   Home Care

ABSTRACT
                    This data book examines statewide trends in the well-being
of California's children. California is the only state where the majority of
the children (56%) come from African-American, Latino, Asian, and Native
American families. The report begins with summary tables of general state
facts, including: (1) California's children under 18; (2) education; (3)
safety; (4) health; and (5) economic status. The bulk of the report provides
county-by-county data and includes county rank and status as compared to
state averages. The first point of analysis is an ethnic and population
description of the children within the county and the percent with limited
English skills. The second area of analysis is how well children are educated
and reports on the following: fourth grade California Learning Assessment
System (CLAS) reading scores, eighth grade CLAS writing scores, high school
graduates prepared for college, and high school dropouts. The third area of
assessment is how safe children are and includes child abuse reports and
juvenile felony arrests. The fourth area of concern is child health and
includes: late or no prenatal care, low birthweight, infant mortality, teen
births, and immunization. The final area of assessment is economic security
and focuses on: newborns whose parents cannot afford health care, children of
unmarried parents, and child support payments. The report ends with technical
notes and data sources. (SD)

Children Now is a nonpartisan policy and advocacy organization for children. Children Now acts as a strong and independent voice for the millions of children who cannot speak for themselves— in the public policy arena, in the mass media and in the community. We focus particular attention on children who are poor or at-risk.

Table of Contents

Introduction

Once again, California is the bellwether for the nation: California is the first and, so far, the only state where the majority of our children (56 percent) come from African-American, Latino, Asian and Native American families. The U.S. Census forecasts that by the year 2050, the rest of the nation will be as diverse as California is now, with no one group representing more than a plurality. As the vanguard state in the country's demographic trend, California's success in facing and capitalizing on these changes can and should provide leadership for the nation.

For four years, Children Now has gathered and reported county-by-county data to inform citizens, community leaders, business people, elected officials and the media how well local communities are doing as the caretakers of our children. This year, for the first time, Children Now has brought a different and, in some ways, more intense lens to the data that has revealed a more complex picture than ever before. This *County Data Book 1994* reports not only how well all children are doing but, for key health and education outcomes, how each of the four major ethnic groups of children are faring: Anglos, Latinos, African-Americans and Asians (combined with others). The picture puts in the foreground facts that have been true for some time: the outcomes for all of California's children are too often grim. For Latino and African-American children, the failure to provide them with some of the very basics for success is even more dramatic. These data shed light on the many challenges California faces if we are to succeed in nurturing and developing our diverse population of children into productive and effective citizens.

As we examine the data reflected in the 58 county snapshots, and for California as a whole, we have very few choices: we can pretend our children are not in crisis, or we can do something to make a difference. We hope the *County Data Book 1994* will be a wake-up call for those who want to improve the lives of all children in California. The children we are failing today are California's future, our future. How well all of our children fare as they grow from toddlers to school children to workers will ultimately determine:

➤ The tax base of California and the state's ability to provide its citizens with basic services such as schools, roads, parks, libraries, police and firefighters.

➤ The everyday climate of our streets and communities, be they safe or unsafe, healthy or unhealthy, thriving or declining.

➤ The ability of the Social Security system to provide retirees a meaningful level of benefits (Social Security retirement benefits are not funded by the retired workers' own historical contributions, but by the next generation's current contributions).

Ultimately, the quality of life in California—a melange of ingredients that most of us affirmatively seek and cherish—turns on the economic well-being of this state and is inextricably bound to the well-being of today's children.

While economists often disagree, there is nearly universal consensus that the future economy of this state and country is dependent on a well educated—in fact, better educated than ever before—work force. There also is nearly universal consensus that when it comes to educating students, the stresses on today's children and families—ranging from limited access to health care to the economic and emotional challenges of keeping a working family afloat—makes the job of schools and teachers more difficult.

While many findings are disturbing, there's much good news to be found in this *County Data Fact Book 1994*. A review of the differing counties shows that there are children who are faring well, including many children of color. Equally important to note is that some counties are doing better than others at meeting the challenge of caring for all of their children. Significantly, in every instance where the facts are disturbing, there are solutions documented in extensive policy research and in diverse California communities that point the way to success for all of our children and, therefore, for all of us.

The data in this book answer the following key questions for each of California's 58 counties:

➤ Who are California's children?

➤ How well are they educated?

➤ How safe are they?

➤ How healthy are they?

➤ How economically secure are they?

