Maryland's children in individual county factsheets.

This factbook is an important tool in educating the public and decision-makers on the status of children in Maryland. It builds a strong and effective case for improving measurable outcomes for Maryland's children. It is our hope that the increased awareness resulting from the presentation of this data will prompt the interest of all Marylanders — business leaders, media, public servants, elected officials, community groups, indeed all citizens — to work toward improving the quality of life for our children. This can be done by working together toward public and private solutions to the present and future crises our children face.

WHAT'S NEW IN THE 1995 FACTBOOK?

The 1995 KIDS COUNT Factbook includes the county-by-county factsheets developed by KIDS COUNT, previously published separately. This Factbook provides 14 baseline outcome measures of child well-being. School violence data is provided by county. State level AIDS data is not included in this year's factbook. The 1995 KIDS COUNT Factbook presents charts and an analysis of the child well-being trends reflected by three years of collecting this data.

Maryland's children will have opportunities to achieve their full potential. They will reach adulthood having experienced a safe, healthy and nurturing childhood. Children in Maryland will have opportunities to grow physically, intellectually, emotionally and socially. They will be prepared to become responsible, self-sufficient and contributing members of the community.

INTRODUCTION AND OVERVIEW

PROMISING NEWS

The 1995 Maryland KIDS COUNT Factbook shows that there has been evidence of improvements in 10 of the 14 indicators of child well-being presented. The most significant improvements are in the area of Preparing for Adulthood, or education. Third grade reading scores, considered an indicator of future achievement, improved from 28.6% of students scoring satisfactory or above on the tests in 1992 to 34.1% in 1995. The percentage of students graduating from high school on-time and meeting minimal requirements to enter the University of Maryland System have also increased.

The infant mortality rate has dropped 26% between 1985 and 1994. The proportion of teens having babies declined from 12.1% in 1985 to 9.7% in 1994. Gains made in infant mortality reflect advancements in medical technology. Improved education benchmarks are the result of prevention programs, new education accountability standards (measures) and persistent efforts of advocates, educators and providers.

The 1995 Maryland KIDS COUNT Factbook

shows that there is promising news about infant mortality rates, percent of births to teens and education outcomes.

18

DISTURBING NEWS

There is disturbing news in the area of child and adolescent safety. The growing epidemic of violence continues to threaten the health and spirit of our children and communities. The rate of violent deaths among teens grew from 60.6 deaths per 100,000 in 1986-89 to a rate of 68.6 in 1990-93. The threat of violent death continues to be particularly real for African-American youth, who are 25 times as likely as white youth to die from homicide. The number of arrests for violent crimes among juveniles continues to climb—rising 35% in four years. And schools are less and less a safe haven for children. In 1993-94 the number of public school suspensions for violence related behavior increased to a rate of 39.9 per 1,000 students—an increase of 9% from 1992-93.

Maryland

has witnessed an alarming increase in violent crime arrests and violent deaths among children and teens.

19

KEY FINDINGS ABOUT MARYLAND CHILDREN

The ability of families to provide basic necessities is key to the physical, emotional and intellectual growth of children. Poverty threatens the well-being of children because it exposes them to greater risks. Poverty also creates greater obstacles for children to experience a safe, healthy and nurturing childhood and to reach their full potential. There is an interrelationship between poverty and many of the KIDS COUNT data indicators such as low birthweight, infant mortality and high school graduation. Poor babies are 1.2 to 2.2 times more likely to be born with low birthweight than non-poor babies and 1.3 times more likely to die in their first year of life. Teens living in poverty are twice as likely as middle-income youth and 11 times more likely than wealthy teens for being a school dropout at ages 16-24.

In interpreting the significance of any data trends, it is important to go beyond a superficial review of the numbers to determine the true significance of the statistics. While the analysis of progress presented on page 12 indicates "better" conditions in ten of fourteen indicators, a look at the actual figures show that the improvements are slight in most areas. For example, the percentage of child support orders with payment increased from 32.9% in 1994 to 35.6% in 1995. Payment is made in only slightly more than one-third of court-ordered child support cases. This means that most absent parents — two-thirds — still do not contribute to the financial well-being of their children.

Similarly, the drop in infant mortality rates may seem to provide cause for celebration. During the periods 1985-89 to 1990-94, Maryland's infant mortality rate dropped from 11.3 deaths per 1,000 live births to 9.5 deaths, respectively.

HOW DO WE RANK?

Maryland has the 5th highest per capita income in the United States, yet it ranks 31st in the nation on the well-being of its children.

