 IDENTIFIERS Food Stamp Program; *Indicators; *Louisiana; Welfare Reform; Women Infants Children Supplemental Food Program

ABSTRACT

This Kids Count data book presents statewide trends in the well-being of Louisiana's children. The statistical report is based on seven major groups of indicators of well-being: (1) poverty; (2) employment and income; (3) children receiving welfare; (4) maternal and child health; (5) children in trouble; (6) child abuse and neglect cases; and (7) public education. Part 1 provides an overview of findings related to poverty; employment and income, focusing on welfare reform and the FIND WORK Program; the lack of health insurance for children; child health indicators; and the need to intervene to improve children's lives. Part 2, the bulk of the document, details demographic and indicator findings for the state as a whole and for each parish, comparing Whites and African Americans. Part 3 provides information on statewide and parish trends from the early to mid-1990s. Findings indicate that about 20 percent of births are to teen mothers; the low birthweight rate is the third highest in the nation; the adequate prenatal care rate has improved; the infant mortality rate for African American infants more than doubles that of white infants; about 5,500 children are placed into foster care each year; and the number of children receiving Aid to Families with Dependent Children (AFDC) has declined. The report also contains data notes and sources. (KB)

Agenda for Children

Agenda for Children is Louisiana's statewide comprehensive child advocacy organization. Our mission is to make Louisiana a state in which all children can thrive, by ensuring that the basic needs of children and families are met; by ensuring that our children are nurtured and well-taught, beginning in the early years and continuing through adolescence; by ensuring that children are protected from harm, and by acting in ways which combat racism and other forms of oppression. Agenda for Children compiles information on the status of children, monitors legislation and policies affecting children, and acts as a statewide network capable of generating positive change for children and families. Agenda for Children is a private, non-profit organization supported by individual and corporate memberships, foundation grants, and contracts.

Louisiana Kids Count

Louisiana Kids Count is a project of Agenda for Children. The purpose of Louisiana Kids Count is to document the conditions of children at the state and parish level in the annual Data Book on Louisiana's Children; to disseminate this information as widely as possible, and to mobilize action for children based on the data findings. The Kids Count mobilization effort, known as "Coming Together for Children and Families," involves organizing at the community level around child and family issues. Louisiana Kids Count is funded by the Annie E. Casey Foundation of Baltimore, Maryland, which funds Kids Count projects in each state and produces the national Kids Count Data Book. The Casey Foundation is the largest foundation devoted exclusively to disadvantaged children.

Special thanks to: the staff at the U.S. Census Bureau and in state agencies who provided the data for this report, especially Dr. Jean Takenaka and Tracie Wright of the Office of Public Health, Carolyn Adams of the Office of Youth Development, and Dotty Tapscott of the Office of Community Development for exceptional assistance; Lys Cockrell, Steve Philipi and Melanie Bronfin for providing information on the FINS program; Melissa Stainback of the Louisiana Population Data Center at LSU for sharing information; Magali Smith for gathering information and contributing to the overview; Mawiyah El-Jamah for precise data entry; Tasha Francis and Marilyn Martin for meticulous proofing of figures; Jennifer K. Daniels of the American Public Health Association for fact-finding; Donna Johnigan for contributing to the narrative, Melanie Seward for editing, colleagues at Agenda for Children and Child Care Resources for assistance and support; Julie Litwiler, Kelly Going, and Brenda Zook for editing and bringing snacks and coffee; and the Annie E. Casey Foundation for committing their resources to building better futures for all of America's children.

Overview

My Thoughts about Welfare Reform: The Voices of Two Moms

I feel a hurt in my community, is what this change is about. I don't have an idea about what this change is about, or what it will do to children and poor families.

As I sit and think about welfare reform, the new laws, I feel a hurt in my community, is what this change is about. I don't have an idea about what this change is about, or what it will do to children and poor families.

As I sit and think about welfare reform, the new laws, I feel a hurt in my community, is what this change is about. I don't have an idea about what this change is about, or what it will do to children and poor families.

“The System” is what I call it. So while we go out looking for work, and a sense of hopelessness about the future of families in my community, is what this change is about. I don't have an idea about what this change is about, or what it will do to children and poor families.

As I sit and think about welfare reform, the new laws, I feel a hurt in my community, is what this change is about. I don't have an idea about what this change is about, or what it will do to children and poor families.

As I sit and think about welfare reform, the new laws, I feel a hurt in my community, is what this change is about. I don't have an idea about what this change is about, or what it will do to children and poor families.

I am a mother who was once on welfare and lost a child to violence. So I say to the system, disease or poverty, until you give back, the support and street raise while I work long hours at low paying jobs? Will I miss them 3 months up, their first words, to them the love that God has meant to give each child.

Children need and have traditionally had a whole community to raise them, not just one overworked adult. Now with the gang moms and drug dealers in the hood even more than in the past.

I don't know and really don't care who wrote these laws or the proposal. But I know for sure they don't live around here, in my community, in my street, in my shoes and once you step out of them, they are gone. Walk in my shoes and once you step out of them, they are gone. Walk in my shoes and once you step out of them, they are gone. Walk in my shoes and once you step out of them, they are gone. Walk in my shoes and once you step out of them, they are gone. Walk in my shoes and once you step out of them, they are gone.

I don't know and really don't care who wrote these laws or the proposal. Overview

CHILDREN IN POVERTY

These are some things we know about poverty. Poverty means you don't have enough. You don't have enough money to buy milk and cereal at the end of the month when Food Stamps have run out. Your baby sister goes to sleep in a wet diaper because mom doesn't have enough to buy a whole box and the last of the three diapers bought at the corner store this morning were used up. Poverty means you had to miss the field trip last week because it cost three dollars and you started school three days late because mom had to get money together for the uniform. Poverty means your shoes pinch your toes but you keep wearing them anyway. Last December the lights got cut off and the landlord put your furniture out on the sidewalk. You and your mom and the baby had to move in with your aunt who didn't want any of you there. She made that perfectly clear.

Poverty means sometimes your mom goes off to work every day. But her paycheck still doesn't cover all of the expenses, and she's not there when you get home from school. When she's not working she gets the welfare check. That's not enough either, but at least she doesn't have to pay \$2 a day to ride the bus and she's there when you get home from school. She also doesn't have to pay for day care for the baby and she can get medicine when the asthma hits her. The last job ended after a year when the day care money stopped coming. The one before that ended when you got the chicken pox and mom had to stay home with you for a week only to go back to work to find someone else had her job.

These are some more things we know about poverty. Poverty is the single most significant predictor of poor outcomes for children. Children and families of color are over-represented in the poverty statistics. The 1990 Census reported the poverty rate for African American children at 56.5%, compared to 15.4% for white children. Children of color tend to live in poor areas

and thus go to poor schools. Children of color and their parents face racial discrimination in hiring and housing, bank loans and business deals, promotions and perceptions, and all the various privileges that lead to an adequacy of resources.

