### ABSTRACT

A study was conducted to examine the attitudes of elementary, middle/junior high, and high school counselors toward the development of national standards for school counseling programs. An effort was also made to identify the components counselors thought should be included in the national standards. Input from leaders of the American School Counselor Association (ASCA) was used to develop a questionnaire that was refined and distributed to 102 participants at the ASCA annual meeting. Responses of 1,127 ASCA members provided the data. Results clearly establish that school counselors strongly and broadly wish to have national standards. They generally believe that national standards will identify a focal point for practice, articulate a professional mission, provide a center for aspiration, and drive momentum for the future of the profession. These findings can be a foundation for the development of national standards for school counseling programs, but considerable thought, exploration, and conversation will be needed to ensure that the voice of the practitioner is not lost as standards are developed. The survey is attached. (Contains 22 tables and 2 references.) (SLD)

### INTRODUCTION

During recent years, interest has increased in the development of national standards for school counseling programs. Although this current wave of the school reform movement strongly recommended the development of national standards to direct educational practice, school counseling has largely been ignored. Yet, school counselors face the enormous challenge of preparing students to meet the expectations of higher academic standards and to become contributing members of society. School counseling continues to play an increasingly complex role in contemporary education.

### Purpose of the Study

The purpose of the study reported herein was to: (a) examine the attitudes of elementary, middle/junior high and high school counselors towards the development of national standards for school counseling programs; (b) clarify the purpose that standards would serve for school counseling programs; and, (c) identify the program components that school counselors believe should be contained in national standards.

### **Initial Development**

Before the current study was initiated, we took a number of essential steps to determine the content and issues that needed to be addressed. These included:

(a) a leadership discussion summary; (b) an open-ended questionnaire and, (c) a comprehensive review of the literature.

In June, 1994, the American School Counselor Association (ASCA) Governing

1

Board engaged in a lengthy discussion to determine whether or not there was a purpose for and a need to develop national standards for the school counseling community. The ASCA determined that national standards would identify what students should know and be able to do as a result of participating in a school counseling program, articulate the strategies that support student success in school, and clarify the relationship of school counseling to the educational system. As a result, the ASCA, the national professional association representing school counselors, decided to undertake the process of developing national standards for school counseling programs.

The results of this discussion were incorporated into a brief questionnaire which was distributed to 27 ASCA leaders. The recipients represented elementary, middle/junior high and high school work settings as well as the four major regions of the country (north-Atlantic, south, mid west, and west).

The questionnaire asked the following:

- Describe your thoughts on establishing national standards for school counseling.
- 2. What purpose will national standards serve?
- 3. What does it mean to have standards?
- 4. How are school counselors looking at standards?
- 5. What should the voluntary national standards include?
- 6. How would you implement the voluntary national standards in your school building (system)?

The response rate to the questionnaires was 81%. We used this information to develop a matrix of attitudes and perceptions about national standards, purposes for developing standards, and issues that standards should address. It was reported that the development of national standards for school counseling programs would:

- create framework for a national model for school counseling programs;
- establish school counseling as an integral component of the academic mission of the educational system;
- encourage equitable access to a school counseling services for all students
   provided by a credentialed school counselor;
- identify the key components of a developmental school counseling model program;
- identify the knowledge and skills that all students should acquire as a result of the K-12 school counseling program; and
- ensure that school counseling programs are comprehensive in design and delivered in a systematic fashion for all students.

These beliefs, in addition to a comprehensive review of school counseling literature and the existing thirty-five developmental state models for school counseling programs were the foundation for the pilot instrument. Thus, survey instrument reflected a blend of theory and practice.

As part of the development process, ASCA committed to a detailed study of the need for and potential content of these standards. This document reports the results of a national survey study that collected information pertinent to the development of the

3

national standards for school counseling programs.

### **Pilot Study**

A pilot survey was distributed to 102 participants in the ASCA annual delegate assembly in April, 1995 to assess the state and national leadership's attitudes toward the development of national standards for school counseling programs. The return rate for this study was 51%. Additionally, the leadership rated a variety of program activities for inclusion in school counseling program standards and suggested additional activities that were not included in the pilot survey.

ACT served as research consultant and coordinator for the collection of information and contributed personnel and resources to ensure that the survey design, distribution, and data analysis followed universally accepted research practices.

