ABSTRACT

Because education in the United States is largely determined at the state and local levels, there has been considerable interest in how the performance of students in individual states compares with each other, with the United States as a whole, and with other nations. The comparison of state performance with other states and with the nation as a whole is made possible by the National Assessment of Educational Progress (NAEP). In 1996, NAEP assessed mathematics and science in the United Sates as a whole. The Third International Mathematics and Science Study (TIMSS) conducted in 1995 provides the most recent information about America's progress in mathematics and science education compared with other countries in the world. This study is one of two reports about the linking of NAEP results to TIMSS results for Grade 8 mathematics and science. The study describes the types of linking approaches considered, the methods used to develop the linking functions, the sources of variability that affect the variance of the linking functions, and the validation and results obtained for Grade 8 mathematics and science achievement. The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

Foreword

The Research and Development (R&D) series of the reports has been initiated:

- 1. To share studies and research that are developmental in nature. The results of such studies may be revised as the work continues and additional data become available.
 - 2. To share results of studies that are, to some extent, on the "cutting-edge" of methodological developments. Emerging analytical approaches and new computer software development often permits new, and sometimes controversial, analysis to be done. By participating in "frontier research," we hope to contribute to the resolution of issues and improved analysis.
 - 3. To participate in discussions of emerging issues of interest to educational researchers, statisticians, and the Federal statistical community in general. Such reports may document workshops and symposiums sponsored by NCES that address methodological and analytical issues or may share and discuss issues regarding NCES practice, procedures, and standards.

The common theme in all three goals is that these reports present results or discussions that do not reach definitive conclusions at this point in time, either because the data are tentative, the methodology is new and developing, or the topic is one on which there are divergent views. Therefore the techniques and inferences made from the data are tentative and are subject to revision. To facilitate the process of closure on the issues, we invite comment, criticism, and alternatives to what we have done. Such responses should be directed to:

> Marilyn M. McMillen Chief Statistician Statistical Standards Services Group National Center for Education Statistics 555 New Jersey Avenue NW Washington, DC 20208-5654

Acknowledgments

The authors wish to thank all those who contributed to the production of this report. This report was produced with the assistance of professional staff at the Education Statistics Service Institute (ESSI), the National Center for Education Statistics (NCES), the National Institute of Statistical Sciences (NISS), and Westat, Inc.

The ESSI staff who provided text and reviews for this report include: Ramsay Selden, Karol Krotki, and Michell Long.

Many thanks are due to Arnold Goldstein, who coordinated production of this report, and to the numerous reviewers at NCES. The comments and critical feedback of the following reviewers are reflected in this report: Gary W. Phillips, Marty Orland, Marilyn M. McMillen, Eugene Owen, Maureen Treacy, and Mary Frase. Thanks also to the external reviewers at NISS: Ingram Olkin, Lyle V. Jones, Richard M. Jaeger, Juliet Shaffer, Valerie Williams, James R. Chromy, Jerome Sacks, and Susan Ahmed.

We would also like to acknowledge the contribution of Nancy Caldwell at Westat to the design of the profiles.

v

1. INTRODUCTION

In 1989, the Nation's President along with its governors made clear that there was a keen interest in comparing the educational performance of United States' students with that of students in other countries. That year a National Education Summit adopted six education goals, one of which stated that by the year 2000, "U.S. students will be first in the world in science and mathematics achievement" (National Education Goals Panel, 1991, p. 16).

The Third International Mathematics and Science Study (TIMSS), conducted in 1995, provides the most recent information about our country's progress toward this goal. TIMSS is the largest, most comprehensive, and most rigorous international study of the schools and student achievement ever conducted. The international project involved the testing of more than a half-million students in mathematics and science at several different grade levels in 41 countries. The TIMSS results for the United States describe student mathematics and science achievement for both the country as a whole and for various subgroups of the population. These U.S. results are directly comparable to TIMSS results from many other countries. However, with the exception of a few states that chose to participate in the state-level TIMSS program, equivalent TIMSS results are not available at the state level.

Because education in the United States is largely determined at the state and local levels, there has been considerable interest in how the performance of students in individual states compares with each other, with the United States as a whole, and with other nations. The comparison of state performance with other states and with the nation as a whole is made possible by the National Assessment of Educational Progress (NAEP). NAEP surveys the educational accomplishment of U.S. students and monitors changes in those accomplishments. NAEP tracks the educational achievements of fourth-, eighth-, eleventh-, and twelfth-grade students over time in selected content areas. For nearly 30 years, NAEP has been collecting data to provide educators and policymakers with accurate and useful information.

