ABSTRACT

This final report describes the activities and outcomes of a federally funded project that was designed to increase the availability of graduate level Essential Early Educators in Vermont who can: (1) provide integrated, family-centered, early childhood special education services to young children with disabilities and their families; (2) provide direct and consultative services across home, center, and inclusive community-based settings; (3) work with other agencies and disciplines to implement a comprehensive, coordinated system of services; and (4) assume the multiple education and leadership roles required for coordinating, implementing, and evaluating early childhood special education services in rural, sparsely populated settings. The project established and maintained a representative statewide Advisory Council to oversee activities related to Vermont's goals of establishing a unified system of early care, education, and intervention services. The project also succeeded in recruiting 28 participants from Head Start, Parent-Child Centers, child care, preschool and kindergarten programs to train to become Essential Early Educators. Appendices include the training strand for a master's in special education with an emphasis in Essential Early Education, and the training strand for a master's in special education with an emphasis in leadership. FINAL REPORT

84.029Q

Essential Early Education Reach Out Program

I. INTRODUCTION

This is the final report for 84.029Q Preparation of Personnel to Provide Early Intervention Services to Infants and Toddlers with Disabilities. This project entitled Essential Early Education Reach Out Program was designed to increase the availability of graduate level Essential Early Educators who can: 1) provide integrated, family-centered, early childhood special education services to young children with disabilities and their families; 2) provide direct and consultative services across home, center, and inclusive community-based settings; 3) work with other agencies and disciplines to implement a comprehensive, coordinated system of services that is responsive to family identified priorities, and 4) assume the multiple education and leadership roles required for coordinating, implementing, and evaluating early childhood special education services in rural, sparsely populated settings. Specifically, the Essential Early Education Reach Out program was designed to meet the needs of in-place professionals who provide services to Vermont's young children with disabilities and their families in remote areas across the state. The Essential Early Education Reach Out program was offered in the southeastern region of Vermont during years one and two, and the northern and southwestern region during years three and four.

Specifically, the project had three goals:

1. Maintain a representative statewide Advisory Council which will meet at least annually to review program goals, objectives, recruitment and selection strategies, course content, and practica requirements.
2. Prepare at least 24 in-place early childhood/early childhood special education professionals.
3. Implement the evaluation plan.

II. PROJECT ACCOMPLISHMENTS

a. Advisory Council

In year three of the project Vermont's Early Childhood Steering Committee began serving in an advisory capacity. This transition was a reflection of a state movement to create a statewide, unified system of early childhood services. In 1996 the state of Vermont established a state level Early Childhood Steering Committee comprised of representatives from key programs, agencies, and projects serving young children (birth to five) and their families (see appendix A for membership). This steering committee was designed to oversee activities related to Vermont's goal of establishing a unified system of early care, education, and intervention services. One of the major responsibilities of this committee is to advise and oversee all state and federal projects and initiatives focusing on Vermont's early care, education and intervention community. Due to its comprehensive membership and its connection to Vermont's Early Childhood Work Group, this steering committee was uniquely qualified to meet these responsibilities and to advise the Reach Out program. Steering committee members reviewed

project activities and content relative to the project's ability to be responsive to the training needs of Vermont's early care, education and intervention community. In addition to providing positive feedback, steering committee members identified two issues the project should address.

Issue #1: To assure there exist a cadre of early childhood professionals prepared to meet the needs of young children with disabilities in inclusive, community-based child care and preschool settings.

The Reach Out project responded to this issue in two ways. First, considerable effort was expended to recruit participants from Head Start, Parent-Child Centers, child care, preschool, and Kindergarten programs to enroll in the second cohort group. While many of these participants were excited about completing a master's in Early Childhood Special Education and receiving certification as: Teacher of the Handicapped: EEE; a significant number of participants were not interested in certification. In response, project staff designed a "training strand" for early childhood professionals who: 1) were working with young children with disabilities and their families in inclusive, community-based settings; 2) wanted a Master's in Special Education with and emphasis in Essential Early Education; 3) did not want certification. Competencies and portfolio requirements for this strand can be found in Appendix B.

Issue #2: Availability of personnel to assume leadership roles in early childhood special education.

At the most recent Early Childhood Steering Committee meeting, council members identified a early childhood leadership as a critical need.

Council members engaged in an intense dialogue that spoke to the fact that in addition to providing quality services to children and families, early childhood special educators must be prepared to provide leadership to an evolving field. In recent years, states' commitments to young children have expanded, yielding an increasingly diverse and complex set of early childhood special education services (Kagan & Bowman, 1997). This is also the case for Vermont which has experienced a rapid growth of early childhood initiatives over the last 8-10 years. The need for strong leadership has grown along with the challenges presented by this expansion to insure that families of young children with disabilities continue to receive high quality services from a coordinated delivery system that is community-based, collaborative, family-centered and developmentally appropriate. Challenges stem from the fact that services for young children with disabilities are in diverse settings, embedded in several different professions, under the auspices of a number of institutional contexts (including public schools, Head Start, child care centers, family day care), and provided by child care personnel with varying levels of preparedness and training (Bowman, 1997). Project staff developed have developed a leadership strand. This strand was incorporated into an application submitted to the Federal Office of Special Education Programs in May of this year. Program competencies and portfolio requirements for this strand can be found in Appendix C.

b. Project Participants

A total of 28 trainees participated in the EEE Reach Out Program. Fifteen trainees have successfully completed the program, it is anticipated that additional 5 trainees will complete the program by December 1998 and

the final eight by June 1999. Trainees represent the disciplines of early childhood, early childhood special education, speech/language pathology, guidance, primary education, physical education, and art. In addition, trainees worked in an array of early childhood settings including: Essential Early Education, Chapter One, Head Start, Parent Child Centers, Kindergarten, and elementary guidance programs, and community child care and preschool programs. Sixteen participants received (will receive) Vermont certification as Teacher of the Handicapped: EEE upon successful completion of the program. The remainder of the participants completed (or will complete) either a thirty or thirty-three credit master's degree in Special Education with an emphasis in Essential Early Education. Table 1 that follows presents an overview of trainees.

