ABSTRACT

This Kids Count report presents information on the status of Florida's children. A statistical profile is presented for the state and for each county, based on demographic data and 19 indicators of child well being: (1) per capita income; (2) county population; (3) number of white and nonwhite children under 18 years; (4) number of births in 1993 compared to 1990 by race; (5) teen birth rate by race; (6) low birth weight by race; (7) early prenatal care by race; (8) infant mortality rate by race; (9) number of births to unwed mothers by age and race; (10) number of child deaths; (11) teen violent death rate and number; (12) number of runaways; (13) number of children affected by marriage dissolutions; (14) number of students in school; (15) number of school disciplinary actions; (16) high school graduation rate; (17) number of students eligible for free or reduced school lunches; (18) number of youths in the juvenile justice system by race; and (19) number of child abuse and neglect cases verified. Data tables, terminology, and sources are appended. (KDFB)

University of South Florida/Florida Mental Health Institute

The University of South Florida (USF), one of the new universities created in the 20th century, is driving higher education on a fast track into the next millennium. University of South Florida's Florida Mental Health Institute (USF/FMHI) is the state's primary university research and training center for public mental health services. Nationally recognized for its innovative research and training, USF/FMHI is an integral part of USF's optimism, vitality and can-do attitude.

The 18th largest university in the United States and still growing, USF has built a solid reputation as a leader in learning, offering comprehensive, state-of-the-art programs. During fiscal year 94/95, USF/FMHI trained more than 21,000 individuals in addition to providing 4,360 hours of consultation and over 1,370 hours of community/university service. Located on the USF Tampa campus, each of the Institute's four departments provide in-depth research and training with a focus on the mental health needs of specific populations and service systems:

The Department of Aging and Mental Health (AMH) addresses the mental health, well-being and quality of life issues affecting people in a rapidly aging population. AMH offers out-patient services for older adults and their families including substance abuse counseling. AMH operates an interdisciplinary Memory Disorder Clinic with diagnostic and treatment services for cognitively-impaired individuals and families.

The Department of Child and Familu Studies (CFS) examines mental health issues involving children from pre-kindergarten to adolescence through education, consultation and demonstration services, including parent training, positive behavior management and family preservation. CFS's Research and Training Center for Children's Mental Health, a federally funded program, improves services for seriously emotionally disturbed children and their families.

The Department of Community Mental Health (CMH) focuses on developing, evaluating and strengthening community treatment programs for adults with severe emotional disorders. CMH designs and evaluates innovative treatment approaches and disseminates its finding through training, research and consultation. The department also operates the USF Center for HIV Education and Research to health care providers throughout Florida.

The Department of Mental Health Law and Policy (MHLP) develops new approaches to mental health and related services within the criminal and civil justice systems. MHLP examines the impact of law and mental health policy upon individuals with mental illness or substance abuse problems. Operating one of Florida's Children, Youth and Family Professional Development Centers, MHLP provides specialized training for dependency/delinquency staff.

USF/FMHI is an official practicum and intern site for a growing number of university undergraduate and graduate programs. It also offers a predoctoral internship in clinical psychology and a multicultural training program to involve minority students in the mental health field.

Founded in 1956, USF opened its doors in 1960 to 2,000 students. Today the University serves over 36,000 students—with nearly 200 programs at the undergraduate, master's, speciality and doctoral levels, including the M.D. Created by Florida's state legislature in 1969 to help strengthen the state's mental health care services. FMHI became part of USF in 1984.

This publication is one in a series of technical publications that consists of printed and audiovisual materials based on USF/FMHI's innovative research and training. For a complete list of publications available for sale, or for more information, please contact:

Introduction

Since 1992, the Florida Kids Count project has made available demographic and descriptive data about the lives of children in our state. Acquired from a variety of public and private sources, this information has become an important tool for policy makers, government agencies, child advocates and concerned citizens in their work on behalf of children and families. Over the course of the project, much has been learned about the lives of our children. Of equal importance, we have learned about how we can assess the impact of our public policy decisions on their day to day quality of life by tracking measurable changes in critical indicators of economic, health, educational and legal status.

This Profile of Florida's Children The 1995 Statewide and County Update provides users of Kids Count with indicator data which will fill in the gaps between Key Facts About the Children: The 1996 Florida KIDS COUNT Data Book, and the previous edition from 1994. This update includes data from the 1993-94 collection year on both a statewide and county basis and will allow for comparison across years for certain key indicators. Because some indicators can only reliably be reported based on United States Census data, the 1990 figures are repeated here for contextual purposes.