The *County Data Book 1994* not only contains previously unreported race and ethnic information, but a number of other new indicators such as the number of children killed by guns and the proportion of high school graduates prepared for college. These data are presented as a snapshot rather than the several years' trends which previous Children Now county data books utilized, because we have adopted so many new indicators and because of data limitations on old indicators.

The data are also presented county by county, in alphabetical order. Since these county fact sheets are often used and duplicated for separate use (and Children Now enthusiastically encourages their reproduction), each county fact sheet also includes some additional facts that put these data in a comparative context, as well as in the context of effective solutions.

Key Findings

Who are California's Children?

California's 8.5 million children are a large and diverse group. California is a youthful state, with far more children than any other state. More than two-thirds of the state's children live in just 10 of the state's 58 counties (Los Angeles, San Diego, Orange, San Bernardino, Riverside, Santa Clara, Alameda, Sacramento, Fresno and Contra Costa counties). The number of children in those 10 counties alone is more than the total in any other state. Statewide, the majority of our children are either Latino, African-American, Asian, or Native American. California is the only state in the nation where Anglos constitute less than half of the child population. California's rapid growth also means that many children are newcomers. Today more than 1.1 million—or one in five California schoolchildren—has limited English skills.

How Well are California's Children Educated?

While showing signs of improvement, California schools are still not educating children well enough. Statewide, 24 percent of fourth graders could not fully understand a basic reading assignment, and 20 percent of eighth graders could not write a basic essay, as determined by the California Learning Assessment System (CLAS). While the dropout rate has improved significantly, last year alone nearly 55,000 high school students dropped out of school. Among the class of 1993, more than one in seven (15.3 percent) dropped out between the tenth and twelfth grades. Fewer than one-third (32.7 percent) of those students who do finish high school were prepared for college.

In recent years, gaps in achievement between racial and ethnic groups have narrowed. Yet even with improvements, schools are still leaving many African-American and Latino students behind. For example, California schools produced more African-American and Latino dropouts than African-American and Latino students prepared for college. Yet many counties show promising trends that support the premise that all children can learn at a high level. In fact, 15 counties prepared more Latino graduates ready for college than dropouts. Similarly, 20 counties produced more African-Americans ready for college than dropouts.

Deteriorating physical plants, outmoded curricula, overcrowded classrooms and lowered expectations often block the door to an effective education for many of California's children. Schools must be reformed to better meet the needs of students, and parents must have the tools to become more involved in their children's education. When schools tailor themselves to the needs of all children, many more students will achieve at higher levels.

8

A Community Success Story: Humanitas

Humanitas was launched by the Los Angeles Educational Partnership (LAEP) in eight Los Angeles high schools in 1986, to find a new way to improve educational performance. Built around a thematic, interdisciplinary, writing-based approach to teaching, the Humanitas program brings teachers and students together to form a "Community of Scholars." Teams of teachers from different disciplines at one or more grade levels collaborate to develop themes that capture the interest and curiosity of their students, while matching local and state curricular guidelines. The aim is to improve students' critical-thinking skills, as well as to give them confidence in exploring the art and cultural world around them.

The success of Humanitas students demonstrates why the program won a Ford Foundation "Innovations in State and Local Government" award as a model program for creativity and success: 65 percent of Humanitas students have applied to 4-year colleges, compared to 11 percent of non-Humanitas students; 27 percent of Humanitas students have a grade point average above 3.0 (necessary to get into the University of California), compared to 11 percent of non-Humanitas students.

The program targets students with diverse learning rates, ethnic and racial backgrounds—a mix designed to catalyze student interaction. Teachers are enthusiastic about a collaborative educational process which gives them opportunities to participate in team teaching and to draw on their expertise. Humanitas topics are integrated across academic disciplines, helping students make connections between history, their personal experiences and contemporary society. Today, 4,500 students and 267 teachers throughout the district participate in the program, which is currently offered in 36 Los Angeles high schools.

A Community Success Story: The Accelerated Schools Project

The Accelerated Schools Project, developed at Stanford University in 1986, challenges conventional wisdom about education by speeding up, rather than slowing down, instruction for at-risk students. Rather than reserving the richest learning experiences exclusively for gifted students, Accelerated Schools provide powerful learning experiences for all students and takes the approach that all students are capable of achieving at high levels.