Table #1
Reach Out Participants

Student	Discipline/ Field	Completed	Certified	Current Position
1	EEE	Yes	Yes	EEE teacher
2	EEE	Yes	Yes	EEE teacher
3	SLP	Yes	Yes	EEE teacher
4	SLP	Yes	Yes	EEE teacher
5	Guidance	Yes	No	Early Child. Guidance
6	Phys. Ed.	Yes	Yes	Early Child. Phys. Ed.
7	Art	Yes	Yes	EEE teacher
8	Early Child.	Yes	No	Early Childhood
9	Early Child.	Yes	Yes	Preschool Lab Prog.

16	EEE	No	No	EEE
17	Kind	Yes	No	Kind
18	SLP	Yes	Yes	EEE
19	Early Childhood	Yes	Yes	EEE
20	Kind	Yes	Yes	Kind
21	Parent Child Center	Yes	No	Parent Child Center
22	Early Child	No	No	Parent to Parent
23	Head Start	No	Yes	Head Start
24	Head Start	No	No	Head Start
25	EEL	No	Yes	EEL
26	Early Child	No	Yes	Early Child Paraprof.
27	Kind	No	Yes	Kind
28	Early Child	Yes	Yes	Internship

c. Program Evaluation

The Reach Out evaluation plan collected both student and program evaluation data.

Student Evaluation Data: Trainees were evaluated to determine the extent to which each demonstrated required competencies. Performance competencies were assessed through direct observation of student performance, review of student's written practicum-related materials, and feedback from families with whom the trainee was working. Program faculty observed and talked with students every other week (on average) to identify competencies that had been mastered and to plan remediation/alternative experiences as necessary. Knowledge-based competencies were assessed primarily through coursework including: participation in class discussions, reflection and research papers. Trainees who demonstrated all required

program competencies and completed all coursework with a grade of A or B were eligible for graduation. In addition, all trainees were required to complete an oral exam and complete a professional portfolio.

Oral Exam: Oral exams are scheduled once trainees successfully completed (or are in their final semester of) coursework. Each trainee is required to prepare an oral's packet that includes: philosophy of providing services for young children with disabilities and their families; a personal statement outlining the impact of the Reach Out program on professional development and program practice; and a polished research project. Over the course of the project trainees have presented research on issues such as: Father Involvement in Early Intervention; Facilitating Literacy in Young Children with Down Syndrome; The Impact of Book Writing on the Development Early Literacy Skills; Positive Transition Planning; Conducting Effective Play-Based Screening. Oral presentations provided an opportunity to evaluate trainee's ability to present material in a concise, coherent, reflective manner, as well as their ability to "think on their feet" and respond to questions addressing key issues facing the field.

Professional Portfolio: Trainees are required to prepare a professional portfolio presenting their understanding of, reflections on, and accomplishments related to the five philosophical dispositions that frame the Reach Out Program (i.e., Cultural Competence, Family-Centered Practice, Developmentally Appropriate Practice, Inclusion, Collaboration). All portfolios are reviewed by project faculty. Portfolios have provided a rich source of information relative to the impact of program content and activities on the practice of in-place professionals. Trainees have

documented program change in areas such as: placing play at the center of the curriculum, working with parents to develop new procedures for documenting child progress, involving parents in program decisions, translating an emergent curriculum approach into practice. Portfolios have provided tangible evidence of the impact of the Reach Out Program on the context of services for young children with disabilities and their families across the state of Vermont.

Program Evaluation Data: Project staff have collected a variety of program evaluation data including: course evaluation, practicum evaluation; advisor/supervisor evaluation, and student evaluation of the overall personnel preparation program. In each instance, trainees are required to complete a evaluation instrument and an open-ended questionnaire. Responses to both have been extraordinarily positive. Program evaluation data has been compiled and is presented in Appendix D.

Why Develop A Portfolio?

A portfolio serves as a site for documentation of your professional development. It is a dynamic form of documentation, emerging and changing as you develop as a professional. Developing a portfolio is somewhat like creating a photo album. As a photo album serves to give visual evidence of the growth and development of your family, a portfolio provides evidence of your growth and development as a professional.

As a educational professional, you may find a maintaining a portfolio is required as part of your Individual Professional Development Plan in your employment contract . Additionally, portfolios are valuable in job interviews and in preparing for licensure.

This guide has been developed to help you create a portfolio that documents your specialized expertise in Early Childhood Special Education. This portfolio will document your commitment to the philosophical assumptions of inclusion, developmentally appropriate practice, cultural competence, the uniqueness of early childhood as a developmental phase, family-centered practice, and inter- and intra-professional collaboration and your ability to integrate these beliefs into the provision of services for young children with disabilities and their families.

