ABSTRACT

This Kids Count Report details statewide trends in the well-being of Maine's children, with particular focus on child health care access. The statistical portrait is based on a variety of indicators in five areas: (1) child health care access; (2) physical and mental health; (3) community and family environment; (4) social and economic opportunity; and (5) education and learning. Following the data for these areas, the report presents state level trend data, a Maine state profile, county-by-county profiles, 1990 census data, and definitions and sources of data. The report notes that while a brighter economy and tightened eligibility requirements have decreased welfare roles, families getting off welfare may simply be swelling the ranks of the working poor, as evidenced in the increase in numbers of children receiving subsidized school lunches and the decline in jobs paying a livable wage. In addition, the state has seen an increase in child abuse cases, children placed in the care of the state, and in substance abuse. Infant mortality and teen pregnancies are declining. With regard to access to child health care, the report shows that the state still has at least 1 in 10 children without health insurance coverage, that these children are more at risk of poor health consequences than are low-income but privately-insured children, and that free and low cost health insurance for children is available through the State Children's Health Insurance Program. Maine Kids Count

Frannie Wheeler-Berta

Maine KIDS COUNT is a project to collect and analyze data on the well-being of children in Maine. Produced in collaboration with the Maine Health Information Center, Maine KIDS COUNT provides the most comprehensive resource available today of outcomes for Maine children. Major funding for the project is provided by the Annie E. Casey Foundation as part of a national and state-by-state effort to track the status of children in the United States. Additional funders for KIDS COUNT and the Child Health Care Access Project include the Bingham Program, Jessie B. Cox Charitable Trusts and the Maine Community Foundation.

As we refine our data collection efforts and focus on specific issues, it is critical that indicators measure outcomes for children, not merely efforts made on their behalf. It continues to be important that, to the extent possible, each indicator meet several criteria: it must be reliable and consistent over time; it must reflect a salient outcome or measure of well-being in terms that are easily understandable; and it should be available on an annual basis.

Goals of Maine KIDS COUNT

The overall goal of Maine KIDS COUNT is to ensure that Maine's children thrive and become successful adults who are able to participate fully in Maine's social and economic environments. The project has identified certain desirable outcomes to measure Maine's progress in reaching this goal:

- Fewer Maine children will live in poverty;
- Children and youth will have improved access to health care and will be healthier;
- Children will enter school ready to learn;
- Family violence will be reduced;
- Teens will have more hope and purpose in their lives;
- The community will share the responsibility of raising children.

These outcomes shape the Maine KIDS COUNT project. By working towards them, we will ultimately create a Maine environment conducive to raising happy, healthy children ready to reach their full potential as adults.

The approach of a new millennium is cause for each of us to focus on the future of our state in a new century. Whether we view that future with hope or with anxiety depends on how well we believe our children, the future citizenry of our state, are faring. For those concerned about the well being of our youngest citizens, our view of the next century also depends on a stronger resolve in our state to better address the needs of our children. Here, there is certainly cause for hope. Spurred by new discoveries about the importance of the early years for the development of cognitive and social skills, and propelled by a greater understanding of the repercussions for all of us of neglecting our children's needs, Maine seems to be making significant progress.

A task force established to look at the implications of the new brain research for Maine's children has recommended a package of reforms that address the need for enriching the home environment of children by supporting parents in their child rearing responsibilities. In an alliance unique to Maine, this task force has joined forces with a greatly strengthened organization of child care providers and advocates called ACCESS to promote a comprehensive and coordinated approach to better serving the child both at home and in the child care setting. An effort is underway to educate the public at large about the importance of addressing the needs of children during the most critical stages of brain growth.

Lastly, the state is in the process of implementing a major health insurance expansion which will extend health care access to 15,000 previously uninsured children. Efforts are underway to push for continued expansion of health care coverage to additional children and families. Providing quality health care for parents is a critical step toward ensuring that they stay healthy emotionally and physically so that they can nurture their children.

This is our fifth data book providing information about the status of Maine's children. We hope that the availability of this data, collected in one document and published annually over the past four years, has contributed to the education of Mainers about the needs of children and has been part of the motivation for investing more resources in our youngest citizens. In these books, we have focused not on the programs

Ann Woloson

designed to address children's needs but on the critical indicators of how children are faring – these outcomes allow us to measure how well our efforts have been in improving the lives of Maine's children.