1 = BEST

51* = WORST

percent of low birth weight babies 43RD

***50 STATES AND THE DISTRICT OF COLUMBIA**

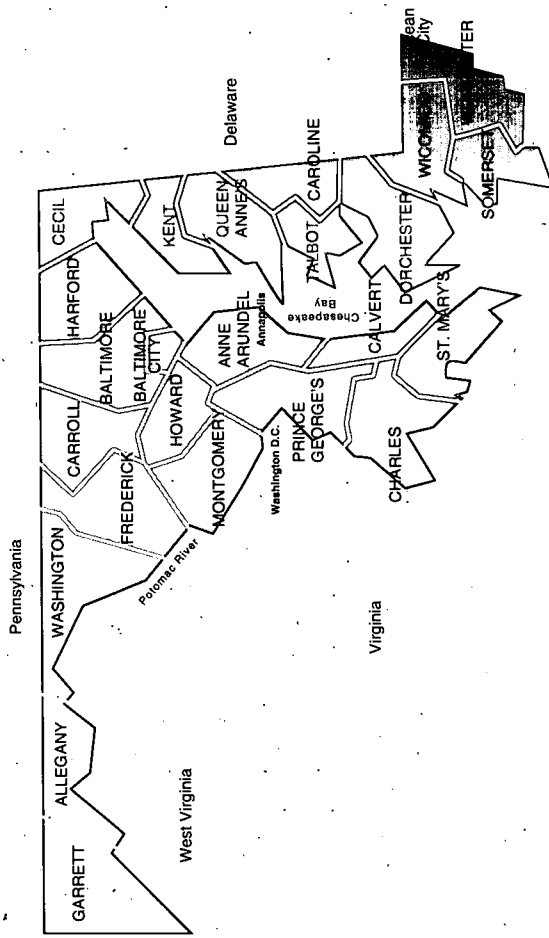

Source: KIDS COUNT DATA BOOK - 1996, The Annie E. Casey Foundation

However, there is a similar decline in infant deaths throughout the U.S., which is largely due to advances in medical technology. African-American babies in Maryland continue to die at twice the rate of white infants. Maryland's national standing is dismal, ranking 42nd out of 50 states and the District of Columbia in infant mortality.

Lead poisoning is the number one environmental disease of children in Maryland and the United States. And yet too few children are being screened for lead poisoning. The number of children screened has grown from 50,007 in 1992 to 60,853 in 1994. Although children under the age of six are especially vulnerable, only one in seven is screened.

The most alarming and most significant changes have been movement in a negative direction in the areas of youth violence. In 1993, 45% of all violent deaths were the result of homicide, with an equal percentage, 45%, caused by accidents. This is a significant change from 1992, when only 38% of all teen violent deaths were due to homicide as compared to 50% due to accidents. This means that while the proportion of accidents has decreased, the proportion of homicides has skyrocketed. A rise in the number of juvenile violent crime arrests is also cause for concern. Maryland has the 5th highest juvenile violent crime arrest rate in the nation. Between 1989 and 1993, the greatest increase in juvenile violent crime arrests occurred among 10-14 year-olds.

MARYLAND

HOW MARYLAND COUNTIES RANK

The following chart provides a county comparison of child well-being in 14 baseline measures.

1	Carroll	13	Allegany

11	Washington	23	Dorchester
12	Kent	24	Baltimore City

HOW ARE WE DOING?

The following chart provides an overview of Maryland's performance in 14 benchmark measures of child well-being.

ECONOMIC WELL-BEING

	THEN	NOW	TREND
Percent of Children in Poverty	10.9% (1989)	15% (1993)	worse
Paying Child Support Case	34.1 (1993)	35.6% (1995)	better
Percent of all Births to Teens	11.4% (1985-89)	10.1% (1990-94)	better

GOOD HEALTH

Percent of Babies Born Low Birthweight	7.9% (1985-89)	8.2% (1990-94)	worse
Infant Mortality Rate (per 1,000 live births)	11.3 (1985-89)	9.5 (1990-94)	better
Percent of Children Screened for Lead Poisoning	3.0% (1992)	14.2% (1994)	better

SAFETY

Child Death Rate (ages 1-14, per 100,000 children)	31.0 (1986-89)	29.9 (1990-93)	better
Teen Violent Death Rate (ages 15-19, per 100,000 Teens)	60.6 (1986-89)	68.6 (1990-93)	worse
Indicated Child Abuse and Neglect Rate (per 1,000 children)	8.2 (1990)	7.6 (1994)	better
Juvenile Violent Crime Arrest Rate (ages 10-17, per 10,000)	55.9 (1990)	70.1 (1994)	worse
Violence Related Suspension Rate (per 1,000 students)	37.5 (1992)	34.7 (1994)	better