The current poverty level is \$12,980 gross income per year for a family of three. Families with gross annual incomes less than that are considered to be living in poverty.

EMPLOYMENT AND INCOME

People are poor because there are fewer living wage jobs available to those with limited educational opportunities than there were in the past. People are poor because the money has moved.

A parent working 40 hours a week at minimum wage — currently \$4.75 per hour — earns \$9,880 a year and, with 2 children, can gain approximately \$3,500 in additional income by filing with the IRS for the federal Earned Income Credit. The majority of persons in the low-wage workforce do not work full-time, but for the most part not by choice.

A parent with 2 children receiving welfare gets \$2,280 per year. If she is earning a small amount of money she may still keep a portion of welfare assistance, but as soon as she earns \$310 per month, she loses eligibility for welfare. Then after one year she loses Medicaid eligibility and guaranteed child care assistance.

The real solutions to the problems of poverty should focus first on making work possible and making work pay. For the most part, people are on welfare because they can't find work or they can't maintain it in the face of child care, health care, transportation and housing costs.

WELFARE AS WE KNOW IT: EFFECTIVE 1/1/97
 The new welfare "reform" laws and policies focus on making work necessary, but provisions for making it

rected by the federal Personal Responsibility and Work Opportunity Reconciliation Act of 1996, and including some extra provisions passed earlier by the 1995 Louisiana Legislature the key features of Louisiana's new welfare plan are work participation activities, time limits and sanctions. In marked contrast to the previous welfare reform program - The Family Support Act of 1988, which focused on job training and basic skills — the new version substantially reduces opportunities for workforce preparation and renders major segments of the population of poor children and families ineligible for assistance.

Further, the new law eliminates the entitlement status that has characterized the nation's welfare program since its inception sixty years ago. Instead of being available to all parents with dependent children and little or no income who meet the rules for eligibility, welfare now comes to the states in the form of a Block Grant. This means the allocation is a fixed amount that will not stretch in times of greater need. It also means that when states are successful in discouraging people from applying or moving people off the welfare rolls, toward whatever outcomes, the amount of the state's block grant allocation stays the same.

AFDC no longer exists: FIND WORK

The federal law replaces Aid to Families with Dependent Children (AFDC), the former cash assistance program known as welfare, with Temporary Assistance for Needy Families (TANF). Louisiana's version of the TANF program is titled FI-TAP, or Family Independence Temporary Assistance Program.

The old Family Support Act enacted by the 1988 Congress operated nationwide under the name JOBS, standing for Job Opportunities and Basic Skills, and in Louisiana as "Project Independence." Under TANF, JOBS and Project Independence have been replaced with "FIND WORK."

Required Activities

The core of FIND WORK is "work participation activities." The law requires that states have 25% of all TANF families participating in work activities at least 20 hours a week in 1997. The required percent and hours go up gradually to 50% of all TANF families and 30 hours per week in the Year 2002. For two-parent families receiving TANF the quotas are higher.

- Activities that count toward the work participation quotas include:**
- ◆ **community service**, as long as it is approved in advance by the state office
 - ◆ **paid work**, but Louisiana's welfare grants to families are so low that a fairly small number of hours of paid work results in loss of eligibility for cash assistance
 - ◆ **job search and job readiness assistance**, but not for longer than 6 weeks
 - ◆ **vocational training**, but only for 12 months
 - ◆ **basic skills education**, but only for recipients under the age of 20.
 - ◆ **subsidized employment**, which implies but does not offer an investment of public dollars toward this purpose
 - ◆ **providing free child care services** for another parent on TANF participating in community service.

Time limits: The Clock is Ticking

Under the 1995 state law, a family may not receive cash assistance for more than 2 years in any 5 year period of time. Exceptions or extensions may be made for those who are looking for work but can't find it, for those who live in areas of the state where factors relating to job availability are "unfavorable" as defined by the state, and for those who are incapacitated or disabled.

The federal law adds an absolute five year lifetime limit with possible hardship exemptions capped at **no 15**

Overview

more than 20% of the population receiving cash assistance.

Time limits began running on January 1, 1997. Thus, no recipient of welfare cash assistance should lose eligibility due to time limits until January 1, 1999. There are, however, other reasons that will cause some to lose their benefits earlier.

Sanctions

A family will lose their welfare benefits if the parent refuses to accept a full-time job "without good cause."

A child of school age will be subject to being removed from the family's welfare grant if he or she misses more than 15 days of school in a six-month period. Parents will be held responsible for producing documentation of satisfactory attendance.

Teen parents receiving welfare must be in school unless they have graduated, must attend parenting classes, and — unless they are married — must live with a parent or an approved substitute guardian.

A whole family will lose eligibility for welfare if the mother fails to cooperate with the state in establishing paternity or obtaining child support.

Anyone convicted of a drug related felony offense (after 8/22/96) may be permanently ineligible for cash assistance. The State can opt out of this provision or pass legislation to limit the time of ineligibility.

A child whose immunizations are not current may be removed from the family's welfare grant.

Legal Immigrants

The new federal law bars most current and future legal immigrants from receiving SSI (Supplemental Security Income for the elderly and disabled) and Food Stamps, unless and until they become citizens. There are some exceptions for refugees, individuals with a ten-year work history, and veterans. States have the

option under federal law to also bar legal immigrants from TANF and Medicaid. Louisiana has chosen to allow TANF eligibility to continue for the 600 immigrant Louisiana families receiving AFDC in October, 1996. However, the state has moved to ban all legal immigrants from Medicaid. The impact of this decision will be severe for low income women and children, but even more so for 10,348 elderly and disabled immigrants (Sue Weishar, Catholic Charities Archdiocese of New Orleans, 2/14/97).

Facing the loss of SSI, Medicaid, and Food Stamps with no other means of support, most elderly immigrants have very little hope for obtaining U.S. citizenship, given the required English language skills and knowledge of U.S. history, and even slimmer prospects for finding a job. The result is widespread panic and even talk of suicide among disabled and elderly immigrants.

More People Than Jobs

The fundamental problem with "FIND WORK" is that there simply aren't enough paying jobs to accommodate the numbers of individuals who will be forced off welfare by the end of 1998. University of New Orleans economist Tim Ryan estimates that the state's economy produces roughly 15,000 new entry-level jobs per year. Adding roughly 60,000 adult recipients of welfare to 140,000 unemployed individuals currently seeking employment creates a job shortfall of 170,000, and that's assuming that the state will indeed produce 30,000 new jobs by January 1, 1999.

Child Care and Health Care in Working Families

The next problem is that those who are able to move from welfare to work typically enter the workforce at low wage jobs, often part-time, with no benefits. Costs of employment — most notably transportation and child care — quickly consume the major portion of a small paycheck, and health care moves out of the reach of most workers upon the loss of Medicaid eligibility.

