ABSTRACT

This study identified training needs for Pennsylvania child care providers and assessed the impact of training, classroom/caregiver dynamics, and staff characteristics on child care quality. Participating were 29 family child care providers, 30 group homes, and 60 child care centers, stratified by type of site and geographic region. Quality of care was measured through the Early Childhood Rating Scale, Infant/Toddler Environment Rating Scale (ITERS), and Family Day Care Rating Scale. The work environment was assessed with the Early Childhood Work Environment Survey. Questionnaires were used to obtain information on background and training, and site characteristics. Overall findings indicated that the training system was viewed positively. Providers were highly interested in training and believed it would help them in their work. On-site training and workshops were viewed as most helpful, video and satellite training as least helpful. The major training needs were child motivation and guidance, dealing with child conflict, child development, and developmentally appropriate practice. Low ITERS scores suggested that training in infant/toddler care is a priority. and low scores on all three rating scales indicated that cultural awareness, personal grooming, pretend play, and sand and water play should receive training priority. The amount of training did not predict quality. The most significant change in quality since 1989 occurred in family child care sites. Center quality was related to professional growth opportunities, higher salaries, good communication, and staff agreement on school philosophy. (The research instruments and a data summary are appended. Contains 18 references.) (Author)

Acknowledgements

Keystone University Research Corporation would like to thank the many individuals who contributed to the completion of this study. First, the Department of Public Welfare, Office of Children, Youth, and Families, Bureau of Child Day Care is commended for its commitment to child care and efforts to improve quality. Without DPW's funding of this project, it could not have been completed. The support of Richard Fiene, Ph.D., the DPW Project Officer, has been particularly instrumental in moving this research forward and guaranteeing that the policy implications of the findings are not lost. In addition, others within DPW—Kathryn Holod, Director of the Bureau of Child Day Care and Jo Ann R. Lawer, Esq., Deputy Secretary for Children, Youth, and Families—are thanked for their continued support of this effort.

Thanks are also extended to the family, group, and center child care facilities that participated in this study as sample sites. Without their willingness to participate in this study and to be open and honest with the fieldworkers, this study would not have been possible. Furthermore, Marilyn Albert, Evette Banfield, Ronnie Braun, Harriet Darling, Kathy Downing, Robin Eckert, Winifred Feise, Lydia Goellner, Kristi Hannan, Lisa Heintzelman, Genevieve Mann, Barbara Marchese, Majida Mehana, Susan Nanz, Marsha Partington, Judy Peterson-Sherwood, Debora Reiff, Patricia Robertson-Burns, and Jeanette Twombly are thanked for their quality efforts as fieldworkers for this study.

Finally, the individuals who contributed countless hours to assist the principal investigators in implementing this project—Pauline Kraus and Scott Johnson of Keystone University Research Corporation—are thanked for their perseverance over the long haul. The tasks of organizing the data collection process, monitoring the work of fieldworkers, organizing the data sets, and assisting in its analysis were complicated and required considerable attention to detail.

The overarching goal of this study is to contribute to our knowledge about how to improve the quality of care for children in Pennsylvania. We hope that the knowledge gained as a result of this study will take us one step further in that direction.

EXECUTIVE SUMMARY

The quality of child care is of great concern in our society. In the past decade there has been a dramatic rise in the number of mothers in the labor force with small children, leading to an increased demand for child care. In response to this demand there has been a significant increase in the number of licensed child care centers and home-based child care providers--not to mention unregulated child care settings. Thus, as the need increases and child care facilities spring up to meet the growing demand, the concern over quality becomes more pressing. National studies have reported that there is too little good child care in the United States.

Given this state of affairs, research on child care and factors associated with quality care is very important, particularly if it has implications for public policy. State regulations play a key role in ensuring that programs comply with minimum standards regarding structural features and staff qualifications. But minimum standards related to child/staff ratios and educational level of staff are not enough. Other dimensions found to be associated with quality care are classroom/caregiver dynamics (including caregiver sensitivity and use of developmentally appropriate practice) and staff characteristics (such as specialized education, training, and experience).

Recognizing the importance of tracking the impact of training on the quality of care and assessing the existing *Pennsylvania Child Care/Early Childhood Development Training System*, the Department of Public Welfare, Bureau of Child Day Care Services, has supported this research effort. The research reported herein has been designed for dual purposes: to identify the training needs for Pennsylvania child care providers and to assess the impact of training and other factors on the quality of care in child care sites. Within these overarching goals, this study examined these specific research questions:

Research Questions Related to Training Needs

- What are the perceived needs for training? Do various provider groups have different needs (e.g., center teachers, center directors, group providers, and family providers)?
- What are the observed needs for training as indicated through the site observations of quality of care?
- What are the most important factors affecting the selection of training? How does the director impact this?
- How do providers evaluate the training? What are their perceptions regarding appropriateness, usefulness, applicability, and effectiveness of training in achieving learning objectives? What is their level of interest in training? And how do they think it applies to their work?
- What are the barriers to training? Are the barriers different for the various provider groups?

Research Questions Related to Quality of Care

- How has the quality of care in Pennsylvania child care changed over the years?
- What factors are significantly associated with the quality of care as observed in child care classrooms?
- To what extent do staff background characteristics (e.g., current education, educational goals, age, years in field, and salary) impact the classroom's quality of care?
- How are features of a caregiver's training experience related to classroom quality of care? To what extent does the level of training impact quality? What is the impact of the training's perceived appropriateness, usefulness, applicability, and effectiveness?
- What is characteristic of the quality of work life in child care centers in terms of organizational climate, summary of worker values, overall commitment, how the environment resembles an ideal, the importance of educational goals and objectives, and the degree of influence of teaching staff?
- To what extent is a center's organizational climate associated with director background characteristics, aggregate teacher characteristics, site turnover, accreditation status, size of site, and average hours of training per site?
- To what extent are teachers' perceptions of organizational climate associated with the quality of classroom care?
- To what extent is a center's overall quality of care associated with director background characteristics, aggregate teacher characteristics, organizational climate, and other site level features (e.g., size of center, accreditation status, turnover rate, and average hours of training per year)?

Methodology

A cross-sectional research design was used to collect data from child sites throughout Pennsylvania. Child care sites were randomly selected and trained fieldworkers conducted site visits to observe the quality of care in classrooms and to administer questionnaires to child care staff. The sample, stratified by type of site and geographic region, consisted of 29 family child care providers, 30 group homes, and 60 child care centers. Within these sites, surveys were completed for 60 center directors, 30 group home directors, 561 center teachers, 70 group home teachers, and 44 family providers.

Quality of care was measured through the use of three Harms and Clifford Environment Rating Scales: the Early Childhood Rating Scale (ECERS), the Infant/Toddler Environment Rating Scale (ITERS), and the Family Day Care Rating Scale (FDCRS). Although each scale has comparable areas that are assessed, the individual items composing each scale do vary depending on the type of child care site or classroom

observed. Across all of these scales, these are the major components: furnishings and display; personal/basic care; language and reasoning; fine/gross motor (ECERS only); creative/learning activities; social development; interaction (ITERS only); program structure (ITERS only); and adult needs.

The dimensions of child care work environment were measured with P. Jorde-Bloom's Early Childhood Work Environment Survey (ECWES). This instrument included a number of conceptual areas: ten dimensions of organizational climate (collegiality, professional growth, supervisor support, clarity, reward system, decision making, goal consensus, task orientation, physical setting, and innovativeness); the importance staff assign to each dimension (summary of worker values); the staff's overall commitment to the center; how the current work environment resembles the staff's ideal; the importance of various educational goals and objectives; and the degree of influence of the teaching staff regarding various organizational dimensions.

In addition to these standardized instruments, questions were developed to gather background and training information from both directors and teachers within the child care sites. Additionally, site level characteristics (e.g., age of children in facility, type of facility, licensed capacity, number of classrooms, turnover rate, and accreditation status) were assessed via the director questionnaire.

Findings

Background characteristics of provider groups and sites:

- The vast majority of providers are female. Their average age is between 34.8 and 45.8 with directors slightly older than teachers are. A majority of providers are parents (between 59 to 93 percent) with center teachers least likely to hold this status.
- Educationally, center directors hold the highest levels of education while group teachers and family providers have the lowest levels. Directors average just under fourteen years in the field of early childhood education while teachers and family providers average seven.
- Over 93 percent of directors for both centers and group facilities are full-time, while a majority of group teachers (59.4 percent) are part-time.
- Group teachers are the lowest paid (approximately \$5.89/hour), while center directors, on the average, earn the highest salaries—just under \$20,000 per year. Benefits are also not prevalent in the field, although center staff are more likely to have some benefits than are home-based providers. Health benefits are the most common, yet less than half (48.7 percent) of the center teachers report having this benefit.

- Over one-third of each provider group indicate that they have no long-term educational goals. Center directors (12.7 percent of them) are more likely to have the CDA than are the other provider groups.
- Over the past three years, directors averaged over 40 hours of training, while teachers and family providers averaged only around 20 hours (just slightly higher than what is required to meet the state regulations of 6 hours per year).
- A majority in each provider group, except group directors, indicates that completing the 6 hours required by DPW is their annual training goal.
- More than half of teachers and family providers indicate that they have a personal career development plan.
- Centers average a licensed capacity for 76 children, just under five classrooms, and an enrollment of 69 children.
- Special needs children are most likely served by centers, not group or family homes.
- Centers average just under eleven paid staff, while group homes average just fewer than four. Approximately one-third of both centers and group homes has an assistant director.
- The turnover rate, indicated by the ratio of new staff to total number employed, is slightly higher for group child care (.31) than it is for centers (.22).
- Centers are most likely to be accredited (26.3 percent) while group homes are least likely (10 percent).

Training Needs and Perceptions of Current Training System:

- The four areas consistently ranked as priority training topics are:
 - supervision, motivation, and discipline/guidance of children
 - social development (dealing with conflict)
 - child development
 - developmentally appropriate practice
- Regardless of their relative importance and rank order position, providers view none of the training topics specified on the research instrument as *unimportant*. The average scale value for these topics ranged between 1.28 and 2.53--thus there is no topic area that is viewed as *not a priority* for training.
- Utilizing the Harms and Clifford Environment Rating Scales to determine areas in need of training (i.e., areas that receive a very low rating—below a scale value of

4.00), across all three scales--FDCRS, ITERS, and ECERS--these items are consistently rated low:

- cultural awareness
- personal grooming
- dramatic (pretend) play
- sand and water play

➤ Furthermore, these areas are rated low in two out of the three environment rating scales:

- displays for children (FDCRS and ITERS)
- space alone (FDCRS and ECERS)
- helping infants/toddlers understand language (FDCRS and ITERS)
- art (ITERS and ECERS)
- blocks (FDCRS and ITERS)

➤ These areas rated highly (above a scale value of 5.00):

- nap/rest time
- discipline/supervision
- provision for parents
- informal use of language with infants/toddlers
- health practice and/or policy

➤ Providers indicate that their selection is based primarily on their interest in a topic and if a topic helps understand children. The factors having the least priority across all provider groups are: networking opportunities, training organization, session length, cost of training, and trainer.

➤ Overall, the training system is viewed positively by the provider groups, as evidenced by their response to the questions about appropriateness, usefulness, applicability, and effectiveness in achieving learning objectives. The providers consider the training appropriate for their level of knowledge and skill, find it helpful in their current work, indicate they are able to apply what they have learned, and feel the training goals have been achieved.

➤ On-site training ranks as the most helpful method by the directors of centers and group homes, while family providers rank it as second most helpful. Center directors and family providers also positively assess workshops. While the satellite and video methods of training may be cost effective and efficient in reaching providers in the more rural areas, both these methods of training are viewed as less helpful than the other methods.

➤ Having no one to watch the children during the child care hours is seen as the most significant barrier to training by all provider groups.

The Work Environment of Child Care Facilities

- Regarding the ten dimensions of organizational, the dimension of professional growth ranks at the bottom (3.94), followed by reward system (5.88) and clarity (5.91). This indicates that overall, the staff in centers do not perceive many opportunities for professional growth, they do not feel that pay and fringe benefits are fair and equitably distributed, and they feel that communication about policies and procedures is unclear.
- The average age of teachers is significantly related to all dimensions of organizational climate. Centers with older workers have a more positive work environment. Correspondingly, two other factors that are closely related to each other (i.e., average number of years in the current position and site turnover) are also significantly related to a number of the dimensions of organizational climate. In addition, a number of these organizational climate dimensions are more positive in centers that have older and more experienced directors. Hence, an older and more stable workforce is closely associated with a positive organizational climate. The causal link between these factors cannot be determined from this analysis, but it is plausible that there is a reciprocal effect--a positive organizational climate results in a more stable workforce and vice-versa.
- The most highly valued aspect is collegiality and co-worker relations--over 60 percent of the child care center staff identify this as one of the three most important aspects of their work. The reward system--fairness in pay and benefits--is second most important (48.2 percent) and supervisor support is third (40.9 percent) most important. The dimension of opportunities for professional growth comes in fourth with 30.5 percent of the caregivers identifying it as important. Therefore, even though staff do not perceive many opportunities for professional growth, this aspect is not as highly valued as other areas. Those areas least valued are goal consensus (13.5 percent), clarity (15.2 percent), and innovativeness (20.5 percent).
- How these organizational climate dimensions are rated compared to the value placed on them gives us an indication where to focus improvement efforts. Improvement in the reward system will probably accrue the most lasting results since it is very poorly rated, yet highly valued. Improving opportunities for professional growth is also an area where attention should be focused since it is the most poorly rated area and it ranked fourth in importance. On the other hand, collegiality is very important to workers, but given its positive assessment as a dimension of organizational climate, there is no need to improve it.
- Consistent with developmentally appropriate practice in the early childhood field, the greatest emphasis is placed on helping children to develop positive self concepts and self esteem while the least emphasis is placed on helping children develop concepts needed for reading and math.
- Commitment among Pennsylvania child care staff is relatively high; directors have a slightly higher level than teachers--8.6 for directors compared to 7.5 for teaching staff.

Quality of Care:

- Comparatively, in 1996, the ECERS average score is 4.63 while in 1989 it is 4.27. The average score in 1984 is 3.78. This shows improvement over the years. Although there is not a statistically significant improvement in the overall ECERS scores from 1989 to 1996, when we examine the individual subscales, there are some areas that improved significantly. On individual subscales these three areas show significant improvement: social development, adult needs, and fine/gross motor.
- An analysis of the FDCRS scores shows a marked improvement from 1989. Comparing the 1996 data (4.47) with that from the 1989 study (3.80), there is a statistically significant difference. There are also higher mean scores for each of the subscales in the FDCRS.
- The ITERS for 1996 has the lowest average score (4.23). There are no comparable data for the ITERS from the 1989 or 1984 research studies.
- The bivariate analysis of the FDCRS finds four factors that are significantly correlated with the quality of family child care. Family caregivers that are younger and have higher long-term educational goals are more likely to provide a higher quality of care. The other factors are measures of a family provider's assessment of the current training system. Providers who evaluate the current system of training as inappropriate to their skill level and not useful for their work as a family caregiver are more likely to provide a higher quality of care. This is not as unexpected as it sounds. It is likely that those providers who are already providing quality care do not find as much benefit from the current training system that focuses most of its attention on entry level skills.
- Our bivariate analysis of the ITERS finds only salary level of the caregiver to be significantly related to the quality of infant/toddler care. Caregivers with higher salaries provide higher quality infant/toddler care.
- The bivariate analysis of the ECERS reveals a number of factors that are significantly correlated with the quality of child care: salary and the organizational climate factors of professional growth, clarity, reward system, goal consensus, and task orientation. Thus, the caregivers that provide high quality early childhood care are more likely to:
 - have higher salaries
 - indicate that their center has opportunities for professional growth
 - feel that communication at their center is good and that work schedules, job descriptions, and rules are clear and well-defined
 - indicate that the pay and fringe benefits are fair and equitably distributed in their center

- indicate that staff at their center agree on school philosophy, are united in their approach, and are committed to program goals and objectives
 - believe that they work hard but still have time to relax, that program procedures are efficient, and that meetings are productive.
- In the analysis of *overall quality of care* at the site level, we find that only opportunities for professional growth independently contributes to the variation of quality of care at child care sites (the majority of which are centers). Forty (40) percent of the variation is explained by this factor. As we hypothesize, child care facilities that have more opportunities for professional growth have a higher overall quality of care.

Conclusions and Policy Implications

What can we conclude as a result of this research and what are the implications for public policy? There are numerous issues addressed and volumes of data analyzed. First we can examine the overall conclusions with regard to the current training system—how it is evaluated and what the training needs are.

Overall, the training system is viewed positively by the provider groups, as evidenced by their response to questions about appropriateness, usefulness, applicability, and effectiveness in achieving learning objectives. Furthermore, providers express a high level of interest in the training and, for the most part, feel that additional training will help them in their work. When directors of centers and home-based providers are asked about the particular methods of training that they perceive to be most helpful to them and their staff, the training methods that provide direct contact with a trainer (e.g., on-site training and workshops) are viewed most helpful. The methods where the contact is indirect (e.g., video and satellite training) are viewed as least helpful. This is understandable, although the policy implications of this are not to abandon some of the more indirect, yet very cost effective methods of training like the learn-at-home videos and satellite training. A balance of methods is important in a system as massive as this one, where the ability to access training varies tremendously across providers and where resources are limited.

Regarding training needs, there is a high degree of consistency across provider groups in terms of the areas they perceive as most critical. They identify supervision/discipline of children, social development (dealing with conflict), child development, and developmentally appropriate practice as areas with the highest priority. Although, the providers do not identify any topic area as *not a priority* for training.

On the other hand, if we use the environment rating scales as an indicator where there are weaknesses in child care settings (hence, an area in need of training), we see a slightly different picture. Given the overall low score for the infant/toddler area (ITERS), any training in this area can be viewed as a priority. In addition, these items are consistently

ranked low on all three environment rating scales: cultural awareness, personal grooming, dramatic (pretend) play, and sand and water play; furthermore, these areas are rated low in two out of the three environment rating scales: displays for children (FDCRS and ITERS), space alone (FDCRS and ECERS), helping infants/toddlers understand language (FDCRS and ITERS), art (ITERS and ECERS), and blocks (FDCRS and ITERS). Indeed, a number of these items from the environment rating scales fall under the broader categories of social development, child development, and developmentally appropriate practice. The information from the environment rating scales offers more specific areas of need.

The one interesting finding is the contradictory information related to the area of supervision/discipline of children. While providers identify this as a high priority area for training, the environment rating scales indicate an assessment in the *good* range for the discipline item. Again, this shows that providers are performing better in this area than they think and it reveals the extent to which this is viewed as one of the most challenging areas in child care.

Turning now to the issue of quality of care and the factors that are associated with it, we find that our results that examine the relationship between the level of training at a site and quality of care are not as predicted. We do not find that the number of hours of training is a significant predictor of quality. What we do see, however, is that the most significant change in the quality of care since 1989 has occurred in family child care sites. Although we are unable to definitively conclude that the training system has been instrumental in improving quality of care in family homes, we do note that the home-based training system has been in existence the longest—for 12 years. Furthermore, the intervention effort (i.e., the hours of training per year that staff at a site average), is still considerably low—on the average it is 8.5 hours, with 98 percent of the sample sites having fewer than 18 hours per year, on the average. A threshold for training to show some impact is around 18 hours according to other research (Howes, Smith & Galinsky 1995). Given this, it is not unexpected that we do not find a significant relationship between number of hours of training and quality of care—there simply is not enough intervention (i.e., training hours) to determine impact. What does this mean for public policy? A policy implication of this concerns the number of hours of training that are mandated in the state regulations for child care. It points to the need to increase the number of hours of training for child care providers if a significant impact of the training is to be detected.

This is further supported when we see the strong association between the organizational climate dimension of opportunities for professional growth and overall quality of care at the site level. Centers where staff report more opportunities for professional growth have a higher quality of care and this factor, alone, explains a considerable portion of the variation in quality (40 percent). This finding substantiates the importance of fostering professional growth opportunities for child care providers. But it also implies the importance of making sure that these opportunities are linked to a model of career development and progression—not just a few hours of training that providers haphazardly take because they have to or because they are offered at a time that fits their schedule.

Overall, these data have given us some solid evidence to guide the development of the training system in Pennsylvania. We have highlighted some very specific areas where there is a need for training and we have shown the clear association between opportunities for professional growth and the quality of care. Although there are some anomalies in the data and some unexpected findings, as a whole, these data are supportive of the efforts to implement a training system, one that fosters career development, in the prediction that these efforts will improve the quality of care for children in Pennsylvania.

1.0 STATEMENT OF THE PROBLEM

Children are our future. A recent news article highlighted the current trend in public opinion and political action related to our concern about children and their welfare (McAllister 1997:36). "The fastest growing segment of the electorate is the one concerned about protecting children and helping parents be good parents," says political pollster Mark Penn. In the past year, alone, we saw the release of some exciting new research on the impact of early experiences on how a child's brain is "wired." In an effort to bring attention to this important new research on brain development and its implications for public policy, the Families and Work Institute initiated the Early Childhood Public Engagement Campaign. A White House Conference on Early Childhood Development and a television special, *I Am Your Child*, launched this campaign. Another White House Conference on child care was held in October 1997. Politicians are quick to notice that children's issues strike a special chord with Americans—hence the plethora of new initiatives aimed at the young.

All of this attention on children's issues is heartening in an era of budget cutting, welfare reform, and move to eliminate Big Government. However, the extent to which all this *talk* will be translated into *action* is yet to be determined. Regardless, this public issue has brought attention to an area of critical need in our society—quality child care. With the dramatic rise in the number of mothers in the labor force with small children, the need for child care services and the maintenance of quality programs throughout the nation cannot be denied (Katz 1994). In response to this increased demand there has been a significant rise in the number of licensed child care centers and home-based child care providers—not to mention the unregulated child care settings. The recent welfare reform legislation is also expected to result in an increase in mothers needing child care services as they move into the labor force. Some of these welfare-to-work mothers will help meet this increased demand for child care by offering child care out of their home to neighbors and relatives.

Thus, as the need increases and child care facilities spring up to meet the growing demand—both regulated and unregulated care—the concern over quality becomes more pressing. A study conducted by Mathematica Policy Research for the U.S. Department of Education (1990) reports that the quality of care is jeopardized with the trend of serving more children with fewer workers. More recent studies have determined that there is far too little good child care in the United States. Only 14 percent of center care, 12 percent of family child care, and an even lower percentage of infant care can be rated as good in this country (Galinsky et al. 1994; Helburn et al. 1995).

Given this state of affairs, research on child care and factors associated with quality care is very important, particularly if it has implications for public policy. State regulations play a key role in ensuring that programs comply with minimum standards regarding structural features and staff qualifications. But minimum standards related to child/staff ratios and educational level of staff are not enough. Other dimensions found to be associated with quality care are classroom/caregiver dynamics (including caregivers'

sensitivity and use of developmentally appropriate practice) and staff characteristics such as specialized education, training, and experience (Love, Schochet, & Meckstroth 1986).

The education and training of child care workers has been viewed as the key to improving classroom/caregiver dynamics and staff characteristics. But not all education and training is equally effective. The Center for Career Development in Early Care and Education at Wheelock College has emphasized the importance of professional development programs for child care providers. The model developed by the Center focuses on the linkages between education and training and the development of new career opportunities for early childhood practitioners (Morgan et al. 1993). Having all training opportunities build on one another, offering incentives for practitioners to obtain training, and specifying a core body of knowledge for all early childhood care and education practitioners are particularly important elements of a model program for career development. In addition, the Center says that a comprehensive, coordinated system of training and education should include these features: quality control over training content and trainers; a system for assessing training needs and offering training based on those needs; a system to make information about training easily accessible and widely distributed; a system for tracking provider training; a linkage between training and compensation; and an expanded and coordinated plan for funding training—preferably through public/private partnerships.

