#### **ABSTRACT**

This Kids Count data book examines statewide trends in the well-being of Texas' children. The statistical portrait is based on indicators in ten general areas of children's well being: (1) number of low birthweight babies; (2) rate of prenatal care; (3) infant mortality rates; (4) child death rates; (5) number of births to single teens; (6) juvenile violent crime arrest rate; (7) number of teen violent deaths; (8) dropout rate; (9) fourth grade math performance; and (10) fourth grade reading performance. Following an introduction, the first section of the report presents an overview of research findings, which include the following: child population is growing rapidly; poverty among children is increasing; family structure is a leading predictor for child poverty; a disproportionately large number of children in poverty are minority children; parental employment does not necessarily protect children from poverty; 647,000 families with children are living just above the poverty line; and consequences of poverty are cumulative and self-perpetuating. This section also includes descriptions of the indicators and definitions and data understanding. The second section of the report consists of indicator maps for the state as a whole. The third section and bulk of the report provides data, by county, on the key indicators for the years 1985, 1991, 1992, and 1994, including percent change over time. The final section provides tables by indicator of individual county rankings. (SD)

#### **ABOUT THE AUTHORS**

The State of Texas Children: Fact Book 3 is a publication of the Texas Kids Count Project.

Texas Kids Count is a project of the Center for Public Policy Priorities with the University of Texas Center for Social Work Research as a research partner. The project is part of a nationwide effort to highlight the well-being of children in every state. As part of this ongoing effort to build a better understanding of the conditions facing all children in Texas, Texas Kids Count is building a comprehensive database of indicators of child well-being. The data are used to produce annual fact books and other analyses on the status of children in Texas.

Core funding for Texas Kids Count is provided by the Annie E. Casey Foundation and supplemented by support from the Hogg Foundation for Mental Health and the RGK Foundation. Special research is also supported by the Texas Department of Health, the Texas Department of Human Services, the Children's Trust Fund of Texas, and the Texas Work and Family Clearinghouse.

### The State of Texas Children: Fact Book 3

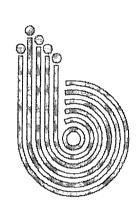

#### The Center for Public Policy Priorities

The Center for Public Policy Priorities is a public policy research and analysis organization, seeking sound solutions to the challenges faced by low- and moderate-income families in Texas. The Center pursues this goal through independent research, analysis, policy development, public education, and technical assistance. The Center for Public Policy Priorities is an office of the Benedictine Resource Center.

#### The Benedictine Resource Center

The Benedictine Resource Center (BRC) is a not-for profit corporation dedicated to promoting the well-being and empowerment of the poor and disenfranchised. In 1985, a congregation of Benedictine nuns from Boerne, Texas founded the BRC. The Benedictine tenet of societal discernment — the ongoing process of reading the "signs of the times" and responding to them — is focal to the BRC's Ministry. Through education, technical assistance, advocacy, research, and resource development, the BRC creates strategies for bringing about those structures that promote individual dignity, spiritual enrichment, and community well-being — interdependent and essential components of its comprehensive mission. The Texas Kids Count project is a direct outgrowth of the BRC mission to improve the lives of disadvantaged children and families in Texas. The dedication of BRC to this fundamental goal undergirds the Texas Kids Count project and all the activities of the Center for Public Policy Priorities.

#### Errata

Every publication must have a spirit hole to let the evil spirits out. The State of Texas Children: Fact Book 3 has the following spirit holes (errors):

Page 13: The chart entitled Percent of Low Birthweight Babies has an erroneous subtitle. There should be no subtitle on this chart. The caption reads 'Although more mothers are receiving prenatal care, the rate of babies being born with low birthweight remains around 7 per 1,000 live births. This should read 'remains around 7 percent'.

Page 20: The value labels on the chart entitled Juvenile Violent Crime Arrest Rate are slightly out of place. The correct labels are:

1985	173.4
1991	346.3
1992	383.5
1994	425.7
1996	333.6

#### **Forward**

Texas Kids Count is a project of the Center for Public Policy Priorities with the University of Texas Center for Social Work Research as a research partner. The project is part of a nationwide effort to highlight the well-being of children in every state. As part of this ongoing effort to build a better understanding of the conditions facing all children in Texas, Texas Kids Count is building a comprehensive database of indicators of child well-being. The University of Texas is the repository of the database. The data are used to produce annual fact books and other analyses on the status of children in Texas.

Texas Kids Count has produced three Fact books:

- The State of Texas Children (1994)
- Helping Hands: Social Services for Children in Texas (1997)
- The State of Texas Children: Fact Book 3 (1998)

In additions to the fact books, the Texas Kids Count Project is producing a series of special reports. Special reports include:

- Child Violent Death (1995)
- Hispanic Children in Texas (1995)
- African American Children in Texas (1997)

Special report in progress include:

- Preventing Child Death: Strategies for the Prevention of Child Deaths by Poisoning, Firearms, Drowning and Fires
- Measuring Up: The State of Texas Education

SECTION IV: COUNTY RATES AND RANKINGS

#### Introduction

The State of Texas Children: Fact Book 3 is part of a series of reports produced by the Texas Kids Count project to report on the status of children and their families in Texas. Texas Kids Count reports are tools used by policymakers, service providers, and advocates to work for solutions on behalf of children. Texas Kids Count is unique because it provides detailed profiles about the status of children for every county in the state. This information is used in planning at the local level as well as the state level. Texas Kids Count is recognized by planners and policymakers across Texas as the best source of statistics on the well-being of children.