Completion of this portfolio will serve as a testimony to your proficiency as a early childhood special educator with commitment to and competence in providing services that are inclusive, family-centered, culturally competent, collaborative, developmentally appropriate and that reflect the uniqueness of early childhood as a developmental phase.

How This Guide Can Help You Create Your Portfolio

This portfolio guide is intended to help you construct a portfolio profiling your professional development accomplishments related to Early Childhood Special Education. You will have chosen to concentrate on one of the three following strands of this graduate program:

Strand One: Masters of Education/Licensure

Strand Two: Masters of Education/Non-licensure

Strand Three: Certificate of Advanced Study/Leadership

When completed, your portfolio should establish your clear and in-depth understanding of the six philosophical assumptions that support the development of high quality, comprehensive services for all young children and their families, including those with and without disabilities. Those six philosophical assumptions are described in greater detail in the "Six Philosophical Assumptions" section of this guide. Additionally, as students in this Early Childhood Special Education Graduate program, you should also establish your expertise related to the provision of specialized services for young children with disabilities. The section entitled "The Components of Special Education" describes the areas of special education in which you will be developing competence and through which you will be applying the six philosophical assumptions.

Since all graduate students participate in practica, a "Practica Requirements" section has been included in this guide which describes the practica requirements for each strand in greater detail.

Practica experiences, in conjunction with course work, provide an opportunity for students to document specific competence. A Self Assessment of Core Competencies has been created to serve as a record for your increasing confidence in each competency area. A

specific self assessment for each strand is included in this portfolio guide and should be completed and included in your portfolio. The "Reference" section of this portfolio guide contains a list of sources you can consult in your studies.

What Should Your Finished Portfolio Look Like?

Your portfolio should be divided into **eight** sections.

Sections 1-6:

Each section labeled for one of the following six philosophical assumptions:

1. Inclusion
2. Developmentally Appropriate Practice
3. Cultural Competence
4. Uniqueness of Early Childhood as a Developmental Phase
5. Family-Centered Practice
6. Inter- and Intra-Professional Collaboration

Each of the six sections should contain:

- a. a narrative component that includes:
 - a) a review of the literature related to that philosophical assumption.
 - b) a discussion of the implications for applying the assumption in general practice, and
 - c) the implications specific to the implementation of each the following special education activities:
 - *child find/screening
 - *comprehensive evaluation
 - *IEP or IFSP
 - *consultation/collaboration
 - *transition.
- b. a description of a project you have undertaken and completed that provides evidence of your understanding of this section's particular philosophical assumption and demonstrates your ability to imbed it in your practice.

Section 7:

A case study of a child, a family or an issue in which you:

- a) integrate the perspective of all six philosophical assumptions
- b) honestly assess your strengths and challenges in relation to each philosophical belief
- c) identify areas for future professional development

Section 8:

A completed Self Assessment of Core Competencies specific to your chosen strand of the Early Childhood Special Education Graduate Program.

The Six Philosophical Assumptions

Inclusion

Inclusion involves not merely the physical placement of a child with disabilities in the same setting with other typically developing children of a similar age, but the true involvement of that child in the interactions and activities of occurring to the greatest degree possible. Educators who are committed to inclusion are able to integrate their knowledge of the needs of young children with disabilities and appropriate interventions with an ability to provide age appropriate and individually appropriate services to all of the children with whom they work. Educators committed to inclusion can function in the diverse range of community settings in which young children and families receive services and can modify or adapt activities and materials to address the diverse, individual needs of young children and their families.

Developmentally Appropriate Practice

The design of learning opportunities that facilitate children's active engagement and participation in their environment is critical to providing an environment that supports children's optimal development (Bredekamp, 1987). Such learning opportunities should maximize children's opportunities to make choices, value children's interests, and emphasize play and enjoyment. Careful planning that reflects an understanding of both age appropriate and individually appropriate practice is an essential activity of educators providing early care and educational services to young children, including those with disabilities.

Cultural Competence

All development and learning occurs within and is influenced by a cultural context. There are essentially five elements of cultural competence: a) valuing diversity; b) cultural assessment; c) dynamics of difference; d) institutionalization of cultural knowledge; and e) adaptation to diversity. Culturally competent educators are aware of their own values and how they have impacted their lives, but are able to separate their personal value judgments when working with children and families with diverse experiences and backgrounds. Culturally competent practitioners seek to learn about and respond to families in an individually appropriate and culturally appropriate manner.

Uniqueness of Early Childhood as a Developmental Phase

The unique developmental needs of young children require a supportive learning environment structured to be responsive to those needs (Carta, Schwartz, Atwater & McConnell, 1991). A knowledge of the sequence of development (birth to 5), an understanding of the interrelationship between the development of young children and the impact of disability on development, and subsequent implications for intervention are essential to the intervention process (McCollum, 1989; ATE & NAEYC, 1991a).

Family Systems and Family-Centered Approach

Establishing relationships with families ensures continuity between families and providers (Powell, 1994). These relationships should be built on mutual support of each other's roles, upon a commitment to joint decision-making, and upon respect for family choices and preferences for their level of involvement (Garshelis & McConnell, 1993). Competent family-centered practitioners understand the experiences of families of young children, including those with disabilities; are knowledgeable about specific strategies to establish and maintain productive relationships with families with diverse needs, experiences, and preferences; and clearly understand specific legal requirements (Wolery, Strain, Bailey, 1992; Bredekamp, 1993).

