Analysis

ABSTRACT

This report presents data on college costs from the Annual Survey of Colleges for the 1998-99 academic year, as well as trends in costs over the past 25 years and analyses of college prices in relation to family income and available financial aid. Ten tables and seven figures present such data as average fixed charges for undergraduates, sample undergraduate budgets, average tuition and fees in current and constant dollars, and 10-year comparison of tuition and fees by region and institution type. Data highlights include the following: (1) average tuition at public four-year institutions is \$3,243, an increase of 4 percent over 1997-98; (2) the Southwest has the lowest and New England the highest tuition rates at both private and public institutions; (3) since 1980 college prices have risen between two and three times the Consumer Price Index; (4) almost three-quarters of students at four-year institutions pay less than \$8,000 in tuition and fees; (5) student aid has increased in total value but not enough to keep pace with rising tuition; and (6) there has been a decline in state and federal funding for higher education which has resulted in greater costs for students and families. INTRODUCTION

The price of college, commonly referred to as "college costs," attracts much attention from the media, public policymakers, and our nation's students and families. Average tuition and fees charged by institutions of higher education continue to rise faster than inflation, leading Congress to establish a National Commission on the Cost of Higher Education in 1997.

A theme of the commission's January 1998 report, "Straight Talk About College Costs and Prices," was the importance of defining terms clearly in any discussion of higher education finance. The commission made a useful distinction between expenditures that colleges incur to provide education — *costs* — and expenses students and families must pay — *prices*. Thus we have titled this publication "Trends in College Pricing" since its purpose is to provide the latest information on tuition and other expenses associated with attending college.

Each spring, the College Board administers the *Annual Survey of Colleges (ASC)* to 3,000 postsecondary institutions across the country. The survey collects a wealth of data on enrollment, admissions, degrees and majors, tuition, financial aid, and other aspects of undergraduate education. The College Board has conducted the Annual Survey for more than two decades, resulting in an extensive longitudinal data file about two-year, four-year, public and private colleges and universities.

Each fall over the past decade, the College Board has released information from the Annual Survey on how much colleges and universities plan to charge undergraduate students in the upcoming academic year. And for the past three years we have simultaneously released information from a counterpart survey conducted by the College Board, *Trends in Student Aid*.

This year we are publishing companion reports. Just as *Trends in Student Aid* has become widely respected for accuracy and consistency since it was first published in 1983, we hope that *Trends in College Pricing* will become a standard reference useful for policymakers, researchers, and media representatives.

Taken together, these two studies tell much about the financing of postsecondary educational opportunity in America. One provides the latest information on how much college "costs." The other tracks the amount of financial assistance available to help pay these expenses. In both publications we report trend data in both current and constant (inflation-adjusted) dollars.

This report presents pricing data from the *Annual Survey of Colleges* for the 1998-99 academic year, including:

- average fixed charges for undergraduates tuition and fees and room and board;
- average non-fixed budget components books and supplies, transportation, and other expenses; and
- sample student budgets for each type of institution.

The report also provides trend data over the past 25 years and analysis of college prices in relation to family income as well as available financial aid. In all cases, we have tried to present the data in ways that may be useful to different audiences, while ensuring the integrity of the data.

This report would not have been possible without the cooperation and work of the following individuals at the College Board: Renee Gernand and the Annual Survey of Colleges staff in Guidance Publishing; Hal Higginbotham, Jack Joyce, and Kathy Payea of the College Scholarship Service; and the Communications and Government Relations Division, including John Childers, Jeffrey Penn, Robert Caruano and many others who have supported the development and dissemination of this report.

We welcome reader comments and suggestions on these *Trends* reports. Visit College Board Online at *www.collegeboard.org* for an electronic version of this document and its counterpart, *Trends in Student Aid 1998*. Both reports are downloadable in PDF format, complete with additional data not provided in the print versions.

Defining Terms

According to the National Commission on the Cost of Higher Education, defining "cost," "price," and "subsidy" is not just a technical sidenote: it is critical to clarifying the issues in financing postsecondary education.

- Costs refer to the expenditures associated with delivering instruction, including physical plant and salaries.
- Prices are the expenses that students and parents face.
 Sticker price is the posted price institutions charge for tuition as well as room and board in the case of students residing on campus. A full student budget also includes books, supplies, and transportation.

Net price is what the student and/or family must cover after financial aid awards are subtracted.

