ABSTRACT

This report examines trends in college student tuition and fees for the year 1998-99, at public four-year colleges and universities, as well as trend data for the period beginning 1998-90. The report notes that while tuition and fee increases are near their lowest point in more than a decade, they remain above the rate of inflation, with average resident undergraduate tuition and fees rising 4 percent annually. Increases in room and board rates have moderated as well, with average increases at 4.1 percent. Also noted is the shift from state appropriations to tuition as a revenue source, causing a significant increase in the ratio of average tuition and fees to median family income over the last thirty years, and a projection that this ratio will rise further in the next twenty years. Financial aid available to postsecondary students rose as well by 6.2 percent to \$60.5 billion in 1997-98. Other sections of the report discuss various policy issues, ten-year trends for student charges, public perceptions of the value of education, state policies on tuition; financial aid developments, and federal, state, and institutional loan trends. A table of student undergraduate charges at American Association of State Colleges and Universities is appended. (Contains 19 references.) (CH)

Executive Summary

Tuition and Fees

- ◆ Tuition and fee increases at public four-year colleges and universities continue to hover near their lowest point in more than a decade, but remain above the rate of inflation. Average resident undergraduate tuition and fees at these institutions rose 4 percent from 1997-98 to 1998-99. Master's tuition and fees increased 6.4 percent over the same period, and tuition and fees for doctoral students rose 6.9 percent.
- ◆ More than a third of the states (18) posted resident undergraduate tuition and fee increases below the "cost of living" for colleges and universities for Fiscal Year 1998.
- ◆ The majority of public four-year institutions still charge less than \$3,000 for tuition and fees.

Room and Board

- ◆ Increases in room and board rates continue to moderate as well. Average room and board rates at public four-year institutions rose 4.1 percent from 1997-98 to 1998-99.

Role of Tuition

- ◆ Public institutions are increasingly relying on tuition proceeds to fund their operations. The portion of institutional revenue contributed by tuition at state colleges and universities has risen markedly during the 1990s. At the same time, the portion of institutional revenue composed of state appropriations has declined.
- ◆ The shift from state appropriations to tuition as a revenue source means that student charges at public colleges and universities are increasing relative to family income. The ratio of average tuition and fees at public four-year institutions to median family income increased significantly from 1966 to 1996, and is projected to rise further over the next 20 years.

Financial Aid

- ◆ Financial aid available to postsecondary students in the United States rose 6.2 percent to a record \$60.5 billion in 1997-98; however, the portion of this aid composed of grants remains well below the portion represented by loans.

- ◆ States are taking advantage of healthy economic conditions to increase their spending on need-based and non-need-based student aid. From 1990-91 to 1996-97, state expenditures on need-based aid (adjusted for inflation) rose 29.3 percent, while inflation-adjusted spending on non-need-based awards jumped 76 percent.
- ◆ Public colleges and universities have dramatically increased their own spending on aid for students—82.5 percent from 1989-90 to 1996-97 (adjusted for inflation). AASCU and NASULGC institutions posted similar increases over this period.

Policy Issues

- ◆ A number of states are currently considering legislation affecting tuition and fee policies at state colleges and universities. Some would require legislative approval of tuition increases, others would freeze or limit tuition increases, and still others would guarantee appropriations increases to minimize tuition hikes.
- ◆ Taking their cue from the federal government, several states are offering tax benefits of their own to college students and their families, including income tax deductions and credits for tuition and fees paid.

Student Charges: 1989-90 to 1998-99

Introduction

During the 1990s, the issues of what colleges and universities charge and how students and their families finance these charges have emerged at the forefront of public discussion. Rapidly rising tuition and mounting student loan debt have escalated concern over these issues, and have brought renewed scrutiny of institutions' administrative and financial practices. For many institutions and their constituents, it has been a trying decade, one with many fiscal pressures and few easy answers.