Many of these schools have experienced dramatic results. Before Accelerated Schools, four-fifths of the students at Burnett Academy, a San Jose middle school, took remedial math. After one year as an accelerated school, the school community decided to eliminate ability groups. All 6th grade students now take accelerated math, all 7th graders take pre-algebra, and all 8th graders are enrolled in algebra. Seventh graders are showing test score improvements of more than a grade level in math and most 8th grade students go on to take geometry in high school. Similar gains have been enjoyed in language arts and reading. The San Jose School District is in the process of becoming the first district to apply these principles to all of its schools.

9

How Safe Are California's Children?

In many ways, violence has sadly become a common part of children's lives—in their homes, in their schools and in their communities. There were 663,042 reports of child abuse and neglect in California in 1992. More than two children a day—811 children under age 20—were killed by firearms in California in 1992. In addition, statewide there were more than 93,000 juvenile felony arrests in 1992. The extent of violence in our society affects our children's behavior.

Mistakenly, many think that children's safety is only a concern in urban areas. In fact, the counties with the highest incidence of child abuse and neglect are rural. The counties with the highest rates of juvenile felony arrests include pre-dominantly rural counties, such as Kern, Mono, San Joaquin, Shasta, Solano, Stanislaus, and Yolo. While the number of children killed by guns is highest in large urban counties, gun deaths are closely associated with the availability of guns. In fact, the seven counties with the highest number of children killed by guns also had the highest number of gun sales (Los Angeles, Orange, San Diego, Alameda, San Bernardino, Riverside and Sacramento counties).

Severe cutbacks in youth programs and community services such as parks and libraries have limited the positive activities available to many children. Children need after-school programs and recreation centers where they can learn and play without threat from abuse, violence, or crime. When children do not have healthy, supervised outlets for their energy, they often fall prey to high risk behavior. To reduce the death toll in our communities, California must invest in youth programs, as well as reduce the accessibility and availability of guns.

A Community Success Story: Barrios Unidos

Together with young people in Santa Cruz, Barrios Unidos invested their energy and resources to provide recreational opportunities for the children in their neighbor-hood. Barrios Unidos is an organization that works to prevent violence among youth by providing enriching activities and opportunities for individual growth, such as tutoring, cultural activities, sports and business experience. For two years, the Barrios Unidos Neary Lagoon Kids Club had lobbied the City of Santa Cruz to build a park near the Neary Lagoon Housing Cooperative where approximately 150 mostly Latino youth lived. When they faced continual delays, about 50 of these young people got together with parents and other community members to build their own soccer field. Soon after, the City Council invited the youths to make a presentation, and a new park in the Neary Lagoon neighborhood was approved. The leadership and initia-tive exhibited by these young people will help ensure that children in their neighbor-hood have a safe place to play during non-school hours.

Barrios Unidos is working with others to prevent violence in Santa Cruz, which is one of 18 California communities taking part in a statewide Violence Prevention Initiative sponsored by the California Wellness Foundation.

A Community Success Story: LA's BEST

In many Los Angeles neighborhoods, where children have grown accustomed to hearing gun shots on an almost daily basis, an after-school enrichment program is making a measurable difference in their lives.

LA's BEST (Better Educated Students for Tomorrow) is a public/private partnership among the City of Los Angeles, the Los Angeles Unified School District, and the private business sector, that is targeted at the most needy elementary schools in the district. Sites were selected based on low test scores, socio-economic status of the community, and high neighborhood gang/crime rates. It is currently serving 4,200 school children at 21 schools.

The program provides a wide variety of supervised after-school activities—from homework assistance to citywide sports competitions—that have resulted in positive outcomes for these children. A recent independent evaluation conducted at UCLA identified proven successes:

➤ *77 percent of the children report that they "like school more" since joining LA's BEST.*

➤ *The children report feeling significantly safer in the LA's BEST program than in their neighborhoods.*

➤ *The children displayed demonstrable improvement in their self-esteem.*

➤ *Most parents reported academic improvements in their children and felt their children were learning more with the help they were receiving with their schoolwork.*

Many parents become involved in working with the staff of LA's BEST and this becomes yet another factor that increases the success of the program. This special public/private partnership is clearly making a difference in the lives of thousands of inner-city children in Los Angeles.

How Healthy are California's Children?

Good health care begins with prenatal care before birth, and includes timely immunizations and regular checkups. Every year more than 30,000 infants (a rate of 6.2 percent between 1990 and 1992) are born to women who received no prenatal care or none until the last trimester of pregnancy. Every year, more than 35,000 babies (a rate of 5.8 percent between 1990 and 1992) are born at low birthweight in California. Low birthweight is an especially serious problem among African-Americans—one in eight is born too small. Every year more than 4,000 babies die before their first birthday. California's infant mortality rate (a rate of 7.5 deaths per 1,000 live births between 1990 and 1992) was about twice as high as Sweden's, the country with the lowest rate. While timely vaccinations prevent deadly diseases, fewer than half (48.5 percent) of California's two-year-olds are fully protected.

