 IDENTIFIERS \*National Postsecondary Student Aid Study

ABSTRACT

This report uses data from the 1995-96 National Postsecondary Student Aid Study to examine the factors that first time students consider when choosing an institution for postsecondary education. Specifically, it describes the importance of reputation, location, price, and influence, and assesses how this varies with student characteristics. Students attending public four-year; private, not-for-profit four-year; and public two-year institutions are considered separately. Highlighted among study findings are the following: beginning students at both public and private, not-for-profit four-year institutions were more likely to cite reputation as the most important reason for choosing their institution; students at public four-year institutions were more likely than students at private, not-for-profit four-year institutions to identify location or price as the most important reason for their choice; and beginning students at public two-year institutions reported location as the most important reason for choosing their institutions. Following an introductory section, individual sections present tables, graphs, and text detailing findings concerning: enrollment patterns, choosing a four-year institution, and choosing a public two-year institution. Appended are a glossary and details on methodology. (DB)

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

## Highlights

---

This report uses data from the 1995–96 National Postsecondary Student Aid Study (NPSAS:96) to examine the factors that students enrolling in postsecondary education for the first time in 1995–96 considered in choosing their institution. Specifically, it describes the importance of reputation, location, price, and influence and how this varies with student characteristics. Students attending public 4-year; private, not-for-profit 4-year; and public 2-year institutions are considered separately.

- About 40 percent of undergraduates enrolling in postsecondary education for the first time in 1995–96 decided to attend a 4-year institution. A greater proportion enrolled in public than in private, not-for-profit institutions (25 percent versus 15 percent). Another 46 percent enrolled in public 2-year institutions, and the remaining 14 percent in other types of institutions.
- Public and private, not-for-profit 4-year institutions serve primarily traditional students, with the large majority of students under 24 years of age, financially dependent on their parents for financial aid purposes, and enrolled full time. Students at private, not-for-profit 4-year institutions were more likely than those at public 4-year institutions to come from families with incomes of \$70,000 or more (among dependent students) and to have parents with an advanced degree.
- Compared with students at 4-year institutions, students at public 2-year institutions were much more likely to be 24 years or older, single parents, financially independent of their parents, and enrolled part time.
- Beginning postsecondary students at both public and private, not-for-profit 4-year institutions were more likely to cite reputation than location, price, or the influence of others as the most important reason for choosing their institution. However, students at public 4-year institutions were more likely than their counterparts at private, not-for-profit 4-year institutions to identify location or price as the most important reason for their choice.
- In general, beginning postsecondary students were satisfied with most aspects of their institutions. Students at private, not-for-profit 4-year institutions were more likely than those at public 4-year institutions to be satisfied with certain aspects of instruction, but they were less likely to be satisfied with price.
- Beginning postsecondary students at public 2-year institutions mentioned location reasons for choosing their institutions more often than reputation, price, or influence factors.

## *Highlights*

---

- As was the case with 4-year students, public 2-year students were generally satisfied with most aspects of their institutions. They were more likely than 4-year students to be satisfied with the price of attending.

## Foreword

---

This report examines the factors that students who enrolled in postsecondary education for the first time in 1995–96 considered when choosing their institutions. It begins with a description of the enrollment patterns of these students. It then examines the reasons students reported for choosing the institution they attended and how the reasons varied according to student characteristics. Students at 4-year institutions are considered first, then students at public 2-year institutions. The report also describes student satisfaction with various aspects of their educational experiences such as their intellectual growth, the price of attending, and the prestige of the school.

The report uses data from the 1995–96 National Postsecondary Student Aid Study (NPSAS:96), a nationally representative study of students enrolled in all types of postsecondary institutions, from 4-year colleges and universities to less-than-2-year vocational institutions. NPSAS provides detailed information on students' backgrounds, their education expenses, and the sources and types of financial aid they receive. The study has been conducted four times—1986–87, 1989–90, 1992–93, and 1995–96—and will be conducted again in 1999–2000.

The analysis conducted for this report was limited to students who enrolled in postsecondary education for the first time during the 1995–96 academic year. These students, who constitute the basis for the Beginning Postsecondary Students Longitudinal Study (BPS:96/98), were the only ones asked about reasons for selecting their institutions.

The estimates presented in the report were produced using the NPSAS:96 Undergraduate Data Analysis System (DAS). The DAS is a microcomputer application that allows users to specify and generate their own tables. This software system produces the design-adjusted standard errors necessary for testing the statistical significance of differences among estimates. Additional details are included in appendix B of this report, including how readers can obtain access to the DAS through the Internet.

## Acknowledgments

---

The authors wish to thank all those who contributed to the production of this report. At MPR Associates, Laura Horn provided many helpful comments and various stages of the analysis and writing. Thanks also go to Helen Jang, who ran the tables; Barbara Kridl, who supervised the production of the report; Andrea Livingston and Karyn Madden, who edited and proofread it; and Leslie Retallick, Francesca Tussing, and Mary Mack, who shared responsibility for preparing graphics, formatting tables, and assembling the final report.

We would also like to acknowledge the careful review and thoughtful comments of the following reviewers: Dennis Carroll, Robert Burton, Kristin Perry, and Susan Broyles at NCES; Ellen Bradburn from the Education Statistics Services Institute; Dan Madzelon of the Office of Postsecondary Education; and Kent Phillipe of the American Association of Community Colleges.

# 1. Introduction

---

Students beginning their postsecondary education have, at least theoretically, an almost overwhelming range of options. They can choose a baccalaureate program at a 4-year college or university, a certificate or an associate's degree program at a 2-year college, or a vocational program at a 2-year or less-than-2-year institution. They can attend a local institution, living at home or on their own; choose an in-state institution away from home; or move to a completely different part of the country. Depending on where students choose to enroll and live, the amount they pay for their education can vary widely. They may spend as little as a few hundred dollars for tuition, fees, and books if they attend a public 2-year institution and live at home, or more than \$25,000 for tuition, room, and board if they attend certain private, not-for-profit institutions and live on campus.

As a practical matter, students' choices are constrained in a number of ways. In making their choices, students must take into account what they want to study relative to what different institutions offer, the admissions practices of the institutions they would like to attend, their financial resources, the availability of financial aid, and any family or work responsibilities that require them to live in a particular location or take classes on certain days or at certain times. Their choices may also be affected by family, school, and societal expectations about appropriate alternatives.<sup>1</sup> Even within these bounds, however, students typically still have options, although a single student from a wealthy family usually has a wider range of alternatives than a student with a family, a job, and limited financial resources.

What factors do prospective students take into consideration when deciding where to enroll? How do these factors vary with demographic, socioeconomic, and other student characteristics? Are students satisfied with their choices? These are the questions addressed in this report for students who enrolled in postsecondary education for the first time in 1995–96. Because the analysis includes only individuals who actually enrolled in postsecondary education, it can address the reasons students chose specific institutions, but not the reasons individuals chose to enroll or not enroll in postsecondary education.

---

<sup>1</sup>P. McDonough, *Choosing Colleges: How Social Class and Schools Structure Opportunity* (Albany, NY: State University of New York Press, 1997).

## The Choice Process

The approach students use to choose an institution has been described by many researchers as a three-stage process: it begins with a broad overview of postsecondary education opportunities available, followed by a search for information about possible institutions to form a choice set, and then a final choice phase when the student narrows the choice set down to a single institution.<sup>2</sup> Various institutional characteristics consistently have been found to be influential during this process, such as cost, distance from home, availability of financial aid (especially grants), and selectivity, as have student characteristics such as gender, race-ethnicity, parents' education, income, parental preferences, religion, and academic ability.<sup>3</sup>

Several NCES reports have examined the importance of various factors affecting student choice and how these factors vary with age and income. A study using the 1989-90 National Postsecondary Student Aid Study (NPSAS:90) data found that the following were very important considerations for students in selecting an institution: the institution offered the course of study they wanted (cited by 73 percent); they could live at home (51 percent); they were able to go to school while working (51 percent); the institution had a good reputation (50 percent); and the institution was located close to home (43 percent).<sup>4</sup> Except for the institution's reputation, older students (24 years or older) were more likely than younger students to consider each of these factors important. For low-income students, obtaining the financial aid they needed was especially likely to be a very important consideration (45 percent reported that it was very important, versus 20 percent of other students).<sup>5</sup>

Although about 65 percent of all high school graduates now enroll in college immediately after graduating from high school,<sup>6</sup> and more enroll later on, not all students have equal access to the range of educational opportunities available, and not all postsecondary institutions provide the same programs. Thus, both where students enroll and why have important implications for understanding who receives what types of benefits of postsecondary education.

---

<sup>2</sup>See, for example, D. Hossler and K.S. Gallagher, "Studying Student College Choice: A Three-Phase Model and Implications for Policymakers," *College and University*, 2 (1987): 207-221.

<sup>3</sup>For a summary of the evidence, see M. Paulsen, *College Choice: Understanding Student Enrollment Behavior* (ASHE-ERIC Higher Education Report No. 6) (Washington, D.C.: The George Washington University, School of Education and Human Development, 1990).

<sup>4</sup>S. Choy and M. Premo, *Profile of Older Undergraduates: 1989-90* (NCES 95-167) (Washington, D.C.: U.S. Department of Education, National Center for Education Statistics, 1995).

<sup>5</sup>S. Choy and M. Premo, *How Low Income Undergraduates Financed Postsecondary Education: 1992-93* (NCES 96-161) (Washington, D.C.: U.S. Department of Education, National Center for Education Statistics, 1996).

<sup>6</sup>U.S. Department of Education, National Center for Education Statistics, *Digest of Education Statistics, 1997* (Washington, D.C.: 1997), table 184.

Students' satisfaction with their choices can have implications for their persistence and attainment. Research suggests that whether or not a student stays enrolled in an institution is related to the degree to which the student fits in with the environment—that is, how the student engages with the academic and social systems of the institution and the extent to which the student is satisfied with institutional resources.<sup>7</sup> Thus, measures of students' satisfaction with various aspects of their institution can be useful to those concerned about increasing persistence and attainment in general or of specific subgroups (nontraditional students, for example, who tend to have lower attainment rates than traditional students who enter college immediately after high school).<sup>8</sup>

## Data

This study uses data on 1995–96 beginning postsecondary students (those who enrolled in postsecondary education for the first time in 1995–96), a subset of the 1995–96 National Postsecondary Student Aid Study (NPSAS:96). NPSAS:96 is based on a nationally representative sample of all students enrolled in postsecondary education in 1995–96.

Students were asked in a telephone interview why they decided to attend the institution in which they enrolled, and they could provide as many reasons as they wanted. The interviewers coded their verbatim responses into 20 predetermined categories developed using information gathered from field tests. These 20 categories were then aggregated into four general categories as follows:

Location-related	Close to job Could live at home Close to home Liked the campus Other location reason
Reputation/school-related	School has a good reputation Job placement Facilities/equipment Faculty reputation Other reputation/school reason

<sup>7</sup>E. Pascarella and P. Terenzini, *How College Affects Students* (San Francisco, CA: Jossey-Bass Inc., 1991).

<sup>8</sup>Forty-three percent of nontraditional students who began their postsecondary education in 1989–90 had attained some postsecondary credential by 1994, compared with 64 percent of traditional students. See L. Horn, *Nontraditional Undergraduates* (NCES 97-158) (Washington, D.C.: U.S. Department of Education, National Center for Education Statistics, 1996).