 General subsidies make it possible for institutions to charge less than the actual costs of instruction. State, federal, and local appropriations, as well as private philanthropy, reduce the prices faced by all students whether or not they receive financial aid.

This report focuses on the sticker prices facing students and parents. It does not include estimates of average net price. However, we refer readers to the companion publication, *Trends in Student Aid 1998*, for data on the grant, loan, and work-study funds available to help families cover the expenses of college attendance.

This report also does not focus on the underlying costs of instruction or subsidies to institutions, although we do include an overview of sources of institutional revenue and how they have shifted over time.

For the 1998-99 academic year, the average tuition charged by public four-year colleges and universities is \$3,243, up from \$3,111 in 1997-98, an increase of 4 percent. Private four-year college tuition increased by 5 percent, from \$13,785 to \$14,508. Two-year public and private institutions are charging an average of \$1,633 and \$7,333 respectively, up 4 percent in each case. (Table 1)

The average surcharge for out-of-state or out-of-district students at public institutions is \$3,096 at two-year colleges and \$5,228 at four-year colleges. (Table 4)

The Southwest offers the lowest tuition rates at both private and public four-year institutions (\$10,701 and \$2,526 respectively). New England has the highest rates, averaging \$19,211 at four-year private institutions and \$4,635 at four-year publics. (Table 4)

This year's room and board charges are between 3 and 5 percent higher than the previous year. Room and board averages \$5,042 at four-year private colleges and \$4,342 at four-year public colleges. (Table 1)

In the 1970s there was little if any real growth in college prices. Since 1980, however, college prices have been rising at twice and sometimes three times the Consumer Price Index. (Figure 4; Tables 5 and 6a)

Over the ten-year period ending in 1998-99, after adjusting for inflation, average public four-year tuition and fees rose 53 percent compared to 35 percent for private four-year colleges. Since 1980-81, both public and private four-year college tuitions increased on average more than 100 percent over inflation. Private college tuition rose most sharply in the early and mid-1980s, while public tuition increased the most in the late 1980s and early 1990s. (Tables 5 and 6a)

More than half of the students attending four-year institutions pay less than \$4,000 in tuition and fees, and almost three quarters face tuition charges of less than \$8,000. Only 6 percent attend institutions charging tuition of \$20,000 or more per year. (Figure 1) For most Americans, college remains accessible, especially with the availability of more than \$60 billion in financial aid. (Figure 8; Table 9; also see companion *Trends in Student Aid* report)

Combined with stagnant family income over the past 15 years, however, trends in college tuition present serious problems for low- and moderate-income families. While average, inflation-adjusted tuition has more than doubled at both public and private four-year institutions, median family income has risen only 12 per cent since 1981. Student aid, meanwhile, has increased in total value, but not enough to keep pace with the rise in tuition, and most of the growth in aid has been in the form of student borrowing. (Figure 6)

Median family income, moreover, tells only part of the story, because incomes have grown steadily less equal during the 1980s and 1990s. The share of family income required to pay college expenses has increased for all families, but it has gone up the most for those on the lower rungs of the economic ladder. (Figure 7; Table 8)

In 1994-95, tuition and fees covered 27 percent of the revenue raised by institutions of higher education. Although the federal government is responsible for about three-quarters of available student financial aid, it contributes only 12 percent of the total revenues of colleges and universities. The states contribute approximately twice that amount.

In 1980-81, tuition and fees generated 21 percent of the revenue of institutions. In the intervening years, a decline in state and federal funding for higher education has shifted more of the cost burden to students and families. (Figure 10)

Enrollment in postsecondary education has been rising for all income groups in the 1980s and 1990s. Yet an individual's chances of entering and completing college remain closely correlated with economic background and circumstance. Wide gaps in opportunity persist between those at the bottom of the income ladder and those at the top. (Figure 9; Table 10)

FIGURE 3. Distribution of Full-Time Undergraduates at Public and Private Four-Year Institutions by Tuition and Fees Charged, 1998-99

The cover graphic on this report shows the distribution of full-time undergraduates at all four-year colleges and universities, by tuition and fees charged. The two graphics to the right divide this overall picture into separate distributions for public and private institutions. Readers may also find a distribution of four-year institutions (as opposed to students enrolled) by tuition and fees charged on page 18.