In 1996, NAEP assessed mathematics and science in the United States as a whole. Additionally, results for the individual states that chose to participate in the state NAEP assessment are available at grades 4 and 8 for mathematics and at grade 8 for science. While it is directly possible to compare the participating states with each other and with the nation as a whole, policymakers and the general public cannot know directly how the students in the various states would perform relative to students in other countries.

1

Because TIMSS and NAEP were administered within a year of each other, there has been considerable interest in attempting to link the two assessments. Such a linkage would allow states that participated in the state component of the NAEP mathematics or science assessments to compare their predicted TIMSS results with the actual results from countries participating in TIMSS at the same grade level. Specifically, predicted performance on TIMSS could be estimated for each state that participated in NAEP by applying the link to that state's NAEP data.

The success of the link between the 1992 NAEP mathematics results with those from the 1991 International Assessment of Educational Progress (IAEP) in mathematics (Pashley and Phillips 1993) provided encouragement that a link between TIMSS and NAEP was possible.

9

2. NAEP AND TIMSS

NAEP is an ongoing, congressionally mandated survey designed to measure what students know and can do. The goal of NAEP is to estimate educational achievement and changes in that achievement over time for American students of specified grades as well as for subpopulations defined by demographic characteristics and by specific background characteristics and experiences. In 1996, NAEP collected mathematics and science data from nationally representative samples of students in public and private schools in grades 4, 8, and 12. Additionally, directly comparable state assessments were conducted in public and private schools in participating states and jurisdictions at grade 4 for mathematics and at grade 8 for mathematics and science. (For many of the states and jurisdictions the sample of private school students was not adequate to support reporting of private school results. Accordingly, state-level results were reported by NAEP for the public school samples only.) State-level NAEP mathematics and science results are available for grade 8 public school students in 44 states and jurisdictions.

TIMSS is the largest and most ambitious study ever conducted by the International Association for the Evaluation of Educational Achievement (IEA). TIMSS is an international comparative study designed to provide information about educational achievement and learning contexts for the participating countries. Each participating country assessed mathematics and science in the two grades with the largest proportion of 13-year-olds (grades 7 and 8 in most countries, including the United States). Mathematics and science results are available for 41 countries for the higher of these grade levels--which, for convenience, will be referred to as the grade 8 level in this report. The U.S. TIMSS results are based on the sample of students from public and private schools.

In addition to the national results, three states opted to collect grade 8 data from representative samples of their students. Minnesota participated in a state-level administration of grade 8 TIMSS mathematics and science in 1995, while Missouri and Oregon participated in state-level administrations of grade 8 TIMSS in 1997. All three states also participated in the 1996 State NAEP. Thus, released public school NAEP results are available for all three states, as well as released TIMSS results for Minnesota. The TIMSS results for Missouri and Oregon have not yet been publicly released; however, preliminary data allowed some empirical verification of the linkage between NAEP and TIMSS.

3

3. **REPORT OUTLINE**

This is one of two reports about the linking of NAEP results to TIMSS results for grade 8 mathematics and science. The first, "Linking the National Assessment of Educational Progress and the Third International Mathematics and Science Study for Eighth Grade: A Research Report," is a technical discussion of the statistical methods employed to link NAEP and TIMSS. It describes the types of linking approaches considered, the method used to develop the linking functions, the sources of variability that affect the variance of the linking functions, and the validation and results obtained for grade 8 mathematics and science. Readers interested in the statistical aspects of this research are referred to the technical report.

The results presented in this report are based on a link of NAEP to TIMSS, thereby providing predicted TIMSS results for given NAEP results. Since a major goal of the link is to enable comparisons between states and countries, links were estimated for those grades and subjects where there are both state NAEP data and international TIMSS data. The links are based on the data from the U.S. TIMSS national sample and from the NAEP national sample. Furthermore, the links are derived from public school data, since this is the population for which NAEP state-level results have been published. The actual TIMSS results of the participating nations include both private and public school data. The results in this report are for mathematics and science at grade 8. An additional link is being attempted for grade 4 mathematics but is still undergoing NCES review.