Inter- and Intra- Professional Collaboration

Collaborative relationships with family members, peers of the same discipline, and individuals from other disciplines as members of teams are essential to ensure the provision of family-centered, culturally competent, services that support the full inclusion of young children with disabilities in community settings. In addition to the provision of direct service, effective professionals consult with colleagues, build interpersonal relationships, communicate with related service professionals, and provide technical assistance to others.

SPECIAL EDUCATION COMPONENTS

Child Find/Screening

Child Find/ Screening is a process of seeking out young children within a school district who may be in need of special educational services. The process provides opportunities for all families to learn more about their child's development and community resources. It involves gathering information from a variety of sources, including interviews with parents, observing children and administering valid and reliable standardized and non-standardized instruments. Interpreting and discussing screening results with families to determine "next steps" is a vital component.

Comprehensive Evaluation Process

The comprehensive evaluation process involves the compilation of information that gives a picture of a child's strengths and needs, and family concerns and priorities for the purpose of making decisions relative to diagnosis, eligibility, placement and planning for specialized services.

The process involves selecting and using a variety of appropriate assessment instruments and procedures for young children. To determine eligibility and to develop an individualized education plan (IEP), implementation of reliable and valid evaluation procedures which incorporate multi-measure, multi-source and multi-domain information-gathering activities is essential. Working with families and evaluation team members to develop an evaluation plan and utilizing family concerns, priorities and resources as they relate to the child's development is a critical aspect of the process.

Consultation/Collaboration

Consultation/Collaboration refers to the efforts on the part of all parties involved in an intervention plan (including the child's family, the early childhood community and other service providers) to work together to share ideas, information and resources to improve comprehensive service delivery for young children with disabilities and their families.

Knowledge of community resources (programs and services available for families and how to network with those resources) and the ability to establish and maintain effective family and interagency cooperation is essential.

Knowledge of and sensitivity to diverse cultural, socio-economic, developmental and psychological influences on team members are vital aspects of successful collaboration.

Individualized Education Plan (IEP)

An IEP is a written statement developed by a multi-disciplinary staffing team (including parents) that integrates the results of a multi-disciplinary team evaluation, input from the child's parents and individual team members and the curriculum of the program the child attends.

It outlines the annual goals to be met, specific instructional objectives to be accomplished, and the educational services that will assist the child in reaching the specific goals and objectives.

It reflects current trends and practices in medical, therapeutic, developmental and educational intervention for eligible children and families, as well as the legal, philosophical, and ecological foundations of intervention practices and their impact upon planning, implementing and evaluating services.

Interpreting and discussing evaluation information with families and others in a manner that is clear and understandable, supports the child and family, and facilitates the development of an appropriate program is essential. Working with families and individuals from a variety of disciplines to develop, implement, and evaluate an IEP that is responsive to family identified concerns and priorities is a key component of the process, as well.

Individualized Family Service Plan (IFSP)

An IFSP is created to respond to the unique needs of children with disabilities birth to three and their families. It acknowledges the interrelationship of children and their families and provides necessary services for both children and their family members.

IFSPs are developed by individuals from a variety of agencies and disciplines and families in response to family identified concerns and priorities as they relate to the child within the context of their family.

Current trends and practices in medical, therapeutic, developmental and educational intervention for eligible children and families, as well as the legal, philosophical, and ecological foundations of intervention practices and their impact upon planning, implementing and evaluating services are reflected in IFSPs.

Transition Planning

Transition Planning leads to a successful transition of a child from Part H services to Part B services, from one early care and education program to another or into the local kindergarten classroom. The critical activities related to the transition planning process include such aspects as providing necessary information to key individuals, establishing a transition planning team, and communicating with the receiving program.

It is essential to be aware of family priorities and concerns, and of child characteristics that are pertinent to the development of a successful transition plan, as well as "best practices" related to transition.

Identification of necessary personnel, instructional materials, adaptive equipment, and building improvements for promoting the child's successful participation in the next setting, as well as monitoring the child's participation in the environment are all part of the transition.

Practica Requirements - Licensure and Non-Licensure Strands

- a. Instructional Programs.** Trainees will development, implement, and evaluate two instructional program plans for helping an individual (parent, child, childcare worker) acquire a new skill or behavior. The content of this instructional program must be related to an outcome identified by the early childhood team and included on the IEP.
- b. Transition Planning.** Trainees will participate in planning and facilitating the transition of a child to a new service delivery setting. Family goals for the transition process as well as their criteria for selecting the next setting must be included as part of an outcome statement on the IEP/IFSP.
- c. Community-Based Consultation.** Trainees must consult with and assist others in the development, implementation, and evaluation of an "intervention" program within a community-based early childhood setting. The particular goals and design of this relationship will be directed by the outcomes identified on the IEP and should be determined in collaboration with the child's family and the community setting staff.
- d. Comprehensive Evaluation.** Trainees will design, implement, and evaluate two comprehensive evaluations. Answers to the questions addressed in the evaluation plan should provide the information necessary to develop an IEP.
- e. Child Find.** Trainees must participate in the child find activities of a participating educational site. Trainees must assume responsibilities related to community awareness, referral process and screening.
- f. Case Study with the Family of a Child with Multiple Disabilities.** Trainees must participate as a member of an interdisciplinary team for a child who meets multiple disabilities eligibility criteria under Vermont regulations. The extent and nature of the activities involved in this case study will be

determined by the family's team and will be documented in the form of the IEP and a number of related short-term action plans.