Children cannot achieve their highest potential if they are burdened with poor health. Unfortunately, many California children do not get a healthy start in life. One reason for these poor indicators is that too many parents are children themselves. More than 70,000 babies—one in eight—are born to teenagers in California every year.

Improving the health of mothers and babies is not only good for children, it makes fiscal sense. Every $1 spent on prenatal care saves more than $3 by preventing low birthweight. Similarly, $1 spent to immunize a child saves more than $10 by preventing disease. We must ensure that all Americans have comprehensive, affordable health insurance. Furthermore, every community needs enough doctors and clinics to provide quality care. There is an especially acute need for community-based, culturally-appropriate providers in African-American and Latino communities. If we provide a healthy start for every child, both children and the economy will benefit.

Counties that have made the commitment to healthy children are already seeing better outcomes that will save costs in the long term. For example, Alameda County, including the inner-city Oakland and Berkeley communities, has one of the best rates of prenatal care among African-American women in the state. As a result, it also has one of the best African-American infant mortality rates. In addition, Alameda immunizes its children as effectively as Marin County, even though Marin is a much wealthier county.

A Community Success Story: Healthy Tomorrows

Infant mortality is a basic measure of a community's well-being. While the East Bay county of Contra Costa includes some of the state's poorest communities, it has the state's best infant mortality rate for African-Americans, 12 deaths per 1,000 lives births. It is proof that making a sustained commitment to reducing infant mortality can succeed.

Beginning in the mid-1980s, Contra Costa County embarked on a multi-faceted effort to improve the health of pregnant women and infants, with special attention to African-American families. Taking advantage of new federal resources through Medi-Cal and state tobacco tax funds, Contra Costa developed a comprehensive public-private strategy to expand access to prenatal care, improve the quality of care, and focus on prevention. The effort involved more than 30 community-based organizations and public health programs around the county.

A special outreach program, Healthy Tomorrows, was developed to help African-American women get earlier prenatal care. The program sends lay outreach workers into the community to visit soup kitchens, shelters, and temporary housing facilities to find pregnant women and link them to health care. Since transportation is a major problem for many women, Healthy Tomorrows offers taxi vouchers so women can get to their appointments. Weekly support group meetings

11

and personal attention from outreach workers helps the women find stability and a sense of community.

Yet outreach is not enough to assure healthy babies. The county also worked to improve the quality of prenatal care, and expanded access to care by implementing a Comprehensive Perinatal Services Program. It provides health education, nutrition and psycho-social services, in addition to regular medical care. Several new programs were also started to help pregnant women with drug and alcohol problems.

As a result of its comprehensive efforts, Contra Costa County has already achieved the year 2000 objective for African-American infant mortality. Its extraordinary progress stands as an example to other counties. The county is now aiming to completely close the infant mortality gap between African-American and Anglo infants by the end of the decade. The entire state and nation should watch what it does.

A Community Success Story: California Teen Outreach Program

In eight communities across the state, the Teen Outreach Program (TOP) is fighting to reduce school dropout and teen pregnancy rates, while finding new ways for young people to discover the rewards of community service. The program is working in continuation high schools, a migrant education program in a restructured high school, and a middle school. In all of these settings, students are making a difference for their own future, and for their community.

Sponsored nationally by the Association of Junior Leagues International, the program is based on local community/school partnerships between school districts, local Junior Leagues, volunteer centers and other community-based organizations. TOP combines a positive self-image curriculum facilitated by education professionals, with community service placement for involved teenagers. Here in California, TOP teens learn that their life experience is valuable while they help address local community needs. In Sacramento, seventh and eighth graders discover how important bilingual skills are when working with elementary school students.

Seven years of national effort show that TOP works. Nationally, TOP participants have a five percent lower rate of course failure in school, an 18 percent lower rate of school suspension, a 33 percent lower rate of pregnancy, and a 50 percent lower dropout rate than other students. The program has been operating in California since 1993, and will expand to six more sites in the 1994-95 school year.

How Economically Secure are California's Children?