PREPARING FOR ADULTHOOD

Third Grade Reading*	28.6% (1992)	34.1% (1995)	better
On-time Graduation Rate	72.8% (1990)	74.8% (1995)	better
High School Program Completion**	43.5% (1990)	49.7% (1995)	better

*percent of students scoring satisfactory on Maryland School Performance Assessment Program tests

Economic Well-Being *Families should be able to feed, clothe, and house their children.*

CHILD POVERTY

The percent of children in poverty is perhaps the most widely used indicator of child well-being. The ability of families to provide basic necessities is key to the physical, intellectual and emotional growth of children. Children who grow up in poor families are more likely to lack basic health care, to suffer from hunger and to live in sub-standard housing amid crime and violence. Poor children are also at greater risk of poor school performance, dropping out of school and early parenthood.

MARYLAND FINDINGS: The percentage of children under the age of 18 who are poor has grown from 10.9% in 1989 to 15% in years 1993. By 1993, one third of poor children lived in homes where one parent worked full time 50 weeks of the year.

COUNTY FINDINGS: In 1989, children were the poorest age group in Maryland. The percent of children living in poverty ranged from 3.7% in Howard County to 32.2% in Baltimore City.

CHILD SUPPORT

It is estimated that one-half of children born today will spend part of their childhood in a single-parent home. Many of these children will be poor, in part due to the failure of an absent parent (usually a father) to pay child support. Obtaining child support starts by establishing paternity and securing a child support order from the court. Only 60% of custodial mothers had a child support order in 1990. Many of the women awarded child support receive either less than the full payment owed or no payment at all. Eight in ten of mothers without a child support order receive no financial support.

MARYLAND FINDINGS: The percentage of child support orders with payment increased slightly between 1994 and 1995 from 32.9% to 35.6% respectively.

COUNTY FINDINGS: Almost all Maryland counties experienced increases in the percentage of paying child support cases between 1993 and 1995. Currently, child support cases in which payment is made ranges from 72.7% in Washington County to 17.1% in Baltimore City. Two suburban counties, Montgomery and Anne Arundel, rank 21st and 23rd in the state.

Good Health *Children should have the physical and mental health care they need to be healthy, secure and strong.*

BIRTHS TO TEENS

It is clear that early parenting often results in limiting life options for both the child and the parent. Children born to teen mothers will have to overcome high odds to thrive. They are more likely to be born prematurely, have low birthweight and die before their first birthday. They face an increased likelihood of growing up poor and experiencing low academic performance, dropping out of school, and becoming teen parents themselves. Teen parenting doubles the probability of living in poverty. Teen mothers are also more likely to be unmarried and unemployed, and to have dropped out of school. Two in five teen mothers are living in poverty five years after giving birth.

MARYLAND FINDINGS: The proportion of births to teens has fallen in the early 1990s. From 1985-89, 11.4% of births to teens compared to 10.1% from 1990-94.

COUNTY FINDINGS: Twenty-one counties had decreases in the percentage of births to teens from 1985-89 to 1990-94. The percent of birth to teens ranged from a low of 3.0% in Howard County to a high of 2.1% in Baltimore City during the period 1990-94.

LOW BIRTHWEIGHT BABIES

The condition of infants is a significant measure of the overall health of a community. Low birthweight and infant mortality rates are considered key indicators of child well-being. A low birthweight infant weighs less than 5.5 pounds (2,500 grams) at birth. Low birthweight babies face increased risk of long-term disabilities and death

during their first year. They also have a high probability of experiencing developmental problems. As they grow up, these children face increased risks of visual and hearing impairment, cerebral palsy, autism, epilepsy, delayed speech and development and learning disabilities. The number of low birthweight babies is not only an indicator of increased risk to the health of the child, but also a reflection of health problems of the mother. Mothers of low birthweight babies often do not receive adequate pre-natal care. Smoking, poor nutrition and drug and alcohol abuse put a mother at risk of giving birth to a low-weight baby. Low birthweight can be viewed as an indicator of the effectiveness of the health care delivery and social service systems to identify pregnant women at risk.

MARYLAND FINDINGS: The number of infants born low birthweight has not declined. From 1990-94, the percent of babies born low birthweight was 8.2% -- up slightly from 7.9% from 1985-89. The number of low birthweight babies rose from 28,734 from 1985-89 to 31,563 from 1990-94.

COUNTY FINDINGS: Only 8 counties experienced improvements in the percentage of babies born with low birthweight from 1985-89 to 1990-94. The Eastern Shore and Baltimore City had the highest percentage of low birthweight infants.