Price-related	Shorter time to finish Price of attendance was less Got more financial aid Tuition was low Other price reason
Influence-related	Parents went there Friends/spouse went there Parents wanted student to go there Teacher/guidance counselor recommended Other influence factors

After they gave all their reasons for selecting their institution, students were asked which of the reasons they mentioned was the most important in selecting the institution they were attending. From this information, a variable was created with 20 categories corresponding to the reasons listed above. For this analysis, these 20 values were grouped into the four aggregated categories indicated above.

Beginning postsecondary students were also asked to indicate if they were satisfied (yes or no) with various aspects of their first-year experiences in postsecondary education. These aspects fell into three general categories: 1) institutional characteristics, including the prestige of the institution, the overall campus climate regarding students of different racial or ethnic backgrounds, and the price of attending; 2) classroom instruction, including the availability of courses, class sizes, and the teaching ability of most of the instructors; and 3) students' personal experiences, including their intellectual growth and social life.

In addition, students were asked if they had participated in certain school-sponsored activities or used certain services including job placement services; sports and recreational facilities; counseling services for academic, financial aid, or personal issues; and music, art, and drama activities. If so, they were asked if they had been satisfied with them.

This study relies primarily on tabular analysis, disaggregating student college choice behavior and student satisfaction with postsecondary experiences by their demographic and enrollment characteristics. It examines separately students who enrolled in public 4-year institutions; private, not-for-profit 4-year institutions; and public 2-year institutions. This type of analysis provides useful information in determining overall patterns among different groups of students who enrolled in postsecondary education for the first time in 1995–96. However, it does not take into account the covariation of the independent variables. Several statistical methods are available to examine the relationships between two variables while holding other variables constant.

In this analysis, linear regression models were used to describe how a number of student characteristics were related to the reasons students mentioned as being most important in selecting the institution they were attending.

## **Organization of the Report**

The next section of this report describes the enrollment patterns of the 1995–96 beginning postsecondary students and profiles the students who selected public and private, not-for-profit 4-year institutions and public 2-year institutions. The following two sections examine the reasons students reported for choosing the institution they attended and how these varied by student characteristics, first considering students at 4-year institutions and then students at public 2-year institutions. These sections also describe student satisfaction with various aspects of their educational experiences such as their intellectual growth, the price of attending, and the prestige of the school. A conclusion summarizes the major findings.

## 2. Enrollment Patterns

---

As background to the discussion of the reasons students gave for choosing their institutions, this section describes where 1995–96 beginning postsecondary students enrolled, first considering all students and then traditional and nontraditional students separately. It then profiles the beginning student population at each of the three major types of institutions: public 4-year; private, not-for-profit 4-year; and public 2-year.

### All Students

The type of institution a prospective student chooses depends to a large extent on his or her educational goals. These goals might include earning a formal award such as a bachelor's degree, an associate's degree, or a certificate; obtaining job skills through course enrollment; or pursuing personal interests.

Individuals who want to earn a bachelor's degree typically enroll in a 4-year college or university if they have taken the required steps toward admission and have the necessary financial resources. These steps include successfully completing college preparatory courses in high school, taking college entrance examinations (the SAT or ACT) when required, completing the application process, and being accepted for admission.<sup>9</sup>

About 40 percent of undergraduates of all ages who enrolled in postsecondary education for the first time in 1995–96 decided on a public or private, not-for-profit 4-year institution (table 1). A greater proportion enrolled in public rather than private, not-for-profit institutions (25 percent versus 15 percent) (figure 1).

Prospective students who aspire to a bachelor's degree but have missed one of the required steps for admission or cannot afford to attend a 4-year institution can still reach their goal. They can make up their academic deficiencies, complete the required steps, and assemble the financial resources later, or they can enroll first at a 2-year institution and then transfer to a

---

<sup>9</sup>For a discussion of access based on taking these steps, see L. Berkner, *Access to Postsecondary Education for the 1992 High School Graduates* (NCES 98-105) (Washington, D.C.: U.S. Department of Education, National Center for Education Statistics, 1997).

## 2. Enrollment Patterns

**Table 1—Percentage distribution of beginning postsecondary students according to institution type: 1995–96**

	Public less- than- 2-year	Public 2-year	Public 4-year	Private, not-for- profit less- than- 4-year	Private, not- for- profit 4-year	Private, for- profit
Total	1.9	45.7	25.4	1.3	14.5	11.3

4-year college or university to complete their bachelor's degree.<sup>10</sup> Among 1995–96 beginning postsecondary students who enrolled in a less-than-4-year institution, 29 percent planned to transfer later to a 4-year institution (table 2).

Prospective students with postsecondary goals other than a bachelor's degree may have a variety of institutions from which to choose, depending on where they live and what they want to study. Their options typically include 2-year institutions or less-than-2-year institutions, although some 4-year institutions offer subbaccalaureate programs or permit nondegree enrollment as well.

<sup>10</sup>For a discussion of transfer behavior, see A. McCormick, *Transfer Behavior Among Beginning Postsecondary Students: 1989–94* (NCES 97-266) (Washington, D.C.: U.S. Department of Education, National Center for Education Statistics, 1997).

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

Forty-six percent of 1995–96 beginning postsecondary students enrolled in a public 2-year institution (figure 1 and table 1). The remaining 14 percent attended public less-than-2-year; private, not-for-profit less-than-4-year; or private, for-profit institutions. Beginning postsecondary students at less-than-4-year institutions reported a variety of reasons for enrolling. In addition to the 29 percent already mentioned who were planning to transfer to a 4-year institution, 33 percent

were seeking job skills; 20 percent wanted to earn an associate's degree or a certificate at the institution in which they were enrolled; and 18 percent had personal or other reasons for enrolling (table 2).

## Traditional Versus Nontraditional Students

Where 1995–96 beginning postsecondary students enrolled—and their reasons for enrolling if they selected a less-than-4-year institution—were closely related to how “traditional” or “non-traditional” they were. For this analysis, nontraditional characteristics included delaying enrollment into postsecondary education after high school for a year or more; having no high school diploma or having a GED; enrolling part time; being financially independent; having dependents other than a spouse; being a single parent; and working full time while enrolled.<sup>11</sup> Students were characterized as traditional if they had none of these characteristics, minimally nontraditional if they had one, moderately nontraditional if they had two or three, and highly nontraditional if they had four or more. In the aggregate, 43 percent of beginning postsecondary students were traditional; 19 percent were minimally nontraditional; 21 percent were moderately nontraditional; and 17 percent were highly nontraditional (table 3).

Among traditional beginning postsecondary students, 67 percent enrolled in a 4-year institution (figure 2). Another 16 percent enrolled in a less-than-4-year institution but planned to transfer later to a 4-year institution. Thus, in total, at least three-quarters either attended or expected eventually to attend a 4-year institution.

Beginning postsecondary students who were minimally nontraditional were about half as likely as traditional students to attend a 4-year institution (35 percent), and moderately and highly nontraditional students were even less likely to do so (15 percent and 11 percent, respectively). Some minimally and moderately nontraditional beginning postsecondary students enrolled first in less-than-4-year institutions intending to transfer to 4-year institutions later (25 and 20 percent, respectively), but relatively few highly nontraditional students had such aspirations (9 percent). Among the highly nontraditional beginning postsecondary students, 45 percent enrolled in a less-than-4-year institution with the objective of obtaining job skills.

---

<sup>11</sup>For a description of this categorization, see L. Horn, *Nontraditional Undergraduates* (NCES 97-578) (Washington, D.C.: U.S. Department of Education, National Center for Education Statistics, 1996).

## Students Enrolled at 4-Year Institutions

### *Public 4-Year Institutions*

Public 4-year institutions serve a primarily traditional student population: 70 percent of the 1995–96 beginning postsecondary students who enrolled in a public 4-year institution were traditional, and another 18 percent were minimally nontraditional (that is, had just one characteristic associated with nontraditional status) (table 3). About 95 percent were under 24 years of age, and 91 percent were financially dependent on their parents for financial aid purposes (figure 3). Eighty-eight percent enrolled full time (table 3).

Women outnumbered men (54 percent were female), and 72 percent of all beginning postsecondary students at public 4-year institutions were white, non-Hispanic. Black, non-Hispanics made up 11 percent of the beginning postsecondary student population at public 4-year institutions; Hispanics, 10 percent; and Asian/Pacific Islanders, 7 percent. About two-thirds of the students had parents with at least some postsecondary education, and 21 percent of them had parents with an advanced degree (figure 3).

Dependent beginning postsecondary students at public 4-year institutions came from families in all income ranges: 29 percent were from families with incomes less than \$30,000; 44 percent were from families with incomes between \$30,000 and \$69,999; and 27 percent were from families with incomes of \$70,000 or more. About one-third (32 percent) of all beginning postsecondary students at public 4-year institutions (dependent and independent) attended with no financial aid (table 3). Another 28 percent received an aid package without loans (that is, they received grants and/or work study only), and the remaining 41 percent had an aid package with loans (table 3).

The majority of students (61 percent) worked while enrolled. Of these students, 87 percent considered themselves primarily students working to meet their expenses rather than employees who enrolled to take classes.

### *Private, Not-for-Profit 4-Year Institutions*

Beginning postsecondary students at private, not-for-profit 4-year institutions were similar in many ways to their public sector counterparts (table 3 and figure 3). The gender, age, and racial-ethnic makeup of the student populations at the two types of institutions was very similar, and comparable percentages of students were financially dependent for financial aid purposes

**Figure 3—Percentage distributions of beginning postsecondary students with various characteristics, by type of institution: 1995–96**

NOTE: Percentages may not sum to 100 due to rounding.

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

(about 91 percent). Beginning students at both types of institutions were about equally likely to work while enrolled (about 6 out of 10), and, if they worked, to consider themselves primarily students working to meet expenses (about 9 out of 10).

Their family backgrounds differed slightly, however. Beginning postsecondary students at private, not-for-profit 4-year institutions were more likely than those at public 4-year institutions to come from families with incomes of \$70,000 or more (if they were dependent) and more likely to have parents with an advanced degree.

In 1995–96, the average tuition was higher at private, not-for-profit than at public 4-year institutions.<sup>12</sup> Dependent students at private, not-for-profit 4-year institutions were more likely than their counterparts at public 4-year institutions to come from high-income families, but students at private, not-for-profit 4-year institutions (dependent and independent together) were less likely than those at public 4-year institutions to attend without aid (19 percent versus 32 percent) (table 3). Beginning students at the two types of 4-year institutions were about equally likely to receive an aid package without loans (about one-quarter), but students at private, not-for-profit institutions were more likely than those at public institutions to take out loans (55 percent versus 41 percent).

### Students Enrolled at Public 2-Year Institutions

Public 2-year institutions frequently schedule evening classes, enroll part-time students, and generally charge lower tuition than 4-year institutions. For these reasons, they often serve individuals who have family or work responsibilities that limit the amount of time they have to attend classes and the financial resources they have to support their attendance.