The once tightly woven fabric of economic security that embraced California families has been unraveling over the past decade. In 1992, 39.5 percent of all babies were born to parents who would have been uninsured or unable to pay for care without Medi-Cal. Contrary to popular belief, the vast majority of these families work. Yet, nearly 1.7 million California schoolchildren cannot afford lunch. Almost one-third of all schoolchildren in the state receive free or reduced-price lunches. One reason many children are impoverished is because they do not receive the financial support of two parents. Moreover, nearly one-third of all California babies are born to unmarried parents, many of whom do not seek or receive support orders. Among children with court-ordered child support, only 40.1 percent received any money at all from the non-custodial parent in 1993.

Families are struggling throughout the state. No county is exempt from the problematic consequences of poverty. Even the wealthiest counties in the state have large numbers of struggling families. For example, more than one in eight infants delivered in Marin County receives Medi-Cal assistance, and one in ten Marin schoolchildren cannot afford school lunch. Similarly, in Ventura County more than 27,000 (nearly one in four) schoolchildren cannot afford lunch, and nearly one-third of newborns have parents who cannot afford health care.

We must assure life's essentials for every California child. By strengthening the child support system, including establishing paternity for all children, every child can get the support of two parents. Tax policies that help low- and moderate-income working families, and job training can enable more families to become self-sufficient. Moreover, the safety net must be mended to assure that no California child goes without adequate food or shelter.

A Community Success Story: "What Kind of Parent Will You Be? Think About It" and POP: The Paternity Opportunity Program

There are three critical components of child support: establishment of paternity; establishing the appropriate level of financial support through an order for child support; and enforcement of the child support order.

Since June of 1992, the California Department of Social Services (CDSS) has been carrying out several new programs designed to educate the public about the child support system. These programs include improving establishment of paternity and strengthening enforcement.

As part of a comprehensive public awareness campaign to improve attitudes toward child support, parenting, and ultimately, our children, CDSS has instituted the Child Support Curriculum for California High Schools. Entitled, "What Kind of Parent Will You Be? Think About It," the curriculum seeks to expose young people to information that may influence their behavior both now, and when they become adults.

14

The goal is to get students to understand that child support, financial as well as emotional, is one of the inherent responsibilities that go hand-in-hand with parenthood.

The multi-media curriculum was designed for students in grades 9-12. The youth-oriented video that accompanies the curriculum incorporates upbeat music, a teen host and child support terminology. Using real life stories, the curriculum debunks many of the myths about child support and teaches students the steps necessary to move through the child support system. Students are even involved in creating public service announcements on child support.

Since October 1993, "Think About It" has been sent to 850 high schools, 450 continuation high schools and 380 pregnant minor programs. The Los Angeles Unified School District has included the program in its curriculum offerings for the coming year. Thousands of young people have been reached through this program and many others have been exposed to the curriculum through Family Support Divisions of local district attorneys' offices. Child support enforcement agencies in many other states, including Texas, Michigan, Virginia and Alabama, have contacted California to get copies for use in their states.

A second new program, POP, the Parent Opportunity Program, was developed as a pilot through the collaboration of child support experts, district attorneys and children's advocates. Under this program, the natural parents of a child can acknowledge paternity by voluntarily signing a declaration of paternity at the hospital or other site of birth. By giving parents an easy, fast and early opportunity to establish paternity, the voluntary declaration reduces the court time involved in establishing paternity and makes it more likely that parents will honor the obligation to pay child support.

California's early experience with this program shows that in certain counties, 75-80 percent of fathers visit the hospital near the time of the birth of their child, and that up to 30 percent of parents are willing to sign a voluntary declaration of paternity. In addition, counties that invest in parent education, such as Humboldt County, can expect even greater success, particularly when the education occurs before mothers arrive at the hospital. These successes should help increase the number of children receiving support from both parents, and legislation signed by Governor Wilson in 1992 allows for statewide expansion of this program by January, 1995.

Conclusion

This snapshot of how California's children are faring at the county level is grim, especially for our Latino and African-American children. As Californians, we ignore these facts at our peril. Most importantly, we jeopardize the future of all our children. As the most diverse state in the country, California is poised to enjoy the many blessings and challenges of the California of the next century. In fact, there are communities today who experience the benefits of improving the lives of children, including children who are hurting the most. As individuals, communities, and as a state, we can make a difference. One by one, we can influence the life of a child by tutoring, mentoring or volunteering. Collectively, through our congregations, civic organizations, at work and in community groups, we can create opportunities for young people to learn, work, play and develop. And, by joining together, we can elect leaders who will create policies which put the interests of children first by investing in the right start for every child. Only then will we get the return on investment California needs to remain a thriving and unique state—the Golden State, the bellwether of the nation.

of
Alameda County

The profile of each county brings home the facts about children in that community. The picture for all children is grim; it is particularly disturbing for African-American and Latino children. From the California recession, to an eroding tax base, to a crumbling infrastructure, it is not hard to understand why so many children are in crisis. While there is good news in some areas, every county needs improvement for all its children. Solutions are at hand. Communities are improving the lives of children every day, especially those children who are hurting the most. When we invest in children, it pays off. We hope this "close-up" look spurs every Californian to make a difference for children in their community.

who are they?

