IDENTIFIERS Pensacola Junior College FL

ABSTRACT

At the close of the 1996-97 academic year, Florida's Pensacola Junior College (PJC) undertook an analysis of enrollment to determine trends from the previous academic year. Results of the analysis included the following: (1) PJC ended the year with 6,644 fundable full-time equivalent (FFTE) students, a drop of 6.6%, or 470.5 FFTE, from 1995-96; (2) unduplicated fundable headcount enrollment for 1996-97 was 22,520, a decrease of 4.8% from 1995-96; (3) the 6.6% FFTE loss represented a substantial worsening of the 4.2% decline between 1994-95 and 1995-96; (4) most of the enrollment losses were in the college credit area of advanced and professional (A&P) and postsecondary vocational (PSV) programs, with A&P experiencing a decrease of 7.9% (n=-283) and PSV showing a loss of 3% (n=-43); and (5) although the area of college prep experienced a 23.1% increase (n=65) in FFTE between 1995-96 and 1996-97, adult basic education and general education development (GED) showed a substantial drop in FFTE of 18.9% (n=-128). A discussion of factors contributing to the trends is included. Seven data tables are attached. (HAA)

Findings: For Academic Year 1996-1997, Pensacola Junior College ended the year with 6,572 unadjusted Fundable FTE. This was a drop from 1995 - 1996 of -428 or -6.1%.

	<u>1995 - 1996</u>	<u>1996 -1997</u>	<u>Net Change</u>	<u>% Change</u>
Fundable FTE	7,000	6,572	-428	-6.1%
Fundable FTE Adjusted for Dual Enrollment	7,114.5	6,644	-470.5	-6.6%

District unduplicated fundable headcount for 1996 - 1997 was 22,520 (minus 1,137 or -4.8% from last year).

ANALYSIS

District FFTE:

1. The overall FFTE loss from last year of -470.5 adjusted FFTE or -6.6%, represented a substantial worsening of the losses experienced in the 1995 - 1996 year (-315, or -4.2%). This indicates a downward trend with negative rates of change. Headcount fundable enrollments are down by 1,137 unduplicated students, or -4.8%, which indicates a positive change from the prior year loss of 1,546 or -6.1% .
2. The bulk of the negative (unadjusted) FFTE trend is accounted for (as was last year) in the college credit area of:

	<u>Last Year</u>	<u>This Year</u>	<u>No. Change</u>	<u>% Change</u>
A&P	3,565	3,282	-283	-7.9%
and				
PSV	1,451	1,408	-43	-3.0%
<hr/>				
College Credit	5,016	4,690	-326	-6.5%
Minus Dual Enrollment	<u>-458</u>	<u>-288</u>	<u>-170</u>	<u>-37.1%</u>
Paying Students	4,558	4,402	-156	-3.4%

This is a loss of -156 (or -3.4%) in fee paying FFTE in this area. Last year the loss was -293 (or -6.0%); thus, the credit area is improving somewhat in terms of fee-paying students.

A&P students took slightly fewer credits in 1996 - 1997 (-6.1% FFTE vs. -4.8% HC) and PSV students took more credits per student (-3.0% FFTE vs. -7.5% HC). The sites of college credit FFTE losses for 1996 - 1997 were:

Pensacola:	A&P	2,651	2,458	-193	-7.3%
	PSV	860	876	+16	+1.9%
Warrington:	A&P	415	408	-7	-1.7%
	PSV	513	463	-50	-9.8%
Milton:	A&P	500	416	-84	-16.8%
	PSV	76	69	-7	-9.2%

3. Across the District there was a modest increase for College Prep. (+65 FFTE or +23.1%).
4. At the Pensacola Campus, for the District, the Adult High School (adult secondary) increased by +3 FFTE or 0.5%. There was a decrease of 1 HC student or -0.1%.
5. Across the district there was a substantial drop in ABE and GED FFTE:

ABE	555	444	-111	-20.0%
GED	122	105	-17	-13.9%
<hr/>				
ABE + GED	677	549	-128	-18.9%

COMMENTARY

Q.: For reporting year 1996-1997 (95963-96972) both headcount and full-time equivalent enrollments were down significantly, why did this occur?

