 DESCRIPTORS Bachelors Degrees; *Degrees (Academic); Doctoral Degrees; *Engineering Education; Higher Education; Masters Degrees; *Science Education; Sciences; *Statistical Distributions; Statistical Surveys; Tables (Data); Technology; *Womens Education

ABSTRACT

This report is based on final data obtained from several federal surveys including the U.S. Department of Education's Survey of Degrees and Other Formal Awards Conferred, the Integrated Postsecondary Education Data Systems (IPEDS) Completions Survey, and the Survey of Earned Doctorates, the last of which is conducted annually for the National Science Foundation (NSF). The data cover earned degrees conferred in the aggregate United States which includes the 50 states, the District of Columbia, and U.S. Territories and outlying areas. Statistical charts show numbers and percentages of degrees awarded in science and engineering fields by major field, sex, and degree level from 1966 to 1995. Tables show in detail the number of degrees awarded in various fields arranged by degree level, sex of recipient, and major field group. Percentage distribution of degrees awarded is also shown. Degree data are compiled for a 12-month period, July through June, of the following year. The data from earlier years are presented as consistently as possible with the classifications used in the current Classification of Instructional Programs (CIP). The data have been reclassified according to NSF field categories where appropriate. (PVD)

Contributors

Tabulations and charts were prepared by Quantum Research Corp. for the National Science Foundation. The project officer for this report was Susan T. Hill.

ACKNOWLEDGMENTS

The development of *Science and Engineering Degrees: 1966–95*, was managed by Susan T. Hill, Analyst, National Science Foundation (NSF), Division of Science Resources Studies (SRS), Science and Engineering Education and Human Resources Program (EDU), under the overall direction of Mary J. Golladay, Program Director, NSF, SRS, EDU. Anne Houghton and Julia Harriston provided copyediting, processing,

and final composition for this report. Quantum Research Corp. (QRC) of Bethesda, MD, under NSF contract number SRS-9423167, prepared the tables, charts, and report copy. QRC staff members who worked on this project were Heidi L. Clark, Teresa L. Grimes, George J. Nozicka, Elizabeth H. Peto, and Jennifer D. Ranwez.

GENERAL NOTES

This publication is based on data obtained from several Federal agencies that had acquired them as part of their general statistics programs. The bachelor's and master's degree data were obtained from universe institution surveys of the National Center for Education Statistics (NCES), U.S. Department of Education. Data on doctorates are from the Survey of Earned Doctorates, a universe survey of individual doctorate recipients that is sponsored by the National Science Foundation (NSF) and four other Federal agencies, and were collected by the National Research Council. Estimates of population in the various age categories are based on data that were collected and published by the Bureau of the Census, U.S. Department of Commerce.

The data in this report cover earned degrees conferred in the aggregate United States, which comprises the 50 States, the District of Columbia, and the U.S. Territories and Outlying Areas (American Samoa, the former Canal Zone, the Northern Mariana Islands, Puerto Rico, Guam, the Virgin Islands, and the Trust Territory of the Pacific Islands). Degree data are compiled for a 12-month period, July through June of the following year. For convenience, degrees in a given July-through-June period are referred to by the year in which the period ended; e.g., 1995 means the 12-month period ending June 1995.

It is difficult to establish a completely consistent series of degree data over a long period of time because of changes in definitions, instructions, and field

classifications, including the introduction of new specialties. The data for earlier years are presented as consistently as possible with the classifications used in the current *Classification of Instructional Programs* (Washington, DC, Superintendent of Documents, U.S. Government Printing Office). See the Technical Notes for further information on the field classifications used.

The publication focuses on degrees in science and engineering fields, and, where appropriate, the data have been reclassified according to NSF field categories. This report supersedes previous editions, not only because it includes later data, but because fields classified as science and engineering differ slightly, especially in the social sciences at the doctorate level, from those of past editions. It should be noted that data on engineering technology degrees and degrees in the health/medical sciences are not included in the science and engineering totals here. The time series for this report begins in 1966.

SECTION A.
TECHNICAL NOTES

This report is based on final data from several Federal surveys. Two of them are the U.S. Department of Education's Survey of Degrees and Other Formal Awards Conferred, and the Integrated Postsecondary Education Data System (IPEDS) Completions Survey conducted annually by the National Center for Education Statistics (NCES), earlier conducted as Higher Education General Information Survey (HEGIS). A third is the Survey of Earned Doctorates, conducted annually for the National Science Foundation (NSF) and four other Federal agencies. In addition, population data on various age groups for tables 56–58 were obtained from Current Population Surveys conducted by the Census Bureau. Each source is described in more detail in the following sections.

