ABSTRACT

This guide presents a list of writing skills that all students should know and be able to do at each grade level from kindergarten through sixth grade, as determined by the Idaho State Board of Education. It presents, grade by grade, a list of target skills and sample assessment methods. The guide also includes columns identifying three processes that a teacher takes the student through for each skill, allowing an "X" to be placed in the column next to the skill where it is expected to be introduced, reinforced, and/or finally placed in long-term memory. This is intended to help the teacher determine the lesson and amount of repeated practice that will help achieve mastery of the skill. Three thinking levels (factual, applied/analysis, and synthesis) are also identified in columns. These thinking levels may help the teacher develop an assessment to measure the skill in question. The guide is intended to help build a basis for curriculum development, instructional strategy, and assessment practices, and provide consistency across the state in what is being taught and learned. Schools may wish to use the guide as a resource in developing and writing curriculum at the local level. The guide will also help provide parents, teachers, and students with knowledge of what is being taught in a logical scope and sequence by grade level. An appendix contains a scoring standard for kindergarten writing. (SR)

## INTRODUCTION

The State Department of Education's Skills-Based Scope and Sequence Guide is organized around a list of skills that all students should know and be able to do at each grade level from kindergarten through sixth grade. This guide will help provide parents, teachers, and students with knowledge of what is being taught in a logical scope and sequence by grade level. The purpose of this guide is to help build a basis for curriculum development, instructional strategy, and assessment practices, and provide consistency across the state in what is being taught and learned. Schools may wish to use the guide as a resource in developing and writing curriculum at the local level.

The guide has been developed as a scope and sequence by a team of teachers, parents, school board members, community representatives, patrons, and State Department of Education specialists. The listed set of skills are to be learned at a factual, applied/analysis, or synthesis/evaluation level. There are sample assessment methods included for teacher use.

### How to Use the Skills Based Scope and Sequence Guide

The skills are identified by grade level starting at kindergarten then progressing through the sixth grade. The skills were selected based on knowledge of many classroom teachers, skills identified in scope and sequence charts of the textbooks on the State of Idaho textbook adoption list, skills measured on the Iowa Test of Basic Skills, skills measured on Idaho's direct assessments, and input from educators, patrons, and parents.

There are three processes that a teacher takes the student through for each skill. You will see an X placed in the column next to a skill where it is expected to be introduced, reinforced, and/or finally placed in long term memory. This helps the teacher determine the lesson and amount of repeated practices that will help achieve mastery of the skill.

Once the student achieves the skill the question is how to use it. We have identified three thinking levels for this ability. They are