For a number of years Pennsylvania has been at the forefront nationally in the development of training opportunities for child care workers. Training for various segments of the child care provider population has been available for the past ten years. An integration of a number of separate training programs was established in 1992 under the title of *The Pennsylvania Child Care/Early Childhood Development Training System* (see section 2.0 for details on the development of this system). The Pennsylvania Department of Public Welfare has been instrumental in the development of this training system and has promoted the establishment of an affordable and flexible training system that is based on the principles of early childhood education and child development.

Recognizing the importance of tracking the impact of this training system on the quality of care, DPW has supported research efforts in this regard. The research reported herein has been designed for dual purposes: to identify the training needs for Pennsylvania child care providers and to assess the impact of training and other factors on the quality of care in child care sites. In addition, the results of this research effort are compared to earlier Pennsylvania studies that examined the quality of child care. Within these overarching research goals, this study examined a number of specific research questions that are delineated below.

Research Questions Related to Training Needs

- What are the perceived needs for training? Do various provider groups have different needs (e.g., center teachers, center directors, group providers, and family providers)?
- What are the observed needs for training as indicated through the site observations of quality of care?

- What are the most important factors affecting the selection of training? How does the director impact this?
- How do providers evaluate the training? What are their perceptions regarding appropriateness, usefulness, applicability, and effectiveness of training in achieving learning objectives? What is their level of interest in training? And how do they think it applies to their work?
- What are the barriers to training? Are the barriers different for the various provider groups?

Research Questions Related to Quality of Care

- How has the quality of care in Pennsylvania child care changed over the years?
- What factors are significantly associated with the quality of care as observed in child care classrooms?
- To what extent do staff background characteristics (e.g., current education, educational goals, age, years in field, and salary) impact the classroom's quality of care?
- How are features of a caregiver's training experience related to classroom quality of care? To what extent does the level of training impact quality? What is the impact of the training's perceived appropriateness, usefulness, applicability, and effectiveness?
- What is characteristic of the quality of work life in child care centers in terms of organizational climate, summary of worker values, overall commitment, how the environment resembles an ideal, the importance of educational goals and objectives, and the degree of influence of teaching staff?
- To what extent is a center's organizational climate associated with director background characteristics, aggregate teacher characteristics, site turnover, accreditation status, size of site, and average hours of training per site?
- To what extent are teachers' perceptions of organizational climate associated with the quality of classroom care?
- To what extent is a center's overall quality of care associated with director background characteristics, aggregate teacher characteristics, organizational climate, and other site level features (e.g., size of center, accreditation status, turnover rate, and average hours of training per year)?

This study was undertaken in an effort to answer these research questions. The following sections provide a description of Pennsylvania's child care training initiative and its evolution over the years; an overview of the conceptual framework and methodology used to guide the study; and a summary of the results along with the implications of the findings for public policy.

2.0 PENNSYLVANIA'S CHILD CARE TRAINING INITIATIVE

Pennsylvania's child care training initiative started as many statewide training systems in the early 1990s utilizing Child Care and Development Block Grant (CCDBG) funds (Fiene 1995). States utilized the program quality portion of CCDBG¹ to fund early childhood development training systems. The Pennsylvania training system is commonly known as the *Pennsylvania Child Care/Early Childhood Development Training System* (PA CC/ECD). The PA CC/ECD Training System started in January 1992 after lengthy public hearings into the Child Care and Development Block Grant in which child care advocates pushed for a comprehensive training system for early childhood providers throughout the state. The advocates felt that a comprehensive child care training system was a cost-effective way of improving the quality of early childhood programs throughout Pennsylvania.

The PA CC/ECD Training System has gone through several system changes since 1992 and several evaluations with the presently described study as just one of these. For example, prior to 1992, the only training available to child care providers was through a home-based voucher training program. This program proved to be very popular with providers because it gave them ultimate flexibility in the selection of training opportunities. As the training system has evolved, this home-based voucher program became part of the overall PA CC/ECD Training System in 1995. However, this program provides very little structure related to course sequencing or core competencies for child caregivers.

Four school-age technical assistance and capacity building projects also existed prior to 1992 but their major focus was not on training. After 1992 this changed and their focus turned to training. In 1995 these four school age training projects became part of the overall PA CC/ECD Training System. By 1995, all training for center-based, home-based, and school age were under the umbrella of the PA CC/ECD Training System and administered by one contractor, Keystone University Research Corporation (KURC).

The Early Childhood Education Linkage System (ECELS), the program responsible for all health and safety training and technical assistance in Pennsylvania, delivered the American Red Cross Child Care Course throughout the state from 1992 until 1995. In 1995 this course was also taken under the umbrella of the PA CC/ECD Training System. This completed the coordination of all training activities related to early childhood and child care under the umbrella of PA CC/ECD with the exception of Head Start and early intervention training. However, there was a mandate for the KURC project director to coordinate with both groups.

Since 1992, approximately 50,000 training opportunities have been delivered to early childhood providers on an annual basis. These training opportunities include workshops, seminars, videos, learn-at-home materials, conferences, satellite teleconferences, mentoring visits, or vouchers for college coursework and other training outside the PA CC/ECD system. The PA CC/ECD Training System is a diverse system of training opportunities and funding mechanisms. Several of the PA CC/ECD Training System components have been

¹This included a set aside of 6.25% of \$731,915,000 in 1991 federal funds for program quality initiatives.

recognized as innovative training modalities. For example, the home-based voucher program and ECELS were recognized in *Making a Career of It*, a report by the Center for Career Development in Early Care and Education at Wheelock College (Morgan et. al. 1993). However, a concern began to grow that the training opportunities, albeit comprehensive, were not coordinated to lead an individual on a career path. Therefore, several research studies were undertaken to determine the effectiveness of the overall system and its implementation.

Penn State University conducted the first, an evaluation in 1992 through 1995. Two other studies were initiated in 1996. The Penn State University evaluation research helped to clearly delineate the need for additional training opportunities for staff. The key variable that predicted positive developmentally appropriate changes in the classroom after three years of tracking staff was the accumulative amount of training over a number of years that staff were taking (Johnson 1994). This was a key finding, but other factors and features of training that were associated with child care quality needed to be determined.

There were overlapping concerns, although different purposes for the two studies initiated in 1996. Wheelock College (Stoney et al. 1997) conducted one study, an assessment of the various early childhood training systems in Pennsylvania. This study was undertaken to determine how to coordinate the existing PA CC/ECD Training System with other training systems in an effort to develop a full-fledged early childhood career development system within Pennsylvania. The other study initiated in 1996 is the one reported herein. It will help to answer many of the additional concerns not addressed in earlier studies and to track the changes in the quality of child care in Pennsylvania.

3.0 CONCEPTUAL FRAMEWORK

Staff development research as well as studies on factors associated with the quality of child care always share the same long term goal, typically the same theoretical orientation, and often have variables in common within their research designs. The present study, with its twofold purpose of investigating the PA CC/ECD Training System with respect to user perceptions and the relationship between training and program quality, intersects with the current research literature. Accordingly, its long range purpose, its conceptual underpinnings, and its choice of variables and measures are consistent with previous work in these two areas.

The long range motive inherent in this and related research is to bring about optimal experiences for children in child care. Descriptive and explanatory knowledge about early childhood inservice education or staff development and about program quality is needed to achieve this aim. Other related goals can be served at the same time when research adds to an understanding of quality experiences for children in child care, the value of training for staff development, and the relationship between the two.

A socio-ecological or systems theory perspective provides a framework for this study. This perspective emphasizes reciprocal transactions between individuals and their environments. Individuals' constructions (beliefs and attitudes) of their social environments, rather than some notion of objective reality, are central to personal adaptation and behavior (Bronfrenbrenner 1979; Lewin 1935). Child care and training workshops are dynamic, psychological entities as well as physical ones. Providers' social role behaviors and interpersonal relations relevant to the care of children are associated with the totality of factors that constitute a particular child care site (i.e., overall staff and program characteristics). Likewise, providers' role behaviors and relations within child care (staff-staff, staff-child, staff-parents) that contribute to program quality are assumed to influence and be influenced by the PA CC/ECD Training System.

The selection of variables and measures involved in this study, the rationales for the choices, how the variables are conceptually organized, and how they are consistent with previous research are described in the remaining part of this section. These variables are organized into categories as depicted in Figures A and B relevant to the two major purposes of the present study.

Figure A illustrates how the variables are conceptually organized and associated with levels of child care quality. Quality of child care is operationalized by scores from the Harms and Clifford Environment Rating Scales, while the various dimensions of a child care work environment are measured with Paula Jorde Bloom's Early Childhood Work Environment Survey. Characteristics of the work environment are viewed as a primary set of intervening variables.

As measures of program quality, three separate environment rating scales were used in this study: the Early Childhood Environment Rating Scale (ECERS), the Infant/Toddler Environment Rating Scale (ITERS), and the Family Day Care Rating Scale (FDCRS).

Although each scale has comparable areas that are assessed, the individual items composing each scale do vary depending on the type of child care site or classroom observed. Across each of these scales, these are the major components and the items used as indicators of the area:

Furnishings and Display: furnishings for routine care; use of furnishings for learning activities; furnishings for relaxation and comfort; room arrangement; child-related display; indoor space arrangement; active physical play; space to be alone for a) infants and toddlers and/or b) 2 years and older.

Personal/Basic Care: arriving/departing; meals/snacks; nap/rest; diapering/toileting; personal grooming; health practice; health policy; safety practice; safety policy.

Language and Reasoning: informal use of language for a) infants/toddlers and/or b) 2 years and older; helping children understand language for a) infants/toddlers (books & pictures) and/or b) 2 years and older; helping children use language; helping children reason.

Fine/Gross Motor (ECERS only): fine motor (FM); supervision (FM); gross motor (GM) space; GM equipment; GM time; supervision (GM).

Creative/Learning Activities: eye-hand coordination; active physical play; art; music and movement; sand and water play; dramatic (pretend) play; blocks; use of T.V.; schedule of daily activities; supervision of play indoors and outdoors; cultural awareness.

Social Development: tone; discipline; cultural awareness; space (alone); free play; group time; exceptional provisions.

Interaction (ITERS only): peer interaction; adult-child interaction; discipline.

Program Structure (ITERS only): schedule of daily activities; supervision of daily activities; staff cooperation; provisions for exceptional children.

Adult Needs: adult personal needs; opportunities for professional growth; adult meeting area; provisions for parents; relationships with parents; balancing personal and caregiving responsibilities.

As indicators of the various dimensions of an early childhood work environment, the Early Childhood Work Environment Survey (Jorde-Bloom 1988) includes these conceptual areas:

Organizational Climate is the collective perceptions of staff regarding these ten dimensions:

- *Collegiality* is the extent to which staff are friendly, supportive, and trust one another.
- *Professional growth* is the degree of emphasis placed on personal and professional growth.
- *Supervisor support* measures the presence of facilitative leadership that provides clear expectations, support, and encouragement.

- *Clarity* looks at the way policies, procedures, and responsibilities are defined and communicated.
- *Reward system* concerns the degree of fairness and equity in the distribution of pay, fringe benefits, and opportunities for advancement.
- *Decision making* measures the degree of autonomy given to staff and the extent to which they are involved in center-wide decision making.
- *Goal consensus* is the degree to which staff agree on the goals and objectives of the center.
- *Task orientation* measures the emphasis placed on good planning, efficiency, and getting the job done.
- *Physical setting* is the extent to which the equipment, materials and the spatial arrangement of the center help or hinder staff in carrying out responsibilities.
- *Innovativeness* measures the extent to which the center adapts to change and encourages staff to find creative ways to solve problems.

Summary of Worker Values assesses the importance or value that staff attach to each of the dimensions of organizational climate.

Overall Commitment provides a summary of the staff's overall commitment to the center; individuals who feel deeply committed to their jobs tend to put extra effort into their work and take pride in their center.

Summary of How Current Work Environment Resembles Ideal measures staff perceptions of how closely their current work situation resembles their ideal work environment.

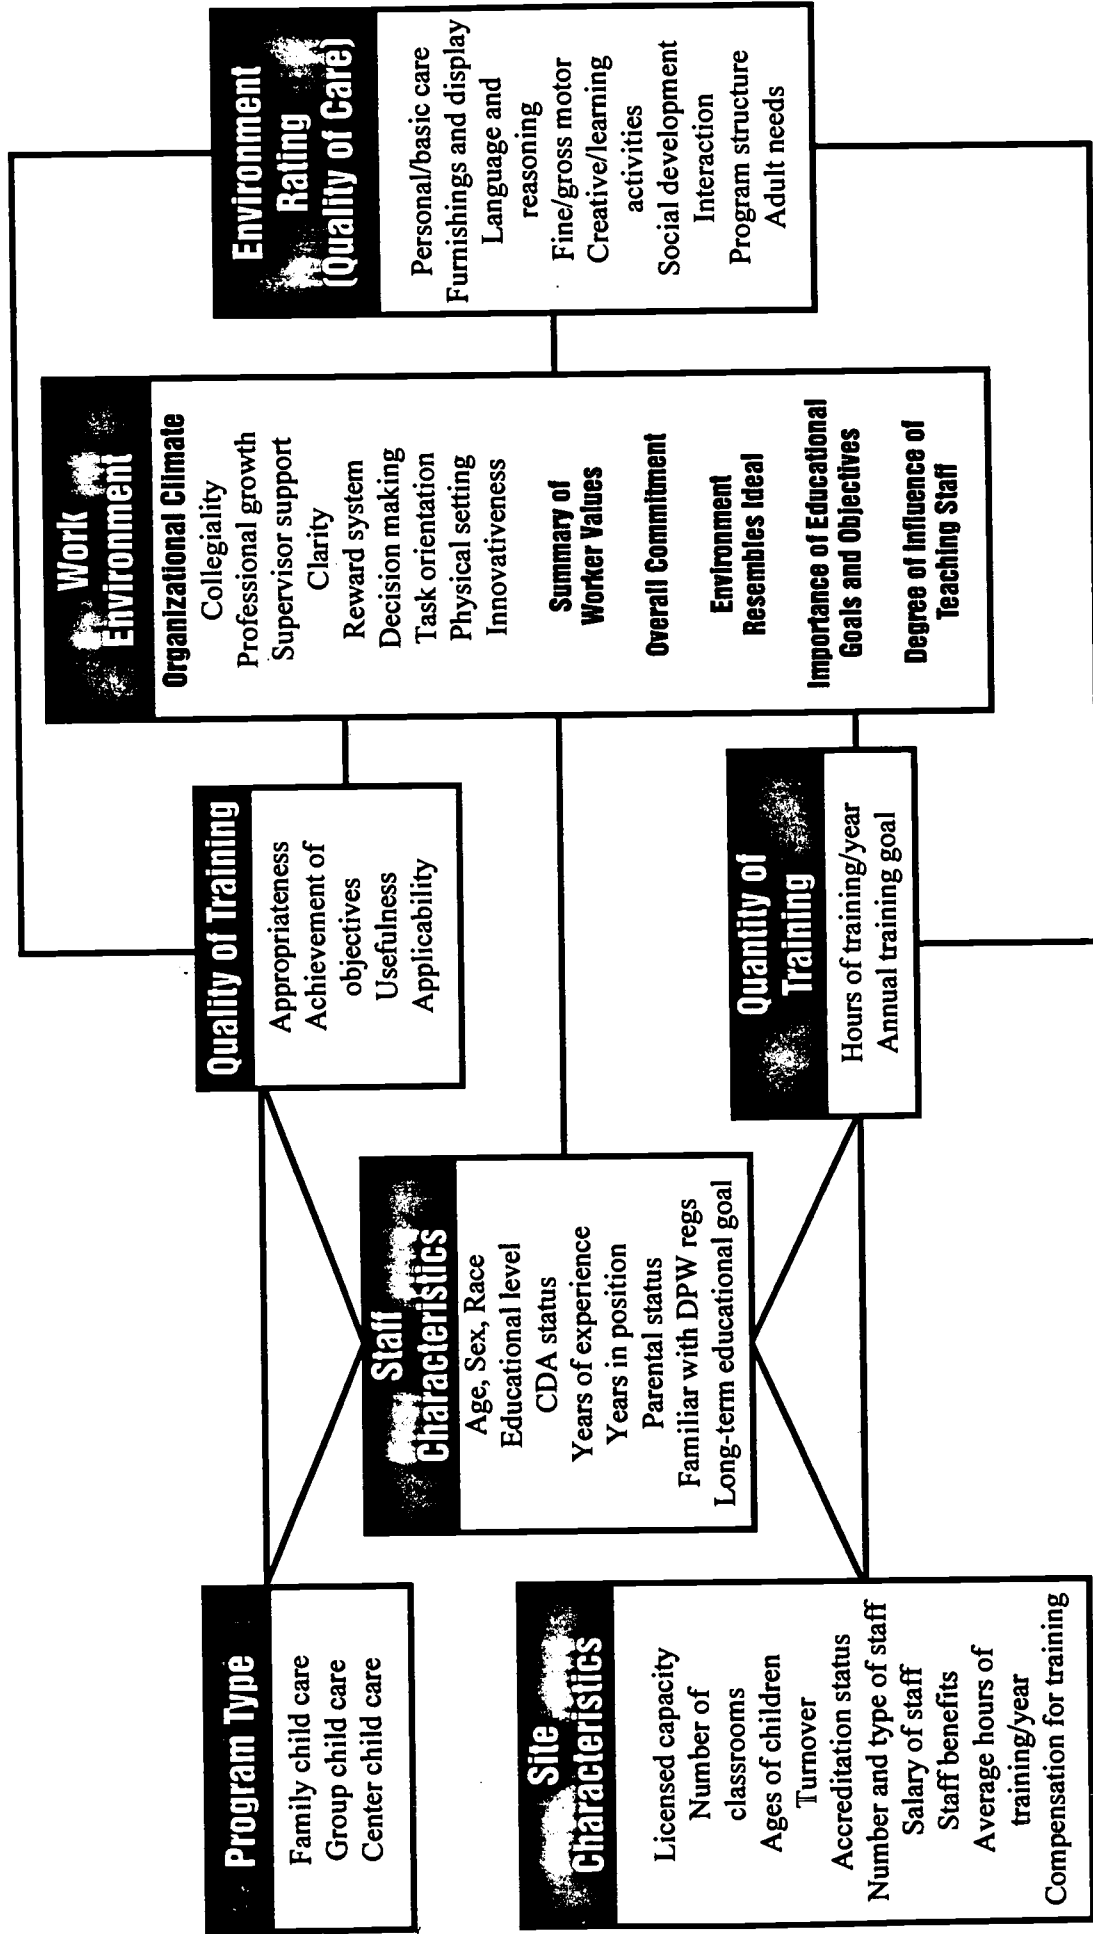

Importance of Educational Goals and Objectives details the rankings that staff assign to six different early childhood educational objectives: language and problem solving skills; strong friendships, skills in sharing; concepts needed for reading and math; independence in caring for themselves; physical skill and coordination; and positive self concepts and self esteem.

Degree of Influence of the Teaching Staff describes the perceptions of workers regarding the degree of influence of the teaching staff with respect to various decisions that are typically made in early childhood programs—both those where centralized decision making may be preferred and those where shared decision making may be possible.

Figure A shows an overview of the variables and how they are conceptually organized with respect to the investigation of factors related to the quality of child care. Although the left- to right- hand side ordering of the variable categories in Figure A suggests directionality of effects, it is important to keep in mind that this study is basically descriptive-correlational in nature. The non-experimental, cross-sectional nature of the research design precludes testing directional hypotheses. Program quality could be the cause or the effect of the other variable categories. Nevertheless, the original rationale for selecting this research design centered on the plausible assumption that higher levels of training of personnel in a program would go hand-in-hand with the quality of care. In addition to organizational climate, certain staff and program characteristics were also expected to show a positive and statistically significant relationship with the quality of care.

Figure A

Quality of Care Conceptual Model

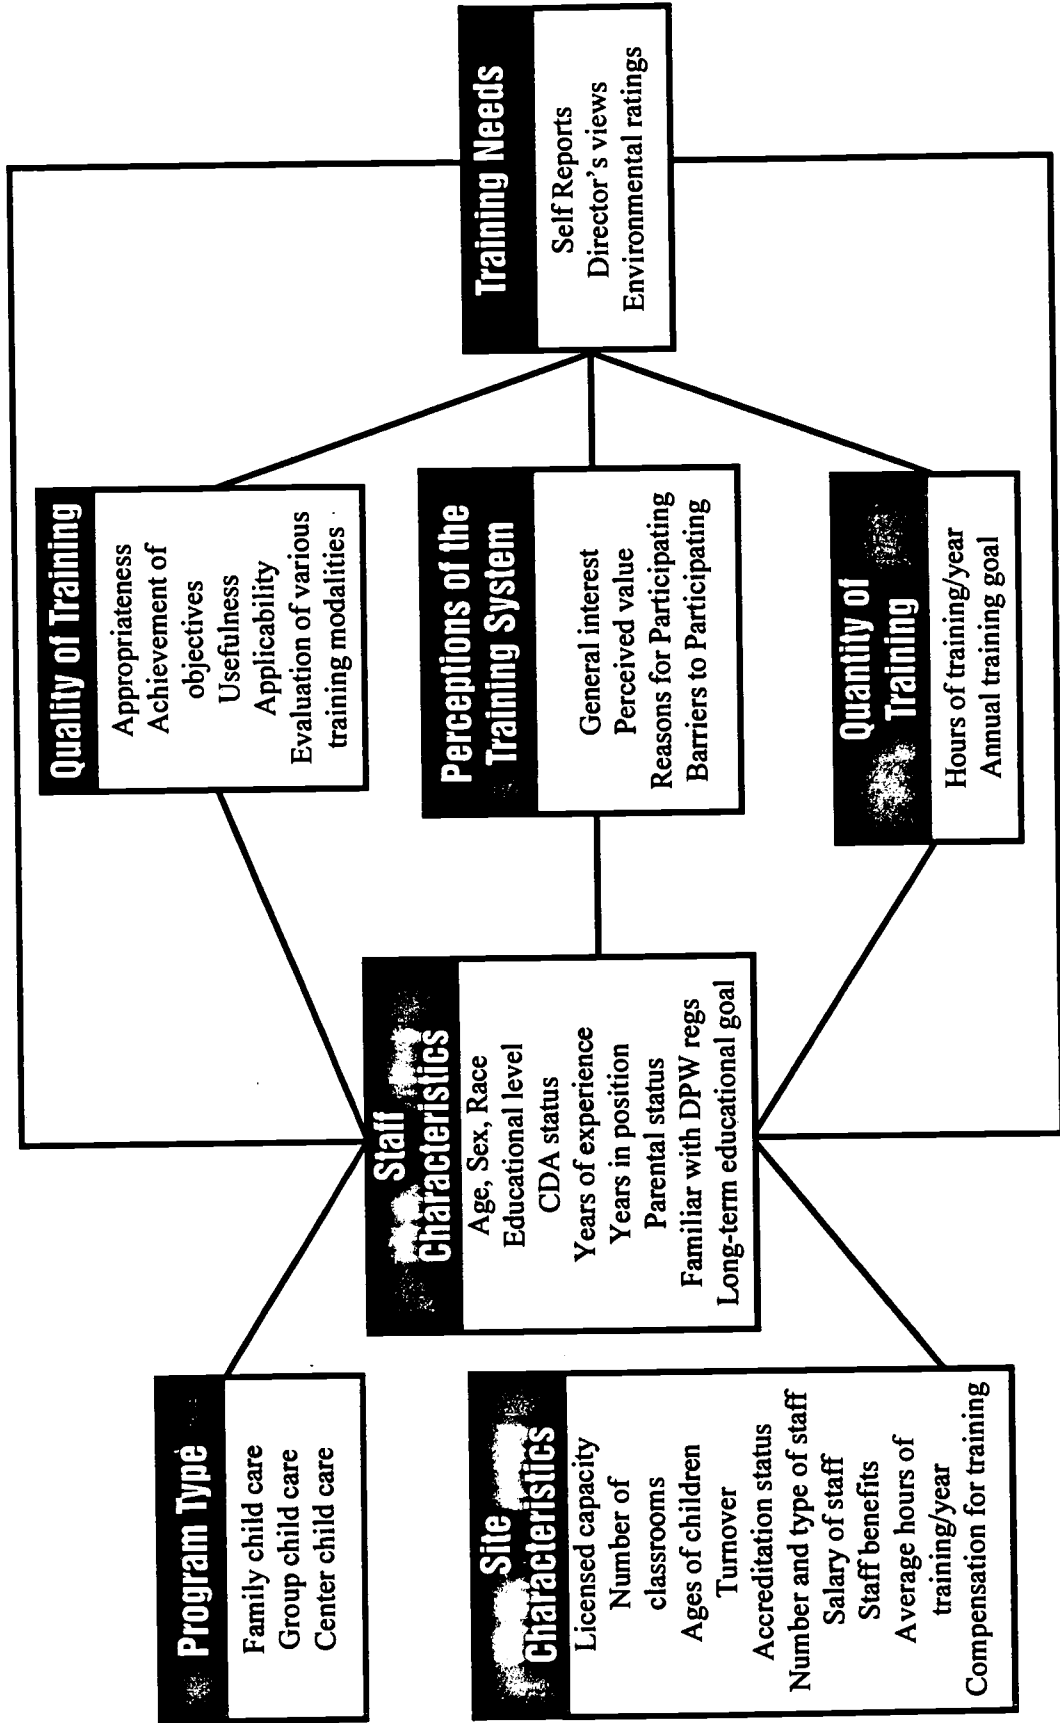

The variable categories of program type and program variables shown on the far left-hand side of Figure A are best viewed as moderating variables. These variables suggest data-based comparisons but are not seen as predictors or mediators of quality (with the exception of accreditation status).

