## ABSTRACT

A recent study asked nationally representative samples of public school principals and teachers about their use of content and performance standards and other reform strategies, ties between the home and school, Title I's role in supporting reform, and the information they needed to proceed with reforms. This report presents findings of the principal survey, which had 1,216 respondents. Fully 78 percent of principals reported their schools used content standards to a moderate or great extent to guide curriculum and instruction in all four core subjects. About 10 percent indicated their schools were implementing all 10 comprehensive reform strategies. At least 40 percent of respondents needed more information on using innovative technologies, professional development linked to standards, and parental involvement activities. Barriers to achieving high standards included diverse student populations, high student mobility, inadequate parent involvement, and inadequate student assessments. Half the principals preferred to receive information on reforms through institutes or workshops. Principals of Title I-funded schools and those without such funding had similar familiarity with and implementation of comprehensive reforms. Included are survey highlights, a summary, and appendices containing methodologies, tables, and the survey form. (MLH)

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

## Highlights

- Seventy-eight percent of public school principals reported that their schools use content standards to a moderate or great extent to guide curriculum and instruction in all four core subjects: 92 percent in mathematics, 90 percent in reading/language arts, 84 percent in science, and 81 percent in history/social studies (figure 1). Almost two-thirds of principals (64 percent) reported that their content standards in any subject changed to a moderate or great extent in the last 3 years (figure 2).
- About 1 in 10 public school principals reported that their schools were implementing all 10 strategies in support of comprehensive reform that were asked about on the survey. Eighty-five percent reported using strategic plans for enabling all students to achieve to high levels of performance and 84 percent reported using professional development to enable staff to teach the content students are expected to learn (table 1).
- When asked to indicate the three strategies in support of comprehensive reform for which they most needed information, 40 percent or more of public school principals reported that they needed information on the following: using innovative technologies such as the Internet and telecommunications-supported instruction that expose students to the content they are expected to learn (43 percent), professional development linked to the standards (41 percent), and parent involvement activities (40 percent) (table 1).
- About half of public school principals cited the following factors as barriers to the application of high standards to all students: teaching students who are at different levels (56 percent), the inadequacy of parent involvement (49 percent), and assessments that do not measure what students can do (48 percent) (table 2).
- Principals reported that they were likely to provide parents with a school progress report to inform parents of their expectations for student learning (88 percent); they also frequently provided an overview of the curriculum (81 percent), examples of successful student work (76 percent), and an overview of the content standards (61 percent) (figure 6).
- For decisions related to developing content standards for the school, similar percentages of public school principals attributed a moderate or great amount of influence to the state department of education and to local district administrators (both 86 percent), to principals and teachers at the school (85 percent), and to the local school board (69 percent) (table 5).

- More than 30 percent of public school principals cited the following sources as very helpful to them in understanding or using comprehensive reform strategies or activities: institutes or workshops (41 percent), other principals (33 percent), the school district (32 percent), and state- or district-sponsored education conferences (31 percent). Less frequently cited sources were the Educational Resource Information Center (ERIC), U.S. Department of Education regional labs, other U.S. Department of Education offices or programs, the media, and teacher organizations (4 percent or less) (table 4).
- Public school principals reported that they used Title I funds for specific activities, including serving targeted children in a pull-out or in-class setting (88 percent), providing extended-time learning opportunities (64 percent), operating a schoolwide program (36 percent), and providing summer learning activities (37 percent). The percentage of principals who operated schoolwide programs was higher for elementary schools (51 percent) than for middle schools (19 percent) and high schools (11 percent) (table 7).
- Forty-three percent of public school principals in Title I-funded schools reported familiarity with eight recent legislative changes to Title I to a moderate or great extent. More principals in schools with schoolwide programs (54 percent) than in other Title I schools (34 percent) were familiar with the eight specific provisions asked about on the survey. This finding holds true as well for each of the specific provisions, with principals with schoolwide programs more likely to report familiarity (table 10).

## Introduction

National attention is focused on education reform as more state and local education agencies adopt challenging content and performance standards for students, decide how to restructure the school day, and begin to involve parents in all aspects of their children's education. These efforts have expanded significantly since the 1994 passage of the Goals 2000: Educate America Act. Under Goals 2000, states develop education improvement plans that include "strategies for ensuring that comprehensive, systemic reform is promoted from the bottom up in communities, local educational associations, and schools, as well as guided by coordination and facilitation from State leaders" (section 306).

This study asked nationally representative samples of public school principals and teachers about their use of content standards and performance standards and other reform strategies, ties between the school and home, the role of the Title I program in supporting reform, and what information they need to help them move ahead with reform.

This report presents the findings of the principal survey, called the *Public School Survey on Education Reform*; a subsequent report, called *Status of Education Reform in Public Elementary and Secondary Schools: Teachers' Perspectives*, will summarize results from the teacher survey. The U.S. Department of Education (ED) will use this information to see how principals and teachers view reform and reform efforts. Findings from parallel surveys of school districts and states are reported in *Reports on Reform from the Field: District and State Survey Results*.

This report contains information about reform efforts in schools reported by school principals through a mail survey. The information has not been objectively measured or independently verified. Because of the survey questions and collection methodology used, results should be interpreted carefully. Principals may have overreported their involvement in reform for the following reasons:

1. Since all principals do not share the same concept of reform, survey questions were designed to be inclusive of a wide variety of activities.
2. The reporting of reform activities has strong demand characteristics--meaning that principals know that their schools should be engaged in these activities.
3. As a Fast Response survey, the questionnaire was brief and could not collect information to judge the accuracy of the principals' reports about their reform efforts.

Principals were given guidance while completing their surveys in the form of general definitions of reform and standards. Comprehensive reform was defined on the questionnaire as “efforts to improve education for all students by establishing high content and performance standards and redesigning the various components of the education system in a coordinated and coherent fashion to support students learning to the standards.” High standards were defined as “recent and current education reform activities that seek to establish more challenging expectations for student achievement and performance, such as the National Council of Teachers of Mathematics standards for math, state- or local-initiated standards in various subjects, and those outlined in Goals 2000.” Further, “standards go beyond general expectations for student learning in that they are written, may be externally developed, and are to be applied uniformly by all teachers.” Note that the survey did not limit standards to those adopted by states, since schools in states that have not adopted standards could have locally-developed standards of their own.

These data were requested by ED’s Planning and Evaluation Service (PES) to provide descriptive information about reform, principals’ needs for information and assistance, and the role of Title I program resources in supporting education reform. This study is part of a larger national assessment of the Title I program. Other parts of the assessment use methodologies such as site visits to collect additional detail and to verify school activities.