Data from the Survey of Degrees and Other Formal Awards Conferred and from the Completions Survey were used to report the number of bachelor's and master's degrees. The data on doctoral degrees in this report were derived from the Survey of Earned Doctorates, which surveyed all individuals earning research doctorates, rather than from the Completions Survey, which surveyed the institutions awarding the doctorates. The Survey of Earned Doctorate data were preferred because the data provided by individuals are more specific with respect to the field of specialization and are less prone to errors in data reporting and data entry than are the data provided in aggregates by institutions. Furthermore, doctorate data provide 100 percent coverage for data by field and sex of individual recipients, whereas institutional data are subject to imputation for nonresponse. For a comparison of reporting on doctoral degrees in the Completions Survey and the Survey of Earned Doctorates, see National Science Foundation, *Science and Engineering Doctorates: 1960–91*, NSF 93-301, Detailed Statistical Tables (Washington, DC, 1993).

BACHELOR'S AND MASTER'S DEGREE DATA

In the Survey of Degrees and Other Formal Awards Conferred and in the Completions Survey, data are collected on all degrees conferred between July 1 and June 30 from the universe of accredited institutions of higher education in the 50 States, the District of Columbia, and the U.S. Territories and Outlying Areas. The survey forms are filled out by institution

administrative personnel. The data are collected according to sex of recipient and field of study. In 1995, the final universe of institutions granting bachelor's or higher level degrees was 2,793. Each year between 1966 and 1995, institutional responses to these surveys exceeded 85 percent. Imputations for nonresponse were based on the previous year's response for an institution, if available. Because the data in this report include those for institutions in the U.S. territories, they may differ from numbers published by NCES that relate only to the 50 States and the District of Columbia and their field groupings. Data on degrees by field of study were collected according to the *Classification of Instructional Programs*, developed by NCES. Four field classification systems were used during the 1966–95 period. (See "Current Classification Schemes.")

DOCTORAL DEGREE DATA

In the Survey of Earned Doctorates, information is collected during the period of July 1 of one year to June 30 of the next from all persons who have fulfilled the requirements for a *research* doctorate. The survey is funded jointly by NSF and four other agencies: the U.S. Department of Education, the National Institutes of Health, the National Endowment for the Humanities, and the U.S. Department of Agriculture. The National Research Council sent the survey forms to all accredited doctorate-granting institutions for distribution by the graduate deans to all research doctorate recipients as they complete degree requirements. Information collected in the survey comprises demographic data, such as the student's sex, citizenship, and racial/ethnic group; education history, including field of degrees; sources of graduate student support; employment status during the year preceding receipt of the doctorate; postgraduation plans; and background on parents' education. Approximately 92–95 percent of the doctorate recipients complete and return the survey forms. For nonrespondents, commencement programs constituted a source of skeletal information that was added to the file. These variables were sex, field of study, institution, year of doctorate, and educational background. Consequently, for the variables used in this report, there is complete coverage. Data are updated annually from completed survey forms submitted belatedly by previous nonrespondents; therefore, data on doctorates are subject to revision and may differ very slightly from reports published earlier.

POPULATION DATA

Published reports of the Bureau of the Census, U.S. Department of Commerce provided estimates of population in the various age classifications, based on sample household surveys. All documents used were from *Current Population Surveys*, Series P-25, estimates for the total population as of July 1 of each year. Data for years 1970–79 were obtained from *Current Population Surveys*, “Preliminary Estimates of the Population of the United States, by Age, Sex, and Race: 1970 to 1981,” No. 917, 1982. Data for 1980–89 were obtained from “United States Population Estimates by Age, Sex, Race, and Hispanic Origin: 1980 to 1991,” No. 1095, February 1993 (Washington, DC: Superintendent of Documents, GPO). Data for 1990–94 are from “United States Population Estimates by Age, Sex, Race, and Hispanic Origin: 1990 to 1995,” No. PPL-41, February 1996 (Washington, DC: Superintendent of Documents, GPO). Data are for the total U.S. population taken from table 1 of each report cited. These data include the population of the 50 States, the District of Columbia, and the Armed Forces overseas, but exclude residents of Puerto Rico and the U.S. Territories and Outlying Areas. These estimates do not make any allowances for the under-

count of U.S. residents in the decennial censuses. The completeness of coverage is estimated to be 97.3 percent for 22-year-olds, 97.8 percent for 24-year-olds, and 99.8 percent for 30-year-olds.