OVERVIEW

Overview

workforce whose child care is unreliable are likely to have attendance and performance problems that lead to termination, and parents who are not comfortable with the care their children are receiving often choose to leave their jobs.

Maintaining a Safety Net: Exceptions and Extensions

Given that there will be roughly 6 or 7 job seekers for each job opening, there will obviously be a large number of families with no visible means of support when January, 1999 arrives. The exemptions and extensions outlined in the 1995 state law could provide some semblance of a safety net but the state must define and clarify the rules that will be used to determine who qualifies. What counts as documentation of an active but as yet unsuccessful work search? What unfavorable factors relating to job availability will be considered worthy of allowing an exemption or extension to the two-year limits? How is "incapacity" or "disability" to be defined?

Clarity is also needed regarding sanctions. What is "good cause" for refusing to accept a full-time job? Does a lack of available child care, or a lack of good child care, count as good cause? What about a combination of arduous work and physical difficulties? What if an 8 or 8 1/2 hour day and a long commute keeps a mother away from home for eleven hours or more? Individuals need a clear view of their options in order to make the best possible decisions for themselves and their families.

Families and school systems as well need to know what is necessary to document an excused absence in determining a school-age child's continued eligibility for welfare. Will the reporting requirements be made consistent with the school systems' attendance reporting schedules? Teen parents need to know what opportunities for parenting classes are available and approved. Will child care be provided? Mothers need to know whether a missed appointment constituted failure to cooperate with paternity establishment and

The state plans to provide child care assistance and continued Medicaid eligibility for one year when a parent moves off welfare into a job. When that year ends some families may be able to access continued child care assistance, depending on how many slots the state provides. Younger children may retain Medicaid eligibility (see section on Medicaid). Without health care for the family and assistance with the cost of child care, maintaining low wage employment becomes even more difficult. Many parents are likely to find themselves jobless after the first illness or when the paycheck doesn't stretch far enough to pay for the child care.

The integral role of child care in a parent's ability to secure and maintain employment raises issues beyond affordability. There will be critical gaps in the supply of child care in many areas of the state and for some specific child care needs, e.g., infant and school age care, split shift and night shift care, and care for children with special needs.

An even more critical issue is the quality of care available. Louisiana licensing standards tend to be weak, especially in the area of child/staff ratios, e.g., 1 caregiver for 6 infants or 12 two-year-olds. Child care providers who may want to offer high quality care are limited by the level of fees paid by the state through child care assistance — currently \$50-\$55 per week, depending on the age of the child — and by the capacity of unassisted low-income families to pay. Informal care arrangements outside of licensed or certified facilities may cost less but also tend to offer less in terms of reliability and stability.

Further barriers to quality and stability in licensed care as well as informal care are presented by frequent staff turnover and a shortage of well-trained caregivers willing to work at very low wages. Teaching and caring methods tend to mirror practices used in elementary schools rather than practices appropriate to the developmental needs and capabilities of young children.

Parents in the workforce who cannot find child care will not be likely to seek employment. Parents in the

whether they can intentionally "refuse" to identify the father if they have good reasons to fear his retribution.

While we could all agree that the best alternative to welfare is a decent job, it is fairly clear that this option will not be available to everyone within the prescribed time limits. Exceptions and extensions to the time limits represent a lifeline for thousands of children and families. The specific terms defining grounds for sanctions must be made clear in order that families can do their best to comply. It is critical that guidance on these issues be clearly, widely, and promptly provided.

Workforce Preparation

Most parents receiving cash assistance would rather be employed at a living wage. In addition to the insufficiency of jobs — especially living wage jobs, or even entry level jobs likely to lead to a living wage — and the cost of child care and health care, a lack of sufficient and appropriate skills and qualifications represent a primary barrier to employment for many welfare recipients.

In this light, the state's decision to restrict access to basic skills education and vocational training seems counter-productive. Federal block grant and state dollars can legitimately be used to provide training and adult education. However, these activities do not count toward the federal work participation quotas. For the majority of adults receiving welfare, community service and related activities are not likely to lead directly to paid employment, especially if unaccompanied by appropriate skills training.

While the state's intentions to meet the quotas are understandable, options need to be weighed. The state can actually reduce work participation requirements by earning federal credits available to states that reduce their caseloads. Education and training targeted toward available jobs are generally considered the optimal route toward reducing caseloads. The state could even choose to take the penalty for

not meeting the quotas, in the interest of investing in good outcomes for its citizens. Relative to the increased funds that the state is getting overall in the TANF Block Grant, the penalty for falling short of the work activity quotas is small. The Congressional Budget Office projects that most states will opt to accept sanctions in light of the sacrifices and administrative effort necessary to meet the quotas.

A final option might be to creatively combine training and basic skills education with on-the-job training, community service, or subsidized employment.

The Missing Link: Child Support

A major contributor to families' need for public assistance is the failure or inability of an absent parent to contribute the support of children.

The welfare reform bill contains sweeping revisions of the federal child support statute and restructures the administration of child support into centralized collections and disbursement and nationwide registries (National Governor's Association et al., 1996).

Under the new law, assistance will be denied to applicants or recipients of welfare and their families for failure to cooperate in establishing paternity or obtaining child support (Department of Social Services, 1997). The law added provisions for tougher enforcement of child support orders, including the establishment of a federal registry to track at-large parents, requirements that employers report new hires to the state and requirements for states to establish an automated centralized unit by October, 1998 to collect and disburse support payments.

There is certainly room for improvement in moving child support cases through the system. In Louisiana, only 38.7% of child support cases have orders for collection established. The rest are waiting for some type of action. The children must wait with their cases: for clothes, school supplies and any other need or want that might be denied because the money simply isn't there.

Uninsured Children

Parents rank their children's health as their greatest concern. It is a major societal concern as well. One of the first steps in ensuring children's good health is to assure that they receive those primary, preventive, and screening services that produce good health outcomes.

Because of an inability to pay, 20% of Louisiana children are denied access to consistent, comprehensive health care. These are primarily children of parents who work but have no health benefits for their family (General Accounting Office, 1996). Some may find it surprising that most of the state's uninsured children are children of families who have at least one wage earner. Many of these parents are working in the jobs that are vital to our lives and make our state function. They work in hotels, universities, gas stations, restaurants, on construction sites or in the health care field where, with sad irony, they help deliver the very services they and their children are denied.

**Of Louisiana uninsured children:
16% are infants to 5 years old
41% are 6 to 12 years old
43% are 13 to 18 years old**

The Southern Institute on Children and Families, 1996.

The children in these families live in a nation with an abundance of the world's most sophisticated health technologies, but often cannot reach basic health services. Even when their children are sick or injured, families often find that health care is unaffordable or out of reach. Low-income working parents face choices many other parents would find unthinkable. Taking a job for an employer who does not provide health insurance can mean becoming ineligible for the health coverage provided to the state's poorest families. Only 13% of all workers earning less than \$5 per hour had employer-based health care coverage nationally (Center on Budget and Policy Priorities, 1996).