331,442 **children**
40.3% Anglo
20.5% African-American
20.5% Latino
18.7% Asian/other
percent with **limited English skills**: 16.0%

how well are they educated?

percent of 4th graders that can't fully understand a **basic reading** assignment: 22%
proportion of 8th graders that can't write a **basic essay**: 18%
percentage of the class of 1993 that **dropped out**: 12.9%
percentage of high school **graduates prepared** for college: 34.1%
number of **dropouts**/number of high school graduates **prepared for college**: 1,433/3,315

       Anglo: 334/1,509   African-American: 527/457

The Children

of
Alpine County

The profile of each county brings home the facts about children in that community. The picture for all children is grim; it is particularly disturbing for African-American and Latino children. From the California recession, to an eroding tax base, to a crumbling infrastructure, it is not hard to understand why so many children are in crisis. While there is good news in some areas, every county needs improvement for all its children. Solutions are at hand. Communities are improving the lives of children every day, especially those children who are hurting the most. When we invest in children, it pays off. We hope this "close-up" look spurs every Californian to make a difference for children in their community.

of
Del Norte County

The profile of each county brings home the facts about children in that community. The picture for all children is grim; it is particularly disturbing for African-American and Latino children. From the California recession, to an eroding tax base, to a crumbling infrastructure, it is not hard to understand why so many children are in crisis. While there is good news in some areas, every county needs improvement for all its children. Solutions are at hand. Communities are improving the lives of children every day, especially those children who are hurting the most. When we invest in children, it pays off. We hope this "close-up" look spurs every Californian to make a difference for children in their community.

The Children

of
Kern County

The profile of each county brings home the facts about children in that community. The picture for all children is grim; it is particularly disturbing for African-American and Latino children. From the California recession, to an eroding tax base, to a crumbling infrastructure, it is not hard to understand why so many children are in crisis. While there is good news in some areas, every county needs improvement for all its children. Solutions are at hand. Communities are improving the lives of children every day, especially those children who are hurting the most. When we invest in children, it pays off. We hope this "close-up" look spurs every Californian to make a difference for children in their community.

The Children

of
Marin County

The profile of each county brings home the facts about children in that community. The picture for all children is grim; it is particularly disturbing for African-American and Latino children. From the California recession, to an eroding tax base, to a crumbling infrastructure, it is not hard to understand why so many children are in crisis. While there is good news in some areas, every county needs improvement for all its children. Solutions are at hand. Communities are improving the lives of children every day, especially those children who are hurting the most. When we invest in children, it pays off. We hope this "close-up" look spurs every Californian to make a difference for children in their community.

The profile of each county brings home the facts about children in that community. The picture for all children is grim it is particularly disturbing for African-American and Latino children. From the California recession, to an eroding tax base, to a crumbling infrastructure, it is not hard to understand why so many children are in crisis. While there is good news in some areas, every county needs improvement for all its children. Solutions are at hand. Communities are improving the lives of children every day, especially those children who are hurting the most. When we invest in children, it pays off. We hope this "close-up" look spurs every Californian to make a difference for children in their community.

of
Sacramento County

The profile of each county brings home the facts about children in that community. The picture for all children is grim
it is particularly disturbing for African-American and Latino children. From the California recession, to an eroding tax
base, to a crumbling infrastructure, it is not hard to understand why so many children are in crisis. While there is
good news in some areas, every county needs improvement for all its children. Solutions are at hand. Communities
are improving the lives of children every day, especially those children who are hurting the most. When we
invest in children, it pays off. We hope this "close-up" look spurs every Californian to make a difference
for children in their community.

of
San Luis Obispo County

The profile of each county brings home the facts about children in that community. The picture for all children is grim; it is particularly disturbing for African-American and Latino children. From the California recession, to an eroding tax base, to a crumbling infrastructure, it is not hard to understand why so many children are in crisis. While there is good news in some areas, every county needs improvement for all its children. Solutions are at hand. Communities are improving the lives of children every day, especially those children who are hurting the most. When we invest in children, it pays off. We hope this "close-up" look spurs every Californian to make a difference for children in their community.