INFANT MORTALITY

The infant mortality rate measures the number of children who die before their first birthday, per 1,000 live births. Infant mortality reflects the adequacy of the health care system, the proper nutrition of the mother and the living conditions of the infant. During the first year of life an infant is particularly vulnerable to negative social conditions and surroundings. Children born into poverty are more likely to suffer health problems at an early age.

The major causes of infant death are low birthweight, disorders related to short gestation and sudden infant death syndrome (SIDS). Birthweight is the strongest indicator of infant survival. Two-thirds of infants who die have low birthweight. There continues to be a wide gap between African-American and white infant mortality rates. An African-American infant in Maryland is more than twice as likely to die in the first year of life as a white infant. Studies reveal that higher infant death rates among African-Americans are the result of higher incidence of low birthweight and poorer survival rates at all birthweights.

MARYLAND FINDINGS: During the periods 1985-89 to 1990-94, infant mortality rates dropped from 11.3 deaths per 1,000 live births to 9.5 deaths, respectively.

COUNTY FINDINGS: Twenty counties across the state experienced a decline in their infant mortality rate between 1985-89 to 1990-94. The highest infant mortality rates in the period 1990-94 were found in Talbot County, Prince George's County and Baltimore City, respectively.

NOTE: BLACK INCLUDES CHILDREN OF OTHER RACES
SOURCE: MARYLAND DEPARTMENT OF HEALTH AND MENTAL HYGIENE

LEAD POISONING

Although lead poisoning is preventable, it remains a pervasive health problem in the United States, with a significant impact on the health of children affected. It is estimated that 75% of all U.S. children live in housing that may contain lead paint or dust hazards. Children are exposed to lead from paint, gasoline and solder from dust, water, food, soil, the air, and from parents' occupations and hobbies. Children are commonly poisoned by ingesting lead contaminated dust while playing or eating. They may also be exposed through tap water with high concentrations of lead.

Children under age six are particularly vulnerable to lead poisoning. Even low doses of lead exposure can cause developmental problems in children, including verbal, perceptual and motor disabilities and inattentiveness. High levels of lead exposure may lead to comas, convulsions and even death.

MARYLAND FINDINGS: The number of children screened for lead poisoning grew from 50,007 in 1992 to 60,853 in 1994. Only 1 in 7 children under the age of 6 in Maryland are screened. The number of children with lead poisoning has also increased. In 1994, there were 1,793 children with lead poisoning — a 12% increase from 1993.

COUNTY FINDINGS: Between 1993 and 1994, just over one-half of Maryland counties had increases in the percentage of children screened for lead poisoning. However, there were only 6 counties where more than 10% of children were screened. Baltimore City and Talbot County had the highest percentage of children screened at 45.1% and 38.9%.

Safety *Children should have caring families, safe homes, schools and streets, free of fear and violence.*

CHILD DEATH RATE

The child death rate is the number of deaths from all illnesses, accidents, homicides and suicides of children ages 1-14, per 100,000. Children's well-being is placed at risk by both health problems and inadequate safety in the home and community. Poor children have higher mortality rates than children from middle and upper income families. Children living in substandard housing and poor neighborhoods are at an increased risk of intentional and non-intentional injuries.

MARYLAND FINDINGS: The primary cause of death for children of ages 1-14 is illness. One-third of child deaths are caused by unintentional injuries. The rate of child death dropped slightly from 31.0 deaths per 100,000 in 1986-89 to a rate of 29.9 in 1990-93.

COUNTY FINDINGS: Only 10 counties had decreases in their child death rates from 1985-89 to 1990-94. From 1990-94, the child death rate ranged from a low of 16 deaths per 100,000 children in Calvert County to a high rate of 82.9 deaths per 100,000 children in Caroline County.

TEEN VIOLENT DEATHS

The teen violent death rate is the number of deaths from homicides, suicides and accidents of teens between the ages of 15-19, per 100,000. Many teens engage in high-risk behaviors that threaten their health and safety. Teen homicide and suicide can be viewed as indicators of the level of hopelessness, anger and grief among adolescents.

MARYLAND FINDINGS: In 1993, there was an equal number of teen violent deaths from homicides as from accidents: each accounted for 45% of all such deaths. The rate of violent deaths grew from 60.6 deaths per 100,000 in 1986-89 to a rate of 68.6 in 1990-93. African-American and other race teens are 25 times more likely to die from homicide as white teens. White adolescents are twice as likely as African-American teens to commit suicide.

COUNTY FINDINGS: Violent death rates improved in 13 counties between 1985-89 to 1990-94. During the period 1990-94, teen violent death rates ranged from a low of 33.6 in Montgomery County to a high of 119.6 in Baltimore City.