Figure B illustrates the relationships among variable categories pertinent to the identification of training needs and user perceptions of the training system. Of major interest, again, are the comparisons involving program type (family child care, group child care, and centers) and type of staff (directors versus teachers). The model included these specific areas: site characteristics, staff characteristics, quality of training, perceptions of the training system, and quantity of training. Training needs and interests were also identified. Questionnaires administered to child care staff were used to identify perceived training needs and interest areas via teacher and director self reports as well as directors' views of staff interests and needs. Needs (as opposed to interests) were also gleaned from information obtained from the environmental rating scales.

Figure B

Training System Conceptual Model

4.0 METHODOLOGY

As previously indicated, this is a cross-sectional study that collected data from child care sites throughout Pennsylvania. Child care sites were sampled and trained fieldworkers conducted site visits to observe the quality of care in classrooms and to administer questionnaires to child care staff. Specific details about the sampling process, fieldworker training, and data collection instruments are described in the following sections.

4.1 Sampling

A stratified systematic sampling process was utilized to identify child care sites for this study. At the time in which we drew the sample, there was a population of approximately 4,144 family child care sites, 590 group homes, and 3,067 child care centers (the *registered* family child care sites and *licensed* group homes and centers). Within each of these separate lists, we then created sampling frames stratified by geographic region. From these stratified lists, we randomly selected a number of child care sites of each type within the various geographic regions of the state. Our sampling design called for a disproportionate number of sites in each category: 30 family child care homes, 30 group child care homes, and 60 child care centers.

We decided on these numbers for a couple reasons. First, limited resources and time would not allow us to conduct more than the 120 site visits. Second, to have a sufficient number of group homes to analyze, the number of group child care sites in the sample had to be disproportionate to what they represented in the population. Given the disproportionate nature of the sample, weights were used in any analysis that involved more than one type of child care site.

To encourage voluntary participation in this study, we implemented a number of procedures. First, we initially sent a letter to selected sites to explain the purpose of the study and the importance of the findings for *improving the child care training system in Pennsylvania*. In this letter we explained the advantages of their participation in the study: they would receive a voucher to purchase children's books/toys from Gryphon House (\$100 for centers and \$50 for family and group homes); they would have an opportunity to have an early childhood professional visit their site and provide some feedback to them regarding the environment rating scales; and they would receive a certificate acknowledging their participation in the study. A follow-up call to the sites was made to further explain the study and encourage their participation. Once a confirmation was received from the site, a fieldworker was assigned to the site to establish a date for a site visit.

A number of the sites initially drawn for the sample were not included in the final total (some were no longer in business, some refused, some could not be visited due to scheduling difficulties). In each case, another randomly drawn site was used as a replacement. Our analysis of the data confirms that the resulting sample was not biased as a result of this replacement; the indicators of quality vary in the expected manner and other

site level characteristics reflect known data. The final sample size consisted of 29 family child care homes, 30 group homes, and 60 centers.²

4.2 Fieldworker Identification and Training

The importance of having trained observers in a study of this nature cannot be underestimated. Because of this, we took care to identify fieldworkers who were familiar with the Harms and Clifford Environment Rating Scales or with the validation procedures used by the National Association for the Education of Young Children when they conduct accreditation site visits. Once fieldworkers were identified, we sent them the training materials (video and manual) for the Harms and Clifford Environment Rating Scales. Following that, we held a training session to review these materials and other procedures that were to be used in setting up and conducting the site visits. A fieldworker manual was prepared and distributed to everyone; monitoring of their work and progress was conducted from the KURC office; and inter-rater reliability was determined for a small percentage of each fieldworker's observations for the environment rating scales. The high inter-rater reliability scores indicate consistent use of the scales.³ Furthermore, the overall quality of the data gathered by the fieldworkers attests to their ability.

4.3 Data Collection Instruments

Our operationalization and measurement of two key areas in this study have been previously discussed. Quality of child care was measured through the three Harms and Clifford Environment Rating Scales: ECERS, ITERS, and FDCRS. The scale value for each of the items assessed on these instruments ranges between 1 and 7, where 1=inadequate, 3=minimal, 5=good, and 7=excellent.⁴

The dimensions of the child care work environment were measured with Paula Jorde-Bloom's Early Childhood Work Environment Survey (ECWES). There are six separate conceptual areas assessed through this instrument, as identified earlier. For each of the *organizational climate* dimensions, a score of 0 to 10 is calculated by averaging the staff responses to 10 items for each dimension. The *summary of worker values* is indicated by the percentage of staff (0 to 100 percent) that identify an organizational climate dimension as one of the three most important aspects of their work. *Overall commitment* has a range of values between 0 and 10 where 0=not committed and 10=highly committed. Staff's perceptions of *how their current work environment compares with their ideal* ranges between 1=not like my ideal and 5=like my ideal. The *importance of educational goals and objectives* is indicated by a priority ranking, ranging from 1=low

² A decision was made not to extend the data collection process for one additional family site after we had difficulty in scheduling the final site visit.

³ There were 26 paired observations analyzed to determine inter-rater reliability. For the ECERS, the rank order correlation was .90; for the ITERS it was .95; for FDCRS, it could not be calculated since there was only one paired observation; however, a visual inspection of the FDCRS data shows a high degree of consistency across observers.

⁴ The instruments include specific descriptions of what to look for in assigning a value of 1,3,5 and 7 for each of the items assessed. A mid-point rating of 2,4, or 6 is given when all the lower and part of the higher description applies. The internal consistency scores (Cronbach's Alpha) for each of the environment rating scales is .83 for ECERS, .83 for ITERS, and between .70 and .93 for the individual subscales of the FDCRS.

priority to 6=high priority. Finally, the *degree of influence of teaching staff regarding organizational decisions* is assessed on a scale of 0 to 10 where 0=very little influence and 10=considerable influence.⁵

In addition to these standardized instruments, we developed a series of questions to gather background and training information from both directors and teachers within the child care sites. Although the questions were comparable for directors and teachers and across the type of sites, there were some items that applied only to one or the other. Given this, separate instruments were developed. One was for family providers; one for directors of small sites (group homes and some small centers); one for directors of centers; one for teachers of small sites; and one for teachers from centers. In the end, we analyzed the data in terms of the type of site (family, group, or center) as well as type of respondent (director or teacher). Copies of these instruments and the descriptive data for each question are in Appendix A.

The comprehensive background information gathered with these questionnaires included:

- **Director and/or Teacher Background:** age, sex, race, education, years in early childhood field, years with current employer, employment status, salary, long-term educational goal, CDA status, and parental status.
- **Training Background and Assessment:** number of training hours in past three years, annual training goal, evaluation of training system (appropriateness, achievement of goals/objectives, usefulness, applicability), helpfulness of additional training, specialized training, assessment of specific training modalities, decisions about staff training, presence of staff development plans, compensation for training, factors affecting the selection of training, barriers to training, interest in training, and need for additional training in selected topic areas.
- **Site Characteristics:** age of children in facility, type of facility, licensed capacity, number of classrooms, change in licensed capacity in past year, number of paid staff, number of new staff in current year, presence of assistant director, and accreditation status.

⁵ The total scale alpha coefficient for internal consistency for the ten dimensions of organizational climate is .95. The specific details on the reliability and validity for other components of ECWES can be found in P. Jorde-Bloom (1996). *Improving the Quality of Work Life in the Early Childhood Setting: Resource Guide and Technical Manual for the Early Childhood Work Environment Survey*. Wheeling, Illinois: The Early Childhood Professional Development Project.

5.0 FINDINGS

The results of this study address a number of specific research questions within the context of identifying training needs and assessing the factors associated with the quality of care (see section 1.0, Statement of the Problem). In presenting the results of the data analysis, we first provide an overview of the background data for each of the provider groups, followed by the findings for the specific research questions.

5.1 Background Data on Provider Groups and Child Care Facilities⁶

The socio-demographic characteristics of the provider groups, their training background, and various site characteristics are summarized in Tables 1-3 to give a better understanding of the child care providers and facilities included in this study.

As Table 1 shows, the socio-demographic characteristics of this sample are typical of what we find in national statistics. As expected, the vast majority of providers are female. Their average age is between 34.8 and 45.8 with directors slightly older than teachers are. A majority of providers are parents (between 59 to 93 percent) with center teachers least likely to hold this status. Educationally, we see that center directors hold the highest levels of education while group teachers and family providers have the lowest levels, thus showing the relationship between child care position and academic background. The directors for both centers and group facilities have been in the field of early childhood education longer than the other provider groups (on an average of thirteen years for directors in comparison to approximately seven years for child care teachers and family providers). Center teachers have the least amount of time with their current employer in comparison to their total number of years in the field. The vast majority (over 93 percent) of directors for both centers and group facilities are full-time, while a majority of group teachers (59.4 percent) are part-time. Regarding compensation, group teachers are also the lowest paid (approximately \$5.89/hour), while center directors, on the average, earn the highest salaries—just under \$20,000 per year. Benefits are also not prevalent in the field, although center staff are more likely to have some benefits than are home-based providers. Health benefits are the most common, yet less than half (48.7 percent) of the center teachers report having this benefit.

Table 2 summarizes the responses to questions that are indicators of the extent to which providers are motivated to pursue additional as well as higher levels of education and training. Over one-third of each provider group indicate that they have no long-term educational goals when asked about them. However, the center directors are more likely to express a desire for higher education, with 57.1 percent of them indicating that a graduate degree is their long-term educational goal. As far as other child care training, a substantial percentage of providers do *not* have a Child Development Associate (CDA)

⁶ Also see Appendix A for the summary of the data from each of the questionnaires administered to the provider groups—center directors, center teachers, group child care directors, group child care teachers, and family providers.

Table 1: Background Characteristics of Provider Groups*

Characteristic	Center Directors (N = 60)	Center Teachers (N = 561)	Group Directors (N = 30)	Group Teachers (N = 70)	Family Providers (N = 44)
SEX (% female)	98.3	98.0	100	95.7	93.2
AGE (mean)	41.6	34.9	45.8	34.8	38.8
RACE/ETHNICITY

Disability		16.3		2.1	
Education reimbursement		25.9		17.0	

*Percentages are reported except where otherwise noted.

** N.A. = Question not asked of this provider group.

certificate, but center directors (12.7 percent of them) are more likely to have the CDA than are the other provider groups. Furthermore, directors of both centers and group facilities have, on the average, twice the number of training hours than do the teacher and family provider groups. Over the past three years, directors averaged over 40 hours of training, while teachers and family providers averaged only around 20 hours (just slightly higher than what is required to meet the state regulations of 6 hours per year). The

emphasis on only meeting state requirements is further evidenced by the responses from providers when asked to indicate their annual training goal. A majority in each provider group, except group directors, indicates that completing the 6 hours is their goal. Both directors of centers and group facilities, as well as family providers show greater interest in education/training beyond the minimum required. The final indicator of a provider's educational interest and motivation is revealed when asked, "Do you have a plan for your individual career development in early childhood care and education?" More than half of teachers and family providers indicate that they have a personal career development plan. This appears to be a higher percentage than expected, given the responses to the other questions related to educational interest and motivation. However, this question did not ask if the plan was written and/or formalized; as such, the responses to this question may include individuals who at a minimum have *thought* about their plans for further training and education.

Table 2: Training Background of Provider Groups*

Characteristic	Center Directors (N = 60)	Center Teachers (N = 561)	Group Directors (N = 30)	Group Teachers (N = 70)	Family Providers (N = 44)

Accreditation Status (% yes)	26.3	10.0	22.5

** N.A. = Question not asked of this provider group.

The characteristics of the sample sites are shown in Table 3. On the average, centers have a licensed capacity for 76 children, just under five classrooms, and an enrollment of 69 children. While centers have fewer enrolled children than they are licensed for, both group and family homes have more (probably due to school-age children or children who might not be enrolled for full-child care). As for the age of children served, children age two through five are most likely to be enrolled in child care. Special needs children are most likely served by centers, not group or family homes. Staffing patterns are also consistent with common knowledge—centers average just under eleven paid staff, while group homes average just fewer than four. Approximately one-third of both centers and group homes has an assistant director. The turnover rate, indicated by the ratio of new staff to total number employed, is slightly higher for group child care (.31) than it is for centers (.22). Centers are most likely to be accredited (26.3 percent) while group homes are least likely (10 percent).

5.2 Training Needs and Perceptions of Current Training System

5.2.1 Perceived Training Needs

The survey instrument distributed to child care staff asked both directors and teachers to identify the need for training in specified training topics.⁷ They were also asked to base their assessment on the *need for training* for child care providers, not just the importance of the topic, alone. Table 4 summarizes the responses of these provider groups: center directors, center teachers, group providers⁸, and family providers.

In examining Table 4, if we rank order the topics in terms of perceived priority, we see that the general topic area of **supervision, motivation, and discipline/guidance of children** is considered an area of very serious need for training. This topic is ranked at the top for all provider groups except family providers who rank it as the second most needed area of training. The family providers identify **fostering social development (e.g., dealing with conflict)** as their top priority for training. These two topics are closely related in that they both deal with the issue of behavior management--a serious concern for providers that is repeatedly expressed by them. This concern over behavior management is further supported by the data when we see that both topics end up being ranked as either a first or second priority for training by all provider groups.

When all topics are listed in rank order (from topics that are a very serious need to topics that are not a priority), there is a high degree of consistency across all provider groups--for center directors and teachers as well as the home-based providers. The four areas consistently ranked as priority training topics are:

- supervision, motivation, and discipline/guidance of children
- social development (dealing with conflict)
- child development
- developmentally appropriate practice

In addition, family providers identify **nutrition and infant/child development** as important areas of training for them.

Regardless of their relative importance and rank order position, providers view none of the training topics specified on the research instrument as *unimportant*. The average scale value for these topics ranged between 1.28 and 2.53--thus there is no topic area that is viewed as *not a priority* for training.

⁷ They were asked to indicate if there is a need for training, based on a scale of 1 to 4 where 1= a very serious need and 4= not a training priority.

⁸ For the purpose of this analysis on training needs, both the directors and teachers within a group home have been combined into one category, representing group child care providers. This decision was made because the child care setting is usually small and a distinction cannot always be made between a "director" and "teacher" within the group site.

Table 4: Perceived Need for Training in Selected Topic Areas*

Training Topic	Center Directors (N=60)	Center Teachers (N=546)	Group Providers (N=100)	Family Providers (N=44)
Child care business, management	2.19 (16)	2.36 (17)	2.43 (19)	2.03 (17)

Nutrition	2.27 (17)	1.99 (13)	1.88 (5)	1.57 (4)
Personal care routines (naptime, toileting, grooming)	2.46 (19)	2.12 (16)	2.11 (15)	1.60 (6)
Play	1.97 (12)	1.91 (10)	1.96 (8)	1.71 (11)
Supervision, motivation discipline/guidance of children	1.28 (1)	1.51 (1)	1.55 (1)	1.46 (2)
Working with parents/community services	1.73 (5)	1.85 (8)	2.00 (9)	1.64 (7)
Statewide conference on multiple topics	2.48 (20)	2.53 (20)	2.48 (20)	2.22 (20)
Regional conference on multiple topics	2.41 (18)	2.53 (19)	2.36 (18)	2.18 (19)
Mentoring, multiple topics	2.18 (15)	2.45 (18)	2.30 (17)	2.08 (18)

* Perceived need is indicated by the mean score for the provider group on a scale of 1=a very serious need, 2=important but not critical, 3=more would be helpful, and 4= not a priority; in addition, a rank order of training needs for each provider group is indicated in parentheses.

5.2.2 Training Needs as Observed via the Environment Rating Scales

In addition to the identification of training needs through the self-reports of child care staff, we are able to provide a more objective measure via the Harms and Clifford Environment Rating Scales. By identifying areas where child care sites are weak (e.g., where average scores are less than 5), we can specify needed training topics. Table 5 summarizes the average scores for the individual items included in each of the environment rating scales (FDCRS, ITERS, and ECERS).

Table 5: Average Score on Individual Environment Rating Scale Items

Scale Item	FDCRS (N= 67)*	ITERS (N= 36)	ECERS (N=57)*

* This is the weighted N since there were observations made in more than one type of child care (i.e., family, group, or center)
 ** N.A. = Question not applicable for this environment rating scale. Spaces where there are no applicable scores are indicated by "-"

In analyzing the set of individual items on the three different Harms and Clifford Environment Rating Scales, we see that there are a number of areas that receive a very low rating—below a scale value of 4.00. Items rated this low indicate areas where special attention should be placed in the design and delivery of training. Across all three scales--FDCRS, ITERS, and ECERS--these items are consistently rated low: **cultural awareness, personal grooming, dramatic (pretend) play, and sand and water play.** Furthermore, these areas are rated low in two out of the three environment rating scales: **displays for children** (FDCRS and ITERS), **space alone** (FDCRS and ECERS), **helping infants/toddlers understand language** (FDCRS and ITERS), **art** (ITERS and ECERS), and **blocks** (FDCRS and ITERS).

Overall, the ECERS reveals fewer areas of serious concern (only 16 percent of the items on this scale have a score below 4.00), while the ITERS reveals the most (46 percent of the ITERS' items have a score below 4.00). This is consistent with national data on the environment rating scales (Phillips 1987; Scarr 1994). Indeed, if we compare the overall average score for each scale, (FDCRS = 4.47; ITERS = 4.26; ECERS = 4.63), the ITERS has the lowest average score. This points to the need for particular focus on infant/toddler training, a finding that is consistent with anecdotal evidence and comments.

On the other end of the continuum, there are a number of items on each of these scales that score above 5.00, indicating an assessment in the *good* range. Keeping in mind that there are not comparable items across all three scales,⁹ we consistently see these areas rated highly: **nap/rest time, discipline/supervision, provision for parents, informal use of language with infants/toddlers, and health practice and/or policy.** Consistent with our analysis of the items rated poorly, the ECERS fares the best. It has the highest percentage of items (38 percent) receiving a score above 5.00 (ITERS only has 26 percent of the items scoring above 5.00, while FDCRS has 23 percent). There are a couple points of interest in our examination of these ratings. First, it is noteworthy that the health area received such a positive evaluation. No doubt, concerns about health and safety are of primary importance to parents as well as officials who regulate child care. Second, the high rating for discipline/supervision is paradoxical given the consistent identification of this area by caregivers as one in which they are in the most need of training. What this shows is that caregivers are performing better in this area than they think; it also reveals that discipline/supervision is perhaps one of the most challenging areas in child care and something for which caregivers think they need constant help and support.

5.2.3 Selection of Training

Providers were asked to indicate the importance of a number of factors in their selection of training.¹⁰ In Table 6 we see, again, there is a high degree of consistency across all provider groups. Providers indicate that their selection is based primarily on their **interest in a topic** and if a topic **helps understand children.** Furthermore, center staff (directors

⁹ For example, the ECERS doesn't assess health and safety areas and the discipline item is spread across a number of supervision items.

¹⁰ Each factor was assessed by providers as 1=very important, 2=somewhat important, or 3=not important.

and teachers) identify **opportunities for professional development** as important. All provider groups, except center directors, rank training that offers practical solutions within the top five categories. Center directors mention the **scheduled times for training** as important. Similarly, home-based providers mention the **scheduled times for training** or the **location/convenience** as important factors affecting their selection of training. These priority rankings are congruent with the role responsibilities of center directors and teachers and home-based providers. Directors are responsible for the scheduling of staff at their child care facility, while home-based providers must participate in training that is offered during nonbusiness hours--hence the importance of when training is scheduled. On the other hand, teachers deal with the day-to-day child care activities for which they want practical guidance.

Table 6: Factors Affecting the Selection of Training*

Selection Factors	Center Directors (N=60)	Center Teachers (N=546)	Group Providers (N=100)	Family Providers (N=44)
Location/convenience	1.19 (5)	1.27 (5)	1.29 (3)	1.08 (3)
Session length	1.51 (10)	1.70 (12)	1.71 (11)	1.54 (10)
Meet state requirements	1.24 (7)	1.40 (8)	1.33 (5)	1.34 (6)
Quality of previous training	1.41 (8)	1.39 (7)	1.49 (8)	1.49 (8)
Cost of training	1.53 (11)	1.66 (11)	1.50 (9)	1.58 (11)
Scheduled times of training	1.13 (4)	1.31 (6)	1.36 (6)	1.03 (1)
Interest in topic/contents	1.10 (1)	1.15 (2)	1.15 (1)	1.21 (4)
Networking opportunities	1.75 (12)	1.81 (13)	1.82 (13)	1.66 (12)
Training organization	1.76 (13)	1.65 (10)	1.72 (12)	1.69 (13)
The trainer	1.48 (9)	1.51 (9)	1.66 (10)	1.54 (9)
Offers practical solutions	1.19 (6)	1.25 (4)	1.32 (4)	1.24 (5)
Helps understand children	1.12 (3)	1.09 (1)	1.16 (2)	1.08 (2)
Professional development	1.10 (2)	1.22 (3)	1.37 (7)	1.35 (7)
Sent by director	N.A.**	1.91 (14)	1.87 (14)***	N.A.**

* Importance of factors in the selection of training is indicated by the mean score for the provider group on a scale of 1=a very important, 2=somewhat important, and 3=not important. In addition, the rank order of the factors in terms of importance is indicated in parentheses.