Indeed, many families receiving cash assistance can tell you that one of the biggest obstacles to their leaving welfare for employment is that doing so would eliminate their family's access to health care coverage.

Parents working for low wages cannot solve the problem by purchasing their own coverage nor can they pay typical medical bills without sacrificing essentials. Ultimately, most parents conclude that it is in the best interest of their family to tend to the essentials of day to day life and hope and pray that they and the kids won't need to see a doctor.

Given the new time limits and work requirements in the new welfare law, there will be more parents who are thrust into a labor market increasingly inhospitable to the health insurance needs of families with children. According to the General Accounting Office, the percentage of children with private health insurance coverage reached its lowest level in eight years in 1994. Further, among children with a parent working full-time during the entire year, approximately 25% lacked private health insurance. Many low income working parents are not able to secure full-time employment, and a part-time job rarely offers health insurance.

Uninsured children are usually without a regular source of care and receive only limited access to health care services in general. Without health insurance, parents frequently delay taking their children to doctors hoping the illness will go away. Sometimes it does, but when it doesn't the child is at greater risk of more serious health problems, the illness becomes costlier to treat, and too often permanent impairment occurs. Clearly, a visit to the emergency room is more expensive than one to a doctor's office, in the short term as well as the long term.

Given the advanced state of our health care delivery system and the fact that children are not an expensive group to cover under Medicaid (National Association of Child Advocates, 1996), there is no reason for children in any state of this nation to suffer from preventable illnesses,

Overview

untreated injuries, or needless developmental delays and disabilities.

MEDICAID

Medicaid was created in 1965 as a companion program to Medicare. In Louisiana, there are 327,565 children who rely on Medicaid for their health care needs. Medicaid is a key source of health care coverage for children in poor and working poor families. Medicaid is also a source of health care coverage for families when parents are transitioning off welfare or for young children whose parents are working in low wage jobs without benefits. Medicaid also helps maintain a strong health care delivery system. For example, children's hospitals rely heavily on Medicaid for their operating budgets.

Medicaid is currently an entitlement program, which means that all individuals who meet eligibility standards can receive the benefit. Services which must be covered include physician services, in and out patient hospital services, prenatal care and early and periodic screening, diagnosis, and treatment (EPSDT) services for children under age 21.

Louisiana is among only two other Southern states which have not exercised the option to broaden the minimum eligibility levels set by the federal government for Medicaid. Also contributing to the problem of uninsured kids is the fact that not all children who are eligible for Medicaid are enrolled. Of uninsured children nationally, 30% are eligible for Medicaid but not receiving it (Southern Institute on Children and Families, 1996). This is due, at least in part, to the fact that outreach efforts have not successfully informed families that children not receiving cash assistance can still qualify for Medicaid. More of these children would be covered if there were better outreach and simplified enrollment. It appears, however, that we are moving in the opposite direction.

Despite these limitations, Medicaid is an increasingly

important health care safety net. It also makes good economic sense. For every \$28 that the state invests in the health of its low income children and families, the federal government provides a \$72 match. By building on existing public health services, children who are currently without insurance can be covered.

WHO IS COVERED?

Being poor does not automatically qualify a person for Medicaid. Only persons who fall into particular categories are eligible. Although Medicaid has increasingly been used to expand coverage to the low income population, thousands of uninsured Louisianians are beyond the programs reach (Louisiana Health Care Campaign, 1996).

Income eligibility levels for pregnant women and children in Medicaid:

LOUISIANA MEDICAID ELIGIBILITY LEVELS annual income, family of three (1996)			
Age	Income	Percent of Poverty	
Birth to 1	\$17,263	133%	
1 - 5	\$17,263	133%	
6 - 12	\$12,980	100%	
13 - 18	\$2,280	17.6%	

As with other social programs, Medicaid is in the midst of change, with more changes being proposed all the time. The Personal Responsibility and Work Opportunity Reconciliation Act of 1996 eliminated the Aid to Families with Dependent Children (AFDC) and eliminates automatic Medicaid eligibility for persons eligible for TANF cash assistance. Though TANF recipients may still be eligible, new procedures will be necessary.

About half of the children on Medicaid in Louisiana do not receive welfare cash assistance from the government. These are generally children of families with at least one adult employed in a job that does not offer health insurance for themselves and/or their children.

Overview

As noted earlier, children are not an expensive group to cover under Medicaid. While children account for more than half of all Medicaid beneficiaries, they account for less than one-quarter of Medicaid costs nationally (Medicaid Managed Care: an advocates guide to protecting children p. I-19). The 1996 welfare law has also made it more difficult for disabled children to receive Supplemental Security Income (SSI) and will limit their eligibility for Medicaid also.

CHILD HEALTH INDICATORS

This book contains a number of measures which gauge the state of children's health. With previous and pending changes in public policy regarding insurance, public commitment to health care and overall changes in the health care delivery system, it becomes increasingly important to monitor the indicators of children's health. The indicators included here are among the baseline measures of children's health.

BIRTHS TO TEENS

Louisiana has one of the highest teen pregnancy rates in the country, at 19.1%. While no one should assume that teen parents and their children are destined for failure, the evidence is overwhelming that becoming a parent too soon tends to limit the life options of both the parents and their children. Teen parents often fail to finish school. They are much more likely to live in poverty and suffer the consequences of limited resources. Teens who arrive early at parenthood find their own development impeded. They often miss out on the milestones that function as rites of passage for others of their age cohort—graduating from high school, entering college, trade school, or deciding upon a job path, and transitioning, rather than being thrust, into independence.

Allie was a pregnant teen referred to FINS (an early intervention program discussed below) by her parents. After a thorough psychological assessment and family service plan Allie was connected with the Parenting Center in her parish. Allie attended parenting and prenatal classes there and was paired with a "Mentor Mom." Allie and her FINS officer created a plan which allowed Allie to complete her education. She has now received her GED (equivalent to a high school diploma) and is planning to be in college by the fall of 1997.

As noted earlier, children are not an expensive group to cover under Medicaid. While children account for more than half of all Medicaid beneficiaries, they account for less than one-quarter of Medicaid costs nationally (Medicaid Managed Care: an advocates guide to protecting children p. I-19). The 1996 welfare law has also made it more difficult for disabled children to receive Supplemental Security Income (SSI) and will limit their eligibility for Medicaid also.

MEDICAID MANAGED CARE ON THE HORIZON

Louisiana is looking to managed care as an answer to soaring Medicaid costs, as 40 other states have begun to do. This shift from traditional fee-for-service system of payment has been largely driven by financial considerations. Medicaid expenditures, like private health insurance costs, have grown rapidly. Across the nation, the experience with Medicaid managed care has been mixed in terms of health access and cost effectiveness (Louisiana Health Care Campaign, 1996).