- A.:
1. This represents the fourth year in a trend of annual enrollment decline.
 2. The largest numerical loss (though not the largest percent loss) was in students whose majority courses were in the Advanced and Professional category.
 3. Over a half of the A&P losses were due to substantial declines (almost -40% FTE) in Dual Enrollment A&P. Many fewer A&P Dual Enrollment sections were scheduled this year than last. This was due, in part, to reactions of high school principals and counselors to changes in general education core requirements (the 36 credit rule) by the legislature. It was the widespread belief among these secondary school decision-makers that Dual Enrollment credits would not "count" toward graduation in a baccalaureate program. The potential exists for a slow reversal of this trend.
 4. Apparently increases this year in tuition and fees did not seem to affect A&P enrollments because there was no appreciable difference in changes in A&P HC & FTE enrollments (both were negative at about the same rate).
 5. Some (perhaps as much as -20%) of the overall A&P losses were due to recent changes in remedial practice (both locally and statewide). Increased placement test thresholds shifted large numbers of students from predominately A&P course schedules to predominately developmental course schedules. Yet, because of new restrictions (new co-requisites and prerequisites) and the fact that developmental-schedule students tend to enroll for fewer credits than A&P-schedule students, the result that the transition of these students from A&P to developmental status tended to result in fewer credits taken on the average per student. Also developmental students are not retained at as high rates as non-developmental students; an important consideration for Performance Based Budgeting.

6. For A&P students there yet remains approximately 40% of the overall loss due to factors other than Dual Enrollment losses and shifts to developmental work. The prime suspect in this third category of A&P loss is the fact that the local economy is excellent and employment is very high. It is clear that many students either are postponing their postsecondary education, or have concluded (at least for the present) that a satisfactory job does not require post-high school education. Clearly, the potential exists for the reversal of this factor when (not if) the economic situation reverses itself. A second factor in this remaining A&P loss may well be increasing competition from regional postsecondary providers. A third may well be that overall market demand may have finally been saturated (the mature industry idea). A fourth may be that (not fully understood) local economic trends (i.e. the change in focus of NAS, the closing of Westinghouse, the transition to a service-based economy) may also have had its effect. A fifth may be that the economic utility of the baccalaureate degree may have lost some of its attractiveness generally. A sixth possible factor is the emergence of Generation-X thinking that may well cause potential students to distrust the utility of higher education generally.
7. Associate degree (PSV) occupational education is also in decline, more so in terms of FTE than in headcounts. The same factors may be present for PSV majority credit students as for those in the A&P majority (except for Dual Enrollment, a small fraction). However, the losses were greater for FTE than headcount among PSV students which suggests that of those remaining, that these were not less "serious" students who enrolled for more credits than before but rather the result of AS curriculum changes last year. PSV losses were more striking on the smaller campuses, though the number of actual students lost at Milton was small. Warrington showed somewhat larger (in numbers) of PSV losses (though the remaining students took slightly more credits). The Pensacola campus was virtually stable in terms of PSV.
8. Similar trends exist for PSAV courses (though the percents are higher the numbers are low).
9. Supplemental vocational courses are up in FTE and HC (but account for little of overall production).

10. College preparatory-majority students are up in HC and FTE but fail to offset other losses as noted above. (Again, it is important to recognize that prep students tend to take fewer courses than A&P, etc. students.)
11. Vocational prep is a non-entity at PJC.
12. Adult basic education and GED prep enrollments are generally down by about a fifth. This is due, apparently, to the effects of the new Welfare Reform Act which has changed the market value of these courses. It is unlikely that this trend will reverse itself unless federal rules are changed in our favor. These two categories are an important part of PJC enrollments.
13. Life-long learning courses are about the same in terms of FTE but down by about -10% in terms of headcount participation. This suggests a tightening of the LLL market.
14. The non-funded cluster data are bizarre: FTE up by about +10% but headcount down by about -70%. This can be explained, in part, by the absence this year of hospital-based contract students. (This has exaggerated overall headcount losses this year, but probably masked higher losses last year.)
15. Recreation and leisure courses are stable in terms of headcount students but down in FTE production, which probably means nothing.

Although the rates of change vary among the various categories, the general trend seems to be a roughly uniform shrinking of the entire college. That is to say, all categories, with a few exceptions, seem to be in decline rather than a situation where the college decline can be attributed to a single classification of courses.

In such a situation several courses of action may be considered.

1. Fiscal conservation may well be indicated, especially in the approving of new and replacement personnel hires.

2. While retention, recruitment and marketing efforts should be emphasized, expectations should not be too great: at best, such efforts may well only minimize the loss trends present, not actually reverse them given that some causes may be beyond college control.
3. Should the trend have failed to have bottomed out this year and is found to be continuing in the fall of 1997, serious consideration should be given to new tactical planning. (So far revenues have been adequate but there may be a revenue loss effect to be experienced later in the present enrollment loss effect).

Conclusions: District-wide enrollments in the year declined in a manner that must be of much concern. This is the fourth year of negative numbers.

Recommendation: All efforts to recruit and retain students should be continued and increased.

Exceptions: Variations by district and by campus in the proportion of plus or minus $\pm 10\%$, or more are boxed in the following tables. Exceptions in excess of $\pm 20\%$ are boxed and highlighted