Beginning postsecondary students at public 2-year institutions were much more likely than students at either public or private, not-for-profit 4-year institutions to have characteristics associated with “nontraditional” college students. Specifically, students at public 2-year institutions were more likely to be 24 years or older, single parents, financially independent of their parents for financial aid purposes, and enrolled part time (table 3 and figure 3). They were also more likely to have parents with no more than a high school education. If they worked, they were more likely than students at 4-year institutions to consider themselves primarily employees taking classes than students working to meet expenses. If they were dependent, students at public 2-year

---

<sup>12</sup>In 1995–96, the average tuition for students who attended full time, full year was \$12,600 at private, not-for-profit 4-year institutions, and \$3,800 at public 4-year institutions. See L. Berkner, *Student Financing of Undergraduate Education, 1995–96* (NCES 98-076) (Washington, D.C.: U.S. Department of Education, National Center for Education Statistics, forthcoming).

institutions were more likely than those at private, not-for-profit 4-year institutions to be from families with lower incomes (less than \$30,000).

Beginning postsecondary students enrolled in public 2-year institutions for a variety of reasons. Thirty-seven percent planned to transfer to a 4-year institution, the most frequent reason for enrolling (table 3). Another 23 percent enrolled to obtain job skills, and 21 percent planned to earn a degree or certificate at the 2-year institution. The remaining 19 percent enrolled for other reasons such as personal enrichment or to transfer to an institution other than a 4-year one.

Once students decide on the type of postsecondary education they are going to pursue, they must next identify a set of institutions that might meet their needs and then finally narrow this set down to a single institution. They make this choice based on their individual preferences and financial circumstances, constrained of course by the admissions decisions of the institutions to which they apply.<sup>13</sup> The rest of this report focuses on the reasons why beginning postsecondary students at public 4-year, private, not-for-profit 4-year, and public 2-year institutions chose the institutions they attended.

### 3. Choosing a 4-Year Institution

---

In NPSAS:96, beginning postsecondary students were asked why they decided to attend their institution. As described in the Introduction, their verbatim responses were coded into 20 categories. These 20 categories were then aggregated into four: reputation/school-related, location-related, price-related, and influence-related. Students could give more than one reason for their choice of institution. The specific reasons students at 4-year institutions gave and how the reasons varied by type of institution and student characteristics are described in this section. Also discussed is the extent to which students were satisfied with various aspects of the institutions they attended.

#### Factors Affecting Choice

The majority (63 percent) of beginning postsecondary students at 4-year institutions gave at least one reputation/school-related reason for choosing their institution (figure 4). A majority also cited at least one location-related reason (58 percent). A considerably smaller percentage (26 percent) gave reasons related to price, and even fewer (21 percent) mentioned the influence of friends, teachers, counselors, or others.

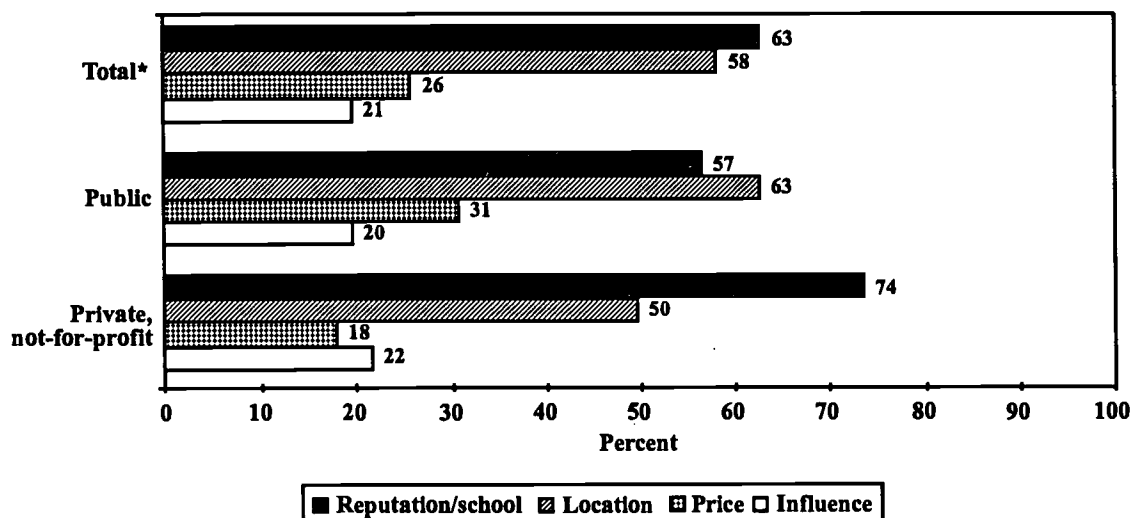

The relatively low mention given to the price of attending does not support the findings of other researchers that the price of going to college affects not only whether students enroll but also where they go.<sup>14</sup> In addition, the rising public concern over college tuition<sup>15</sup> makes it difficult to conclude that the price of attending is not a factor in students' college decisions. One possible explanation for the relatively low percentage of students mentioning price is that in developing their "choice set," students include only those institutions they think they can afford or that their parents had identified as affordable. They may have answered the question about reasons for choosing their institution in the context of making a final choice from the set of institutions that had already been narrowed down to those they considered as financially feasible to attend. It is also possible that, at least for some students, financial aid provided sufficient assistance that they were indifferent to price differences among the institutions they were considering.

Finally, the percentage of students citing price reasons may understate the percentage considering the price of attending because of the way in which students articulated the reasons for their choices. For example, some location-related reasons (living at home, for example) may actually indicate price concerns, because living at home while enrolled is a way of reducing the price of attending.

The fact that relatively few students reported the influence of others as being a factor in their decision is somewhat inconsistent with the observed importance of parents, high school personnel, and community values in determining where students go to college.<sup>16</sup> As with price-related reasons, however, influence factors may play a prominent role in determining whether an individual goes to college and the set of alternatives a student considers, but may be less important in his or her final choice. Students who have defined their options as a set of state

<sup>16</sup>P. McDonough, *Choosing Colleges: How Social Class and Schools Structure Opportunity*.

universities, for example, or a set of private colleges where they are likely to be admitted, might have had parents, teachers, and guidance counselors help them in identifying this group of institutions. However, they may view their final choice of a specific institution as their own, determined by other considerations. Also, influence factors, like price factors, might be partially reflected in other responses (like being close to home).

Students who enrolled at public and private, not-for-profit 4-year institutions tended to use different criteria to pick the institution they attended. The frequency with which students mentioned various reasons for selecting their institution and the most important reasons they reported also differed according to their family background, enrollment characteristics, financial aid status, and work status. These patterns are discussed next.

### ***Reputation/School-Related Reasons***

Some students using reputation as a criterion for deciding to attend a particular institution have in mind its general reputation as a high-quality institution. Other students have more specific reputation/school-related reasons for their choices. For example, they might focus on the reputation of the faculty, campus facilities, or the availability of particular programs or majors. Similarly, students with well-defined academic interests might focus on an institution's offerings and reputation in their anticipated major field of study. Students might also choose an institution partly because of the way instruction is organized—class sizes or the types of course-taking requirements, for example.

As already indicated, 63 percent of all beginning postsecondary students at 4-year institutions cited at least one reputation/school-related reason for their choice of institution (table 4). Thirty-five percent reported that the institution's good reputation was a factor in their decision, and 28 percent reported "other" reputation/school-related reasons. As just described, these other reasons might include the institution's program offerings in a specific area or its teaching methods, for example. Relatively small percentages mentioned other reputation/school-related characteristics such as faculty, facilities, or job placement (no more than 6 percent).

Beginning postsecondary students attending private, not-for-profit 4-year institutions were especially likely to give a reputation-related reason for choosing their institution compared with those attending public 4-year institutions (74 percent versus 57 percent). They were also more likely than their counterparts at public 4-year institutions to mention each of the specific reputation-related reasons—the school's good reputation, facilities, faculty reputation, and job placement—and also "other" reputation/school-related reasons.

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

Considering an institution's reputation as a good school was associated with having well-educated parents and high admission test scores. At both types of 4-year institutions, students whose parents had an advanced degree were more likely than those whose parents had no more than a high school diploma to cite this reason. Also, at both types of institutions, students with high SAT and ACT scores (1200 or more and 25 or more, respectively) were more likely than those with low scores (less than 900 or less than 19, respectively) to mention the school's good reputation as a reason for choosing it.

#### *Location-Related Reasons*

Location-related reasons can include proximity or distance. Some students who cite location as a factor in their choice of institution may be looking for an institution close to their home or job because family or work responsibilities make convenient access to a campus crucial. Others may want to remain close to home to maintain close ties with their family and friends or to be assured that they could get home quickly and inexpensively for vacations or in case of emergency. Other students focusing on location might be looking for an institution far away from home for the experience of living on campus or on their own. Some students may have very specific location criteria and want to be in a particular part of the country or in a location that affords them ready access to desired amenities such as recreational opportunities or cultural activities.

A majority (58 percent) of beginning postsecondary students at 4-year institutions gave at least one location-related reason for choosing their institution (table 5). The most frequently cited reason was being close to home (given by 32 percent). Similar reasons—being able to live at home or being close to their job—were given by 5 percent and 1 percent of the students, respectively.<sup>17</sup> Sixteen percent cited liking the campus as a reason for choosing their institution, and 12 percent reported an “other” location-related reason.

Location was more likely to be a factor in choosing an institution for students attending public 4-year institutions (63 percent) than for those attending private, not-for-profit 4-year institutions (50 percent). Compared with students at private, not-for-profit 4-year institutions, students at public 4-year institutions were more likely to mention being close to home (38 percent versus 21 percent) and being able to live at home (7 percent versus 3 percent) as factors in their choice of institution. However, students at private, not-for-profit 4-year institutions gave one particular location-related reason—liking the campus—slightly more often than their public 4-year counterparts (18 percent versus 14 percent).

---

<sup>17</sup>It is important to keep in mind that students could have given more than one of these reasons. Thus, these percentages cannot be added together to indicate the percentage who gave proximity as a reason.

\*Includes public; private, not-for-profit; and private, for-profit institutions.

NOTE: Students could name more than one reason. Thus, columns do not sum to the total. Values of 0.0 indicate true values of less than 0.05.

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

Specific location-related reasons varied with income among dependent students at both public and private, not-for-profit 4-year institutions. At public 4-year institutions, dependent students were about equally likely to have a location-related reason for choosing their institution regardless of income, but their reasons differed. Compared with those in other income categories, dependent students from families with incomes of at least \$70,000 were more likely to choose their institutions because they liked the campus, and less likely to want to be close to home.

At private, not-for-profit 4-year institutions, dependent students from families with incomes of at least \$70,000 were more likely than those with incomes from \$30,000 to 69,999 to cite liking the campus as a reason for choosing their institution (24 percent versus 17 percent). At this upper income level (\$70,000 or more), students from public and private, not-for-profit 4-year institutions were about equally likely to cite liking the campus as a reason for choosing their institution (21 and 24 percent, respectively). At private, not-for-profit 4-year institutions, students with SAT scores of 1200 or more were more likely than those with scores of less than 900 to cite liking the campus as a reason for their choice of institution.

### ***Price-Related Reasons***

As discussed earlier, the price of attending may help define the set of institutions students consider to be open to them, with students seriously considering only those institutions they think they can afford. Only students from wealthy families or who have other sources of funds or are awarded substantial amounts of financial aid can afford to ignore price completely in making their decisions. In fact, research on price and choice has shown that as net prices rise, the enrollment of lower income students tends to shift to less expensive colleges.<sup>18</sup>

About one-quarter (26 percent) of all beginning postsecondary students at 4-year institutions gave at least one price-related reason for choosing their institution (table 6). This reason was expressed in general terms—some version of “the price of attending was less”—by 11 percent of students. Seven percent of students specifically mentioned that they got more financial aid, and 5 percent mentioned lower tuition.