This Fact Book assesses indicators of child well-being. Statistics are presented about various education, health, economic, and social factors in an attempt to provide valuable information about the status of children in every county in the state. By tracking changes in benchmarks of child well-being over time, this Fact Book reveals trends that help us understand the ways our children's lives are improving, but also gives insight into areas that need change. This report tracks changes over time in the following indicators:

Percent of Low Birthweight Babies
Infant Mortality Rate
Percent of all Births to Single Teens
Teen Violent Death Rate
Percent of fourth graders passing TAAS tests
Percent mothers receiving little or no prenatal care

Percent Children in Poverty Child Death Rate Juvenile Violent Crime Arrest Rate Unemployment Rates Population Estimates

By reporting information for each county, this report provides those who work for children a better picture of the conditions faced by children in different regions of the state. Also included in this report is the state's ranking compared to the other states in the nation and the District of Columbia as well as each county's ranking among the 254 counties in the state for each indicator. Rankings are based on 1994 data and a ranking of I indicates that a county is the best and 254 is worst in the state. The nationwide ranking appears at the top of each section and the Texas county rankings are in Appendix A. Also, to see how your county compares to the state as a whole, please fold out the back cover for the state rates.

An analysis of the information collected for this report shows that trends also vary by race and ethnicity. We have reported some of these differences here. However, Texas Kids Count has also produced special reports specifically on the topics of Hispanic and African American children in Texas. Please ask for a copy of those reports for more information about these groups of children.

#### **Overview of Findings**

This report contains an analysis of important changes for children between 1985 and 1994. In many cases, 1994 information was the most recent available at the time this report was prepared. However, in some instances, information for 1996 was available and has been included as well. The findings of this study show that Texas has improved in many of the areas studied. Between 1985 and 1994,

- the infant mortality rate decreased,
- the child death rate decreased.
- the teen violent death rate decreased, and
- the dropout rate decreased.

#### Between 1992 and 1994,

- more mothers received prenatal care,
- more fourth graders passed the math and reading TAAS tests.

However, in three areas, Texas declined between 1985 and 1994:

- more children were living in poverty,
- more babies were born with low birthweight,
- more single teens had babies, and
- more teens were arrested for violent crimes.

The good news is that in the period between 1994 and 1996, we have started to see some important improvements in Texas. While the rate of arrests of teens for violent crimes increased dramatically between 1985 and 1994, there were fewer arrests in 1996 than in 1994. Also, the rate of teens under 18 years having babies also declined slightly. However, these trends will need to be closely monitored in the coming years to determine their true significance.

Even though Texas has seen improvement in some areas, there is still need for continued attention to the challenges faced by low-income children and their families. Texas still ranks among the worst in the nation on many of these indicators. Until Texas can improve the lives of children, all Texans will continue to pay a high price in quality of life, cost of services, and in lost potential.

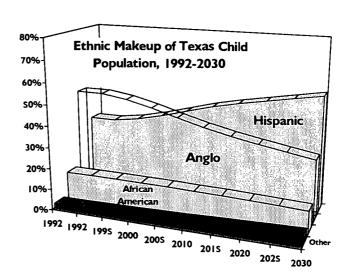

#### Child Population is Growing Rapidly

In 1995, Texas replaced New York as the second most populous state, after California. Of the five most populous states in the nation, Texas has the largest proportion of its population under age 18 (5.3 million children or 29 percent of the population). Demographers project that former 'minority' populations will make up the majority of the population within the next 13 years. As the minority population grows, the percent of children under 18 will increase.

Child Population Estimates for Texas, 1994

	Total	Proportion
Anglo	2,622,768	49.9%
African	695,590	13.1%
American		
Hispanic	1,864,995	35.1%
Other	124,856	2.4%
Total	5,308,209	100%*

#### Poverty among children is increasing

Despite improvements in the overall economy and increases in the median income as reported by the U.S. Census Bureau<sup>5</sup>, the economic security of Texas children has declined. A report release by the U.S. Census Bureau found that despite an overall increase in income nationally, the poorest 20 percent of households had an income drop of 1.8 percent. There was also an increase in the number of 'very poor' people.<sup>6</sup>

The most recently released poverty statistics for children in Texas show that between 1989 and 1993, the poverty rate for Texas children has risen from 25.8 percent to 28.6 percent. By contrast, the child poverty rate for the nation as a whole went from 19.6 percent to 22.7 percent. Only four states had higher child poverty rates than Texas in 1993, Mississippi, Louisiana, West Virginia, and New Mexico. A family of four was considered to be living in poverty in 1993 if the household income was below \$14,763. Although the overall economy has seen some improvement, the poorest sector of the population has not shared in the economic improvements.

The State of Texas Children: Fact Book 3

The number of Texas children in poverty has risen sharply since 1989. Over 1.5 million children in Texas are living in poverty and many more live near the poverty line. Children living in poor neighborhoods are more likely to drop out of school, get pregnant, or become involved in crime. These severe consequences mean that too many children are unprepared to continue their education or enter the workforce. Texas pays a high price for leaving these children behind.

The younger a child is, the more likely he or she is to live in poverty. In 1994, the most impoverished sector of the Texas population was children in the 0 to 2 age bracket. More than one-third of all 0-2 year olds lives in poverty. Twenty-nine percent of all children under age 6 in Texas lives in poverty (29.1%)<sup>10</sup> and the poverty rate among children ages 5-17 years is estimated to be 26.1 percent.

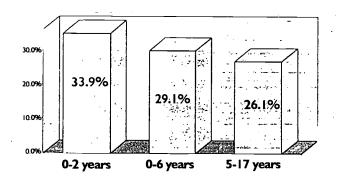

#### **Child Poverty Rates in 1993**

	1989	1993
Mississippi	34.1%	33.9%
Louisiana	32.0%	33.3%

Dallas	19.0	28.5
Harris	21. <del>4</del>	30.8
Tarrant	14.7	21.0
El Paso	36.I	41.7

Source: U.S. Census

#### Percent Children in Poverty, by age group

Source: Columbia University, One in Four

# The younger a child is, the more likely he or she is to live in poverty.

The map of child poverty in the map section of this report, shows that there are extremely high rates of poverty (over 30% of all children 5-17 living in poverty) along the Texas-Mexico border, the panhandle, and the area surrounding Houston. Even more counties have rates of poverty between 15 and 30 percent and these counties are spread throughout the state.