Managed care is a term used to describe health care systems that integrate the financing and delivery of health care services by arrangements with selected providers to furnish a comprehensive set of health services. The method of payment is by capitation, or a fixed fee per person for a specific period of time without regard to the number of visits.

There are various types of managed care organizations, the fastest growing type being the Health Maintenance Organizations (HMO). Since HMOs are paid a set fee for each enrolled person, the incentive becomes to keep people out of hospitals and presumably in better health through providing preventive and primary care. When you're in managed care one provider is responsible for your care, essentially functioning as a gatekeeper through whom you access the other care you need.

As Louisiana moves toward managed care as the primary mechanism for delivering health care, citizens and policymakers must insist on safeguards to prevent problems that have emerged in other states. There must be rigorous over-

25

LOW BIRTHWEIGHT INFANTS

The rate of low birthweight (infants born weighing less than 2500 grams or 5.5 pounds) has decreased in recent years. Low birthweight has been associated with increased mortality as well as developmental, learning or hearing problems for those children later on. Factors which place pregnant women at higher risk of delivering low birthweight infants include inadequate prenatal care, smoking, substance abuse and stress.

PRENATAL CARE

Adequate health care during pregnancy increases the likelihood of healthy babies because medical and developmental problems can be detected early and high-risk health habits of the mother discouraged. The American Public Health Association has estimated that every \$1 spent on prenatal care saves three and a half times that much in expenditures for the care of low birthweight babies (Select Committee on Children, Youth and Families, 1990). The trend in this area has been positive, but there are wide disparities by race and parish which persist.

State Comparison by Race
Adequate Prenatal Care
 white: 83% African American: 60.3%

Parishes with the highest total rates of adequate prenatal care: Cameron, Jefferson, LaFourche, St. Bernard, and St. Tammany

Parishes with the lowest total rates of adequate prenatal care: Acadia, East Carroll, Lincoln, Morehouse and Winn

A public health objective, set forth in "Healthy People 2000" is to increase to 90% the number of pregnant women receiving prenatal care in their first trimester (Parish Health Profile). This can be a goal Louisiana could successfully reach, with the adequate outreach and access to medical care that we are capable of providing.

INFANT MORTALITY RATE

The infant mortality rate documents the deaths of children during their first year of life. The Office of Public Health (OPH) notes that most of these deaths are preventable. OPH lists risk factors associated with infant mortality, which include giving birth at under 19 years of age or over 40 years of age, leaving less than 2 years between births, poor maternal health or nutrition, inadequate prenatal care and exposure to toxins such as alcohol, drugs and tobacco smoke (Parish Health Profile, 1995). The trend in infant mortality has improved in the last five years, from 10.9 per 1,000 live births in 1993 to 10.4 in 1995.

IMMUNIZATION

The immunization figure in this book reflects the percentage of children immunized at public health clinics whose immunizations are up to date at age 2. Approximately 70% of Louisiana children receive their immunization at public clinics. The trend in immunization is positive, increasing by 21% from 1991 to 1995.

Immunization rate			
1992	1993	1994	1995
55%	59%	64%	75%

CHILDREN IN TROUBLE

Adolescence is the time when children begin making decisions that have significant impact on their futures. Too many of our young people are making decisions that lead them into trouble. In Louisiana from June 1995 to July 1996, 14,755 encountered the Office of Youth Development after being caught in crimes ranging from truancy to homicide.

In the face of daily reports of children getting into trouble, juvenile crime - particularly violent crime - is a major concern throughout the state and the nation. Young

people themselves fear the violence that's in their homes and on the streets of their neighborhoods, for not only are youth sometimes the perpetrators of crime, they're also victims of it. The overall homicide victim rate among teenagers is 33.5 per 100,000 15 to 19 year olds. The breakdown of this figure by race is particularly staggering: 80 out of every 100,000 African American teens is a victim of homicide, compared to 5.4 per 100,000 white teens.

Sometimes teens die violently at their own hands. The suicide rate among teenagers is 10.6 per 100,000. White teens have the highest rate of suicide at 12.2 per 100,000. The rate among African American youth is 8.2 per 100,000.

The senseless violent death of young people devastates families. It also takes a tremendous toll on the child's peers, community, and our overall sense of hope when our children don't live long enough to grow up.

As a state, we can — and we must — provide our young people with better options and instill in them a sense of optimism about a future that inspires good decisions now.

INTERVENING BEFORE IT'S TOO LATE

As a state we can also become more determined to rescue our youth from their own bad decisions before the outcomes become horrible.

One of the avenues we have for protecting children is through the Families in Need of Services (FINS) Programs, attached to juvenile and district courts throughout the state. Working with schools, courts, probation and other systems that intervene with children in trouble, FINS is designed to reach kids at the first sign of trouble. It's a way of catching kids when they trip instead of turning aside and letting them fall. FINS includes the family in the process of reaching the child, and has had significant success in reaching families and children who otherwise may have continued on a negative path.

Emily's Story

Emily, a 15 year old female, was referred to FINS with

problems of truancy, running away, and chronic alcohol abuse. Upon assessment, Emily was discovered to be chemically dependent and had a family history of chemical dependency issues. Her father was serving time in prison for drug possession and robbery. There was a long history of domestic violence, most currently being committed by her mother's boyfriend.

Emily, upon self report, admitted to drinking and smoking marijuana with her mother's boyfriend and often having to lock herself in her room in fear of his sexual advances and violent behaviors when her mother was not present. She often reported taking care of him when he became so drunk as to not be able to function. Emily's substance abuse problems had advanced to a point where she was often skipping school and found at neighbors' houses drinking as early as 7:30 a.m. She had also begun to steal from home and from neighbors. Emily was sexually active and at risk of becoming pregnant.

A family service plan was drawn up. Emily began individual and family counseling with her mother at a non-profit community agency. Family counseling for her and her mother was also facilitated through the agency. Her mother agreed to leave the boyfriend and find another place to live with Emily. After establishing their immediate safety, both began to work on their chemical dependency issues and Emily's mother became very involved in taking on her role as mother rather than friend to Emily, as she had previously attempted. After some outpatient work, Emily was referred to an inpatient chemical dependency program through a coordinated effort with the state substance abuse clinic. Her mother continued outpatient counseling, and Emily, upon completion of her program, returned to family counseling.

FINS officers also arranged for her to become involved in a church youth program and attend local Alcoholics Anonymous and Narcotics Anonymous meetings. Much more of Emily's chaotic, abusive family history was discovered as she continued to work with FINS

31

officers for an entire year. Emily was also able to break off her unhealthy relationship with her own boyfriend and maintain no sexual activity for the remainder of her time in the FINS program. She began to recognize the emptiness she felt in her self that she was trying to fill through sexual relations with male peers. State mental health was also contacted and, after an evaluation, Emily was put on a short term trial of antidepressants for four months during which time she was able to learn and practice new, healthy coping skills.