CHILD ABUSE AND NEGLECT

Child abuse is a serious community problem: it reflects society's failure to care, nurture and protect children. Children from all races and classes can be victims of child abuse and neglect. Children are at increased risk of abuse and neglect if their parents or caregivers are coping with multiple problems such as alcohol and substance abuse, poverty, unemployment, domestic violence and homelessness.

Children who are abused and neglected may suffer both short- and long-term social, emotional and physical harm. This harm may manifest itself in low self-esteem, learning disorders, developmental delays, juvenile delinquency and even death.

MARYLAND FINDINGS: Between 1990 and 1995 the number of indicated child abuse and neglect investigations dropped 20%, from 9,555 investigations in 1990 to only 7,656 in 1995.

COUNTY FINDINGS: Seventeen counties experienced improvements in child abuse and neglect rates. Rates ranged from 2.1 indicated investigations per 1,000 children in Montgomery County to a rate of 16.2 in Somerset County.

JUVENILE VIOLENT CRIME ARRESTS

The juvenile violent crime arrest rate is the number of arrest of youth ages 10-17 for violent offenses — homicide, aggravated assault, forcible rape and robbery — per 10,000.

Poverty, family violence, neglect and abuse place teens at a greater risk of becoming involved in violent crimes. Being arrested for a violent crime is an event with serious ramifications for the future in the life of a teen. This indicator represents a major public policy issue, as policymakers attempt to address the alarming increase of violent crime being perpetrated by and victimizing youth.

MARYLAND FINDINGS: The number of violent crime arrests rose 35% between 1990 and 1994. In 1994, there were 3,569 juvenile arrests for violent crimes. The rate of violent crime arrests increased from 55.9 arrests per 10,000 youth in 1990 to a rate of 70.1 in 1994.

COUNTY FINDINGS: Only five counties experienced declines in juvenile violent crime arrest rates between 1990 and 1994. In 1994, arrests ranged from low rates of 8.6 and 9.4 in Harford and Carroll Counties, to high rates of 182.1 and 126.9 in Baltimore City and Wicomico County, respectively.

SCHOOL VIOLENCE

The level of school violence is determined by the number of physical attacks against teacher/staff, physical attacks against students, verbal/physical threats against teacher/staff, and verbal/physical threats against students resulting in a suspension and/or expulsion from school.

Violent incidents create an atmosphere of fear and increase the level of stress and anxiety for students. A violent environment in the schools impedes both the learning process and the social development of students. While many violent incidents among children and youth take place on school grounds, in-school fights may also lead to violence outside of school.

MARYLAND FINDINGS: Between the 1992-93 and 1993-94 school years, the number of suspensions for violence related behavior increased 9% from 27,588 to 30,061, respectively. In 1993-94 there were 39.9 suspensions for violence related behavior for every 1,000 public school students.

COUNTY FINDINGS: Between the 1992-93 and 1993-94 school years, 16 counties experienced increases in their suspension rates for violence related behavior. In 1993-94, suspension rates ranged from a low of 19.5 in Montgomery County to a high of 110.1 in Dorchester.

Preparing for Adulthood *Children should learn how to become responsible adults who can advance themselves while being sensitive to others.*

THIRD GRADE READING

Third grade reading ability is widely considered an indicator of future academic achievement. Third grade reading ability is determined by the percent of students scoring satisfactory or above on tests given as part of the Maryland School Performance Assessment Program (MSPAP). MSPAP measures school performance in relation to standards for 1996 and Maryland's educational goals for the year 2000. Schools must meet standards for satisfactory performance by 1996 in reading, mathematics, science and social studies. These assessments provide information primarily on school performance rather than individual student performance and focus on students' "higher level thinking skills" (i.e. their ability to apply knowledge and skills to solve problems and make decisions). MSPAP assessments are performance-based: students write, sketch and diagram responses to questions and other activities rather than select answers in multiple-choice items.

MARYLAND FINDINGS: The percentage of students who scored satisfactory or above in third grade reading improved from 28.6% in 1992 to 34.1% in 1995.

COUNTY FINDINGS: Between 1992 and 1995, all but one county witnessed improvements in the percentage of students scoring satisfactory or above in third grade reading on the MSPAP. In 9 counties, at least 40% of students scored satisfactory or above.

ON-TIME GRADUATION

On-time graduation rate is the percentage of students who complete their high school education within four years. This rate does not include those students who drop out of high school and eventually earn their high school diploma or General Equivalency Diploma (GED).