The quality of the link between NAEP and TIMSS was evaluated using data from the few states for which representative data were available from both assessments. Specifically, the predicted TIMSS performance, based on NAEP data, was compared with the actual TIMSS results for these states. In the 1995 administration of TIMSS, one state, Minnesota, elected to participate in the grade 8 TIMSS assessments of mathematics and science. The predicted results were quite close to the actual results for the grade 8 mathematics and science assessments. In addition, two states, Missouri and Oregon, participated in a special assessment of the TIMSS in their states in 1997. While the results of these assessments have not yet been publicly released, the predicted TIMSS results for these states were reasonably close to their actual TIMSS results.

This report, "Linking the National Assessment of Educational Progress and the Third International Mathematics and Science: Eighth Grade Results," presents the results of the linking project. Comparisons are given for grade 8 mathematics and science of the states and jurisdictions which participated in NAEP in 1996 with the nations that participated in TIMSS in

1995. In addition, for each state and jurisdiction, the estimated percentage of students reaching the TIMSS International Top Half and Top Ten Percent marker levels are given for grade 8 mathematics and science.

The reader should use caution when using the results presented in this report. The results presented here are adequate for approximate comparisons of the relative rankings of individual states versus other countries, but are not adequate for extensive analyses based on the estimated scores. The results presented in this report are not appropriate for comparing performance between states or between countries.

12

4. COMPARISONS OF EACH NAEP STATE AND JURISDICTION WITH THE TIMSS NATIONS FOR GRADE 8 MATHEMATICS

This chapter presents one-page profiles for each state and jurisdiction participating in NAEP in grade 8 mathematics in alphabetical order. Each profile contains two tables.

- The first table displays how the state or jurisdiction would perform in comparison to the 41 nations that took TIMSS mathematics at grade 8. Each table indicates whether the **actual** scores of the participating TIMSS nations are significantly higher than, not significantly different from, or significantly lower than the **estimated** average performance of public school students in the state or jurisdiction.
- The second table displays a range of possible values for the estimated percentage of public school students in the state or jurisdiction that would perform above the TIMSS Top Ten Percent marker level and the TIMSS Top Half marker level for mathematics at grade 8. The TIMSS Top Ten Percent marker level represents the score achieved by the top ten percent of all eighth grade students in the 41 TIMSS countries combined. The TIMSS Top Half marker level represents the score achieved by the top fifty percent of all eighth grade students in the 41 TIMSS countries combined. Each table presents the estimated percentage of public school students in the state that are expected to perform above the TIMSS marker levels. The lower and upper bounds represent the range of possible values around these estimated percentages (95% confidence intervals).

A second profile is presented for the state of Minnesota. Similar tables to those described above are included. However, in this profile, the **actual** TIMSS results for Minnesota's public school students are compared with the results of the 41 nations who participated in TIMSS for grade 8 mathematics.

Readers of these profiles are reminded that the state's or jurisdiction's TIMSS performance in grade 8 mathematics is **estimated** from its NAEP score, using the linking function, and must therefore be interpreted with caution. Furthermore, the calculations for the 1996 NAEP scores and 1995 TIMSS scores for the participating states, jurisdictions, and nations are based on samples of the student populations, not entire student populations. Hence, estimates are imprecise.

13

The SOLE purpose of these profiles is to allow the comparison of the predicted TIMSS performance for individual states with the actual TIMSS performance of individual countries. It is NOT appropriate to use these profiles to compare performance between states or between countries. Accordingly, the profiles for the states and jurisdictions participating in NAEP grade 8 mathematics are arranged in alphabetical order. The proper between state comparisons are provided in the NAEP reports (O'Sullivan, Reese and Mazzeo 1997; Reese et al. 1997), while the proper between country comparisons are provided in the TIMSS reports (Beaton, Mullis, et al. 1997; Beaton, Martin, et al. 1997).

State/Jurisdiction: Alabama

If the public school students in Alabama participated in TIMSS, how would their average performance in mathematics compare to that of students in the 41 nations that took TIMSS at grade 8?