FIELD CLASSIFICATION SCHEMES

It is difficult to establish a completely consistent series of degree data over a long period of time, given changes in field classifications and evolving fields of study. Data for the earlier years are presented as consistently as possible with the current classification schemes of fields of study, which show the Completions and the Survey of Earned Doctorates field codes used in this report, (beginning in section D—page 91).

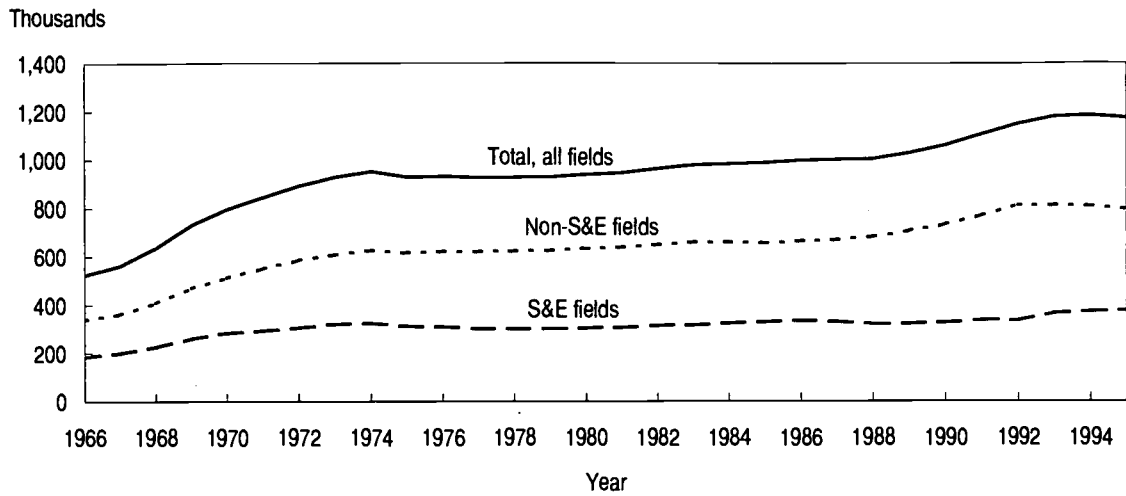

Note that the data in this report have been grouped into the science and engineering categories used by NSF. It should be noted that data on engineering technology degrees and degrees in health/medical fields are not included in the science and engineering totals here. Therefore, data in this report may differ from those in reports published by the U.S. Department of Education.

NOTE: Engineering technologies are a summary of instructional programs that prepare individuals to support and assist engineering and related professionals or to independently provide such services. Programs stress specialized, practical knowledge related to the mathematical, scientific, or technical aspects of engineering and related sciences.

The National Science Foundation promotes and advances scientific progress in the United States by competitively awarding grants for research and education in the sciences, mathematics and engineering.

To get the latest information about program deadlines, to download copies of NSF publications, and to access abstracts of awards, visit the NSF Web site at:

<http://www.nsf.gov>

- ☐ Location: 4201 Wilson Blvd.
Arlington, VA 22230

- ☐ For General Information (NSF Information Center): (703) 306-1234

- ☐ TDD (for the hearing-impaired): (703) 306-0090

- ☐ To Order Publications or Forms:
 - Send an e-mail to: pubs@nsf.gov
 - or telephone: (301) 947-2722

- ☐ To Locate NSF Employees: (703) 306-1234

Order Form

Please send me the following reports, free of charge:

Title	NSF No.	
<i>Undergraduate Origins of Recent Science and Engineering Doctorate Recipients, Special Report</i>	96-334	<input type="checkbox"/>
<i>Characteristics of Doctoral Scientists and Engineers in the United States, Detailed Statistical Tables</i>	97-319	<input type="checkbox"/>
<i>Science and Engineering Degrees, by Race/Ethnicity of Recipients, 1989-95, Detailed Statistical Tables</i>	97-334	<input type="checkbox"/>
<i>"Doctoral Awards Increase in S&E Overall, but Computer Science Declines for First Time," Data Brief</i>	97-325	<input type="checkbox"/>