As the decade draws to a close, these pressures have eased significantly. Renewed state appropriations have led to substantial moderation of tuition and fee increases. At the same time, healthy increases in student aid spending are providing additional relief for a wide range of students. The middle and late 1990s have furnished some much-needed breathing room for institutions and the publics they serve.

Nagging problems remain, however. Increases in student charges continue to outpace the rate of inflation and growth in median family income, which raises serious affordability issues for the future. Institutions are having to rely less on public funds and more on student tuition to fund their operations, which poses the question of whether higher education is seen by policymakers as primarily a public good or a private good. States are showing increased interest in changing the terms of tuition-setting policy at public institutions, which opens debates related to governance as well as finance. Additionally, public awareness regarding student charges and financial aid continues to lag, which is forcing colleges and universities to develop new approaches for communicating important consumer information.

If current trends hold, public colleges and universities will face unprecedented challenges and opportunities for preserving the quality and financial accessibility of their programs and services in the opening decades of the next century.

Notes/Definitions

The confusion surrounding discussions of tuition-related issues is often compounded by imprecise or inconsistent definition of basic terms. In an attempt to bring clarity to public discussion of these issues, the National Commission on the Cost of Higher Education offered the following definitions in its 1998 report:

- **Price**—the amount of money students and their families are charged and what they pay for higher education
- **Cost**—the amount of money institutions spend to provide education and related services to students
- **Subsidy**—discounts that all students receive, regardless of the institution or whether they get financial assistance; the difference between the institutional cost of providing an education (cost per student) and the tuition and fees charged to students (sticker price)¹

In this publication, the term “student charges” refers to the two basic components of what the Commission defined as price (sticker price):

- **Tuition and fees (required)**—the basic charges all students must pay to attend an institution; required fees include those for health service, extracurricular activities, and the like
- **Room and board**

It is important to note that more than half of the students at public four-year institutions pay less than the “sticker price” tuition because they receive some form of financial aid. Moreover, resident undergraduate students at state colleges and universities do not commonly pay the full cost of their instruction because of state subsidies (though some states do have policies requiring that tuition for non-resident students will cover the full cost of their instruction).

Current View

Tuition and Fees

- ◆ Average tuition and fees for resident undergraduate students at public four-year colleges and universities increased 4 percent from 1997-98 to 1998-99 (\$3,119 to \$3,243). [See Table 1] Specifically, resident undergraduate tuition at AASCU institutions rose 3.6 percent (\$2,820 to \$2,921) and 4.1 percent (\$3,323 to \$3,458) at NASULGC institutions over the same period. [See Tables 4 and 5] These increases exceeded both the Consumer Price Index (which rose 1.8 percent in Fiscal Year 1998) and the

Higher Education Price Index^{2*} (which rose 3.5 percent in Fiscal Year 1998).

◆ The one-year increase in tuition and fees for non-resident undergraduate students shows a similar pattern. Average tuition and fees for non-resident undergraduates rose 4.4 percent (\$8,696 to \$9,080) at all public four-year colleges and universities from 1997-98 to 1998-99. [See Table 1] At AASCU institutions, the increase was 3.2 percent (\$7,702 to \$7,952), while at NASULGC institutions it was 4.1 percent (\$9,552 to \$9,941). [See Tables 4 and 5]

◆ Graduate tuition and fees posted slightly higher one-year increases. Resident tuition and fees for master's students at public four year colleges and rose 6.4 percent (\$3,837 to \$4,081), while at AASCU institutions the increase was 3.4 percent (\$3,304 to \$3,415) and 7.4 percent at NASULGC institutions (\$4,028 to \$4,328). For doctoral students, resident tuition and fees grew 6.9 percent (\$3,933 to \$4,204) at public four-year institutions, 3.9 percent (\$3,383 to \$3,515) at AASCU institutions, and 7.5 percent (\$4,046 to \$4,350) at NASULGC institutions. [See Tables 1, 4, and 5]

◆ From 1997-98 to 1998-99, two states (California and Massachusetts) posted decreases in their resident undergraduate tuition and fee rates. Another 7 states increased tuition at or below the rate of increase for the Consumer Price Index for Fiscal Year 1998 (1.8 percent), and 16 states increased tuition at or below the rate of increase for the Higher Education

* The Higher Education Price Index (HEPI) is a measure of inflation at colleges and universities, developed by Research Associates of Washington.