** N.A.= Not asked of this provider group.

*** This represents the response from the group teachers only.

However, all of the factors that might affect the selection of training are considered at least *somewhat important* by the child care providers. (Note that none of the factors have a mean score above 2.0) But, in terms of priority, the factors having the least priority across all provider groups are: **networking opportunities, training organization, session length, cost of training, and trainer**. The relative unimportance of the cost of training is to be expected. The Pennsylvania child care training system provides training opportunities at no cost, or for a minimal registration fee, therefore this is not a critical issue. As for the trainer and training organization, it may be that providers are satisfied with current training organizations and trainers (as expressed elsewhere in these data and also in the participant evaluation forms completed for each training session). Given this,

who the trainer or training organization is may not be as important as other factors in the selection of training.

What is of interest is the relative unimportance of **networking opportunities**. Anecdotally, we often hear that the opportunity to meet and talk with other child care providers is highly valued. On closer inspection, we see that family providers (the provider group that is most isolated from peers), are more likely to consider networking opportunities as important than are the other provider groups. Half of the family providers indicate that networking is a very important factor in their selection of training, while only around one-third of the other provider groups indicate this.¹¹

Center teachers also were asked to indicate the importance of **being sent by the director** in their selection of training. In comparison to other factors, **being sent by the director** is relatively unimportant—it is ranked at the bottom. Regardless, approximately one-third of the teachers in centers indicates that **being sent by the director** is a *very important* factor. Ideally, the directors of child care centers should be working with their staff to establish professional development plans that meet the individual needs of their workers. However, this question, as asked, does not identify the reason why a director sends staff to particular training—i.e., whether the selected training corresponds with professional development needs of staff or whether the training is offered at a convenient time and place.

When directors were asked about how decisions are made regarding staff training, just under half of the center directors (46.6 percent) indicate that they “guide the selection but the staff make the final decision.” Whereas, in the group child care situation, 60 percent of the group directors indicate this.

Having a personal plan for career development is related to this decision-making process and the selection of child care training. Whether or not staff have such plans was assessed by asking directors “What percentage of your child care staff have personal plans for career development in early child care and education?” Center directors, on the average, indicate that over half (51.9 percent) of their staff have personal plans. In group child care, directors report that only 24.2 percent of their staff have personal career development plans. A much higher percentage (71.1 percent) of the family providers indicate that they have a plan for their development as a child care provider. This question does not ask for specific details, therefore the interpretation of what constitutes a *plan* probably varies considerably.

5.2.4 Evaluation of Training

The appropriateness, usefulness, applicability, and effectiveness of training in achieving learning objectives, as perceived by the providers, were used as one means to evaluate the training system. Providers were asked for their *overall* assessment of the training in

¹¹ See Appendix A for percentages on relevant questions that are reported in the discussion in this section 5.2.3.

which they participated, knowing that many have participated in a number of training opportunities over the past few years (see Figure 1).

The vast majority of all provider groups consider the training to be either very appropriate or somewhat appropriate. In comparison, the group providers are more likely than the others to consider the training appropriate (94.6 percent), while family providers are least likely (89.2 percent).

Providers also positively assess the usefulness of training. More than four-fifths of each provider group consider the training somewhat or very helpful. Comparatively, home-based providers are most likely to consider the training useful (group=89.1 percent and family=89.2 percent), while center directors are least likely (87.5 percent).

Figure 1: Perceived Appropriateness, Usefulness, Applicability, and Effectiveness of Training*

*For each factor, these data represent the percentage of providers who indicate that:

- The training was "very appropriate" or "somewhat appropriate" (Appropriateness)
- The training was "very helpful" or "somewhat helpful" in their work (Usefulness)
- They can apply "all," "a lot," or "some" of what they learned in training (Applicability)
- The training goals were "achieved" or "somewhat achieved" (Effectiveness)

The applicability of training (of the knowledge and skills learned) to the work environment should be an important feature of any training system if it is to have an impact. It is impressive that a substantial majority of all providers (over 90 percent) indicate that they could apply all, a lot, or some of what they learned in the training to their current work.

To assess the perceived effectiveness of training, providers were asked to indicate the extent to which the training goal(s) were achieved, that is, the extent to which they learned the material.¹² As with the applicability of training, almost all of the providers (over 90 percent) respond that they learned at least some of the material. A slightly smaller percentage of family providers indicate this (91.9 percent vs. over 96 percent for the other provider groups).

Overall, the training system is viewed positively by the provider groups, as evidenced by their response to the questions about appropriateness, usefulness, applicability, and effectiveness in achieving learning objectives. The providers consider the training appropriate for their level of knowledge and skill, find it helpful in their current work, indicate they are able to apply what they have learned, and feel the training goals have been achieved.

This positive assessment also corresponds with their response when asked about their level of interest in training and if they think more training would help them in their work (see Figure 2).¹³ As with the other evaluative factors, the level of interest is high among the teachers, with over 80 percent of the center and group teachers indicating they are either *interested* or *very interested* in taking training. Furthermore, directors are on target in assessing the level of interest of their staff. As further evidence of the positive evaluation of the training by providers, a substantial percentage (86-100 percent) indicate that attending more workshops or training will help them in their work.

A final evaluative measure used in assessing the current training system asked about the perceived helpfulness of the various training methods used in the Pennsylvania Child Care Training System. Only directors and family providers were asked about this.¹⁴ Table 7 summarizes the responses for center directors, group directors, and family providers. **On-site training** ranks as the most helpful method by the directors of centers and group homes, while family providers rank it as second most helpful. Center directors and family providers also positively assess **workshops**. While the **satellite** and **video** methods of training may be cost effective and efficient in reaching providers in the more rural areas, both these methods of training are viewed as less helpful than the other methods. Interestingly, both family providers and group directors express a more positive view of these two methods than do the center directors.

¹² It is important to keep in mind that when providers indicate that they learned the material, this is based on their subjective assessment, and the extent to which they actually did learn the material is not objectively measured through this question.

¹³ Teachers in both group and center settings were asked, "In general, how interested are you in taking workshops or courses on teaching and/or caring for children?" Directors were asked to indicate their perception of interest on the part of their staff.

¹⁴ Family providers were asked, "Based on your experience, what method(s) of training are most helpful for you?" Center directors, were asked, "Based on your experience, what method(s) of training are most helpful for your staff?"

Figure 2: Level of Interest and Perceived Helpfulness of Additional Training*

*For level of interest, numbers represent:

- The percentage of family providers, group teachers, and center teachers who indicate they are "interested" or "very interested" in taking workshops or training.
- The percentage of center directors and group directors who indicate their staff are "interested" or "very interested" in taking workshops or training.

For helpfulness of additional training in one's work numbers represent:

- The percentage of providers who indicate that attending additional workshops of training will "somewhat" or "very much" help them in their work.

Table 7: Perceived Helpfulness of Training Methods*

Training Method	Center Directors (N=60)	Group Directors (N=30)	Family Providers (N=44)
Workshop	1.26 (2)	1.52 (2)	1.16 (1)
Satellite	2.33 (6)	2.07 (6)	1.84 (6)
Video	1.92 (5)	1.56 (5)	1.60 (4)
On-site Training	1.21 (1)	1.39 (1)	1.42 (2)
Conference	1.57 (4)	1.48 (3)	1.55 (3)
Mentoring	1.38 (3)	1.47(4)	1.78 (5)

* Perceived helpfulness is indicated by the mean score for those who have experienced a method of training, on a scale of 1=very helpful, 2=somewhat helpful, and 3=not helpful. In addition, a rank order of the methods is indicated in parentheses.

5.2.5 Barriers to Training

Several factors may limit child care providers from attending training. Providers were asked to indicate the importance of a number of factors that might prevent them from attending training or workshops (see Figure 3).

The lack of child care for their own children while they attend training is considered important as a barrier only by family providers. This is another expected finding since

family providers are most likely to have to attend training outside of their work hours, necessitating the need to find care for their own children while they attend training.

Also, having **no long term gains or rewards** for training is not considered a very important barrier by the provider groups, contrary to what we might expect given the current status and reward system for child care providers. However, center directors, in comparison to the other provider groups, were more likely to perceive this as an important barrier.

Having **no one to watch the children during the child care hours** is seen as the most significant barrier to training by all provider groups. The center directors and family child care providers, however, are more likely to indicate this as a very important factor than are the teachers and group providers. This is normal, since directors and family providers are responsible for finding substitutes in their child care settings.

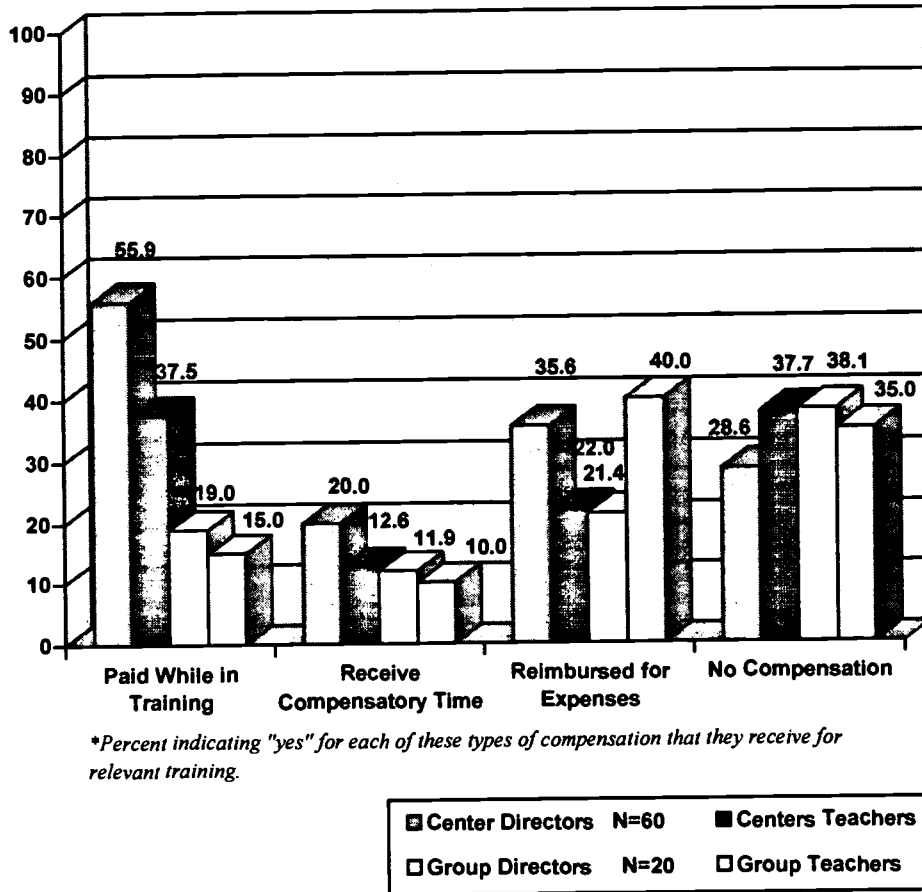

Figure 3: Barriers to Training*

*Importance of barrier is indicated by the mean score of the provider group on a scale of 1=very important, 2=somewhat important, and 3=not important

In identifying other barriers to training, we can also examine the reward system attached to training. Providers were asked, "Do you receive any compensation for attending relevant training?" Figure 4 shows the types of compensation received by the center and group child care providers. Few providers receive any type of compensation, i.e., being paid while in training, receiving compensatory time, or being reimbursed for expenses. Center directors appear to fare better than the other provider groups—55.9 percent of them indicate that they are paid while in training. This can be interpreted that they are more likely to attend relevant training during the work hours.

Figure 4: Compensation for Attending Relevant Training*

5.3 The Work Environment of Child Care Facilities

The quality of work life is not only an indicator of one type of quality within a child care environment, but as well, it is an important factor that can influence the overall quality of care for young children. As stated previously, we have used Jorde-Bloom's Early Childhood Work Environment Survey (ECWES) to assess a number of dimensions of the work environment within child care centers. The ECWES¹⁵ includes measurements of:

- Ten dimensions of *organizational climate* (collegiality, professional growth, supervisor support, clarity, reward system, decision making, goal consensus, task orientation, physical setting, and innovativeness);
- The importance that staff assign to each dimension (*summary of worker values*);
- The staff's *overall commitment* to the center;

¹⁵The analysis in this section only includes child care centers since we used Bloom's instrument only in facilities that had more than three staff, as recommended. There were a total of 60 centers included in the data set, however, due to missing data from some centers, only 55 are included in the analysis presented herein.

- How the current *work environment resembles the staff's ideal*;
- The importance of various *educational goals and objectives*;
- The *degree of influence of the teaching staff* regarding various organizational dimensions.

5.3.1 Organizational Climate

The ten dimensions of organizational climate are shown in Figure 5. In analyzing the scale values, which can range between 0 and 10, we see that the dimension of **professional growth** ranks at the bottom (3.94), followed by **reward system** (5.88) and **clarity** (5.91). This indicates that overall, the staff in centers do not perceive many opportunities for professional growth, they do not feel that pay and fringe benefits are fair and equitably distributed, and they feel that communication about policies and procedures is unclear. These results are similar to national data where professional growth opportunities and reward systems are evaluated poorly by most child care staff (Jorde-Bloom 1996).

Figure 5: Organizational Climate at Child Care Centers*

*Mean value for each dimension of organizational climate on a scale of 0=low and 10=high

It is important to determine what factors, if any, are associated with these ten dimensions of organizational climate. Table 8 provides a summary from an analysis of the relationships between each of the organizational climate dimensions and a series of factors. A number of **director characteristics** are examined first. In addition, **characteristics of teachers** (aggregated per site) and overall **site characteristics** are analyzed. The significant relationships that we find from these analyses are:

* p < .05 ** p < .01 *** p < .001

Collegiality is higher in centers where:

- *directors* have been in their current job longer;
 - *teachers* are older and have been in their current job longer;
 - *site* turnover is lower.
- Opportunities for **professional growth** are perceived to be greater in centers where:
 - *directors* are older, have more years in the field of early childhood education, have been in their current job longer, and have higher salaries;
 - *teachers* are older, have more years in the field of early childhood education, have been in their current job longer, have higher salaries, and have an annual training goal of 12+ hours;
 - *sites* are larger (have more classrooms), have lower turnover, and are accredited.
- **Supervisor support** is perceived to be greater in centers where:
 - *teachers* are older and have been in their current job longer;
 - *site* turnover is lower.
- The **clarity** of policies and procedures is perceived to be better in centers where:
 - *teachers* are older, have more years in the field of early childhood education, have been in their current job longer, and have higher salaries.
- The **reward system** is considered more fair and equitable in centers where:
 - *directors* are older, have more years in the field of early childhood education, and they are full-time;
 - *teachers* are older, have more years in the field of early childhood education, have been in their current job longer, and have higher salaries;
 - *sites* are accredited.
- The ability of staff to make decisions about those things that affect them (**decision making**) is perceived to be greater in centers where:
 - *teachers* are older;
 - *site* turnover is lower.
- The level of **goal consensus** at a center is greater where:
 - *teachers* are older and have been in their current job longer;
 - *sites* have lower turnover and are accredited.
- The emphasis on good planning, efficiency, and getting the job done (**task orientation**) is higher in centers where:
 - *directors* have more years in the field of early childhood education and have been in their current job longer;
 - *teachers* are older, have been in their current job longer, and have higher salaries.

- The **physical setting** is well-arranged, organized, and provides sufficient supplies and equipment in centers where:
 - *directors* have more years in the field of early childhood education and have been in their current job longer;
 - *teachers* are older;
 - *sites* have lower turnover and are accredited.

- The extent to which staff are encouraged to be creative and innovative in their work (**innovativeness**) is greater in centers where:
 - *directors* have more years in the field of early childhood education.
 - *teachers* are older;

Across all of these, the average age of teachers is significantly related to all dimensions of organizational climate. Centers with older workers have a more positive work environment. Correspondingly, two other factors that are closely related to each other (i.e., average number of years in the current position and site turnover) are also significantly related to a number of the dimensions of organizational climate. In addition, a number of these organizational climate dimensions are more positive in centers that have older and more experienced directors. Hence, an older and more stable workforce is closely associated with a positive organizational climate. The causal link between these factors cannot be determined from this analysis, but it is plausible that there is a reciprocal effect--a positive organizational climate results in a more stable workforce and vice-versa.

5.3.2 Summary of Worker Values

The previous analysis of organizational climate gives us a picture of how child care centers fare on each of these dimensions. We see that opportunities for professional growth are particularly poor while at the other end of the continuum, the physical setting is viewed very positively by workers. These perceptions, however, are tempered by the degree to which child care workers value these aspects of their work environment.

Figure 6 gives us an indication as to the overall value placed on each of the 10 dimensions of organizational climate. Center staff identified the three most important aspects of their work from the list of organizational climate dimensions. The most highly valued aspect is **collegiality and co-worker relations**--over 60 percent of the child care center staff identify this as one of the three most important aspects of their work. The **reward system**--fairness in pay and benefits--is second most important (48.2 percent) and **supervisor support** is third (40.9 percent) most important. The dimension of **opportunities for professional growth** comes in fourth with 30.5 percent of the caregivers identifying it as important. Therefore, even though staff do not perceive many opportunities for professional growth, this aspect is not as highly valued as other areas. Those areas least valued are **goal consensus** (13.5 percent), **clarity** (15.2 percent), and **innovativeness** (20.5 percent).

How these organizational climate dimensions are rated compared to the value placed on them gives us an indication where to focus improvement efforts. **Improvement in the**

reward system will probably accrue the most lasting results since it is very poorly rated, yet highly valued. **Improving opportunities for professional growth** is also an area where attention should be focused since it is the most poorly rated area and it ranked fourth in importance. On the other hand, collegiality is very important to workers, but given its positive assessment as a dimension of organizational climate, there is no need to improve it.

Figure 6: Summary of Worker Values*

* Percent of center staff (averaged across sites) that identify each dimension of organizational climate as important.

5.3.3 Summary of How Current Work Environment Resembles Ideal

As a way of understanding the discrepancy between ideal and real work conditions, child care workers were asked, "If you could design the ideal job, how close would your present position resemble this ideal position with respect to the following?" Responses range between *not at all like my ideal* to *is my ideal*. Based on this assessment, we see in Figure 7 that the greatest discrepancy is in the **reward system**. There is a wide gap between what child care workers are paid versus what they think they should be paid. Given their current low salaries, this is an accurate appraisal on their part. The autonomy of staff to **make decisions** or express their opinions on important issues is another area where child care staff feel that their work environments least resemble their ideal.

The smallest gap between the ideal environment and the real one experienced by child care workers is in the areas of **collegiality** and **supervisor support**. As far as **opportunities for professional growth**, the discrepancy between the ideal and the real falls mid-range on the continuum.

*Mean value for center staff on a scale of 1=not like my ideal to 5=like my ideal when asked "If you could design the ideal job, how close would your present position resemble your ideal work environment with respect to the following?"

5.3.4 The Importance of Educational Goals and Objectives

Early childhood programs can have a number of educational goals and objectives--but the priority given to each can vary across programs. Figure 8 shows how these educational goals and objectives are ranked in Pennsylvania child care centers. Consistent with developmentally appropriate practice in the early childhood field, the greatest emphasis is placed on **helping children to develop positive self concepts and self esteem** while the least emphasis is placed on helping children develop concepts needed for reading and math.

Figure 8: Importance of Organizational Goals*

*Mean value of importance on a scale of 1=most important and 6=least important

5.3.5 Degree of Influence of Teaching Staff Regarding Organizational Decisions

The perceptions of workers regarding the degree of influence of the teaching staff with respect to the various organizational decisions provides a fuller understanding of the decision making dimension of organizational climate. Staff were asked how much influence they have (very little to considerable influence) in ordering materials and supplies, interviewing and hiring staff, determining program objectives, training new aides or teachers, and planning daily activities. In Figure 9 we see the difference between what directors perceive is the degree of influence versus what teachers perceive is their degree of influence. Not unexpectedly, teachers do not perceive that they have as much influence as what directors say they do. This discrepancy also points to an area where improvement efforts can be focused.

Figure 9: Degree of Influence of the Teaching Staff Regarding Various Organizational Decisions*

*Mean value on a scale of 0=very little influence to 10=considerable influence when asked. "How much influence does teaching staff currently have in each of the following areas below:

- ordering materials/supplies
- interviewing/hiring new staff
- determining program objectives
- training new aides/teachers
- planning daily schedule of activities."

Figure 10: Overall Commitment*

*Mean value on a scale of 1=not committed to 10=highly committed

5.3.6 Overall Commitment

All of the characteristics that have been discussed provide an understanding of specific areas where attention can be paid in intervention efforts to improve child care work environments. The commitment scale provides a summary of the overall commitment of child care staff to their centers. Individuals who feel deeply committed to their jobs tend to put extra effort into their work and take pride in their centers. In such environments, turnover is generally lower. Commitment among Pennsylvania child care staff is relatively high. In Figure 10 we see that directors have a slightly higher level than teachers--8.6 for directors compared to 7.5 for teaching staff. Together this gives us an overall value of 7.6 for child care centers.

5.4 Quality of Care

5.4.1 Quality of Care as Assessed through the Environment Rating Scales

Section 5.2.2 discusses the results from our observations of child care sites and the scale values for each individual item on the FDCRS, ITERS, and ECERS. That discussion focuses on these data as a means to assess training needs. Our focus now shifts to the question about overall quality of training and its changes over the years. In this section we report the 1996 results on the ITERS, ECERS, and FDCRS (see Figure 12) and compare them to the ECERS and FDCRS results obtained in Pennsylvania in 1989 (Fiene and Melnick 1991) and in 1984 (Kontos and Fiene 1987).