Notes & Sources

Source of Data

Average tuition, fees, room and board, and other fixed and non-fixed costs are based on data reported by colleges and universities as part of the College Board's *Annual Survey of Colleges* (ASC). Data analysis was performed by the College Scholarship Service (CSS), the financial aid arm of the College Board.

Data were collected on questionnaires distributed in early 1998, and subjected to intensive review and follow-up where necessary through August 1998.

Composition of the Sample

Data from approximately 99 percent of the respondents (2,781 of 2,804) to the Annual Survey of Colleges were examined as part of this year's analysis. Following past practice, the sample was further reduced to include only those institutions for which two consecutive years' worth of current price and enrollment data was available (see Table A). The purpose of this restriction is to minimize the distortions that might otherwise be caused by institutions responding one year and not the next, and thus appearing and disappearing in the sample.

Because institutions are not required to report information in all categories, rates of response vary considerably by budget component. With the single exception of "Books and Supplies," which draws a response rate similar to that for "Tuition

Table A. Composition of Sample for Tuition and Fees (T&F) Analysis

| | Universe | Sample N included in T&F Analysis | Percentage of institutions in Sample where T&F are projected (not firm) |
|--------------|----------|---|---|
| 2-yr Public | 1,006 | 656 (65%) | 9% 62 schools |
| 2-yr Private | 119 | 76 (64%) | 0% 0 schools |
| 4-yr Public | 547 | 486 (89%) | 2% 10 schools |
| 4-yr Private | 1,132 | 1,009 (89%) | 0% 0 schools |

and Fees," averages in particular cells (e.g., room and board) are always derived from smaller subsets of the whole. Tables such as the foregoing are constructed for every data cell to ensure that there are sufficient observations to support analysis.

Restricting the analysis to those institutions for which two consecutive years' worth of data are available also requires that CSS annually *recompute* the base-year averages at the same time as it calculates new averages and rates of change. Thus, the base-year values for 1997-98 used in this new analysis differ somewhat from the 1997-98 averages that were reported last year.

"Fixed Charges" and "Estimated Expenditures"

The 1998-99 data analysis differentiates between fixed charges (sometimes also called "direct charges"), such as tuition, fees, and on-campus room and board, and estimated student expenditures in non-fixed budget categories, such as books and supplies, transportation, personal expenses, and commuters' board-only expenses.

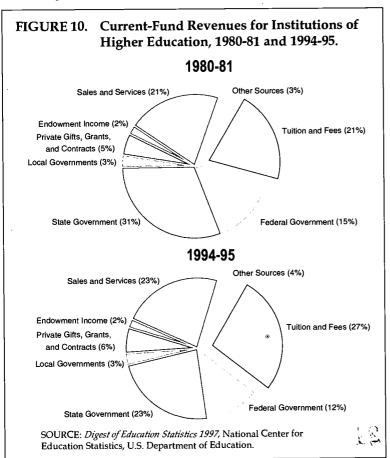

Both kinds of expenses should be taken into account by families in planning to meet educational expenses, and by institutions in constructing student aid budgets for purposes of determining need and eligibility. However, students do have some degree of discretionary control over the non-fixed components of their budgets.

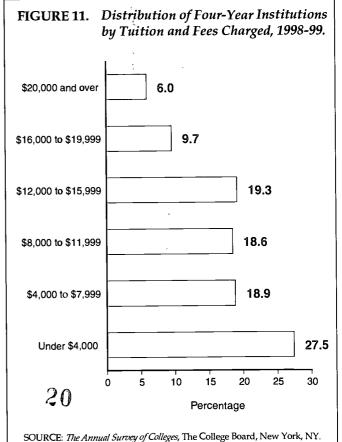

"Enrollment-Weighted" and "Unweighted" Averages

This report provides enrollment-weighted averages, or average prices that students confront. The College Board also calculates unweighted average tuition charges, which are shown in Table 1a of page 19 of this report.

Weighted and unweighted averages represent two different vantage points from which costs can be viewed:

- The experience of the average student in incurring charges [weighted], and
- An averaging of institutional charges [unweighted].

When weights are used in the calculations, fixed charges and estimated expenditures reported by colleges with larger enrollments are weighted more heavily than institutions with smaller enrollments. When calculations are performed without weighting, the fixed charges and estimated expenditures of all reporting institutions are treated the same and simply averaged.