With so many children living in poverty, any discussion of their well-being must address, as a core issue, the inevitable consequences of living in poverty and near poverty conditions. Children living at or near the poverty line are faced with similar challenges and risks. Lack of health insurance and

inadequate access to health care substantially increase the risks for children. It is estimated that one in four children in Texas does not have health insurance. An average between 1993 and 1996 of uninsured children shows that Texas ranks second-worst in the nation for the percentage of uninsured children (23.3%).<sup>12</sup> (New Mexico had the highest rate of uninsured children.) Currently, more than 1.3 million children under age eighteen - approximately one quarter of the state's children - are not covered by any private or public health insurance program. <sup>13</sup>

Children growing up in families that are poor or near poor are more likely to: 14

- have no health insurance
- lack full immunization
- have health problems
- go to school hungry and unprepared to learn
- go to the worst schools
- live in unsafe neighborhoods.

Teens living at or near poverty are more likely to:

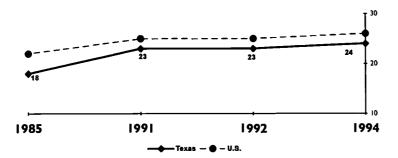

- drop out of school
- receive inadequate training to enter today's more technical workplace
- become teen parents
- be unemployed or underemployed, and
- become the victims and/or perpetrators of criminal activities.

All of the causes for these negative outcomes must be addressed in order to improve the lives of all children.

#### Family structure is a leading predictor for child poverty.

Single parent households are more likely to live in poverty. Children in families with a married couple have the lowest poverty rate. One in five children in married couple families lived in poverty, while 26.8 percent of children who lived in male-headed families were in poverty. In 1996, almost half the children living in female-headed families lived in poverty (48.7%).<sup>15</sup> Gender-based wage and employment sector differences are, to a great extent, responsible for the differences in earning potential of female-headed versus male headed households.<sup>16</sup>

# Percent Families with Children Headed by a Single Parent

Texas has experienced an increase in the percent of families headed by a single parent.

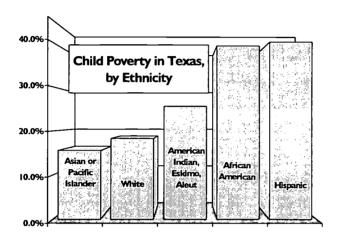

Source: Annie E. Casey Foundation, Kids Count 1997

**Texas Kids Count** 

#### **Minority Children in Poverty**

A disproportionately large number of those children living in poverty are minorities. While 24 percent of all Texas children were living in poverty in 1990, almost 40 percent of African American and Hispanic children were poor. While it is likely that the rates of child poverty for minorities have changed since 1990, more current estimates are not available. For more information about African American and Hispanic children in Texas, please ask for a copy of our special reports about these groups of children.

**Child Poverty Rates in 1990**

#### **Working Poor**

Parental employment does not necessarily protect children from poverty. In fact, the majority of poor families with children in Texas have one or more working family members (80%).<sup>17</sup> Even with at least one parent working full-time, many families in Texas are not able to make enough money to live above the poverty line. The number of working poor families in Texas more than doubled from 198,000 in the late 1970s to 433,000 in the mid 1990s. In the mid 1990s, over a million children lived in working poor families in Texas.<sup>18</sup> The major source of income for over 67 percent of all poor families with children in Texas is earnings from work and more than a third of these families have a full-time year-round worker (compared to 50% for the nation as a whole).<sup>19</sup>

#### Percent Families with a Worker

	Percent
California	61%
New York	44%
Texas	80%
Florida	66%
Pennsylvania	55%
U.S.	65%

The majority of poor families with children in Texas have one or more working family members.

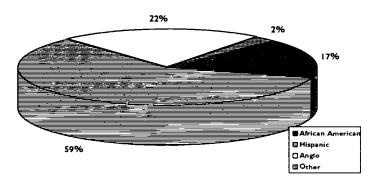

Source: Center on Budget and Policy Priorities

More Texas working poor families are headed by a married couple than in the nation as a whole. In the mid-1990s, two-thirds (64%) of the working poor families with children in Texas were headed by a married couple (compared to 51% for the nation as a whole). Approximately 32 percent were headed by a single woman, and 4 percent were headed by a single man. The majority of working poor in Texas are Hispanic.

### The Race and Ethnicity of Working Poor Families with Children 1994-96

Working poor families are trying to earn a living and support their kids. However, despite hard work and personal responsibility, working poor families cannot pull themselves out of poverty.

Source: Center on Budget and Policy Priorities.

#### Children living near poverty

In Texas there are 647,000 families with children that are living just above the poverty line.<sup>20</sup> That is, the income for a family of 3 is between \$12,873 and \$25,746 (or between 100% and 200% of poverty in 1997). In Texas, practically all near-poor families with children have a least one working parent (97%). More than three-fourths of the families in Texas with incomes between 100 percent and 200 percent of the poverty line, had a full-time, year-round working family member.<sup>21</sup> Near-poor families often do not have health insurance and many do not qualify for safety net social programs. Children living near the poverty line face many of the same risks that those in poverty face.