g. Family-Based Experience. The focus of this experience is to provide trainees with the opportunity to learn directly from a family rather than from reading or attending lectures about families. This practicum component provides trainees with an in-depth experience with a family of a child with special needs. Through this experience interns will acquire an understanding of the elements of a family-centered approach and will demonstrate a working knowledge of the ways in which existing systems and policies can become more responsive to family concerns and priorities. The experience is composed of two phases: "Getting to Know the Family," and "Implementation of a Plan." This experience is designed, implemented and supervised by project staff in collaboration with Parent-to-Parent of VT.

h. Individual Educational Program. Trainees will participate as a member of an IEP team for at least 3 children and their families. Trainees must participate in the development of an initial IEP, the revisions of an existing IEP, or the development of an IEP for the following school year. Through the IEP process trainees should focus on decisions related to the identification of goals and objectives, related services, and placement.

Vermont LEEDS

Self Assessment of Core Competencies

Trainee: _____ Date: _____

Discipline: _____ Core Faculty Advisor: _____

In order to provide you with the most valuable experience possible through the Vermont LEEDS Graduate Program, it is important that we know the confidence level you have in each of the competency areas that will be emphasized. It is also important to obtain input from your core faculty advisor/mentor and other community supervisors with whom you will be working.

The confidence levels for this self assessment have been broken down into *uncertain*, *somewhat confident*, and *fully confident*. Your rating of yourself should be placed under **S** (self). Your core faculty advisor/mentor will place his/her rating under **A** (advisor). Collaborators in the community will place their rating under **O** (other).

As a pre-assessment, this information will be used to help you develop your Training Plan in collaboration with your core faculty advisor/mentor. As a dynamic assessment tool, it will provide a way for you to monitor your progress throughout your training experience with the input of your core faculty advisor/mentor and community supervisors or collaborators. As a post-assessment, this information will be used to determine the acquisition of all program competencies.

Category One Competencies

1. Uniqueness of Early Childhood as a Developmental Phase

2. Family-Centered Approach

3. Developmentally Appropriate Practice

4. Inclusion

5. Cultural Competence

6. Collaborative Interpersonal and Interprofessional Actions

UNIQUENESS OF EARLY CHILDHOOD AS A DEVELOPMENTAL PHASE	UNCERTAIN			SOMEWHAT CONFIDENT			FULLY CONFIDENT		
	S	A	O	S	A	O	S	A	O
A. Trainees will demonstrate:									
1. Knowledge of pre- and perinatal development.									
a. proper care and delivery.									
b. effects of genetics, environment, maternal health and nutrition, and other factors on the developing fetus.									
2. Knowledge of child development.									
a. sequences of development and the interrelationship among developmental areas.									
b. sensory and motor development and their influence on later cognitive, perceptual, and language skills.									
c. the development of receptive and expressive communicative competence.									
d. the development of perceptual learning and skills.									
e. motivation and initiation and their developmental significance.									
f. the development of cognitive skills such as problem-solving, concept formation, memory, learning, imitation and attention.									
g. socialization, socio-emotional development, and play behavior.									
h. the development of self-help skills and adaptive behaviors.									
i. physical maturation, including health and nutritional needs.									
3. Impact of environment									
a. knowledge of interactions among familial, cultural, social, and physical environments that enhance/prevent maximum growth and development.									
1. social and physical environments and their influences on development.

Self Assessment of Category Two Competencies

Trainee: _____ Date: _____

Discipline: _____ Core Faculty Advisor: _____

In order to provide you with the most valuable experience possible through the Vermont LEEDS Graduate Program, it is important that we know the confidence level you have in each of the competency areas that will be emphasized. It is also important to obtain input from your core faculty advisor/mentor and other community supervisors with whom you will be working.

The confidence levels for this self assessment have been broken down into *uncertain*, *somewhat confident*, and *fully confident*. Your rating of yourself should be placed under **S** (self). Your core faculty advisor/mentor will place his/her rating under **A** (advisor). Collaborators in the community will place their rating under **O** (other).

As a pre-assessment, this information will be used to help you develop your Training Plan in collaboration with your core faculty advisor/mentor. As a dynamic assessment tool, it will provide a way for you to monitor your progress throughout your training experience with the input of your core faculty advisor/mentor and community supervisors or collaborators. As a post-assessment, this information will be used to determine the acquisition of all program competencies.

Self Assessment of Competencies: Category Three
Leadership

Portfolio Guide Contents

Why Develop a Portfolio?

The Six Philosophical Assumptions

Practica Requirements

Self Assessment Of Core Competencies

Self Assessment of Category Three Competencies

Why Develop A Portfolio?

A portfolio serves as a site for documentation of your professional development. It is a dynamic form of documentation, emerging and changing as you develop as a professional. Developing a portfolio is somewhat like creating a photo album. As a photo album serves to give visual evidence of the growth and development of your family, a portfolio provides evidence of your growth and development as a professional.

Your portfolio should document your leadership activities, those activities based on practica requirements and agreed upon by your faculty supervisor, field supervisor and yourself and outlined in your Plan of Operation. Additionally, it will include your action-based research project which is required of all students in the Leadership strand as part of EDLP 295. Trainees are expected to design and implement an applied research study which addresses an identified challenge within an organization supporting the needs of eligible children and their families. As part of this experience, trainees will participate in the planning and implementation of a needs assessment to identify areas of potential change and utilize the study's outcomes to develop strategies for program improvement.