Price-related reasons were mentioned much more often by students attending public as opposed to private, not-for-profit 4-year institutions (31 percent versus 18 percent). Furthermore, students at the two types of institutions had different price considerations. Of the various types of price-related reasons, students at public 4-year institutions were most likely to give a general

### 3. Choosing a 4-Year Institution

---

reason—some version of “the price of attending was less” (15 percent). In contrast, students at private, not-for-profit 4-year institutions mentioned getting financial aid more often than any other price-related reason (11 percent).

Among dependent beginning postsecondary students at public 4-year institutions, similar percentages in each income group gave a price-related reason for attending their institution (29 to 34 percent). Previous research cited above<sup>19</sup> might suggest that price would be considered more often by lower income families. However, as already suggested, students may have reported their reasons for choosing from a narrow range of options. Price may have been an important consideration at the point in the decision process when realistic options were being identified, but less important at the final decision stage. In addition, financial aid serves to equalize financial resources for college across income levels.<sup>20</sup> Furthermore, perceptions of affordability are subjective. For example, a lower income family might be willing to make enormous sacrifices to cover the price of their child’s attending a specific college and therefore consider it affordable, while another family, wealthier but with different spending priorities, considers it unaffordable.<sup>21</sup> Also, the extent to which specific prices are a concern for families at particular income levels will depend on whether they saved for college as well as on their income. A family with a modest income that began saving early might not have to be as concerned about price as a family with a higher income but no savings.

At private, not-for-profit 4-year institutions, dependent students from families with incomes less than \$70,000 were more likely than those from higher income families to cite a price-related reason (21 percent versus 14 percent). The major difference was in the percentage who cited getting more financial aid as a reason for their choice of institution. However, since students from families with incomes of \$70,000 or more are not eligible for as much financial aid as those with lower incomes, it is logical that financial aid receipt would be less of a consideration in their choice.

#### *Influence-Related Reasons*

The percentages of beginning postsecondary students at public and private, not-for-profit 4-year institutions who mentioned an influence-related reason for choosing their institution were similar (20 and 22 percent, respectively) (table 7). Seven percent of the students at public 4-year

institutions and 5 percent of students at private, not-for-profit 4-year institutions mentioned specifically that the fact that friends or spouses attended the institution was a factor, but for the most part, students in both types of institutions gave reasons in the “other” influence-related category. That is, they were influenced by individuals or things other than parents, friends, teachers, or counselors. Other individuals with influence might include, for example, siblings; coaches; employers; or alumni, faculty, or admissions staff connected with institutions. Other things students might have been influenced by include informational materials or recruiting activities sponsored by institutions. Students who attended private, not-for-profit 4-year institutions were slightly more likely than those in public 4-year institutions to report this “other” influence reason (14 percent versus 10 percent).

### **Most Important Reason**

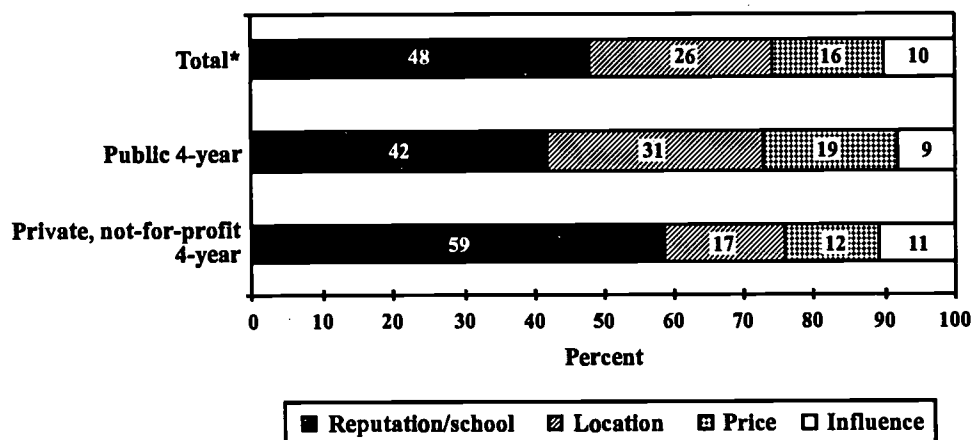

In addition to being asked to enumerate the reasons they chose the institution they attended, 1995–96 beginning postsecondary students were also asked to identify the most important reason for their choice. Students at both public and private, not-for-profit 4-year institutions were more likely to cite reputation/school-related reasons for choosing their institution than they were to cite location, price, or influence (figure 5 and table 8). However, students at public 4-year institutions were more likely than those at private, not-for-profit 4-year institutions to identify location or price as most important.

The most important reason for selecting an institution varied by student characteristics (such as family income and parents’ education) as well as by sector (public or private, not-for-profit), and many of these characteristics are interrelated. Therefore, multivariate analyses were conducted to take into account this covariation. Tables 9–11 show the percentages of students at 4-year institutions who cited reputation/school-, location-, or price-related reasons as the most important considerations in choosing their institutions and the adjusted percentages after taking into account the covariation of the variables listed in the table. The results are summarized in table 12.

Multivariate analysis confirmed that, after controlling for student characteristics, beginning postsecondary students at private, not-for-profit 4-year institutions were more likely than those at public 4-year institutions to give a reputation/school-related reason as the most important consideration in choosing where to enroll (table 9). Certain student background characteristics were associated with considering reputation to be most important as well. These included having a family income of \$70,000 or more (if dependent) compared to an income of less than \$30,000, and having parents with some postsecondary education (although not a degree) compared to a

### 3. Choosing a 4-Year Institution

high school education or less. Finally, students who enrolled full time were more likely than those who enrolled part time to identify a reputation/school-related reason as the most important.

Again controlling for student characteristics, beginning postsecondary students at public 4-year institutions were still more likely than those at private, not-for-profit 4-year institutions to give a location reason as most important in choosing their institution (table 10). Students whose parents had a high school education or less were more likely than those whose parents had more education to consider location most important. So were students from families with incomes less than \$30,000 compared with those from families with incomes of \$30,000–69,999. Students with a combined score of less than 900 on their SAT tests were more likely than those with a score of 1200 or higher to consider location most important, as were part-time students compared to full-time students, and unaided students compared to students with loans.

### 3. Choosing a 4-Year Institution

**Table 12—Characteristics associated with a greater likelihood of reporting certain types of reasons as most important in beginning postsecondary students' choice of a 4-year institution: 1995–96**

	REPUTATION	LOCATION	PRICE
<b>Student characteristics</b>			
Family income/ dependency status	Dependent, income more than \$70,000 (versus less than \$30,000)	Dependent, income \$30,000–60,000 (versus less than \$30,000)	—
Parents' education	Some postsecondary education (versus high school or less)	High school or less (versus at least some postsecondary)	—
SAT-combined verbal and math	—	Less than 900 (versus 1200 or more)	900 or more (versus less than 900)
ACT composite score	—	Score less than 19 (versus 25 or more)	—
<b>Enrollment and financial aid characteristics</b>			
Attendance intensity	Full-time (versus part-time)	Part-time (versus full-time)	—
Aid status	—	No aid (versus loan aid)	Aided, no loans (versus loans) Loans (versus no aid)
<b>Institution type</b>			
Control	Private, not-for-profit and private, for-profit (versus public)	Public (versus private, not-for- profit or private, for- profit)	Public (versus private, not-for- profit)

NOTE: These are summaries of the multivariate models presented in tables 9–11. Gender and race–ethnicity were taken into account in the analysis but were not associated with any greater likelihood of reporting these types of reasons as most important in the choice of a 4-year institution.

SOURCE: Tables 9–11.

The multivariate analysis also confirmed that after controlling for student characteristics, beginning postsecondary students at public 4-year institutions were still more likely than those at private, not-for-profit 4-year institutions to consider price the most important reason for choosing their institutions (table 11). Price as the most important reason was also associated with a

combined SAT score of 900 or more compared with a lower score. Compared with students with loan aid, aided students without loans were more likely to consider price as the most important reason for choosing their institutions, while unaided students were less likely to do so.

### **Satisfaction With Choice**

The 1995–96 beginning postsecondary students at 4-year institutions were generally very satisfied with most aspects of the colleges and universities they chose. At least 8 out of 10 students at both public and private, not-for-profit 4-year institutions were satisfied with the prestige of their institution, the campus climate regarding students of different racial or ethnic backgrounds, class size, instructors' ability to teach, their intellectual growth, and their social life (table 13). Students at public 4-year institutions were less likely to be satisfied with course availability (73 percent) than with other aspects of their institutions, and students at private, not-for-profit 4-year institutions were less likely to be satisfied with the price of attending (51 percent).

Beginning postsecondary students were also satisfied with the activities they participated in and the services they used. In both types of 4-year institutions, 9 out of 10 students who had participated in cultural activities, used counseling services, or used sports and recreational facilities were satisfied. In addition, 8 out of 10 of those who had used job placement services were satisfied (table 14).

In interpreting these data it is important to keep in mind that students were reporting their satisfaction during their first year enrolled, and their opinions could easily change over time. Nevertheless, satisfaction did vary somewhat across types of institutions and according to the most important reasons students gave for choosing their institution.

### ***Differences by Type of Institution***

While beginning postsecondary students at both at public and private, not-for-profit 4-year institutions were generally satisfied with most aspects of their institutions, there were a few differences between these students. Students at private, not-for-profit 4-year institutions were more likely than those at public 4-year institutions to be satisfied with aspects of the institution related to instruction, such as course availability (81 percent versus 73 percent), class size (97 percent versus 88 percent), and the instructors' ability to teach (93 percent versus 87 percent) (table 13).

### 3. Choosing a 4-Year Institution

\*Includes public; private, not-for-profit; and private, for-profit institutions.

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

On the other hand, beginning postsecondary students at public 4-year institutions were more likely than their counterparts at private, not-for-profit 4-year institutions to be satisfied with the campus climate regarding students of different racial or ethnic backgrounds (90 percent versus 83 percent). The most notable difference was in students' satisfaction with the price of attending. While 78 percent of students at public 4-year institutions were satisfied, 51 percent were satisfied at private, not-for-profit 4-year institutions.

#### ***Differences by Most Important Reason for Choosing the Institution***

Among beginning postsecondary students at public 4-year institutions, those who cited price as the most important reason for choosing their institution were slightly less likely than those who gave other reasons to be satisfied with the prestige of their institutions (table 13). They were also slightly less likely than those who gave location-related reasons to be satisfied with the campus climate regarding students of different racial or ethnic backgrounds.

Among students at private, not-for-profit 4-year institutions, those who gave a reputation/school-related reason as most important were more likely than those who gave a location-related reason to be satisfied with course availability (85 percent versus 77 percent). In addition, those for whom price was most important were more likely to be satisfied with the price of attending than were those for whom reputation was most important (63 percent versus 50 percent).

#### **Summary**

Beginning postsecondary students at both public and private, not-for-profit 4-year institutions attached more importance to reputation than to location, price, or the influence of others in choosing their institutions. However, students at public 4-year institutions were more likely than those at private, not-for-profit 4-year institutions to identify location or price as the most important reason for their choice.

Students at private, not-for-profit 4-year institutions were more likely than those at public 4-year institutions to mention each of the reputation-related reasons as important in selecting an institution. They were less likely than their public sector counterparts to mention a location reason, but if they did, they were more likely to mention liking the campus; however, students at public 4-year institutions were more likely to mention being close to home.