#### **Consequences of Poverty**

**Texas Kids Count** 

The consequences of low economic status are cumulative and self-perpetuating. Economic status, and in particular poverty, is the best predictor of many negative outcomes faced by children and their families. The cumulative effects of poverty over time adversely affect the ability of children and families to improve their lives, thus causing many children born in poverty to remain in poverty.<sup>22</sup> For example, children living in poor neighborhoods often go to the worst schools. Low educational attainment can lead to children dropping out of school. If they do finish school, they are less likely to go on to college. As adults, they are more likely to be either unemployed or have low-wage jobs.

Texas has many excellent social service programs that help thousands of children across the state. Early childhood enrichment programs, preventive health care, child protection services, and basic subsistence assistance all assist the children in greatest need. Prevention and intervention efforts have already led to

improvements in the status of children in Texas. See the Texas Kids Count report entitled *Helping Hands:* Social Services for Children in Texas for a detailed discussion of the availability and use of social services by children in Texas.

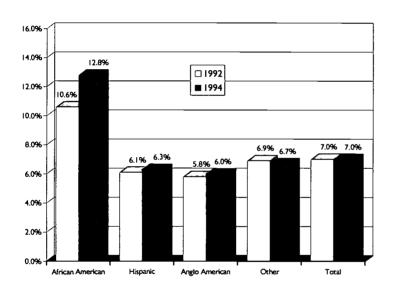

The following sections will look in more detail at each of the ten indicators of child well-being presented in this report. This overview is followed by a Key to County Fact Sheets, which gives information about how to read the county data sheets. Then, the section entitled Understanding the Data will provide more information about how the data were collected and how to interpret them. This is followed by the definitions of the indicators and the sources of data.

In 1994, 22,531 Texas babies (7 per 1,000 live births) were born with low birthweight. The rate increased in 1996 to 7.2 per 1,000 live births. Babies born weighing less than 2,500 grams (5 pounds, 9 ounces) are more than twice as likely to suffer severe developmental delay or congenital anomalies.<sup>23</sup> They are also at greater risk of cerebral palsy, autism, mental retardation, and vision and hearing impairments.<sup>24</sup> Almost 4,000 of these births were considered 'very low birthweight' babies (3 lb. 5 oz.).

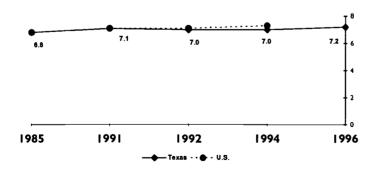

Between 1985 and 1996, Texas experienced an overall increase in the rate of low birthweight babies. However, in spite of the fact that the overall rate for Texas increased, a large number of counties (104) experienced an improvement (decrease) in the rate of low birthweight babies.

### Percent of Low Birthweight Babies (per 1,000 live births)

The counties with low birthweight rates above 7 are fairly evenly scattered around the state (see map). The counties along the Texas-Mexico border show relatively low rates of babies born with low birthweights.

Access to health care can be influenced by the availability of health insurance. Mothers who lack health insurance are less likely to seek prenatal care. Without prenatal care, babies are more likely to be born with low birthweight.

Although more mothers are receiving prenatal care, the rate of babies being born with low birthweight remains around 7 per 1,000 live births.

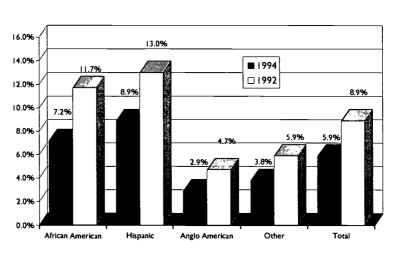

Prenatal care refers to the health care and education women receive during pregnancy, labor, and delivery. Mothers who do not receive adequate prenatal care during their pregnancies are at increased risk of having problems during their pregnancies, and their babies are more likely to have serious health problems. For instance, the probability of infant death increases by at least 10 percent when prenatal care is not received until the third trimester. The costs of preventing these potentially serious health problems for babies through quality prenatal care is much lower than the costs associated with treating these health problems once they occur.

Prenatal care is not only a valuable source of health care and information about pregnancy and parenting for new parents, it can also serve as a link to other valuable social services. Studies have indicated that women who receive prenatal care are more likely to seek preventive care for their infants, including immunizations. <sup>28</sup>

A higher percentage of women received early prenatal care in 1994 than in 1992. Most women in Texas in 1994 reported starting prenatal care during the first trimester of pregnancy (75.5%).<sup>29</sup> However, of the 321,088

# Percent of Mothers Receiving Little or No Prenatal Care

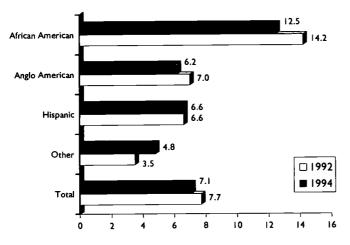

More mothers are receiving prenatal care, thus improving their babies' chances of prospering.

live births that occurred in 1994, 18,944 births were to women who received little or no prenatal care (3.8% began prenatal care in the third trimester and 2.2% received no prenatal care at all).<sup>30</sup> Furthermore, the quality of prenatal care that mothers did receive was rated 'adequate' by the Texas Department of Health in only two-thirds of the cases, 'intermediate' in 23 percent, and 'inadequate' in almost 9 percent of the cases.<sup>31</sup> Of the 254 counties in Texas, 82 percent (209 counties) reported a higher percent of women receiving timely prenatal care in 1994 than in 1992. Fifteen percent of all counties reported lower rates of prenatal care (38 counties). The map of Texas counties (in the map section) shows high rates of little or no prenatal care in the valley and in moderate levels in and around the metropolitan regions of the state.

Infant mortality is closely associated with factors such as poverty, inadequate prenatal care, and early and frequent childbearing. Nutrition and good medical care are associated with decreases in infant mortality. Infant death rates are positively impacted by new advances in neonatal technology and public education.