Sierra
County

The profile of each county brings home the facts about children in that community. The picture for all children is grim; it is particularly disturbing for African-American and Latino children. From the California recession, to an eroding tax base, to a crumbling infrastructure, it is not hard to understand why so many children are in crisis. While there is good news in some areas, every county needs improvement for all its children. Solutions are at hand. Communities are improving the lives of children every day, especially those children who are hurting the most. When we invest in children, it pays off. We hope this "close-up" look spurs every Californian to make a difference for children in their community.

The Children

of
Trinity County

The profile of each county brings home the facts about children in that community. The picture for all children is grim it is particularly disturbing for African-American and Latino children. From the California recession, to an eroding tax base, to a crumbling infrastructure, it is not hard to understand why so many children are in crisis. While there is good news in some areas, every county needs improvement for all its children. Solutions are at hand. Communities are improving the lives of children every day, especially those children who are hurting the most. When we invest in children, it pays off. We hope this "close-up" look spurs every Californian to make a difference for children in their community.

Technical Notes

Who Are California's Children?
Child Population: Child population and racial/ethnic distribution data are from the State of California Department of Finance population estimates for 1992. Throughout this report, Anglo is used in place of white, non-Latino, African-American is equivalent to black, and Latino is substituted for Hispanic.

Limited English Skills: Percent of students enrolled in school who have been identified as having limited English proficiency, 1993. The State of California Department of Education conducts an annual language census in every school in California.

How Well Are California's Children Educated?
4th Graders that Can't Fully Understand a Basic Reading Assignment: Percentage of 4th graders that scored a one or two on the CLAS reading test, 1993. The CLAS test is scored on a range of one to six. A score of two or lower indicates that a child has only a superficial or fragmentary understanding of the text.
Source: State of California Department of Education.

8th Graders that Can't Write a Basic Essay: Percentage of 8th graders that scored a one or two on the CLAS writing test. Students who score a two or lower cannot write complete sentences or form structured paragraphs.
Source: State of California Department of Education.

Percentage of the Class of 1993 that Dropped Out: Three-year dropout rate, 1993. The three- year dropout rate reflects the percentage of 10th grade students in the class of 1993 that began in September, 1990 and dropped out of school by the end of the 1993 school year.
Source: State of California Department of Education.

Percentage of High School Graduates Prepared for College: Preparation for college was defined as having completed the minimum academic course work needed for admission to the University of California or the California State University in 1992. The course work requirements are often called the A-F requirements.
Source: State of California Department of Education.

Number of Dropouts/Number of High School Graduates Prepared for College:
The number of high school students that dropped out and the number of graduates prepared for college during the 1992 school year.
Source: State of California Department of Education.

Poverty Rates of Children of High School Dropouts and Children of Parents with Some College: National estimates obtained from the U.S. Bureau of the Census.

How Safe Are California's Children?   152
Number of Child Abuse Reports: The number of child abuse and neglect incidents reported in 1992.
Source: State of California Department of Social Services.

Ratio of Child Abuse Reports to Incidents of Violent Crime: The ratio of child abuse and neglect incidents reported to the State of California Department of Social Services and the number of violent crimes tabulated by the State of California Department of Justice in 1992.

Chances a Gun in the Home Will Kill a Family Member or Friend Rather than a Criminal: Kellerman, Alona, and Reay, DT. "Protection or Peril? An Analysis of Firearm-Related Deaths in the Home." New England Journal of Medicine, 1986, 314:1557-1560.

Number of Children Killed by Guns: Number of children ages 0 to 19 killed by firearms in 1992. Firearm deaths include homicide, suicide and accidents.
Source: State of California Department of Health Services.

Juvenile Felony Arrest Rate: Number of children under the age of 18 arrested for a felony per 1,000 children ages 0 to 17.
Source: State of California Department of Justice.

How Healthy Are California's Children?

Percentage of Babies Born with Late or No Prenatal Care: Percentage of infants born to mothers who did not receive prenatal care until after the 6th month of pregnancy or who received no prenatal care at all.
Source: State of California Department of Health Services.

How Much Each Dollar Spent on Prenatal Care Saves: Preventing Low Birthweight, Institute of Medicine, Washington, D.C., 1986.