When students at public 4-year institutions mentioned a price-related reason, they most frequently stated the reason in general terms, such as "the price of attending was less." In contrast, when students at private, not-for-profit 4-year institutions mentioned a price-related reason for

choosing their institution it was more likely to be getting more financial aid than any other reason.

In general, beginning postsecondary students at 4-year institutions were satisfied with most aspects of their institutions. Students at private, not-for-profit 4-year institutions were more likely than those at public 4-year institutions to be satisfied with certain aspects of instruction, but they were less likely to be satisfied with price.

## 4. Choosing a Public 2-Year Institution

---

In 1995–96, about three-quarters of beginning postsecondary students who enrolled in public 2-year institutions (primarily community colleges and technical institutes) were nontraditional. In this respect, they were very different from beginning students at public 4-year institutions (where 30 percent were nontraditional), or at private, not-for-profit 4-year institutions (where 25 percent were nontraditional) (table 3).

Reflecting the fact that nontraditional students often have work, family, and financial obligations competing with the demands of their academic life, beginning postsecondary students at public 2-year institutions tended to have different considerations in choosing an institution than their counterparts at 4-year institutions. Students at public 2-year institutions were more likely to mention a price-related reason for choosing their institution (33 percent versus 26 percent), and were considerably less likely to mention a reputation/school-related reason (43 percent versus 63 percent) (figures 6 and 4). They were about equally likely to mention location (61 percent and 58 percent), and slightly less likely to mention influence factors (17 percent versus 21 percent).

### Factors Affecting Choice

Location was especially important to beginning postsecondary students at public 2-year institutions, with 61 percent mentioning at least one location-related reason for choosing their institution (figure 6 and table 15). Students mentioned location-related reasons more often than any other type of reason, followed by reputation/school-related reasons (43 percent) (table 16) and price-related reasons (33 percent) (table 17). Influence-related reasons were mentioned least often (17 percent) (table 18). Much of the variation in students' reasons for choosing their particular public 2-year institution was related to their reasons for enrolling (job skills, degree or certificate, transfer, or other reason) or whether the students considered themselves primarily students working to pay their educational expenses or employees taking classes. These patterns are described in this section.

**Figure 6—Percentage of beginning postsecondary students at public 2-year institutions who gave various types of reasons for choosing their institution, by reason for enrolling: 1995–96**

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

**Location-Related Reasons**

In contrast to 4-year institutions, which often attract students from a wide geographic area and sometimes compete for students in a national or even international market, public 2-year institutions tend to serve a local constituency. As already indicated, a majority (61 percent) of the 1995–96 beginning postsecondary students at public 2-year institutions mentioned at least one location-related reason for choosing their institution. Forty-six percent gave being close to home as a reason, and 10 percent mentioned being able to live at home (students could have given both reasons) (table 15).

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

While students at public 2-year and 4-year institutions were about equally likely to have location-related reasons for choosing their institution, their particular location concerns were different (tables 15 and 5). For example, students at public 2-year institutions were much more likely to mention being close to home as a reason for choosing their institution (46 percent versus 32 percent) or living at home (10 percent versus 5 percent), while students at 4-year institutions were much more likely to report that they liked the campus (16 percent versus 4 percent) or had “other” location-related reasons (12 percent versus 3 percent).

Within the beginning postsecondary student population at public 2-year institutions, the specific location reasons students cited varied according to whether they considered themselves primarily students or employees. Comparing the two groups, those who considered themselves primarily students were more likely to mention being close to home (52 percent versus 41

percent), and those who considered themselves primarily employees were more likely to mention being close to their job (7 percent versus 2 percent) (table 15).

### ***Reputation/School-Related Reasons***

Overall, 43 percent of the beginning postsecondary students attending public 2-year institutions mentioned a reputation/school-related reason for choosing their institution (table 16). Their specific considerations are difficult to know, because an “other” reputation/school-related reason was cited more often (by 25 percent) than any of the other types of reputation reasons. As indicated earlier, this “other” category might include reasons such as the institution’s program offerings in a particular area or its instructional methods. Beginning students at public 2-year institutions were much less likely than their counterparts at 4-year institutions to choose their institution on the basis of its reputation as a good school (14 percent versus 35 percent of students at 4-year institutions) (tables 16 and 4).

Although the percentage of beginning postsecondary students at public 2-year institutions mentioning the institution’s reputation for job placement as a reason for choosing their institution was relatively small overall (4 percent), it was notably more important to some kinds of students than others (table 16). Concern with the institution’s reputation for job placement was greatest among students whose reason for enrolling was to obtain job skills. Twelve percent of such students mentioned the institution’s reputation for job placement as a reason for choosing their institution, compared with no more than 3 percent of those enrolling for any other reason.

Students enrolled at public 2-year institutions who had certain characteristics (often associated with enrolling for job skills, table 2) were also particularly likely to mention the institution’s reputation for job placement: being more than 24 years old, independent, a single parent, enrolled part time, and primarily an employee (table 16).

### ***Price-Related Reasons***

One-third of the beginning postsecondary students at public 2-year institutions mentioned a price-related reason for choosing their institution (table 17). Nineteen percent expressed their reason in general terms (some form of “the price of attending was less”), and 8 percent specifically mentioned tuition. Students planning to transfer (37 percent of beginning postsecondary students at public 2-year institutions, table 2) were particularly likely to mention a price-related reason (39 percent). They were more likely to do so than students who enrolled to obtain job skills (25 percent) or for “other” reasons (27 percent). Included in this group would be any

beginning students with bachelor's degree aspirations who were starting at a public 2-year institution to reduce the total price of attaining that degree.

Also particularly likely to cite a price-related reason for choosing their institution were students with characteristics associated with traditional student status: being less than 24 years of age, being financially dependent, enrolling full time, and working but considering themselves primarily students as opposed to employees. Traditional status was also associated with a transfer goal: almost half (48 percent) of traditional students and 38 percent of minimally nontraditional students at less-than-4-year institutions were intending to transfer to a 4-year institution (table 2).

### ***Influence-Related Reasons***

Overall, 17 percent of beginning postsecondary students enrolling in a public 2-year institution chose that institution at least partly because someone influenced them or they were responding to some other type of influence (such as advertising or informational materials) (table 18). Most commonly mentioned was an “other” influence (10 percent), followed by friends attending the school (5 percent). Students attending for personal or “other” reasons were more likely to give an “other” influence reason than were students enrolling for a degree or to transfer (17 percent versus 7 percent).

## Most Important Reason

In contrast to beginning postsecondary students at 4-year institutions, who considered the institution's reputation the most important reason for choosing their institution (figure 5), students at public 2-year institutions were about as likely to cite location as reputation (35 percent and 33 percent, respectively) (figure 7). Price was cited as most important somewhat less often (24 percent). However, beginning students at public 2-year institutions were more likely than those at 4-year institutions to consider price the most important reason (24 percent versus 16 percent) (tables 19 and 8).

**Figure 7—Percentage distribution of beginning postsecondary students at public 2-year institutions according to the most important reason for choosing their institution, by reason for enrolling: 1995–96**

NOTE: Percentages may not sum to 100 due to rounding.

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

As was done for students beginning at 4-year institutions, multivariate analyses were conducted to determine which student characteristics were associated with identifying specific reasons as most important for choosing an institution. Tables 20–22 show the percentages of students at public 2-year institutions who cited reputation/school-, location-, or price-related reasons as the most important reasons for choosing their institutions and the adjusted percentages after taking into account the covariation of the variables in the table.

Students who considered themselves to be primarily employees were more likely than those who considered themselves to be primarily students to cite reputation as the most important reason for choosing their institution, as were older students (24 years or older) compared to younger students (18 years or younger) (table 20). In addition, black, non-Hispanic and Asian/Pacific

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

Islander students were more likely than white, non-Hispanic students to consider reputation most important.

Younger students (18 years or younger) were more likely than older students (24 years or older) to cite location as the most important reason for selecting their institution, as were independent students compared to dependent students from families with incomes of less than \$30,000 (table 21). Finally, students who considered themselves to be primarily students were more likely than those who considered themselves to be primarily employees to cite price as their most important reason (table 22).

### Satisfaction With Choice

As was the case with students enrolled in 4-year institutions, beginning postsecondary students enrolled in public 2-year institutions were generally satisfied with their institutions. At least

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

8 out of 10 students were satisfied with each aspect of their institution about which they were questioned (table 23). There was little notable variation by student characteristics.

Reflecting the typically lower tuition at public 2-year institutions, students were more likely to be satisfied with the price of attending their institution (89 percent) than were students at 4-year institutions (68 percent, table 13). Students at public 2-year institutions without financial aid were less likely than those with aid to be satisfied with the price of attending: 85 percent of unaided students were satisfied, compared with 94 percent of aided students without loans and 93 percent of aided students with loans.

Asian/Pacific Islander students at public 2-year institutions appeared to be less satisfied than those from other racial-ethnic backgrounds with the campus climate regarding students of different racial or ethnic backgrounds (83 percent versus more than 90 percent for other groups). However, these differences were not statistically significant.

Like their counterparts at 4-year institutions, beginning postsecondary students at public 2-year institutions were generally satisfied with the activities in which they had participated and the services they had used. Nine out of 10 were satisfied with cultural activities, counseling services, and sports and recreational activities (table 24). Students who considered themselves primarily employees appeared to be less satisfied with job placement services (72 percent) than those who considered themselves primarily students (88 percent), but the difference was not statistically significant. As beginning postsecondary students, relatively few would have used this service.

### Summary

Beginning postsecondary students at public 2-year institutions mentioned location reasons for choosing which institution to attend more often than reputation, price, or influence factors. Although beginning postsecondary students at public 2-year institutions were about as likely as those at 4-year institutions to mention location-related reasons, their specific reasons were different, with public 2-year students being more likely than 4-year students to choose being close to home, and less likely to use liking the campus as a criterion for their choice.

Reputation was the next most mentioned consideration, but exactly what students had in mind is difficult to determine, because most of their reasons were in the “other” reputation/school-related category. The institution’s program offerings or instructional practices are possible reasons. Beginning postsecondary students at public 2-year institutions were less likely than those at 4-year institutions to base their decision on the overall reputation of the institution as a good school. Price was mentioned by public 2-year students less often than location- or

reputation/school-related reasons. However, students who planned to transfer were more likely than those enrolling for job skills or “other” reasons to consider the price of attending in making their choice.

The most important reason for choosing their institution varied according to whether students considered themselves primarily students or employees. The former were more likely than the latter to have cited price as the most important reason for choosing their institution. In contrast, students who considered themselves primarily employees were more likely than those who

Other	100.0	92.6	81.3	96.6

—Sample size too small for a reliable estimate.

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995–96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

considered themselves primarily students to cite a reputation/school-related reason as the most important.

As was the case with 4-year students, public 2-year students were generally satisfied with most aspects of their institutions. They were more likely to be satisfied with the price of attending than were 4-year students.

## 5. Conclusion

---

Of all beginning postsecondary students in 1995–96, 25 percent enrolled at public 4-year institutions, 15 percent at private, not-for-profit 4-year institutions, and 46 percent at public 2-year institutions. The remaining 14 percent enrolled at public less-than-2-year institutions; private, not-for-profit less-than-4-year institutions; and private, for-profit institutions.