## Infant Mortality Rates (per 1,000 Live Births)

1985 1991 1992 1994 1996

Infant mortality has improved between 1985 and 1996 from 9 to 6 deaths per 1,000 births.

The infant mortality rate in Texas is declining. In 1994, 2,290 babies died before their first birthday (7.1 out of every 1,000 births). More than half of all infant deaths occurred during the first month of life and were caused by conditions originating in the prenatal period and congenital anomalies.<sup>32</sup> In 1996, the infant mortality rate continued to decline to 6.3 per 1,000 live births.

Between 1985 and 1994, 135 counties showed improvements in infant mortality rates. While infant mortality rates show a positive trend at the state level, a closer look at individual counties reveals that 85 Texas counties had worse infant mortality rates in 1994 than in 1985 and 155 counties were worse than the state as a whole in 1994.

Texas has seen a consistent improvement in the rate of deaths for children ages 1-14 years (from 36.9 in 1985 to 29.3 in 1994). More than a third of child deaths in 1994 were caused by preventable accidents with one in five child deaths caused by motor vehicle accidents (246 deaths). Other leading causes of death for this age group were malignant neoplasms or tumors (155 deaths), and homicide (89 deaths). Thirty-four children between ages 10 and 14 committed suicide in 1994.

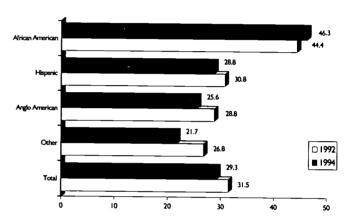

Between 1985 and 1994, the child death rates improved in 115 Texas counties, but worsened in 96 counties. In 1994, more than 60 percent of all counties had worse child death rates than the state as a whole (156 counties) and 97 counties had a better rate than Texas.

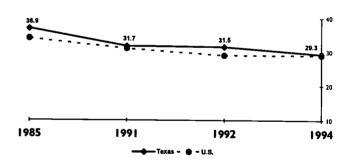

1994 Leading Causes of Death, Ages 1-14

	Boys	Girls
Accidents	307	165
Malignant neoplasms	89	66
Homicide	51	38
Congenital Anomalies	37	33
Suicides	26	8
Diseases of the Heart	23	28
TOTAL	533	338

Child Death Rate (per 100,000 children ages 1-14)

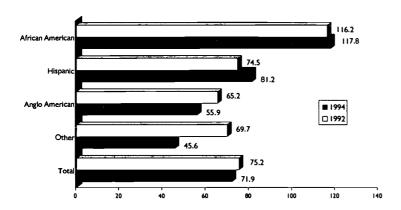

The child death rate has gone down from 37 to 29 deaths per 100,000 1-14 year olds. The leading causes of death are accidents, malignant neoplasms, homicide, and suicide.

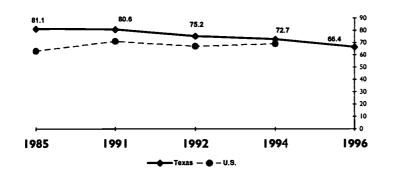

Over the past decade, Texas has experienced a consistent drop in the rate of violent deaths (by accident, homicide, or suicide) among teens, ages 15 to 19. In 1994, 1,003 teens died from accidents (508), homicides (324), or suicides (171) for a rate of 71.9 per 100,000 15-19 yr. olds. Most of the accidental deaths to teens involved motor vehicles (405 deaths in 1994). The rate for 1996 has dropped to 66.4 per 100,000 teens.

In 74 Texas counties, teen violent death rates increased between 1985 and 1994. However, close to half of all counties experienced decreases in the teen violent death rates (115 counties). In 1994, 150 counties had teen violent death rates that were worse than the state as a whole.

# Teen Violent Death Rate (per 100,000 Teens Ages 15-19)

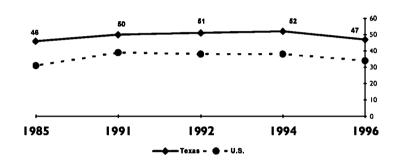

The teen violent death rate has consistently declined. Between 1985 and 1996 the violent death rate went from 81 to 66 per 100,000 15-19 year olds.

Nationally, the teen birth rate has remained relatively constant in recent years at 38 per 1,000 females age 15-17.<sup>33</sup> However, Texas has seen an increase in the rate of teen births, with only Mississippi and the District of Columbia having higher rates in 1994. There were 20,680 births to teens between 15 and 17 years (52 per 1,000 females ages 15-17) in 1994. Another 1,389 babies were born to children 14 and under.

Births to Teens (per 1,000 15-17 yr olds)

After a steady increase in the rate of births to teens 15-17 between 1985 and 1994, the rate has begun to improve. Fewer teens had babies in 1996.

Source: Kids Count 1997

When comparing births to all girls aged 17 and under, the rate has improved slightly between 1994 and 1996. The rate of births to all girls under 18 has dropped from 6.9 percent in 1994 to 6.8 percent in 1996. However, it is unclear whether this decrease represents a trend.