The pilot instrument consisted of ninety-two content related items and twelve demographic questions. The survey responses were analyzed using simple descriptive statistics including percentages, means, standards deviations and correlation coefficient. Factor analyses also were conducted on each section of the survey. A principal components analysis with varimax rotations were used to extract factors. The factor analyses provided us with the ability to examine the pattern of the items within each factor. This assisted us to eliminate redundancy, clarify and refine the language, and eliminate items. We sought to achieve reliability and confirm that each section was consistent with its defined purpose. Items were regenerated from the pilot survey based upon the empirical results of the analyses. The original number of items

was subsequently reduced 92 to 77.

### **METHODS**

### Instrumentation

In order to accomplish the purpose of this study, this research study required the development of an original survey instrument (see Appendix). The instrument contained five general sections to respond to the areas of investigation as presented in the purpose for the study. A five point Likert scale was used by the respondents throughout the survey to rate the items from strongly disagree to strongly agree, with exception of the responses to the demographic inquiries.

The eight items in the first section asked specifically if national standards should be developed and assessed attitudes toward the development of national standards.

The second section of the survey sought opinions as to what purpose the development of national standards would serve. The nine items in this section addressed professional concerns about the role of school counseling programs in the educational system.

The items in section three of the survey asked respondents which school counseling program activities should be considered in national standards. The construction of the individual items for each domain was based on school counseling research, and the program components and student outcomes identified in developmental school counseling state models. The items were organized into three domains or topics: personal/social development, academic development, and career

development. The respondents used a five point Likert scale to rate the relative importance of the same item in their current school counseling program.

The fourth section assessed the role of the school counselor in school system support activities. The purpose of this section was to determine which activities school counselors considered as a component of a school counseling program. This study did not determine whether specific activities were appropriately or inappropriately assigned to the school counselor.

The items in this section considered two phenomena: (a) school counselor contributions to the overall well being and needs of a school building; and, (b) perceived non-counseling functions that school counselors often are required to assume.

Respondents were asked to rate the importance of addressing the item in a national standard and the importance of the same item in their current school counseling program.

The fifth section requested demographic information about the respondents. Survey respondents reported additional demographic information not requested by the professional association such as community wealth (socio-economic status), number of students assigned to the caseload, and urban, suburban or rural designation which allowed for an examination of differences.

### Sample and Sampling Procedures

The instrument was administered to two thousand school counselors who were employed in a K-12 school setting selected randomly from the ASCA membership data

6

base in September, 1995. Three stratified computerized samples were drawn from the data set to closely approximate the level of the work setting and regional proportions of the ASCA membership.

The survey instrument and cover letter were mailed in September, 1995. This mailing was followed by a reminder post card and a subsequent complete packet to non-respondents within the first three weeks. Respondents were numerically coded and deleted from the data base as the surveys were returned.

### **Data Analysis Procedures**

We used simple descriptive statistics for a preliminary review of the data. We examined percentages, computed means, correlation coefficients and cross tabulations as a first step to organize and sort the data. Inferential statistical procedures, including factor analyses, analyses of variance, and follow up pairwise comparisons were conducted. Factor analyses were then applied to determine the structure underlying the variables in each section. We examined the item means and overall section means to determine an item's importance in national standards and the item's importance in current school counseling programs. Analyses of variance and follow up pairwise comparisons were performed to check for differences between means that could be attributed to the work setting, region, student caseload, school setting, and community wealth represented by the respondents.

7

### **RESEARCH STUDY RESULTS**

### Respondents

A total of 1127 ASCA members, representing elementary (43.2%), middle/junior high (19.6%), and high school counselors (35.1%) responded to the 77 item questionnaire. The return rate following the three wave mailed administration was 56.4%.

### **Analysis of the Research Questions**

### Attitudes Toward and Purpose for National Standards

One of the fundamental questions raised in this research study concerned whether or not national standards should be developed. Eighty percent of the respondents supported the development of national standards. We found no significant differences in responses among elementary, middle/junior high school, high school counselors or counselor supervisors. However, the mean agreement scores for elementary counselors (M=4.17, SD=.83) were somewhat higher than those for high school counselors (M=4.05, SD=.93) and displayed the most variation in responses for this item. Also, the means for the midwest region were significantly lower than the means for the other three regions of the country.