Enrollment patterns varied with student characteristics. Beginning postsecondary students who were older, single parents, nontraditional, independent, and who had parents who had not attended college were less likely to enroll in 4-year institutions. In addition, the majority of students who worked and considered themselves primarily employees who enrolled in school as opposed to students working to meet expenses enrolled in public 2-year institutions. About two-thirds of traditional students enrolled in public or private, not-for-profit 4-year institutions. Among dependent beginning postsecondary students, those from families with higher incomes (\$70,000 or more) were more likely than their counterparts from lower income families to enroll in private, not-for-profit 4-year institutions.

Beginning postsecondary students at both public and private, not-for-profit 4-year institutions were more likely to cite reputation as the most important reason for attending than any other reason. However, students at public institutions were more likely than those at private, not-for-profit institutions to give location or price as the most important reason, and less likely to cite reputation. In contrast to 4-year students, beginning students at public 2-year institutions were about as likely to cite location as they were to cite reputation as the most important reason.

Most beginning postsecondary students reported being satisfied with the various aspects of their first-year experience about which they were asked, but they varied somewhat by type of institution. For example, beginning students at private, not-for-profit 4-year institutions were more likely to be satisfied with course availability, class size, and instructors' ability to teach than were their counterparts at public 4-year institutions. On the other hand, students at public 4-year institutions were more likely than those at private, not-for-profit 4-year institutions to be satisfied with the price of attending. Beginning postsecondary students at public 2-year institutions were the most likely to be satisfied with this aspect of their first-year experience.

## Appendix A—Glossary

---

This glossary describes the variables used in this report. The variables were taken directly from the NPSAS:96 Undergraduate Data Analysis System (DAS), an NCES software application that generates tables from the NPSAS:96 data. A description of the DAS software can be found in appendix B. The labels in capital letters correspond to the names of the variables in the DAS.

In the index below, the variables in each section are listed in the order they appear in the report; the glossary is in alphabetical order by variable name (displayed in the right-hand column). Some items were reported only by the student during the Computer-Assisted Telephone Interview (CATI). Variables using information only from this source are identified as such.

### GLOSSARY INDEX

#### STUDENT CHARACTERISTICS

Gender ..... GENDER  
 Age ..... AGE  
 Race—ethnicity ..... RACE  
 Single parent status ..... SINGLPAR  
 Traditional/nontraditional status ..... RISKINDX  
 Dependency status ..... DEPEND2  
 Family income of dependent students ..... INCOME  
 Parents' education ..... PAREduc  
 SAT score—combined verbal and math . SATTOTAL  
 ACT composite score ..... ACT

#### ENROLLMENT, FINANCIAL AID, AND WORK

Degree program ..... DEGLAST  
 Attendance intensity ..... ATTNST1  
 Aid status ..... LOANAID  
 Primary role if working while enrolled ..... SEROLE  
 Institution type, level, or control ..... SECTOR  
 Reason for enrolling ..... SBENRPUR

#### LOCATION-RELATED REASONS

Any location-related reason ..... LOCREL  
 Close to home ..... SCHCLOSE  
 Could live at home ..... LIVEHOME  
 Liked the campus ..... SURROUND  
 Close to job ..... SCHLNWRK  
 Other location reason ..... LOCATION

#### REPUTATION/SCHOOL-RELATED REASONS

Any reputation-related reason ..... REPREL  
 School has good reputation ..... REPUTATN  
 Job placement ..... PLACEMNT  
 Facilities/equipment ..... FACILITY  
 Faculty reputation ..... PROFESOR  
 Other reputation reason ..... OTHRSN

#### PRICE-RELATED REASONS

Any price-related reason ..... COSTREL  
 Price of attendance was less ..... COSTLIVE  
 Tuition was low ..... TUITLESS  
 Got more financial aid ..... MOREAID  
 Shorter time to finish ..... SHORTER  
 Other price reason ..... OTHCOST

#### INFLUENCE-RELATED REASONS

Any influence-related reason ..... INFLREL  
 Friends or spouse attended ..... FRIENDAT  
 Parent(s) attended ..... PARNATT  
 Parent(s) wanted student to attend ..... PARENT  
 Teacher or counselor recommended ..... TEACHER  
 Other influence factors ..... INFLUNCE  
 Most important reason for attending ..... SBRSNMST

**STUDENT SATISFACTION**

Prestige of institution .....SIPRSTG  
Campus climate.....SICLIMT  
Price of attending.....SICOST  
Course availability.....SICOURS  
Class size .....SICLSIZE  
Instructors' ability to teach .....SITEACH

Intellectual growth ..... SIINTELL  
Social life.....SISOCLIF  
Cultural activities.....CULTUR  
Job placement services.....JOBPLC  
Counseling services ..... COUNSEL  
Sports and recreational activities .....SPORTS

**ACT composite score****ACT**

Indicates the student's composite ACT score, which was constructed from the institution-reported ACT score. If the institution report was not available, the student-reported score was used. For this analysis, the scores were categorized as follows:

Missing  
Less than 19  
19–24  
25 or more

**Age****AGE**

Indicates the student's age as of 12/31/95. Calculated from date of birth (BDATE).

18 years or younger  
19–23 years  
24 years or older

**Attendance intensity****ATTNST1**

Indicates the student's attendance intensity and persistence at the NPSAS institution during 1995–96. Intensity refers to the student's full- or part-time attendance while enrolled. Persistence refers to the number of months a student was enrolled during the year at the NPSAS institution. Because this information is based only on the report of the NPSAS institution, it does not accurately represent the experience of students who transferred during 1995–96 (approximately 5 percent to 10 percent) and is not strictly comparable to prior NPSAS surveys. Students were considered to have enrolled for a full year at the NPSAS institution if they were enrolled 8 or more months during the NPSAS year. Months did not have to be contiguous, and students did not have to be enrolled for a full month in order to be considered enrolled for that month. In prior NPSAS surveys, full year has been defined as 9 or more months. This proved to be unrealistic in NPSAS:96 because at a number of institutions, including several major universities, there were no undergraduates who attended more than 8 months full time, and these students were paying the normal tuition charged for a complete academic year. Comparability with prior NPSAS surveys may be achieved by using the variable ATTNST3, which utilizes the 9-month definition of full year.

Full-time	Student attended full time all months enrolled.
Part-time	Student attended part time all or part of the year.

**Price of attendance was less****COSTLIVE**

One of a series of variables indicating whether the student reported various reasons for choosing to attend the NPSAS institution. Student response to the question "Why did you decide to attend (fill in school)?" Asked on the student CATI. The answers were categorized as follows:

Location-related reasons:

SCHCLOSE	Close to home
LIVEHOME	Could live at home
SURROUND	Liked the campus
SCHLNWRK	Close to job
LOCATION	Other location-related reason

Reputation/school-related reasons:

REPUTATN	School has a good reputation
PLACEMNT	Job placement
FACILITY	Facilities/equipment
PROFESOR	Faculty reputation
OTHRSN	Other reputation/school-related reason

Price-related reasons:

COSTLIVE	Price of attendance was less
TUITLESS	Tuition was low
MOREAID	Got more financial aid
SHORTER	Shorter time to finish
OTHCOST	Other price-related reason

Influence-related reasons:

FRIENDAT	Friends or spouse attended the school
PARNATT	Parent(s) attended the school
PARENT	Parent(s) wanted student to attend
TEACHER	Teacher or guidance counselor recommended
INFLUNCE	Other influence factors

NOTE: Related responses are aggregated in COSTREL, LOCREL, REPREL, and INFLREL. The most important reason is given in SBRSNMST.

***Any price-related reason***

**COSTREL**

Indicates whether the student cited any price-related reasons for attending the NPSAS institution (Yes/No). Price-related reasons included shorter time to finish (SHORTER), price of attendance was less (COSTLIVE), got more financial aid (MOREAID), tuition was low (TUITLESS), and other price-related reason (OTHCOST). For a complete description, see COSTLIVE. Asked on the student CATI.

***Counseling services***

**COUNSEL**

For students who used counseling services at the NPSAS institution, variable indicates whether student was satisfied with these services (Yes/No). One of a series of variables examining students' use of and satisfaction with services and activities at the NPSAS institution. Student response to the question "During 1995–96, how often did you use the counseling services? Were you satisfied with the services?" Asked on the student CATI.

***Cultural activities***

**CULTUR**

For students who participated in cultural activities at the NPSAS institution, variable indicates whether the student was satisfied with these services (Yes/No). One of a series of variables examining students' use of and satisfaction with services and activities at the NPSAS institution. Student response to the question "During 1995–96, how often did you participate in activities including music, art, and drama? Were you satisfied with the activities?" Asked on the student CATI.

***Degree program*****DEGLAST**

Degree program in which student was enrolled in the last term, as reported by the institution.

Certificate or award	Student pursuing a certificate or formal award other than an associate's or bachelor's degree
Associate's degree	Student pursuing an associate's degree
Bachelor's degree	Student pursuing a Bachelor of Arts or Bachelor of Science degree
Undergraduate, nondegree program	Student is not in any of the above degree programs

***Dependency status*****DEPEND2**

Student dependency status for financial aid. Students were considered independent if they met one of the following criteria:

1. Student was 24 years or older as of 12/31/95;
2. Student was a veteran of the U.S. Armed Forces;
3. Student was enrolled in a graduate or professional program (beyond a bachelor's degree) in 1995–96;
4. Student was married;
5. Student was an orphan or ward of the court; or
6. Student had legal dependents other than spouse. (Students were considered to have dependents if they had any dependents other than a spouse.)

Dependent  
 Independent, no dependents  
 Independent, with dependents

NOTE: In some tables (multivariate analyses) categories are collapsed and combined with income categories.

***Facilities/equipment*****FACILITY**

Indicates whether a student reported attending the NPSAS institution because of its facilities and equipment (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend his or her institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Friends or spouse attended*****FRIENDAT**

Constructed from student-reported reason for attending NPSAS institution: friends or spouse attended the school. One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution (Yes/No). For a complete description, see COSTLIVE. Asked on the student CATI.

***Gender*****GENDER**

Male  
 Female

***Family income of dependent students***

**INCOME**

The 1994 total income of dependent students' parents or guardians.

Less than \$30,000

\$30,000–69,999

\$70,000 or more

***Any influence-related reason***

**INFLREL**

Indicates whether the student cited any influence-related reasons for attending the NPSAS institution (Yes/No). Influence-related reasons included parent went there (PARNATT), friends/spouse went there (FRIENDAT), parent(s) wanted student to go (PARENT), teacher or counselor recommended (TEACHER), and other influence factors (INFLUNCE). For a complete description, see COSTLIVE. Asked on the student CATI.

***Other influence factors***

**INFLUNCE**

Indicates whether the student reported attending the NPSAS institution because of an "other" influence factor (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Job placement services***

**JOBPLC**

For students who used job placement services at the NPSAS institution, variable indicates whether the student was satisfied with these services (Yes/No). One of a series of variables examining students use of and satisfaction with services and activities at the NPSAS institution. Student response to the question "During 1995–96, how often did you use the job placement services? Were you satisfied with the services?" Asked on the student CATI.

***Could live at home***

**LIVEHOME**

Indicates whether the student reported attending the NPSAS institution so he/she could live at home (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Aid status***

**LOANAID**

Indicates the student's aid status with respect to loans (including PLUS loans).

Aided, no loans

Student received student aid, such as grants or work-study, but no loans.

Loan aid

Student received loans only or loans in combination with other types of aid.

No aid

Student received no financial aid.