Source: The College Board, Annual Survey of Colleges 1998-99 (Standard Research Compilation Files)

Price Index for Fiscal Year 1998 (3.5 percent). [See Table 2]

- ◆ More than half of public four-year colleges and universities (51.2 percent) charge less than \$3,000 in resident undergraduate tuition and fees, and just under half (49.6 percent) of the full-time resident undergraduate students attending public four-year institutions pay less than \$3,000 in tuition and fees. Both figures represent a slight decline from 1997-98, when 54.1 percent of public four-year institutions charged less than \$3,000 in resident tuition and fees, and 54.4 percent of full-time resident undergraduate students paid less than \$3,000 in tuition and fees. [See Table 3]

Room and Board

◆ Room and board charges increased at a similar rate during this period. At public four-year institutions, average room and board rose from \$4,357 in 1997-98 to \$4,536 in 1998-99 (4.1 percent). [See Table 1] AASCU institutions posted a one-year increase of 2.5 percent (\$3,981 to \$4,082), while NASULGC institutions registered an increase of 4.3 percent (\$4,563 to \$4,761). [See Tables 4 and 5]

Trends and Indicators**10-Year Trends in Student Charges**

◆ From 1988-89 to 1998-99, tuition and fees at public four-year colleges and universities increased 52.6 percent (\$2,125 to \$3,243) in constant dollars (adjusted for inflation). By comparison, tuition and fees at private four-year institutions rose 34.6 percent (\$10,778 to \$14,508) in constant dollars over the same period.

◆ Over the same period, room and board at public four-year institutions rose 17 percent (\$3,877 to \$4,536) in constant dollars.

◆ The rate of increase for student charges at public institutions remains near 10-year lows. The 4 percent increase in average undergraduate tuition and fees for 1998-99 is the second lowest in a decade (the lowest was 3.9 percent in 1995-96). Similarly, the 4.1 percent in average

room and board is the third lowest since 1989-90 (the lowest was 3.6 percent in 1995-96). [See Figure 1]

Role of Tuition

◆ Student tuition is becoming an increasingly important source of revenue for state colleges and universities. From 1989-90 to 1996-97, the share of institutional revenue contributed by tuition increased from 14.8 percent to 18.4 percent at public four-year institutions, from 19.9 percent to 25.2 percent at AASCU institutions, and from 14.6 percent to 18.1 percent at NASULGC institutions. [See Figure 2]

◆ As a result, tuition is taking an increasing bite out of family income. The ratio of average tuition at public four-

Source: The College Board, Annual Survey of Colleges 1998-99 (Standard Research Compilation Files)

year universities to median family income in the United States has risen from 3.9 percent in 1966 to 5.7 percent in 1996, with most of the increase occurring since 1985. The story is similar for public four-year colleges, where the ratio has increased from 2.8 percent in 1966 to 4.8 percent in 1996. For both types of institutions, this ratio is projected to increase further over the next 20 years. [See Figure 3]

Public Perceptions

◆ The public generally feels that a four-year college education is a good value, but significantly overestimates its price. According to a study by the American Council on Education (ACE), more than half of those surveyed (59 percent) believe that a four-year college education is usually worth the price, compared with 45 percent for food at a grocery store and 43 percent for medical care at a hospital. However, respondents estimated that average tuition at public four-year colleges and universities is 211.6 percent higher than the actual average for 1997-98 (\$3,111 versus \$9,694). Respondents also pegged the average total price of attendance at a public four-year institution at \$17,259, which is 98.9 percent above the actual price for 1997-98 (\$8,679).³