Percentage of Babies Born at Low Birthweight: Percentage of infants born weighing less than 2,500 grams or 5.5 pounds at birth. Children Now calculation based on all births in 1990, 1991 and 1992.
Source: State of California Department of Health Services. Mexico's rate is for 1992 as reported by UNICEF.

Proportion of Neonatal Infant Deaths Due to Low Birthweight: The proportion of all infants born nationwide whose death within the first two months of life is attributed to low birthweight.
Source: Children's Defense Fund, Washington, D.C.

Cost of Neonatal Intensive Care for Low Birthweight Baby: A national estimate of the 1993 cost per day to care for a child in the Neonatal Intensive Care Unit.
Source: Children's Defense Fund, Washington, D.C.

Infant Mortality Rate: The number of infants who die within the first year of life per 1,000 live births. Children Now calculation based on all infant births and infant deaths in 1990, 1991 and 1992.
Source: State of California Department of Health Services. Sweden's rate is for 1992 as reported by UNICEF.

Proportion of Infants Born to Teen Mothers: Percentage of infants born to mothers younger than 20. Children Now calculation based on all births in 1990, 1991 and 1992. *Source: State of California Department of Health Services.*

Percentage of Two-Year-Olds Fully Immunized: Percentage of children entering kindergarten in 1992 that received four doses of DTP (diphtheria, tetanus and pertussis), three doses of OPV (oral polio vaccine), and one dose of MMR (measles, mumps and rubella) by their second birthday.
Source: State of California Department of Health Services.

Health Costs Saved for Each $1 Invested in Immunizations: U.S. Centers for Disease Control and Prevention, Atlanta, Georgia, and the Children's Defense Fund, Washington, D.C., 1993.

How Economically Secure Are California's Children?
Percentage of Babies Born to Parents Who Cannot Afford Health Care: Percentage of all deliveries in California that were covered by Medi-Cal in 1992. *Source: State of California Department of Health Services.*

Number/Percentage of Children Who Cannot Afford Lunch at School: Average number of schoolchildren receiving free or reduced priced lunch, and that average as a percentage of all enrolled schoolchildren, 1991-1992.
Source: State of California Department of Education.

Percentage of Babies Born to Unmarried Parents: Percentage of infants born in California to unmarried mothers. Children Now calculation based on all births in 1990, 1991 and 1992.
Source: State of California Department of Health Services.

Odds a Baby Born to Unmarried Parents Will Live in Poverty: Poverty rate for children younger than six living in single-parent families in California in 1989.
Source: U.S. Bureau of the Census.

Proportion of Children with Court-ordered Child Support Who Receive Any Money from a Noncustodial Parent: Proportion of all child support accounts that received any payment at all, September, 1993.
Source: State of California Department of Social Services.

What Others Say About Children Now's County Databook

Once again, Children Now's *County Databook* shows that you really do get what you pay for. When we neglect children's needs, we guarantee a future of undereducated adults and overcrowded prisons. Too many of California's children are subject to spreading violence, illness, poverty and neglect. But this report shows that when we invest our time, energy and resources into our children, we can create equal opportunities for all.

Cruz Reynoso
Justice, California State Supreme Court, ret.

The Children Now *County Databook 1994* makes the critical connection between rigorous data collection and strategy development. If we are to achieve equity, individuals, politicians, and institutions must use this data to inform decisions, design programs, and evaluate progress.

Angela Blackwell
President, Urban Strategies Council and National Coordinator, Black Community Crusade for Children

This report underscores the reality of our state's racial, ethnic, and cultural diversity. We must turn this challenge into an asset by guaranteeing equal economic and educational opportunity for all. Children Now is helping to lead the way by showing what is wrong, what works, and what we can do to make a difference.

John Gamboa
Executive Director, Latino Issues Forum

Kids don't vote, and so we must organize the political and community support so critical to their future. Children Now gives us the most useful ammunition I know of—accurate information, up-to-date, and written to reach local and state policymakers. If we grow temporarily discouraged, the success stories in this edition are inspiring and practical. So read this book, arm yourself with information and hope, and go to work!

Molly Joel Coye, M.D., M.P.H.
former Director, California Department of Health Services

Children Now's report demonstrates the payoff we get when we give children the resources they need and it warns us about the consequences of disinvesting in our future. The *County Databook 1994* provides examples of success stories that can serve as a road map for parents, business leaders, politicians, activists, and other concerned citizens to design programs and policies to solve this crisis.

Andrew Galef
Founder, The Galef Institute; and Chair, Business Roundtable Education Reform Task Force