This year, our data highlight areas of continued concern. While a brighter economy and tightening eligibility requirements have caused welfare rolls to decline, there is evidence in the increases in the numbers of children getting subsidized school lunches, and the decline in jobs paying a livable wage, that families getting off welfare may simply be swelling the ranks of the working poor.

Partly as a result of the challenges of poverty, there is evidence that more and more Maine families are under stress and need help. Between 1996 and 1997, the number of children who were found to be victims of child abuse and neglect increased by 23%. There was an equally dramatic increase in the number of children placed in the state's care or custody because they were found either to be in jeopardy or because their parents voluntarily placed them until they could resume responsibility for their care.

Substance abuse continues to be a serious problem among our youth. This year's most dramatic evidence: a near doubling of the number of OUI arrests of drivers under 21.

We haven't done enough to reward young people who stay in high school by providing the encouragement and resources to enable them to continue their education. While we continue to have one of the lowest high school drop out rates in the nation, the proportion of Maine's high school graduates who plan to go on to post-secondary school is still below the national average.

As this information suggests, there is still much more to do. In our last two data books we emphasized the issues of access to health care and we will continue to report on those indicators. In future data books, we will try to identify and refine child development indicators that measure child well-being at younger ages, particularly as they relate to the readiness of children for elementary school. We will try to develop methods to track those benchmarks of brain development identified in the new research to identify how well our youngest children are doing. With the critically important efforts of ACCESS and the state to collect better data on child care, we will also be able to comprehensively examine the status of our early care and education system in order to assess how well it meets the needs of children as they are newly defined in the brain development research.

Our efforts continue in an environment of heightened interest to meet the needs of children. This is an exciting and inspiring time. We must remember, however,

that at the dawn of a new century, Maine and the nation are enjoying a period of economic strength that is unprecedented. The true test of our efforts and our commitment will come when we must decide where to place our resources when the economy turns downward. If our commitment remains strong, then we will know that the job of fostering an understanding of the common interest we all share in helping our children to become healthy and productive adults will have been well done. If our resolve falters in hard times, we will know that we need to redouble our efforts to convince all Mainers that in a time of scarce resources, the needs of our children must come first. We will continue, through these books as well as through our efforts to bring concerned Maine citizens together in effective alliances, to promote the wise public investments needed to insure a secure future for our children and for our state.

Table of Contents

To make the best decisions about how to improve the lives of Maine's children, we must first know how to read and interpret the available data. These pages provide an introduction. The data definitions and sources section at the end of the book provides more detailed information about individual indicators.

Changes in Indicators and Data Display

Like its predecessors, this fifth Maine KIDS COUNT Data Book features indicators from a variety of sources. It reiterates a number of indicators from earlier books which have not been updated. For example, the indicator for children aged 0-17 not living with a parent is only counted at the ten-year census. It provides updates to last year's indicators where they were available at press time. Responsible agencies of state government, for example, collect and disseminate data on immunizations, high school dropouts, and teen pregnancy every year.

What is a Year?

We understand that our indicators would be easier to use if they all represented the same years, or at least defined years in the same way. Unfortunately, our data sources can't easily accommodate these needs. Our practice is to include the most recent year available for each indicator. We use multi-year averages for those indicators that tend to vary widely from one year to the next, such as poverty estimates and child deaths. The data definitions and sources section explains how a year is defined for each indicator. A calendar year runs from January 1 to December 31. A school year runs from September of one year to June of the following year and is described in terms of both years. In Maine, a state fiscal year starts on July 1 of one year and ends on June 30 of the next year and is described by the ending year, so that state fiscal year 1998 ended on June 30, 1998.

Percents and Rates

Wherever possible, we present the indicators in this Data Book as percents or rates. These enable comparison between groups of different population size. For example, in Somerset County, 53 babies were born

Alana Burns

with weights below 2,500 grams in 1996, for a rate of 9.0%. In Cumberland County, 177 babies were born with weights below 2500 grams in 1996, yet the rate was a much lower 5.7%.