Six months after completing the FINS program, Emily is now 17. She is actively attending school and remains sober. Her mother has returned to school and is expected to finish her nursing degree within the next two years. More importantly, Emily's mother has become just that... a mother. She has stopped her negative behavior and has truly become a role model to Emily. Emily has written letters and placed calls to the FINS office on occasion to thank them and to allow them to hear her continued progress.

CHILD ABUSE AND NEGLECT

Emily's story is unfortunately not typical for abused and neglected children and their families. Louisiana's child protection office is overburdened and underfunded, resulting in an apparent tendency to limit the number of cases accepted for investigation and intervention. The only immediately available way to do this is to refuse to validate and follow up on reports that do not indicate immediate, serious physical danger to a child. The approach is not necessarily consistent. Some cases of lesser risk may be accepted, depending on caseloads, calls, and the judgment of the screener. But the tendency will be to substantially limit the response. Unfortunately, without some sort of intervention — whether it be public or private, community or family — a pattern of even potentially abusive or neglectful behavior tends to escalate. Thus by the time the case meets the standard of risk that requires a response from child protection, the situation is so severe as to require removing the child from the home.

Once a child enters foster care or institutional care in the custody of the state, efforts should be made to help the original family solve the problems that led to the removal of the child. Unfortunately, the state's resources for family help fall way short of the mark - whether it be intensive therapy that is needed or cash to put the lights on and food in the refrigerator. So the children remain in the state's care. The situation is exacerbated by the difficulty in recruiting and keeping foster parents, probably due to the payment rate and the increasing level of difficulty that more severely damaged children present. The state cannot refuse children. To do so would be to defy a court order. When foster families cannot be identified, children are placed in institutional care which is much more expensive. The Legislature consistently underfunds foster care, so the department has to find the money somewhere else, and we are back at the front line where the calls come in, refusing to intervene.

Now comes the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 - welfare reform - threatening to deprive thousands of Louisiana families of income altogether and throw 1.1 million more of the nation's children into poverty. (Urban Institute, 1996.) Poverty is extremely stressful and stress can lead to abuse. Having no income can obviously lead quickly to situations that may be considered serious neglect. To quote Mark Courtney of the University of Wisconsin's Institute for Research on Poverty, "Growth in child poverty...is likely to lead to an increase in child maltreatment, and a corresponding increase in demand for child welfare services including substitute care." (Columbia University School of Social Work, 1997). Note that "child welfare" is the term used to define the array of services for abused, neglected, and otherwise temporarily or permanently parent-less children. Services include child protection, family treatment, foster care, and adoption. Note also that child welfare services cost substantially more than welfare cash assistance to families.

Prevention of child abuse and neglect is the obvious answer to this mammoth problem, this cycle spinning out

OVERVIEW

tive role models, the adequacy of family income, and the ability to access health and social services when needed are among the factors which affect the educational attainment of the next generation of adults.

INVESTING IN CHILDREN WHILE THERE'S TIME

The range of data indicators in this book — poverty, employment, child health, children in trouble, child abuse, and education — are fundamental measures of children's well-being. Research and practical experience tell us that children who face a number of adverse circumstances, such as poverty, inadequate health care, and poor education, experience significantly worse outcomes than children who do not face such disadvantages.

It is possible to break the cycle of disadvantage. Scholars Robert Haveman and Barbara Wolfe followed one group of young people for two decades, looking at the life circumstances and outcomes for these youth. They saw how societal circumstances as well as parental and personal choices impacted on the success the group experienced later in life. Their findings suggest that to break the cycle of disadvantage, we must commit to the following:

Seek to strengthen American Families and enable them to exercise their desires to be economically self-sufficient. Help them to live in neighborhoods that will support their economic goals and instincts for stability. Where serious deficits in resources and stability — or excesses of family-based stress — plague particular children, provide intensive support and counseling designed to offset these problems. And, above all, seek to increase the educational attainment of the next set of the nation's parents, concentrating efforts on minimizing the number of those without even a high-school diploma. (Haveman and Wolfe, *Succeeding Generations*, page 263).

of control. Louisiana's Children's Trust Fund for the prevention of child abuse does a valiant job - through dozens of fine programs throughout the state that empower children, support parents, and bring communities together toward building healthy well-functioning families. But these fine efforts pale in the face of the threat that advances.

EDUCATION

One of the most fundamental indicators of a child's future well being is education. Educational attainment is negatively correlated with poverty, which means that the more education a person has, the less likely they are to be poor.

The good news in this is that education can break the cycle of disadvantage. The bad news is there seems to be a vicious cycle operating here: poor children enter school with challenges to learning, such as untreated health problems, inadequate nutrition, living in neighborhoods where violence is a daily threat, and living in homes where unstable finances create perpetual stress. The schools they arrive at each morning are too often inadequately equipped to educate them. There may be too few books and no computers, buildings may be deteriorating, there may be too little heat in the winter and no air conditioning to combat the sweltering Louisiana heat. And most significantly, when children arrive at school to find teachers who have low expectations of their success, they absorb negative messages.

DROPPING OUT OF SCHOOL

Although the Department of Education does not calculate a graduation rate, we can look at the number of public school students in grades 7 through 12 who leave school before graduating. In the 1994-95 school year, 8,928 Louisiana children dropped out of school. That's 24 students each and every day — about the equivalent of a classroom full. The majority of students who drop out do so in the ninth and tenth grades.

The quality of schools students attend, the presence of posi-

Overview

Our current public policy decisions are a far cry from "supporting families reach their economic goals" and "providing intensive support" to augment serious deficits. But they needn't be. We've seen repeatedly that investments in children pay-off in personal, social and economic terms. Engineering punitive policies against the parents — mostly mothers — of disadvantaged children will contribute nothing towards improving children's well-being. Nor will such policies magically create jobs, increase skill levels, or improve health care and child care access for the families they intend to "reform." One generation's economic decisions have an impact on the next. By investing our time, money and energy in what we know works for kids rather than what is politically expedient, we can ensure that the impact we have on the next generation is a positive one.

OVERVIEW

Children in Louisiana

Louisiana I Love You

Louisiana, I love you. You look like a raggy toed boot, and you are like the crawfish on Friday at my grandpa's house. Louisiana, I love you. You are the smell of my dog in my back yard. You look like the swamp in Lake Charles. You are like the flowers by our pond and the pine trees around our house. You taste like the gumbo that my grandma makes and the caffish that my great grandpa makes. Louisiana, I love you. You feel like the mud in my front yard, and when my turtle bit me and the sun shining on a hot summer day. Louisiana, I love you. You sound like a cricket in the night, and the rain, and my bird singing a song.

Trends and Notes

CHILDREN OF TOMORROW

We are the children of tomorrow
Forgotten by yesterday
Halfway between night and day
I lean against a star.

We are the children of tomorrow
Lost for years among the darkness
Disguised with masks
Hidden by today.

I live in a city of riddles
Lost for years among life
Halfway between life and death
Locked into the future.