Completion of this portfolio will serve as a testimony to your proficiency as a leader in early childhood special education and demonstrate your leadership skills, including team building, curriculum development, organizational and fiscal management, collaboration, facilitation, strategic planning and public relations. It will also demonstrate your commitment to and competence in creating, supporting and providing services that are inclusive, family-centered, culturally competent, collaborative, developmentally appropriate and that reflect the uniqueness of early childhood as a developmental phase.

The Six Philosophical Assumptions

Inclusion

Inclusion involves not merely the physical placement of a child with disabilities in the same setting with other typically developing children of a similar age, but the true involvement of that child in the interactions and activities of occurring to the greatest degree possible. Educators who are committed to inclusion are able to integrate their knowledge of the needs of young children with disabilities and appropriate interventions with an ability to provide age appropriate and individually appropriate services to all of the children with whom they work. Educators committed to inclusion can function in the diverse range of community settings in which young children and families receive services and can modify or adapt activities and materials to address the diverse, individual needs of young children and their families.

Developmentally Appropriate Practice

The design of learning opportunities that facilitate children's active engagement and participation in their environment is critical to providing an environment that supports children's optimal development (Bredekamp, 1987). Such learning opportunities should maximize children's opportunities to make choices, value children's interests, and emphasize play and enjoyment. Careful planning that reflects an understanding of both age appropriate and individually appropriate practice is an essential activity of educators providing early care and educational services to young children, including those with disabilities.

Cultural Competence

All development and learning occurs within and is influenced by a cultural context. There are essentially five elements of cultural competence: a) valuing diversity; b) cultural assessment; c) dynamics of difference; d) institutionalization of cultural knowledge; and e) adaptation to diversity. Culturally competent educators are aware of their own values and how they have impacted their lives, but are able to separate their personal value judgments when working with children and families with diverse experiences and backgrounds. Culturally competent practitioners seek to learn about and respond to families in an individually appropriate and culturally appropriate manner.

Uniqueness of Early Childhood as a Developmental Phase

The unique developmental needs of young children require a supportive learning environment structured to be responsive to those needs (Carta, Schwartz, Atwater & McConnell, 1991). A knowledge of the sequence of development (birth to 5), an understanding of the interrelationship between the development of young children and the impact of disability on development, and subsequent implications for intervention are essential to the intervention process (McCullum, 1989; ATE & NAEYC, 1991a).

BEST COPY AVAILABLE

Family Systems and Family-Centered Approach

Establishing relationships with families ensures continuity between families and providers (Powell, 1994). These relationships should be built on mutual support of each other's roles, upon a commitment to joint decision-making, and upon respect for family choices and preferences for their level of involvement (Garshelis & McConnell, 1993). Competent family-centered practitioners understand the experiences of families of young children, including those with disabilities; are knowledgeable about specific strategies to establish and maintain productive relationships with families with diverse needs, experiences, and preferences; and clearly understand specific legal requirements (Wolery, Strain, Bailey, 1992; Bredekamp, 1993).

Inter- and Intra- Professional Collaboration

Collaborative relationships with family members, peers of the same discipline, and individuals from other disciplines as members of teams are essential to ensure the provision of family-centered, culturally competent, services that support the full inclusion of young children with disabilities in community settings. In addition to the provision of direct service, effective professionals consult with colleagues, build interpersonal relationships, communicate with related service professionals, and provide technical assistance to others.

Leadership Strand Practica Requirements

- a. EEE Program Teams.** Trainees will participate in the Supervisory Union Early Childhood Program's monthly meetings. This group processes referrals, reviews child progress and administers the EEE program.
- b. Community Based Early Childhood Teams.** Trainees will participate in the development and encouragement of community-based early childhood teams that were developed to support early childhood needs specific to a community. Teams shall be comprised of parents, educators, child care providers, business leaders and legislators.
- c. Curriculum Development.** Trainees will participate in the Curriculum Development Project to ensure that early childhood curriculum across inclusive community settings is aligned with Developmentally Appropriate Practices. The committee is comprised of school based educators, child care providers and private preschool teachers.
- d. Interagency Collaboration.** Trainees will participate on interagency teams working towards coordination of services for young children with disabilities and their families, including the Franklin County Early Childhood Advisory Council (serves as the advisory board for EEE, Head Start, Success by Six, Child Care Services) and the Franklin County Protection Team.
- e. Advocacy.** Trainees will participate in advocacy efforts including sponsorship and organization of community forums, candidate forums, and public relations around issues affecting young children and their families.
- f. Education.** Trainees will participate in the 1) development of a coordinated county-wide training system that involves interagency design and collaboration and 2) planning and coordinating training opportunities such as the annual Northwest Vermont Early Childhood Conference.

g. Funding. Trainees will help to identify funding sources and participate in pursuing grants.

Vermont LEEDS

Self Assessment of Category Three Competencies

Trainee: _____ Date: _____

Discipline: _____ Core Faculty Advisor: _____

In order to provide you with the most valuable experience possible through the Vermont LEEDS Graduate Program, it is important that we know the confidence level you have in each of the competency areas that will be emphasized. It is also important to obtain input from your core faculty advisor/mentor and other community supervisors with whom you will be working.