Nations whose performance is expected to be:

Not significantly different from Alabama	Lower than Alabama
	(Colombia)
· ·	Iran, Islamic Republic
	(Kuwait)
	(South Africa)
Spain	
	Not significantly different from Alabama Cyprus (Greece) Iceland (Lithuania) Portugal (Romania) Spain Spain

(Jurisdiction) indicates that the nation, state, or jurisdiction did not satisfy one or more of the sample participation guidelines. Latvia-LSS: Latvian-speaking schools only

Comparisons of averages tell how typical students perform, but they do not describe how well the best students perform. What is the estimated percentage of students in Alabama that would perform above the TIMSS Top Ten Percent marker level? What is the estimated percentage that would perform above the Top Half marker level? (Below are estimates of the percentage of students expected to perform above the Top Ten Percent and Top Fifty Percent international marker levels. Each estimate is accompanied by a "Lower bound" and an "Upper bound" that reflect the range of possible values around the estimated percentage.)

	Lower bound	Estimate	Upper bound
Top 10%	0%	1%	3%
Top 50% (Half)	23%	32%	42%

Comparisons of averages tell how typical students perform, but they do not describe how well the best students perform. What is the estimated percentage of students in Minnesota that would perform above the TIMSS Top Ten Percent marker level? What is the estimated percentage that would perform above the Top Half marker level? (Below are estimates of the percentage of students expected to perform above the Top Ten Percent and Top Fifty Percent international marker levels. Each estimate is accompanied by a "Lower bound" and an "Upper bound" that reflect the range of possible values around the estimated percentage.)

	Lower bound	Estimate	Upper bound	
Тор 10%	3%	6%	10%	
Top 50% (Half)	54%	62%	71%

Comparison of Actual TIMSS Scores from Public School Data for Minnesota with Actual TIMSS Scores for Nations: Grade 8 Mathematics (1995)

State/Jurisdiction: Minnesota*

How did the students in Minnesota perform in grade 8 mathematics in comparison to the students in the 41 nations that participated in TIMSS?

Nations whose performance was:

Higher than Minnesota	Not significantly different from Minnesota	Lower than Minnesota
Belgium – Flemish	(Australia)	(Colombia)
Czech Republic	(Austria)	Cyprus
Hong Kong	(Belgium – French)	(Denmark)
Japan	(Bulgaria)	(Greece)
Korea	Canada	Iceland
Singapore	(England)	Iran, Islamic Republic
	France	(Kuwait)
	(Germany)	(Latvia – LSS)
	Hungary	(Lithuania)
	Ireland	Norway
	(Israel)	Portugal
	(Netherlands)	(Romania)
	New Zealand	(Scotland)
	Russian Federation	(South Africa)
	Slovak Republic	Spain
	(Slovenia)	United States (average)
	Sweden	
	(Switzerland)	
	(Thailand)	

(Jurisdiction) indicates that the nation, state, or jurisdiction did not satisfy one or more of the sample participation guidelines. Latvia-LSS: Latvian-speaking schools only

Comparisons of averages tell how typical students perform, but they do not describe how well the best students perform. What percentage of Minnesota's students performed above the TIMSS Top Ten Percent marker level? What percentage performed above the Top Half marker level? (Below are estimates for the percentage of students who performed above the Top Ten Percent and Top Fifty Percent international marker levels. Each estimate is accompanied by a "Lower bound" and an "Upper bound" that reflect the range of possible values around the estimated percentage.)

	Lower bound	Estimate	Upper bound	
Top 10%	3%	7%	11%	
Top 50% (Half)	49%	57%	66%	

* The comparisons and values shown in this profile represent actual TIMSS results and not estimated TIMSS results based on the link the between NAEP and TIMSS.

State/Jurisdiction: Virginia

If the public school students in Virginia participated in TIMSS, how would their average performance in mathematics compare to that of students in the 41 nations that took TIMSS at grade 8?

Nations whose performance is expected to be:

Higher than Virginia	Not significantly different from Virginia	Lower than Virginia
(Australia) (Austria) Belgium – Flemish (Belgium – French) (Bulgaria) Canada Czech Republic France Hong Kong Hungary Ireland Japan Korea (Netherlands) Russian Federation Singapore Slovak Republic (Slovenia) (Switzerland)	Cyprus (Denmark) (England) (Germany) (Greece) Iceland (Israel) (Latvia-LSS) (Lithuania) New Zealand Norway (Romania) (Scotland) Spain Sweden (Thailand) United States (average)	(Colombia) Iran, Islamic Republic (Kuwait) Portugal (South Africa)

(Jurisdiction) indicates that the nation, state, or jurisdiction did not satisfy one or more of the sample participation guidelines. Latvia-LSS: Latvian-speaking schools only

Comparisons of averages tell how typical students perform, but they do not describe how well the best students perform. What is the estimated percentage of students in Virginia that would perform above the TIMSS Top Ten Percent marker level? What is the estimated percentage that would perform above the Top Half marker level? (Below are estimates of the percentage of students expected to perform above the Top Ten Percent and Top Fifty Percent international marker levels. Each estimate is accompanied by a "Lower bound" and an "Upper bound" that reflect the range of possible values around the estimated percentage.)