◆ The public is not aware of what drives increases in student charges at state colleges and universities. The ACE study also found that more than one-quarter of

survey respondents (29 percent) indicated that they did not know what causes tuition hikes, and hardly any of the respondents cited shortfalls in state funding as a potential cause.⁴

Tuition and State Policy

Because public concern over college and university prices has risen markedly in the 1990s, the containment of institutional costs and student charges has gained a prominent place on the public policy agenda. AASCU's 1998 State Issues Survey reveals that while public colleges and universities are engaged in a number of activities to contain costs and thus tuition increases, state legislatures are becoming increasingly involved in these issues. This trend could alter the balance of tuition-setting authority in the states, which now resides primarily with college and university system governing boards. In particular, many legislators are interested in giving themselves more of a role in determining tuition rates, which raises a num-

ber of interesting and possibly contentious questions related to the governance of institutions and systems.

How/Why Does Tuition Increase?

◆ Public colleges and universities have sole authority to set tuition in just nine states, and shared authority in eight more. The most prominent player in tuition-setting is the college/university system governing board, which has sole or shared tuition-setting authority in 32 states.⁵

◆ Tuition levels at public colleges and universities are closely linked to changes in state appropriations. Double-digit rates of increase in student charges in the early 1990s corresponded with slowed and reduced state appropriations, while recent increases in appropriations have been matched by significantly lower rates of increase in student charges. [See Figure 4]

◆ While states continue a period of unprecedented fiscal health and higher education reaps some of its benefits, it is important to remember that this situation has emerged only recently and will not continue indefinitely. State colleges and universities have spent most of their recent increases making up for the severe cut-backs of the early 1990s, and some of their 1999 requests are in anticipation of harder economic times—when, traditionally, higher education appropriations have been disproportionately cut as state budgets are squeezed.

Note: Median family income for families with two wage earners in the paid labor force.

◆ The purchasing power of state funding for public colleges and universities continues to lag its inflation-projected levels. State appropriations per full-time equivalent (FTE) student were \$5,058 for Fiscal Year 1997—\$668 per FTE below where they would be had they been consistently increased by HEPI since Fiscal Year 1988. [See Figure 5]

◆ At the same time, tuition per FTE student was \$2,313 in Fiscal Year 1997—\$517 per FTE above where it would be had it consistently increased by HEPI since Fiscal Year 1988. [See Figure 5]

Recent Developments in Tuition Policy

◆ More than half of the respondents (51 percent) to AASCU's 1998 State Issues Survey indicated that public institutions in their state are operating under limi-

tations on their rate of increase for tuition (e.g. indexing of tuition increases to the Consumer Price Index or the Higher Education Price Index). More than three-quarters (79.6 percent) of the respondents indicated that public institutions in their state were sharing courses or programs as a cost-saving measure. Nearly one-third of the respondents reported that their state's public colleges and universities are offering guarantees that students in certain programs will be able to complete their degrees in four years, in an effort to reduce the accumulation of excess student credit hours.

◆ A number of states took up tuition-related measures in their 1999 legislative sessions. These states include:

Arizona

House Bill 2338 would allow the Board of Regents to raise tuition only if ALL of the following are satisfied:

- a public meeting on the proposed rate increase is held at each affected institution;
- a public notice of the proposed increase is given at least ten days prior to the public meeting;
- a roll call vote on the proposed increase is taken in a regular meeting of the Regents; and
- the proposed increase does not exceed the increase in the Gross Domestic Product deflator for the previous year, plus one percent.

Connecticut

Assembly Bill 14 would cap tuition and fees at public four-year institutions at one-third of "the cost of educating the student at the institution." Legislators here are also considering a number of bills to extend the state's current freeze on tuition and fees at public institutions.