This publication is not intended to substitute for the *Key Facts about the Children: The 1996*Florida KIDS COUNT Data Book, to be published within the next few months. This update is organized to allow for quick reference by the user. The State of Florida summary page appears first and the county pages follow in alphabetical order. Terminology and sources can be found at the end of the book. In addition, the data that is displayed in the county pages appears in tabular form after the last county page to allow for comparison between a county and the statewide average and between and among counties.

As is the case with all Florida Kids Count publications, more detailed data and analysis is available on most of the indicators presented here. Information on county level data, data sources and comparable information from other states and the nation as a whole can be obtained by contacting:

Terminology & Sources

Terminology & Sources

Population Profile

Total Population - the combination of the white and nonwhite population.

White - includes persons who indicated their race as "White" or reported entries on the U.S. Census, such as Canadian, German, Italian, Lebanese, Near Eastern, Arab, or Polish. Nonwhite - includes persons who indicated their race as "Black or Negro" or reported entries on the U.S. Census, 1980 or 1990, such as African -American, Afro-American, Black Puerto Rican, Jamaican, Nigerian, West Indian, or Haitian; or persons who classified themselves as American Indian, Eskimo, Aleut; or persons who reported in one of the Asian or Pacific Islander groups; or those persons classified as "Other Race", including multiracial, multiethnic, or a Spanish/Hispanic origin group.

<u>Per Capita Income</u> - earning components of personal income are allocated on a place-of-work basis and are converted to place-of-residence basis by means of a residence adjustment factor. Property income and transfer payments are then added to earnings, resulting in total income on a place-of-residence basis. Expressed on per capita basis, earning by place-of-residence is an indicator of living standards and welfare level. (Florida Statistical Abstract, 1993).

Data were obtained from the Division of Economic and Demographic Research, Joint Legislative Management Committee, Tallahassee, Florida. Official population estimates and forecasts were prepared at the Florida Demographic Estimating Conference, Spring 1994

Florida Statistical Abstract, 1994, Table 5.10 Personal income: per capita amounts on a place of residence basis in the United States and the State and Counties. of Florida U.S. Department of Commerce, Bureau of Economics Analysis. Bureau of Economic and Business Research, College of Business Administration, University of Florida. Gainesville, Florida.

Infants in Florida

<u>Birth Statistics</u> - all birth data are reported by the parents' usual place of residence (regardless of where the birth occurred). The mother's residence is used when it differs from the father's residence. Race is usually counted as it is stated on birth and death certificates, with such designations as "Hispanic" counted as white. For births, the race of the child is determined as follows: (1) White, if both parents are white or if one is white and the other is unknown or not stated, (2) Nonwhite, in all other cases where the race of at least one parent is known, or (3) Unknown, only when the race of both parents is unknown or not stated.

<u>Birth Rate</u> - defined as the number of births per 1,000 resident population. Birth rates were obtained from Florida Vital Statistics. Midyear population estimates were furnished by the Office of Planning & Budgeting, Executive Office of the Governor.

<u>Teen Birth Rate</u> - the number of births to females 15 to 19 years of age per 1,000 female population of the same race and age group. Midyear population estimates were provided by the Division of Economic and Demographic Research, Joint Legislative Management Committee, Tallahassee, Florida.

<u>Infant Mortality Rate</u> - the number of infant deaths age under one year per 1,000 live births.

Low Birth Weight - infants who weighed less than 2,500 grams (5.5 pounds) at birth.

<u>Early Prenatal Care</u> - births to mothers of all ages by race, and total who received prenatal care in the first three months of pregnancy.

* an asterisk represents unreliable rates and ratios, those with denominators less than 100.

Data were obtained from the Florida Department of Health and Rehabilitative Services, Office of Vital Statistics, Jacksonville, Florida. Data were derived from requested unpublished tables, and from data in Florida Vital Statistics, 1993. Florida Vital Statistics for 1990 was also utilized.

Well-Being of the Children

Child Deaths - the number of deaths from all causes to children 1 to 14 years of age

<u>Violent Teen Death Rate</u> - the number of deaths from homicides, suicides, and accidents to teens 15 to 19 years old, per 10,000 teens of the same race and age group. Rates should be interpreted with caution in some counties due to low numbers of teens and deaths. Population estimates for July 1, were provided by the Division of Economic and Demographic Research, Joint Legislative Management Committee, Tallahassee, Florida.

<u>Runaways</u> - the number of youth who were reported as a runaway by the Florida Department of Law Enforcement (FDLE), Uniform Crime Reports.