Comparatively, in 1996, the ECERS average score is 4.63 while in 1989 it is 4.27. The average score in 1984 is 3.78. This shows improvement over the years. Although there is not a statistically significant improvement in the overall ECERS scores from 1989 to 1996, when we examine the individual subscales, there are some areas that improved significantly (see Figure 11). On individual subscales these three areas show significant improvement: **social development, adult needs, and fine/gross motor**. The specific subscale values for both 1996 and 1989 are:

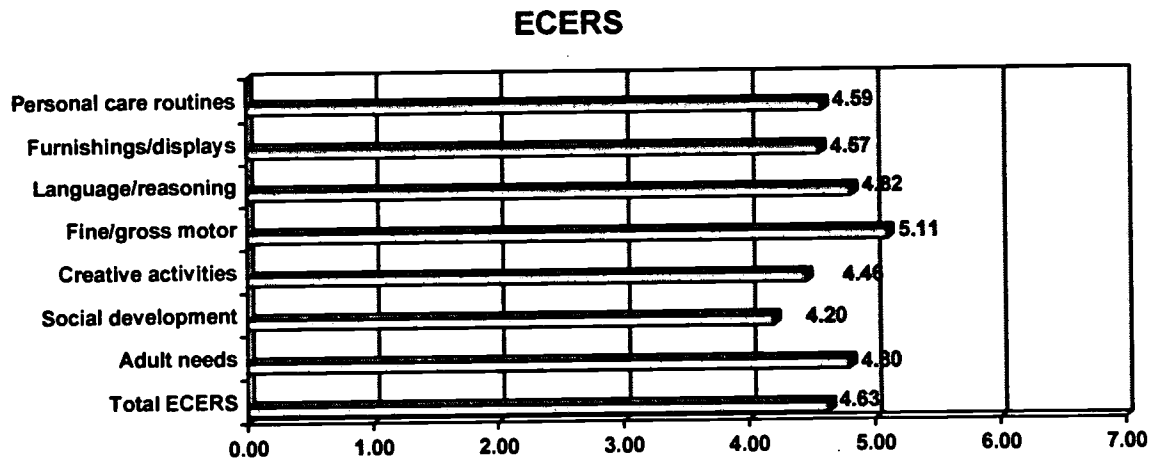

Subscales	ECERS Scores		Significance
	1989	1996	
Social development	3.46	4.20	$p \leq .05$
Creative activities	4.54	4.46	ns
Furnishings/display	4.23	4.57	ns
Personal care routines	4.54	4.59	ns
Adult needs	4.36	4.80	$p \leq .05$
Language/reasoning	4.43	4.82	ns
Fine/gross motor	4.54	5.11	$p \leq .05$
Total ECERS	4.27	4.63	ns

Figure 11: Early Childhood Environment Rating Scale*

*Mean scores on a scale 1=low and 7=high

Figure 12: Environmental Scales for 1996*

*Mean scores on a scale 1=low and 7=high

An analysis of the FDCRS scores shows a marked improvement from 1989 (see Figure 13). Comparing the 1996 data with that from the 1989 study, we see higher mean scores for each of the subscales in the FDCRS:

Subscales	FDCRS Scores		Significance
	1989	1996	
Space and furnishings	3.50	4.10	p < .05
Learning activities	3.71	4.12	p < .05
Language and reasoning	4.06	4.54	p < .05
Social development	3.81	4.72	p < .01
Basic care	3.65	4.84	p < .01
Adult needs	4.35	5.17	p < .05
Total FDCRS	3.80	4.47	p < .05

*Mean scores on a scale of 1=low and 7=high

There are several observations that can be made in comparing the 1996 with the 1989 and the 1984 data sets. Overall, program quality scores on the ECERS and FDCRS have improved over the 12-year time frame. The bad news is that the quality scores, on the average, are still at the mediocre level on the ECERS and FDCRS. The ITERS is even worse and is a major concern. There are no comparable data for the ITERS from the 1989 or 1984 research studies. Overall, Pennsylvania child care has improved, but it is still not in the good or excellent range. National and international data from research studies are very similar with ranges from 3.70 for family child care homes with little training to 5.22 for child care centers that are accredited (Phillips 1987).

What are some reasons for the improvements? Two major interventions occurred during this 12-year time period. Both of them occurred at approximately around the same time so it is difficult to determine the contribution of each to the overall improvement in quality. In

1992 new child care regulations were promulgated; as well, the new comprehensive PA CC/ECD Training System was implemented. The new regulations were an improvement over the existing set of regulations, but the regulations deal with basic health and safety issues and although this will contribute to overall quality, it will not be a major contributor (Fiene and Melnick 1991). What has been and continues to be a major contributor is the training system that has been implemented. When data are compared from the ECERS and FDCRS, the family child care homes improved significantly more than the child care centers. The home-based training system has been in place for twice as long as the center-based system. This is a very encouraging result.

5.4.2 Factors Associated with the Quality of Child Care

The analysis in section 5.4.1 presents an overall picture of the quality of child care in Pennsylvania and the progress made in improving quality. The analysis presented in this section examines the current data to determine what factors are significantly related to the quality of care.¹⁶ This analysis will be presented separately for each of the three environment rating scales.¹⁷

Table 9 provides a summary of the results of a series of bivariate correlations between the measure of quality (i.e., either the FDCRS, ITERS, or ECERS average score) and a set of factors hypothesized to be related to quality (e.g., caregiver background characteristics, training experience, and assessment of organizational climate; for family providers, in lieu of organizational climate, an indicator of their *connectedness* to a child care network is used).

The bivariate analysis of the FDCRS finds four factors that are significantly correlated with the quality of family child care. Family caregivers that are younger and have higher long-term educational goals are more likely to provide a higher quality of care. The other factors are measures of a family provider's assessment of the current training system. Providers who evaluate the current system of training as **inappropriate to their skill level and not useful for their work** as a family caregiver are more likely to provide a higher quality of care. This is not as unexpected as it sounds. It is likely that those providers who are already providing quality care do not find as much benefit from the current training system that focuses most of its attention on entry level skills. In an attempt to further analyze this unusual finding, we examined the relationship between hours of training and the evaluation of training by providers. We see that providers who

¹⁶ Part of this analysis will be based on a data set that has matched the environment rating scales with the child care providers that were observed. This data set establishes the most direct link between an indicator of quality and the set of factors that might be associated with it (e.g., the background characteristics of the caregiver, the level of training of the caregiver, and the caregiver's assessment of organizational climate). Other parts of this analysis will be based on a site level data set where aggregate values for most of the variables have been created to represent the site, overall.

¹⁷ Where necessary, data have been weighted to adjust for the different probabilities of sample selection (i.e., the FDCRS included both family and group homes while the ECERS included both centers and group homes, necessitating that these analyses be based on weighted data).

have more hours of training are also more likely to rate the current system positively in terms of goal achievement, appropriate skill level, and usefulness.¹⁸

† This is the weighted N since there were observations made in more than one type of child care (i.e., family, group, or center).

†† N.A.= Not applicable

* p ≤ .05 ** p ≤ .

¹⁸ The correlation coefficients are: training hours/year and goal achievement (B = -.24, p ≤ .07); appropriate skill level (B = -.28, p ≤ .03); and usefulness (B = -.45, p ≤ .000). These coefficients are negative since a lower value on each of the evaluative factors indicates a more positive assessment.

Our bivariate analysis of the ITERS finds only **salary level** of the caregiver to be significantly related to the quality of infant/toddler care. Caregivers with higher salaries provide higher quality infant/toddler care. The bivariate analysis of the ECERS reveals a number of factors that are significantly correlated with the quality of child care: salary and the organizational climate factors of **professional growth, clarity, reward system, goal consensus, and task orientation**. Thus, the caregivers that provide high quality early childhood care are more likely to:

- have higher salaries;
- indicate that their center has opportunities for professional growth;
- feel that communication at their center is good and that work schedules, job descriptions, and rules are clear and well-defined;
- indicate that the pay and fringe benefits are fair and equitably distributed in their center;
- indicate that staff at their center agree on school philosophy, are united in their approach, and are committed to program goals and objectives;
- believe that they work hard but still have time to relax, that program procedures are efficient, and that meetings are productive.

In an analysis of the site level data set, we created an overall *quality of care* variable as an indicator of child care quality.¹⁹ In a multivariate analysis of these data, we then determined what site level factors significantly contribute to the variance in *quality of care* at the site level. Initially, we did not include any of the work environment variables (Bloom items) since that would result in excluding all home-based providers from the analysis. Our analysis reveals that **size** and **turnover** are significant factors and they explain 19 percent of the variance in quality of care.²⁰ Thus, the sites with more classrooms and lower turnover have higher quality of care.

When we add the Bloom items on organizational climate (thereby eliminating all home-based providers from the analysis), we find that only **opportunities for professional growth** independently contributes to the variation of quality of care at child care sites (the majority of which are centers). Forty (40) percent of the variation is explained by this factor.²¹ As we hypothesize, child care facilities that have more opportunities for professional growth have a higher overall quality of care.

¹⁹ If there were two classrooms observed, the new overall *quality* measure was an average of the two scores (regardless of the type of classroom observed). If only one classroom was observed, then that score became of the site's overall *quality* score.

²⁰ The results from the regression analysis are: **class number** (B = .11, p < .0053) and **turnover** (B = -1.08, p < .0216).

²¹ The results from the regression analysis are: **professional growth** (B = .45, p < .0000).

6.0 CONCLUSIONS AND POLICY IMPLICATIONS

What can we conclude as a result of this research and what are the implications for public policy? There are numerous issues addressed and volumes of data analyzed. First we can examine the overall conclusions with regard to the current training system—how it is evaluated and what the training needs are.

Overall, the training system is viewed positively by the provider groups, as evidenced by their response to questions about appropriateness, usefulness, applicability, and effectiveness in achieving learning objectives. Furthermore, providers express a high level of interest in the training and, for the most part, feel that additional training will help them in their work. When directors of centers and home-based providers are asked about the particular methods of training that they perceive to be most helpful to them and their staff, the training methods that provide direct contact with a trainer (e.g., on-site training and workshops) are viewed most helpful. The methods where the contact is indirect (e.g., video and satellite training) are viewed as least helpful. This is understandable, although the policy implications of this are not to abandon some of the more indirect, yet very cost effective methods of training like the learn-at-home videos and satellite training. A balance of methods is important in a system as massive as this one, where the ability to access training varies tremendously across providers and where resources are limited.

Regarding training needs, there is a high degree of consistency across provider groups in terms of the areas they perceive as most critical. They identify supervision/discipline of children, social development (dealing with conflict), child development, and developmentally appropriate practice as areas with the highest priority. Although, the providers do not identify any topic area as *not a priority* for training.

On the other hand, if we use the environment rating scales as an indicator where there are weaknesses in child care settings (hence, an area in need of training), we see a slightly different picture. Given the overall low score for the infant/toddler area (ITERS), any training in this area can be viewed as a priority. In addition, these items are consistently ranked low on all three environment rating scales: cultural awareness, personal grooming, dramatic (pretend) play, and sand and water play; furthermore, these areas are rated low in two out of the three environment rating scales: displays for children (FDCRS and ITERS), space alone (FDCRS and ECERS), helping infants/toddlers understand language (FDCRS and ITERS), art (ITERS and ECERS), and blocks (FDCRS and ITERS). Indeed, a number of these items from the environment rating scales fall under the broader categories of social development, child development, and developmentally appropriate practice. The information from the environment rating scales offers more specific areas of need.

The one interesting finding is the contradictory information related to the area of supervision/discipline of children. While providers identify this as a high priority area for training, the environment rating scales indicate an assessment in the *good* range for the discipline item. Again, this shows that providers are performing better in this area than

they think and it reveals the extent to which this is viewed as one of the most challenging areas in child care.

Turning now to the issue of quality of care and the factors that are associated with it, we find that our results that examine the relationship between the level of training at a site and quality of care are not as predicted. We do not find that the number of hours of training is a significant predictor of quality. What we do see, however, is that the most significant change in the quality of care since 1989 has occurred in family child care sites. Although we are unable to definitively conclude that the training system has been instrumental in improving quality of care in family homes, we do note that the home-based training system has been in existence the longest—for 12 years. Furthermore, the intervention effort (i.e., the hours of training per year that staff at a site average), is still considerably low—on the average it is 8.5 hours, with 98 percent of the sample sites having fewer than 18 hours per year, on the average. A threshold for training to show some impact is around 18 hours according to other research (Howes, Smith & Galinsky 1995). Given this, it is not unexpected that we do not find a significant relationship between number of hours of training and quality of care—there simply is not enough intervention (i.e., training hours) to determine impact.²² What does this mean for public policy? A policy implication of this concerns the number of hours of training that are mandated in the state regulations for child care. It points to the need to increase the number of hours of training for child care providers if a significant impact of the training is to be detected.

This is further supported when we see the strong association between the organizational climate dimension of opportunities for professional growth and overall quality of care at the site level. Centers where staff report more opportunities for professional growth have a higher quality of care and this factor, alone, explains a considerable portion of the variation in quality (40 percent). This finding substantiates the importance of fostering professional growth opportunities for child care providers. But it also implies the importance of making sure that these opportunities are linked to a model of career development and progression—not just a few hours of training that providers haphazardly take because they have to or because they are offered at a time that fits their schedule.

Overall, these data have given us some solid evidence to guide the development of the training system in Pennsylvania. We have highlighted some very specific areas where there is a need for training and we have shown the clear association between opportunities for professional growth and the quality of care. Although there are some anomalies in the data and some unexpected findings, as a whole, these data are supportive of the efforts to implement a training system, one that fosters career development, in the prediction that these efforts will improve the quality of care for children in Pennsylvania.

²² There may also be measurement problems related to the *quantity of training* variable. Issues related to recall on the part of the provider and definitions of what constitutes training may vary—both of which can affect the reliability and validity of the reported hours of training.

Research Instruments and Data Summary

**Directors
Child Care Centers**

N = 60 [Percentages are reported except where means (M), standard deviations (S.D.), minimum (MIN), and maximum (MAX) values are specified.]

Directors Child Care Centers

As you are probably aware, the Commonwealth of Pennsylvania now requires child care workers and supervisors to receive a minimum of six hours of training each year. The Commonwealth is supporting much of this education and is trying to make the process as easy as possible. It is offering many types of training, with a wide range of locations and methods.

To help improve workshops and courses we are requesting your input on training programs and needs. This questionnaire will help guide training for child care workers throughout Pennsylvania. Your help is very much appreciated.

Your comments are confidential and anonymous. Do *not* put your name on this document. Return it to the visiting fieldworker, or send it to us at The Social Research Corp., P.O. Box 2328, Jenkintown, PA 19046.

First, we have some background information that we ask all participants:

1. Sex: 1.7 Male 98.3 Female

M = 41.6 MIN = 23

2. Age: _____ Years *S.D. = 12.05 MAX = 78*

3. What is the highest educational level you have completed?

- | | |
|---|---------------------------------------|
| a. <u>3.3</u> High School or GED Equivalent | e. <u>30.0</u> Some graduate work |
| b. <u>1.7</u> Some college | f. <u>13.3</u> Masters degree (MA/MS) |
| c. <u>13.3</u> Associate degree (AA) | g. <u>3.3</u> Post master's work |
| d. <u>33.3</u> Bachelor's degree | h. <u>1.7</u> Doctorate (Ed.D/Ph.D.) |

4. How long have you worked in the field of early childhood?

M = 13.68 MIN = 1.92

_____ Years _____ Months *S.D. = 7.8 MAX = 37.0*

5. How long have you worked for your present employer? (Or operated this facility?)

M = 8.56 MIN = .25

_____ Years _____ Months *S.D. = 6.39 MAX = 22.58*

6. Indicate the category that most nearly describes your present employment?

- a. 93.3 Employed full-time (more than 35 hours per week)
- b. 6.7 Employed part-time (20 to 35 hours per week)
- c. 0.0 Employed part-time (10 to 19 hours per week)

7. How many months of the year are you employed in your position?

- a. 95.0 Year around (12 months)
- b. 5.0 School year only (9 or 10 months)
- c. - Less than 9 months

8. Which of the following salary ranges is nearest to the total income you can expect from your job this year?

- | | | | |
|----------------------------|------------------------------|--------------------------------|---|
| a. <u>1.8</u> under \$5000 | d. <u>3.6</u> 11,000-13,999 | g. <u>14.3</u> 20,000-22,999 | <i>Average approximately
\$19,900</i> |
| b. <u>5.4</u> 5,000-8,999 | e. <u>8.9</u> 14,000-16,999 | h. <u>23.2</u> 23,000-25,999 | |
| c. <u>3.6</u> 9,000-10,999 | f. <u>16.1</u> 17,000-19,999 | i. <u>5.4</u> 26,000-29,999 | |
| | | j. <u>17.9</u> 30,000 and over | |

9. Your long term educational goals:

- a. - GED/high school diploma
- b. 1.8 Non-credit adult education
- c. - Early Childhood Certification/Diploma
- d. 1.8 Associate Degree (AA)
- e. 5.4 College Degree: Please specify _____
- f. 57.1 Graduate Degree: Please specify _____
- g. 33.9 No long term goals at this time

10. Are you seeking Child Development Associate (CDA) certificate?

1.8 Yes 85.5 No 12.7 I already have one.

11. Training in past three Years: Number of hours of early childhood training you have completed in the past three years _____

*M = 43.11 MIN = 0
S.D. = 58.5 MAX = 400*

12. Your annual training or education goal:

- a. 40.7 Complete six (6) hours of training per year to meet state minimum requirements
- b. 27.1 Complete twelve (12) hours of training per year
- c. 32.2 Complete more than twelve (12) hours of training per year

13. Age of the children in your facility: (check all that apply)

- | | |
|---------------------------------------|-----------------------------------|
| a. <u>55.0</u> Birth to 12 months | e. <u>63.3</u> 6 years to 8 years |
| b. <u>71.7</u> 13 months to 24 months | f. <u>48.3</u> 9 years and over |
| c. <u>83.3</u> 25 months to 36 months | |
| d. <u>96.7</u> 3 years to 5 years | |

Do you have special needs children in your care?

61.7 Yes 38.3 No

14. Type of child care facility:

- a. Family Home
- b. Group Home
- c. 96.6 Center (other than school-age)
- d. 1.7 School Age Center (only)
- e. Minimally Certified Home
- f. 1.7 Other: _____

15. Your Racial/Ethnic background:

- a. 88.1 Caucasian/White
- b. 8.5 African American/Black
- c. Hispanic/Latino
- d. 1.7 Asian
- e. 1.7 Native American
- f. Other: _____

16. Parental Status: Have you been /are you now a parent: 72.9 Yes 27.1 No

M = 76.23 MIN = 15

17. What is the licensed capacity of this facility? _____ # Children *S.D. = 49.55 MAX = 282*

M = 4.95 MIN = 1

18. Total number of classrooms in this facility? *S.D. = 2.77 MAX = 15*

M = 68.73 MIN = 12

19. Total number of children enrolled at this facility? *S.D. = 66.2 MAX = 410*

20. Has the licensed capacity of this facility changed in the past year? 13.8 Yes 86.2 No

M = 10.93 MIN = 2

21. Total number of paid staff who work with children: _____ *S.D. = 9.27 MAX = 65*

22. Total number of staff that are new this year (that is, this calendar year):

M = 2.4 MIN = 0

S.D. = 2.17 MAX = 10

23. Is there an assistant director? 37.3 Yes 62.7 No

24. Is this facility accredited? 26.3 Yes 66.7 No 7.0 Not sure

24A. If Yes, (accredited): What is the accrediting agency? (N = 14)

Accredited by NAEYC *N = 8*

Accredited by NECPA *N = 1*

Accredited by NAFDC _____

The next seven questions are for those who have taken any training in the past four years. If you have not personally taken any training/workshops in the past four years, please skip to question number 31.

25. To what extent were the workshops or training sessions that you attended appropriate to your skill/knowledge level? (if you have taken more than one workshop or training session, please give your overall impression.)

- a. 44.6 Very appropriate (Targeted to my level of experience/knowledge)
- b. 46.4 Somewhat appropriate (Sort of targeted to my level)
- c. 7.1 Not very appropriate (Not really targeted to my level)
- d. 1.8 Not appropriate (Not targeted to my level)
- e. - Don't know

26. To what extent was the training goal achieved? (Again, if you have taken more than one workshop or training session, please give your overall impression)

- a. 67.9 Achieved (I learned the material)
- b. 30.4 Somewhat achieved (I learned some of the material)
- c. 1.8 Not achieved (I learned little of the material)
- d. - Don't know

27. In general, how useful was the training for your work in this facility?

- a. 39.3 Workshops or training very helpful
- b. 48.2 Workshops or training somewhat helpful
- c. 12.5 Workshops or training a little helpful
- d. - Workshops or training not helpful
- e. - Don't know

28. How much of the information you learned in workshops or training sessions do you apply in your current work?

- a. 12.5 Could apply all the information I learned
- b. 55.4 Could apply a lot of the information I learned
- c. 25.0 Could apply some of the information I learned
- d. 7.1 Could apply a little of the information I learned
- e. - Could apply very little of the information I learned

[For those who can *not* apply what they learned:]

28A. Why do you think you do not apply what you learned in workshops or courses? _____

29. How much do you think your attending more workshops or training would help in your work as a director?

a. 61.4 Very much b. 31.6 Somewhat c. 7.0 Very little d. - Not needed at all

30. Have you received any specialized training as a director? 63.0 Yes 37.0 No - Not sure

Changing focus now from your personal training experience to your staff's use of training:

31. Do you think more workshops or training would help your staff in their work as child care givers/teachers?

a. 65.0 Very much b. 33.3 Somewhat c. 1.7 Very little d. - Not needed at all

32. Based on your experience, what method(s) of training is (are) most helpful for your staff:

	Very Helpful (1)	Somewhat Helpful (2)	Not Helpful (3)	Don't know/Not used	Mean(for those who used method)
Workshop	72.9	25.4	0.0	1.7	1.26
Satellite	1.9	26.4	17.0	54.7	2.33
Video	20.0	54.5	12.7	12.7	1.92
On-site training	78.9	17.5	1.8	1.8	1.21
Conference	41.8	36.4	5.5	16.4	1.57
Mentoring	41.5	20.8	1.9	35.8	1.38

33. How are decisions made about staff training?
(Please indicate the most frequently used method)

- a. 12.1 I select the training/workshops
- b. 46.6 I guide the selection but the staff make the final decision
- c. 41.4 The staff selects training but I am informed of their decision
- d. - The staff selects training and I am not informed of decision

34. Is there a staff development plan for your child care staff? 48.2 Yes 51.8 No

35. What percentage of your child care staff have personal plans for career development in early child care and education? (Please indicate percentage from 0 [no such plans] to 100% [all staff have such plans]) _____% *M = 51.94 MIN = 0*
S.D. = 30.73 MAX = 100

36. Do staff receive any compensation for attending relevant training? (Please check *all* that apply):

- a. 55.9 Paid while in training
- b. 20.0 Receive compensatory time
- c. 35.6 Reimbursed for expenses
- d. 28.6 No Compensation

37. How important are the following factors in selecting training for staff:

	Very Important Factor (1)	Somewhat Important Factor (2)	Not Important Factor (3)	Mean
The scheduled times for training	86.7	13.3	0.0	1.13
Session length	57.6	33.9	8.5	1.50
Need to meet state requirements of 6 hours	79.7	16.9	3.4	1.23
Quality of previous training	62.5	33.9	3.6	1.41
Cost of training	61.0	25.4	13.6	1.53
Location/Convenience	81.4	18.6	0.0	1.19
Interest in topics/content	89.8	10.2	0.0	1.10
Opportunities for networking	36.8	50.9	12.3	1.75
The training organization (the organization providing training)	36.4	50.9	12.7	1.76
The trainer	56.9	37.9	5.2	1.48
Offers practical solutions for work	81.0	19.0	0.0	1.19
Helps understand children	88.3	11.7	0.0	1.11
Fosters professional development	89.7	10.3	0.0	1.10

38. Several factors may limit staff attending training or workshops. How important is each of the following:

	Very Important Factor (1)	Somewhat Important Factor (2)	Not Important Factor (3)	Mean
Lack of child care for children of child care staff	27.6	27.6	44.8	2.17
No long term financial gain or rewards	32.2	44.1	23.7	1.92
No one to watch children (clients) during our child care hours (no substitutes)	48.3	40.0	11.7	1.63

39. In general, how interested are your staff in taking workshops or courses on care and education of children?

- a. 41.7 Very interested
- b. 40.0 Interested
- c. 16.7 Somewhat interested
- d. 1.7 Not interested

40. Here is a list of suggested topics for training. Next to each listed topic please indicate what you think is the need for training of child care workers. Please base your assessment on the need for training of child care workers -- not just the importance of a topic alone. That is, a topic may be very important but may not require additional training.