The generic formula for calculating percents or rates is:

$$\frac{(\text{number of persons or occurrences}) \times (\text{base rate, e.g. 100 or 1,000})}{\text{population-at-risk}}$$

What we mean by the population-at-risk is the population that could experience the event described in the indicator. For example, the population-at-risk for school children receiving subsidized school lunches is children enrolled in school. Percents refer to number of persons or occurrences per one hundred of the population-at-risk, and are shown with percent signs throughout this Data Book. Other rates are calculated per 1,000, 10,000, or 100,000 of the population-at-risk. For the most part, we follow commonly-used standards in our use of rates. However, at the county level, we use rate per 10,000 rather than the standard rate per 100,000 for child and teen deaths, teen violent deaths and child and teen suicides, in recognition of the relatively small populations at risk. In all cases, the indicator itself tells the base rate, while the definition in the back of the book tells the population-at-risk used to calculate the rate.

The “county thermometer” pages again include comparisons to the previous year, whenever available and in a comparable format, as well as comparisons to state-wide averages. We compare county rates to corresponding state rates using the following formula:

$$\% \text{ difference} = \frac{(\text{county rate} - \text{state rate}) \times 100}{\text{state rate}}$$

Similarly, we compare current rates to previous rates using this formula:

$$\% \text{ difference} = \frac{(\text{current rate} - \text{previous rate}) \times 100}{\text{previous rate}}$$

Increased rates are generally desirable for the following indicators on the thermometer page:

- Live births for which prenatal care began in the first trimester;
- Pediatricians, family practitioners, and general practitioners;
- General practice dentists; and
- High school graduates planning to attend post-secondary school.

Increased rates are not desirable for these indicators:

- Unemployed persons aged 16 and over;
- Births to unmarried teenaged mothers who have not completed 12 years of school;
- Low birth weight infants;
- Infant mortality;
- Child deaths;
- Teen deaths;
- Teen violent deaths;
- Child and teen suicides;
- Domestic assaults reported to police;
- Arrests of children aged 10-17; and
- High school dropouts.

For the following indicators, the goal generally is to lower the rate by reducing the need for services or programs, not by reducing eligibility:

- Children aged 0-17 on TANF;
- School children receiving subsidized school lunches;
- Children aged 0-17 participating in Medicaid;
- Children under age 18 in Department of Human Services care or custody; and
- Children with special needs as reported to the Department of Education.

Chris Haines

MAINE KIDS COUNT: CHILD HEALTH CARE ACCESS

The Maine KIDS COUNT Project was expanded last year to include the Child Health Care Access Project. The expansion, made possible by the generous support of the Bingham Program, Jessie B. Cox Charitable Trusts and the Maine Community Foundation, has provided the momentum for activities aimed at significantly improving children's access to quality health care throughout Maine.

The Child Health Care Access Project has provided research and advocacy in the following areas related to improving children's access to health care:

- Medicaid Outreach to promote expanded health insurance coverage for uninsured children in Maine through the State Child Health Insurance Program (SCHIP).
- Creation of the Maine Dental Access Coalition aimed at improving access to dental and oral health care for low-income children and families in Maine.
- Promotion of a "medical home" for all Maine children in an effort to improve access to quality primary health care services through the Rural Health Care Research Initiative.

These initiatives are aimed at significantly improving children's access to health care throughout Maine and are described in further detail throughout the 1999 Maine KIDS COUNT Data Book.

State of Maine Distribution of Uninsured Children by Parents' Employment

Health Insurance Coverage Among Maine's Children

The data continue to tell us that there are too many children, at least one in ten, who lack health insurance coverage.

*Health Insurance Coverage Among Maine's Children, The Results of a Household Survey 1997*¹ is a report sponsored by the Maine Department of Human Services based on a survey of Maine families with uninsured children. Co-sponsored by Blue Cross and Blue Shield of Maine, the Maine Children's Alliance, the Maine Community Foundation, and Maine Health, the survey was designed to provide estimates regarding health insurance coverage, or the lack thereof, among Maine children. The report indicates that, during October and November 1997, approximately 30,900 children in Maine did not have health insurance coverage. Information released by the Census Bureau and based on a five-year average of Current Population Survey data from 1993 through 1997 suggests that the percentage of children in Maine who did not have health insurance was as high as 12%. The numbers continue to tell us that there are too many children, at least one in ten, who lack health insurance coverage in Maine. These children are more at risk of not receiving the preventive services they need to remain healthy. Many go without necessary health care for an illness until it has progressed and become more serious than it might have, had treatment been sought sooner.