In section II, school counselors were asked to determine whether national standards should be theory based or practice based. Two different survey questions asked respondents to choose the preferred basis for standards development. When asked if standards should be based on practice, two-thirds (66.7%) of the respondents

clearly indicated that national standards should be based more upon practice than theory. When asked about standards based upon theory, 15.3% of the respondents indicated that standards should be based more upon theory than practice. The correlation of -.63 between these two items indicated a relatively large relationship. As expected, respondents who rated one item high, tended to rate the other item low. There were no significant differences among the respondents when school setting, region, caseload or community wealth were considered.

Respondents strongly articulated what purposes national standards would serve as demonstrated below:

- eighty-three percent of the total sample population agreed or strongly agreed that standards are necessary to better define the role of school counseling in American education;
- ninety-one percent of the respondents agreed or strongly agreed that standards would more clearly define the role of school counseling in the educational system;
- eighty-nine percent of the total population agreed or strongly agreed that standards would define the goals that are considered important for school counseling;
- seventy-four percent of the respondents supported standards
   development to address legitimacy for the mission of school counseling;
- eighty-five percent stated that standards would assist school counseling in achieving recognition within the educational system; and,

Ç

 eighty-one percent agreed that standards would establish a national program framework for effective school counseling programs.

Agreement with these items was lowest for the respondents from the midwest.

However, no significant differences were revealed in the analyses by community

wealth, school setting, or the size of the caseload assigned to a school counselor.

A summary of the survey results for sections I and II of the survey can be found in Tables 1 through 6 in the Appendix.

### What Should National Standards Contain?

### School Counseling Programs and Personal/Social Development

Tables 7 and 8 report the overall results for the personal/social development section of the survey. These results suggested that skills such accepting responsibility, dealing with conflict, and problem solving were of the utmost priority for both national standards and in current school counseling programs. Although the majority of school counselors (90.3%) agreed that understanding and appreciating differences should be addressed in national standards, only 75.7% indicated that it is important in their current program. Elementary school counselors demonstrated the strongest show of support for personal and social development skills. Tables 9 and 10 report the significant differences in mean responses for elementary, middle/junior high and high school counselors.

### **School Counseling Programs and Educational Development**

We found that school counselors highly rated items that provided academic and learning environment support for national standards. A summary of the findings is presented in Tables 11 through 14 in the Appendix.

Elementary and middle school counselors assigned the highest priority to developmental skills (acquiring study skills, time management, life long learning) for inclusion in national standards, while high school counselors strongly supported academic planning and goal setting activities as essential to student success. Urban counselors more strongly favored the concept of understanding the factors that influence school achievement (M= 4.17) as more important to include in national standards than their rural counterparts (M=3.99).

School counselors working in low income communities also placed a higher priority on study skills and time management skills for inclusion in national standards as did school counselors with the largest caseload. In general, elementary counselors were more supportive of developmental skill development (acquiring skills for improving learning) while high school counselors were more inclined to rate items related to goal planning at a higher level.

### School Counseling Programs and Career Development

Just over 70% of the respondents agreed or strongly agreed that exploratory career development experiences and activities related to career planning should be considered in national standards. School counselors more readily agreed that career

development activities were more important than employment readiness activities for national standards. Educational goal setting and career goal setting received strong support. The results of this section of the survey is presented in Tables 15 through 18 in the Appendix.

We found that high school counselors responded significantly differently from elementary and middle school counselors on several items. High school counselors indicated a greater willingness to address career preparation activities in national standards. Elementary and middle school counselors tended to support career development program elements that were more developmental in nature such as explore skills, explore careers, understanding relationships among school, community and work, career planning, and acquiring information skills. Items specifically related to employment information generated less support for national standards on the part of the elementary and middle school respondents than the high school counselors.

Of the three general areas investigated, the overall means for national standards and current programs showed that school counselors reported the largest support for personal/social development(M=4.43; M=4.16), followed by educational development (M=4.13; M=3.78), and career development (M=4.02; M=3.38). Regional differences, school setting, community wealth and caseload had little or no influence on the findings.

### School Counseling Programs and System Support

The purpose of this section of the survey was to determine which system support services should be considered part of a school counseling program.