Illinois

House Bills 336 and 354 would prohibit tuition increases at the state's public universities (beginning in the 1999-2000 academic year) that exceed the lesser of:

- 5 percent of the tuition rate from the preceding academic year; or

- the product of the tuition rate from the preceding year multiplied by the rate of inflation for the calendar year in which the academic year began.

New Hampshire

House Bill 243 would require the legislature's fiscal committee to approve tuition increases for the state's public university system.

South Carolina

House Joint Resolution 3143 would freeze tuition and fees at the state's public colleges and universities at 1998-99 levels until the General Assembly votes to lift the freeze.

South Dakota

House Bill 1073 would restrict increases in tuition and system fee increases by the Board of Regents to the prior year's increase in the Consumer Price Index or three percent (whichever is higher), and would require legislative approval for any increase in excess of this amount.

Virginia

House Bill 2038 would limit tuition charged by public four-year institutions to 25 percent of educational costs (defined

Figure 4

Change in Student Charges and State Appropriations, Public Colleges and Universities, 1989-90 to 1998-99

Sources: The College Board, *Trends in College Pricing 1998*; *Grapevine* (Illinois State University)

as “costs of the educational and general major program areas”). Also, Governor Gilmore announced a plan in December 1998 to cut resident tuition at public two-year and four-year institutions in the state by 20 percent (introduced as House Bill 2757 and Senate Bill 1337).

- ◆ A number of states are considering legislation related to higher education appropriations that could impact tuition-setting. These states include:

California

Assembly Bill 14 would require the state to provide its public colleges and universities with appropriations and mandatory systemwide student fee revenue equal to the prior year’s, plus an adjustment equal to the increase in the state’s per capita income. It would also require the state to fund the institutions to support enrollment growth consistent with its Master Plan for Higher Education. Finally, it expresses “the intent of the Legislature that mandatory systemwide student fees shall not be increased in any given year at a rate that is greater than the percentage increase in the California per capita personal income, which reflects increases in the purchasing power of students and their families.”

New Jersey

Assembly Bill 2217 would limit annual increases in the unrestricted operating budgets of public four-year institutions to three percent or the rate of increase in the Consumer Price Index, whichever is greater.

Financial Aid Developments

The past year has brought a number of significant changes in aid policies for college and university students. Federal aid policy has been marked by continued movement away from grants and toward loans and by the advent of substantial new tax benefits for students and their families. Student financial aid is also becoming an increasingly prominent issue at the state level, with more than a third of the states expected to take up related legislation in their 1999 sessions. Much of this attention will be devoted to merit scholarships, as the interest generated by Georgia’s ground-breaking HOPE (Helping Outstanding Pupils Educationally) Scholarship continues to spread. At the institutional level, colleges and universities have significantly increased their spending on aid over the past several years, but policy shifts at the state and federal level appear to be having an impact on how this aid is distributed.

These developments indicate continued movement in the roles and responsibilities of different stakeholders in financing higher education. For public colleges and universities, the changes stand to exacerbate the existing tension between attracting the best and the brightest students and maintaining their historical commitment to providing broad access to educational opportunity.

General Developments

- ◆ The total amount of financial aid available for postsecondary students in the United States increased 6.2 percent from 1996-97 to 1997-98, from \$56.9 billion to \$60.5 billion. From 1987-88 to 1997-98, total aid rose 81.5 percent (adjusted for inflation).⁶

- ◆ From 1987-88 to 1997-98, the portion of total aid consisting of grants fell from 45 percent to 38.9 percent, while the share consisting of loans grew from 52.3 percent to 59.4 percent.⁷ [See Figure 6]