Health Insurance Coverage Among Maine's Children, The Results of a Household Survey 1997 provides significant insight to who uninsured children in Maine are. Key survey findings include:²

1. At the time of the survey, approximately 30,900 children in Maine, or 10 percent of Maine children, did not have health insurance coverage.

Most of these children live in families with incomes between 125% and 180% of the federal poverty level. For a family size of three, this translates into an annual income of between approximately \$17,063 and \$24,570.

2. The vast majority (85 percent) of uninsured children live in families with parent(s) who work.

The survey also reveals that employed adults with uninsured children are more likely to be working in a small and/or family-owned business, or are self-employed. It also

reveals that employed adults with uninsured children are more likely to work seasonally or part-time, compared to low-income parents with privately insured children.

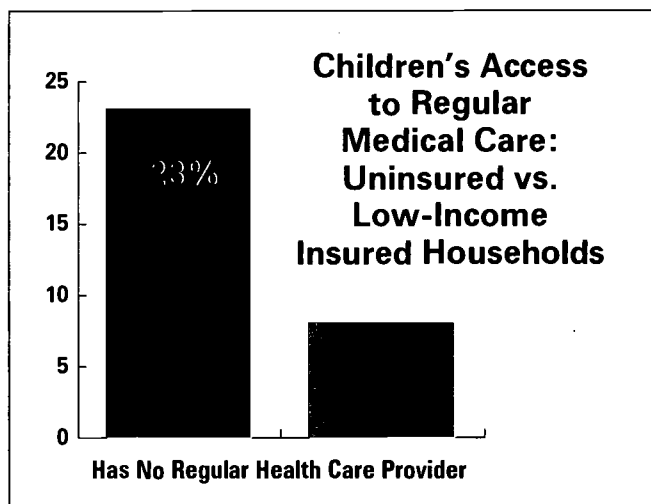

3. Many employed adults with uninsured children work for businesses that offer health insurance benefits, but they are either ineligible or cannot afford the cost.

In families where the head of household has employer-sponsored health insurance but the children are uninsured, 80 percent have employers who offer dependent coverage. Families did not purchase coverage for their children in 93 percent of these situations because it was too expensive.

4. Uninsured children in Maine are more at risk of poor health consequences than low-income, privately-insured children.

The survey confirms that children without health insurance are:

- less likely to have regular health care provider than low-income, privately-insured children;
- less likely to have a regular dentist, or to have had a dental visit in the last year, than low-income, privately-insured children;
- more likely to be in fair or poor health than low-income, privately-insured children.

The lack of health insurance, although not the only barrier to health care in Maine, clearly puts uninsured children at greater risk of experiencing health related problems. For more information regarding The Results of A Household Survey 1997, please contact the Maine Children's Alliance at (207) 623-1868.

Fannie Wheeler Berta

Free and Low Cost Health Insurance for Maine's Children: The State Children's Health Insurance Program (SCHIP)

Finally, affordable health insurance is available to families with uninsured children: Expanded Medicaid and Cub Care.

- Free or low cost insurance may be available to families even if the parent(s) are working.
- Services covered include sick and preventive visits to a doctor, immunizations, dental services, eye-glasses, hospital services, drugs, hearing and vision testing, certain transportation services, mental health and substance abuse services and more.

The Balanced Budget Act of 1997 provided federal funding to states for new children's health insurance initiatives. Maine has developed two new programs, **Expanded Maine Medicaid and Cub Care**, to help many families with uninsured children receive the coverage they need to improve their access to health care.

Expanded Maine Medicaid: This program provides health insurance coverage to children up to age 19 if their family income falls within certain limits. Although the federal legislation allowing this expansion includes some limitations regarding eligibility, enrollment in the program is based on family income only. It does not matter if a family has assets such as a car or a home.