***Other location reason*****LOCATION**

Indicates whether the student reported attending the NPSAS institution for an “other” location reason (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Any location related-reason*****LOCREL**

Indicates whether the student cited location-related reasons for attending the NPSAS institution (Yes/No). Location-related reasons included close to job (SCHLNWRK), could live at home (LIVEHOME), close to home (SCHCLOSE), liked the campus (SURROUND), and other location-related reasons (LOCATION). For a complete description, see COSTLIVE. Asked on the student CATI.

***Got more financial aid*****MOREAID**

Indicates whether the student reported attending the NPSAS institution because more financial aid was available (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Other price reason*****OTHCOST**

Indicates whether the student reported attending the NPSAS institution for an “other” price-related reason (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Other reputation reason*****OTHRSN**

Indicates whether the student reported attending the NPSAS institution for an “other” reputation- or school-related reason (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Parents’ education*****PAREduc**

The highest level of education completed by the student’s parent (mother or father, whoever had the highest level).

- High school diploma or equivalent or less
- Some postsecondary education (less than a bachelor’s degree)
- Bachelor’s degree
- Advanced degree

***Parent(s) wanted student to attend*****PARENT**

Indicates whether the student reported attending the NPSAS institution because his/her parent(s) wanted the student to attend (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Parent(s) attended***

**PARNATT**

Indicates whether the student reported attending the NPSAS institution because his/her parent(s) attended the school (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Job placement***

**PLACEMNT**

Indicates whether the student reported attending the NPSAS institution for job placement reasons (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Faculty reputation***

**PROFESOR**

Indicates whether the student reported attending the NPSAS institution because of the faculty's reputation (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Race—ethnicity***

**RACE**

Race—ethnicity as reported by the student or, if not available from the student, by the institution.

White, non-Hispanic

A person having origins in any of the original peoples of Europe, North Africa, or the Middle East (except those of Hispanic origin).

Black, non-Hispanic

A person having origins in any of the black racial groups of Africa, who is not of Hispanic origin.

Hispanic

A person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin, regardless of race.

Asian/Pacific Islander

A person having origins in any of the peoples of the Far East, Southeast Asia, the Indian subcontinent, or Pacific Islands. This includes people from China, Japan, Korea, the Philippine Islands, Samoa, India, and Vietnam.

American Indian/Alaskan Native

A person having origins in any of the original peoples of North America and who maintains cultural identification through tribal affiliation or community recognition.

***Any reputation-related reason***

**REPREL**

Indicates whether the student cited any reputation-related reasons for attending the NPSAS institution (Yes/No). Reputation/school-related reasons included school has a good reputation (REPUTATN), job placement (PLACEMNT), facilities/equipment (FACILITY), faculty reputation (PROFESOR), and other reputation-related reason (OTHRSN). For a complete description, see COSTLIVE. Asked on the student CATI.

***School has good reputation*****REPUTATN**

Indicates whether the student reported attending the NPSAS institution because the school had a good reputation (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Traditional/nontraditional status*****RISKINDX**

Based on an index of risk from 0–7 related to 7 characteristics known to adversely affect persistence and attainment. Characteristics include delayed enrollment, no high school diploma (including GED recipients), part-time enrollment, financial independence, having dependents other than spouse, single parent status, and working full time while enrolled.

Traditional	Student had no risk factors
Minimally nontraditional	Student had 1 risk factor
Moderately nontraditional	Student had 2 or 3 risk factors
Highly nontraditional	Student had 4 or more risk factors.

***SAT score—combined verbal and math*****SATTOTAL**

Equal to the sum of the scores on the SAT math section and the SAT verbal section. Constructed from institution-reported SAT scores. If the institution report was not available, student-reported scores were used. Composite score was set to missing if one or more component variables were missing, or if the combined score was less than 400.

Missing
Less than 900
900–1199
1200 or more

***Reason for enrolling*****SBENRPUR**

Indicates the student's primary reason for enrolling in a 2-year or less-than-2-year institution. The responses were categorized as follows:

Obtain job skills	Student enrolled to obtain job skills.
Degree or certificate	Student enrolled to earn a degree or certificate.
Transfer to 4-year institution	Student enrolled intending to transfer to a 4-year institution.
Other	Student enrolled intending to transfer to a 2-year institution or to another institution (type yet to be decided), or for personal enrichment.

**Most important reason for attending**

**SBRSNMST**

Student response to the question “Which of the reasons you mentioned was most important to your selection of [NPSAS school]?” The responses were categorized as follows:

- Shorter time to finish
- Prices were less
- Got more financial aid
- Tuition was low
- Other price reason
- Parents went there
- Friends/spouse went there
- Parents wanted student to go there
- Teacher/guidance counselor recommended
- Other influence factors
- Close to job
- Could live at home
- Close to home
- Other location reason
- Liked the campus
- School has good reputation
- Job placement
- Facilities/equipment
- Faculty reputation
- Other reputation/school reason

- Location-related reasons: Composed of close to home; close to job; could live at home; liked the campus; other location-related reason.
- Reputation/school-related reasons: Composed of facilities/equipment; school had a good reputation; job placement; faculty reputation; other reputation/school-related reason.
- Price-related reasons: Composed of tuition was low; prices were less; got more financial aid; shorter time to finish; other price-related reason.
- Influence-related reasons: Composed of friends/spouse attended the school; parent(s) wanted student to attend; parent(s) attended the school; teacher/guidance counselor recommended; other influence-related reason.

**Close to home**

**SCHCLOSE**

Indicates whether the student reported attending the NPSAS institution because it was close to the student’s home (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

**Close to job**

**SCHLNWRK**

Indicates whether the student reported attending the NPSAS institution because it was close to the student's job (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

**Institution type, level, or control**

**SECTOR**

Indicates the level and control of the NPSAS institution where the student was surveyed. Constructed by combining the level of the NPSAS institution and the control of that institution. In some tables only level or control are shown and in others they are combined.

**Control**

Public	A postsecondary institution operated by publicly elected or appointed officials where the program and activities are under the control of these officials and that is supported primarily by public funds.
Private, not-for-profit	A postsecondary institution that is controlled by an independent governing board and incorporated under Section 501(c)(3) of the Internal Revenue Code.
Private, for-profit	A postsecondary institution that is privately owned and operated as a profit-making enterprise. These institutions include career colleges and proprietary institutions.

**Level**

4-year	An institution that offers 4-year baccalaureate degrees. These institutions may or may not also offer master's, doctoral, or first-professional degrees in one or more programs as the highest degree awarded.
2-year	An institution whose program of study results in an award or degree below the baccalaureate level, and is at least 2 years but less than 4 years in duration. These institutions include many community and junior colleges.
Less-than-2-year	An institution whose normal program of study is less than 2 years in duration.

**Primary role if working while enrolled**

**SEROLE**

Student response to the question "While you were working, would you say that you were primarily a student working to meet expenses or an employee who's decided to enroll in school?" Asked on student CATI (Yes/No).

Student working to meet expenses  
Employee who has decided to enroll

***Shorter time to finish***

**SHORTER**

Indicates whether the student reported attending the NPSAS institution to finish in a shorter time (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Campus climate***

**SICLMT**

Indicates if the student was satisfied with the campus climate (Yes/No). One of a series of variables indicating student-reported satisfaction with selected characteristics of his/her institution. Student response to the question "Were you satisfied with the campus climate?" Asked on the student CATI.

***Class size***

**SICLSIZE**

Indicates if the student was satisfied with class size (Yes/No). One of a series of variables indicating student-reported satisfaction with selected characteristics of his/her institution. Student response to the question "Were you satisfied with class size?" Asked on the student CATI.

***Price of attending***

**SICOST**

Indicates if the student was satisfied with the price of attending his or her institution (Yes/No). One of a series of variables indicating student-reported satisfaction with selected characteristics of his/her institution. Student response to the question "Were you satisfied with the price of attendance?" Asked on the student CATI.

***Course availability***

**SICOURS**

Indicates if the student was satisfied with course availability (Yes/No). One of a series of variables indicating student-reported satisfaction with selected characteristics of his/her institution. Student response to the question "Were you satisfied with course availability?" Asked on the student CATI.

***Intellectual growth***

**SIINTELL**

Indicates if student was satisfied with his or her intellectual growth (Yes/No). One of a series of variables indicating student-reported satisfaction with selected characteristics of his/her institution. Student response to the question "Were you satisfied with your intellectual growth?" Asked on the student CATI.

***Single parent status***

**SINGLPAR**

Identifies independent students who were single parents. Students were considered to be single parents if they had dependents and were not married. NOTE: The number of dependents does not distinguish between dependent children and other dependents such as parents or relatives. Approximately 3 percent of unmarried individuals with dependents did not have children.

Not a single parent  
Single parent

***Prestige of institution*****SIPRSTG**

Indicates if student was satisfied with the prestige of the institution (Yes/No). One of a series of variables indicating student-reported satisfaction with selected characteristics of his/her institution. Student response to the question “Were you satisfied with the prestige of the institution?” Asked on the student CATI.

***Social life*****SISOCLIF**

Indicates if student was satisfied with his or her social life (Yes/No). One of a series of variables indicating student-reported satisfaction with selected characteristics of his/her institution. Student response to the question “Were you satisfied with your social life?” Asked on the student CATI.

***Instructors’ ability to teach*****SITEACH**

Indicates if student was satisfied with the instructors’ ability to teach (Yes/No). One of a series of variables indicating student-reported satisfaction with selected characteristics of his/her institution. Student response to the question “Were you satisfied with the instructors’ ability to teach?” Asked on the student CATI.

***Sports and recreational activities*****SPORTS**

For students who participated in sports and recreational activities at the NPSAS institution, variable indicates whether the student was satisfied with these services (Yes/No). One of a series of variables examining students’ use of and satisfaction with services and activities at the NPSAS institution. Student response to the question “During 1995–96, how often did you participate in sports and recreational activities at the NPSAS institution? Were you satisfied with the facilities?” Asked on the student CATI.

***Liked the campus*****SURROUND**

Indicates whether the student reported attending the NPSAS institution because he/she liked the campus (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Teacher or counselor recommended*****TEACHER**

Indicates whether the student reported attending the NPSAS institution because of a teacher or guidance counselor recommendation (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

***Tuition was low*****TUITLESS**

Indicates whether the student reported attending the NPSAS institution because tuition was low (Yes/No). One of a series of variables indicating student-reported reasons for choosing to attend the NPSAS institution. For a complete description, see COSTLIVE. Asked on the student CATI.

## Appendix B—Technical Notes and Methodology

---

### The 1995–96 National Postsecondary Student Aid Study (NPSAS:96)

The 1995–96 National Postsecondary Student Aid Study (NPSAS:96) is a comprehensive nationwide study representing approximately 16.7 million undergraduates. The study is conducted by the Department of Education’s National Center for Education Statistics (NCES) to determine how students and their families pay for postsecondary education. It also describes the demographic and other characteristics of students enrolled. The study is based on a nationally representative sample of approximately 41,400 undergraduates (including 27,000 student interviews) enrolled in more than 830 postsecondary education institutions. Students attending all types and levels of institutions are represented in the sample, including public and private institutions and less-than-2-year institutions, 2-year institutions, and 4-year colleges and universities. The weighted effective response rate for the telephone interviews was 76.2 percent. The study is designed to address the policy questions resulting from the rapid growth of financial aid programs, and the succession of changes in financial aid program policies since 1986. The first NPSAS study was conducted in 1986–87, then again in 1989–90 and 1992–93.<sup>22</sup>

### Accuracy of Estimates

The statistics in this report are estimates derived from a sample. Two broad categories of error occur in such estimates: sampling and nonsampling errors. Sampling errors occur because observations are made only on samples of students, not on entire populations. Nonsampling errors occur not only in sample surveys but also in complete censuses of entire populations. Nonsampling errors can be attributed to a number of sources: inability to obtain complete information about all students in all institutions in the sample (some students or institutions refused to participate, or students participated but answered only certain items); ambiguous definitions; differences in interpreting questions; inability or unwillingness to give correct information; mistakes in recording or coding data; and other errors of collecting, processing, sampling, and imputing missing data.