Respondents were asked to determine the relative importance of addressing the item in national standards and as part of the current school counseling program.

Elementary school counselors, who reported the largest caseload and often work in multiple school buildings, tended to favor activities which assisted those who work directly with students. These included: conducting parent workshops (M=3.62), collaboration with community agencies (M=4.43), providing staff development for teachers (M=3.73), and consulting with staff (M=4.72). High school counselors placed a high priority on activities that focused on academic issues such as student placement (M=4.06), achievement (M=3.33), college entrance testing (M=3.60), and administering career inventories (M=4.00). Junior high and middle school counselors strongly promoted involvement in advisory activities (M=3.46), which usually require collaboration with the entire school staff.

Items concerning conducting parent workshops, collaborating with community agencies, participating in school reform initiatives, and consultation received strong support from all respondents for national standards and in current school counseling programs.

The respondents also strongly agreed that activities such as assisting in organizing school assemblies, managing grade reporting, and participating in other school duties, are not considered an essential part of a school counseling program at either the elementary, middle/junior high school or high school level. An overview of the findings in this section can be can be found in Tables 19 through 22.

### SUMMARY AND IMPLICATIONS FOR FUTURE RESEARCH

### **Principal Findings**

School counselors overwhelmingly (82%) supported the development of national standards. The basis for the desire to have national standards is rooted in the recency of the evolution of the occupation, the wide diversity of services that school counselors provide to students, and the responsiveness of the school counseling community to societal needs and demands.

The majority of school counselors want national standards based more upon practice than theory, however, not from their current practice but rather from an envisioned practice. School counselors strongly and broadly proclaimed that a national standards based program would raise the expectations of what is important in current practice. This study also determined that the work setting of the school counselor strongly influenced program priorities for national standards and in current school counseling programs. Elementary, middle/junior high and high school counselors identified program preferences that are based upon developmental or age appropriate needs of students.

Personal/social development program activities received the strongest level of support for national standards development and also in current practice. This was followed by educational development. Within the areas of personal/social, educational and career development, distinct priorities emerged by work level. These results held true for national standards and in current programs. The overall findings demonstrated that most of the statistically significant differences revealed in school counseling

program components were related to the work level setting of the school counselor. Elementary school counselors consistently gave the highest ratings to activities that supported personal/social growth such as self awareness. High school counselors strongly supported educational development needs such as academic planning and goal setting. Despite the current national attention on career development, there was a lack of consensus in the importance of specific activities for both national standards and in current programs.

### **Implications**

This research study clearly has established that school counselors strongly and broadly wish to have national standards. The findings confirmed the belief that national standards will identify a focal point for practice, articulate a professional mission, provide a center for aspiration and momentum for the future. School counselor practitioners have expressed a need and a desire for national standards and have articulated their opinion as to what national standards should contain. The findings further delineated the program priorities of elementary, middle/junior high and high school counselors. School counselors have identified what they believe is important in their current programs and what is important to include in national standards.

The school counselors who participated in this study responded that national standards:

 would provide the mechanism for school counseling to be accepted as a legitimate component of the educational system;

15

- could establish similar goals, expectations, support systems and experiences for all students as a result of participation in school counseling programs; and
- may help to define the vision and goals for the school counseling for the twenty-first century.

National standards will help the school counseling community to look within itself to clarify its purpose and establish higher expectations of quality. Standards based programs require a demonstration of what students should know and be able to do. This will necessitate the development of new and different measures of accountability to evidence that student outcomes are achieved. National standards could assist the occupation to demonstrate the effectiveness of school counseling programs and their relationship to student achievement. Conversations must occur on the national, state and local level to ensure that a standards based program is viable and feasible.

National standards will accomplish little if implementation is not possible.

The findings also demonstrated that school counselors strongly and broadly proclaimed that a national standards based program would raise the expectations of what is important in current practice. The respondents also revealed a tendency to support the majority of the survey items as important in national standards. However, this study is not about the capacity of school counselors to accomplish the objectives of a standards based program.

The development of national standards, as illustrated by events within the academic disciplines, will raise new issues and concerns and identify new problems.

Adopting standards can fundamentally change the educational system (Mitchell, 1996), however, the national standards movement has yet to produce evidence to support this premise. The impact of change on school counseling programs will remain to be seen.