Children are typically eligible for six months once enrolled. It is important to remember that families are allowed to make deductions from their monthly income **before** comparing it to the income guidelines listed in the chart below.

**ELIGIBLE DEDUCTIONS
for Expanded Medicaid**

Parents may deduct the following amounts from monthly gross wages before comparing income to the chart below:

- \$90 standard work deduction (can be taken if parent(s) work)
- Any child care expenses, actually paid, up to \$200 per month, per child under two years of age, or \$175 per child over two years of age
- Parents receiving child support may also deduct the first \$50 of such support from monthly income

EXPANDED MEDICAID

Approximate Gross Monthly Family Income Guidelines

Family Size	1	2	3	
Eligible Amount	\$1,007	\$1,357	\$1,707	
Family Size	4	5	6	7
Eligible Amount	\$2,057	\$2,407	\$2,757	\$3,107

Child may be eligible if monthly family income is close to the amount listed or less

Cub Care: Cub Care is health insurance available to children whose family income is higher than that allowed for Medicaid but which also falls within certain limits. Cub Care offers coverage for the same comprehensive benefits allowed under the Medicaid Program, such as visits to the doctor or dentist, immunizations, drugs, eye glasses, physical and speech therapy, hospital services, substance abuse and mental health services and more. Although the federal legislation allowing the creation of Cub Care includes some limitations regarding eligibility, enrollment in the program is based on family income only – please refer to the chart below. Children are typically eligible for six months once they are enrolled.

Families must make a small payment to receive Cub Care coverage for their child(ren), and may pay the required premium on a monthly basis, pay more than one month at a time, or can choose to pay for the entire six months at once. Monthly payments range from \$5-\$30 per month, depending on family income levels and the number of children enrolled.

CUB CARE

Approximate Gross Monthly Family Income Guidelines

Family Size	1	2	3	
Eligible Amount	\$1,241	\$1,673	\$2,105	
Family Size	4	5	6	7
Eligible Amount	\$2,536	\$2,968	\$2,757	\$3,400

Child may be eligible if monthly family income is close to the amount listed or less

The application for Expanded Medicaid or Cub Care is included on the next page. Feel free to reproduce and share it with others. Applications are also available from the Regional or District Office of the Bureau of Family Independence, Department of Human Services, or from the State’s website at <http://www.state.me.us>. Applications should be sent to the office that covers the area in which a family lives as listed on page 9. Families do not have to apply in person. Families should apply for Cub Care and Medicaid even if family income is slightly higher than that listed, as eligibility limits change every year.

Medicaid Outreach Works! The Maine Department of Human Services (DHS) has been successful in reaching out to working families with uninsured children to provide them with the information and resources necessary to get their children enrolled in Medicaid, Expanded Medicaid and Cub Care. DHS has worked diligently to simplify the application process for these programs. By coordinating efforts with the Department of Education, school age children and their families were provided with a mail-in application and information about these health insurance programs during the first week of school. Additionally, DHS has worked with the Maine Hospital Association in providing regional training to hospital staff and community members throughout Maine in an effort to provide families with information and enrollment assistance.

The numbers in the charts below show that, in a short period of time, the Department of Human Services has provided the momentum for getting information about the State Child Health Insurance Program to families who qualify and in getting many eligible children enrolled. As of January 1999, over 1,564 children had been enrolled in Cub Care and over 3,627 children had enrolled in Expanded Medicaid. This means that over 5,191 previously uninsured children now have comprehensive health insurance that will improve their access to the health care services they need.

Covering Kids Campaign: Maine has been granted significant funding from the Robert Wood Johnson Foundation under its Covering Kids Initiative aimed at providing outreach services to families and enrolling eligible uninsured and underinsured children into the State Child Health Insurance Program. The Covering Kids grant will provide resources to four partners who have played an important role in the provision of similar outreach activities in the past: the Maine Ambulatory Care Coalition (serving as the lead agency); Consumers for Affordable Health Care; the Maine Equal Justice Project; and the Maine Children's Alliance. These partners will work with the Department of Human Services in expanding outreach activities that provide the resources families need to learn more about health insurance coverage available to cover uninsured children. To learn more about this initiative or to become involved in outreach activities, please contact the Maine Children's Alliance at (207) 623-1868.