The confidence levels for this self assessment have been broken down into *uncertain*, *somewhat confident*, and *fully confident*. Your rating of yourself should be placed under **S** (self). Your core faculty advisor/mentor will place his/her rating under **A** (advisor). Collaborators in the community will place their rating under **O** (other).

As a pre-assessment, this information will be used to help you develop your Training Plan in collaboration with your core faculty advisor/mentor. As a dynamic assessment tool, it will provide a way for you to monitor your progress throughout your training experience with the input of your core faculty advisor/mentor and community supervisors or collaborators. As a post-assessment, this information will be used to determine the acquisition of all program competencies.

Category Three Competencies

12. Inquiry, Reflection and Action

13. Communication and Relationships

14. Organizational Renewal and Change

15. Systems Context and Management

16. Teaching and Learning

Category Three Competency Area	UNCERTAIN			SOMEWHAT CONFIDENT			FULLY CONFIDENT		
	S	A	O	S	A	O	S	A	O
Inquiry, Reflection and Action									
1. Analyze and evaluate qualitative and quantitative research to inform leadership practices									
2. Design and implement a research study to address an identified challenge within a specific organization									
3. Utilize outcomes of research study to develop strategies to effect program improvement									
4. Participate in the planning and implementation of an assessment/evaluation project and identify areas of potential change									
Communications and Relationships									
1. Build purposeful collaborative networks and partnerships among parents, community members, social service professionals and educators									
2. Develop a plan to promote the vision and outcomes associated with the organization and engage public dialog and support for continual reflection and renewal									
3. Recognize and respect diverse perspectives within and external to the organization for the purpose of enriching the organizational context and relationships within that environment									
4. Foster and develop effective communication and interpersonal skills that encourage problem identification, problem-solving and evaluation of outcomes									
5. Understand and utilize the nature and theories of adult development, learning, and career stages at they apply to leadership and professional development									
Organizational Renewal and Change									
1. Critically examine one's own leadership dispositions and style in relation to theory and knowledge to increase one's capacity as a caring, effective leader									
2. Understand and apply the knowledge of organizational development and change theory to the design and implementation of leadership strategies and practices

*** Evaluation of the Overall Program**

**Evaluation of the University Supervisor
By Intern
(Summary of Evaluation Data Fall)**

Intern: _____
Supervisor: _____
Date: _____

The rating scale is based on a 1-5 rating with 1 being a poor score and 5 being excellent.

Question	1	2	3	4	5
1. Availability of University Supervisor.	0%	0%	0%	0%	100%
2. Quality of University Supervisor's feedback and ability to refer you to appropriate resources.	0%	0%	0%	.2%	99.8%
3. Quality of University Supervisor's support to complete program requirements.	0%	0%	0%	.2%	99.8%
4. Quality of University Supervisor's professional behaviors (e.g., friendly, courteous, punctual).	0%	0%	0%	.2%	99.8%
5. University Supervisor's knowledge of best practices in the development, implementation and evaluation of early intervention services.	0%	0%	0%	0%	99.8%

**Evaluation of the University Advisor
By Intern
(Summary of Evaluation Data)**

Intern: _____
Advisor: _____
Date: _____

The rating scale is based on a 1-5 rating with 1 being a poor score and 5 being excellent.

Question	1	2	3	4	5
1. Advisor's Availability.	0%	0%	0%	.2%	99.8%
2. Quality of Advisor's Recommendations and ability to refer you to others for appropriate advice.	0%	0%	0%	0%	100%
3. Advisor's Overall Professional Behavior (e.g., scheduling necessary meetings, amount of time needed to respond to request for advice, etc.).	0%	0%	0%	0%	100%
4. Quality of Advisor's rapport with you (e.g., friendly, courteous, punctual).	0%	0%	0%	0%	100%
5. Quality of Advisor's knowledge of Curriculum Materials.	0%	0%	0%	0%	99.8%
6. Quality of Advisor's Knowledge of Behavior Analysis and Other Intervention Methodologies.	0%	0%	0%	.2%	99.8%

7. Quality of Advisor's Knowledge of Educational Assessment.	0%	0%	0%	0%	100%
8. Quality of Advisor's Ability to Encourage You to Continue Your Professional Development.	0%	0%	0%	0%	100%

Sample Student Responses to Open Ended Questions

Teaching

1. What to you were the most beneficial aspects of this course?

- * A lot of very interesting discussion. A great deal of information about infants and play.
- * Information on infant development. The variety of perspectives and quality of information as well as the format was great.
- * Much information was given through discussion rather than through lectures.
- * The cross-exposure to many topics/teachers- opportunity to dialogue with colleagues in a safe, supportive area.
- * Help in Understanding Family-Centered.
- * The colleagues I met through other students. The great skill of Angela Capone to guide discussions.
- * The opportunity to share ideas, questions, concerns, etc., with the women who work in early intervention. A real gathering of peers who have a lot to probe and do it well together.
- * Dialogue and perspectives of the instructor.
- * Discussion of readings.
- * Expertise of the instructor- ability to look at issues in many ways simultaneously

2. What aspects of the course do you feel should be improved upon or deleted?

- * Break of modules was difficult for me.
- * Clearer directions on the product expectations for me would be helpful.
- * I cannot honestly think of aspects to improve or delete.
- * There was some confusion over assignments in play-based portion.
- * Too much time on student presentations.