### **Considerations For Future Research**

Research has demonstrated that school counseling programs support student success in school through personal/social, educational and career development experiences. School counseling programs also may assist students achieve the expectations of the newly released national academic standards. Future research can be the impetus to develop measures to validate student success as an outcome of a standards based school counseling program.

This study has raised additional questions about the distinctiveness of elementary, middle/junior high and high school counseling programs. Respondents have identified priorities in each of the broad areas of student development (personal/social, educational, career) that comprise school counseling programs at each school level. These preferences may necessitate the need to research current school counselor pre-service programs and credentialing models to determine if specific training for each level, similar to the educational model for elementary, middle/junior high and high school teachers, is necessary.

The development of national standards also may require an articulation between the pre-service curriculum and the requisite knowledge and skills essential to success in a school system. The Council for Accreditation of Counseling and Related

Educational Program (CACREP) and organizations such as the Association for Counselor Educators and Supervisors (ACES) must work with the American School Counselor Association to identify the gaps and bring about the necessary alignment.

The findings from this research study form the foundation for the development of national standards for school counseling programs. Considerable thought, exploration and conversation are essential to ensure that the voice of the practitioner is not lost among good intentions and political agendas. The school counseling community can proactively apply these findings to direct the future role and mission of school counseling and support a nation of learners to achieve academic success in school.

### National Standards for School Counseling Programs

### SCHOOL COUNSELOR SURVEY

The American School Counselor Association (ASCA) is considering developing national standards for school counseling programs and is extremely interested in your opinion. Because school counseling is different from the academic disciplines, ASCA's consideration of the development of national standards for school counseling programs must reflect the thinking of school counselors and include research and practice. Elementary, middle/junior high, high school counselors and school district counselor supervisors from across the country are being asked to provide input concerning the development of national standards for school counseling programs.

As a school counselor you have been selected to help in this very important undertaking. Your responses will contribute to the future direction of school counseling programs and the contribution they make to our nation's educational system. Thank you for participating in this very important undertaking.

Directions: For purposes of this survey, a school counseling program is defined as the comprehensive set of services, tasks, and functions delivered by a professional school counselor practitioner in an elementary, middle/junior high, or high school setting. The information you supply will be kept confidential. However, if any item requests information that you do not wish to provide, feel free to omit it.

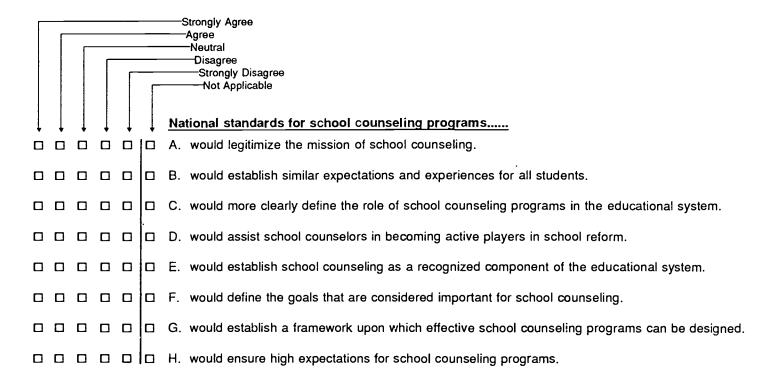

### SECTION I. Attitudes toward developing national standards for school counseling programs

Please answer the following by checking the one response that best indicates your opinion:

					Strongly Agree -Agree -NeutralDisagreeStrongly DisagreeNot Applicable  tional standards for school counseling programs
			-	Α.	should be developed.
				В.	are necessary to better define the role of school counseling in American education.
				C.	should be based more upon school counseling theory than on practice.
				D.	should be student-outcome oriented.
				Ε.	should support the educational mission of the school.
				F.	should reflect the belief that all children can learn given the time, tools, and motivation to do so.
				G.	should be based more upon school counseling practice than on theory.
				Н.	should help ensure equal access and equal opportunity for all students.
IC led by ERIC				1.	should emphasize counseling, consultation, coordination, and collaboration as the primary methods of delivery.  21 BEST COPY AVAILABLE

## SECTION II. What purposes would the development of national standards for school counseling programs serve?

Please answer the following by checking the one response that best indicates your opinion:

### **SECTION III. Program Domains**

Directions: The three program domains presented in this section are based upon the principles of comprehensive developmental school counseling. Each domain's section contains a list of items that could be considered for inclusion in program standards.