	Lower bound	Estimate	Upper bound	
Top 10%	1%	3%	5%	
Top 50% (Half)	36%	-45%	54%

5. COMPARISONS OF EACH NAEP STATE AND JURISDICTION WITH THE TIMSS NATIONS FOR GRADE 8 SCIENCE

This chapter presents one-page profiles for each state and jurisdiction participating in grade 8 science in alphabetical order. Each profile contains two tables.

- The first table displays how the state or jurisdiction would perform in comparison to the 41 nations that took TIMSS science at grade 8. Each table indicates whether the **actual** scores of the participating TIMSS nations are significantly higher than, not significantly different from, or significantly lower than the **estimated** average performance of the public school students in the state or jurisdiction.
- The second table displays the range of possible values for the estimated percentage of public school students in the state or jurisdiction that would perform above the TIMSS Top Ten Percent marker level and the TIMSS Top Ten Half marker level for science at grade 8. The TIMSS Top Ten Percent marker level represents the score achieved by the top ten percent of all eighth grade students in the 41 TIMSS countries combined. The TIMSS Top Half marker level represents the score achieved by the top fifty percent of all eighth grade students in the 41 TIMSS countries combined. The TIMSS marker levels in the 41 TIMSS countries combined. The term of all eighth grade students in the score achieved by the top fifty percent of all eighth grade students in the 41 TIMSS countries combined. Each table presents the estimated percentage of public school students in the state that are expected to perform above the two TIMSS marker levels. The lower and upper bounds represent the range of possible values around the estimated percentages (95% confidence intervals).

A second profile is presented for the state of Minnesota. Similar tables to those described above are included. However, in this profile, the **actual** TIMSS results for Minnesota's public school students are compared with the results of the 41 nations who participated in TIMSS for grade 8 science.

Readers of these profiles are reminded that the state's or jurisdiction's TIMSS performance in grade 8 science is **estimated** from its NAEP score, using the linking function, and must therefore be interpreted with caution. Furthermore, the calculations for the 1996 NAEP scores and 1995 TIMSS scores for the participating states, jurisdictions and nations are based on samples of the student populations, not entire student populations. Hence, estimates are imprecise.

53

The SOLE purpose of these profiles is to allow the comparison of predicted TIMSS performances for individual states with the actual TIMSS performances of individual countries. It is NOT appropriate to use these profiles to compare performances between states or between countries. Accordingly, the profiles for the states and jurisdictions participating in NAEP grade 8 science are arranged in alphabetical order. The proper between state comparisons are provided in the NAEP reports (O'Sullivan, Reese and Mazzeo 1997; Reese et al. 1997), while the proper between country comparisons are provided in the TIMSS reports (Beaton, Mullis, et al. 1997; Beaton, Martin, et al. 1997).

State/Jurisdiction: Alabama

If the public school students in Alabama participated in TIMSS, how would their average performance in science compare to that of students in the 41 nations that took TIMSS at grade 8?

Nations whose performance is expected to be:

Higher than Alabama	Not significantly different from Alabama	Lower than Alabama
(Australia) (Austria) Belgium – Flemish (Bulgaria) Canada Czech Republic (England)	(Denmark) France (Greece) Hong Kong Iceland (Israel) (Latvia – LSS)	(Belgium – French) (Colombia) Cyprus Iran, Islamic Republic (Kuwait) (South Africa)
(Germany) Hungary Ireland Japan Korea (Netherlands) Russian Federation Singapore Slovak Republic (Slovenia) Sweden United States (average)	(Lithuania) (Lithuania) New Zealand Norway Portugal (Romania) (Scotland) Spain (Switzerland) (Thailand)	

(Jurisdiction) indicates that the nation, state, or jurisdiction did not satisfy one or more of the sample participation guidelines. Latvia-LSS: Latvian-speaking schools only

Comparisons of averages tell how typical students perform, but they do not describe how well the best students perform. What is the estimated percentage of students in Alabama that would perform above the TIMSS Top Ten Percent marker level? What is the estimated percentage that would perform above the Top Half marker level? (Below are estimates of the percentage of students expected to perform above the Top Ten Percent and Top Fifty Percent international marker levels. Each estimate is accompanied by a "Lower bound" and an "Upper bound" that reflect the range of possible values around the estimated percentage.)