3. Do you feel that additional activities should be added to the course?

- * No !
- * Perhaps more time to view kids and set ups in action.
- * Maybe this should be a pass/fail course

4. Would you recommend this course to other students? Why?

- * Yes- quality of teaching, opportunity for network with peers, usefulness of information.
- * Yes, all.
- * Absolutely, this would be valuable for any family worker.
- * Yes anyone who works with babies needs this information.
- * Yes, information was very useful.
- * Yes, a valuable exchange of ideas and information.
- * Yes, this course explored issues that are not explored enough, if at all, in the early childhood field- GREAT COURSE !

Sample Student Responses to Open Ended Questions

Supervision

- * Angela quickly became my mentor in every sense of the word.
Because I was in a difficult placement, I really needed a lot of support and feedback provided on a constant basis.
- * Angela made me feel valued as a professional and this gave me the confidence necessary to "forge ahead" with my ideas/methods.
- * Of all the things I value most in my relationship (supervisor-student) I think the most treasured one was that she provided an atmosphere of safety. I always knew I could go to her with questions.
- * She provided the chance for a lot of dialogue between us as to the ethical practice and ways to create change in a non-threatening manner- both of which are ongoing issues in a professional sense.
- * I really feel that her expertise and support enabled me to not only establish an infant program- but also provide quality services.
- * Couldn't ask for a better supervisor and mentor.

Sample Student Responses to Open Ended Questions

Advising

- * Always willing to answer a quick question and have a long discussion.
- * Always supportive to clarify issues.
- * Knowledgeable of intervention strategies.
- * Always encouraging to continue professional development.
- * Angela has provided me with a great deal of assistance, encouragement, and valuable information.
- * Angela encouraged and challenged me to continuously evaluate and re-evaluate my work as well as taking it a step further.
- * I felt a great deal of support and as a result consistently turned to Angela for assistance.
- * Angela definitely played an integral role in my learning and development over the year.

Sample Student Responses to Open Ended Questions

Overall Program Evaluation

1. Strengths of the Program

- * Great knowledgeable instructors !
- * Practical materials- very usable.
- Internship- excellent use of time.
- * The faculty, knowledgeable and supportive.
- * Flexibility of supervisors.
- * Faculty enthusiasm and interest in their work.
- * Quality of instruction, comprehensives of areas covered.
- * Practicum/internship was possible through my present work experience enhancing established philosophies and conditions.
- * The availability of courses offered locally.
- * The diverse expertise of the faculty members.
- * Hands on experiences provided frequently.

2. What improvements would you suggest?

- * The distance (off-campus program) often made it difficult to have time with advisors.
- * I would have liked greater ties to the on-campus program (students and faculty).
- * The Reach-Out program should have been done in three years instead of two.
- * The foundation course did not provide a foundation (EDFS).

**Special Education Graduate Survey
(Summary of Evaluation Data)**

Program Evaluation Items

For each item, mark the letter on the data sheet which seems most appropriate. The highest possible rating is E. The lowest is A with three gradations between.

Question	A	B	C	D	E
5. The program met its state philosophy.	0%	0%	0%	42.9%	57.1%
6. Course contained up to date information.	0%	0%	0%	14.3%	85.7%
7. Size of classes were conducive to learning.	0%	0%	0%	0%	100%
8. Format/structure of classes were conducive to learning.	0%	0%	0%	42.9%	57.1%
9. Courses prepared students to meet their professional objectives.	0%	0%	14.3%	50%	35.7%
10. Practicum experiences prepared students for professional roles.	0%	0%	0%	61.9%	38.5%
11. Practicum experience complemented course work.	0%	0%	0%	14.2%	85.7%
12. Faculty were effective teachers.	0%	0%	0%	28.6%	71.4%
13. Faculty knew subject matter.	0%	0%	0%	7.1%	92.9%
14. Faculty were professional role models.	0%	0%	0%	21.4%	78.6%

15. Faculty were supportive of student development in and out of class.	0%	0%	0%	14.3%	85.7%
16. Faculty served as mentors.	0%	0%	7.1%	35.7%	57.1%
17. Faculty provided advising and assistance that was responsive to student personal and professional needs.	0%	0%	0%	42.9%	57.1%
18. Faculty provided advising and assistance that was responsive to student scholarly needs.	0%	0%	0%	28.6%	71.4%
19. Faculty met with students in a timely manner.	0%	0%	0%	42.9%	57.1%
20. Faculty encouraged students to bring diverse perspectives to discussions.	0%	0%	7.1%	28.6%	64.2%
21. Program encouraged students to support each others professional development.	0%	0%	4.0%	32.7%	64.2%
22. The program provided a sense of continuity and cohesiveness.	0%	0%	57.1%	42.9%	
23. There was a balance structure and flexibility in the program.	0%	0%	7.1%	28.6%	64.2%
24. Program provided an atmosphere which supported student development.	0%	0%	0%	28.6%	71.4%
25. Program provided an appropriate breath of	0%	0%	0%	28.6%	71.4%

knowledge.

26. Program provided an appropriate breath of technical skills.	0%	0%	11.2%	42.9%	45.9%
27. Program provided an appropriate breath of collaboration skills.	0%	0%	7.1%	21.4%	71.4%
28. Course requirements were relevant to the demands of the profession.	0%	0%	5.1%	14.3%	78.6%
29. Program course work was intellectually challenging and stimulating.	0%	0%	3.6%	14.3%	82.1%
30. Courses were scheduled to be readily accessible to students.	0%	0%	0%	28.6%	71.4%