Births to girls 17 and under in Texas

****	Births	Percent
1992	20,519	6.4%
1994	22,069	6.9%
1996	22,382	6.8%

Poverty is a predictor of teen births, and early childbearing creates serious risks for both mother and child.<sup>34</sup> The risk of an infant dying in the first year of life is greater for the children of teen mothers.<sup>35</sup> Children of teen mothers exhibit more behavioral problems such as hyperactivity and poor impulse control<sup>36</sup>, and adolescent mothers often do not have the parenting skills necessary to raise a small child, particularly if that child has health or behavioral problems.<sup>37</sup> Teen mothers are more likely to abuse their children than older parents.<sup>38</sup>

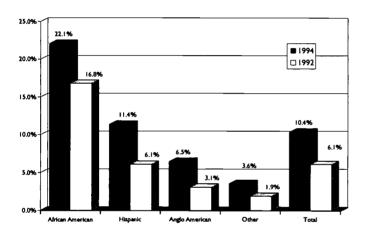

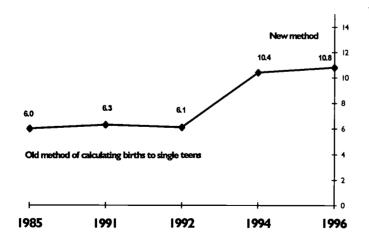

#### Births to Single Teens (13-19 year olds)

The babies of 'single' or unmarried teen mothers are particularly at risk since an unmarried teen often has neither the emotional nor the economic resources to take care of a child. In Texas, the rate of births to single teens has increased substantially between 1992 and 1994 (from 6.1% to 10.4%). This increase is due in part to the fact that the Texas Department of Health changed the way they define 'single'; now more teen mothers are considered single than before 1994.<sup>39</sup> Because of this change in definition, the information given for 1994 and after is more accurate than that given for the years before 1994 (see explanation on page 28).

In 1994, one in ten births was to a single teen (33,371 births). Of all births to teens aged 13-19, two-thirds are to unmarried teens.<sup>40</sup>

#### Births to Single Teens (ages 13-19 years)

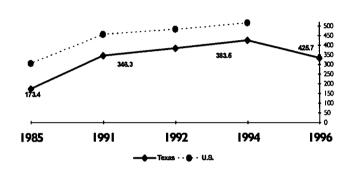

Of all births in Texas, one in ten is to a single teen. Of all births to teens aged 13-19, two-thirds are to unmarried teens.

The rate of juvenile violent crime arrests almost tripled since 1985 with Texas' rates paralleling those at the national level. However, since 1994, the arrest rate has begun to decline. For this study, violent crimes included murder, manslaughter, rape, robbery, and aggravated assault. In Texas, there were 9,552 arrests of juveniles between 10 and 17 for violent crimes in 1994 (425.7 per 100,000 juveniles). In addition, children under age 10 were arrested for 2 murders, 6 forcible rapes, 9 robberies, and 35 aggravated assaults.

The number of juveniles arrested for violent crimes went up between 1985 and 1994. However, since 1994, the arrest rates have begun to decline.<sup>41</sup>

#### Juvenile Violent Crime Arrest Rate (per 100,000 10-17 yr. olds)

Violent Crime	1985	1994	1996
Murder	178	445	237
Manslaughter	12	23	13
Rape	258	409	482
Robbery	1,289	3414	2,514
Aggravated Assault	1,808	5261	4,577
TOTAL	3,545	9,552	7,823

Source: Department of Public Safety

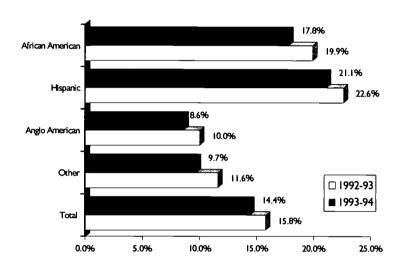

In addition to those juveniles arrested for serious violent crimes, many more were referred to the Texas Juvenile Probation Commission for a variety of criminal activities. Children who end up in the juvenile justice system have often been the victims of abuse. Of the 84,854 juveniles referred to juvenile probation departments in 1994, 14,496 were reported to have exhibited symptoms of sexual abuse, 15,874 had been physically abused, and 37,391 showed signs of emotional abuse. 42

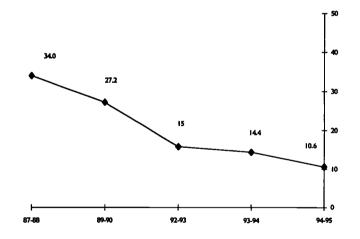

Two-thirds of all counties saw their juvenile violent crime arrest rates increase between 1985 and 1994 (172 counties). However, 40 counties had improved rates. Overall, 63 counties were worse than the state as a whole in 1994 and 139 counties were better. The highest concentrations of juvenile arrests were in the large urban areas, however, there are counties with high rates scattered around the state.

There are many social costs that occur when students drop out of school. Texas needs to develop a skilled workforce in order to make gains in a competitive market place. Families, schools, social service agencies, as well as the community at large must cooperate to provide the needed support and incentives to children to ensure they stay in school and develop to their full potential.

#### **Estimated Longitudinal Dropout Rates**

According to the Texas Education Agency (TEA), estimated longitudinal dropout rates decreased from 34 percent in the 1987-88 school year to 14.4 percent in the 1993-4 school year.

According to statistics from the Texas Education Agency, the rate of children who drop out of school is decreasing in Texas. Both the actual number of students dropping out of school each year and the estimated Iongitudinal dropout declined in recent years.43 Estimated Longitudinal Dropout Rate calculated by the Texas Education agency by "subtracting the annual rate as a percentage of 1.0 and raising the resulting retention rate to the sixth power. The retention rate is then subtracted from 1.0 for the final estimated longitudinal dropout rate."44

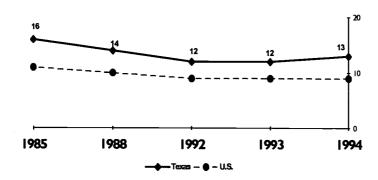

Please note that changes in the dropout definition are partially responsible for declines in the number of dropouts reported. The Education Agency improved its ability to track students who have moved from one school district to another. Furthermore. starting in 1993-4, seniors who fail exit-level TAAS tests, but pass all other graduation requirements, are now excluded from the dropout count.45

In the 1994-95 school year, the total number of Texas students in grades 7 through 12 who dropped out of public school was 29,918. This number is significantly less than the 40,211 students dropping out in the previous year. In 1994-95, the estimated longitudinal dropout rate for Texas was 10.6 percent as compared to a 14.4 percent dropout rate in 1993-94. Fifty-three percent of all counties (136) improved their dropout rates over time while 41 percent changed for the worse (104). Compared to the state rate, 138 counties were worse and 114 were better.