The study was conducted during the spring of 1996 (with followup through July of that year) by the Fast Response Survey System (FRSS) for the National Center for Education Statistics (NCES) by Westat, Inc., a research firm in Rockville, Maryland. The survey asked principals to report for the 1995-96 school year.

The questionnaires were sent to 1,360 principals of a nationally representative sample of U.S. public schools (see appendix A for survey methodology). The survey requested information about the following issues:

- Use of content standards to guide curriculum and instruction;
- Strategies to support comprehensive reform;
- Barriers to the application of high standards to all students;
- Methods of informing parents about the school’s expectations for student learning;
- Sources of information and assistance in using and understanding reform strategies and activities;

- Groups with influence over decisions related to reform; and
- Understanding of new Title I program provisions supporting reform.

Survey findings are presented for all schools, and frequently by the following school characteristics:

- Instructional level (elementary school, middle school, high school);
- Locale of school (city, urban fringe, town, rural);
- Percent of students in the school eligible for free or reduced-price lunches through the National School Lunch Program (42 USC 1758 (f)(2)) (less than 35 percent, 35-49 percent, 50-74 percent, 75 percent or more) by instructional level; and
- Title I funding (no Title I, Title I nonschoolwide program, Title I schoolwide program) by instructional level.

Appendix B contains reference tables of the survey data broken out by the four school characteristics. These tables were included in the report because many of the comparisons between types of schools on the extent of their reform activities did not show the substantively interesting or statistically significant differences that were anticipated. Readers can refer to the tables in appendix B to view comparisons not cited in the text of this report.

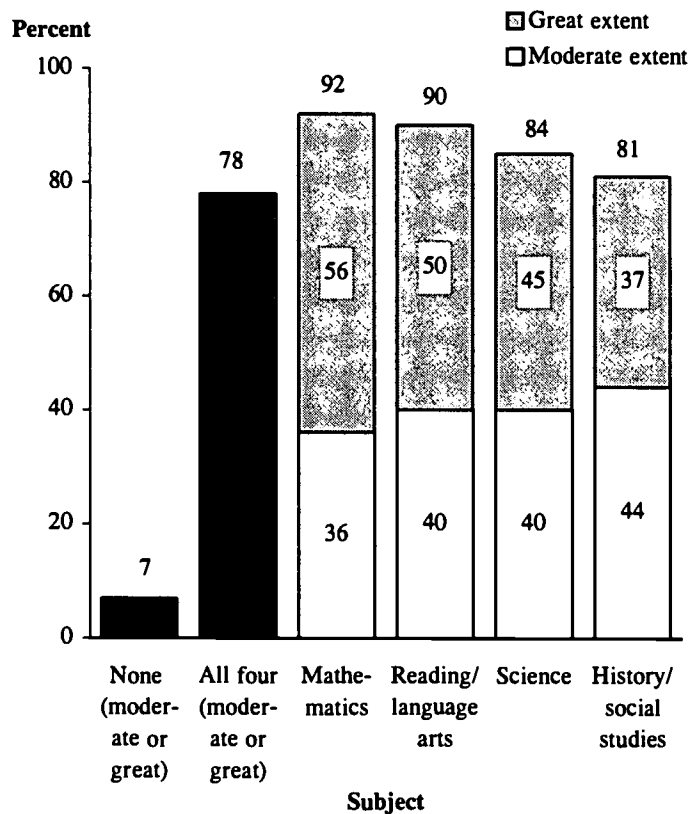

Data have been weighted to provide national estimates of public schools. All comparative statements made in this report have been tested for statistical significance through chi-square tests or *t*-tests adjusted for multiple comparisons using the Bonferroni adjustment and are significant at the 0.05 level or better. However, not all statistically significant comparisons have been presented. It should be noted that the estimates for elementary schools with between 35 and 49 percent of students eligible for free or reduced-price lunches are based on a relatively small number of unweighted cases (39) (appendix table A-1).

## **Use of Content Standards to Guide Curriculum and Instruction**

Written standards that specify the content that students are expected to learn, that go beyond general expectations, and that are applied uniformly by all teachers can be valuable education reform tools for schools (Goals 2000: Educate America Act, section 211). Content standards are generally subject-specific and may be adopted from an external source (such as a professional teacher association) or developed by schools, districts, or states. To find out how pervasive standards are, the survey asked principals about the use of content standards in four core subjects: reading/language arts, mathematics, science, and history/social studies.

Seventy-eight percent of public school principals reported that their schools use content standards to a moderate or great extent to guide curriculum and instruction in all four core subjects asked about on the questionnaire (figure 1). These findings generally hold true across the different types of schools compared in this analysis (appendix table B-2). By subject, 92 percent of principals reported their schools used content standards in mathematics, 90 percent in reading/language arts, 84 percent in science, and 81 percent in history/social studies. These findings also generally hold true across different types of schools (appendix table B-2).

**Figure 1.—Percent of principals reporting that their schools use content standards to guide curriculum and instruction in various subjects: 1996**

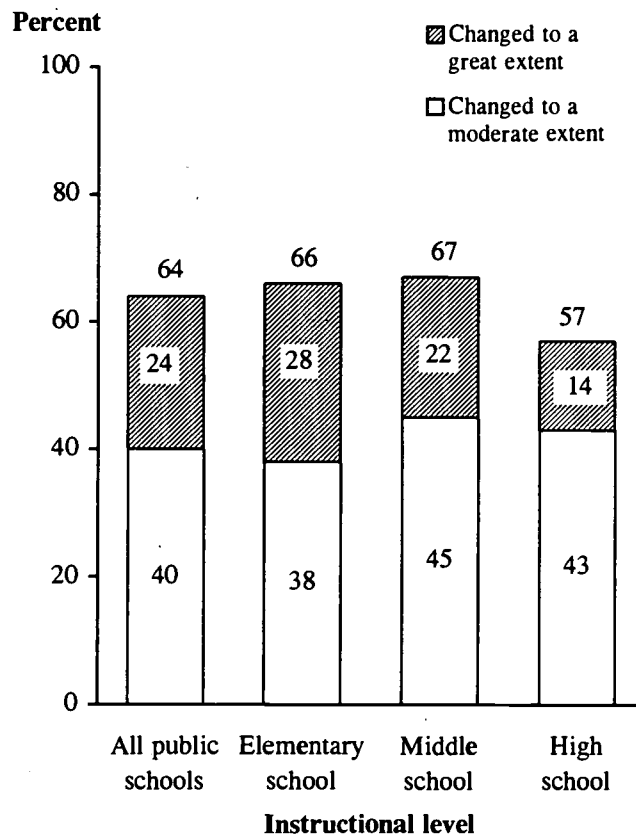

NOTE: This survey included only public schools.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform," FRSS 54, 1996.

About two-thirds of principals (64 percent) reported that the content standards in their school for any subject have changed to a moderate or great extent in the last 3 years (figure 2 and appendix table B-3). This finding can be interpreted in several ways. Changes to content standards could mean that schools are updating their curricula to take advantage of current developments, or alternatively, that schools view content standards as another in a series of passing fads.

**Figure 2.—Percent of principals reporting that the content standards for any subject in their schools have changed in the last 3 years, by instructional level: 1996**

NOTE: This survey included only public schools.

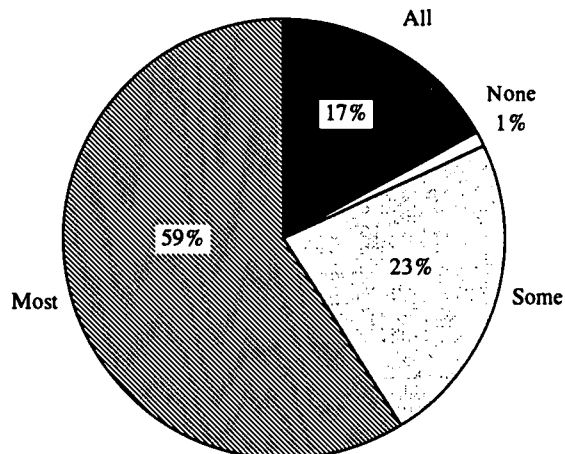

SOURCE: U.S. Department of Education. National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform." FRSS 54, 1996.

Public school principals were generally confident about the abilities of their staff members to implement reforms. About three-quarters (76 percent) reported that all or most of their staff were ready to set or apply new high standards of achievement for their students (figure 3 and appendix table B-4). Elementary school principals (21 percent) were more likely to report that all of their staff were ready than were high school principals (8 percent) (figure 4 and appendix table B-4). No differences were observed between schools with different proportions of students eligible for the free or reduced-price lunch program or between principals by receipt of Title I funding (appendix table B-4).

These figures on staff abilities match fairly well with the principal reports of use of content standards. While 78 percent of principals report their schools used content standards to guide curriculum and instruction, 76 percent report that most or all of their staff were ready to set or apply these content standards.

## **Strategies to Support Comprehensive Reform**

The survey asked public school principals about the use of a number of specific strategies in support of comprehensive reform to provide a picture of how seriously involved schools were in education reform. The strategies listed were the following:

- A strategic plan for enabling all students to achieve to high levels of performance;
- Professional development to enable staff to teach the content students are expected to learn;
- Instructional materials such as textbooks that expose students to the content they are expected to learn;
- Innovative technologies such as the Internet and telecommunication-supported instruction that expose students to the content they are expected to learn;

- Adaptations so that all students (specifically: limited-English proficient students) are expected to achieve to high levels of performance;
- Adaptations so that all students (specifically: students with learning disabilities) are expected to achieve to high levels of performance;
- Assessments that measure performance against the content students are expected to learn;
- Assessments that are used for school accountability and continuous improvement;
- Parent involvement activities that help parents work with their children to achieve to high levels of performance; and
- Restructuring the school day to teach content in more depth.

For these same strategies, principals also indicated the three for which they most needed information.

Most principals reported that their schools were active in these areas, but only about 1 in 10 said their schools were implementing all 10 strategies to a moderate or great extent. These findings also hold across different types of schools (appendix table B-6). Elementary schools principals (72 percent) were more likely than middle school (50 percent) and high school (42 percent) principals to report that their schools are implementing parent involvement activities (table 1 and appendix table B-6).

Eighty-four percent of principals reported that their schools had professional development to enable staff to teach the content students are expected to learn, while 41 percent reported they need more information on this topic. This finding can be compared to the 76 percent who reported that most or all of their teachers are ready to set or apply new high standards of achievement for their students.

**Table 1.—Percent of principals reporting that they are implementing various strategies in support of comprehensive reform, and percent reporting that they need information on these strategies: 1996**

Strategy	All public schools	Instructional level			Information needed <sup>1</sup>

--Not applicable.

<sup>1</sup>Principals could select up to three strategies for information.

<sup>2</sup>Implementation among schools with these students enrolled.

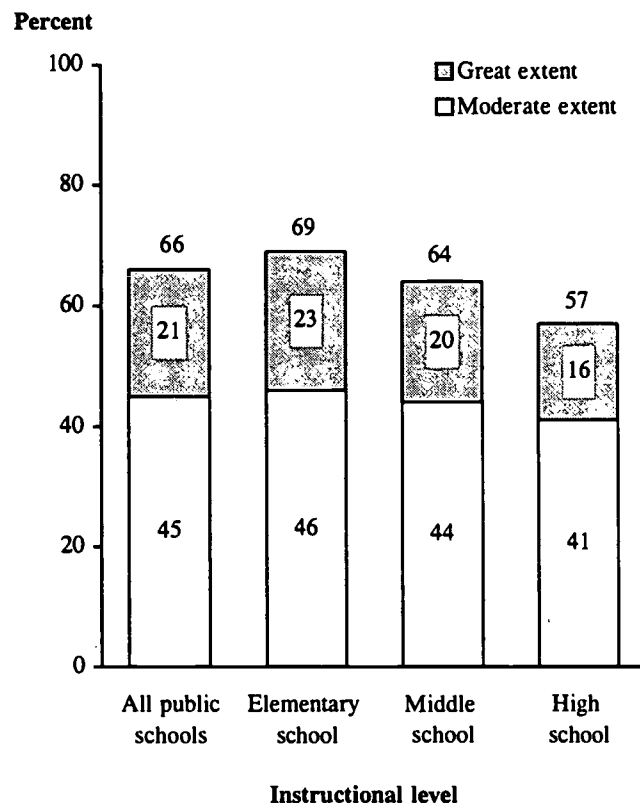

NOTE: This survey included only public schools. Percentages are for a moderate or great extent.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform." FRSS 54, 1996.

Overall, about three-quarters of public school principals (76 percent) reported that their schools use assessments of student performance matched to their content standards to a moderate or great extent, and 79 percent reported using assessments for school accountability (table 1 and appendix table B-6). About two-thirds of all principals (66 percent) reported that their schools express these performance assessments in terms of students meeting specified levels, such as advanced, proficient, and novice (figure 5 and appendix table B-8). Elementary school principals (69 percent) were more likely than high school principals (57 percent) to report that their schools express their assessments in these terms.

Principal reports of use of assessments generally coordinate with their reports of use of content standards. For example, the 78 percent of principals who reported using content standards in all subjects matches well with the 76 percent who claimed to use assessments matched to the standards. However, 32 percent reported needing more information on matching assessments to content standards. This figure appears high, considering that 76 percent reported they currently match assessments to their content standards.

**Figure 5.—Percent of principals who report that their schools use assessments that are expressed in terms of students meeting various levels of performance standards, by instructional level: 1996**

NOTE: This survey included only public schools.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform," FRSS 54, 1996.

Forty percent or more of principals reported that they needed information on each of the following strategies: using innovative technologies such as the Internet and telecommunication-supported instruction that expose students to the content they are expected to learn (43 percent), professional development linked to the standards (41 percent), and parent involvement activities (40 percent) (table 1 and appendix table B-7).

### **Barriers to Application of High Standards to All Students**

The survey asked public school principals the extent to which 10 factors were barriers to the application of high standards to all students in their school (table 2 and appendix table B-16). "All students" could mean students in all grades, students with limited English proficiency, or students with disabilities. Findings for this question provide further detail to help interpret previous findings on prevalence of reform strategies.

**Table 2.—Percent of principals reporting various barriers to applying high standards to all students in the school: 1996**

Barrier	Percent of principals reporting barrier
No barriers reported .....	10
Teaching students who are at different levels.....	56
Inadequacy of parent involvement.....	49
Assessments that do not measure what students can do .....	48
Outdated technology .....	41
Inadequacy of professional development .....	38
Inadequacy of guidelines on what standards to use.....	37

Outdated textbooks.....	22
Language barriers .....	13

NOTE: This survey included only public schools. Percentages are for a moderate or great extent.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform," FRSS 54, 1996.

For all schools, factors cited as moderate or great barriers by close to half of principals were the following: teaching students who are at different levels (56 percent), the inadequacy of parent involvement (49 percent), and assessments that do not measure what students can do (48 percent). The prevalence of several barriers for different types of schools varied. For example, principals of elementary schools with higher proportions of students eligible for free or reduced-priced lunches reported more problems with inadequacy of parent involvement, high student mobility, diversity of student populations, language barriers, teaching students who are at different levels, and assessments that do not measure what students can do than principals of schools with the lowest proportion of these students (table 3 and appendix table B-16).

As mentioned previously, 78 percent of principals say their schools use content standards in all subjects. The positive picture implied by this finding contrasts sharply with the 37 percent of principals who felt the guidelines on standards were inadequate.

The 48 percent of principals who reported the barrier "assessments not measuring what students can do" contrasts with the 76 percent who say they match assessments to content standards. During debriefings held as part of the pretest of the instrument, principals said that they used this category to report, for example, a situation where students in a bilingual class were assessed using an English-language test. The assessment covered the correct content, but the

skills of the students were not adequately measured. These situations may account for a portion of the 48 percent. However, this figure still makes it appear that 76 percent was an overestimate.

In addition, while 84 percent of principals reported that their schools engaged in professional development tied to the standards to a moderate or great extent, 38 percent said that inadequate professional development was a barrier to the application of high standards, calling into question the reports of professional development implementation.

**Table 3.—Percent of elementary school principals reporting various barriers to applying high standards to all students in the school, by percent of students eligible for free or reduced-price school lunch: 1996**

## Methods of Informing Parents About the School's Expectations for Student Learning

Parents who know what standards the school expects students to meet are in a better position to help their children succeed in school (Goals 2000: Educate America Act, section 102). Schools can inform parents of their expectations for student learning in a number of ways. The survey asked public school principals whether their schools used the following four methods of informing parents: providing parents with an overview of the curriculum, providing parents with an overview of the content standards, providing parents with examples of successful student work, and providing information about the entire school's performance and progress in meeting academic expectations (figure 6 and appendix table B-12). Many principals reported that their schools provided parents with a school progress report (88 percent), an overview of the curriculum (81 percent), examples of student work (76 percent), and an overview of the content standards (61 percent).

**Figure 6.—Percent of principals reporting that their schools inform parents about the schools' expectations for student learning in various ways: 1996**

NOTE: Public schools only are included.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform," FRSS 54, 1996.

## Sources of Information and Assistance in Using and Understanding Reform Strategies and Activities

Numerous resources are available to school personnel attempting to implement education reforms. The survey asked public school principals whether 19 specific sources have been helpful to them in trying to understand or use comprehensive reform strategies or activities (table 4 and appendix table B-13). Sources cited as very helpful by 30 percent or more of principals were institutes or workshops (41 percent), other principals (33 percent), the school district (32 percent), and state- or district-sponsored education conferences (31 percent). Less frequently cited sources were U.S. Department of Education regional labs, other U.S. Department of Education offices or programs, the media, and teacher organizations (each with 3 percent).

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform." FRSS 54, 1996.

About half of public school principals most preferred to receive information through workshops and summer institutes (52 percent), and slightly fewer (42 percent) preferred to receive information in hard copy documents such as journal articles and magazines (figure 7 and appendix table B-14). A small proportion (6 percent) preferred to receive information electronically.

**Figure 7.—Percent of principals selecting various formats as their first choice to receive information about comprehensive reform strategies or activities: 1996**

NOTE: This survey included only public schools. Percents may not sum to 100 because of rounding.

## Groups With Influence Over Decisions Related to Reform

Public school principals were asked to rate on a scale from 0 to 5 (where 0 indicated no influence and 5 a great deal of influence), the actual influence they thought that four groups—the state department of education, the local school board, local district administrators, and principals and teachers at the school—have on three types of decisions related to reform at their school. The decisions are establishing curriculum, developing content standards, and developing student performance standards.

In general, high ratings were given by principals to most groups over most decisions, with the local school board generally attributed less influence over each of the three types of decisions (table 5 and appendix table B-10). For example, for decisions related to developing content standards for the school, similar percentages of principals attributed a moderate or great amount of influence to the state department of education, to local district administrators (both 86 percent), and to principals and teachers at the school (85 percent); and 69 percent attributed this level of influence to the local school board.

**Table 5.—Percent of principals reporting a moderate or great deal of influence of various groups over decisions related to reform: 1996**

Group	Decision		
	Establishing curriculum for the school	Developing content standards for the school	Developing student performance standards for the school

## Federal Title I Program

The study estimates from principal reports that about two-thirds of all public schools (66 percent) received some Title I funds in school year 1995-96 (table 6 and appendix table B-17). Principal reports of funding were higher for elementary schools (75 percent) than for middle schools (53 percent) and high schools (50 percent).

**Table 6.—Percent of principals reporting their school's participation in the Title I program: 1996**

School characteristic	Received Title I funds in school year 1995-96	Title I schools		
		Eligible to operate a schoolwide program in school year 1995-96	Plan to operate a schoolwide program in school year 1996-97	Identified as in need of improvement under Title I in school year 1995-96

NOTE: This survey included only public schools.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform," FRSS 54, 1996.

Principals reported that their schools used Title I funds for specific activities, including serving targeted children in a pull-out or in-class setting (88 percent), providing extended-time learning opportunities (64 percent), operating schoolwide programs (36 percent), or providing summer learning activities (37 percent) (table 7 and appendix table B-18). Title I-funded schools may operate schoolwide programs if they meet certain eligibility criteria and devise a comprehensive plan to ensure implementation. For high poverty schools, schoolwide programs combine Title I funds with other federal program funds to support comprehensive reform and improve the entire educational enterprise for all students at the school, not just targeted students. The percentage of principals of Title I schools who reported operating schoolwide programs was higher for elementary schools (51 percent) than for middle schools (19 percent) and high schools (11 percent).

**Table 7.—Percent of principals of Title I schools reporting that they use Title I resources for various purposes, by instructional level: 1996**

Use of Title I resources	All Title I schools	Instructional level		
		Elementary school	Middle school	High school

Principals of Title I schools with schoolwide programs were more likely to report that their schools were identified as in need of improvement under Title I (table 9 and appendix table B-17), as were principals of Title I schools with 75 percent or more of their students eligible for free or reduced-price lunches.

**Table 9.—Percent of principals of Title I schools who report their programs were identified as in need of improvement under Title I in school year 1995-96, by various characteristics: 1996**

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System. "Public School Survey on Education Reform," FRSS 54, 1996.

To gauge their familiarity with recent legislative changes to Title I, principals in Title I-funded schools were asked the extent to which they were familiar with eight specific provisions (table 10 and appendix table B-19). Forty-three percent of principals in Title I-funded schools reported they were familiar with all eight provisions to a moderate or great extent. More principals in schools with schoolwide programs (54 percent) than other Title I schools (34 percent) said they were familiar with all eight provisions. This finding holds true as well for all the specific provisions, with principals in schools with schoolwide programs more likely to report familiarity.

Note that we do not have objective measures of familiarity with the eight provisions. However, other evidence indicates that principals are overly confident about their level of familiarity with Title I. An indirect measure of principals' understanding of Title I are their reports of eligibility to operate a schoolwide program. As shown in table 6 and appendix table B-17, 52 percent of Title I principals in low poverty schools report that they are eligible for schoolwide programs, even though they probably are not. Findings about familiarity should be interpreted cautiously.

Principals reporting familiarity with the provisions were also asked to gauge how much of a change would be required in their schools in order to implement the provisions (table 10 and appendix table B-20). Generally, between 40 and 50 percent of principals reported that moderate or great changes would be required in their schools to implement each provision. There were no substantively interesting differences in reports of difficulty of implementation between schools with schoolwide programs and other Title I schools.

Generally, schools have found that making these changes requires substantial effort, and that the level of effort required is not anticipated at the start of the process. Figures presented above provide evidence that even principals who claim they are familiar with the provisions are probably not fully aware of what implementing the changes would entail, and that they are not very far along in the process of implementation.

**Table 10.—Percent of principals of Title I schools who report . . .  
they are familiar with new provisions in the Title I  
program and who report that these new provisions  
will require changes in their schools: 1996**

## Summary

The survey findings generally describe a high level of use of content and performance standards among public schools, according to principals. Certain strategies in support of reform, such as strategic plans for enabling all students to achieve to high levels of performance, were likely to have been implemented already. However, some barriers to applying high standards to all students were perceived, especially for schools with higher proportions of their student populations eligible for free or reduced-price lunches. These reported barriers include inadequacy of parent involvement, high student mobility, diversity of student populations, language barriers, teaching students who are at different levels, and assessments that do not measure what students can do.

Public school principals found assistance to help them understand and use comprehensive reform strategies and activities, citing institutes or workshops, other principals, the school district, and state- or district-sponsored education conferences as especially helpful. In fact, about half of principals preferred to receive information on reform through institutes or workshops. Less frequently cited sources were U.S. Department of Education regional labs, other U.S. Department of Education offices or programs, the media, and teacher organizations.

Principals of Title I-funded schools generally were not different from those in schools not receiving Title I funds with regard to familiarity with and implementation of comprehensive reform. Principals in Title I schools also reported familiarity with new provisions in the Title I legislation related to comprehensive reform. However, familiarity with provisions does not imply full awareness of what implementing the provisions would entail.

Overall, though, the survey found few differences in reform efforts between different types of schools. Subsequent studies might try to provide a more detailed picture by asking principals to describe the specifics of reform implementation at their school.

**Appendix A**

**Survey Methodology  
and  
Data Reliability**

# **Survey Methodology and Data Reliability**

## **Sample Selection**

The sampling frame for the FRSS *Public School Survey on Education Reform* was constructed from the 1993-94 NCES Common Core of Data (CCD) public school universe file and included over 82,000 public elementary, middle, and high schools. Excluded from the frame were special education, vocational, and alternative/other schools, schools in the territories, and schools with the highest grade lower than grade 1.

A stratified sample of 1,360 schools—534 elementary schools, 375 middle schools, and 451 high schools—was selected for the survey. To select the sample, the schools in the frame were stratified by the three instructional levels, poverty status (based on the percent of students eligible for the free or reduced-price lunch program as recorded in the CCD file) within level, and enrollment size class within poverty status. Within these primary strata, schools were sorted by region and locale to induce limited additional stratification. Since free or reduced-price lunch program participation data were missing for about 24 percent of the schools in the CCD, such schools were placed in a separate stratum for sampling purposes. (Note that an item on the survey questionnaire updated this information for all schools.) High poverty schools were oversampled. Such a design is reasonably efficient for the analysis of the survey results by poverty group within instructional level. Within each instructional level and poverty status group, the sample of schools was selected within size classes with probabilities roughly proportional to the square root of the enrollment of the school. The use of the square root of enrollment to determine the sample allocation is reasonably efficient for estimating both school-level characteristics and quantitative measures correlated with enrollment. Further, the proposed sample allocation permits limited analysis (along a single dimension) by instructional level, locale, and poverty status within level (table A-1).

## **Respondents and Response Rates**

In April of 1996, questionnaires (see appendix D) were mailed to 1,360 public school principals. Seven schools were found to be out of scope (no longer at the same location or not serving the same population), leaving 1,353 eligible schools in the sample. Telephone followup was initiated in mid-May and data collection was completed on July 31, with 1,216 respondents. Principals completed 90 percent of the returned questionnaires; the remaining 10 percent were completed by other administrators at the school. Fifty-five percent of the surveys were returned by mail and 30 percent by fax, and about 15 percent of the responses were taken over the telephone. The final unweighted response rate was 90 percent. The weighted response rate was also 90 percent. Item nonresponse rates ranged from 0.0 to 1.0 percent.

**Table A-1.—Number and percent of responding public schools in the study sample, and estimated number and percent of public schools the sample represents, by school characteristics: 1996**

## **Sampling and Nonsampling Errors**

For estimation purposes, sampling weights were used that reflect each school's overall probability of selection. These weights are also adjusted to compensate for differential nonresponse in the survey. The findings in this report are estimates based on the sample selected and, consequently, are subject to sampling variability.

The survey estimates are also subject to nonsampling errors that can arise because of nonobservation (nonresponse or noncoverage) errors, errors of reporting, and errors made in the collection of the data. These errors can sometimes bias the data. Nonsampling errors include such problems as the differences in the respondents' interpretations of the meaning of the questions; memory effects; misrecording of responses; incorrect editing, coding, and data entry; differences related to the particular time the survey was conducted; and errors in data preparation. While general sampling theory can be used in part to determine how to estimate the sampling variability of a statistic, nonsampling errors are not easy to measure and, for measurement purposes, usually require that an experiment be conducted as part of the data collection procedures or that data external to the study be used.

To minimize the potential for nonsampling errors, the questionnaire was pretested with knowledgeable respondents like those who completed the survey. During the design of the survey and the survey pretest, an effort was made to check for consistency of interpretation of questions and to eliminate ambiguous terms. The questionnaire and instructions were extensively reviewed by the Planning and Evaluation Service and the National Center for Education Statistics. Manual and machine editing of the questionnaire responses were conducted to check the data for accuracy and consistency. Cases with missing or inconsistent items were recontacted by telephone. Imputations for item nonresponse were not implemented, as item nonresponse rates were very low. Data were keyed with 100 percent verification.

## **Variances**

The standard error is a measure of the variability of estimates due to sampling. It indicates the variability of a sample estimate that would be obtained from all possible samples of a given design and size. Standard errors are used as a measure of the precision expected from a particular sample. If all possible samples were surveyed under similar conditions, intervals of 1.96 standard errors below to 1.96 standard errors above a particular statistic would include the true population parameter being estimated in about 95 percent of the samples. This is a 95 percent confidence interval. For example, the estimated percentage of public schools that use content standards to a great extent in reading/language arts is 50 percent and the estimated standard error is 2.3 percent. The 95 percent confidence

interval for this statistic extends from  $[50 - (2.3 \times 1.96)$  to  $50 + (2.3 \times 1.96)]$ , or from 45.5 to 54.5.

Estimates of standard errors were computed using a technique known as jackknife replication. As with any replication method, jackknife replication involves constructing a number of subsamples (replicates) from the full sample and computing the statistic of interest for each replicate. The mean square error of the replicate estimates around the full sample estimate provides an estimate of the variance of the statistic. To construct the replications, 50 stratified subsamples of the full sample were created and then dropped, one at a time, to define 50 jackknife replicates. A proprietary computer program (WESVAR), available at Westat, Inc., was used to calculate the estimates of standard errors.

## **Background Information**

The survey was conducted under contract with Westat, Inc., using the NCES Fast Response Survey System (FRSS). Westat's project director was Elizabeth Farris, and the survey manager was Carin Celebuski. Judi Carpenter and Shelley Burns were the NCES project officers. The data were requested by Nancy Loy and Daphne Hardcastle of the Planning and Evaluation Service (PES) of the U.S. Department of Education. The report was reviewed by the following individuals:

### Outside NCES

- Daphne Hardcastle, PES
- Valena Plisko, PES
- Joanne Bogart, PES
- Elois Scott, PES
- Nancy Loy, OERI

### Inside NCES

- Edith McArthur
- Mary Frase

For more information about the Fast Response Survey System or the *Public School Survey on Education Reform*, contact Shelley Burns, Elementary/Secondary Statistics Division, Office of Educational Research and Improvement, National Center for Education Statistics, 555 New Jersey Avenue, NW, Washington, DC 20208-5651, telephone (202) 219-1463.

## Terms Defined on the Survey Questionnaire

**Comprehensive reform:** Efforts to improve education for all students by establishing high content and performance standards and redesigning the various components of the education system in a coordinated and coherent fashion to support students learning to the standards.

**Disability:** An impairment that substantially limits one or more of the major life activities of individuals.

**ERIC:** Educational Resources Information Center. ERIC is an education database, clearinghouse, and document reproduction service financed by the U.S. Department of Education.

**High standards:** Refers to recent and current education reform activities that seek to establish more challenging expectations for student achievement and performance, such as the National Council of Teachers of Mathematics standards for math, state- or local-initiated standards in various subjects, and those outlined in Goals 2000.

**School-parent compact:** Voluntary written agreements between the school and parents on what each will do to help students succeed in school.

**SSI/USI:** National Science Foundation's Statewide Systemic Initiatives and Urban Systemic Initiatives programs. For these programs, NSF has cooperative agreements with states and urban areas to undertake comprehensive initiatives for education reform in science, mathematics, and technology.

## Classification Variables

- **Locale**

- **City** - a central city of a Metropolitan Statistical Area (MSA).
- **Urban fringe** - a place within an MSA of a central city, but not within its central city.
- **Town** - a place not within an MSA, but with a population greater than or equal to 2,500, and defined as urban by the U.S. Bureau of the Census.
- **Rural** - a place with a population less than 2,500 and defined as rural by the U.S. Bureau of the Census.

- **Eligibility for free or reduced-price lunches through the National School Lunch Program** (available for 75 percent of the sample from the CCD—data for remaining schools taken from survey questionnaire)
  - **Less than 35 percent** of students in the school eligible
  - **35-49 percent** of students in the school eligible
  - **50-74 percent** of students in the school eligible
  - **75 percent or more** students in the school eligible
- **Title I funding**
  - **No Title I** - School principal reported on the questionnaire that the school did not receive Title I funds in school year 1995-96.
  - **Title I nonschoolwide program** - School principal reported on the questionnaire that the school received Title I funds in school year 1995-96, but did not operate a schoolwide program.
  - **Title I schoolwide program** - School principal reported on the questionnaire that the school received Title I funds in school year 1995-96 and operated a schoolwide program.

## **Appendix B**

## **Appendix C**

### **Tables of Standard Errors for Text Tables and Figures**

Table 1a.—Standard errors of the percent of principals reporting that they are implementing various strategies in support of comprehensive reform, and percent reporting that they need information on these strategies: 1996

Strategy	All public schools	Instructional level			
		Elementary school	Middle school	High school	Information needed <sup>1</sup>
Implementing all 10 strategies asked about on the survey .....	1.3	2.1	1.6	1.6	--
Strategic plan .....	1.5	2.4	1.8	3.1	2.2
Professional development .....	1.4	2.0	1.7	3.5	2.4
Instructional materials .....	1.5	2.3	1.8	2.7	1.6
Innovative technologies .....	2.1	3.3	3.0	3.7	2.2
Adaptations for limited-English proficient students <sup>2</sup> .....	2.7	3.8	3.8	3.6	1.4
Adaptations for learning disabled students <sup>2</sup> .....	1.6	2.0	1.5	2.7	1.7
Assessments matched to content standards .....	1.9	2.6	2.6	2.8	2.3
Assessments for school accountability .....	2.1	3.2	2.0	3.2	2.2
Parent involvement activities .....	2.1	3.3	3.0	2.8	2.4
Restructuring the school day .....	2.4	3.6	3.0	3.1	2.1

-- Not applicable.

<sup>1</sup>Principals could select up to three strategies.

<sup>2</sup>Implementation among schools with these students enrolled.

Table 6a.—Standard errors of the percent of principals reporting their school's participation in the Title I program: 1996

Instructional level	Received Title I funds in school year 1995-96	Title I schools		
		Eligible to operate a schoolwide program in school year 1995-96	Plan to operate a schoolwide program in school year 1996-97	Identified as in need of improvement under Title I in school year 1995-96
All public schools .....	2.2	3.3	3.4	1.6
Elementary school .....	3.6	4.1	4.4	2.2
Middle school .....	2.7	4.0	4.4	2.2
High school .....	3.0	5.3	5.0	2.3

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform," FRSS 54, 1996.

Table 7a.—Standard errors of the percent of principals of Title I schools reporting that they use Title I resources for various purposes, by instructional level: 1996

Use of Title I resources	All Title I schools	Instructional level		
		Elementary school	Middle school	High school
Serve targeted children in a pull-out or in-class setting.....	1.3	1.7	2.0	2.9
Provide extended-time learning opportunities for targeted children....	2.9	3.8	4.1	4.5
Improve the entire educational enterprise through a schoolwide program .....	2.4	4.1	2.2	1.9
Provide summer learning opportunities .....	2.4	3.6	4.1	4.7

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform," FRSS 54, 1996.

Table 8a.—Standard errors of the percent of principals of Title I elementary schools reporting that they serve targeted children in a pull-out or in-class setting or operate a schoolwide program, by percent of students eligible for free or reduced-price school lunch: 1996

Use of Title I resources	All Title I elementary schools	Percent of students eligible for free or reduced-price school lunch			
		Less than 35 percent	35 to 49 percent	50 to 74 percent	75 percent or more
Serve targeted children in a pull-out or in-class setting.....	1.7	1.2	4.1	2.5	4.9
Improve the entire educational enterprise through a schoolwide program .....	4.1	8.3	10.9	7.4	2.8

NOTE: Public schools only are included.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Public School Survey on Education Reform," FRSS 54, 1996.

Table 9a.—Standard errors of the percent of principals of Title I schools who report their programs were identified as in need of improvement under Title I in school year 1995-96, by various characteristics: 1996

Title I school characteristic	Identified as in need of improvement under Title I
<b>Title I funding</b>	
Nonschoolwide .....	2.2
Schoolwide.....	2.7
<b>Percent of students eligible for free or reduced-price lunch</b>	
Less than 35 percent.....	3.6
35 to 49 percent.....	3.2
50 to 74 percent.....	3.5
75 percent or more .....	2.8

NOTE: This survey included only public schools.

Table 10a.—Standard errors of the percent of principals of Title I schools who report they are familiar with new provisions in the Title I program and standard errors of the percent who report that these new provisions will require changes in their schools: 1996

Title I provision	Familiar with provision	Change in school required*
<b>Familiar with all 8 provisions</b>		
All Title I schools.....	3.1	-
Nonschoolwide program.....	4.4	-
Schoolwide program.....	4.2	-
<b>Apply high standards</b>		
All Title I schools.....	2.8	3.3
Nonschoolwide program.....	4.4	5.0
Schoolwide program.....	3.5	4.4
<b>More flexibility in identification</b>		
All Title I schools.....	2.4	3.2
Nonschoolwide program.....	3.6	4.7
Schoolwide program.....	3.1	3.8
<b>Extend learning time</b>		
All Title I schools.....	2.9	3.6
Nonschoolwide program.....	4.0	4.8
Schoolwide program.....	3.6	4.7
<b>Minimize pull-out programs</b>		
All Title I schools.....	2.1	2.8
Nonschoolwide program.....	3.6	4.8
Schoolwide program.....	2.4	4.6
<b>Develop a parent involvement policy</b>		
All Title I schools.....	2.0	3.1
Nonschoolwide program.....	3.0	4.7
Schoolwide program.....	2.2	4.5
<b>Develop a school-parent compact</b>		
All Title I schools.....	2.4	2.9
Nonschoolwide program.....	3.3	4.4
Schoolwide program.....	3.5	4.5
<b>Assess student performance</b>		
All Title I schools.....	1.5	2.8
Nonschoolwide program.....	2.6	3.9
Schoolwide program.....	1.8	3.7
<b>Use performance results for school accountability</b>		
All Title I schools.....	1.9	3.8
Nonschoolwide program.....	3.1	5.5
Schoolwide program.....	2.1	4.0

## **Appendix D**

### **Survey Form**

NATIONAL CENTER FOR EDUCATION STATISTICS  
U.S. DEPARTMENT OF EDUCATION  
WASHINGTON, D.C. 20208-5651

**PUBLIC SCHOOL SURVEY ON  
EDUCATION REFORM**  
**FAST RESPONSE SURVEY SYSTEM**

O.M.B. No.: 1850-0727  
EXPIRATION DATE: 5/31/96

This survey is authorized by law (P.L. 103382). While you are not required to respond, your cooperation is needed to make the results of this survey comprehensive, accurate, and timely.

**DEFINITIONS FOR THIS SURVEY:**

**Comprehensive reform:** Efforts to improve education for all students by establishing high content and performance standards and redesigning the various components of the education system in a coordinated and coherent fashion to support students learning to the standards.

**Disability:** An impairment that substantially limits one or more of the major life activities of individuals.

**ERIC:** Educational Resources Information Center. ERIC is an education database, clearinghouse, and document reproduction service financed by the U.S. Department of Education.

**High standards:** Refers to recent and current education reform activities that seek to establish more challenging expectations for student achievement and performance, such as the National Council of Teachers of Mathematics standards for math, state- or local-initiated standards in various subjects, and those outlined in Goals 2000.

**School-parent compact:** Voluntary written agreements between the school and parents on what each will do to help students succeed in school.

**SSI/USI:** National Science Foundation's Statewide Systemic Initiatives and Urban Systemic Initiatives programs. For these programs, NSF has cooperative agreements with states and urban areas to undertake comprehensive initiatives for education reform in science, mathematics, and technology.

Rockville, Maryland 20850

According to the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 1850-0727. The time required to complete this information collection is estimated to average 30 minutes per response, including the time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection. If you have any comments concerning the accuracy of the time estimate(s) or suggestions for improving this form, please write to: U.S. Department of Education, Washington, D.C. 20202-4651. If you have comments or concerns regarding the status of your individual submission of this form, write directly to: National Center for Education Statistics, 555 New Jersey Avenue, N.W., Washington, D.C. 20208.

FRSS Form No. 54, 4/96

*Please refer to definitions on the front cover.*

Currently, there is discussion of the need to establish new high standards for student achievement both in the content that students are expected to learn (content standards) and in the level of performance that students are expected to achieve (performance standards, e.g., proficient, advanced, novice). Standards go beyond general expectations for student learning in that they are written, **may be externally developed**, and are to be applied uniformly by all teachers.

1. To what extent does your school use content standards to guide curriculum and instruction...

	Not at all	Small extent	Moderate extent	Great extent
a. In reading/language arts.....	1	2	3	4
b. In mathematics.....	1	2	3	4
c. In science.....	1	2	3	4
d. In history/social studies.....	1	2	3	4

2. To what extent have the content standards for any subjects in your school changed in the last three years?

No change..... 1 Small extent..... 2 Moderate extent.... 3 Great extent..... 4 No content standards..... 5

3. About what proportion of the staff in your school would you say are ready to set or apply new high standards of achievement for their students?

None..... 1 Some..... 2 Most..... 3 All..... 4

4. Various strategies are being proposed and developed to support comprehensive reform. In column A, indicate the extent to which the following strategies are being implemented in your school. In column B, indicate the areas where information is most needed. For e1 and e2 check the "none enrolled" box if your school does not have those students.

Strategy to support comprehensive reform	A. Extent to which your school is implementing strategy				B. Information most needed
	Not at all	Small extent	Moderate extent	Great extent	(Check three)
a. A strategic plan for enabling all students to achieve to high levels of performance.....	1	2	3	4	
b. Professional development to enable staff to teach the content students are expected to learn.....	1	2	3	4	
c. Instruction materials such as textbooks that expose students to the content they are expected to learn.....	1	2	3	4	
d. Innovative technologies such as the Internet and telecommunications-supported instruction that expose students to the content they are expected to learn.....	1	2	3	4	
e. Adaptations so that all students are expected to achieve to high levels of performance, None specifically enrolled					
e1. Limited-English proficient students..... <input type="checkbox"/>	1	2	3	4	
e2. Students with learning disabilities..... <input type="checkbox"/>	1	2	3	4	
f. Assessments that measure performance against the content students are expected to learn.....	1	2	3	4	
g. Assessments that are used for school accountability and continuous improvement.....	1	2	3	4	
h. Parent involvement activities that help parents work with their children to achieve to high levels of performance.....	1	2	3	4	
i. Restructuring the school day to teach content in more depth.....	1	2	3	4	

5. In which of the following ways does your school inform parents about the school's expectations for student learning?

	Yes	No
a. Parents are provided with an overview of the school curriculum.....	1	2
b. Parents are provided with an overview of content standards.....	1	2
c. Parents are provided with examples of successful student work.....	1	2
d. Parents are provided with information about the entire school's performance and progress in meeting academic expectations.....	1	2

Please refer to definitions on the front cover.

6. To what extent are assessments that your school uses expressed in terms of students meeting various levels of performance standards (e.g., proficient, advanced, novice)?

Not at all ..... 1      Small extent..... 2      Moderate extent..... 3      Great extent ..... 4

7. Using the scale 0 to 5, where 0 is "None" and 5 is a "Great deal," indicate how much actual influence you think each group or person has on decisions concerning A) establishing curriculum in your school, B) developing content standards for your school, and C) developing student performance standards for your school.

A. Establishing curriculum	B. Developing content standards						C. Developing student performance standards											
	Great deal	None					Great deal	None					Great deal	None				
a. State department of education .....	0	1	2	3	4	5	0	1	2	3	4	5	0	1	2	3	4	5
b. Local school board .....	0	1	2	3	4	5	0	1	2	3	4	5	0	1	2	3	4	5
c. Local district administrators .....	0	1	2	3	4	5	0	1	2	3	4	5	0	1	2	3	4	5
d. Principals and teachers at the school .....	0	1	2	3	4	5	0	1	2	3	4	5	0	1	2	3	4	5

8. How helpful have the following sources of information or assistance been in helping you understand or use comprehensive reform strategies or activities such as those mentioned in question 4?

	Not used	Not at all helpful	Somewhat helpful	Very helpful
a. Other principals .....	1	2	3	4
b. Professional principal associations .....	1	2	3	4
c. Teacher unions or organizations .....	1	2	3	4
d. Other administrators .....	1	2	3	4
e. School district .....	1	2	3	4
f. Intermediate or regional education agency .....	1	2	3	4
g. State department of education .....	1	2	3	4
h. U.S. Department of Education Regional Labs .....	1	2	3	4
i. U.S. Department of Education's ERIC .....	1	2	3	4
j. Other U.S. Department of Education offices or programs .....	1	2	3	4
k. National Science Foundation-funded initiatives (e.g., SSI, USI) .....	1	2	3	4
l. National model content standards .....	1	2	3	4
m. State-developed content standards .....	1	2	3	4
n. Institutions of higher education .....	1	2	3	4
o. Professional journals .....	1	2	3	4
p. State- or district-sponsored education conferences .....	1	2	3	4
q. Institutes or workshops .....	1	2	3	4
r. Electronic networks/discussion groups .....	1	2	3	4
s. Media (e.g., newspapers, television) .....	1	2	3	4
t. Other (specify) .....	1	2	3	4