Neither set of averages is more or less "correct" than the other; they simply described different phenomena. The College Board produced weighted averages for the first time in 1987, having previously computed unweighted averages only. The College Board believes that the weighted averages are generally more helpful to students and families in planning to meet future education expenses, as well as more easily compared with other enrollment-weighted data produced by other major data sources.

However, some researchers, policy analysts, and academic administrators find the unweighted averages useful in maintaining ongoing longitudinal studies and evaluating a particular institution's practices against a larger set. Thus the College Board continues to compute and publish unweighted averages as well. For additional information on how the weights are applied, please contact the College Board or visit College Board Online.

Inflation Adjustment

The Consumer Price Index for all urban dwellers (the CPI-U) is used to adjust for inflation. Updated

CPI data are available from the Bureau of Labor Statistics website (http://stats.bls.gov/cpiliome.htm). The academic base year for 1998-99 was extrapolated from current CPI data and is inclusive of July 1998 to June 1999.

Formula for Constant Dollar Conversion

| CONSTANT | _ | CURRENT | CPI for the base year |
|-------------|---|---------|-----------------------|
| (base year) | _ | year X | CPI for the current |
| Dollars | | dollars | year |

The table below provides academic and calendar year CPI data. The factor column provides the user with a multiplication factor equal to that of CPI (base year) divided by CPI (current year), as illustrated in the right-hand side of the above equation. A simple multiplication of a current year figure by the associated factor will yield a constant-dollar result.

Consumer Price Indexes (1982-84=100)

| Ac | ademic | Year | Calendar Year | | | |
|---------|--------|--------|---------------|-------|--------|--|
| Year | CPI | Factor | Year | CPI | Factor | |
| 1988-89 | 121.2 | 1.3466 | 1988 | 118.3 | 1.3737 | |
| 1989-90 | 127.0 | 1.2853 | 1989 | 124.0 | 1.3105 | |
| 1990-91 | 133.9 | 1.2187 | 1990 | 130.7 | 1.2434 | |
| 1991-92 | 138.2 | 1.1808 | 1991 | 136.2 | 1.1929 | |
| 1992-93 | 142.5 | 1.1451 | 1992 | 140.3 | 1.1578 | |
| 1993-94 | 146.2 | 1.1162 | 1993 | 144.5 | 1.1246 | |
| 1994-95 | 150.4 | 1.0850 | 1994 | 148.2 | 1.0960 | |
| 1995-96 | 154.5 | 1.0563 | 1995 | 152.4 | 1.0661 | |
| 1996-97 | 158.9 | 1.0270 | 1996 | 156.9 | 1.0357 | |
| 1997-98 | 161.7 | 1.0090 | 1997 | 160.5 | 1.0121 | |
| 1998-99 | 163.2 | 1.0000 | 1998 | 162.5 | 1.0000 | |

Data Limitations

The longitudinal data provided in this report provide a best approximation of the changes in fixed and non-fixed costs from year to year. Because the institutional sample varies slightly each year, annual increases reported on longitudinal tables may vary slightly from actual increases. This, however, does not apply to the annual changes reported for 1998-99 and 1997-98, as these data are derived from exact same sample of institutions.

Data from years prior to 1987-88 were extracted from the National Center for Education Statistics' Integrated Postsecondary Education Database System (IPEDS). Differences in the collection and analysis of IPEDS data and the College Board's *Annual Survey of Colleges* data result in slight variations in terms of average tuition and fee charges for institutions. Some of these differences may be attributed to the enrollment weights attached to the ASC data. Internal analysis, however, shows that the two data sets track very closely.

www.collegeboard.org

TABLE 1a. Average Fixed Charges for Undergraduates, 1998-99 (unweighted)

| | 7 | uition and F | ees | I | Room and Bo | ard |
|-------------------|---------|--------------|----------|---------|-------------|----------|
| Sector | 1998-99 | 1997-98 | % Change | 1998-99 | 1997-98 | % Change |
| Two-Year Public | 1,587 | 1,528 | 4% | * | * | * |
| Two-Year Private | 7,748 | 7,381 | 5% | 4,315 | 4,162 | 4% |
| Four-Year Public | 3,163 | 3,042 | 4% | 4,342 | 4,172 | 4% |
| Four-Year Private | 12,378 | 11,812 | 5% | 5,042 | 4,871 | 4% |

^{*} The sample was too small to provide meaningful information. These averages are NOT weighted for enrollment, as in Table 1.
