IDENTIFIERS *Left Right Discrimination

ABSTRACT

This concise pamphlet describes methods of determining hand dominance in children. The pamphlet states that the child should be observed in certain procedures without being told that he or she is being tested. Among the test procedures suggested are activities with a hand puppet, hammering nails, and throwing a ball. The pamphlet offers directions for positioning the hand and the paper for left-handed writers for both manuscript and cursive writing. The pamphlet also discusses special problems of left-handed writers, such as reversals, and gives suggestions for solutions. (CR)

* from the original document. *

he writing should take place within the half of the desk surface, i.e., to the left of the midline of the body. The paper should be shifted to the left as the writing progresses across the page.

Special Problems

The Hooked Position The hooked wrist is caused by incorrect paper position. In an effort to see what she or he is writing, the left-handed child often adopts the hooked position. This is a problem that should be dealt with early in the child's development, since twisting of the hand or wrist can be detrimental to legibility and fluency. A valuable aid in correcting the problem, once the habit has been formed, is the Zaner-Bloser Writing Frame.

Reversals The problem of reversals is common to the left-handed child. Most errors result from confusion between the lowercase manuscript **d** and **b** and **p** and **q**. Awareness of the problem and concentration on the formal teaching of left to right progression and forward and backward circles before introduction of the teaching of the manuscript letters **b**, **d**, **p**, and **q** result in fewer reversals of these letters.

Chalkboard Work

Chalkboard practice is important because it lends itself to full, free arm movement and allows both the student and the teacher to easily spot incorrect habits. The position at the board for left-handed writing is similar to that for writing with the right hand, except that the eraser is held in the right hand and the chalk in the left, and the left hand stands to the right of where the writing takes place for both manuscript and cursive. This is not true of the right-hander. The right-hander stands in front of his or her manuscript writing, but stands to the left of cursive writing because the downstrokes are pulled toward the body's midsection.

Special Provisions

Left-handers should be provided with scissors designed especially for the left-hander. If table and arm chairs are used, make certain left-handers don't have to sit at desks for right-handers. Before students begin to write, demonstrate paper and pencil positions for the left-hander as well as the right-hander. It is often helpful for the left-hander to hold her or his pencil a little higher than the right-hander. The pencil points toward the left elbow, not toward the shoulder as the right-handers do. When given the proper attention and instruction, left-handers will write as well as right-handers.

Zaner-Bloser

We live in a right-handed society. Our civilization has been built around a tradition that regards the right hand as preferable to the left. Hand tools, machines, even doors were designed on the basis of this attitude. However, several years ago, Dr. Frank Freeman observed:

"The number of left-handed children seems to have increased in recent years. This may be due to relaxed home and school discipline as well as the recommendations of medical authorities that children who show early preference for the left hand should not be changed. Whatever the reason, these children are entitled to just as much guidance and help in the development of the skill of handwriting as the right-hander receives."*

Recent studies indicate that the number of left-handers is still on the increase. Estimates range as high as ten to 15 percent of the population. Almost assuredly, the elementary teacher will be teaching handwriting not only to right-handed children but will also have the responsibility of instructing the left-handers.

Determining Hand Dominance

How can one decide which hand the child should use in writing? Wrong choices at the readiness and early primary level could be detrimental to the child's writing and perhaps to the child's learning ability and personality. The choice, then, is an important one.

If the child is definitely left-handed, it is better to teach her or him to use that hand in

writing. If, however, there is some doubt as to which is the dominant hand, there are several simple ways of determining which will be the hand to train.

A few guidelines should be observed in these procedures. Do not tell the child that she or he is being tested. Work with only one child at a time. Keep a record as to which hand is used for each specific situation. Let the child pick up the testing materials; do not hand them to the child. Keep a tally of the procedures. If the child indicates true ambidexterity, it is probably better to train the right hand.

Several procedures are listed below. There are many other simple play situations that the observant teacher will find helpful for determining hand dominance.

Hand puppet Place a hand puppet on the table. In a play situation, observe the child to see which hand she or he puts the puppet on.

Key and lock Padlock a cupboard in the classroom. Place the key on the desk. Ask the child to take the key and unlock the padlock and bring you an object from the cupboard. Observe the child as she or he unlocks the padlock and picks up the object.

Hammering nails Place a toy hammer and nails, or pegs and pegboard on the table. Observe the child as she or he hammers several nails into place, or puts pegs into pegboard.

Screwing lids on jars Place several jars of various sizes with removable lids on the table. Place the lids in a separate pile. Ask the child to match the lids with the jars, put the lids on the jars, and close them.

Throwing a ball Place a rubber ball on the floor. Ask the child to pick up the ball and throw it to you.

Holding a spoon At lunchtime, or in a play situation where the child must use eating utensils, observe which hand is used.

Cutting with scissors Place a pair of scissors and a piece of colored construction paper on the table. Instruct the child to cut the paper into strips. Observe which hand is used to pick up the scissors and to cut the paper. Next, place paper of a different color on the table and have the child repeat the process. Did the child use the same hand or change hands? Repeat with a third color.

Position for Writing

For manuscript writing, the left-hander should position the paper with the lower right corner a little to the left of the midsection. For cursive writing, the paper is slanted less, with the lower right corner pointing toward the midsection or just a little to the right of it. The strokes are pulled down toward the left elbow, whether manuscript or cursive is being written.

The writing instrument is held between the thumb and first two fingers, about an inch above its point. The first finger rests on the top of the pencil or pen. The end of the bent thumb is placed against the writing instrument to hold it high in the hand and near the large knuckle. The top of the instrument points in the direction of the left elbow.

REPRODUCTION RELEASE

(Specific Document)

I. DOCUMENT IDENTIFICATION:

Title: <i>The Left-Handed Child in a Right-Handed World.</i>	
Author(s): <i>Clinton J. Hecton</i>	
Corporate Source: <i>Zaner-Bloser</i>	Publication Date:

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic/optical media, and sold through the ERIC Document Reproduction Service (EDRS) or other ERIC vendors. Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following two options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

The sample sticker shown below will be affixed to all Level 2 documents

Check here
For Level 1 Release:
Permitting reproduction in microfiche (4" x 6" film) or other ERIC archival media (e.g., electronic or optical) and paper copy.

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY
