 IDENTIFIERS Idea Oral Language Proficiency Test; Idea Oral Language Proficiency Test Spanish; *Las Cruces Public Schools NM

ABSTRACT

The report presents findings concerning the language proficiency of elementary, middle, and high school students receiving bilingual services in the Las Cruces Public Schools (New Mexico). The report contains five sections: general information about the bilingual program in the school district; the Idea Language Proficiency Tests (IPT); results of the English and Spanish oral tests; results of the English and Spanish reading and writing tests; and recommendations. Highlights of the findings include the following: an overall decrease in the number of non-English and limited-English speakers and a rise in the number of fluent English speakers; an overall increase in fluent Spanish speakers and decrease in limited-Spanish speakers; differential program effects on LAU ratings of oral proficiency; an overall rise in competent English readers and writers; and an overall rise in competent Spanish readers and writers. In all cases, differential program effects were found, and are summarized, for students at each school level (elementary, middle, high school) and for different bilingual program levels (6-hour, 3-hour, 2-hour, 1-hour). Acronyms used in the analysis and forms used for collecting data are appended. (MSE)

**SUMMARY REPORT FOR 96-97 IPT TESTING RESULTS
AND CONCLUSIONS**

BEST COPY AVAILABLE

SUMMARY REPORT FOR 1996-97 IPT TESTING RESULTS

LAS CRUCES PUBLIC SCHOOLS, NEW MEXICO

The Idea Language Proficiency Report was summarized in two parts. Part one is the summary for the English oral proficiency and the Spanish oral proficiency. Part two summarizes the reading and writing proficiency in both English and Spanish. The oral, reading and writing proficiency of both languages was summarized by district, by levels (elementary, middle school, and high school), and by the number of hours in which the students participated (1-hour, 2-hour, 3-hour, and 6-hour).

ENGLISH ORAL PROFICIENCY

Overall District. In the 1996-97 school year, the English oral proficiency of 2,129 bilingual students was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-English speakers was 8% lower than that of the pretest, and the number of limited English speakers was 6% lower. In contrast, the number of fluent English speakers was 13% more than that found in the pretest. In other words, the number of non-English speakers and limited English Speakers decreased, while the number of fluent English speakers increased. (Figure 1 and Table 7)

Elementary School Level. The oral proficiency of 1, 553 elementary school bilingual students was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-English speakers was 7% lower than that of the pretest, and the number of limited English speakers was 5% lower. On the other hand, the number of fluent English speakers was 14% more than that found in the pretest. (Figure 2 and Table 8)

Middle School Level. The oral proficiency of 320 middle school bilingual students was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-English speakers was 9% lower than that of the pretest, and the number of limited English speakers was 2% lower. However, the number of fluent English speakers was 12% more than that found in the pretest. (Figure 3 and Table 9)

High School Level. The oral proficiency of 256 high school bilingual students was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-English speakers was 10% lower than that of the pretest, and the number of limited English speakers was 7% lower, but the number of fluent English speakers was 17% more than that found in the pretest. (Figure 4 and Table 10)

6-Hour Program. The oral proficiency of 25 students in grades K-1 participating in a 6-hour bilingual program was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-English speakers was 16% lower than that of the pretest, while the number of limited English speakers and fluent English speakers was 4% and 12% more than that found in the pre-test respectively. (Figure 5 and Table 11)

3-Hour Program. The oral proficiency of 537 students in grades 1-12 participating in a 3-hour bilingual program was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-English speakers was 9% lower than that of the pretest, and the number of limited English speakers was 3% lower. However, the number of fluent English speakers was 8% more than that found in the pretest. (See Figure 6 and Table 12).

2-Hour Program. The oral proficiency of 1,494 students in grades K-12 participating in a 2-hour bilingual program was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-English speakers was 11% lower than that of the pretest, and the number of limited English speakers was 7% lower. However, the number of fluent English speakers was 13% more than that found in the pretest. (Figure 7 and Table 13)

1-Hour Program. The oral proficiency of 73 elementary school students (K-3 and 5) participating in a 1-hour bilingual program was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-English speakers was 23% lower than that of the pretest, while the number of limited English speakers and fluent English speakers was 18% and 6% more than that found in the pretest respectively. (Figure 8 and Table 14)

SPANISH ORAL PROFICIENCY

Overall District. In the 1996-97 school year, the Spanish oral proficiency of 2,129 bilingual students was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of limited Spanish speakers was 6% lower than that found in the pretest, while the number of fluent Spanish speakers was 6% more than that of the pretest. (Figure 9 and Table 15).

Elementary School Level. The Spanish oral proficiency of 1,553 elementary school students receiving bilingual services was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of limited Spanish speakers was 8% lower than that found in the pretest, but the number of fluent Spanish speakers was 8% more than that of the pretest. (Figure 10 and Table 16).

Middle School Level. The Spanish oral proficiency of 320 middle school students receiving bilingual services was pre- and post-tested using the IPT Oral. It was concluded that in the post-

test the number of limited Spanish speakers reduced to 0%, and the number of fluent Spanish speakers was 2% more than that of the pretest. (Figure 11 and Table 17)

High School Level. The Spanish oral proficiency of 256 **high school** bilingual students were pre- and post-tested using the Spanish IPT Oral. The analysis concluded that one of the two limited Spanish speakers became a fluent Spanish speaker which left only one limited Spanish speakers at the end of the school year. (Figure 12 and Table 18)

6-Hour Program. The Spanish oral language proficiency of 25 students in grades K-1 participating in a 6-hour program was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of limited Spanish speakers was 28% lower than that of the pretest, while the number of fluent Spanish speakers was 24% higher than that found in the pretest. (Figure 13 and Table 19)

3-Hour Program. The Spanish oral proficiency of 537 students in grades 1-12 receiving bilingual services was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-Spanish speakers was about the same as that of the pretest, but the number of limited Spanish speakers was 4% lower. However, the number of fluent Spanish speakers was 5% higher than that found in the pretest. (Figure 14 and Table 20)

2-Hour Program. The Spanish oral proficiency of 1, 494 students in grades K-12 receiving bilingual services was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-Spanish speakers was about the same as that of the pretest, while the number of limited Spanish speakers was 7% lower. However, the number of fluent Spanish speakers was 7% higher than that found in the pretest. (Figure 15 and Table 21)

1-Hour Program. The Spanish oral proficiency of 73 elementary school students (grades K-3 and 5) receiving bilingual services in a 1-hour program was pre- and post-tested using the IPT Oral. It was concluded that in the post-test the number of non-Spanish speakers was about the same as that of the pretest, while the number of limited Spanish speakers was 4% lower. However, the number of fluent Spanish speakers was 4% higher than that found in the pretest. (Figure 16 and Table 22)

LAU RATINGS (ORAL PROFICIENCY)

Overall District. Both the English and Spanish oral language proficiency of 2, 129 students receiving bilingual services was pre- and post-tested using the IPT English and Spanish Oral. It was concluded that in the post-test the number of A LAU students (non-English speaking students) was 8% lower than that of the pretest and the number of B LAU students (students who

are partial speakers of English) was 6% lower. However, the number of C LAU students (bilingual students with academic needs) was 11% more than that found in the pretest. (Figure 17 and Table 23)

Elementary School Level. The English and Spanish oral proficiency of 1, 553 elementary school students receiving bilingual services was pre- and post-tested using the IPT English and Spanish Oral. It was concluded that in the post-test the number of A LAU students (non-English speaking students) was 7% lower than that of the pretest and the number of B LAU students (students who are partial speakers of English) was 6% lower. However, the number of C LAU students (bilingual students with academic needs) was 10% more than that found in the pretest. (Figure 18 and Table 24)

Middle School Level. The English and Spanish oral proficiency of 320 middle school students receiving bilingual services was pre- and post-tested using the IPT English and Spanish Oral. It was concluded that in the post-test the number of A LAU students (non-English speaking students) was 9% lower than that of the pretest and the number of B LAU students (students who are partial speakers of English) was 2% lower. However, the number of C LAU students (bilingual students with academic needs) was 12% more than that found in the pretest. (Figure 19 and Table 25).

High School Level. The English and Spanish oral proficiency of 256 middle school students receiving bilingual services was pre- and post-tested using the IPT English and Spanish Oral. It was concluded that in the post-test the number of A LAU students (non-English speaking students) was 10% lower than that of the pretest, and the number of B LAU students (students who are partial speakers of English) was 7% lower. However, the number of C LAU students (students with academic needs) was 17% more than that found in the pretest. (Figure 20 and Table 26)

6-Hour Program. The English and Spanish oral proficiency of 25 students (grades K-1) receiving bilingual services in a 6-hour program was pre- and post-tested using the IPT English and Spanish Oral. It was concluded that in the post-test the number of A LAU students was 16% lower than that of the pretest, but the number of B LAU and C LAU students was 4% and 12% more than that found in the pretest respectively. (Figure 21 and Table 27)

3-Hour Program. The English and Spanish oral proficiency of 537 students (grades 1-12) receiving bilingual services in a 3-hour program was pre- and post-tested using the IPT English and Spanish Oral. It was concluded that in the post-test the number of A LAU students was 9% lower than that of the pretest, and the number of B LAU students was 3% lower. However, the number of C LAU students was 11% more than that found in the pretest. (Figure 22 and Table 28)

2-Hour Program. The English and Spanish oral proficiency of 1,494 students (grades 1-12) receiving bilingual services in a 2-hour program was pre- and post-tested using the IPT English and Spanish Oral. It was concluded that in the post-test the number of A LAU students was 7% lower than that of the pretest, and the number of B LAU students was 7% lower. However, the number of C LAU students was 11% more than that found in the pretest. (Figure 23 and Table 29)

1-Hour Program. The English and Spanish oral proficiency of 73 students (grades K-3 and 5) receiving bilingual services in a 6-hour program was pre- and post-tested using the IPT English and Spanish Oral. It was concluded that in the post-test the number of A LAU students was 23% lower than that of the pretest, and the number of B LAU students was 18% lower. However, the number of C LAU students was 4% more than that found in the pretest. (Figure 24 and Table 30)

ENGLISH READING PROFICIENCY

Overall District. The English reading proficiency of 962 students (grades 3-12) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the IPT Reading. The analysis concluded that the number of non-English readers in the post-test was 19% lower than that of the pretest, and the number of limited English readers was 1% lower. However, the number of competent English readers was 19% higher than that found in the pretest. (Figure 25 and Table 31)

Elementary School. The English reading proficiency of 474 elementary students (grades 3-5) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the IPT Reading. It was concluded that the number of non-English readers in the elementary program was 21% lower than that found in the pretest, and the number of limited English readers was 4% lower. However, the number of competent readers was 24% higher than that found in the pretest. (Figure 26 and Table 32)

Middle School. The English reading proficiency of 257 middle school students (grades 6-8) receiving bilingual services in a 2-hour, and 3-hour program was pre- and post-tested using the IPT Reading. The analysis concluded that the number of non-English readers in the middle school program was 14% lower than that found in the pretest, and the number of limited English readers was 4% lower. However, the number of competent English readers was 17% higher than that found the pretest. (Figure 27 and Table 33)

High School. The English reading proficiency of 231 high school students (grades 9-12) receiving bilingual services in a 2-hour, and 3-hour program was pre- and post-tested using the IPT Reading. The analysis concluded that the number of non-English readers in the high school

program was 18% lower than that found in the pretest, while the number of limited English readers and competent readers was 8% and 12% higher than that found in the pre-test respectively. (Figure 28 and Table 34)

3-Hour Program. The English reading proficiency of 378 students (grades 3-12) receiving bilingual services in a 3-hour program was pre- and post-tested using the IPT Reading. The analysis concluded that the number of non-English readers in the 3-hour program was 14% lower than that of the pretest, and the number of limited English readers was 4% lower. However, the number of competent English readers was 17% greater than that found the pretest. (Figure 29 and Table 35)

2-Hour Program. The English reading proficiency of 571 students (grades 3-12) receiving bilingual services in a 2-hour program was pre- and post-tested using the IPT Reading. The analysis concluded that the number of non-English readers in the 2-hour program was 21% lower than that of the pretest. The number of limited English readers between pre- and post-test was about the same. However, the number of competent readers was 20% more than that of the pretest. (Figure 30 and Table 36)

1-Hour Program. The English reading proficiency of 13 students (grades 3 and 5) receiving bilingual services in a 1-hour program was pre- and post-tested using the IPT Reading. The analysis of the IPT Reading post-test for the **non-English readers** found that 5 (38%) students out of 13 became limited English readers, and 1 (8%) became a competent English reader. (Figure 31 and Table 37)

ENGLISH WRITING PROFICIENCY

Overall District. The English writing proficiency of 962 students (grades 3-12) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the IPT Writing. The analysis concluded that the number of non-English writers was 6% lower than that of the pretest, and the number of limited English writers was 17% lower. However, the number of competent English writers was 22% more than that found in the pretest. (Figure 32 and Table 38)

Elementary School. The English writing proficiency of 474 elementary school students (grades 3-5) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the IPT Writing. The analysis concluded that the number of non-English writers in the elementary program was 8% less than that found in the pretest, and the number of limited English writers was 12% lower. However, the number of competent English writers was 19% more than that found in the pretest. (Figure 33 Table 39)

Middle School. The English writing proficiency of 257 middle school students (grades 6-8) receiving bilingual services in a 2-hour and 3-hour program was pre- and post-tested using the IPT Writing. The analysis concluded that the number of non-English writer in the middle school program was 4% lower than that found in the pretest, and the number of limited English writers was 25% lower. However, the number of competent English writers was 29% more than that found in the pretest. (Figure 34 Table 40)

High School. The English writing proficiency of 231 high school students (grades 9-12) receiving bilingual services in a 2-hour and 3-hour program was pre- and post-tested using the IPT Writing. The analysis concluded that the number of non-English writers in the high school program was 4% lower than that was found in the pretest, and the number of limited English writers was 16% lower. However, the number of competent English writers was 20% greater than that found in the pretest. (Figure 35 and Table 41)

3-Hour Program. The English writing proficiency of 378 students (grades 3-12) receiving bilingual services in a 3-hour program was pre- and post-tested using the IPT Writing. The analysis indicated that the number of non-English writers in the 3-hour program was 2% lower than that found in the pretest, and the number of limited English writers was 16% lower, However, the number of competent English writers was 18% more than that found in the pretest. (Figure 36 and Table 42)

2-Hour Program. The English writing proficiency of 571 students (grades 3-12) receiving bilingual services in a 2-hour program was pre- and post-tested using the IPT Writing. The analysis concluded that the number of non-English writers in the 2-hour program was 8% lower than that found in the pretest, and the limited English writers was 16% lower, but the number of competent English writers was 25% higher than that found in the pretest. (Figure 37 and Table 43)

1-Hour Program. The English writing proficiency of 13 elementary school students (grades 3 and 5) receiving bilingual services in a 1-hour program was pre- and post-tested using the IPT Writing. The analysis of the IPT Writing post-test for the non-English Writers indicated that all students remained in the same category. (Figure 38 and Table 44)

ENGLISH LITERACY STATUS

Overall District. The English reading and writing of 962 students (grades 3-12) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the IPT Reading and Writing. It was concluded that the number of non-English proficient students (NEP) was 7% lower than that found in the pretest, and the number of limited English proficient (LEP)

students was 13% lower. However, the number of fluent English proficient (FEP) students was 19% higher than that of the pretest. (Figure 39 and Table 45)

Elementary School. The English reading and writing of 474 elementary school students (grades 3-5) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the IPT Reading and Writing. It was concluded that the number of NEP students was 7% lower than that found in the pretest, and the number of LEP students was 10% lower. However, the number of FEP students was 19% higher than that of the pretest. (Figure 40 and Table 46)

Middle School. The English reading and writing of 257 middle school students (grades 6-8) receiving bilingual services in a 2-hour and 3-hour program was pre- and post-tested using the IPT Reading and Writing. It was concluded that the number of NEP students was 4% lower than that found in the pretest, and the number of LEP students was 19% lower. However, the number of FEP students was 23% higher than that of the pretest. (Figure 41 and Table 47)

High School. The English reading and writing of 231 high school students (grades 9-12) receiving bilingual services in a 2-hour and 3-hour program was pre- and post-tested using the IPT Reading and Writing. It was concluded that the number of NEP students was 5% lower than that found in the pretest, and the number of LEP students was 13% lower. Of 231 students, 41 (18%) became Fluent English proficient. (Figure 42 and Table 48)

3-Hour Program. The English reading and writing of 378 students (grades 3-12) receiving bilingual services in a 3-hour program was pre- and post-tested using the IPT Reading and Writing. It was concluded that the number of NEP students was 3% lower than that found in the pretest, and the number of LEP students was 13% lower. However, the number of FEP students was 16% higher than that of the pretest. (Figure 43 and Table 49)

2- Hour Program. The English reading and writing of 571 students (grades 3-12) receiving bilingual services in a 2-hour program was pre- and post-tested using the IPT Reading and Writing. It was concluded that the number of NEP students was 9% lower than that found in the pretest, and the number of LEP students was 13% lower. However, the number of FEP students was 21% more than that of the pretest. (Figure 44 and Table 50)

1-Hour Program. The English reading and writing of 13 students (grades 3 & 5) receiving bilingual services in a 1-hour program was pre- and post-tested using the IPT Reading and Writing. It was concluded that 1 (8%) out of 12 LEP students became fluent English proficient. (Figure 45 and Table 51)

SPANISH READING PROFICIENCY

Overall District. The Spanish reading proficiency of 962 students (grades 3-12) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the IPT Reading. The analysis concluded that the number of non-Spanish readers in the post-test was 9% lower than that of the pretest, and the number of limited Spanish readers was 4% lower. However, the number of competent Spanish readers was 12% higher than that found in the pretest. (Figure 46 and Table 52)

Elementary School Level. The Spanish reading proficiency of 474 elementary school students (grades 3-5) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the IPT Reading. It was concluded that the number of non-Spanish readers in the elementary program was 16% lower than that found in the pretest, and the number of limited Spanish readers was 1% lower. However, the number of competent readers was 14% higher than that found in the pretest. (Figure 47 and Table 53)

Middle School Level. The Spanish reading proficiency of 257 middle school students (grades 6-8) receiving bilingual services in a 2-hour and 3-hour program was pre- and post-tested using the IPT Reading. The analysis concluded that the number of non-Spanish readers in the middle school program was 6% lower than that found in the pretest, the number of limited Spanish readers was 2% lower. However, the number of competent Spanish readers was 8% higher than that found in the pretest. (Figure 48 and Table 54)

High School Level. The Spanish reading proficiency of 257 high school students (grades 9-12) receiving bilingual services in a 2-hour and 3-hour program was pre- and post-tested using the IPT Reading. The analysis concluded that the number of non-Spanish readers in the high school program was 4% lower than that found in the pretest, while the limited Spanish readers was 10% higher than that of the pretest, and the number of competent readers was 9% more than that of the pretest. (Figure 49 and Table 55)

3-Hour Program. The Spanish reading proficiency of 378 students (grades 3-12) receiving bilingual services in a 3-hour program was pre- and post-tested using the IPT Reading. The analysis concluded that the number of non-Spanish readers in the 3-hour program was 6% lower than that of the pretest, and the number of limited Spanish readers was 6% lower. However, the number of competent Spanish readers was 12% greater than that found the pretest. (Figure 50 and Table 56)

2-Hour Program. The Spanish reading proficiency of 571 students (grades 3-12) receiving bilingual services in a 2-hour program was pre- and post-tested using the IPT Reading. The

analysis concluded that the number of non-Spanish readers in the 2-hour program was 10% lower than that of the pretest, and the number of limited Spanish readers was 1% lower. However, the number of competent readers was 12% more than that of the pretest. (Figure 51 and Table 57)

1-Hour Program. The Spanish reading proficiency of 13 students (grades 3 & 5) receiving bilingual services in a 1-hour program was pre- and post-tested using the IPT Reading. It was concluded that the number of non-Spanish readers was 15% lower than that found in the pretest, while the number of competent readers was 16% more than that of the pretest. (Figure 52 and Table 58)

SPANISH WRITING PROFICIENCY

Overall District. The Spanish writing proficiency of 962 students (grades 3-12) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the IPT Writing. The analysis concluded that the number of non-Spanish writers was 2% lower than that of the pretest, the limited Spanish writers was 12% lower, while the number of competent Spanish writers was 13% more than that found in the pretest. (See Figure 53 and Table 59).

Elementary School Level. The Spanish writing proficiency of 474 elementary school students (grades 3-5) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the IPT Writing. The analysis concluded that the number of non-Spanish writers in the elementary program was 3% lower than that found in the pretest, and the number of limited Spanish writer was 9% lower. However, the number of competent Spanish writers was 13% more than that found in the pretest. (Figure 54 and Table 60)

Middle School Level. The Spanish writing proficiency of 257 middle school students (grades 6-8) receiving bilingual services in a 2-hour and 3-hour program was pre- and post-tested using the IPT Writing. The analysis concluded that the number of non-Spanish writers in the middle school program was the same as in the pretest. The number of limited Spanish writers was 20% lower, while the number of competent Spanish writers was 20% more than that found in the pretest. (Figure 55 and Table 61)

High School Level. The Spanish writing proficiency of 231 high school students (grades 9-12) receiving bilingual services in a 2-hour and 3-hour program was pre- and post-tested using the IPT Writing. The analysis concluded that the number of non-Spanish writers in the high school program was the same as found in the pretest. The number of limited Spanish writers was 10% lower. However, the number of competent Spanish writers was 10% greater than that found in the pretest. (Figure 56 and Table 62)

3-Hour Program. The Spanish writing proficiency of 378 students (grades 3-12) receiving bilingual services in a 3-hour program was pre- and post-tested using the IPT Writing. The analysis concluded that the number of non-Spanish writers in the 3-hour program was 1% lower than that found in the pretest, and the number of limited Spanish writers was 14% lower. However, the number of competent Spanish writers was 15% more than that found in the pretest. (Figure 57 and Table 63)

2-Hour Program. The Spanish writing proficiency of 571 students (grades 3-12) receiving bilingual services in a 2-hour program was pre- and post-tested using the IPT Writing. The analysis indicated that the number of non-Spanish writers in the 2-hour program was 2% lower than that found in the pretest, and the number of limited Spanish writers was 11% lower. However, the number of competent Spanish writers was 14% higher than that found in the pretest. (Figure 58 and Table 64)

1-Hour Program. The Spanish writing proficiency of 13 students (grades 3 & 5) receiving bilingual services in a 1-hour program was pre- and post-tested using the IPT Writing. It was concluded that 1 (8%) out of 12 limited Spanish writers became a competent Spanish writer. (Figure 59 and Table 65)

SPANISH LITERACY STATUS

Overall District. The Spanish reading and writing proficiency of 962 students (grades 3-12) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the Spanish IPT Reading and Writing. It was concluded that the number of non-Spanish proficient (NSP) students was 2% lower than that found in the pretest, and the number of limited Spanish proficient (LSP) students was 10% lower, but the number of fluent Spanish proficient (FSP) students was 12% higher than that of the pretest. (Figure 60 and Table 66)

Elementary School Level. The Spanish reading and writing proficiency of 474 elementary students (grades 3-5) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the Spanish IPT Reading and Writing. It was concluded that the number of NSP students was 4% lower than that found in the pretest, and the number of LSP students was 5% lower. However, the number of FSP students was 9% higher than that of the pretest. (Figure 61 and Table 67)

Middle School Level. The Spanish reading and writing proficiency of 257 middle school students (grades 6-8) receiving bilingual services in a 1-hour, 2-hour, and 3-hour program was pre- and post-tested using the Spanish IPT Reading and Writing. It was concluded that the

number of NSP students was 1% lower than that found in the pretest, and the number of LSP students was 77% lower. However, the number of FSP students was 18% higher than that of the pretest. (Figure 62 and Table 68)

High School Level. The Spanish reading and writing proficiency of 231 high school students (grades 9-12) receiving bilingual services in a 2-hour and 3-hour program was pre- and post-tested using the Spanish IPT Reading and Writing. It was concluded that the number of LSP students was 11% lower than that found in the pretest, while the number of fluent Spanish proficient students was 11% more than that found in the pretest. (Figure 63 and Table 69)

3-Hour Program. The Spanish reading and writing proficiency of 378 students (grades 3-12) receiving bilingual services in a 3-hour program was pre- and post-tested using the Spanish IPT Reading and Writing. It was concluded that the number of non-Spanish proficient (NSP) students was 1% lower than that found in the pretest, and the number of limited Spanish proficient (LSP) students was 12% lower. However, the number of fluent Spanish proficient (FSP) students was 13% higher than that of the pretest. (Figure 64 and Table 70)

2-Hour program. The Spanish reading and writing proficiency of 571 students (grades 3-12) receiving bilingual services in a 2-hour program was pre- and post-tested using the Spanish IPT Reading and Writing. It was concluded that the number of NSP students was 3% lower than that found in the pretest, and the number of LSP students was 9% lower. However, the number of FSP students was 12% more than that of the pretest. (Figure 65 and Table 71)

1-Hour Program. The Spanish reading and writing proficiency of 13 students (grades 3 and 5) receiving bilingual services in a 1-hour program was pre- and post-tested using the Spanish IPT Reading and Writing. It was concluded in the post-test all 13 students who were pre-tested as limited Spanish proficient remained in the same category. (Figure 66 and Table 72)

CONCLUSIONS

The Idea Language Proficiency Test (IPT) results were concluded in three parts: (1) English and Spanish IPT Oral, (2) English IPT Reading and Writing, and (3) Spanish IPT Reading and Writing.

ENGLISH AND SPANISH IPT ORAL

1. English Oral Proficiency. At the end of the 1996-97 school year, the percentage increase of the students who became fluent English speakers (FES) was 13% for the district, 13% for the

elementary school level, 14% for the middle school level, and 17% for the high school level. The highest increase was (17%) at the high school level.

When comparing the number of hours in which the students participated (1-hour, 2-hour, 3-hour and 6-hour), it was concluded that the percentage increase of the students who became fluent English speakers was 12% for the 6-hour program, 12% for the 3-hour program, 13% for the 2-hour program, and 6% for the 1-hour program. The highest increase was (13%) in the 2-hour program and the least increase was (6%) in the 1-hour program.

2. Spanish Oral Proficiency. At the end of the 1996-97 school year, the percentage increase of the students who became fluent Spanish speakers (FSS) was 6% for the district, 8% for the elementary school level, and 2% for the middle school level. At the high school level, only two students were pre-tested as limited Spanish speakers. At the end of the school year, one out of the two students became a fluent Spanish speaker.

When comparing the number of hours in which the students participated (1-hour, 2-hour, 3-hour and 6-hour), it was concluded that the percentage increase of the students who became fluent Spanish speakers was 24% for the 6-hour program, 5% for the 3-hour program, 7% for the 2-hour program, and 4% for the 1-hour program. The highest increase was (24%) in the 6-hour program, and the least increase was (4%) in the 1-hour program.

3. LAU Rating. The LAU rating is used to determine if a student is monolingual in a language other than English, partial speakers of English, or bilingual students with academic needs. At the end of the school year, the analysis concluded that the percentage increase of the students who became bilingual students with academic needs was 11% for the district, 10% for the elementary school level, 12% for the middle school level, and 17% for the high school level. The highest increase was 17% at the high school level.

When comparing the program hour in which the students participated (1-hour, 2-hour, 3-hour and 6-hour), it was concluded that the percentage increase of the students who became bilingual students with academic needs was 12% for the 6-hour program, 11% for the 2-hour and 3-hour program, and 4% for the 1-hour program. The most increase was (12%) in the 6-hour program and the least increase was (4%) in the 1-hour program.

ENGLISH IPT READING AND WRITING

1. English Reading Proficiency. At the end of the 1996-97 school year, the percentage increase of the students who became competent English readers (CER) was 19% for the district, 24% for the elementary school level, 17% for the middle school level, and 12% for the high school

level. The greatest increase was (24%) at the elementary school level and the least increase was (12%) at the high school level.

When comparing the program hour in which the students participated (1-hour, 2-hour, and 3-hour), it was concluded that the percentage increase of the students who became competent readers was 17% for the 3-hour program, 20% for the 2-hour program, and 8% for the 1-hour program. The greatest increase was (20%) in the 2-hour program and the least was (8%) in the 1-hour program.

2. English Writing Proficiency. At the end of the 1996-97 school year, the percentage increase of the students who became competent English writers (CEW) was 22% for the district, 19% for the elementary school level, 29% for the middle school level, and 20% for the high school level. All levels seem to have a high increase in the writing proficiency. However, the highest increase was (29%) at the middle school level.

When comparing the program hour in which the students participated (1-hour, 2-hour, and 3-hour), it was concluded that the percentage increase of the students who became competent writers was 18% for the 3-hour program and 25% for the 2-hour program. No competent English writers were found in the 1-hour program. The highest increase was (25%) in the 2-hour program.

3. English Literacy Status. The reading and writing proficiency was used to determine if a student is non-English proficient (NEP), limited English proficient (LEP), or fluent English proficient (FEP). At the end of the 1996-97 school year, the percentage increase of the students who became fluent English proficient (FEP) was 19% for the district, 19% for the elementary school level, 23% for the middle school level, and 18% for the high school level. The greatest increase was (23%) at the middle school level.

When comparing the number of hours in which the students participated (1-hour, 2-hour, and 3-hour), it was concluded that the percentage increase of the students who became competent readers was 16% for the 3-hour program, 21% for the 2-hour program, and 8% for the 1-hour program. The greatest increase was (21%) in the 2-hour program and the least was (8%) in the 1-hour program.

SPANISH IPT READING AND WRITING

1. Spanish Reading Proficiency. At the end of the 1996-97 school year, the percentage increase of the students who became competent Spanish readers (CSR) was 12% for the district, 14% for the elementary school level, 8% for the middle school level, and 9% for the high school

level. The greatest increase was (14%) at the elementary school level and the least increase was (8%) at the middle school level.

When comparing the program hour in which the students participated (1-hour, 2-hour, and 3-hour), it was concluded that the percentage increase of the students who became competent readers was 12% for the 3-hour program, 12% for the 2-hour program, and 16% for the 1-hour program. The greatest increase was (16%) in the 1-hour program.

5. Spanish IPT Writing. At the end of the 1996-97 school year, the percentage increase of the students who became competent Spanish writers (CSW) was 13% for the district, 13% for the elementary school level, 20% for the middle school level, and 10% for the high school level. The highest increase was (20%) at the middle school level and the least was (10%) at the high school level.

When comparing the number of hours in which the students participated (1-hour, 2-hour, and 3-hour), it was concluded that the percentage increase of the students who became competent writers was 15% for the 3-hour program and 14% for the 2-hour program, and 8% for the 1-hour program. The percentage increase in the 2-hour and the 3-hour program was similar. The least increase was (8%) in the 2-hour program.

3. Spanish Literacy Status. The reading and writing proficiency was used to determine if a student is non-Spanish proficient (NSP), limited Spanish proficient (LSP), or fluent Spanish proficient (FSP). At the end of the 1996-97 school year, the percentage increase of the students who became fluent Spanish proficient (FSP) was 12% for the district, 9% for the elementary school level, 18% for the middle school level, and 11% for the high school level. The greatest increase was (18%) at the middle school level and the least increase was (9%) at the elementary level.

When comparing the number of hours in which the students participated (1-hour, 2-hour, and 3-hour), it was concluded that the percentage increase of the students who became competent readers was 13% for the 3-hour program, and 12% for the 2-hour program. The percentage increase in the 3-hour and 2-hour program was similar. No increase was found in the 1-hour program.

1996-97 BILINGUAL EDUCATION PROGRAM EVALUATION

LAS CRUCES PUBLIC SCHOOLS

The main purpose of the report is to present the language proficiency of 1996-97 elementary, middle school and high school students receiving bilingual services in the Las Cruces Public Schools. This report is composed of six sections: (1) general information about the bilingual program implemented in the district, (2) the Idea Language Proficiency Tests (IPT), (3) the results of IPT Oral, (4) the results of IPT Reading and Writing, (5) Recommendations, and (6) acronyms used in the analysis as well as some forms for collecting data. A summary and conclusions for the report are presented in the front section of the report.

1. GENERAL INFORMATION ABOUT BILINGUAL EDUCATION PROGRAM

In the 1996-97 school year, twenty elementary schools, five middle schools and three high schools in the Las Cruces Public Schools provided bilingual services to LEP students. Due to the lack of teachers endorsed in bilingual education, all schools implemented a Transitional Bilingual Education Program (TBE), except for three elementary schools which had a different program in addition to the TBE program. One of these elementary schools served LEP students in a Two-Way Immersion or Dual Language Program in two classrooms, kindergarten and first grade. The other two served a classroom of each grade, grades 1-5 in a Maintenance Bilingual Education Program (MBE). Transitional bilingual schools implemented the program in different manners. Some implemented a 1-hour program, some implemented a 2-hour program, some implemented a 3-hour program, and some implemented a different-hour program at different grade levels. Table 1 below presents the number of students at each level receiving bilingual education services in different program hours.

Table 1: Number of 1996-97 Students Participating in the Bilingual Program Classified by Level and by Program Hour

Level	1-Hour	2-Hour	3-Hour	6-Hour	Total
Elementary School	73	1,217	238	25	1,553
Middle School		156	164	0	320
High School		121	135	0	256
TOTAL	73	1,494	537	25	2,129

Table 1 indicates that in the 1996-97 school year, 1,553 elementary school students participated in a 1-hour, 2-hour, 3-hour, and 6-hour bilingual education program, 320 middle school students participated in a 2-hour and 3-hour program, and 256 high school students participated in a 2-hour and

3-hour program. The students were placed in the bilingual education program based on the procedures stated below.

In the Las Cruces Public Schools, all students who are new to the district will be given a Home Language Survey to determine if a language other than English is used or spoken at home. Any students whose Home Language Survey indicates another language is used or spoken at home are identified as PHLOTE (pupil whose home language is other than English). The language proficiency of all PHLOTE students will be assessed using the Idea Language Proficiency Tests (IPT). PHLOTE students whose home language is Spanish will be placed in a bilingual classroom if the language proficiency indicates that the students need bilingual education services. The criteria for providing services to bilingual students are summarized in the next paragraph.

In the fall semester, grades K-2 students who are identified as PHLOTE will be pre-tested using the IPT Oral. PHLOTE students in grades K-2 who were pre-tested by the IPT Oral as LAU A (non-English speakers), LAU B (partial speakers of English), and LAU C students (bilingual students with an academic need) will be provided bilingual services. Grades 3-12 students who are pre-tested by the IPT Oral as LAU A, B and C students will be given the IPT Reading and Writing to determine if any of them need bilingual education services. A, B or C LAU students whose reading or writing proficiency is not at the competent level will be placed in bilingual education classes to receive services. Toward the end of the spring semester, the language proficiency of all students will be reassessed using the same instrument. The results will be used for reclassifying students into an appropriate class in the next school year and also for program modification purposes. The next section summarizes the Idea Language Proficiency Test. .

2. IDEA LANGUAGE PROFICIENCY TEST (IPT)

The Idea Language Proficiency Test (IPT) consists of three tests including IPT Oral, IPT Reading and IPT Writing. The tests are used to assess the student's oral, reading and writing proficiency. The information of each test is summarized as follows:

IPT Oral. The IPT Oral is a normed test; it is an individual test. The oral test has two volumes, IPT 1 and IPT 2. IPT 1 is for grades K-6 and IPT 2 is for grades 7-12. (Table 1 presents the IPT testing materials.) The average testing time for the student is 14 minutes. Time will vary depending upon the promptness of responses by the student. Students frequently will not need to complete the test or will not need to start at the beginning of the test, so testing time will often be very short. It is recommended that a tester establish the beginning level for testing. Generally, students are to begin testing at the beginning of the test, working their way through the test, establishing a base for moving up. However, when a tester has knowledge that a student has basic oral skills (English or Spanish)

either from her/his own contact with the student or from school records, s/he may use the criteria suggested in the testing manual for selecting the beginning level for that student.

Table 2: IPT Oral, Reading and Writing Used at Each Grade Level

Grade	IPT Oral		IPT Reading & Writing	
	English	Spanish	English	Spanish
K-1	IPT 1C	IPT 1	Not Applicable	Not Applicable
2-3	IPT 1C	IPT 1	IPT 1B	IPT 1
4-5	IPT 1C	IPT 1	IPT 2B	IPT 2
6	IPT 1C	IPT 1	IPT 2B	IPT 2
7-8	IPT 2B	IPT 2	IPT 3B	IPT 3
9-12	IPT 2B	IPT 2	IPT 3B	IPT 3

The IPT Oral in both English and Spanish is to assess four basic areas of oral language proficiency including Vocabulary, Comprehension, Syntax, and Verbal Expression, which includes articulation. The test consists of five sections (section B through F) and six levels of difficulties tested: Level A, B, C, D, E, and F. When giving the test to a student, the appropriate book of IPT Test Pictures and the corresponding Test Booklet are needed. The student who is administered the IPT oral in either English or Spanish will be designated in one of the three categories depending upon the oral proficiency s/he has in that language. The English categories include non-English speaker, limited English speaker, and fluent English speaker. The Spanish categories are non-Spanish speaker, limited Spanish speaker, and fluent Spanish speaker. Table 3 below presents the IPT Score Designation.

Table 3: IPT Score Designation

English IPT Oral				Spanish IPT Oral			
Elm	Mid	High	Designation	Elm	Mid	High	Designation
ANES BNES CNES	ANES BNES CNES	ANES	NES	ANSS BNSS	ANSS BNSS	ANSS	NSS
BLES CLES DLES ELES	BLES CLES DLES ELES	BLES CLES DLES ELES	LES	BLSS CLSS DLSS	BLSS CLSS DLSS ELSS	BLSS CLSS DLSS ELSS	LSS
CFES DFES EFES FFES	FFES MFES	FFES MFES	FES	CFSS DFSS EFSS FFSS MFSS	EFSS FFSS MFSS	FFES MFSS	FSS

The scores of IPT English Oral and IPT Spanish Oral of each student are used to determine the LAU rating for the student (See Table 4 below for LAU classification). LAU A, B, and C students are placed in the bilingual programs. In addition to the IPT Oral assessment, students in grades 2-12 are administered IPT Reading and Writing in both languages. An overview of the IPT Reading and Writing is presented in the next section.

Table 4: IPT Oral Classification and LAU Ratings

English Oral	Spanish Oral	LAU	Description
NES	NSS LSS FSS	A	Monolingual in a language other than English
LES	NSS LSS FSS	B	Partial Speakers of English
FES	FSS	C	Bilingual students with academic needs
FES	LSS	D	Bilingual students who are achieving academically in the curriculum
FES	NSS	E	English monolingual students

NES = Non-English Speaker
NSS = Non-Spanish Speaker

LES = Limited English Speaker
LSS = Limited Spanish Speaker

FES = Fluent English Speakers
FSS = Fluent Spanish Speaker

IPT Reading. The IPT Reading in both English and Spanish has three volumes: IPT 1 for grades 2-3, IPT 2 for grades 4-6, and IPT 3 for grades 7-12. The IPT Reading consists of five parts: Vocabulary, Vocabulary in Context, Reading for Understanding, Reading for Life Skills, and Language Usage.

The Vocabulary Test contains 10 items that test vocabulary of students' grade levels representing labels, descriptive terms, and action words. For examples, the IPT 1 Vocabulary subtest tests second and third-grade vocabulary, IPT 2 Vocabulary subtest assesses fourth, fifth, and sixth-grade vocabulary, and IPT 3 Vocabulary subtest assess seventh through twelfth-grade vocabulary. The Vocabulary in Context subtest contains 10 sentences, each with a missing word or words, that test whether or not students can select appropriate words when they are embedded in contextual situations. The third subtest is Reading for Understanding which assesses students' reading comprehension. The test contains stories and poems for students to read for details, main ideas, feelings and tone, cause and effect relationship, prediction, and interpretation. The fourth part is Reading for Life Skills test. This test features several real life situations to assess the applications of language. The last part is the Language Usage subtest which tests students' usage of language. The main purpose is to assess

whether a student can discriminate and select from a number of syntactic structures, those which minimize miscommunication and enhance understanding.

IPT Writing. The IPT Writing also has three volumes: IPT 1 for grades 2-3, IPT 2 for grades 4-6, and IPT 3 for grades 7-12. The IPT Writing consists of three parts to assess different domains of writing. Part one (Conventions) contains 10 items to test the mechanics of writing including capitalization, punctuation, and abbreviations. Part two features a series of three sequential pictures for each of two situations to elicit short writing samples about what is happening in the pictures. Each writing sample is scored holistically. For IPT 1 and 2 (grades 2-6, the third part features two pictures, one of which will be the stimulus for a student story. For IPT 3 (grades 7-12), the student select one out of two paragraphs to complete. The student has the choice to write about that situation s/he finds more interesting. This story represents the student's best work and is scored holistically. The rating number for the writing of part two and three is from 0-3. A rating number of 0 is non-expressive, 1 is very limited, 2 is limited, and 3 is competent. The rubrics are presented in Table 5 (Ballard & Tighe).

Table 5: Rubrics for Rating Students' Writing

The Student Response:	Score and Descriptor
<ul style="list-style-type: none"> • is unintelligible • fails to respond to topic • is in language other than English 	#0: NON-EXPRESSIVE
<ul style="list-style-type: none"> • is barely intelligible • inadequately addresses the topic • contains few complete thoughts • makes little sense • uses vocabulary and syntax that are unacceptable for student's grade level • demonstrates significant weaknesses in capitalization, punctuation, word spacing and spelling according to grade-level standards; frequent misspelling of words interferes with understanding • is of poor quality and/or insufficient quantity to meet grade-level standards 	#1: VERY LIMITED
<ul style="list-style-type: none"> • is mostly intelligible • addresses the topic in general • expresses some complete thoughts • makes sense even though disorganization of ideas may be evident • uses vocabulary and syntax that are partially appropriate for grade-level standards • uses capitalization, punctuation, word spacing, and spelling that partially meet grade-level standards • is partially lacking the quality and/or quantity to meet grade-level standards 	#2: LIMITED
<ul style="list-style-type: none"> • is intelligible • addresses the topic • expresses complete thoughts • makes sense and the organization of ideas is logical • uses capitalization, punctuation, word spacing, and spelling that are appropriate for student's grade level; almost no errors are made and those made do not interfere with understanding • is of satisfactory quality and sufficient quantity to meet grade-level standards 	#3: COMPETENT (Must fulfill all criteria)

The scores from IPT English Reading and Writing are used to determine the literacy status of the student if s/he is a non-English proficient (NEP), limited English proficient (LEP), or fluent English proficient (FEP) student, and the scores from the IPT Spanish Reading and Writing are used to determine if a student is a non-Spanish proficient (NSP), limited Spanish proficient (LSP), or fluent Spanish proficient (FSP) student/ Table 6 presents the reading and writing classifications as well as the literacy status in English and Spanish.

Table 6: IPT Reading and Writing Classification

IPT Reading & Writing Assessment	Reading & Writing Designation	Literacy Status	Definition
ENGLISH	NER/NEW	NEP	NEP = Non-English Proficient
	NER/LEW NER/CEW LER/NEW LER/LEW LER/CEW CER/NEW CER/LEW	LEP	NER = Non-English Reader LER = Limited English Reader CER = Competent English Reader NEW = Non-English Writer LEW = Limited English Writer CEW = Competent English Writer LEP = Limited English Proficient
	CER/CEW*	FEP*	FEP = Fluent English Proficient
SPANISH	NSR/NSW	NSP	NSP = Non-Spanish Proficient
	NSR/LSW NSR/CSW LSR/NSW LSR/LSW LSR/CSW CSR/NSW CSR/LSW	LSP	NSR = Non-Spanish Reader LSR = Limited Spanish Reader CSR = Competent Spanish Reader NSW = Non-Spanish Writer LSW = Limited Spanish Writer CSW = Competent Spanish Writer LSP = Limited Spanish Proficient
	CSR/CSW	FSP	FSP = Fluent Spanish Proficient

3. REPORT ON IPT ORAL

This section consists of three main parts. The first part is pre- and post-test results of English IPT Oral. The second parts presents pre- and post-test results of Spanish IPT Oral, and the last part summarizes the pre- and post-test LAU ratings.

3.1 Pre- and Post-test Results for ENGLISH IPT Oral. The English IPT Oral are presented in three categories: pre- and post-test results of English IPT Oral by overall district, pre- and

post-test results of English IPT Oral by levels (elementary, middle school and high school)), and pre- and post-test results of English IPT Oral by program hours in which the students participated (1-hour, 2-hour, 3-hour, and 6-hour).

Figure 1: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for **Overall District**

Table 7: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for **Overall District**

DISTRICT		BOE--Posttest		
BOEP--Pretest	NES	LES	FES	TOTAL
NES	320 (56.54%)	201 (35.51%)	45 (7.95%)	566 (26.59%)
LES	82 (11.14%)	423 (57.47%)	231 (31.39%)	736 (34.57%)
FES	0 (0%)	0 (%)	827 (100%)	827 (38.84%)
TOTAL	402 (18.88%)	624 (29.31%)	1103 (51.81%)	2129 (100%)

The English oral proficiency of 2, 129 bilingual students was pre- and post-tested using the English IPT Oral. The analysis for the pretest indicated that 566 (27%) students were non-English speakers (NES), 736 (35%) were limited English speakers (LES), and 827 (39%) were fluent English speakers (FES).

The analysis of the English IPT Oral post-test for the **non-English speakers** showed that out of 566 students, 132 (34%) became limited English speakers and 45 (8%) became fluent English speakers. For the **limited English speakers**, it was found that 231 (31%) students out of 545 became fluent English speakers.

It was concluded that in the post-test the number of non-English speakers was 8% lower than that of the pretest, and the number of limited English speakers was 6% lower. However, the number of fluent English speakers was 13% more than that found in the pretest.

Figure 2: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for **Elementary** School Students

Table 8: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for **Elementary** School Students

Elementary Level	BOE--Posttest			
BOEP--Pretest	NES	LES	FES	TOTAL
NES	259 (58.33%)	150 (33.78%)	35 (7.88%)	444 (28.59%)
LES	76 (13.55%)	325 (57.93%)	160 (28.52%)	561 (36.12%)
FES	0 (0%)	0 (0%)	548 (100%)	548 (35.29%)
TOTAL	335 (21.57%)	475 (30.59%)	743 (47.84%)	1553 (100%)

The English oral proficiency of 1,553 **elementary** bilingual students was pre- and post-tested using the English IPT Oral. The analysis for the pretest indicated that 444 (29%) students were non-English speakers (NES), 561 (36%) were limited English speakers (LES), and 548 (35%) were fluent English speakers (FES).

The analysis of the English IPT Oral post-test for the **non-English speakers** showed that out of 566 students, 150 (33%) became limited English speakers and 35 (8%) became fluent English speakers. For the **limited English speakers**, it was found that 160 (29%) students out of 545 became fluent English speakers.

It was concluded that in the post-test the number of non-English speakers was 7% lower than that of the pretest, and the limited English speakers was 5% lower. However, the number of fluent English speakers was 14% more than that found in the pretest.

Figure 3: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for **Middle School Students**

Table 9: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for **Middle School Students**

Middle School		BOE--Posttest		
BOEP--Pretest	NES	LES	FES	TOTAL
NES	34 (53.13%)	23 (35.94%)	7 (10.94%)	64 (20%)
LES	1 (1.56%)	33 (51.56%)	30 (46.88%)	64 (20%)
FES	0 (0%)	0 (0%)	192 (100%)	192 (60%)
TOTAL	35 (10.94%)	56 (17.50%)	229 (71.56%)	320 (100%)

The English oral proficiency of 320 **middle school** bilingual students was pre- and post-tested using the English IPT Oral. The analysis for the pretest indicated that 64 (20%) students were non-English speakers (NES), 64 (20%) were limited English speakers (LES), and 192 (60%) were fluent English speakers (FES).

The analysis of the English IPT Oral post-test for the **non-English speakers** showed that out of 64 students, 23 (36%) became limited English speakers and 7 (11%) became fluent English speakers. For the **limited English speakers**, it was found that 30 (47%) students out of 64 became fluent English speakers. It was concluded that in the post-test the number of non-English speakers was 9% lower than that of the pretest, and the number of limited English speakers was 2% lower. However, the number of fluent English speakers was 12% more than that found in the pretest.

Figure 4: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for **High School** StudentsTable 10: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for **High School** Students

High School	BOE--Posttest			
BOEP--Pretest	NES	LES	FES	TOTAL
NES	27 (46.55%)	28 (48.28%)	3 (5.17%)	58 (22.66%)
LES	5 (4.50%)	65 (58.56%)	41 (36.94%)	111 (43.36%)
FES	0 (0%)	0 (0%)	87 (100%)	87 (33.98%)
TOTAL	32 (12.50%)	93 (36.33%)	131 (51.17%)	256 (100%)

The English oral proficiency of 256 **high school** bilingual students was pre- and post-tested using the English IPT Oral. The analysis for the pretest indicated that 58 (23%) students were non-English speakers (NES), 111 (43%) were limited English speakers (LES), and 87 (34%) were fluent English speakers (FES).

The analysis of the English IPT Oral post-test for the **non-English speakers** showed that out of 58 students, 28 (48%) became limited English speakers and 3 (5%) became fluent English speakers. For the **limited English speakers**, it was found that 41 (37%) students out of 111 became fluent English speakers.

It was concluded that in the post-test the number of non-English speakers was 10% lower than that of the pretest, and the number of limited English speakers was 7% lower. However, the number of fluent English speakers was 17% more than that found in the pretest.

Figure 5: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for Students Participating in a 6-Hour Program

Table 11: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for Students Participating in a 6-Hour Program

BOEP--Pretest	BOE--Posttest			TOTAL
	NES	LES	FES	
NES	12 (70.59%)	4 (23.53%)	1 (5.88%)	17 (68%)
LES	1 (16.67%)	3 (50%)	2 (33.33%)	6 (24%)
FES	0 (0%)	0 (0%)	2 (100%)	2 (8%)
TOTAL	13 (52%)	7 (28%)	5 (20%)	25 (100%)

Out of the district's 2, 129 bilingual students, 25 received services in a **6-hour** or two-way immersion program. All students were pre- and post-tested using the English IPT Oral. The analysis for the pretest indicated 17 (68%) students were non-English speakers (NES), 6 (24%) were limited English speakers (LES), and 2 (8%) were fluent English speakers (FES).

The analysis of the English IPT Oral post-test for the **non-English speakers** showed that out of 17 students, 4 (24%) became limited English speakers and 1 (6%) became fluent English speakers. For the **limited English speakers**, it was found that 2 (33%) students out of 6 became fluent English speakers.

It was concluded that in the post-test the number of non-English speakers was 16% lower than that of the pretest, while the number of limited English speakers and the number of fluent English speakers was 4% and 12% more than that found in the pretest respectively.

Figure 6: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for Students Participating in a **3-Hour** Program

Table 12: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for Students Participating in a **3-Hour** Program

Bilingual 3 hrs.	BOE--Posttest			
BOEP--Pretest	NES	LES	FES	TOTAL
NES	71 (55.04%)	48 (37.21%)	10 (7.75%)	129 (24.02%)
LES	11 (6.71%)	101 (61.59%)	52 (31.71%)	164 (30.54%)
FES	0 (0%)	0 (0%)	244 (100%)	244 (45.44%)
TOTAL	82 (15.27%)	149 (27.75%)	306 (56.98%)	537 (100%)

Out of the district's 2, 129 bilingual students, 537 received services in a **3-hour** program. All students were pre- and post-tested using the English IPT Oral. The analysis for the pretest indicated 129 (24%) students were non-English speakers (NES), 164 (31%) were limited English speakers (LES), and 244 (45%) were fluent English speakers (FES).

The analysis of the English IPT Oral post-test for the **non-English speakers** showed that out of 129 students, 48 (38%) became limited English speakers and 10 (8%) became fluent English speakers. For the **limited English speakers**, it was found that 52(32%) students out of 164 became fluent English speakers.

It was concluded that in the post-test the number of non-English speakers was 9% lower than that of the pretest, and the number of limited English speakers was 3% lower. However, the number of fluent English speakers was 12% more than that found in the pretest.

Figure 7: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for Students Participating in a **2-Hour** Program

	Bilingual 2 hrs.		BOE--Posttest	
BOEP--Pretest	NES	LES	FES	TOTAL
NES	222 (57.36%)	132 (34.11%)	33 (8.53%)	387 (25.90%)
LES	69 (12.66%)	302 (55.41%)	174 (31.93%)	545 (36.48%)
FES	0 (0%)	0 (0%)	562 (100%)	562 (37.62%)
TOTAL	291 (19.48%)	434 (29.05%)	769 (51.47%)	1494 (100%)

Out of the district's 2,129 bilingual students, 1,494 received services in a **2-hour** program. All students were pre- and post-tested using the English IPT Oral. The analysis for the pretest indicated 387 (26%) students were non-English speakers (NES), 545 (36%) were limited English speakers (LES), and 562 (38%) were fluent English speakers (FES).

The analysis of the English IPT Oral post-test for the **non-English speakers** showed that out of 387 students, 132 (34%) became limited English speakers and 33 (9%) became fluent English speakers. For the **limited English speakers**, it was found that 174 (32%) students out of 545 became fluent English speakers.

It was concluded that in the post-test the number of non-English speakers was 11% lower than that of the pretest, and the number of limited English speakers was 7% lower. However, the number of fluent English speakers was 13% more than that found in the pretest.

Figure 8: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for Students Participating in a **1-Hour** Program

Table 14: Distribution of 1996-97 Pre- and Post-test of English IPT Oral for Students Participating in a **1-Hour** Program

Bilingual 1 hr.		BOE--Posttest		
BOEP--Pretest	NES	LES	FES	TOTAL
NES	15 (45.45%)	17 (51.52%)	1 (3.03%)	33 (45.21%)
LES	1 (4.76%)	17 (80.95%)	3 (14.29%)	21 (28.77%)
FES	0 (0%)	0 (0%)	19 (100%)	19 (26.03%)
TOTAL	16 (21.91%)	34 (46.58%)	23 (31.51%)	73 (100%)

Out of the district's 2,129 bilingual students, 73 received services in a **1-hour** program. All students were pre- and post-tested using the English IPT Oral. The analysis for the pretest indicated 33 (45%) students were non-English speakers (NES), 21 (29%) were limited English speakers (LES), and 19 (26%) were fluent English speakers (FES).

The analysis of the English IPT Oral post-test for the **non-English speakers** showed that out of 33 students, 17 (52%) became limited English speakers and 1 (3%) became fluent English speakers. For the **limited English speakers**, it was found that 3 (14%) students out of 21 became fluent English speakers.

It was concluded that in the post-test the number of non-English speakers was 23% lower than that of the pretest, while the number of limited English speakers and fluent English speakers was 18% and 6% more than that found in the pretest respectively.

3.2 Pre- and Post-test Results for SPANISH IPT Oral. The Spanish IPT Oral are presented in three categories: pre- and post-test results of Spanish IPT Oral by overall district, pre- and post-test results of Spanish IPT Oral by levels (elementary, middle school and high school) , and pre- and post-test results of Spanish IPT Oral by program hours in which the students participated (1-hour, 2-hour, 3-hour, and 6-hour).

Figure 9: Distribution of 1996-97 Pre- Post-test of Spanish IPT Oral for Overall District

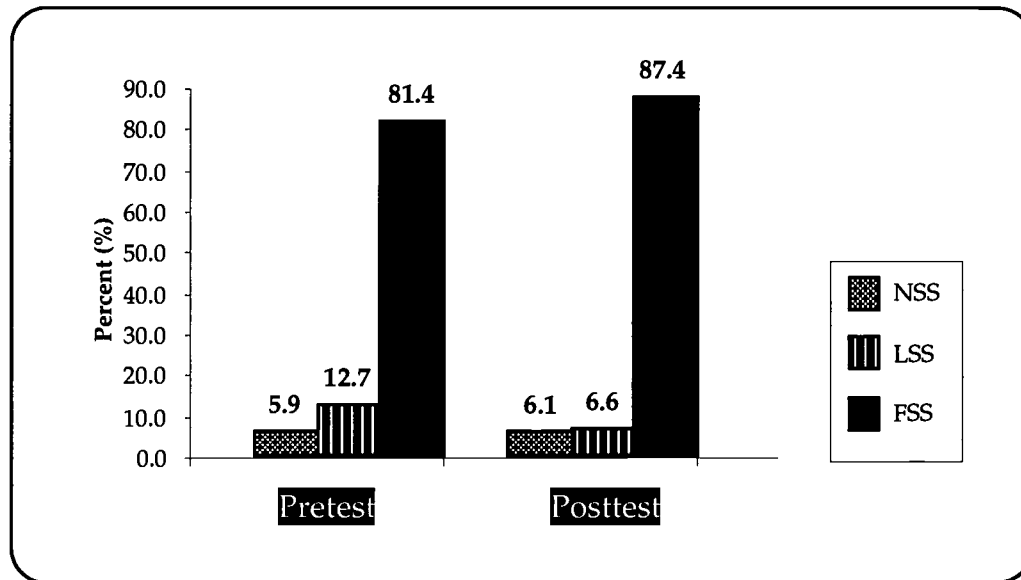

Table 15: Distribution of 1996-97 Pre- Post-test of Spanish IPT Oral for Overall District

DISTRICT		BOP-- Pretest			
BOPP-- Posttest	NSS	LSS	FSS	TOTAL	
NSS	81 (64.80%)	26 (20.80%)	18 (14.40%)	125	(5.87%)
LSS	48 (17.71%)	114 (42.07%)	109 (40.22%)	271	(12.73%)
FSS	0 (0%)	0 (0%)	1733 (100%)	1,733	(81.40%)
TOTAL	129 (6.06%)	140 (6.58%)	1,860 (87.36%)	2,129	(100%)

The Spanish oral proficiency of 2,129 bilingual students was pre- and post-tested using the Spanish IPT Oral. The analysis for the pretest indicated that 125 (6%) students were non-Spanish speakers (NSS), 271 (13%) were limited Spanish Speaker(LSS), and 1,733 (81%) were fluent Spanish speakers (FSS).

The analysis of the Spanish IPT Oral post-test for the **non-Spanish speakers** showed that out of 125 students, 26 (21%) became limited Spanish speakers and 18 (14%) became fluent Spanish speakers. For the **limited Spanish speakers**, it was found that 109 (40%) students out of 271 became fluent Spanish speakers.

It was concluded that in the post-test the number of limited Spanish speakers was 6% lower than that found in the pretest, while the number of fluent Spanish speakers was 6% more than that of the pretest.

Figure 10: Distribution of 1996-97 Pre- Post-test of **Spanish IPT Oral** for **Elementary School Students**

Table 16: Distribution of 1996-97 Pre- Post-test of **Spanish IPT Oral** for **Elementary School Students**

Elementary Level	BOP-- Pretest			
BOPP-- Posttest	NSS	LSS	FSS	TOTAL
NSS	78 (63.93%)	26 (21.31%)	18 (14.75%)	122 (7.86%)
LSS	48 (18.11%)	113 (42.64%)	104 (39.25%)	265 (17.06%)
FSS	0 (0%)	0 (0%)	1166 (100%)	1,166 (75.08%)
TOTAL	126 (8.11%)	139 (8.95%)	1288 (82.94%)	1,553 (100%)

The Spanish oral proficiency of 1,553 **elementary** bilingual students was pre- and post-tested using the Spanish IPT Oral. The analysis for the pretest indicated that 122 (8%) students were non-Spanish speakers (NSS), 265 (17%) were limited Spanish speakers (LSS), and 1,166 (75%) were fluent Spanish speakers (FSS).

The analysis of the Spanish IPT Oral post-test for the **non-Spanish speakers** showed that out of 122 students, 26 (21%) became limited Spanish speakers and 18 (15%) became fluent Spanish speakers. For the **limited Spanish speakers**, it was found that 104 (39%) students out of 265 became fluent Spanish speakers.

It was concluded that in the post-test the number of limited Spanish speakers was 8% lower than that found in the pretest, while the number of fluent Spanish speakers was 8% more than that of the pretest.

Figure 11: Distribution of 1996-97 Pre- Post-test of **Spanish IPT Oral** for **Middle School** Students

Table 17: Distribution of 1996-97 Pre- Post-test of **Spanish IPT Oral** for **Middle School** **BOP-- Pretest**

BOPP-- Posttest	NSS	LSS	FSS	TOTAL
NSS	3 (100%)	0 (0%)	0 (0%)	3 (0.94%)
LSS	0 (0%)	0 (0%)	4 (100%)	4 (1.25%)
FSS	0 (0%)	0 (0%)	313 (100%)	313 (97.81%)
TOTAL	3 (0.94%)	0 (0%)	317 (99.06%)	320 (100%)

The Spanish oral proficiency of 320 **middle school** bilingual students was pre- and post-tested using the Spanish IPT Oral. The analysis for the pretest indicated that 3 (1%) students were non-Spanish speakers (NSS), 4 (1%) were limited Spanish speakers (LSS), and 313 (98%) were fluent Spanish speakers (FSS).

The analysis of the Spanish IPT Oral post-test for the **non-Spanish speakers** showed that the three students remained in the same category. For the **limited Spanish speakers**, it was found that 100% of the students became fluent Spanish speakers.

It was concluded that in the post-test the number of limited Spanish speakers reduced to 0%, and the number of fluent Spanish speakers was 1% more than that of the pretest.

Figure 12: Distribution of 1996-97 Pre- Post-test of Spanish IPT Oral for High School Students

Table 18: Distribution of 1996-97 Pre- Post-test of Spanish IPT Oral for High School Students

BOP-- Pretest

BOPP-- Posttest	NSS	LSS	FSS	TOTAL
NSS	2 (66.67%)	0 (0%)	1 (33.33%)	3 (12%)
LSS	2 (22.22%)	2 (22.22%)	5 (55.56%)	9 (36%)
FSS	0 (0%)	0 (0%)	13 (100%)	13 (52%)
TOTAL	4 (16%)	2 (8%)	19 (76%)	25 (100%)

Out of the district's 2, 129 bilingual students, 25 received services in a **6-hour** or two-way immersion program. All students were pre- and post-tested using the Spanish IPT Oral. The analysis for the pretest indicated 3 (12%) students were non-Spanish speakers (NSS), 9 (36%) were limited Spanish speakers (LSS), and 13 (52%) were fluent Spanish speakers (FSS).

The analysis of the Spanish IPT Oral post-test for the **non-Spanish speakers** showed that out of 3 students, 1 (33%) became a fluent Spanish speaker. For the **limited Spanish speakers**, it was found that 5 (56%) students out of 9 became fluent Spanish speakers.

It was concluded that in the post-test the number of limited Spanish speakers was 28% lower than that of the pretest, while the number of fluent Spanish speakers was 24% higher than that found in the pretest.

LSS	2 (15.38%)	9 (69.23%)	2 (15.38%)	13 (17.81%)
FSS	0 (0%)	0 (0%)	55 (100%)	55 (75.34%)
TOTAL	5 (6.85%)	10 (13.70%)	58 (79.45%)	73 (100%)

Out of the district's 2, 129 bilingual students, 73 received services in a **1-hour** program. All students were pre- and post-tested using the Spanish IPT Oral. The analysis for the pretest indicated 5 (7%) students were non-Spanish speakers (NSS), 13 (18%) were limited Spanish speakers (LSS), and 55 (75%) were fluent Spanish speakers (FSS).

The analysis of the Spanish IPT Oral post-test for the **non-Spanish speakers** showed that out of 5 students, 1 (20%) was a limited Spanish speaker, and 1 (12%) became a fluent Spanish speaker. For the **limited Spanish speakers**, it was found that 2 (15%) students out of 13 became fluent Spanish speakers.

It was concluded that in the post-test the number of non-Spanish speakers was about the same as that of the pretest, while the number of limited Spanish speakers was 4% lower. However, the number of fluent Spanish speakers was 4% higher than that found in the pretest.

3.3 Pre- and Post-test LAU Ratings. The pre- and post-test LAU ratings are presented in three categories: pre- and post-test LAU ratings by overall district, pre- and post-test LAU ratings by levels (elementary, middle school and high school) , and pre- and post-test LAU ratings by program hours in which the students participated (1-hour, 2-hour, 3-hour, and 6-hour).

Figure 17: Distribution of 1996-97 Pre- and Post-test LAU Ratings for Overall District

Table 23: Distribution of 1996-97 Pre- and Post-test LAU Ratings for Overall District

		LAU-Posttest					
LAU -Pretest	A	B	C	D	E	TOTAL	
A	320 (56.54%)	201 (35.51%)	40 (7.07%)	3 (0.53%)	2 (0.35%)	566 (26.59%)	
B	82 (11.14%)	423 (57.47%)	187 (25.41%)	13 (1.77%)	31(4.21%)	736 (34.57%)	
C	0 (0%)	0 (0%)	827 (100%)	0 (0%)	0 (0%)	827 (38.84%)	
D	0 (0%)	0 (0%)	0 (0%)	0 (0%)	0 (0%)	0 (0%)	
E	0 (0%)	0 (0%)	0 (0%)	0 (0%)	0 (0%)	0 (0%)	
TOTAL	402 (18.88%)	624 (29.31%)	1054 (49.51%)	16 (0.75%)	33 (1.55%)	2,129 (100%)	

In the 1996-97 school year, the oral language proficiency (English and Spanish) of 2,129 students receiving bilingual services was pre- and post-tested using the Idea Language Proficiency Tests (IPT Oral). In the pre-test, the analysis indicated that 566 students (27%) were rated as LAU A (Non-English speakers), 736 (35%) as LAU B (Partial speakers of English), and 827 (38%) as LAU C (Bilingual Students with academic needs).

The analysis of the IPT Oral post-test for the non-English speakers indicated that 201 (36%) students out of 566 became partial speakers of English, 40 (7%) became bilingual students with

academic needs, 3 (1%) became bilingual students who are achieving in the curriculum, and 2 (1%) became English monolingual students or lost their home language. The analysis for the partial speakers of English found that out of 736 students, 187 (25%) became bilingual students with academic needs, 13 (2%) were bilingual students who were achieving in the curriculum, and 31 (4%) became English monolingual students or lost their primary language.

. It was concluded that in the post-test the number of A LAU students (non-English speaking students) was 8% lower than that of the pretest and the number of B LAU students (students who are partial speakers of English) was 6% lower. However, the number of C LAU students (bilingual students with academic needs) was 11% more than that found in the pretest.

Figure 18: Distribution of 1996-97 Pre- and Post-test LAU Ratings for **Elementary** School Students

TOTAL	335 (21.57%)	475 (30.59%)	694 (44.69%)	16 (1.03%)	33 (2.12%)	1553 (100%)

Out of the district’s 2,129 students receiving bilingual education services, 1,553 were elementary school students. The results of the IPT Oral pre-test indicated that 444 (29%) students at

this level were rated as LAU A (Non-English speakers), 561 (36%) as LAU B (Partial speakers of English), and 548 (35%) as LAU C (Bilingual Students with academic needs).

The results of the IPT Oral post-test for the **non-English speakers** found that 150 (34%) students out of 444 became partial speakers of English, 30 (7%) became bilingual students with academic needs, 3 (1%) became bilingual students who are achieving in the curriculum, and 2 (1%) became English monolingual students or lost their primary language. The analysis for the **partial speakers of English** indicated that out of 561 students, 116 (21%) became bilingual students with academic needs, 13 (2%) were bilingual students who were achieving in the curriculum, and 31 (6%) became English monolingual students or lost their primary language.

It was concluded that in the post-test the number of A LAU students (non-English speaking students) was 7% lower than that of the pretest and the number of B LAU students (students who are partial speakers of English) was 6% lower. However, the number of C LAU students (bilingual students with academic needs) was 10% more than that found in the pretest.

Figure 19: Distribution of 1996-97 Pre- and Post-test LAU Ratings for **Middle School Students**

TOTAL	82 (15.27%)	149 (27.75%)	299 (55.68%)	3 (0.56%)	4 (0.74%)	537 (100%)

Out of the district's 2,129 bilingual students, 537 participated in a 3-hour program. The results from the IPT Oral pre-test indicated that 129 (24%) students were rated as LAU A (Non-English speakers), 164 (31%) as LAU B (Partial speakers of English), and 244 (45%) as LAU C (Bilingual Students with academic needs).

The analysis of the IPT Oral post-test for the non-English speakers showed that out of 129 students, 48 (37%) became partial speakers of English, 8 (6%) became bilingual students with academic needs, and 2(2%) lost their home language. For the partial speakers of English, it was found that 47 (29%) students out of 164 became bilingual students with academic needs, 3 (2%) were bilingual students achieving in the curriculum, and 2(1%) lost their home language or became English monolingual students. It was concluded that in the post-test the number of A LAU students was 9% lower than that of the pretest, and the number of B LAU students was 3% lower. However, the number of C LAU students was 11% more than that found in the pretest.

TOTAL	291 (19.48%)	434 (29.05)	728 (48.73%)	12 (0.80%)	29 (1.94%)	1494 (100%)

Out of the district's 2,129 bilingual students, 1,494 participated in a **2-hour program**. The results from the IPT Oral pre-test indicated that 387 (26%) students were rated as LAU A (Non-English speakers), 545 (36%) as LAU B (Partial speakers of English), and 562 (38%) as LAU C (Bilingual Students with academic needs).

The analysis of the IPT Oral post-test for the non-English speakers showed that out of 387 students, 132 (34%) became partial speakers of English, 30 (8%) became bilingual students with academic needs, and 3 (1%) were bilingual students who were achieving in the curriculum. For the partial speakers of English, it was found that 136 (25%) students out of 545 became bilingual students with academic needs, 9 (2%) were bilingual students achieving in the curriculum, and 29 (5%) lost their home language or became English monolingual students.

It was concluded that in the post-test the number of A LAU students was 7% lower than that of the pretest, and the number of B LAU students was 7% lower. However, the number of C LAU students was 11% more than that found in the pretest.

TOTAL	16 (21.92%)	34 (46.58%)	22 (30.14%)	1 (1.37%)	0 (0%)	73 (100%)

Out of the district's 2,129 bilingual students, 73 participated in a **1-hour program**. The results from the IPT Oral pre-test indicated that 33 (45%) students were rated as LAU A (Non-English speakers), 21 (29%) as LAU B (Partial speakers of English), and 19 (26%) as LAU C (Bilingual Students with academic needs).

The analysis of the IPT Oral post-test for the non-English speakers showed that out of 33 students, 17 (52%) became partial speakers of English, and 1 (3%) became a bilingual student with academic needs. For the partial speakers of English, it was found that 2 (10%) students out of 21 became bilingual students with academic needs, and 1 (5%) became a bilingual student achieving in the curriculum.

It was concluded that in the post-test the number of A LAU students was 23% lower than that of the pretest, and the number of B LAU students was 18% lower. However, the number of C LAU students was 4% more than that found in the pretest.

4. REPORT ON IPT READING AND WRITING

This report consists of six parts. Part one and two are pre- and post-test results of the English IPT Reading and Writing. Part three summarizes the English literacy status. Part four and five presents pre- and post-test results of Spanish IPT Reading and Writing. The last part summarizes the Spanish literacy status.

4.1 Pre- and Post-test Results of ENGLISH IPT READING. The English reading proficiency of the bilingual students in grades 3-12 was pre- and post-tested using the IPT Reading. The results are presented by district, by levels (elementary, middle school and high school), and by number of hours in which the students participated (1-hour, 2-hour, and 3-hour).

Figure 25: Distribution of 1996-97 Pre- and Post-test English IPT Reading for Overall District

Table 31: Distribution of 1996-97 Pre- and Post-test English IPT Reading for Overall District

District	BER-- Posttest			
BERP--Pretest	NER	LER	CER	TOTAL
NER	220 (50.23%)	168 (38.36%)	50 (11.42%)	438 (45.53%)
LER	43 (13.03%)	152 (46.06%)	135 (40.91%)	330 (34.30%)
CER	0 (0%)	0 (0%)	194 (100%)	194 (20.17%)
TOTAL	263 (27.34%)	320 (33.26%)	379 (39.40%)	962 (100%)

In the 1996-97 school year, the English reading proficiency of 962 of the district's bilingual students in grades 3-12 was pre- and post-tested using the English IPT Reading. The analysis for

the pretest indicated that 436 (46%) were non-English readers (NER), 330 (34%) were limited English readers (LER), and 194 (20%) were competent English readers (CER).

The analysis of the IPT Reading post-test for the **non-English readers** found that 168 (38%) students out of 428 became limited English readers, and 50 (11%) became competent English readers. For the **limited English readers**, it was found that out of 330 students, 135 (41%) became competent English readers. The analysis concluded that the number of non-English readers in the post-test was 19% lower than that of the pretest, and the number of limited English readers was 1% lower. However, the number of competent English readers was 19% higher than that found in the pretest.

TOTAL	134 (28.27%)	124 (26.16%)	216 (45.57%)	474 (100%)

In the 1996-97 school year, the English reading proficiency of 474 **elementary** students in grades 3-5 was pre- and post-tested using the English IPT Reading 1B. The analysis for the

pretest indicated that 231 (49%) were non-English readers (NER), 141 (30%) were limited English readers (LER) and 102 (22%) were competent English readers (CER).

The analysis of the IPT Reading post-test for the **non-English readers** found that 79 (34%) students out of 231 became limited English readers, and 37 (16%) became competent English readers. For the **limited English readers**, it was found that out of 141 students, 77 (55%) became competent English readers. It was concluded that the number of non-English readers in the elementary program was 21% lower than that found in the pretest, and the number of limited English readers was 4% lower. However, the number of competent readers was 24% higher than that found in the pretest.

TOTAL	72 (28.02%)	79 (30.74%)	106 (41.25%)	257 (100%)

In the 1996-97 school year, 320 **middle school** students (grades 6-8) received bilingual services. Of these, 257 students' reading proficiency was pre- and post-tested by the IPT Reading

(6th grade students were given IPT 1B; 7th-8th grade students were given IPT 3B.) The analysis for the pretest indicated that 107 (42%) were non-English readers (NER), 89 (35%) were limited English readers (LER), and 61 (24%) were competent English readers (CER).

The analysis of the IPT Reading post-test for the **non-English readers** found that 42 (39%) students out of 107 became limited English readers, and 8 (7%) became competent English readers. For the **limited English readers**, it was found that out of 89 students, 37 (42%) became competent English readers. The analysis concluded that the number of non-English readers in the middle school program was 14% lower than that found in the pretest, and the number of limited English readers was 4% lower. However, the number of competent English readers was 17% higher than that found in the pretest.

The analysis for the pretest indicated that 64 (11%) of these students were non-English Writers (NEW), 442 (77%) were limited English Writers (LEW), and 65 (11%) were competent English Writers (CEW).

The analysis of the IPT Writing post-test for the **non-English Writers** found that 43 (67%) students out of 64 became limited English Writers. For the **limited English Writers**, it

was found that out of 442 students, 129 (29%) became competent English Writers. The analysis concluded that the number of non-English writers in the 2-hour program was 8% lower than that found in the pretest, and the limited English writers was 16% lower, but the number of competent English writers was 25% higher than that found in the pretest.

Figure 38: Distribution of 1996-97 Pre- and Post-test English IPT **Writing** for Students Participating in a **1-Hour** Program

Table 44: Distribution of 1996-97 Pre- and Post-test English IPT **Writing** for Students Participating in a **1-Hour** Program

BL 1 hrs.	BEW-- Posttest			
BEWP--Pretest	NEW	LEW	CEW	TOTAL
NEW	0 (0%)	0 (0%)	0 (0%)	0 (0%)
LEW	0 (0%)	12 (92.31%)	0 (0%)	12 (92.31%)
CEW	0 (0%)	0 (0%)	1 (100%)	1 (7.69%)
TOTAL	0 (0%)	12 (92.31%)	1 (7.69%)	13 (100%)

The English writing proficiency of 13 elementary school students (grades 3 and 5) receiving bilingual services in a **1-hour** program was pre- and post-tested using the IPT Writing. The analysis for the pretest indicated that 12 (92%) of these students were non-English Writers (NEW), and 1 (8%) was a competent English Writer (CEW). The analysis of the IPT Writing post-test for the non-English Writers indicated that all students remained in the same category.

4.3 Pre- and Post-test Results of ENGLISH LITERACY STATUS. This section presents the English literacy status of grades 3-12 students as measured by the English IPT Reading and Writing. The literacy status derived from the IPT Reading and Writing score of each

student. For example, the literacy status for a student who was tested as a competent English reader (CER) and a competent English writer (CEW) would be fluent English proficient (FEP), and the literacy status of a student who was tested as a limited English reader (LER) and a competent or limited English writer (CEW or LEW) would be limited English proficient (LEP). Please refer to Table 6, page 6 for more details. The results of the English literacy status are presented in three parts, by district, by levels (elementary, middle school and high school), and number of hours in which the students participated (1-hour, 2-hour and 3-hour).

Figure 39: Distribution of 1996-97 Pre- and Post-test English Literacy Status for Overall District

Table 45: Distribution of 1996-97 Pre- and Post-test English Literacy Status for Overall District

Overall District	POSTSTS	POSTTEST	TOTAL	
PRESTS--Pretest	NEP	LEP	FEP	TOTAL
NEP	12 (15.19%)	64 (81.01%)	3 (3.80%)	79 (8.21%)
LEP	10 (1.19%)	647 (77.12%)	182 (21.69%)	839 (87.21%)
FEP	0 (0%)	0 (0%)	44 (100%)	44 (4.57%)
TOTAL	22 (2.29%)	711 (73.91%)	229 (23.80%)	962 (100%)

The English reading and writing proficiency of 962 students in grades 3-12 was pre- and post-tested using the IPT Reading and Writing. The results on the pretest indicated that 79 (8%) students were non-English proficient (NEP), 839 (87%) were limited English proficient (LEP), and 44 (5%) were fluent English proficient (FEP). In the post-test, the analysis on the **non-English proficient** students found that 64 (81%) out of 79 NEP students became limited English proficient, and 3 (4%) became fluent English proficient. For the **limited English**

proficient students it was found that 182 (22%) out of 839 LEP students became fluent English proficient.

It was concluded that the number of non-English proficient students (NEP) was 7% lower than that found in the pretest, and the number of limited English proficient (LEP) students was 13% lower. However, the number of fluent English proficient (FEP) students was 19% higher than that of the pretest.

Figure 40: Distribution of 1996-97 Pre- and Post-test English Literacy Status for **Elementary** Students

Table 46: Distribution of 1996-97 Pre- and Post-test English Literacy Status for **Elementary** Students

Elementary Level	POSTSTS--Posttest			
PRESTS--Pretest	NEP	LEP	FEP	TOTAL
NEP	8 (16.67%)	37 (77.08%)	3 (6.25%)	48 (10.13%)
LEP	4 (1%)	313 (78.25%)	83 (20.75%)	400 (84.39%)
FEP	0 (0%)	0 (0%)	26 (100%)	26 (5.49%)
TOTAL	12 (2.53%)	350 (73.84%)	112 (23.63%)	474 (100%)

In the 1996-97 school year, the reading and writing proficiency of 474 **elementary** students in grades 3-5 was pre- and post-tested using the IPT Reading and Writing. The results on the pretest indicated that 48 (10%) students were non-English proficient (NEP), 400 (84%) were limited English proficient (LEP), and 26 (5%) were fluent English proficient (FEP). In the post-test, the analysis on the **non-English proficient** students found that 37 (77%) out of 48 NEP

students became limited English proficient, and 3 (6%) became fluent English proficient. For the **limited English proficient** students it was found that 83 (21%) out of 400 LEP students became fluent English proficient.

It was concluded that the number of NEP students was 7% lower than that found in the pretest, and the number of LEP students was 10% lower. However, the number of FEP students was 19% higher than that of the pretest.

Figure 41: Distribution of 1996-97 Pre- and Post-test English Literacy Status for **Middle School** Students

Table 47: Distribution of 1996-97 Pre- and Post-test English Literacy Status for **Middle School** Students

MIDDLE Level	POSTSTS--Posttest			
PRESTS--Pretest	NEP	LEP	FEP	TOTAL
NEP	3 (17.65%)	14 (82.35%)	0 (0%)	17 (6.61%)
LEP	4 (1.79%)	160 (71.75%)	59 (26.46%)	223 (86.77%)
FEP	0 (0%)	0 (0%)	17 (100%)	17 (6.61%)
TOTAL	7 (2.72%)	174 (67.70%)	76 (29.57%)	257 (100%)

In the 1996-97 school year, the reading and writing proficiency of 257 **middle school** students in grades 6-8 was pre- and post-tested using the IPT Reading and Writing. The results on the pretest indicated that 17 (7%) students were non-English proficient (NEP), 223 (87%) were limited English proficient (LEP), and 17 (7%) were fluent English proficient (FEP). In the post-test, the analysis on the **non-English proficient** students found that 14 (82%) out of 17 NEP

students became limited English proficient. For the **limited English proficient** students it was found that 59 (26%) out of 223 LEP students became fluent English proficient.

It was concluded that the number of NEP students was 4% lower than that found in the pretest, and the number of LEP students was 19% lower. However, the number of FEP students was 23% higher than that of the pretest.

Figure 42: Distribution of 1996-97 Pre- and Post-test English Literacy Status for **High School** Students

TOTAL	3 (1.30%)	187 (80.95%)	41 (17.75%)	231 (100%)

In the 1996-97 school year, the reading and writing proficiency of 231 **high school** students in grades 9-12 was pre- and post-tested using the IPT Reading and Writing. The results on the pretest indicated that 14 (6%) students were non-English proficient (NEP), and 216 (94%) were limited English proficient (LEP). In the post-test, the analysis on the **non-English proficient** students found that 13 (93%) out of 14 NEP students became limited English

proficient. For the **limited English proficient** students it was found that 40 (19%) out of 216 LEP students became fluent English proficient.

It was concluded that the number of NEP students was 5% lower than that found in the pretest, and the number of LEP students was 13% lower. Of 231 students, 41 (18%) became Fluent English proficient.

TOTAL	8 (2.12%)	278 (73.54%)	92 (24.34%)	378 (100%)

In the 1996-97 school year, the reading and writing proficiency of 378 students (grades 3-12) in a 3-hour program was pre- and post-tested using the IPT Reading and Writing. The results on the pretest indicated that 19 (5%) students were non-English proficient (NEP), 330 (87%) were limited English proficient (LEP), and 29 (8%) were fluent English proficient (FEP). In the post-test, the analysis on the **non-English proficient** students found that 16 (84%) out of 19 NEP students became limited English proficient. For the **limited English proficient** students it was found that 63 (19%) out of 330 LEP students became fluent English proficient.

It was concluded that the number of NEP students was 3% lower than that found in the pretest, and the number of LEP students was 13% lower. However, the number of FEP students was 16% higher than that of the pretest.

The reading and writing proficiency of 13 students (grades 3 and 5) in a **1-hour** program was pre- and post-tested using the IPT Reading and Writing. The results on the pretest indicated that all 13 students were limited English proficient (LEP). In the post-test, the analysis on the **limited English proficient** students found that 1 (8%) out of 12 LEP students became fluent English proficient. It was concluded that 1 (8%) out of 12 LEP students became fluent English proficient.

4.4 Pre- and Post-test Results of SPANISH IPT READING. The Spanish reading proficiency of the bilingual students in grades 3-12 was pre- and post-tested using the IPT Reading. The results are presented by district, by levels (elementary, middle school and high school), and by number of hours in which the students participated (1-hour, 2-hour and 3-hour).

Figure 46: Distribution of 1996-97 Pre- and Post-test **Spanish** Reading for Overall District

Table 52: Distribution of 1996-97 Pre- and Post-test **Spanish** Reading for Overall District

CSR	0 (0%)	0 (0%)	393 (100%)	393 (40.85%)
TOTAL	203 (21.10%)	245 (25.47%)	514 (53.43%)	962 (100%)

In the 1996-97 school year, the Spanish reading proficiency of 962 of the district's bilingual students in grades 3-12 was pre- and post-tested using the Spanish IPT Reading. The analysis for the pretest indicated that 290 (30%) were non-Spanish readers (NSR), 279 (29%) were limited Spanish readers (LSR), and 393 (41%) were competent Spanish readers (CSR).

The analysis of the IPT Reading post-test for the **non-Spanish readers** found that 97 (33%) students out of 290 became limited Spanish readers, and 30 (10%) became competent Spanish readers. For the **limited Spanish readers**, it was found that out of 279 students, 91 (33%) became competent Spanish readers. The analysis concluded that the number of non-Spanish

readers in the post-test was 9% lower than that of the pretest, and the number of limited Spanish readers was 4% lower. However, the number of competent Spanish readers was 12% higher than that found in the pretest.

Figure 47: Distribution of 1996-97 Pre- and Post-test **Spanish** Reading for **Elementary** School Students

TOTAL	148 (31.22%)	138 (29.11%)	188 (39.66%)	474 (100%)

In the 1996-97 school year, the Spanish reading proficiency of 474 **elementary** students in grades 3-5 was pre- and post-tested using the Spanish IPT Reading 1. The analysis for the pretest indicated that 222 (47%) were non-Spanish readers (NSR), 143 (30%) were limited Spanish readers (LSR) and 109 (23%) were competent Spanish readers (CSR).

The analysis of the IPT Reading post-test for the **non-Spanish readers** found that 73 (33%) students out of 222 became limited Spanish readers, and 24 (11%) became competent Spanish readers. For the **limited Spanish readers**, it was found that out of 143 students, 55 (38%) became competent Spanish readers. It was concluded that the number of non-Spanish

readers in the elementary program was 16% lower than that found in the pretest, and the number of limited Spanish readers was 1% lower. However, the number of competent readers was 14% higher than that found in the pretest.

Figure 48: Distribution of 1996-97 Pre- and Post-test **Spanish** Reading for **Middle School** Students

Table 54: Distribution of 1996-97 Pre- and Post-test **Spanish** Reading for **Middle School** Students

TOTAL	43 (16.73%)	59 (22.96%)	155 (60.31%)	257 (100%)

In the 1996-97 school year, 320 **middle school** students (grades 6-8) received bilingual services. Of these, 257 students' reading proficiencies were pre- and post-tested by the IPT Reading (6th grade students were given IPT 1; 7th-8th grade students were given IPT 3.) The analysis for the pretest indicated that 59 (23%) were non-Spanish readers (NSR), 65 (25%) were limited Spanish readers (LSR), and 133 (52%) were competent Spanish readers (CSR).

The analysis of the IPT Reading post-test for the **non-Spanish readers** found that 20 (34%) students out of 59 became limited Spanish readers, and 4 (7%) became competent Spanish readers. For the **limited Spanish readers**, it was found that out of 65 students, 18 (28%)

became competent Spanish readers. The analysis concluded that the number of non-Spanish readers in the middle school program was 6% lower than that found in the pretest, the number of limited Spanish readers was 2% lower. However, the number of competent Spanish readers was 8% higher than that found in the pretest.

Figure 49: Distribution of 1996-97 Pre- and Post-test **Spanish Reading for High School Students**

CSR	0 (0%)	0 (0%)	151 (100%)	151 (65.37%)
TOTAL	12 (5.19%)	48 (20.78%)	171 (74.03%)	231 (100%)

In the 1996-97 school year, 256 **high school** students (grades 9-12) received bilingual services. Of these, 231 students' reading proficiency was pre- and post-tested by the IPT Reading 3. The analysis for the pretest indicated that 9 (4%) were non-Spanish readers (NSR), 71 (31%) were limited Spanish readers (LSR), and 151 (65%) were competent Spanish readers (CSR).

The analysis of the IPT Reading post-test for the **non-Spanish readers** found that 4 (44%) students out of 9 became limited Spanish readers, and 2 (22%) became competent Spanish readers. For the **limited Spanish readers**, it was found that out of 71 students, 18 (25%) became

competent Spanish readers. The analysis concluded that the number of non-Spanish readers in the high school program was 4% lower than that found in the pretest, while the limited Spanish readers was 10% higher than that of the pretest, and the number of competent readers was 9% more than that of the pretest.

CSW	0 (0%)	0 (0%)	284 (100%)	284 (29.52%)
TOTAL	27 (2.81%)	517 (53.71%)	418 (43.45%)	962 (100%)

In the 1996-97 school year, the Spanish writing proficiency of 962 students in grades 3-12 was pre- and post-tested using the Spanish IPT Writing. The analysis for the pretest indicated that 44 (5%) were non-Spanish writers (NEW), 634 (66%) were limited Spanish Writers (LSW), and 284 (30%) were competent Spanish writers (CSW).

The analysis of the IPT Writing post-test for the **non-Spanish writers** found that 30 (68%) students out of 83 became limited Spanish writers, and 2 (5%) became competent Spanish

writers. For the **limited Spanish writers**, it was found that out of 634 students, 132 (21%) became competent Spanish writers. The analysis concluded that the number of non-Spanish writers was 2% lower than that of the pretest, the limited Spanish writers was 12% lower, while the number of competent Spanish writers was 13% more than that found in the pretest.

Figure 54: Distribution of 1996-97 Pre- and Post-test **Spanish Writing** for **Elementary School Students**

Table 60: Distribution of 1996-97 Pre- and Post-test **Spanish Writing** for **Elementary School Students**

ELEMENTARY		BPW-- Posttest		
BPWP--Pretest	NSW	LSW	CSW	TOTAL
NSW	7 (21.21%)	25 (75.76%)	1 (3.03%)	33 (6.96%)
LSW	10 (2.67%)	305 (81.55%)	59 (15.78%)	374 (78.90%)
CSW	0 (0%)	0 (0%)	67 (100%)	67 (14.14%)
TOTAL	17 (3.59%)	330 (69.62%)	127 (26.79%)	474 (100%)

In the 1996-97 school year, the Spanish writing proficiency of 474 **elementary** students in grades 3-5 was pre- and post-tested using the Spanish IPT Writing 1. The analysis for the pretest indicated that 33 (7%) were non-Spanish writers (NEW), 374 (79%) were limited Spanish writers (LSW), and 67 (14%) were competent Spanish writers (CSW).

The analysis of the IPT Writing post-test for the **non-Spanish writers** found that 25 (76%) students out of 33 became limited Spanish writers, and 1 (3%) became a competent Spanish writer. For the **limited Spanish writers**, it was found that out of 374 students, 59 (16%)

became competent Spanish writers. The analysis concluded that the number of non-Spanish writers in the elementary program was 3% lower than that found in the pretest, and the number of limited Spanish writers was 9% lower. However, the number of competent Spanish writers was 13% more than that found in the pretest.

Figure 55: Distribution of 1996-97 Pre- and Post-test **Spanish Writing** for **Middle School** Students

Table 61: Distribution of 1996-97 Pre- and Post-test **Spanish Writing** for **Middle School** Students

MIDDLE		BPW-- Posttest		
BPWP--Pretest	NSW	LSW	CSW	TOTAL
NSW	3 (37.50%)	4 (40%)	1 (12.50%)	8 (3.11%)
LSW	4 (2.33%)	118 (68.60%)	50 (29.07%)	172 (66.93%)
CSW	0 (0%)	0 (0%)	77 (100%)	77 (29.96%)
TOTAL	7 (2.72%)	122 (47.47%)	128 (49.81%)	257 (100%)

In the 1996-97 school year, 320 **middle school** students (grades 6-8) received bilingual services. Of these, 257 students' writing proficiency was pre- and post-tested by the Spanish IPT Writing (6th grade students were given IPT 1; 7th-8th grade students were given IPT 3.) The analysis for the pretest indicated that 8 (3%) were non-Spanish writers (NEW), 172 (67%) were limited Spanish writers (LSW), and 77 (30%) were competent Spanish writers (CSW).

The analysis of the IPT Writing post-test for the **non-Spanish writers** found that 4 (40%) students out of 8 became limited Spanish writers, and 1 (13%) became a competent Spanish writer.

For the **limited Spanish writers**, it was found that out of 172 students, 50 (29%) became competent Spanish writers. The analysis concluded that the number of non-Spanish writers in the middle school program was the same as in the pretest. The number of limited Spanish writers was 20% lower, while the number of competent Spanish writers was 20% more than that found in the pretest.

Figure 56: Distribution of 1996-97 Pre- and Post-test Spanish Writing for High School Students

Table 62: Distribution of 1996-97 Pre- and Post-test Spanish Writing for High School Students

HIGH LEVEL		BPW-- Posttest		
BPWP--Pretest	NSW	LSW	CSW	TOTAL
NSW	2 (66.67%)	1 (33.33%)	0 (0%)	3 (1.30%)
LSW	1 (1.14%)	64 (72.73%)	23 (26.14%)	88 (38.10%)
CSW	0 (0%)	0 (0%)	140 (100%)	140 (60.61%)
TOTAL	3 (1.30%)	65 (28.14%)	163 (70.56%)	231 (100%)

In the 1996-97 school year, 256 **high school** students (grades 9-12) received bilingual services. Of these, 231 students' writing proficiency was pre- and post-tested by the IPT Writing IPT 3. The analysis for the pretest indicated that 3 (1%) were non-Spanish writers (NEW), 88 (38%) were limited Spanish writers (LSW), and 140 (61%) were competent Spanish writers (CSW).

The analysis of the IPT Writing post-test for the **non-Spanish writers** found that 1 (33%) students out of 3 became a limited Spanish writer. For the **limited Spanish writers**, it was found that out of 88 students, 23 (26%) became competent Spanish writers. The analysis concluded that the number of non-Spanish writers in the high school program was the same as found in the pretest. The number of limited Spanish writers was 10% lower. However, the number of competent Spanish writers was 10% greater than that found in the pretest.

TOTAL	6 (1.56%)	181 (47.88%)	191 (50.53%)	378 (100%)

The Spanish writing proficiency of 378 students (grades 3-12) in a **3-hour** bilingual education program was pre- and post-tested by the IPT Writing. The analysis for the pretest indicated that 10 (3%) of these students were non-Spanish Writers (NEW), 233 (62%) were limited Spanish Writers (LSW), and 135 (36%) were competent Spanish Writers (CSW).

The analysis of the IPT Writing post-test for the **non-Spanish Writers** found that 8 (80%) students out of 10 became limited Spanish Writers. For the **limited Spanish Writers**, it was found that out of 233 students, 56 (24%) became competent Spanish Writers. The analysis concluded that the number of non-Spanish writers in the 3-hour program was 1% lower than that found in the pretest, and the number of limited Spanish writers was 14% lower. However, the number of competent Spanish writers was 15% more than that found in the pretest.

In the 1996-97 school year, the Spanish writing proficiency of 13 students (grades 3 & 5) in a **1-hour** bilingual education program was pre- and post-tested by the Spanish IPT Writing. The analysis for the pretest indicated that all of these students were limited Spanish Writers (LSW). The analysis of the IPT Writing post-test for the **limited Spanish Writers** indicated that 1 (8%) student became a competent Spanish writer.

4.6 Pre- and Post-test Results of SPANISH LITERACY STATUS. This section presents the Spanish literacy status of grades 3-12 students as measured by the Spanish IPT Reading and Writing. The literacy status derived from the IPT Reading and Writing score of each student. For example, the literacy status for a student who was tested as a competent Spanish reader (CSR) and a competent Spanish writer (CSW) would be fluent Spanish proficient (FSP), and the literacy status of a student who was tested as a limited Spanish reader (LSR) and a competent or limited Spanish writer (CSW or LSW) would be limited Spanish proficient (LSP). Please refer to Table 6, page 6 for more details. The results of the Spanish literacy status are presented in three parts, by district, by levels (elementary, middle school and high school), and number of hours in which the students participated (1-hour, 2-hour, and 3-hour).

Figure 60: Distribution of 1996-97 Pre- and Post-test **Spanish Literacy Status** for Overall District

Table 66: Distribution of 1996-97 Pre- and Post-test **Spanish Literacy Status** for Overall District

District	POSTSPS	POSTTEST	
PRESPTS--Pretest	NSP	LSP	FSP
NSP	9 (21.43%)	32 (76.19%)	1 (2.38%)
LSP	12 (1.75%)	557 (81.43%)	115 (16.81%)
FSP	0 (0%)	0 (0%)	236 (100%)
TOTAL	21 (2.18%)	589 (61.23%)	352 (36.59%)
			962 (100%)

In the 1996-97 school year, the Spanish reading and writing proficiency of 962 students in grades 3-12 was pre- and post-tested using the Spanish IPT Reading and Writing. The results on

the pretest indicated that 42 (4%) students were non-Spanish proficient (NSP), 684 (71%) were limited Spanish proficient (LSP), and 236 (25%) were fluent Spanish proficient (FSP). In the post-test, the analysis on the **non-Spanish proficient** students found that 32 (76%) out of 42 non-Spanish proficient students became limited Spanish proficient, and 1 (2%) became fluent Spanish proficient. For the **limited Spanish proficient** students, it was found that 115 (17%) out of 684 limited Spanish proficient students became fluent Spanish proficient.

It was concluded that the number of non-Spanish proficient (NSP) students was 2% lower than that found in the pretest, and the number of limited Spanish proficient (LSP) students was 10% lower, but the number of fluent Spanish proficient (FSP) students was 12% higher than that of the pretest.

Figure 61: Distribution of 1996-97 Pre- and Post-test **Spanish** Literacy Status for **Elementary** School Students

Table 67: Distribution of 1996-97 Pre- and Post-test **Spanish** Literacy Status for **Elementary** School Students

ELEMENTARY PRESPS--Pretest	POSTSPS			POSTTEST
	NSP	LSP	FSP	TOTAL
NSP	5 (15.63%)	26 (81.25%)	1 (3.13%)	32 (6.75%)
LSP	8 (2.05%)	339 (86.70%)	44 (11.25%)	391 (82.49%)
FSP	0 (0%)	0 (0%)	51 (100%)	51 (10.76%)
TOTAL	13 (2.74%)	365 (77%)	96 (20.25%)	474 (100%)

In the 1996-97 school year, the reading and writing proficiency of 474 elementary students in grades 3-5 was pre- and post-tested using the Spanish IPT Reading and Writing. The results on the pretest indicated that 32 (7%) students were non-Spanish proficient (NSP), 391 (82%) were limited Spanish proficient (LSP), and 51 (11%) were fluent Spanish proficient (FSP). In the post-test, the analysis on the **non-Spanish proficient** students found that 26 (81%) out of 32 NSP students became limited Spanish proficient, and 1 (3%) became fluent Spanish proficient. For the **limited Spanish proficient** students it was found that 44 (11%) out of 391 LSP students became fluent Spanish proficient.

It was concluded that the number of NSP students was 4% lower than that found in the pretest, and the number of LSP students was 5% lower. However, the number of FSP students was 9% higher than that of the pretest.

Figure 62: Distribution of 1996-97 Pre- and Post-test Spanish Literacy Status for Middle School Students

LSP	3 (1.62%)	136 (73.51%)	46 (24.86%)	185 (71.98%)
FSP	0 (0%)	0 (0%)	64 (100%)	64 (24.90%)
TOTAL	6 (2.33%)	141 (54.86%)	110 (42.80%)	257 (100%)

In the 1996-97 school year, the reading and writing proficiency of 257 **middle school** students in grades 6-8 was pre- and post-tested using the IPT Reading and Writing. The results on the pretest indicated that 8 (3%) students were non-Spanish proficient (NSP), 185 (72%) were limited Spanish proficient (LSP), and 64 (25%) were fluent Spanish proficient (FSP). In the post-test, the analysis on the **non-Spanish proficient** students found that 5 (62%) out of 8 NSP students became limited Spanish proficient. For the **limited Spanish proficient** students it was found that 46 (25%) out of 185 LSP students became fluent Spanish proficient.

It was concluded that the number of NSP students was 1% lower than that found in the pretest, and the number of LSP students was 77% lower. However, the number of FSP students was 18% higher than that of the pretest.

Figure 63: Distribution of 1996-97 Pre- and Post-test **Spanish** Literacy Status for **High School** Students

Table 69: Distribution of 1996-97 Pre- and Post-test **Spanish** Literacy Status for **High School** Students

TOTAL	2(0.87%)	83 (35.93%)	146 (63.20%)	231 (100%)

In the 1996-97 school year, the reading and writing proficiency of 231 **high school** students in grades 9-12 was pre- and post-tested using the IPT Reading and Writing. The results

on the pretest indicated that 2 (1%) students were non-Spanish proficient (NSP), 108 (47%) limited Spanish proficient (LSP), and 121 (52%) fluent Spanish proficient. In the post-test, the analysis on the **non-Spanish proficient** students found that 1 (50%) out of 2 NSP students became limited Spanish proficient. For the **limited Spanish proficient** students it was found that 25 (23%) out of 108 LSP students became fluent Spanish proficient. It was concluded that the number of LSP students was 11% lower than that found in the pretest, while the number of fluent Spanish proficient students was 11% more than that found in the pretest.

In the 1996-97 school year, the reading and writing proficiency of 13 students (grades 3 and 5) in a **1-hour** program was pre- and post-tested using the IPT Reading and Writing. The results on the pretest indicated that all 13 students were limited Spanish proficient (LSP). In the post-test, the analysis on the **limited Spanish proficient** students found that all 13 students remained in the same category.

RECOMMENDATIONS

RECOMMENDATIONS

The language proficiency of limited English proficient (LEP) students could possibly be hindered by some factors other than those that were found in the analysis. These factors may include the following.

1. Teacher Endorsement. The future analysis should investigate whether or not the progress in the students' language proficiency is affected by whether their teacher is endorsed or not endorsed.

2. Years of Experience. Number of years of experience in working with LEP students could be another factor which the district may include in the future analysis.

3. Class Size. Second language acquisition is acquired through interaction. Chances of teacher-student interaction or student-student interaction in a classroom with a large number of students could be less than a classroom with fewer students. The study should investigate if the teacher to student ratio has an impact on acquiring a second language.

4. Parent Support. Research suggests that children who come from a family where the parents highly support their child's education tend to outperform children who are from a family where the parents are not as involved in their child's education. The lack of LEP parental support could possibly be that the parent's command of English is not at the level where they can communicate effectively within the school environment. The future analysis should examine the effect that this support or lack thereof has upon the child's ability to perform.

5. Educational background. Many LEP students come with no prior educational background from their home country. The next investigation should examine if the number of years in the educational system in their native country, availability of tutorial assistance, number of years in the bilingual education or alternative language program, etc. makes a difference in a student's progress of second language acquisition.

6. Materials. Research shows that a home or a classroom with print rich environment promotes literacy development. Many LEP students come from a family of low socio-economic status where books are not affordable. Thus, the future analysis should investigate the impact of the availability of materials on the progress of the students' language proficiency.

7. Socio-Economic Status. Often LEP students were found to have a socio-economic status that does not provide an environment conducive to learning. Future analysis should include socio-economic status as a variable in investigating the progress of the students' language proficiency.

8. Attitude/Motivation. High self-esteem in students affords them the confidence to take risks. The next investigation should examine to what extent a positive attitude and motivation toward the learning of a second language has on the outcome of a student's language proficiency.

9. Exposure to a Second Language. Family members who speak the language, monolingualism, bilingualism, or multilingualism. radio, television, environmental print, etc., all contribute to the language proficiency of students, thus the next analysis should include these factors.

10. Extra-Curricular Activities. Students involved in activities such as church, sports, music, art, dance, scouting or other special interests encourage more use of the language. Thus, the future analysis should investigate to what extent students are involved in these activities and the impact of these activities on the progress of literacy.

11. Technological Support. Research indicates that computer technology has a strong impact on the academic achievement of LEP students (Sarangarm 1991 & Sarangarm 1992). The future analysis should investigate the number of LEP students who are utilizing computer technology in the Las Cruces Public Schools. The investigation should include factors such as availability of computers, grade levels at which the students begin and continue to use computers, the quality of instructional software available, and the length of time daily that the students have access to computers. The competence and training of teachers in computer technology is another important variable that cannot be overlooked.

REPRODUCTION RELEASE

(Specific Document)

I. DOCUMENT IDENTIFICATION:

Title: BILINGUAL PROGRAM EVALUATION: LANGUAGE PROFICIENCY
Author(s): MR. JESSE GONZALES DR. ISARA SARANGARM DR. SUCHINT SARANGARM
NABE presentation? X yes ___ no If not, was this paper presented at another conference? X yes ___ no Specify: LAS CRUCES SCHOOL BOARD
Publication Date: FEBRUARY 1998

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

Three permission boxes: Level 1 (microfiche or other ERIC archival media), Level 2A (microfiche and electronic media for ERIC archival collection subscribers only), and Level 2B (microfiche only). Each box contains a sample signature line and a checkbox.

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.
Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only.
Check here for Level 2B release, permitting reproduction and dissemination in microfiche only.

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

III. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)