Please respond to this section based upon your role as an elementary, middle/junior high, or high school counselor or counselor supervisor.

The scale on the left gives you the opportunity to rate an item for consideration as a national program standard, while the scale on the right provides you with an opportunity to think about and rate the item as part of your current school regions program.

Please answer the following by checking one response in each column that best indicates your opinion:

<u>Domain A.</u> Personal/Social Development (Learning to Live). Items in this domain deal with assisting students to successfully employ interpersonal, Intrapersonal, and social skills.

### SECTION IV. System Support Activities by School Counselors

Directions: School counselors are involved in a variety of activities in their school building. Some of these are directly related to the school counseling program, and some are related to the operational needs of the school building. The purpose of this section is to determine which activities are considered part of a school counseling program.

Please respond to this section based upon your role as an elementary, middle/junior high, or high school counselor.

The scale on the left gives you the opportunity to rate an item for consideration as a national program standard, while the scale on the right provides you with an opportunity to think about the item as part of your current school counseling program.

### U.S. Department of Education

Office of Educational Research and Improvement (OERI) Educational Resources Information Center (ERIC)

TM027354

### REPRODUCTION RELEASE

(Specific Document)

### I. DOCUMENT IDENTIFICATION:

Title: SUPPORTING A NATION OF LEARNERS: The Development of National S Counseling Programs	Standards for School
Author(s): Dr. Carol Dahir, Dr. Laurie Johnson, Dr. Chari Campbell, D	r. Michael Valiga,
Corporate Source: American School Counselor Association	Publication Date:
	March, 1997

### **II. REPRODUCTION RELEASE:**

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic/optical media, and sold through the ERIC Document Reproduction Service (EDRS) or other ERIC vendors. Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following two options and sign at the bottom of the page.

Check here
For Level 1 Release:
Permitting reproduction in
microfiche (4" x 6" film) or
other ERIC archival media
(e.g., electronic or optical)
and paper copy.

The sample sticker shown below will be affixed to all Level 1 documents

The sample sticker shown below will be affixed to all Level 2 documents

Check here
For Level 2 Release:
Permitting reproduction in
microfiche (4" x 6" film) or
other ERIC archival media
(e.g., electronic or optical),
but not in paper copy.

Level 1

Level 2

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but neither box is checked, documents will be processed at Level 1.

"I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic/optical media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries." Sign Printed Name/Position/Title: here→ Carol A. Dahir Ed.D. please Telephone: 800 306 4722 703 683 1619 801 North Fairfax Ave Suite 310 E-Mail Address: 5/20/97 Alexandria, Virginia 22314 ASCA @ aol.com

### THE CATHOLIC UNIVERSITY OF AMERICA

Department of Education, O'Boyle Hall Washington, DC 20064

800 464-3742 (Go4-ERIC)

April 25, 1997

Dear AERA Presenter,

Hopefully, the convention was a productive and rewarding event. We feel you have a responsibility to make your paper readily available. If you haven't done so already, please submit copies of your papers for consideration for inclusion in the ERIC database. If you have submitted your paper, you can track its progress at http://ericae2.educ.cua.edu.

Abstracts of papers accepted by ERIC appear in *Resources in Education (RIE)* and are announced to over 5,000 organizations. The inclusion of your work makes it readily available to other researchers, provides a permanent archive, and enhances the quality of *RIE*. Abstracts of your contribution will be accessible through the printed and electronic versions of *RIE*. The paper will be available through the microfiche collections that are housed at libraries around the world and through the ERIC Document Reproduction Service.

We are soliciting all the AERA Conference papers and will route your paper to the appropriate clearinghouse. You will be notified if your paper meets ERIC's criteria for inclusion in *RIE*: contribution to education, timeliness, relevance, methodology, effectiveness of presentation, and reproduction quality.

Please sign the Reproduction Release Form on the back of this letter and stet **two** copies of your paper. The Release Form gives ERIC permission to make and distribute copies of your paper. It does not preclude you from publishing your work. You can mail your paper to our attention at the address below. Please feel free to copy the form for future or additional submissions.