Additional Training Needed:

	A very serious need (1)	Important but not critical (2)	More would be helpful (3)	Not a priority (4)	Mean
Child care business/management of program/staff	29.8	38.6	14.0	17.5	2.2
Child care program development	50.0	28.6	16.1	5.4	1.8
Child development	57.6	25.4	13.6	3.4	1.6
Child/staff health	35.1	35.1	19.3	10.5	2.1
Developmentally appropriate practice	78.3	8.3	5.0	8.3	1.4
Emergent literacy, children's literature or literacy-based socio-dramatic play	43.1	36.2	13.8	6.9	1.8
Emergent numeracy, science for young children	42.6	44.4	9.3	3.7	1.7
Fostering social development (e.g., dealing with conflict)	71.4	20.4	6.1	2.0	1.4
Inclusive/special needs education issues	44.8	39.7	12.1	3.4	1.7
Infant/Toddler child development/programming	49.1	29.8	5.3	15.8	1.9
Multicultural, gender sensitivity in programming for young children	37.9	39.7	13.8	8.6	1.9
Music, dance, movement for young children	28.1	47.4	22.8	1.8	2.0
Nutrition	20.3	45.8	20.3	13.6	2.3
Personal care routines (naptime, toileting, grooming)	21.4	33.9	21.4	23.2	2.5

Additional Training Needed:

	A very serious need (1)	Important but not critical (2)	More would be helpful (3)	Not a priority (4)	Mean
Play	38.3	33.3	21.7	6.7	2.0
Supervision, motivation discipline/guidance of children	78.3	15.0	6.7	0.0	1.3
Working with parents/community services	44.1	40.7	13.6	1.7	1.7
Statewide conference on multiple topics	19.0	37.9	19.0	24.1	2.5
Regional conference on multiple topics	18.6	39.0	25.4	16.9	2.4
Mentoring, multiple topics	26.3	43.9	15.8	14.0	2.2
Other (specify)					

41. Which of the above topics (or a different one) is most in need of training? (Top 2)

Supervision/motivation (34); developmentally appropriate practices (22.6)

42. Does your child care facility have a "statement of purpose," "mission statement" or philosophy? 98.2 Yes 1.8 No

The following questions are about work attitudes:

B1. Check all that describe how you feel about your child care facility:

SUMMARY OF OVERALL COMMITMENT

a. 68.5 I intend to work here at least two more years

b. 7.4 I often think of quitting

c. 0.0 I'm just putting in time

d. 98.1 I take pride in my child care facility

e. 92.6 I put a lot of extra effort into my work

f. 94.4 I feel very committed to this center

g. 0.0 I don't care what happens to this place after I leave

h. 27.8 It would be difficult for me to find another job as good as this one

i. 0.0 It's hard to feel committed to this place

j. 2.3 I sometimes feel trapped in this job

Mean scaled score = 8.65

S.D. = 1.07

MIN = 5

MAX = 10

B2.If you could design the ideal job, how close would your present position resemble your ideal work environment with respect to the following? (circle 1-5)

HOW ENVIRONMENT RESEMBLES IDEAL

	Not like my ideal	Somewhat like my ideal			Is my ideal	Mean
Relationship with your co-workers	1 (3.8)	2 (7.5)	3(17.0)	4(35.8)	5(35.8)	3.93
Opportunities to learn and grow	1 (3.9)	2 (9.8)	3(19.6)	4(35.3)	5(31.4)	3.80
Relationship with your supervisor	1 (2.2)	2(11.1)	3(11.1)	4(26.7)	5(48.9)	4.09
Clarity in roles and responsibilities	1 (3.9)	2 (7.8)	3(13.7)	4(52.9)	5(21.6)	3.80
Fairness of pay and promotion opportunities	1(23.5)	2(17.6)	3(23.5)	4(17.6)	5(17.6)	2.88
Decision-making structure of the facility	1 (2.0)	2 (6.1)	3(26.5)	4(42.9)	5(22.4)	3.78
Agreement among staff on goals and objectives	1 (0.0)	2(12.2)	3(22.4)	4(44.9)	5(20.4)	3.74
Task orientation, program efficiency	1 (0.0)	2 (2.0)	3(30.6)	4(53.1)	5(14.3)	3.80
Equipment, materials, and the physical setting	1(10.0)	2 (8.0)	3(28.0)	4(34.0)	5(20.0)	3.46
Innovativeness and creative problem solving	1 (0.0)	2 (6.3)	3(31.3)	4(37.5)	5(25.0)	3.81

B3. Different people want and expect different things from their work. Check three aspects of your work that are most important to you. (Percent indicating aspect is important)

IMPORTANCE OF ORGANIZATIONAL DIMENSIONS

- a.57.4 collegiality and co-worker relations
- b.27.8 opportunities for professional growth
- c.18.5 support and feedback from supervisor
- d.16.7 clarity in policies and procedures
- e.37.0 fairness in pay and, benefits, and promotions
- f.31.5 involvement in decision making
- g.31.5 consensus on program goals and objectives
- h.31.5 accomplishing work in an efficient manner
- i.25.9 physical setting and sufficient materials
- j.31.5 innovativeness and creative expression

The following questions are about organizational climate. Please answer the questions in this section with respect to the overall conditions in your child care facility as they are most of the time.

B4. Check *all* that describe the overall staff relations in your child care facility most of the time:

COLLEGIALITY

Mean scaled score = 8.0

S.D. = 1.71

MIN = 2

MAX = 10

- a. 94.4 cooperative and friendly
- b. 16.7 competitive
- c. 14.8 people are reluctant to express their feelings
- d. 83.3 teachers are very helpful to new staff
- e. 72.2 good team spirit
- f. 55.6 staff are generally frank and candid
- g. 5.6 morale is low
- h. 61.1 people socialize outside of work
- i. 3.7 people feel isolated
- j. 25.9 people complain a lot

B5. Check all that apply. Does your child care facility...

PROFESSIONAL GROWTH

Mean scaled score = 5.37

S.D. = 2.13

MIN = 0

MAX = 9

- a. 61.1 provide on-site staff development workshops?
- b. 94.4 encourage staff to share resources with each other?
- c. 57.4 provide released time to attend conferences?
- d. 27.8 provide released time to visit other schools?
- e. 31.5 provide tuition reimbursement to take college courses?
- f. 37.0 provide guidance for professional advancement?
- g. 77.8 have a library of professional books for staff to use?
- h. 70.4 subscribe to several educational journals and magazines?
- i. 18.5 implement a career ladder for professional advancement?
- j. 79.6 encourage staff to learn new skills and competencies?

B6. Check all that characterize the supervision given in your facility most of the time:

SUPERVISOR SUPPORT

Mean scaled score = 7.91

S.D. = 1.87

MIN = 1

MAX = 10

- a. 83.0 provides support and helpful feedback regularly
- b. 5.7 hard to please
- c. 0.0 incompetent
- d. 69.8 conducts fair evaluations of staff
- e. 1.9 too critical
- f. 67.9 sets high but realistic standards
- g. 3.8 delegates too much
- h. 81.1 compliments and praises staff
- i. 0.0 talks down to staff
- j. 54.7 very knowledgeable

B7. Check all that apply. Does your child care facility.....

- a. 96.3 distribute a parents' handbook detailing policies and procedures?
- b. 74.1 have a staff manual outlining staff policies?
- c. 37.0 provide written contracts for employees?
- d. 79.6 have written job descriptions for each position?
- e. 66.7 distribute a monthly newsletter to parents?

CLARITY
Mean scaled score = 6.94
S.D. = 2.05

B8. Check all that characterize your child care facility most of the time:

- a. 74.1 written communication is clear
- b. 51.9 there are seldom conflicting demands made on staff
- c. 66.7 policies and procedures are well-defined
- d. 74.1 rules are consistent
- e. 74.1 staff are well-informed

MIN = 1
MAX = 10

B9. Check all that describe the pay and promotion system at your child care facility:

- a. 72.2 salaries are fair considering the child care facility's income
- b. 1.9 promotions are not handled fairly
- c. 57.4 fringe benefits are equitably distributed
- d. 5.6 some people are paid more than they are worth
- e. 0.0 raises are based on favoritism
- f. 66.7 pay is fair compared to what other child care facilities pay
- g. 1.9 this place is a revolving door, no job security
- h. 3.7 people are taken advantage of
- i. 16.7 chances for promotion are good

REWARD SYSTEM
Mean scaled score = 6.0*

S.D. = 1.27
MIN = 2
MAX = 8

*7.5 when prorated
to scale of 10

B10. Check all that describe how decisions are made at your facility most of the time:

- a. 75.9 people are encouraged to be self-sufficient in making decisions
- b. 13.0 the director likes to make most of the decisions
- c. 1.9 people don't feel free to express their opinions
- d. 59.3 everyone provides input on the content of staff meeting
- e. 0.0 conformity is the name of the game here
- f. 20.4 there are scheduled staff meetings at least twice a month
- g. 1.9 people provide input but decisions have already been made
- h. 77.8 teachers make decisions about things that directly affect them
- i. 3.7 teachers are seldom asked their opinion on issues
- j. 88.9 the director values everyone's input in major decisions

DECISION MAKING
Mean scaled score = 8.02
S.D. = 1.28
MIN = 5
MAX = 10

B11. Listed below are some common organizational decisions and actions. How much influence does the teaching staff currently have in each of the areas below:

DEGREE OF TEACHER INFLUENCE

	Very little influence	Some influence	Considerable influence
Ordering materials/supplies	0 (7.4)	1 (25.9)	2 (66.7)
Interviewing/hiring new staff	0 (49.1)	1 (39.6)	2 (11.6)
Determining program objectives	0 (15.1)	1 (54.7)	2 (30.2)
Training new aides/teachers	0 (7.5)	1 (37.7)	2 (54.7)
Planning daily schedule of activities	0 (3.8)	1 (11.3)	2 (84.9)

Mean scaled score = 6.56 S.D. = 2.14 MIN = 0 MAX = 10.00

B12. Check all that apply with respect to the goals of your program:

GOAL CONSENSUS

Mean scaled score - 7.91

S.D. = 1.65

MIN = 3

MAX = 10

- a. 3.7 goals are left vague
- b. 50.0 everyone agrees on program goals
- c. 64.8 people know how to compromise
- d. 3.7 child care facility does not have a written philosophy
- e. 75.9 staff share a common vision of what the child care facility should be like
- f. 7.4 the staff seldom talk about educational objectives
- g. 61.1 staff are committed to program goals
- h. 3.7 staff are not unified in their philosophy
- i. 1.9 people disagree on what should be taught to children
- j. 52.3 program has well-defined educational objectives

B13. Check all that describe the way things get done at your facility most of the time:

TASK ORIENTATION

Mean scaled score = 7.78

S.D. = 1.59

MIN = 3

MAX = 10

- a. 0.0 meetings are a waste of time
- b. 48.1 this place is run very efficiently
- c. 88.9 people get the job done
- d. 3.7 time is wasted
- e. 7.4 deadlines are missed regularly
- f. 14.8 things rarely get put off
- g. 94.4 employees work hard
- h. 18.5 people come to work late
- i. 14.8 people procrastinate often
- j. 75.9 meetings are productive

B14. Check all that apply to the physical environment of your facility:

- a. 85.2 efficient use of space
- b. 1.9 cramped and crowded conditions
- c. 16.7 seems either too hot or too cold
- e. 81.5 neat, tidy, and safe
- f. 1.9 decorations are drab
- g. 61.1 teachers have a place to store personal belongings
- h. 16.7 classroom noise disrupts office business
- i. 92.6 there are sufficient supplies and materials
- j. 13.0 the building needs major repairs
- k. 51.9 storage space is well-organized

PHYSICAL SETTING
Mean scaled score = 8.22
S.D. = 1.61
MIN = 3
MAX = 10

B15. Check all that describe your organization as a whole:

- a. 75.9 emphasizes creativity
- b. 0.0 not very innovative
- c. 25.9 quite traditional
- d. 57.4 implements needed changes
- e. 66.7 encourages diverse opinions
- f. 57.4 regularly looks at new educational approaches
- g. 20.4 things stay pretty much the same
- h. 77.8 new ideas tried out
- i. 0.0 people avoid taking risks at all costs
- j. 3.8 problems are not addressed

INNOVATIVENESS
Mean scaled score = 7.78
S.D. = 1.80
MIN = 3
MAX = 10

B16. Rank order the following program objectives according to their importance at your child care facility during the next year. Put a "1" by the most important, a "2" by the next most important and so on until you get to "6" for the least important. Each objective must only have one number next to it.

IMPORTANCE OF EDUCATIONAL GOALS/OBJECTIVES

MEAN

- a. 3.41 to help children develop language and problem solving skills
- b. 3.04 to help children build strong friendships and learn to share
- c. 5.35 to help children master concepts needed for reading and arithmetic
- d. 2.90 to help children develop skill and independence in caring for themselves
- e. 4.83 to help children develop physical coordination
- f. 1.35 to help children develop a healthy self-esteem and positive self-concept

Thank you very much. Please return this form to the visiting evaluator or mail it to: Dr. Ross Koppel, The Social Research Corporation, P.O. Box 2328, Jenkintown, PA 19046

Child Care Centers**

N = 546 [Percentages are reported except where means (M), standard deviations (S.D.), minimum (MIN), and maximum (MAX) values are specified.]

Teachers and Care Givers Child Care Centers

As you are probably aware, the Commonwealth of Pennsylvania now requires child care workers and supervisors to receive a minimum of six hours of training each year. The Commonwealth is supporting much of this education and is trying to make the process as easy as possible. It is offering many types of training, with a wide range of locations and methods.

To help improve workshops and courses we are requesting your input on training programs and needs. This questionnaire will help guide training for day care workers throughout Pennsylvania. Your help is very much appreciated.

Your comments are confidential and anonymous. Do *not* put your name on this document. Return it to the visiting fieldworker, or send it to us at The Social Research Corporation, P.O. Box 2328, Jenkintown, PA 19046.

First, we have some background information that we ask all participants:

1. Sex: 2.0 Male 98.0 Female

M = 34.93 MIN = 17

2. Age: _____ Years *S.D. = 11.96 MAX = 75*

3. What is the highest educational level you have completed?

a. 32.4 High School or GED Equivalent

e. 6.4 Some graduate work

b. 22.4 Some college

f. 3.1 Masters degree (MA/MS)

c. 10.8 Associate degree (AA)

g. 1.1 Post master's work

d. 23.7 Bachelor's degree

h. - Doctorate (Ed.D/Ph.D.)

4. How long have you worked in the field of early childhood?

M = 6.79 MIN = 0

_____ Years _____ Months *S.D. = 6.15 MAX = 42*

5. How long have you worked for your present employer? (Or operated this facility?)

M = 3.68 MIN = 0.08

_____ Years _____ Months *S.D. = 4.27 MAX = 30*

6. Indicate the category that most nearly describes your present employment?

a. 62.6 Employed full-time (more than 35 hours per week)

b. 24.7 Employed part-time (20 to 35 hours per week)

c. 12.7 Employed part-time (10 to 19 hours per week)

7. How many months of the year are you employed in your position?

- a. 83.4 Year around (12 months)
- b. 15.2 School year only (9 or 10 months)
- c. 1.5 Less than 9 months

8. Check the job title that most nearly describes your role in your organization. If you have a dual role, what position do you spend *more* time doing?

- | | |
|----------------------------------|--|
| a. <u>24.5</u> Teacher's aide | e. <u>2.1</u> Assistant director |
| b. <u>23.3</u> Assistant teacher | f. <u>2.2</u> Director or supervisor |
| c. <u>29.6</u> Classroom teacher | g. <u>0.6</u> Secretary, cook, maintenance |
| d. <u>16.9</u> Head teacher | h. <u>-</u> Board member |

9. Which of the following hourly ranges is nearest to the total you can expect from your job this year?

- | | | |
|--------------------------------|-----------------------------------|---|
| a. <u>11.4</u> \$4.35 - \$5.00 | e. <u>6.2</u> \$8.01 - \$9.00 | <i>Average approximately \$6.40/hr.</i> |
| b. <u>26.0</u> \$5.01 - \$6.00 | f. <u>3.6</u> \$9.01 - \$10.00 | |
| c. <u>23.8</u> \$6.01 - \$7.00 | g. <u>11.0</u> \$10.01 - and over | |
| d. <u>17.4</u> \$7.01 - \$8.00 | | |

10. Does your employer provide any of the following benefits either fully or partially. Mark all that apply.

- | | |
|-------------------------------|--|
| a. <u>18.5</u> Pension | f. <u>3.2</u> Paid maternity |
| b. <u>15.5</u> Vision | g. <u>16.3</u> Disability |
| c. <u>32.6</u> Dental | h. <u>25.0</u> Unemployment compensation |
| d. <u>48.1</u> Health | i. <u>25.9</u> Education reimbursement |
| e. <u>23.5</u> Life insurance | Other _____ |

11. Your long term educational goals:

- a. 4.3 GED/high school diploma
- b. 5.8 Non-credit adult education
- c. 12.2 Early Childhood Certification/Diploma
- d. 6.8 Associate Degree (AA)
- e. 15.9 College Degree: Please specify _____
- f. 17.6 Graduate Degree: Please specify _____
- g. 37.5 No long term goals at this time

12. Are you seeking Child Development Associate (CDA) certificate?

- 16.9 Yes 75.8 No 7.3 I already have one.

13. Are you familiar with the DPW regulations governing day care operations?

85.3 Yes 14.7 No

14. Training in past three Years: Number of hours of early childhood training you have completed in the past three years _____

M = 18.50 MIN = 0

S.D. = 16.30 MAX = 170

15. Your annual training or education goal:

a. 67.3 Complete six (6) hours of training per year to meet state minimum requirements

b. 19.0 Complete twelve (12) hours of training per year

c. 13.7 Complete more than twelve (12) hours of training per year

16. Age of the children in your care: (check all that apply)

a. 26.8 Birth to 12 months

e. 20.6 6 years to 8 years

b. 38.8 13 months to 24 months

f. 12.3 9 years and over

c. 41.7 25 months to 36 months

d. 61.4 3 years to 5 years

Do you have special needs children in your care?

17.0 Yes 83.0 No

17. Your Racial/Ethnic background

a. 82.6 Caucasian/White

d. 0.6 Asian

b. 14.4 African American/Black

e. 0.8 Native American

c. 1.1 Hispanic/Latino

f. 0.8 Other _____

18. Parental Status: Have you been /are you now a parent: 59.1 Yes 40.9 No

The next ten questions for those who have taken any training in the past four years. If you have not personally taken any training/workshops in the past four years, please skip to question number 29.

19. To what extent were the workshops or training sessions that you attended appropriate to your skill/knowledge level? (if you have taken more than one workshop or training session, please give your *overall* impression.)

a. 48.5 Very appropriate (Targeted to my level of experience/knowledge)

b. 44.7 Somewhat appropriate (Sort of targeted to my level)

c. 4.4 Not very appropriate (Not really targeted to my level)

d. 1.8 Not appropriate (Not targeted to my level)

e. 0.7 Don't know

20. To what extent was the training goal achieved? Again, if you have taken more than one workshop or training session, please give your *overall* impression)

- a. 62.9 Achieved (I learned the material)
- b. 34.9 Somewhat achieved (I learned some of the material)
- c. 0.9 Not achieved (I learned little of the material)
- d. 1.3 Don't know

21. In general, how useful was the training for your work in this facility?

- a. 42.7 Workshops or training very helpful
- b. 46.0 Workshops or training somewhat helpful
- c. 8.8 Workshops or training a little helpful
- d. 1.5 Workshops or training not helpful
- e. 0.9 Don't know

22. How much of the information you learned in workshops or training sessions do you apply in your current work?

- a. 15.3 Could apply all the information I learned
- b. 44.6 Could apply a lot of the information I learned
- c. 34.1 Could apply some of the information I learned
- d. 4.0 Could apply a little of the information I learned
- e. 2.0 Could apply very little of the information I learned

[For those who can *not* apply what they learned:]

22A. Why do you think you do not apply what you learned in workshops or courses? _____

23. Do you think more workshops or training would help you in your work as a teacher/care giver?

- a. 49.7 Very much
- b. 42.1 Somewhat
- c. 6.9 Very little
- d. 1.4 Not needed at all

24. How important are the following factors in your selecting training:

	Very Important Factor (1)	Somewhat Important Factor (2)	Not Important Factor (3)	Mean
Location/convenience	74.7	23.9	1.3	1.27
Session length	39.7	50.3	9.9	1.70
State requirements	66.8	26.4	6.8	1.40
Quality of previous training	64.0	32.8	3.2	1.39

24. How important are the following factors in your selecting training;

	Very Important Factor (1)	Somewhat Important Factor (2)	Not an Important Factor (3)	Mean
Cost of training	51.0	32.1	16.9	1.66
The scheduled times for training	71.3	26.5	2.2	1.31
Interest in topic/contents	85.7	13.6	0.7	1.15
Opportunities for networking	34.0	51.2	14.9	1.81
The training organization	46.2	42.8	11.0	1.65
The trainer	58.3	32.1	9.6	1.51
Solving practical solutions at work	76.8	21.6	1.6	1.25
Helping understand children	91.5	8.3	0.2	1.09
Helping professional development	79.0	20.3	0.7	1.22
Being sent by my director	34.0	41.0	24.9	1.91

25. Several factors may limit teachers and care givers from attending training or workshops. How important is each of the following to you:

	Very Important Factor (1)	Somewhat Important Factor (2)	Not an Important Factor (3)	Mean
Lack of child care for my children (while I attend training)	30.0	14.6	55.4	2.25
No long term financial gain or reward rewards for me	26.3	36.6	37.1	2.11
No one to watch clients' children during our child care hours (no "substitutes")	39.1	23.1	37.9	1.99

26. Do you have a plan for your individual career development in early childhood care and education? 55.1 Yes 44.9 No

27. Do you receive any compensation for attending relevant training? (Please check *all* that apply):

- a. 37.5 Paid while in training
- b. 12.6 Receive compensatory time
- c. 22.0 Reimbursed for expenses
- d. 37.7 No Compensation

28. In general, how interested are you in taking workshops or courses on teaching and/or caring for children?

a.52.7 Very interested b.33.4 Interested c.12.1 Somewhat interested d.1.8 Not interested

29. Here is a list of suggested topics for training. Next to each listed topic please indicate what you think is the need for training of child care workers. Please base your assessment on the need for training of child care workers -- not just the importance of a topic alone. That is, a topic may be very important but may not require additional training.