I lean against nothing
Halfway between the sun and the moon
Locked into today
Forgotten by yesterdays
Traveling for days to reach tomorrow.

- *Reginald Delmore*
7th grade, New Orleans

1994 Estimates of the resident population by age, race, and parish.

Source: U.S. Bureau of the Census

POVERTY

Poverty, 1993. These figures are the most current parish-level poverty estimates as of April, 1997. Estimates are for the total population and for children ages 5 to 17 (updated estimates for children under age 5 are expected later in 1997). The statistical model used to develop these estimates relates poverty to data from federal income tax returns, participation in the Food Stamps and Supplemental Security Income (SSI) programs, and the previous census. These estimates are then combined with direct estimates based on the Current Population Survey (CPS) sample to provide estimates which are more precise than either set alone. Because of differences in methodology, these figures don't compare directly with the poverty figures from the decennial census. There is a trade-off between more statistically precise but outdated 1990 census results and the less statistically precise but more current model-based estimates.

Source: U.S. Bureau of the Census, Small Area Income and Poverty Estimates.

1990 Census Poverty The poverty figures in

the back of the book reflect individuals and families who fell below the federal poverty threshold as reported in the 1990 Census. The poverty threshold is the annual income level which is three times the estimate of what a family spends on food in a year. The poverty threshold is adjusted for family size and revised annually to allow for changes in the cost of living as reflected in the Consumer Price Index. The poverty threshold for a family of four persons was \$12,674 at the time these figures were calculated. Poverty thresholds were applied on a national basis and were not adjusted for regional, state, or local variations in the cost of living. These estimates don't compare directly with the 1993 estimates of poverty.

EMPLOYMENT AND INCOME

Median Family Income Federal fiscal year 1997 estimates of median family income developed by the Department of Housing and Urban Development. Estimates are based on 1990 census data estimates updated with a combination of local Bureau of Labor Statistics data and census divisional data. Separate median family income estimates are calculated for all Metropolitan Statistical Areas (MSAs), Primary Metropolitan Statistics (PMSAs) and nonmetropolitan counties. An asterisk (*) preceding the data in this category indicates that the MSA median, rather than individual parish median, was reported as follows:

East Baton Rouge, West Baton Rouge, Livingston, and Ascension parishes are included in the Baton Rouge MSA.

Terrebonne and Lafourche parishes are included

in the Houma MSA.

St. Martin, Lafayette, Acadia and St. Landry parishes are included in the Lafayette MSA.

Jefferson, Orleans, Plaquemines, St. Tammany, St. Bernard, St. John and St. Charles parishes are included in the New Orleans MSA.

Caddo, Bossier, and Webster parishes are included in the Shreveport-Bossier City MSA.

Source: U.S. Department of Housing and Urban Development, Economic and Market Analysis Division, Office of Economic Affairs.

Unemployment Estimate of the civilian labor force 16 and over who are not employed and are actively seeking employment. Civilian labor force statistics developed in accordance with Bureau of Labor Statistics methodology. Rates are computed from unrounded data. Data is not seasonally adjusted. The number and rate in this book reflect preliminary data for January, 1997.

Source: Louisiana Department of Labor, Research and Statistics Division, Baton Rouge, Louisiana.

CHILDREN RECEIVING:

AFDC Aid to Families with Dependent Children (AFDC) is a cash assistance program that states administer under federal supervision for families with children who meet specific eligibility requirements. The benefit amount is determined by the number of family members and the family's countable income. For example, a family of three with no accountable income will receive a grant of \$190 per month in an urban area; \$174 per month in a non-urban area. A family of three with count-

able income in excess of these amounts would be ineligible for AFDC benefits. The figures in this book reflect the average number of children receiving AFDC benefits each month in fiscal year 1996 (July 1, 1995 through June 30, 1996).

Source: State of Louisiana, Department of Social Services, Office of Family Support, Baton Rouge, Louisiana.

Medicaid The Medicaid program provides medical assistance to low-income persons who are age 65 or over, blind, disabled, or members of families with dependent children or qualified pregnant women or children. Pregnant women and children under the age of 6 whose income unit is less than 133% of the Federal Poverty Income Guidelines and children age 6 or older whose income unit is less than 100% of the federal guidelines may be considered for Medicaid. The data included here reflects individuals under the age of 21 who were eligible for Medicaid in December 1996.

Source: State of Louisiana, Department of Health and Hospitals, Bureau of Health Services Financing, Baton Rouge, Louisiana.

Food Stamps The Food Stamp program is a federal public assistance program which provides food coupons which are exchanged for food. Households in Louisiana with gross income below 130% of the poverty level and net income below 100% of the poverty level may be eligible for Food Stamps. For example, the maximum net income for a family of three is \$1,050 per month. The figures in this book reflect the number of children receiving Food Stamps each month, as well as the state average monthly coupon amount and household size in fiscal year 1996 (July 1, 1995 through June 30, 1996).

Source: State of Louisiana, Department of Social Services, Office of Family Support, Baton Rouge, Louisiana.

Rouge, Louisiana.

WIC Special Supplemental Food Program for Women, Infants and Children (WIC) is a federal food program which provides supplemental foods, nutritional screening and nutrition counseling to eligible low income pregnant women, new or nursing mothers, and children under age 5 who are at "nutritional risk." Eligibility is set by the federal government at 185% of the poverty level. WIC is not an entitlement program. The data contained in this book includes the average number of infants and children participating in the WIC program in fiscal year 1996 (July 1, 1995 through June 30, 1996).

Source: State of Louisiana, Department of Health and Hospitals, Office of Public Health, Nutrition Services, New Orleans, Louisiana.

Child Care Assistance The number of children receiving child care subsidies through the federal Child Care and Development Block Grant and Title IV-A At-Risk child care programs during the month of June, 1996.

Child Care Assistance Waiting List The number of children who have been found eligible to receive Child Care Assistance and are waiting for funds to become available as of June, 1996.

Source: State of Louisiana, Department of Social Services, Child Care Assistance Program, Baton Rouge, Louisiana.

Earned Income Tax Credit (# of families, 1996) The number of families who received the Earned Income Tax Credit (EIC) in the first 8

months of 1996 based on completed 1995 income tax returns. The EIC is a refundable income tax credit for families who work at low and moderately low wages. The maximum income level for EIC eligibility in 1995 was \$26,673.

Source: Internal Revenue Service, New Orleans District, New Orleans, Louisiana.

MATERNAL AND CHILD HEALTH

Live Births The total number of live births to women by race of mother, 1995.

Percent Births to Teens Live births to women ages 19 and under as a percentage of all live births to women of the same race, 1995.

Percent Low Birthweight Babies The total number of live births under 2500 grams (5.5 pounds) as a percentage of all live births to women of the same race, 1995.