Interestingly, data from the U.S. Census, Current Population Survey provide a different picture about the dropout rate in Texas. The Census uses a completely different method to determine the dropout rate. Based on a sample of Texas households, the U.S. Census calculates the percent of teens age 16-19 who are not in school and not high school graduates. According to this measure, the dropout rate declined between 1985 and 1993, but began to increase in 1994.

#### Percent Teens who are Dropouts

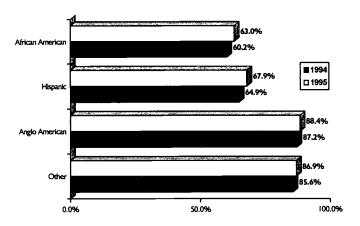

According to U.S.
Census data, Texas
ranks among the
worst in the nation in
the number of
dropouts (47th).

The Texas Assessment of Academic Skills (TAAS) testing program is a tool used by the Texas Education Agency (TEA) to measure how well Texas students are faring academically in basic subjects such as math, reading, and writing. The tests are also an indirect measure of the success of teachers and schools in imparting to their students the standard knowledge and skills set for each grade level. A passing score indicates that the student has met the minimum expectation for that grade level and is not a measure of proficiency in the subject. 48

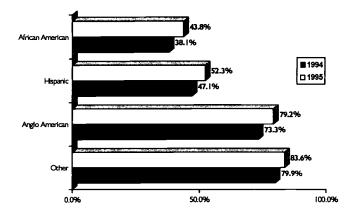

### Percent of Students Passing 4th Grade TAAS Test Reading

by Texas educators, including teachers and administrators, and was first implemented in the 1990-91 school year. The TAAS test places an emphasis on higher-order thinking and problemsolving skills. The reading and mathematics assessment tests are taken each school year in the 3rd through 8th grades and again at grade 10, when an exit-level test is taken. All students must pass the exit-level TAAS tests in math, reading, and writing by grade twelve in order to graduate.<sup>49</sup>

The TAAS was developed based on objectives set

### Percent of Students Passing 4th Grade TAAS Test Math

During the 1993-94 school year, 54.8 percent of the 205,852 Texas fourth-graders taking the TAAS test passed all areas of testing. More than 75 percent of all fourth graders passed the reading section in 1993-94, up from 65 percent the year before. However, the number of fourth graders passing the mathematics section of the test was much lower than for the reading section. In 1993-94 only 59.4 percent of fourth graders passed the math section (up from 52 percent of fourth-graders passing in 1992-93). St

Although the status of children has in many ways changed for the better over the last decade, Texas clearly must continue to work hard to improve the lives of children. High levels of child poverty threaten to undermine any improvements made in other areas.

Despite lack of opportunity and multiple pressures on families, thousands of families living at or near poverty find ways to provide good homes for their children. Many children who grow up in poverty are happy and successful in school and grow up to be productive members of society. However, intervention programs and social services designed to help at-risk children and their families are crucial to help improve the lives of many children. Families and communities must work together informally and through community organizations and institutions to improve their children's life circumstances.

Effective services for at-risk children early in life will increase the likelihood that they are successful in school and work. Prevention of problems is the most cost-effective way to help children and families. Programs that lead to school readiness, healthy children, and stable, nurturing families can prevent astronomical future costs for special education, health care, hospitalization, foster care, crime prevention, and prisons.

To ensure the continued growth of our economy, Texas must invest in creating a strong labor force that is educated and technologically skilled. A community approach to improving the odds for children must involve all the key players: parents, children, businesses, and local, state and federal policymakers. There are no simple solutions to the intractable problems associated with growing poverty. Instead, we must all work together to find solutions.

Recent policy changes such as welfare reform threaten to diminish social support programs and push even more children into poverty and other risky situations.<sup>52</sup> Because of the increased devolution of federal funds to the state level, Texas has a new level of responsibility for its children. Texas government has more control over the way these funds are spent and has the responsibility to ensure that these funds are spent efficiently and effectively.

The benchmarks of child well-being reported in this Fact Book need to be closely monitored as Texas' social and economic conditions change. As new decisions are being made about public assistance, health care, and social services, we must all be vigilant in protecting our most vulnerable children. A careful look at the conditions in each county and the various regions of the state is critical to informed policymaking. The effects of new policies should be carefully evaluated in terms of both their short-term and long-term effects on children and their families.

The State of Texas Children: Fact Book 1

This fact book reports data for 1985. 1991, 1992 and 1994 (unavailable data marked with N/A). School data reported are for 1992-93 and 1993-94. The data at the top of each county page are the number and percent of children by age and ethnic group in 1994. This fact book reports for each county the number of children as well as the county and state rates for each of ten indicators of child well-being. The bar graph on the right side of the page shows the percent change between the first year and the last year of information available. In most cases this was the percent change between 1985 and 1994.

#### 'Percentage' versus 'Rate'

The indicators reported here are a mixture of 'percentages' and 'rates'. Percentages reflect the proportion of the children in a particular county that have a certain characteristic. For instance, the percent of children in poverty reflects the proportion of children in each county living below the federal poverty income guidelines. This indicator is calculated directly from the actual numbers of children meeting the criteria of this indicator.