---

<sup>22</sup>For more information on the NPSAS survey, consult U.S. Department of Education, National Center for Education Statistics, *Methodology Report for the 1995–96 National Postsecondary Student Aid Study* (NCES 98-073) (Washington, D.C.: 1998).

## Data Analysis System

The estimates presented in this report were produced using the NPSAS:96 Data Analysis System (DAS). The DAS software makes it possible for users to specify and generate their own tables from NPSAS:96 data. With the DAS, users can replicate or expand upon the tables presented in this report. In addition to the table estimates, the DAS calculates proper standard errors<sup>23</sup> and weighted sample sizes for these estimates. For example, table B1 contains standard errors that correspond to table 1 in the text, and was generated by the NPSAS:96 DAS. If the number of valid cases is too small to produce a reliable estimate (fewer than 30 cases), the DAS prints the message “low-N” instead of the estimate.

In addition to tables, the DAS will also produce a correlation matrix of selected variables to be used for linear regression models. Included in the output with the correlation matrix are the design effects (DEFTs) for each variable in the matrix. Since statistical procedures generally compute regression coefficients based on simple random sample assumptions, the standard errors must be adjusted with the design effects to take into account the NPSAS:96 stratified sampling method. (See discussion under “Statistical Procedures” below for the adjustment procedure.)

The DAS can be accessed electronically at [www.PEDAR-DAS.org](http://www.PEDAR-DAS.org). For more information about the NPSAS:96 Data Analysis Systems, contact:

Aurora D’Amico  
NCES Postsecondary and Educational Outcomes Longitudinal Studies

Internet address: [Adamico@inet.ed.gov](mailto:Adamico@inet.ed.gov)

---

<sup>23</sup>The NPSAS sample is not a simple random sample, and therefore, simple random sample techniques for estimating sampling errors cannot be applied to these data. The DAS takes into account the complexity of the sampling procedures and calculates standard errors appropriate for such samples. The method for computing sampling errors used by the DAS involves approximating the estimator by the linear terms of a Taylor series expansion. The procedure is typically referred to as the Taylor series method.

## Statistical Procedures

Two types of statistical procedures were used in this report: testing differences between means, and adjustment of means after controlling for covariation among a group of variables. Each procedure is described below.

### *Differences Between Means*

The descriptive comparisons were tested in this report using Student's  $t$  statistic. Differences between estimates are tested against the probability of a Type I error, or significance level. The significance levels were determined by calculating the Student's  $t$  values for the differences between each pair of means or proportions and comparing these with published tables of significance levels for two-tailed hypothesis testing.

Student's  $t$  values may be computed to test the difference between estimates with the following formula:

$$t = \frac{E_1 - E_2}{\sqrt{se_1^2 + se_2^2}} \quad (1)$$

where  $E_1$  and  $E_2$  are the estimates to be compared and  $se_1$  and  $se_2$  are their corresponding standard errors. This formula is valid only for independent estimates. When estimates are not independent a covariance term must be added to the formula. If the comparison is between the mean of a subgroup and the mean of the total group, the following formula is used:

$$\frac{E_{sub} - E_{tot}}{\sqrt{se_{sub}^2 + se_{tot}^2 - 2p se_{sub}^2}} \quad (2)$$

where  $p$  is the proportion of the total group contained in the subgroup.<sup>24</sup>

When comparing two percentages from a distribution that adds to 100 percent, the following formula is used:

$$\frac{E_1 - E_2}{\sqrt{se_1^2 + se_2^2 - 2(r)se_1 se_2}} \quad (3)$$

<sup>24</sup>U.S. Department of Education, National Center for Education Statistics, *A Note from the Chief Statistician*, No. 2, 1993.

where  $r$  is the correlation between the two estimates.<sup>25</sup> The estimates, standard errors, and correlations can all be obtained from the DAS.

There are hazards in reporting statistical tests for each comparison. First, comparisons based on large  $t$  statistics may appear to merit special attention. This can be misleading, since the magnitude of the  $t$  statistic is related not only to the observed differences in means or percentages but also to the number of students in the specific categories used for comparison. Hence, a small difference compared across a large number of students would produce a large  $t$  statistic.

A second hazard in reporting statistical tests for each comparison occurs when making multiple comparisons among categories of an independent variable. For example, when making paired comparisons among different levels of income, the probability of a Type I error for these comparisons taken as a group is larger than the probability for a single comparison. When more than one difference between groups of related characteristics or “families” are tested for statistical significance, one must apply a standard that assures a level of significance for all of those comparisons taken together.

Comparisons were made in this report only when  $p \leq .05/k$  for a particular pairwise comparison, where that comparison was one of  $k$  tests within a family. This guarantees both that the individual comparison would have  $p \leq .05$  and that for  $k$  comparisons within a family of possible comparisons, the significance level for all the comparisons will sum to  $p \leq .05$ .<sup>26</sup>

For example, in a comparison of the percentages of males and females who enrolled in postsecondary education, only one comparison is possible (males versus females). In this family,  $k=1$ , and the comparison can be evaluated without adjusting the significance level. When students are divided into five racial–ethnic groups and all possible comparisons are made, then  $k=10$  and the significance level of each test must be  $p \leq .05/10$ , or  $p \leq .005$ . The formula for calculating family size ( $k$ ) is as follows:

$$k = \frac{j(j-1)}{2} \quad (4)$$

where  $j$  is the number of categories for the variable being tested. In the case of race–ethnicity, there are five racial–ethnic groups (American Indian/Alaskan Native; Asian/Pacific Islander;

---

<sup>25</sup>Ibid.

<sup>26</sup>The standard that  $p \leq .05/k$  for each comparison is more stringent than the criterion that the significance level of the comparisons should sum to  $p \leq .05$ . For tables showing the  $t$  statistic required to ensure that  $p \leq .05/k$  for a particular family size and degrees of freedom, see Olive Jean Dunn, “Multiple Comparisons Among Means,” *Journal of the American Statistical Association* 56 (1961): 52–64.

black, non-Hispanic; Hispanic; and white, non-Hispanic), so when substituting 5 for  $j$  in equation 4,

$$k = \frac{5(5-1)}{2} = 10$$

*Adjustment of Means to Control for Background Variation*

Tabular results are limited by sample size when attempting to control for additional factors that may account for the variation observed between two variables. For example, when examining the percentages of those who completed a degree or were still enrolled in postsecondary education 5 years after their initial enrollment, it is impossible to know to what extent the observed variation is due to socioeconomic status (SES) differences and to what extent it is due to differences in other factors related to SES, such as type of institution attended, intensity of enrollment, and so on. However, if a nested table were produced showing SES within type of institution attended within enrollment intensity, the cell sizes would be too small to identify the patterns. When the sample size becomes too small to support controls for another level of variation, one must use other methods to take such variation into account.

To overcome this difficulty, multiple linear regression was used to obtain means that were adjusted for covariation among a list of control variables.<sup>27</sup> Adjusted means for subgroups were obtained by regressing the dependent variable on a set of descriptive variables such as gender, race-ethnicity, SES, and so on. Substituting ones or zeros for the subgroup characteristic(s) of interest and the mean proportions for the other variables results in an estimate of the adjusted proportion for the specified subgroup, holding all other variables constant. For example, consider a hypothetical case in which two variables, age and gender, are used to describe an outcome,  $Y$  (such as attaining a degree). The variables age and gender are recoded into a dummy variable representing age,  $A$ , and a dummy variable representing gender,  $G$ :

Age	$A$
24 years or older	1
Less than 24 years old	0
and	
Gender	$G$
Female	1
Male	0

<sup>27</sup>For more information about weighted least squares regression, see Michael S. Lewis-Beck, *Applied Regression: An Introduction*, Vol. 22 (Beverly Hills, CA: Sage Publications, Inc., 1980); William D. Berry and Stanley Feldman, *Multiple Regression in Practice*, Vol. 50 (Beverly Hills, CA: Sage Publications, Inc., 1987).

The following regression equation is then estimated from the correlation matrix output from the DAS:

$$\hat{Y} = a + b_1A + b_2G \quad (5)$$

To estimate the adjusted mean for any subgroup evaluated at the mean of all other variables, one substitutes the appropriate values for that subgroup's dummy variables (1 or 0) and the mean for the dummy variable(s) representing all other subgroups. For example, suppose  $Y$  represents attainment, and is being described by age ( $A$ ) and gender ( $G$ ), coded as shown above, with means as follows:

Variable	Mean
$A$	0.355
$G$	0.521

Next, suppose the regression equation results in:

$$\hat{Y} = 0.15 + 0.17A + 0.01G \quad (6)$$

To estimate the adjusted value for older students, one substitutes the appropriate parameter estimates and variable values into equation 6.

Variable	Parameter	Value
$a$	0.15	—
$A$	0.17	1.000
$G$	0.01	0.521

This results in:

$$\hat{Y} = 0.15 + (0.17)(1) + (0.01)(0.521) = 0.325$$

In this case, the adjusted mean for older students is 0.325 and represents the expected outcome for older students who resemble the average student across the other variables (in this example, gender). In other words, the adjusted percentage who attained after controlling for age and gender is 32.5 percent ( $0.325 \times 100$  for conversion to a percentage).

It is relatively straightforward to produce a multivariate model using the DAS, since one of the DAS output options is a correlation matrix, computed using pairwise missing values.<sup>28</sup> This matrix can be used by most statistical software packages as the input data for least squares regression. That is the approach used for this report, with an additional adjustment to incorporate the complex sample design into the statistical significance tests of the parameter estimates (described below). For tabular presentation, parameter estimates and standard errors were multiplied by 100 to match the scale used for reporting unadjusted and adjusted percentages.

Most statistical software packages assume simple random sampling when computing standard errors of parameter estimates. Because of the complex sampling design used for the NPSAS survey, this assumption is incorrect. A better approximation of their standard errors is to multiply each standard error by the design effect associated with the dependent variable (DEFT),<sup>29</sup> where the DEFT is the ratio of the true standard error to the standard error computed under the assumption of simple random sampling. It is calculated by the DAS and produced with the correlation matrix.

---

<sup>28</sup>Although the DAS simplifies the process of making regression models, it also limits the range of models. Analysts who wish to use an approach other than pairwise treatment of missing values or to estimate probit/logit models (which are the most appropriate for models with categorical dependent variables) can apply for a restricted data license from NCES. See John H. Aldrich and Forrest D. Nelson, *Linear Probability, Logit and Probit Models* (Quantitative Applications in Social Sciences, Vol. 45) (Beverly Hills, CA: Sage, 1984).

<sup>29</sup>The adjustment procedure and its limitations are described in C.J. Skinner, D. Holt, and T.M.F. Smith, eds., *Analysis of Complex Surveys* (New York: John Wiley & Sons, 1989).