Additional Training Needed:

	A very serious need (1)	Important but not critical (2)	More would be helpful (3)	Not a priority (4)	Mean
Child care business/management of program/staff	22.5	40.5	15.1	21.9	2.4
Child care program development	44.2	31.3	18.3	6.2	1.9
Child development	61.3	23.0	13.0	2.8	1.6
Child/staff health	50.3	28.2	15.5	6.1	1.8
Developmentally appropriate practice	55.8	27.4	13.1	3.8	1.6
Emergent literacy, children's literature or literacy-based socio-dramatic play	31.0	41.4	21.1	6.5	2.0
Emergent numeracy, science for young children	41.2	32.0	20.6	6.1	1.9
Fostering social development (e.g., dealing with conflict)	60.9	24.2	12.8	2.1	1.6
Inclusive/special needs education issues	50.0	27.8	16.1	6.0	1.8
Infant/Toddler child development/programming	50.6	26.8	16.1	6.5	1.8
Multicultural, gender sensitivity in programming for young children	34.3	37.9	18.8	9.0	2.0
Music, dance, movement for young children	38.2	36.6	18.6	6.5	1.9
Nutrition	36.6	35.4	20.5	7.5	2.0
Personal care routines (naptime, toileting, grooming)	33.7	34.5	17.5	14.3	2.1
Play	44.7	30.1	14.3	10.9	1.9
Supervision, motivation discipline/guidance of children	65.5	19.7	12.8	2.0	1.5
Working with parents/community services	44.1	31.9	18.6	5.4	1.9
Statewide conference on multiple topics	14.9	37.7	27.0	20.4	2.5
Regional conference on multiple topics	14.6	37.1	29.4	18.9	2.5
Mentoring, multiple topics	16.3	39.3	27.3	17.1	2.5
Other (specify)					

30. Which of the above topics (or a different one) is most in need of training?

(Top 3)

Supervision/motivation (17.8); fostering social development (11.4); developmentally appropriate practice (11.4)

The following questions are about work attitudes:

B1. Check all that describe how you feel about your child care facility:

SUMMARY OF OVERALL COMMITMENT

- a. 52.1 I intend to work here at least two more years
- b. 14.6 I often think of quitting
- c. 4.2 I'm just putting in time
- d. 77.4 I take pride in my child care facility
- e. 72.8 I put a lot of extra effort into my work
- f. 66.9 I feel very committed to this center
- g. 3.2 I don't care what happens to this place after I leave
- h. 29.5 It would be difficult for me to find another job as good as this one
- i. 9.9 It's hard to feel committed to this place
- j. 13.0 I sometimes feel trapped in this job

Mean scaled score = 7.54
 S.D. = 2.03
 MIN = 1
 MAX = 10

B2. If you could design the ideal job, how close would your present position resemble your ideal work environment with respect to the following? (circle 1-5)

HOW ENVIRONMENT RESEMBLES IDEAL

	Not like my ideal		Somewhat like my ideal		Is my ideal	Mean
Relationship with your co-workers	1 (5.9)	2 (5.3)	3 (20.5)	4 (31.4)	5 (37.0)	3.88
Opportunities to learn and grow	1 (5.5)	2 (13.2)	3 (27.5)	4 (27.1)	5 (26.7)	3.56
Relationship with your supervisor	1 (9.6)	2 (8.1)	3 (19.1)	4 (27.1)	5 (36.1)	3.72
Clarity in roles and responsibility	1 (8.0)	2 (11.3)	3 (23.5)	4 (29.6)	5 (27.6)	3.57
Fairness of pay and promotion possibilities	1 (28.1)	2 (16.9)	3 (20.3)	4 (17.3)	5 (17.5)	2.79
Decision-making structure of the facility	1 (14.0)	2 (16.4)	3 (30.4)	4 (23.1)	5 (16.2)	3.11
Agreement among staff on goals and objectives	1 (8.2)	2 (12.4)	3 (25.3)	4 (32.1)	5 (22.0)	3.47
Task orientation, program efficiency	1 (7.3)	2 (12.4)	3 (30.2)	4 (31.6)	5 (18.4)	3.41
Equipment, materials, and the physical setting	1 (10.2)	2 (10.4)	3 (22.0)	4 (31.9)	5 (25.5)	3.32
Innovativeness and creative problem solving	1 (7.4)	2 (9.6)	3 (29.3)	4 (35.5)	5 (18.1)	3.47

B3. Different people want and expect different things from their work. Check three aspects of your work that are most important to you. (Percent indicating aspect is important)

- a. 57.7 collegiality and co-worker relations
- b. 30.3 opportunities for professional growth
- c. 43.2 support and feedback from supervisor
- d. 16.2 clarity in policies and procedures
- e. 48.7 fairness in pay, benefits, and promotions
- f. 24.2 involvement in decision making
- g. 12.6 consensus on program goals and objectives
- h. 25.0 accomplishing work in an efficient manner
- i. 24.6 physical setting and sufficient materials
- j. 19.5 innovativeness and creative expression

**IMPORTANCE OF
ORGANIZATIONAL DIMENSIONS**

The following questions are about organizational climate. Please answer the questions in this section with respect to the overall conditions in your child care facility as they are most of the time.

B4 Check *all* that describe the overall staff relations in your child care facility most of the time:

- a. 85.0 cooperative and friendly
- b. 11.0 competitive
- c. 21.7 people are reluctant to express their feelings
- d. 72.0 teachers are very helpful to new staff
- e. 51.2 good team spirit
- f. 41.5 staff are generally frank and candid
- g. 16.6 morale is low
- h. 49.7 people socialize outside of work
- i. 6.5 people feel isolated
- j. 34.7 people complain a lot

COLLEGIALITY
Mean scaled score = 7.09
S.D. = 2.51
MIN = 1
MAX = 10

B5. Check all that apply. Does your child care facility...

- a. 55.4 provide on-site staff development workshops?
- b. 76.8 encourage staff to share resources with each other?
- c. 41.1 provide released time to attend conferences?
- d. 20.4 provide released time to visit other schools?
- e. 30.7 provide tuition reimbursement to take college courses?
- f. 18.9 provide guidance for professional advancement?
- g. 55.6 have a library of professional books for staff to use?
- h. 46.5 subscribe to several educational journals and magazines?
- i. 9.7 implement a career ladder for professional advancement?
- j. 63.2 encourage staff to learn new skills and competencies?

PROFESSIONAL GROWTH
Mean scaled score = 4.18
S.D. = 2.51
MIN = 0
MAX = 10

B6. Check all that characterize the supervision given in your facility most of the time:

SUPERVISOR SUPPORT

Mean scaled score = 7.15

S.D. = 2.43

MIN = 0

MAX = 10

- a. 63.4 provides support and helpful feedback regularly
- b. 14.7 hard to please
- c. 5.7 incompetent
- d. 55.0 conducts fair evaluations of staff
- e. 9.1 too critical
- f. 39.4 sets high but realistic standards
- g. 10.7 delegates too much
- h. 56.0 compliments and praises staff
- i. 12.4 talks down to staff
- j. 53.7 very knowledgeable

B7. Check all that apply. Does your child care facility.....

- a. 82.7 distribute a parents' handbook detailing policies and procedures?
- b. 75.3 have a staff manual outlining staff policies?
- c. 42.8 provide written contracts for employees?
- d. 65.8 have written job descriptions for each position?
- e. 64.3 distribute a monthly newsletter to parents?

CLARITY

Mean scaled score = 5.96

S.D. = 2.61

MIN = 0

MAX = 10

B8. Check all that characterize your child car facility most of the time:

- a. 63.1 written communication is clear
- b. 43.0 there are seldom conflicting demands made on staff
- c. 52.3 policies and procedures are well-defined
- d. 50.6 rules are consistent
- e. 49.0 staff are well-informed

B9. Check all that describe the pay and promotion system at your child care facility:

- a. 45.6 salaries are fair considering the child care facility's income
- b. 12.2 promotions are not handled fairly
- c. 22.5 fringe benefits are equitably distributed
- d. 16.0 some people are paid more than they are worth
- e. 4.4 raises are based on favoritism
- f. 40.5 pay is fair compared to what other child care facilities pay
- g. 11.3 this place is a revolving door, no job security
- h. 19.5 people are taken advantage of
- i. 12.6 chances for promotion are good

REWARD SYSTEM

*Mean scaled score = 4.58**

S.D. = 1.66

MIN = 0

MAX = 8

**5.73 when prorated on a scale of 10.*

B10. Check all that describe how decisions are made at your facility most of the time:

DECISION MAKING

- a. 54.0 people are encouraged to be self-sufficient in making decisions
- b. 22.9 the director likes to make most of the decisions
- c. 15.1 people don't feel free to express their opinions
- d. 56.3 everyone provides input on the content of staff meeting
- e. 6.7 conformity is the name of the game here
- f. 27.9 there are scheduled staff meetings at least twice a month
- g. 21.2 people provide input but decisions have already been made
- h. 45.0 teachers make decisions about things that directly affect them
- i. 9.0 teachers are seldom asked their opinion on issues
- j. 56.9 the director values everyone's input in major decisions

Mean scaled score = 6.69

S.D. = 2.29

MIN = 1

MAX = 10

B11. Listed below are some common organizational decisions and actions. How much influence does the teaching staff currently have in each of the areas below:

DEGREE OF TEACHER INFLUENCE

	Very little influence (0)	Some Influence (1)	Considerable influence (2)
Ordering materials/supplies	16.4	39.0	44.6
Interviewing/hiring new staff	68.9	20.0	11.1
Determining program objectives	20.0	46.5	33.5
Training new aides/teachers	20.0	36.0	43.8
Planning daily schedule of activities	5.4	14.7	79.9

Mean scaled score = 5.62 S.D. = 2.44 MIN = 0 MAX = 10.00

B12. Check all that apply with respect to the goals of your program:

GOAL CONSENSUS

Mean scaled score = 7.11

S.D. = 2.37

MIN = 0

MAX = 10

- a. 10.5 goals are left vague
- b. 43.0 everyone agrees on program goals
- c. 47.5 people know how to compromise
- d. 7.4 child care facility does not have a written philosophy
- e. 62.2 staff share a common vision of what the child care facility should be like
- f. 13.5 the staff seldom talk about educational objectives
- g. 57.0 staff are committed to program goals
- h. 11.0 staff are not unified in their philosophy
- i. 12.0 people disagree on what should be taught to children
- j. 55.1 program has well-defined educational objectives

B13. Check *all* that describe the way things get done at your facility most of the time:

- a. 12.7 meetings are a waste of time
- b. 47.9 this place is run very efficiently
- c. 75.9 people get the job done
- d. 11.6 time is wasted
- e. 5.9 deadlines are missed regularly
- f. 30.6 things rarely get put off
- g. 84.6 employees work hard
- h. 13.5 people come to work late
- i. 9.5 people procrastinate often
- j. 50.6 meetings are productive

TASK ORIENTATION

Mean scaled score = 7.36

S.D. = 2.19

MIN = 0

MAX = 10

B14. Check *all* that apply to the physical environment of your facility:

- a. 68.8 efficient use of space
- b. 14.3 cramped and crowded conditions
- c. 25.5 seems either too hot or too cold
- e. 68.8 neat, tidy, and safe
- f. 5.7 decorations are drab
- g. 55.7 teachers have a place to store personal belongings
- h. 6.3 classroom noise disrupts office business
- i. 66.5 there are sufficient supplies and materials
- j. 10.1 the building needs major repairs
- k. 48.5 storage space is well-organized

PHYSICAL SETTING

Mean scaled score = 7.47

S.D. = 2.16

MIN = 0

MAX = 10

B15. Check *all* that describe your organization as a whole:

- a. 70.7 emphasizes creativity
- b. 4.4 not very innovative
- c. 19.2 quite traditional
- d. 28.3 implements needed changes
- e. 36.5 encourages diverse opinions
- f. 47.5 regularly looks at new educational approaches
- g. 24.9 things stay pretty much the same
- h. 63.7 new ideas tried out
- i. 7.2 people avoid taking risks at all costs
- j. 13.2 problems are not addressed

INNOVATIVENESS

Mean scaled score = 6.78

S.D. = 2.25

MIN = 0

MAX = 10

B16. Rank order the following program objectives according to their importance at your child care facility during the next year. Put a "1" by the most important, a "2" by the next most important and so on until you get to "6" for the least important. Each objective must only have one number next to it.

**IMPORTANCE OF EDUCATIONAL
GOALS/OBJECTIVES**

Mean

- a.3.25 to help children develop language and problem solving skills
- b.3.03 to help children build strong friendships and learn to share
- c.5.18 to help children master concepts needed for reading and arithmetic
- d.3.04 to help children develop skill and independence in caring for themselves
- e.4.60 to help children develop physical coordination
- f.1.72 to help children develop a healthy self-esteem and positive self-concept

Thank you very much. Please return this form to the visiting evaluator or mail it to: Dr. Ross Koppel, The Social Research Corporation, P.O. Box 2328, Jenkintown, PA 19046

Directors Group Child Care

N = 30 [Percentages reported, except where means (M), standard deviations (S.D.), minimum (MIN) and maximum (MAX) values are specified.]

Directors Group Child Care

As you are probably aware, the Commonwealth of Pennsylvania now requires child care workers and supervisors to receive a minimum of six hours of training each year. The Commonwealth is supporting much of this education and is trying to make the process as easy as possible. It is offering many types of training, with a wide range of locations and methods.

To help improve workshops and courses we are requesting your input on training programs and needs. This questionnaire will help guide training for child care workers throughout Pennsylvania. Your help is very much appreciated.

Your comments are confidential and anonymous. Do *not* put your name on this document. Return it to the visiting fieldworker, or send it to us at The Social Research Corp., P.O. Box 2328, Jenkintown, PA 19046.

First, we have some background information that we ask all participants:

1. Sex: 0 Male 100 Female

M = 45.8 MIN = 22

2. Age: _____ Years *S.D. = 9.9 MAX = 65*

3. What is the highest educational level you have completed?

a. 33.3 High School or GED Equivalent

b. 40.0 Some college

c. 13.3 Associate degree (AA)

d. 6.7 Bachelor's degree

e. 3.3 Some graduate work

f. - Masters degree (MA/MS)

g. 3.3 Post master's work

h. - Doctorate (Ed.D/Ph.D.)

4. How long have you worked in the field of early childhood?

M = 13.1 MIN = 2.0

_____ Years _____ Months *S.D. = 8.1 MAX = 30.0*

5. How long have you worked for your present employer? (Or operated this facility?)

M = 9.5 MIN = 1.0

_____ Years _____ Months *S.D. = 7.0 MAX = 27.0*

6. Indicate the category that most nearly describes your present employment?

a. 23.3 Employed full-time (more than 35 hours per week)

b. 6.7 Employed part-time (20 to 35 hours per week)

c. - Employed part-time (10 to 19 hours per week)

7. How many months of the year are you employed in your position?

- a. 100 Year around (12 months)
- b. - School year only (9 or 10 months)
- c. - Less than 9 months

8. Which of the following salary ranges is nearest to the total income you can expect from your job this year?

- | | | | |
|-----------------------------|------------------------------|--------------------------------|----------------------|
| a. <u>12.0</u> under \$5000 | d. <u>8.0</u> 11,000-13,999 | g. <u>4.0</u> 20,000-22,999 | <i>Average</i> |
| b. <u>4.0</u> 5,000-8,999 | e. <u>-</u> 14,000-16,999 | h. <u>4.0</u> 23,000-25,999 | <i>approximately</i> |
| c. <u>16.0</u> 9,000-10,999 | f. <u>16.0</u> 17,000-19,999 | i. <u>4.0</u> 26,000-29,999 | <i>\$17,250.00</i> |
| | | j. <u>32.0</u> 30,000 and over | |

9. Your long term educational goals:

- a. 6.9 GED/high school diploma
- b. 6.9 Non-credit adult education
- c. 13.8 Early Childhood Certification/Diploma
- d. 13.8 Associate Degree (AA)
- e. 13.8 College Degree: Please specify _____
- f. 10.3 Graduate Degree: Please specify _____
- g. 34.5 No long term goals at this time

10. Are you seeking Child Development Associate (CDA) certificate?

20.8 Yes 79.2 No - I already have one.

11. Training in past three Years: Number of hours of early childhood training you have completed in the past three years _____

*M = 40.3 MIN = 0
S.D. = 39.8 MAX = 200*

12. Your annual training or education goal:

- a. 31.0 Complete six (6) hours of training per year to meet state minimum requirements
- b. 31.0 Complete twelve (12) hours of training per year
- c. 37.9 Complete more than twelve (12) hours of training per year

13. Age of the children in your facility: (check all that apply)

- a. 66.7 Birth to 12 months
- b. 80.0 13 months to 24 months
- c. 90.0 25 months to 36 months
- d. 96.7 3 years to 5 years
- e. 60.0 6 years to 8 years
- f. 33.3 9 years and over

Do you have special needs children in your care?

16.7 Yes 83.3 No

14. Type of child care facility:

- a. Family Home
- b. 100 Group Home
- c. Center (other than school-age)
- d. School Age Center (only)
- e. Minimally Certified Home
- f. Other: _____

15. Your Racial/Ethnic background:

- a. 76.7 Caucasian/White
- b. 20.0 African American/Black
- c. Hispanic/Latino
- d. Asian
- e. Native American
- f. 3.3 Other: _____

16. Parental Status: Have you been /are you now a parent: 93.3 Yes 6.7 No

17. What is the licensed capacity of this facility? _____ # Children $M = 13.8$ $MIN = 12$
 $S.D. = 7.2$ $MAX = 50$

18. Total number of classrooms in this facility? _____ $M = 2.1$ $MIN = 0$
 $S.D. = 1.0$ $MAX = 5$

19. Total number of children enrolled at this facility? _____ $M = 15.9$ $MIN = 6$
 $S.D. = 11.3$ $MAX = 70$

20. Has the licensed capacity of this facility changed in the past year? 6.7 Yes 93.3 No

21. Total number of paid staff who work with children: _____ $M = 3.6$ $MIN = 1$
 $S.D. = 2.7$ $MAX = 10$

22. Total number of staff that are new this year (that is, this calendar year):
 $M = .94$ $MIN = 0$
 $S.D. = 1.0$ $MAX = 4$

23. Is there an assistant director? 35 Yes 65 No

24. Is this facility accredited? 10 Yes 76.7 No 13.3 Not sure

24A. If Yes, (accredited): What is the accrediting agency? (N=3)

Accredited by NAEYC N=1

Accredited by NECPA

Accredited by NAFDC N=2

Other (which) _____ Yes No

The next seven questions are for those who have taken any training in the past four years. If you have not personally taken any training/workshops in the past four years, please skip to question number 31.

25. To what extent were the workshops or training sessions that you attended appropriate to your skill/knowledge level? (if you have taken more than one workshop or training session, please give your *overall* impression.)

- a. 53.3 Very appropriate (Targeted to my level of experience/knowledge)
- b. 36.7 Somewhat appropriate (Sort of targeted to my level)
- c. 3.3 Not very appropriate (Not really targeted to my level)
- d. 3.3 Not appropriate (Not targeted to my level)
- e. 3.3 Don't know

26. To what extent was the training goal achieved? (Again, if you have taken more than one workshop or training session, please give your *overall* impression)

- a. 63.3 Achieved (I learned the material)
- b. 30.0 Somewhat achieved (I learned some of the material)
- c. 3.3 Not achieved (I learned little of the material)
- d. 3.3 Don't know

27. In general, how useful was the training for your work in this facility?

- a. 58.6 Workshops or training very helpful
- b. 24.1 Workshops or training somewhat helpful
- c. 13.8 Workshops or training a little helpful
- d. 3.4 Workshops or training not helpful
- e. - Don't know

28. How much of the information you learned in workshops or training sessions do you apply in your current work?

- a. 27.6 Could apply all the information I learned
- b. 27.6 Could apply a lot of the information I learned
- c. 31.0 Could apply some of the information I learned
- d. 3.4 Could apply a little of the information I learned
- e. 10.3 Could apply very little of the information I learned

[For those who can *not* apply what they learned:]

28A. Why do you think you do not apply what you learned in workshops or courses? _____

29. How much do you think your attending more workshops or training would help in your work as a director?

a.58.6 Very much b.27.6 Somewhat c.10.3 Very little d.3.4 Not needed at all

30. Have you received any specialized training as a director? 35.7 Yes 53.6 No 10.7 Not sure

Changing focus now from your personal training experience to your staff's use of training:

31. Do you think more workshops or training would help your staff in their work as childcare givers/teachers?

a.66.7 Very much b.22.2 Somewhat c.5.6 Very little d.5.6 Not needed at all

32. Based on your experience, what method(s) of training is (are) most helpful for your staff:

	Very Helpful (1)	Somewhat Helpful (2)	Not Helpful (3)	Don't know/Not used	Mean (for those who use the method)
Workshop	53.3	36.7	6.7	3.3	1.52
Satellite	8.3	33.3	12.5	45.8	2.07
Video	40.7	40.7	3.7	14.8	1.56
On-Site training	46.2	19.2	3.8	30.8	1.39
Conference	48.1	22.2	7.4	22.2	1.48
Mentoring	36.0	20.0	4.0	40.0	1.47

33. How are decisions made about staff training?

(Please indicate the most frequently used method) (N = 20)

- a.35.0 I select the training/workshops
- b.60.0 I guide the selection but the staff make the final decision
- c. 5.0 The staff selects training but I am informed of their decision
- d. - The staff selects training and I am not informed of decision

34. Is there a staff development plan for your child care staff? 21.0 Yes 79.0 No

35. What percentage of your child care staff have personal plans for career development in early child care and education? (Please indicate percentage from 0 [no such plans] to 100% [all staff have such plans]) _____% M = 24.5 MIN = 0
S.D. = 29.8 MAX = 100

36. Do staff receive any compensation for attending relevant training? (Please check *all* that apply):

- a. 15.0 Paid while in training
- b. 10.0 Receive compensatory time
- c. 40.0 Reimbursed for expenses
- d. 35.0 No Compensation

37. How important are the following factors in selecting training for staff:

	Very Important Factor (1)	Somewhat Important Factor (2)	Not Important Factor (3)	Mean
The scheduled times for training	89.3	10.7	0.0	1.11
Session length	62.1	24.1	13.8	1.51
Need to meet state requirements of 6 hours	76.7	10.0	13.3	1.37
Quality of previous training	53.6	32.1	14.3	1.61
Cost of training	69.0	17.2	13.8	1.45
Location/convenience	82.1	17.9	0.0	1.18
Interest in topic/contents	89.3	10.7	0.0	1.11
Opportunities for networking	37.0	40.7	22.2	1.85
The training organization (the organization providing training)	30.0	60.0	10.0	1.80
The trainer	33.3	60.0	6.7	1.73
Offers practical solutions for work	67.9	32.1	0.0	1.32
Helps understand children	82.8	17.2	0.0	1.17
Fosters professional development	57.7	42.3	0.0	1.42

38. Several factors may limit staff attending training or workshops. How important is each of the following:

	Very Important Factor (1)	Somewhat Important Factor (2)	Not Important Factor (3)	Mean
Lack of child care for children of the child care staff	33.3	18.5	48.1	2.15
No long term financial gain or rewards	11.5	57.7	30.8	2.19
No one to watch children (clients) during our child care hours (no "substitutes")	51.9	14.8	33.3	1.82

39. In general, how interested are your staff in taking workshops or courses on care and education of children?

- a. 44.8 Very interested
- b. 37.9 Interested
- c. 13.8 Somewhat interested
- d. 3.4 Not interested

40. Here is a list of suggested topics for training. Next to each listed topic please indicate what you think is the need for training of child care workers. Please base your assessment on the need for training of child care workers -- not just the importance of a topic alone. That is, a topic may be very important but may not require additional training.

Additional Training Needed:

	A very serious need (1)	Important but not critical (2)	More would be helpful (3)	Not a priority (4)	Mean
Child care business/management of program/staff	26.7	33.3	16.7	23.3	2.4
Child care program development	37.9	24.1	31.0	6.9	2.1
Child development	44.8	31.0	17.2	6.9	1.9
Child/staff health	34.5	27.6	13.8	24.1	2.3
Developmentally appropriate practice	53.6	21.4	21.4	3.6	1.8
Emergent literacy, children's literature or literacy-based socio-dramatic play	27.6	37.9	20.7	13.8	2.2
Emergent numeracy, science for young children	39.3	28.6	17.9	14.3	2.1
Fostering social development (e.g., dealing with conflict)	42.3	34.6	15.4	7.7	1.9
Inclusive/special needs education issues	24.1	31.0	31.0	13.8	2.3
Infant/Toddler child development/programming	51.7	27.6	10.3	10.3	1.8
Multicultural, gender sensitivity in programming for young children	32.1	46.4	14.3	7.1	2.0
Music, dance, movement for young children	55.2	20.7	17.2	6.9	1.8
Nutrition	43.3	16.7	20.0	20.0	2.2
Personal care routines (naptime, toileting, grooming)	31.0	34.5	17.2	17.2	2.2

Additional Training Needed:

	A very serious need (1)	Important but not critical (2)	More would be helpful (3)	Not a priority (4)	Mean
Play	40.0	33.3	16.7	10.0	2.0
Supervision, motivation discipline/guidance of children	60.0	23.3	16.7	0.0	1.6
Working with parents/community services	46.7	33.3	6.7	13.3	1.9
Statewide conference on multiple topics	27.6	34.5	10.3	27.6	2.4
Regional conference on multiple topics	34.5	31.0	13.8	20.7	2.2
Mentoring, multiple topics	37.9	37.9	13.8	10.3	2.0
Other (specify)					

41. Which of the above topics (or a different one) is most in need of training?
(Top 2 mentioned)

Fostering social development (16); Working with parents (12)

42. Does your child care facility have a “statement of purpose,” “mission statement” or philosophy? 65.5 Yes 34.5 No

Thank you very much. Please return this form to the visiting evaluator or mail it to: Dr. Ross Koppel, The Social Research Corporation, P.O. Box 2328, Jenkintown, PA 19046

**Teachers
Group Child Care**

Teachers and Care Givers Group Child Care

As you are probably aware, the Commonwealth of Pennsylvania now requires child care workers and supervisors to receive a minimum of six hours of training each year. The Commonwealth is supporting much of this education and is trying to make the process as easy as possible. It is offering many types of training, with a wide range of locations and methods.