Percent Women Receiving Adequate Prenatal Care Women delivering live infants and having adequate prenatal care by race, 1995. Prenatal care includes health care, counseling, and related services provided during pregnancy to assure the best possible health for both mother and child. Care should start in the first trimester and continue throughout pregnancy. One major focus of such care is screening/monitoring to identify conditions that might threaten the mother or the child. A second major focus is counseling and guidance relative to diet, alcohol, tobacco and other health concerns.

Infant Mortality Rate Number of deaths per 1,000 live-born children under one year of age by race of mother, 1995.

Source: State of Louisiana, Department of Health and Hospitals, Office of Public Health, State Center for Health Information, New Orleans, Louisiana.

% Children without Health Insurance An estimated percentage of children under age 18 not covered by public or private health insurance in 1995.

Source: Unpublished Current Population Survey Data, Poverty and Health Statistics Branch, HHES Division, U.S. Bureau of the Census.

Child Death Rate The number of deaths of children between the ages of 1-14 years from all causes per 100,000 Louisiana residents of the same age, by race, 1995.

Teen Violent Death Rate The number of deaths of teens 15-19 years due to violence (including accidents, homicides and suicides) per 100,000 Louisiana residents of the same age, by race, 1995.

Teen Suicide Rate The number of deaths of teens 15-19 years due to suicide per 100,000 Louisiana residents of the same age, by race, 1995.

Teen Accident Death Rate The number of deaths of teens 15-19 years due to accidents per 100,000 Louisiana residents of the same age, by race, 1995.

Teen Homicide Rate The number of deaths of teens 15-19 years due to homicide and legal intervention per 100,000 Louisiana residents of the same age, by race, 1995.

Source: State of Louisiana, Department of Health and Hospitals, Office of Public Health,

State Center for Health Information, New Orleans, Louisiana.

CHILDREN IN TROUBLE

Children in Custody/Under the Supervision of the Office of Youth Development (OYD) This includes children in custody (in secure and non-secure placements); children under supervision (including Informal Adjustment Agreements), cases that were referred to the Office of Youth Development but diverted from court, and cases still pending court action. The state total presented in this book is greater than the sum of children in custody in each parish because the state total includes cases which don't have a parish of commitment. An asterisk (*) in this category indicates that the parish has a probation office which operates independently of OYD, and therefore may have substantially more "youth in trouble" than reflected in this data. Data is for fiscal year 1996 (July 1, 1995 - June 30, 1996).

Crimes Against Property/Other The majority of crimes in this category are burglary, theft, drug offenses, public order, and status offenses. (A small number of burglaries should be considered crimes against persons because a person was present at the time the crime was committed.)

Crimes Against Persons Includes assault-battery, robbery, homicide, sex crimes, weapons offenses, and other violent and non-violent crimes against persons.

Source: State of Louisiana, Department of Public Safety and Corrections, Office of Youth Development, Baton Rouge, Louisiana.

CHILD ABUSE AND NEGLECT

Valid Abuse and Neglect Cases (no. of children)
The number of children who have been abused or neglected as determined by the state's office of Child Protective Services in the 1996 fiscal year (July 1, 1995 through June 30, 1996). Parishes with an asterisk (*) do not have parish-specific data available. Valid cases of abuse and neglect in these parishes are reflected in the figures for other parishes of the same region as follows:

Assumption reflected in Lafourche data	"
Bienville	" Webster data
Caldwell	" Ouachita data
Cameron	" Calcasieu data
Claiborne	" Webster data
Jackson	" Lincoln data
LaSalle	" Catahoula data
Red River	" Natchitoches data
St. Charles	" St. John data
St. Helena	" Tangipahoa data
St. James	" St. John data
Tensas	" Madison data
West Baton Rouge	" Iberville data
West Feliciana	" East Feliciana data

Children in Foster Care The number of children who are the responsibility of the state in out-of-home placements during the last day of the calendar year as reported for fiscal year 1996 (July 1, 1995 through June 30, 1996).

Source: State of Louisiana, Department of Social Services, Office of Community Services, Information Management Unit, Baton Rouge, Louisiana.

PUBLIC EDUCATION

Registration The total number of public school students on the first day of the 1994-1995 school year, including pre-kindergarten students.

Per Pupil Expenditures The expenditures per student in average daily membership in 1994-1995. Current expenditures include only instruction and support services and do not include adult education expenses.

Teacher Salary (average) The average salary paid to full-time public school teachers in 1994-95.

Pupils being served by exceptional children program 1994-95 Children identified as needing special education services including children with mental disabilities; hearing, speech and/or visual impairments; emotional/behavioral disorders, and other categories of special needs.

Dropouts 1994-95 Number of students in grades 7-12 who were enrolled in school at some time during the previous school year, had not graduated from high school or completed an approved education program, and do not meet any of the following exclusive conditions: transfer to another public school district, private school, or state or district approved education program; temporary absence due to suspension or school-approved illness or death. Special education students are excluded from the count if they attend no regular education classes.

note: the cities of Monroe and Bogalusa operate school systems independent of their respective parish systems. Figures for each city are as follows:

registration Bogalusa:	3,493 (Total)	
1,886(w) 1,594 (AA)		
registration Monroe:	11,638 (Total)	
1,495(w) 10,093 (AA)		
		Bogalusa Monroe
per pupil expenditures	\$4,188	\$4,306
teacher salary (average)	\$23,071	\$24,654
special education	414	959
dropouts	62	161

Source: 145th Annual Financial and Statistical Report, Louisiana Department of Education, Office of Research and Development, Bureau of School Accountability, Baton Rouge, Louisiana.

CHILD SUPPORT

Total Number of Cases A Child Support Enforcement case is defined as every absent parent who is now or may eventually be obligated under law for the support of one or more dependent children. The number in this book includes collection cases (cases in which an obligation for support has been established) and intake cases (cases in which an obligation has not yet been established), for fiscal year 1996 (July 1, 1995 through June 30, 1996).

Percent Collection Cases to Total Cases The percent of cases in which an obligation for support has been established. An obligation is the legal establishment of an amount of money which is to be paid on a regular basis by a non-custodial parent for the support of that parent's children for

fiscal year 1996 (July 1, 1995 through June 30, 1996).

Amount Owed The actual dollar amount owed for all collection cases for fiscal year 1996 (July 1, 1995 through June 30, 1996).

Amount Paid The dollar amount paid on all collection cases for fiscal year 1996 (July 1, 1995 through June 30, 1996).

Source: State of Louisiana, Office of Child Support Enforcement Services, Baton Rouge, Louisiana.

A word about data... Every attempt has been made to compile the latest and most accurate figures available on child well-being at the state and parish level. However, there are limitations to these figures. Some of the data, including census data on poverty, and uninsured children, are based on samples of the population and are subject to sampling variability. For other indicators, such as child support and the Earned Income Credit, parish level data were unavailable. For some health indicators, such as child death and teen violent death rates, data could not be presented on the parish level because the numbers were too small to calculate a meaningful rate.