A similar issue arises in the 'rate' indicators. Those indicators that present 'rates' do so in relation to a constant denominator. In the case of the Infant Mortality Rate, the rates indicate the number of babies per 1,000 live births who died before their first birthday. Data from counties with small populations must be used with caution since small fluctuations in the data can cause large differences in the calculated rates.

#### County rankings

Appendix A provides ranking information for each county and region of the state. While these charts rank every county from highest to lowest on each indicator, caution must be used with this information. Texas has 254 counties with great variations in demographic characteristics. For example, the county populations at the time of the last census (1990) ranged from a total of only 107 people in Loving county to 2,818,199 people in Harris county. The differences between counties, along with the sheer number of counties, make county to county comparisons complicated at best. Thus the reader is asked to view the ranking charts with caution. Comparisons between counties with similar populations or other shared characteristics will be a more meaningful exercise.

#### **Caution to Small Counties**

Several counties in Texas have very small child populations. Reporting percentages and rates becomes problematic for these counties. Small counties can see large changes in rates with only small changes in the actual numbers of children affected. For example: a county with 450 children ages 10-17 can have a violent crime arrest rate of 0 per 100,000 teens (if no teens were arrested). The following year the rate can jump to 216 per 100,000 teens if only one teen is arrested for a violent crime. Thus, caution is urged in interpreting changes if the county has a relatively small number of children.

#### **Indicator Definitions and Sources**

**Population estimates:** Estimates of the population by age, sex, and ethnicity for July 1, 1994 **Source:** The Texas State Data Center, The State Population Estimates and Projections Program, Texas A&M University System

Percent Children (ages 5-17) in Poverty, 1993, is the estimate of related\* children ages 5-17 living below the poverty line in 1993. These estimates are now being revised each year.

Source: U.S. Census Bureau, March 1997

\* Related children in a family include children and all other persons under 18 years of age in the household, regardless of marital status, who are related to the householder, except the spouse of the householder. Foster children are not included since they are not related to the householder.

**Percent change over time analysis** between the two comparison years was calculated by subtracting the newest year rate from the first year rate available, multiplying by 100 and then dividing by the first year rate. For example, if the Low birth weight rate for a particular county was 6.3 in 1985 and 6.6 in 1994, the percent change was calculated:

$$(6.6-6.3) * 100/6.3 = 4.8\%$$

If the rate in the first year was zero, no percent change was calculated. If the rate in both years was zero, no percent change was calculated.

**Percent Low Birthweight Babies** is the percentage of live births weighing under 2,500 grams (5.5 pounds). **Source:** Texas Department of Health, Bureau of Vital Statistics.

**Percent mothers receiving little or no prenatal care** is the percentage of births where the mother began receiving prenatal care in the third trimester of pregnancy or not at all. **Source:** Texas Department of Health, Bureau of Vital Statistics.

**Infant Mortality Rate** (per 1,000 live births) is the number of deaths occurring to infants under 1 year of age per 1,000 live births.

Source: Texas Department of Health, Bureau of Vital Statistics.

Child Death Rate, Ages I-14 (per 100,000 children) is the number of deaths from all causes to children between the ages I and I4, per 100,000 children in this age range.

Source: Texas Department of Health, Bureau of Vital Statistics.

Percent of all Births to Single Teens is the percentage of live births to mothers (13-19 years of age) considered to be 'single' by the Texas Department of Health. In 1985, a mother was asked if she was married or not. If yes, then information about the father's was included on the birth certificate and the mother was considered 'married'. If the mother answered that she was not married, then the father's information was automatically excluded from the birth certificate and the mother was considered 'single'. In 1989, a looser interpretation of 'married' was adopted. Father's information was included if the father signed the birth certificate, signed a paternity statement, or was married to the mother. Under this interpretation, more birth certificates included the father's information and thus more mothers were considered 'married'. In Texas, between 1989 and 1994, if the father's information (name) is on the birth certificate, the parents were considered married. If the father's information is not on the birth certificate, they were not considered married. In 1994, a question was added to the birth certificate specifically asking for the marital status of the mother. An increase in the number of 'single' mothers is partially attributed to the fact that more accurate information about marital status is now being collected.

#### **Federal Poverty Guidelines**

The federal poverty income guidelines are issued annually by the federal Department of Health and Human Services. Central to the guidelines is the "economy food plan," the least costly of four nutritionally adequate food plans designed by the Department of Agriculture. It was determined from the Department of Agriculture's 1955 survey of food consumption that families spent approximately one-third of their income on food. Each year the "economy food plan" is tripled to set the poverty level for families, based on the assumption that a family earning at least three times the economy food plan should have sufficient income. There are critics who believe that the poverty guidelines are inadequate measures of poverty, because spending patterns have changed substantially since the 1950s and 1960s, when the guidelines were developed. However, these guidelines continue to be the ruler by which this country measures poverty among its citizens. The poverty guidelines are also the basis of eligibility determination for a number of public assistance programs that serve children and their families.

Federal Poverty Guidelines for 1994, 1996, and 1997			
Size of Family Unit	1994	1996	1997
1	\$7,360	\$7,740	\$7,890
2	9,840	10,360	10,610
3	12,320	12,980	13,330
4	14,800	15,600	16,050
5	17,280	18,220	18,770
6	19,760	20,840	21,490
7	22,240	23,460	24,210
8	24,720	26,080	26,930
+ each additional member	+2,480	+2,620	+2,720

Percent of fourth-graders passing TAAS reading test (5)	N/A	N/A	65.5%	75.5%	15.3					

<sup>(1)</sup> Hispanic can be of any race.

(2) Unemployment rates are for January 1995.

(3) Percent change is calculated between first and last years available.

(4) Calculation of births to single teens changed in 1994. See explanation in Overview and Findings section.

Shown for educational indicators are school years 4992-1993 and 1993-1994.