To help improve workshops and courses we are requesting your input on training programs and needs. This questionnaire will help guide training for day care workers throughout Pennsylvania. Your help is very much appreciated.

Your comments are confidential and anonymous. Do *not* put your name on this document. Return it to the visiting fieldworker, or send it to us at The Social Research Corporation, P.O. Box 2328, Jenkintown, PA 19046.

First, we have some background information that we ask all participants:

1. Sex: 4.3 Male 95.7 Female

2. Age: _____ Years *M = 34.8 MIN = 18*
S.D. = 12.1 MAX = 67

3. What is the highest educational level you have completed?

a. 55.7 High School or GED Equivalent

b. 27.1 Some college

c. 2.9 Associate degree (AA)

d. 10.0 Bachelor's degree

e. 4.3 Some graduate work

f. - Masters degree (MA/MS)

g. - Post master's work

h. - Doctorate (Ed.D/Ph.D.)

4. How long have you worked in the field of early childhood?

_____ Years _____ Months *M = 6.5 MIN = .16*
S.D. = 5.3 MAX = 22.0

5. How long have you worked for your present employer?

_____ Years _____ Months *M = 4.2 MIN = .16*
S.D. = 4.5 MAX = 20.3

6. Indicate the category that most nearly describes your present employment?

a. 40.6 Employed full-time (more than 35 hours per week)

b. 44.9 Employed part-time (20 to 35 hours per week)

c. 14.5 Employed part-time (10 to 19 hours per week)

7. How many months of the year are you employed in your position?

- a. 89.9 Year around (12 months)
- b. 10.1 School year only (9 or 10 months)
- c. - Less than 9 months

8. Check the job title that most nearly describes your role in your organization. If you have a dual role, what position do you spend *more* time doing?

- a. 22.2 Teacher's aide
- b. 28.9 Assistant teacher
- c. 22.2 Classroom teacher
- d. 8.9 Head teacher
- e. 6.7 Assistant director
- f. 6.7 Director or supervisor
- g. 4.4 Secretary, cook, maintenance
- h. - Board member

9. Which of the following hourly ranges is nearest to the total you can expect from your job this year?

- a. 42.9 \$4.35 - \$5.00
 - b. 39.3 \$5.01 - \$6.00
 - c. 10.7 \$6.01 - \$7.00
 - d. 3.6 \$7.01 - \$8.00
 - e. 1.8 \$8.01 - \$9.00
 - f. 1.8 \$9.01 - \$10.00
 - g. - \$10.01 - and over
- Average approximately \$5.89/hr.*

10. Does your employer provider any of the following benefits either fully or partially. Mark all that apply. (Percent indicating "yes")

- a. 2.1 Pension
- b. 2.1 Vision
- c. 2.1 Dental
- d. 2.1 Health
- e. 0.0 Life insurance
- f. 0.0 Paid maternity
- g. 2.1 Disability
- h. 14.9 Unemployment compensation
- i. 17.0 Education reimbursement
- Other _____

11. Your long term educational goals:

- a. 7.4 GED/high school diploma
- b. 13.2 Non-credit adult education
- c. 16.2 Early Childhood Certification/Diploma
- d. 4.4 Associate Degree (AA)
- e. 8.8 College Degree: Please specify _____
- f. 10.3 Graduate Degree: Please specify _____
- g. 39.7 No long term goals at this time

12. Are you seeking Child Development Associate (CDA) certificate?

- 16.9 Yes 74.6 No 8.5 I already have one.

13. Are you familiar with the DPW regulations governing day care operations?

93.8 Yes 6.3 No

14. Training in past three Years: Number of hours of early childhood training you have completed in the past three years _____ *M = 20.5* *MIN = 0*

S.D. = 21.1 *MAX = 150*

15. Your annual training or education goal:

- a. 63.9 Complete six (6) hours of training per year to meet state minimum requirements
- b. 21.3 Complete twelve (12) hours of training per year
- c. 14.8 Complete more than twelve (12) hours of training per year

16. Age of the children in your care: (check all that apply)

- a. 48.6 Birth to 12 months
- b. 52.9 13 months to 24 months
- c. 60.0 25 months to 36 months
- d. 90.0 3 years to 5 years
- e. 44.3 6 years to 8 years
- f. 22.9 9 years and over
- g. 14.3 Special needs

17. Your Racial/Ethnic background

- a. 80.0 Caucasian/White
- b. 17.1 African American/Black
- c. 2.9 Hispanic/Latino
- d. - Asian
- e. - Native American
- f. - Other _____

18. Parental Status: Have you been /are you now a parent: 70.0 Yes 30.0 No

The next ten questions for those who have taken any training in the past four years. If you have not personally taken any training/workshops in the past four years, please skip to question number 29.

19. To what extent were the workshops or training sessions that you attended appropriate to your skill/knowledge level? (if you have taken more than one workshop or training session, please give your *overall* impression.)

- a. 56.5 Very appropriate (Targeted to my level of experience/knowledge)
- b. 40.3 Somewhat appropriate (Sort of targeted to my level)
- c. 3.2 Not very appropriate (Not really targeted to my level)
- d. - Not appropriate (Not targeted to my level)
- e. - Don't know

20. To what extent was the training goal achieved? Again, if you have taken more than one workshop or training session, please give your *overall* impression)

- a. 69.8 Achieved (I learned the material)
- b. 28.6 Somewhat achieved (I learned some of the material)
- c. 1.6 Not achieved (I learned little of the material)
- d. Don't know

21. In general, how useful was the training for your work in this facility?

- a. 55.6 Workshops or training very helpful
- b. 36.5 Workshops or training somewhat helpful
- c. 6.3 Workshops or training a little helpful
- d. 1.6 Workshops or training not helpful
- e. Don't know

22. How much of the information you learned in workshops or training sessions do you apply in your current work?

- a. 18.8 Could apply all the information I learned
- b. 56.3 Could apply a lot of the information I learned
- c. 18.8 Could apply some of the information I learned
- d. 3.1 Could apply a little of the information I learned
- e. 3.1 Could apply very little of the information I learned

[For those who can *not* apply what they learned:]

22A. Why do you think you do not apply what you learned in workshops or courses? _____

23. Do you think more workshops or training would help you in your work as a teacher/care giver?

- a. 65.0 Very much
- b. 35.0 Somewhat
- c. - Very little
- d. - Not needed at all

24. How important are the following factors in your selecting training:

	Very Important Factor (1)	Somewhat Important Factor (2)	Not Important Factor (3)	Mean
Location/convenience	70.2	24.6	5.3	1.35
Session length	33.9	51.8	14.3	1.80
State requirements	72.9	23.7	3.4	1.31
Quality of previous training	58.9	39.3	1.8	1.43
Cost of training	50.9	45.6	3.5	1.53
The scheduled times for training	60.3	31.0	8.6	1.48
Interest in topics/contents	82.8	17.2	0.0	1.17
Opportunities for networking	34.5	50.9	14.5	1.80
The training organization	44.8	43.1	12.1	1.67
The trainer	49.2	39.0	11.9	1.63
Solving practical solutions at work	71.9	24.6	3.5	1.32
Helping understand children	85.0	15.0	0.0	1.15
Helping professional development	68.3	29.3	2.4	1.34
Being sent by my director	31.6	50.0	18.4	1.87

25. Several factors may limit teachers and care givers from attending training or workshops. How important is each of the following to you:

	Very Important Factor (1)	Somewhat Important Factor (2)	Not Important Factor (3)	Mean
Lack of child care for my children (while I attend training)	25.5	23.6	50.9	2.26
No long term financial gain or rewards for me	14.3	44.6	41.1	2.27
No one to watch clients' children during our child care hours (no "substitutes")	38.6	28.1	33.3	1.95

26. Do you have a plan for your individual career development in early childhood care and education?

55.0 Yes 45.0 No

27. Do you receive any compensation for attending relevant training? (Please check *all* that apply): (Percent indicating "yes")

- a. 19.0 Paid while in training
- b. 11.9 Receive compensatory time
- c. 21.4 Reimbursed for expenses
- d. 38.1 Other _____

28. In general, how interested are you in taking workshops or courses on teaching and/or caring for children?

- a. 51.2 Very interested
- b. 31.7 Interested
- c. 17.1 Somewhat interested
- d. - Not interested

29. Here is a list of suggested topics for training. Next to each listed topic please indicate what you think is the need for training of child care workers. Please base your assessment on the need for training of child care workers -- not just the importance of a topic alone. That is, a topic may be very important but may not require additional training.

Additional Training Needed:

	A very serious need (1)	Important but not critical (2)	More would be helpful (3)	Not a priority (4)	Mean
Child care business/management of programs/staff	30.8	24.6	12.3	32.3	2.5
Child care program development	44.4	22.2	19.0	14.3	2.0
Child development	58.5	23.1	12.3	6.2	1.7
Child/staff health	52.3	30.8	9.2	7.7	1.7
Developmentally appropriate practice	44.4	33.3	15.9	6.3	1.8
Emergent literacy, children's literature or literacy-based socio-dramatic play	35.4	40.0	15.4	9.2	2.0
Emergent numeracy, science for young children	32.3	33.9	21.0	12.8	2.1
Fostering social development (e.g., dealing with conflict)	56.7	21.7	16.7	5.0	1.7

Additional Training Needed:

	A very serious need (1)	Important but not critical (2)	More would be helpful (3)	Not a priority (4)	Mean
Inclusive/special needs education issues	38.7	40.3	11.3	9.7	1.9
Infant/Toddler child development/programming	41.9	33.9	12.9	11.3	1.9
Multicultural, gender sensitivity in programming for young children	33.3	42.9	11.1	12.7	2.0
Music, dance, movement for young children	27.4	38.7	25.8	8.1	2.1
Nutrition	53.1	25.0	15.6	6.3	1.8
Personal care routines (naptime, toileting, grooming)	36.9	35.4	12.3	15.4	2.1
Play	43.8	28.1	17.2	10.9	2.0
Supervision, motivation, discipline/guidance of children	64.6	20.0	12.3	3.1	1.5
Working with parents/community services	35.9	31.3	23.4	9.4	2.1
Statewide conference on multiple topics	16.9	35.4	26.2	21.5	2.5
Regional conference on multiple topics	16.9	36.9	32.3	13.8	2.4
Mentoring, multiple topics	17.7	33.9	33.9	14.5	2.5
Other (specify)					

30. Which of the above topics (or a different one) is most in need of training?
(Top 3)

Supervision/motivation (23.7); Fostering social development (13.2); Inclusion/special needs (13.2)

Thank you very much. Please return this form to the visiting evaluator or mail it to: Dr. Ross Koppel, The Social Research Corporation, P.O. Box 2328, Jenkintown, PA 19046

Family Child Care Providers

N=44 [Percentages reported, except where means (M), a standard deviations (S.D.), minimum (MIN), and maximum (MAX) values are specified.]

Family Child Care Providers

As you are probably aware, the Commonwealth of Pennsylvania now requires child care providers to receive a minimum of six hours of training each year. The Commonwealth is supporting much of this education and is trying to make the process as easy as possible. It is offering many types of training with a wide range of locations and methods.

To help improve workshops and courses, we are requesting your input on training programs and needs. This questionnaire will help guide training for child care workers throughout Pennsylvania. Your help is very much appreciated.

Your comments are confidential and anonymous. Do *not* put your name on this document. Return it to the visiting fieldworker, or send it to us at The Social Research Corp., P.O. Box 2328, Jenkintown, PA 19046.

First, we have some background information that we ask all participants:

1. Sex: 6.8 Male 93.2 Female

M = 38.8 MIN = 16

2. Age: _____ Years *S.D. = 14.8 MAX = 75*

3. What is the highest educational level you have completed?

a. 54.8 High School or GED Equivalent

b. 33.3 Some college

c. 4.8 Associate degree (AA)

d. 4.8 Bachelor's degree (BA/BS)

e. 2.4 Some graduate work

f. _____ Masters degree (MA/MS)

g. _____ Post master's work

h. _____ Doctorate (Ed.D/Ph.D.)

4. How long have you worked in the field of early childhood?

M = 7.2 Years MIN = 0.2

_____ Years _____ Months *S.D. = 5.37 MAX = 20*

5. How long have you operated this facility?

M = 6.5 MIN = 0.3

_____ Years _____ Months *S.D. = 5.25 MAX = 20*

6. Indicate the category that most nearly describes your present employment?

a. 80.5 Employed full-time (more than 35 hours per week)

b. 14.6 Employed part-time (20 to 35 hours per week)

c. 4.9 Employed part-time (10 to 19 hours per week)

7. How many months of the year are you employed in your position?

- a. 22.2 Year around (12 months)
- b. 4.8 School year only (9 or 10 months)
- c. 2.4 Less than 9 months

8. Which of the following salary ranges is nearest to the total income you can expect from your job this year?

- | | | | |
|---------------------------|----------------------------|------------------------------|--|
| a. <u>15</u> under \$5000 | d. <u>10</u> 11,000-13,999 | g. <u>5</u> 20,000-22,999 | <i>Approximately
\$12,500 on
the average</i> |
| b. <u>10</u> 5,000-7,999 | e. <u>30</u> 14,000-16,999 | h. <u>75</u> 23,000-25,999 | |
| c. <u>10</u> 9,000-10,999 | f. <u>5</u> 17,000-19,999 | i. <u>50</u> 26,000-29,999 | |
| | | j. <u>25</u> 30,000 and over | |
| | | | |

9. Your long term educational goals:

- a. 4.8 GED/high school diploma
- b. 9.5 Non-credit adult education
- c. 2.5 Early Childhood Certification/Diploma
- d. 16.7 Associate Degree (AA)
- e. 14.3 College Degree: Please specify _____
- f. 4.8 Graduate Degree: Please specify _____
- g. 40.5 No long term goals at this time

10. Are you seeking Child Development Associate (CDA) certificate?

25.6 Yes 71.8 No 2.6 I already have one.

11. Training in past three Years: Number of hours of early childhood training you have completed in the past three years *M = 20.2 MIN = 0*
S.D. = 16.9 MAX = 60

12. Are you familiar with Department of Public Welfare regulations governing day care operations?

88.4 Yes 11.6 No

13. Your annual training or education goal:

- a. 53.7 Complete six (6) hours of training per year to meet state minimum requirements
- b. 14.6 Complete twelve (12) hours of training per year
- c. 31.7 Complete more than twelve (12) hours of training per year

14. Age of the children in your facility: (check all that apply) (percent indicating yes)

- a. 52.3 Birth to 12 months
- b. 68.2 13 months to 24 months
- c. 72.7 25 months to 36 months
- d. 88.6 3 years to 5 years
- e. 43.2 6 years to 8 years
- f. 22.7 9 years and over
- g. 11.4 Special needs

15. Type of child care facility:

- a. 100 Family Home
- b. Group Home
- c. Center (other than school-age)
- d. School Age Center (only)
- e. Minimally Certified Home
- f. Other: _____

16. Your Racial/Ethnic background:

- a. 66.7 Caucasian/White
- b. 31.0 African American/Black
- c. 2.4 Hispanic/Latino
- d. Asian
- e. Native American
- f. Other: _____

17. Parental Status: Have you been /are you now a parent: 90.9 Yes 9.1 No

**18. What is the capacity of your facility? # Children $M = 6.6$ $MIN = 6$
 $S.D. = 1.5$ $MAX = 12$**

**19. Total number of children enrolled at your facility? _____ $M = 7.2$ $MIN = 4$
 $S.D. = 2.3$ $MAX = 15$**

20. Has the capacity of your facility changed in the past year? 12 Yes 81 No

21. Is your facility accredited? 22.5 Yes 62.5 No 15 Not sure

21A. If Yes, (accredited): What is the accrediting agency? (N = 7)

Accredited by NAEYC ___

Accredited by NECPA ___

Accredited by NAFDC N=3

Other (which) N=4

22. To what extent were the workshops or training sessions that you attended appropriate to your skill/knowledge level? (if you have taken more than one workshop or training session, please give your overall impression)

a. 62.2 Very appropriate (Targeted to my level of experience/knowledge)

b. 29.0 Somewhat appropriate (Sort of targeted to my level)

c. 0.0 Not very appropriate (Not really targeted to my level)

d. 5.4 Not appropriate (Not targeted to my level)

e. 5.4 Don't know

23. To what extent was the training goal achieved? (Again, if you have taken more than one workshop or training session, please give your overall impression)

a. 62.2 Achieved (I learned the material)

b. 29.7 Somewhat achieved (I learned some of the material)

c. 2.7 Not achieved (I learned little of the material)

d. 5.4 Don't know

24. In general, how useful was the training for your work?

a. 62.2 Workshops or training very helpful

b. 27.0 Workshops or training somewhat helpful

c. 5.4 Workshops or training a little helpful

d. 0.0 Workshops or training not helpful

e. 5.4 Don't know

25. How much of the information you learned in workshops or training sessions do you apply in your current work?

a. 33.3 Could apply all the information I learned

b. 44.4 Could apply a lot of the information I learned

c. 16.7 Could apply some of the information I learned

d. 2.8 Could apply a little of the information I learned

e. 2.8 Could apply very little of the information I learned

[For those who can *not* apply what they learned:]

25A. Why do you think you do not apply what you learned in workshops or courses?

26. How much do you think your attending more workshops or training would help in your work?

a. 58.3 Very much b. 36.1 Somewhat c. 5.6 Very little d. 0.0 Not needed at all

27. Have you received any specialized training as a family care provider?

48.6 Yes 45.9 No 5.4 Not sure

28. Based on your experience, what method(s) of training is (are) most helpful for you:

	Very Helpful (1)	Somewhat Helpful (2)	Not Helpful (3)	Don't Know/Not Used	Mean (For those who used the method)
Workshop	79.4	14.7	0.0	5.9	1.16
Satellite	22.2	11.1	14.8	51.9	1.84
Video	50.0	26.5	11.8	11.8	1.60
On-site training	46.9	9.4	9.4	34.4	1.42
Conference	41.4	17.2	10.3	31.0	1.55
Mentoring	20.7	17.2	10.3	51.7	1.78

29. Do you have a plan for your development as a child care provider?

71.1 Yes 28.9 No

30. How important are the following factors in selecting training for staff:

	Very Important Factor (1)	Somewhat Important Factor (2)	Not Important Factor (3)	Mean
The scheduled times for training	97.2	2.8	0.0	1.03
Session length	54.3	37.1	8.6	1.54
Need to meet state requirements of 6 hours	74.3	17.1	8.6	1.34
Quality of previous training	54.3	42.9	2.9	1.49
Cost of training	61.3	19.4	19.4	1.58
Location/convenience	91.7	8.3	0.0	1.08
Interest in topic/contents	78.8	21.2	0.0	1.21
Opportunities for networking	50.0	34.4	15.6	1.66

	Very Important Factor (1)	Somewhat Important Factor (2)	Not Important Factor (3)	Mean
The training organization (the organization providing training)	40.0	51.4	8.6	1.69
The trainer	56.8	32.4	10.8	1.54
Offers practical solutions for work	76.5	23.5	0.0	1.23
Helps understand children	91.7	8.3	0.0	1.08
Fosters professional development	67.6	29.4	2.9	1.35

31. Several factors may limit you from attending training or workshops. How important is each of the following:

	Very Important Factor (1)	Somewhat Important Factor (2)	Not Important Factor (3)	Mean
Lack of child care for my children	52.8	22.2	25.0	1.72
No long term financial gain or rewards	17.6	52.9	29.4	2.12
No one to watch children (clients) during the child care hours (no "substitutes")	52.8	25.0	22.2	1.69

32. In general, how interested are you in taking workshops or courses on care and education of children?

- a. 55 Very interested
- b. 35 Interested
- c. 7.5 Somewhat interested
- d. 2.5 Not interested

33. Here is a list of suggested topics for training. Next to each listed topic please indicate what you think is the need for training of child care workers. Please base your assessment on the need for training of child care workers -- not just the importance of a topic alone. That is, a topic may be very important but may not require additional training.

Additional Training Needed:

	A very serious need (1)	Important but not critical (2)	More would be helpful (3)	Not a priority (4)	Mean
Child care business/management of programs/staff	25.0	52.5	17.5	5.0	2.0
Child care program development	41.0	51.3	7.7	0.0	1.7
Child development	53.7	34.1	12.2	0.0	1.6
Child/staff health	48.8	29.3	14.6	7.3	1.8
Developmentally appropriate practice	50.0	36.8	10.5	2.6	1.7
Emergent literacy, children's literature or literacy-based socio-dramatic play	39.5	36.8	15.8	7.9	1.9
Emergent numeracy, science for young children	41.2	29.4	17.6	11.8	2.0
Fostering social development (e.g., dealing with conflict)	62.5	31.3	6.3	0.0	1.4
Inclusive/special needs education issues	59.0	17.9	17.9	5.1	1.7
Infant/Toddler child development/programming	61.5	30.8	2.6	5.1	1.5
Multicultural, gender sensitivity in programming for children	41.0	30.8	20.5	7.7	1.9
Music, dance, movement for young children	42.1	34.2	15.8	7.9	1.9
Nutrition	69.0	14.3	7.1	9.5	1.6
Personal care routines (naptime, toileting, grooming)	59.5	28.6	4.8	7.1	1.6
Play	44.7	42.1	10.5	2.6	1.7
Supervision, motivation discipline/guidance of children	67.6	21.6	8.1	2.7	1.5
Working with parents/community services	54.8	28.6	14.3	2.4	1.6
Statewide conference on multiple topics	29.7	37.8	13.5	18.9	2.2
Regional conference on multiple topics	31.6	34.2	18.4	15.8	2.2
Mentoring, multiple topics	41.0	25.6	17.9	15.4	2.1
Other (specify)					

34. Which of the above topics (or a different one) is most in need of training? (Top 3 mentioned)

Supervision (20.0); Child development (12.0); Working with parents (12.0)

35. Does your child care facility have a written “statement of purpose,” “mission statement” or philosophy? 48.6 Yes 51.4 No

36. Please check *all* that apply. Do you... (percent indicating “yes”)

- a. 42.5 receive one-on-one visits from other providers of early child care?
- b. 37.5 visit (one-on-one) other providers of early child care?
- c. 40.0 attend meetings (other than training sessions) with at least two other home based or small facility early child care providers
- d. 75.0 receive visits from field supervisors of governmental or affiliate agencies?
- e. 27.5 attend meetings with field supervisors of governmental or affiliate agencies?
- f. 87.5 obtain materials and activity ideas from book and magazines (printed medium)?
- g. 67.5 obtain materials and activity ideas from the use of electronic media (e.g., TV, computer software, video)?
- h. 37.5 engage in other forms of networking with early child care providers?
- i. 82.5 read “The Provider” newsletter