<u>Children Affected by Dissolution of Marriage</u> - the number of children under age 18 who were affected by the collective number of dissolutions of marriage. In Florida, there were 6,750 dissolutions of marriage with an unknown number of children and 40,100 with no minor children affected in 1994.

<u>Maltreatments</u> - a maltreatment is defined as the act of treating badly, roughly, unkindly, or abusively, often used as an inclusive description for all forms of child abuse and neglect. The figures on child victims are based on the number of maltreatments in a report. The maltreatment is counted each time it occurs in a category (abuse, neglect or threatened harm). A victim may have several maltreatments per report. A report may contain several victims.

<u>Verified and Some Indication</u> - a "verified" finding is used when a preponderance of the credible evidence results in a determination that the specific injury or harm was the result of abuse or neglect. A finding of "some indication" is used when credible evidence provides some indication that the specific injury or harm was the result of abuse or neglect.

Data on maltreatments were provided by the Florida Department of Health and Rehabilitative Services, Florida Protective Services System (FPSS), Child Protective Investigations, Tallahassee, Florida.

Juvenile Runaway data were provided by the Florida Department of Law Enforcement (FDLE), Florida Crime Information Center, Monthly Report of Runaway Juveniles, Tallahassee, Florida.

Data on deaths to children and teens were obtained from the Florida Department of Health and Rehabilitative Services, Office of Vital Statistics, Jacksonville, Florida. Data were derived from Florida Vital Statistics, 1993.

Data on dissolutions of marriage and number of minor children affected were obtained from the Florida Department of Health and Rehabilitative Services, Office of Vital Statistics, Jacksonville, Florida. Data were derived from Florida Vital Statistics, 1994.

Education and the Children

<u>Total Enrollment</u> - the number of students of any race or ethnicity enrolled in the Florida public school system. The student membership count is conducted in the Fall of each school year.

<u>Hispanic</u> - the Florida Department of Education has defined Hispanic as a person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin regardless of race.

<u>Disciplinary Actions</u> - the number of disciplinary actions, including in-school suspensions, outof-school suspensions, corporal punishment, and expulsions. More than one disciplinary action per student may have occurred during the year.

<u>Graduation Rate</u> - the percentage is calculated by dividing the number of first time ninth graders into the number of students who receive, four years later, a high school diploma, a certificate of completion, a special certificate of completion, and students 19 years of age or younger who receive a general equivalency diploma.

Free and Reduced School Lunch Program - the National School Lunch Program of the Child Nutrition Program is funded by the U.S. Department of Agriculture and administered through the Florida Department of Education. Schools and Residential Child Care Institutions are eligible to participate in the programs if they are non-profit and serve children less than 21 years old. Eligibility is based on reported income. In 1993/94, a child living in a household with an income of \$18,655 or less qualified for the Free Meal.

<u>Eligible</u> - eligibility is based on reported income. In 1993/94, a child living in a house hold with an income of \$18,655 or less qualified for the Free Meal.

Average Daily Participation - cumulative participation is based on days of service

Data were provided by the Florida Department of Education, Division of Public Schools, Management Information Systems, Tallahassee, Florida.

Data were provided by the Florida Department of Education, Division of Public Schools, Food and Nutrition Management, Tallahassee, Florida.

Youth and the Juvenile Justice System

Cases - if the same juvenile was referred, for example, for several offenses on the same date, these were counted as one case. If the youth was referred on another date for one or more charges, that would be counted as another case, always selecting the most serious offense for tracking purposes.

Youths - the measurement of Youths was developed to measure the number of delinquents in Florida rather than the number of times they get in trouble with the law. If the same youth is referred for several offenses during that year these would not be counted, using only the most serious offense charged during that period.

Received or Referred- the number of delinquency referrals reported to the Client Information System (CIS), a database managed by the Department of Health and Rehabilitative Services and used by the Department of Juvenile Justice to track delinquency offenses/referrals from law enforcement. The number of cases is counted by unduplicating the number of referrals reported received on the CIS by client identifier and the date the referral was received. The number of youths referred is determined by counting only the most serious offense for which a youth is charged during any fiscal year.

<u>Reported Detentions</u> - the number of delinquency cases or youths with a placement in detention during the interim between arrest and case disposition.

<u>Transfers to Adult Court</u> - the number of juvenile cases or youths reported on the CIS as having jurisdiction transferred for disposition in the state's adult courts. Transfers for processing in adult court can occur by direct filing of a bill of information by a state attorney, a waiver of jurisdiction by a juvenile court judge, or an indictment by a grand jury.

Data were provided by the Bureau of Data and Research, Florida Department of Juvenile Justice, Tallahassee. Florida.