Obtaining a high school diploma indicates that a teen has acquired some minimal basic knowledge and skills. Teens who do not graduate from high school face limited employment opportunities and earn only about 75% as much as high school graduates. In 1992, almost one quarter of non-high school graduates earned less than \$5.00 per hour.

Students who have repeated one or more grades are twice as likely to drop out of high school as those students who have never been held back. Regardless of race, poor teens are twice as likely not to complete high school on time.

MARYLAND FINDINGS: Between 1990 and 1995, the percentage of students who graduated on-time increased from 72.8% to 74.8%.

COUNTY FINDINGS: Between 1990 and 1995, 13 counties witnessed improvements in on-time graduation rates. Students who graduated on-time ranged from a low of 39.4% in Baltimore City to a high of 94.2% in Howard County.

SOURCE: MARYLAND STATE DEPARTMENT OF EDUCATION

HIGH SCHOOL PROGRAM COMPLETION

High school program completion reflects the percent of high school graduates who have completed the minimum course requirements for admission to the University of Maryland System. This indicator paints a picture of how well prepared today's youth are to enter the labor force. Jobs in today's economy require high levels of language, math and reasoning skills. More than half of all new jobs created by the end of this century will demand some education beyond high school, and close to one-third will require a college degree. As the 21st century draws nearer, advanced skills and technical knowledge become essential to those seeking a place in the labor force.

MARYLAND FINDINGS: In 1995, just under one-half of high school graduates took minimal course requirements that would qualify them for the University of Maryland system.

COUNTY FINDINGS: Between 1991 and 1995, 15 counties experienced increases in the percent of high school graduates completing the University of Maryland System requirements. In 1995, the percent ranged from a low of 24.8% in Garrett County to a high of 74.9% in Howard County.

methodology & sources

The information in the Maryland 1995 KIDS COUNT Factbook comes from both state and national sources. The data was collected from state departments and agencies and U.S. government bureaus.

This section identifies both the primary and secondary data sources and the methodology used to compute the findings.

BEST COPY AVAILABLE

METHODOLOGY AND SOURCES

The 1995 Factbook provides data for 14 benchmark indicators for each county. County-specific data are reported for time periods marked THEN and NOW. Data presented under the category of NOW or current year data are provided for the most recent available year. Because of time required for agencies that serve as our primary data sources to collect data used in the report and the time required to produce the factbook, "1994" and "1995" serve as the most current years. Data presented under the category of THEN serve as baseline years. The reader is cautioned to check each indicator to determine the exact time period being reported.

The 1995 Factbook provides data for 14 benchmark indicators of child well-being, and data is presented in three different ways: number, rate and rank.

NUMBER: The most direct measure of the scope of a problem is the count of the number of events of concern — e.g. the number of births born to mothers under age 20. County datasheets

show the number of events for a designated time period.

RATE: A rate is the measure of the likelihood of an event — e.g., out of every 100 births, how many babies will be born to women under age 20? Percent is a rate of 100. Rates measure the severity of a problem. A rate is useful if you want to compare the severity of the problem in one area (your county) to another. However, if you are planning an intervention and estimating the required resources, you will need to know the actual numbers.

A rate is calculated by dividing the number of events of interest by the number of persons that are "eligible" for the event. The rate (or percentage of births to women under age 20) is the number of births to women under age 20 (during a given period) divided by the total number of births during the same period.

RANK: In the 1995 Factbook, we used the rate or percentage to assign a ranking for each of the 14 benchmark indicators.

The benchmark rankings are used to compile overall individual county rankings. The overall ranking of a county is the sum of its ranking for each benchmark indicator. The county with the lowest sum total has the highest (best) rank. The county rank tells you how well children in your county are faring compared to all the other jurisdictions in Maryland.

Economic Well-Being

CHILD POVERTY

Child poverty is the number and percent of related children under 18 living in families with incomes below the U.S. Poverty Threshold as defined by the U.S. Bureau of the Census. "Related children" include family head's children by birth, marriage or adoption under age 18, as well as other person under 18 who are related to the family head.

How Poverty Is Measured:

The federal government's official poverty index is used to

classify people as above or below the poverty line. The poverty level, created in 1964, was computed by using as a yardstick the amount of money necessary to purchase the lowest nutritionally adequate diet. This price was then multiplied by three to obtain a poverty threshold. A family is officially classified as poor if its cash income (wages, pensions, social security benefits, AFDC benefits and all other forms of cash income) falls below the poverty threshold. The poverty income thresholds are updated each year to reflect changes in the Consumer Price Index (inflation). The 1996 poverty guideline is \$12,890 for a family of three. The data were obtained from the Maryland Office of Planning Analysis of the U.S. Bureau of the Census, Census of Population and Housing 1990, STF-3A, tables 123, 124, 125 and 126 and Bureau of the Census, 1980 Census of Population, STF-3A. State level data were derived from unpublished March Current Population Survey data supplied by the U.S. Bureau of the Census.

The State of America's Children, 1994, (1994). Children's Defense Fund: Washington, DC.

CHILD SUPPORT

Child support is the number and percent of court-ordered child support cases in which any payment is received. The data were supplied by the Maryland Department of Human Resources.

REFERENCES

Ebb, Nancy. (1994) Enforcing Child Support: Are States Doing the Job?, Children's Defense Fund: Washington, DC.

BIRTHS TO TEENS

Births to teens is the percentage of total births born to women under the age of 20. The percent is computed by dividing the number of

babies born to women under age 20, by the total number of babies born. That number is then multiplied by 100. Birth data were obtained from the Maryland Department of Health and Mental Hygiene.

Safety

CHILD DEATHS

Child death rate is the number of deaths from all causes to children 1-14 years, per 100,000 children of the same ages. Data were compiled from the Maryland Department of Health and Mental Hygiene. The total number of children ages 1-14 for the years 1986-93 was based on the Maryland population estimates from the Maryland Department of Health and Mental Hygiene.

REFERENCES

Miller, A., Fine, A. & Adams-Taylor, S. (1989). Monitoring Children's Health: Key Indicators, American Public Health Association: Washington, DC.

TEEN VIOLENT DEATHS

The teen violent death rate is the number of deaths from homicides, accidents and suicides to youths ages 15-19, per 100,000 teens ages 15-19. The data were supplied by Maryland Department of Health and Mental Hygiene. The total number of teens ages 15-19 for the years 1986-93 was based on the Maryland population estimates from the Maryland Department of Health and Mental Hygiene.

REFERENCES

Losing Generations: Adolescents in High-Risk Settings, (1993). Commission on Behavioral and Social Sciences and Education; National Research Council. Washington, DC.

CHILD ABUSE AND NEGLECT

The number of indicated Child Protective Services' investigations of alleged physical abuse, neglect and sexual abuse. The child abuse and neglect investigation rate is the number of indicated investigations per 1,000 children ages 0-17. An investigation can involve one or more children. Child abuse

and neglect cases are often under-reported. The number of indicated investigations provides a minimum estimate of the prevalence of child abuse in Maryland. The child abuse and neglect rate was calculated by dividing the number of indicated investigations by the estimated number of children under age 18 and multiplying by 1,000. Data on child abuse and neglect were from the Maryland Department of Human Resources. Data on total population under 18 were based on population estimates from the Maryland Department of Health and Mental Hygiene

JUVENILE VIOLENT CRIME ARREST

Violent crime is defined as homicide, forcible rape, robbery and aggravated assault. Arrest rates could include repeat arrests of the same individual for different offenses. Juvenile violent crime arrest rate is the number of violent arrests of youth ages 10 to 17 per 10,000 youths of those same ages. The arrest rate reflects the number of arrests not the number of adolescents involved in a arrest. Data on population ages 10-17 were based on population estimates from the Maryland Department of Health and Mental Hygiene. The rate is computed by dividing the number of violent arrests by the number of youth ages 10-17; that number is then multiplied by 10,000.

Note: In 1990 and 1994, the number of juvenile violent crime arrests in the counties do not sum the state total due to arrests made

by statewide agencies. Juvenile violent crime arrest data were obtained from the Uniform Crime Reporting Program, Maryland State Police Department. The number of youth, ages 10-17, was obtained from the population estimates from the Maryland Department of Health and Mental Hygiene.

SCHOOL VIOLENCE

School violence is the number of physical attacks against teacher/staff, physical attacks against student(s), verbal/physical threats against teacher/staff and verbal/physical threats against student(s) resulting in a suspension and/or expulsion from school. The suspension and expulsion data in Maryland public schools

have several limitations.

Suspension and expulsion may result from an array of behaviors that vary by the severity of the act. For example, a physical attack on a student may range from a push or shove to an assault with a weapon. Additionally, schools vary in methods in dealing with a student's behavior and may employ alternative methods to suspensions and expulsions. Data were obtained from the Maryland State Department of Education.

Preparing for Adulthood

The Maryland School Performance Assessment Program (MSPAP) measures school performance in relation to standards for 1996 and Maryland's educational goals for the year 2000. Data was obtained from the Maryland State Department of Education.