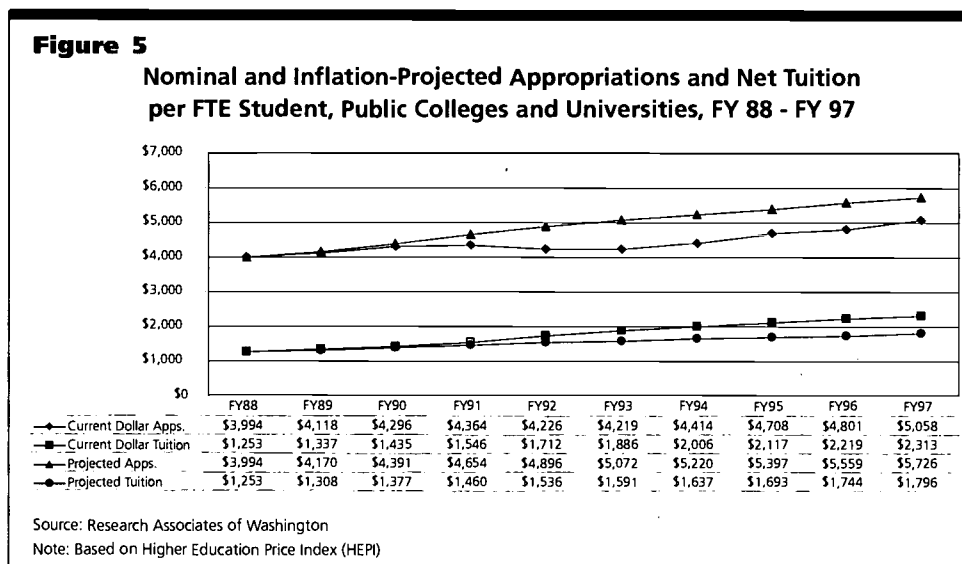

Figure 6

Grants, Loans, and Work-Study
as a Share of Total Aid, 1987-88 to 1997-98

Source: The College Board, *Trends in Student Aid 1998*

◆ From 1985-86 to 1995-96, the share of students receiving any aid at public doctoral institutions rose from 49.5 percent to 55.3 percent. Similarly, the portion of aided students at public non-doctoral institutions increased from 49.7 percent to 55.1 percent over the same period. The percentage of students receiving grants rose at all public institutions over this period, while the portion of students receiving work-study declined. The most significant participation increases during this decade were in borrowing, as the portion of students with loans rose from 26.9 percent to 36.5 percent at public doctoral institutions and grew from 24.6 percent to 34.4 percent at public non-doctoral institutions.⁸

Federal Developments

- ◆ The maximum Pell grant as a percentage of the total cost of attendance at public four-year institutions has declined from 50 percent in 1987-88 to 35.3 percent in 1997-98.⁹ [see Figure 7]
- ◆ Pell grant awards per recipient (adjusted for inflation) increased for the second consecutive year in 1997-98, following a slump that began in 1990-91. Over a ten-year period, however, the award per recipient has failed to keep pace with inflation, while the number of recipients has increased 28 percent.¹⁰

◆ By contrast, participation in the unsubsidized Stafford Loan program continues to soar. The number of recipients has grown from 150,000 in 1992-93 (the first year the loans were offered) to more than 3 million in 1997-98 (an increase of 1,837 percent). Over the same period, the inflation-adjusted loan per recipient jumped 64 percent (from \$2,310 to \$3,794).¹¹

State Developments

◆ From 1995-96 to 1996-97, states increased their expenditures on need-based student aid from \$2.48 billion to \$2.6 billion (5 percent) and boosted their spending on non-need-based aid from \$434.6 million to

\$488.3 million (12.4 percent).¹²

- ◆ From 1990-91 to 1996-97, the proportion of state aid consisting of need-based awards fell from 87.9 percent to 84.2 percent. Accordingly, the share of total state aid consisting of non-need-based awards rose from 12.1 percent to 15.8 percent.¹³
- ◆ Thirteen states reported adopting new merit scholarship programs in 1997-98. These include:

Figure 7

Maximum Pell Grant as a Percentage
of Cost of Attendance,
Public Four-Year Institutions, 1987-88 to 1997-98

Source: The College Board, *Trends in Student Aid 1998*

- *Maryland Science and Technology Scholarship Program (1998)*—Awards of up to \$3,000 per year will go to students with a high school grade point average of 3.0 or higher who seek degrees in high demand fields defined by the Maryland Higher Education Commission. Students must maintain a 3.0 grade point average in their collegiate studies to renew the award.