	Lower bound	Estimate	Upper bound
Top 10%	2%	6%	10%
Top 50% (Half)	37%	45%	53%

Russian Federation		
(Scotland)		
Singapore		
Slovak Republic		
(Slovenia)		
Spain		
Sweden		
(Switzerland)		
(Thailand)		
United States (average)		

(Jurisdiction) indicates that the nation, state, or jurisdiction did not satisfy one or more of the sample participation guidelines. Latvia-LSS: Latvian-speaking schools only

Comparisons of averages tell how typical students perform, but they do not describe how well the best students perform. What is the estimated percentage of students in the District of Columbia that would perform above the TIMSS Top Ten Percent marker level? What is the estimated percentage that would perform above the Top Half marker level? (Below are estimates of the percentage of students expected to perform above the Top Ten Percent and Top Fifty Percent international marker levels. Each estimate is accompanied by a "Lower bound" and an "Upper bound" that reflect the range of possible values around the estimated percentage.)

	Lower bound	Estimate	Upper bound	
Top 10%	1%	2%	3%	
Top 50% (Half)	13%	17%	22%

Nations whose performance is expected to be:

(Jurisdiction) indicates that the nation, state, or jurisdiction did not satisfy one or more of the sample participation guidelines. Latvia-LSS: Latvian-speaking schools only

Comparisons of averages tell how typical students perform, but they do not describe how well the best students perform. What is the estimated percentage of students in Missouri that would perform above the TIMSS Top Ten Percent marker level? What is the estimated percentage that would perform above the Top Half marker level? (Below are estimates of the percentage of students expected to perform above the Top Ten Percent and Top Fifty Percent international marker levels. Each estimate is accompanied by a "Lower bound" and an "Upper bound" that reflect the range of possible values around the estimated percentage.)

	Lower bound	Estimate	Upper bound	
Top 10%	6%	11%	16%	
Top 50% (Half)	53%	61%	69%

	United States (average)		

Nations whose performance is expected to be:

(Jurisdiction) indicates that the nation, state, or jurisdiction did not satisfy one or more of the sample participation guidelines. Latvia-LSS: Latvian-speaking schools only

Comparisons of averages tell how typical students perform, but they do not describe how well the best students perform. What is the estimated percentage of students in Washington that would perform above the TIMSS Top Ten Percent marker level? What is the estimated percentage that would perform above the Top Half marker level? (Below are estimates of the percentage of students expected to perform above the Top Ten Percent and Top Fifty Percent international marker levels. Each estimate is accompanied by a "Lower bound" and an "Upper bound" that reflect the range of possible values around the estimated percentage.)

	Lower bound	Estimate	Upper bound
Top 10%	7%	11%	16%
Top 50% (Half)	50%	58%	66%

103

State/Jurisdiction: West Virginia

If the public school students in West Virginia participated in TIMSS, how would their average performance in science compare to that of students in the 41 nations that took TIMSS at grade 8?

Higher than West Virginia	Not significantly different from West Virginia	Lower than West Virginia	
(Austria)	(Australia)	(Belgium – French)	
(Bulgaria)	Belgium – Flemish	(Colombia)	
Czech Republic	Canada	Cyprus	
(England)	(Germany)	(Denmark)	
Hungary	Hong Kong	France	
Japan	Ireland	(Greece)	
Korea	(Israel)	Iceland	
(Netherlands)	New Zealand	Iran, Islamic Republic	
Singapore	Norway	(Kuwait)	
(Slovenia)	Russian Federation	(Latvia – LSS)	
	(Scotland)	(Lithuania)	
	Slovak Republic	Portugal	
	Spain	(Romania)	
	Sweden	(South Africa)	
	(Switzerland)		
	(Thailand)