ON-TIME GRADUATION

On-time graduation is the percentage of ninth grade public school students who complete high school four years later. The rate was calculated by the number of high school graduates divided by the number of ninth grade students enrolled four years prior. The data were obtained from the Maryland State Department of Education.

Services/ Demographics

AID TO FAMILIES WITH DEPENDENT CHILDREN (AFDC)

AFDC is the monthly average number of children under 18 who live in families receiving AFDC benefits and the average monthly amount of these benefits. Aid to Families with Dependent Children (AFDC) is a public assistance program that provides cash benefits to poor families with dependent children. AFDC is funded by both the federal government and the states. States, however, set their own AFDC benefit levels. The data were supplied by Maryland Department of Human Resources.

MEDICAID

Medicaid notes the number of children under 18 who are enrolled in Medicaid. Medicaid provides medical assistance to low-income elderly, the blind and disabled. It also serves families on AFDC and other low-income women and children. Medicaid is the principal source of health care coverage for poor women and

children. Today, every state must provide Medicaid to all pregnant women with children under age six with family incomes less than 133% of the poverty level. The Maryland Department of Health and Mental Hygiene provided the data.

WOMAN, INFANTS AND CHILDREN (WIC) SPECIAL SUPPLEMENTAL NUTRITION PROGRAM

Children in the WIC program reflects the number of children and infants participating in WIC, the estimated number of children eligible for WIC and the percent of children eligible and enrolled in WIC. The Maryland Department of Health and Mental Hygiene provided the data.

FREE AND REDUCED-PRICE MEALS

Students receiving free/reduced price meals is the number of students whose application for free/reduced price meals met income eligibility guidelines of the U.S. Department of Agriculture. The Maryland State Department of Education supplied the data.

JUVENILE JUSTICE

Juvenile Justice is the number and percentage of intake cases in the Department of Juvenile Justice. The Maryland Department of Juvenile Justice provided the data.

CHILD CARE

Estimated child care costs, food, taxes and housing are based on a two-parent family with 2 children ages 1-2 and 3-5 years. Center-based care refers to year-round care provided in non-residential facilities for 8-12 hours per day and is licensed by the Child Care Administration of the Maryland Department of Human Resources.

Family Day Care pertains to child care provided in the caregiver's home. Caregivers are registered with the Child Care Administration of the Maryland Department of Human Resources and offer full or part-time care.

Child care data is provided by the Maryland Committee for Children, Inc. and the Department of Human Resources.

ESTIMATED CHILD POPULATION

The estimated child population is the number of children in Maryland ages 18 and under. Child population data were derived from the U.S. Bureau of the Census, produced by the Urban Studies Institute, University of Louisville.

CHILDREN'S LIVING ARRANGEMENTS

Children's living arrangements include the number of children under 18 living with two parents, a single parent and relatives/non-relatives. Children's living arrangements data were obtained from the Maryland Office of Planning Analysis of the U.S. Bureau of the Census, Census of Population and Housing 1990, STF-1A.

MEDIAN FAMILY INCOME IN 1989

Data were obtained from the Maryland Office of Planning Analysis of the U.S. Bureau of the Census, Census of Population and Housing 1990, STF-3A, table 109.

PERCENT OF CHILDREN WITH WORKING PARENTS

Includes:
1) the percentage of children under age 18 with all parents working (either both parents or the sole parent living with the children); *and*
2) the percentage of women in the labor force with children under 18. All data on working parents were available from the Maryland Office of Planning Analysis of the U.S. Bureau of the Census, Census of Population and Housing 1990, STF-3A, table 74.

Information on working mothers was supplied by the Maryland Office of Planning Analysis of the U.S. Bureau of the Census, Census of Population and Housing 1990, STF-3A, table 73.

TEEN IDLENESS

Idle teen is the number and percentage of youth ages 16-19 not in school, not working and not looking for work. Data were obtained from the U.S. Bureau of the Census, 1990.

Publication Date: 3/95 + update

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic/optical media, and sold through the ERIC Document Reproduction Service (EDRS) or other ERIC vendors.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following two options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

The sample sticker shown below will be affixed to all Level 2 documents

Check here For Level 1 Release: Permitting reproduction in microfiche (4" x 6" film) or other ERIC archival media (e.g., electronic or optical) and paper copy.

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY
Sample
TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Level 1

Check here For Level 2 Release: Permitting reproduction in microfiche (4" x 6" film) or other ERIC archival media (e.g., electronic or optical), but not in paper copy.

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN OTHER THAN PAPER COPY HAS BEEN GRANTED BY
Sample
TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Level 2

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but neither box is checked, documents will be processed at Level 1.

"I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic/optical media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries."