- *Kentucky Educational Excellence Scholarships (1998)*—Eligibility for this program is based on the student's performance in each year of high school, with the amount of the award varying by the annual grade point average.¹⁴

- ◆ Legislators in at least 17 states are expected to take up measures related to student financial aid in their 1999 sessions, about half of which will propose new merit scholarships. A number of states will also consider tax deductions or credits for payment of college tuition and related expenses.¹⁵

Institutional Developments

- ◆ From 1989-90 to 1996-97, public colleges and universi-

ties increased their spending on institutional aid by 82.5 percent (adjusted for inflation), from \$1.05 billion to \$1.92 billion. The increase for AASCU institutions was 86.6 percent (\$336.4 million to \$627.8 million), while growth for NASULGC institutions was 81.8 percent (\$756.1 million to \$1.37 billion).¹⁶ [See Figure 8]

- ◆ For public colleges and universities, the largest aid increases (adjusted for inflation) from Fiscal Year 1990 to Fiscal Year 1995 were at the institutions with the most selective admissions policies (73 percent). By contrast, the largest spending increases in the private sector were at the institutions with the least selective admissions policies (90 percent).¹⁷

- ◆ The percentage of dependent undergraduate students receiving need-based grants at public colleges and universities rose from 4.5 percent in 1989-90 to 12.5 percent in 1995-96. Over the same period, receipt of need-based grants at private institutions grew from 24.8 percent to 42.5 percent. The distribution of these awards, however, shifted from students in the lowest income brackets to students in the highest income brackets.¹⁸ [See Figure 9]

- ◆ Receipt of non-need-based grants by undergraduates at public institutions did not change between 1989-90 and 1995-96 (4.5 percent in both years). As with need-based aid, students from middle- and upper-income families saw the largest increases in participation over this period.¹⁹

Conclusion

Healthy state appropriations, coupled with institutions' efforts to contain their costs, have helped to keep increases in student charges at public colleges and universities near their lowest level in more than a decade. Moreover, increased spending on student aid at the federal, state, and institutional levels has also helped to ease the pinch of tuition increases. Finally, the recent surge of interest in scholarship and aid programs by state policymakers bodes well for many college-bound students and their families.

Other developments, however, are less encouraging. These include the continuing shift from state funding to student tuition as a primary revenue source

for institutions, as well as the growing tuition burden relative to family income. Those developments, along with the growing movement from grants to loans as a primary means of student aid, suggest an emerging view of public higher education as more of a private good than a public good. The public good/private good balance is a fundamental public policy question, one that deserves to be addressed deliberately and thoughtfully.

The appointment of a National Commission on the Cost of Higher Education in 1997 and the subsequent rise in state activity on tuition policy are important signals of public and policymaker frustration over issues of college costs and student charges. While recent studies indicate that public colleges and universities have been stepping up their efforts to contain costs and hold the line on tuition, it is clear that they will be expected to do much more in the years ahead.

As the twentieth century draws to a close, public four-year institutions face two basic challenges related to student charges and financial aid. One is to develop innovative approaches to institutional finance that preserve the quality of instruction and maintain an appropriate funding burden for students and their families. This will require the type of creativity that has guided the nation's higher education system through a half-century of unparalleled growth and change, as well as a commitment to an unprecedented level of partnership with state policymakers. The other (and perhaps more difficult) challenge will be to forcefully articulate the public good of higher education, and do it in a way that translates into meaningful and lasting public policy regarding student charges and financial aid.