Rural Health Research Initiative: Rural Pediatricians Encourage the Use of Medical Homes in Improving Continuity of Health Care

The Rural Access Research Initiative is a project aimed at promoting medical homes in an effort to improve child access to primary health care throughout rural Maine. A medical home is described by the American Academy of Pediatrics as one which provides health care that is accessible, continuous, comprehensive, family centered, and coordinated; and is provided by well-trained physicians who are able to manage or facilitate essentially all aspects of pediatric care.³

The Community Access to Child Health (CATCH) Program is a program of the American Academy of Pediatrics which gives pediatricians the opportunity to share information about the use of community resources in hopes of improving the care of children across the country. This initiative involves the Northern New England Rural Pediatrics Alliance (NNERPA) which was formed by CATCH participants from New Hampshire, Vermont, and Maine. The group addresses specific education and communication needs of rural pediatricians by emphasizing the importance of collaborating and using community resources to improve the continuity of care for children living in rural areas.⁴

Although the Emergency Room is an important safety net for many families who are without a regular source of health care, it does not always offer the primary and preventive services children and families need to prevent or avoid future illness.

Visits to the ER also tend to be much more costly: costs can add up to three times more than most primary care providers charge. The Rural Access Research Initiative will identify patterns of emergency department/room (ER) use by children who received treatment for certain primary care illnesses such as ear infections, common colds, sore throats and asthma. Conditions or symptoms that result from these illnesses are, in most cases, treatable in the pediatrician or family practitioner's office or other primary care setting.

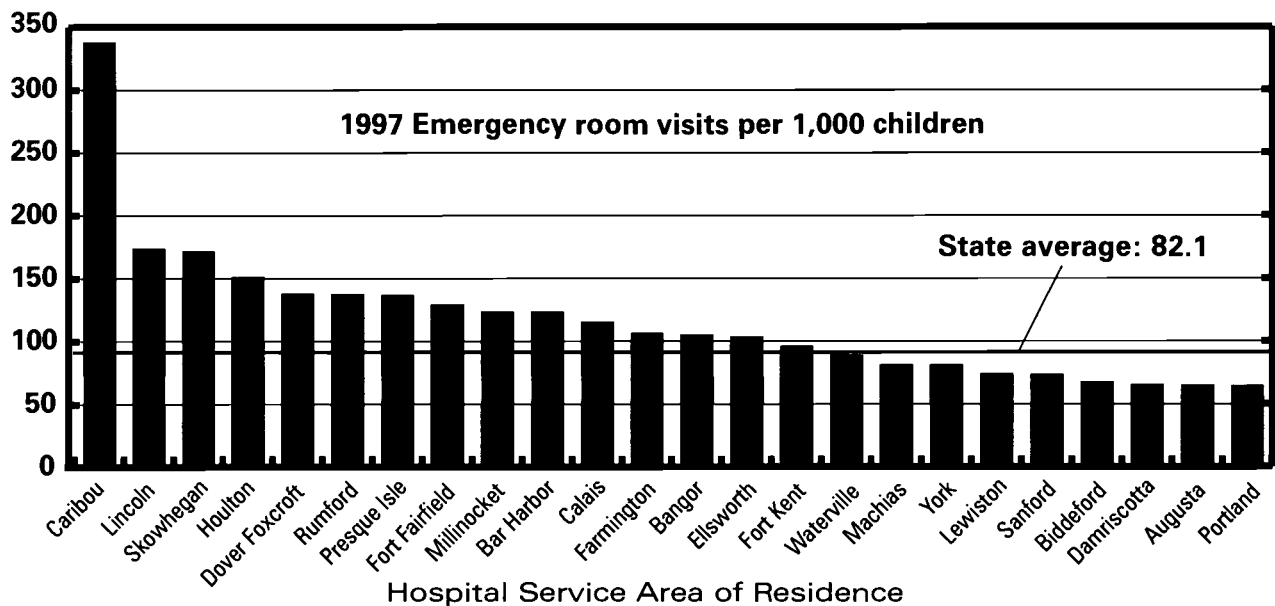

By promoting the use of medical homes, rural pediatricians will improve children's health and access to cost-effective primary, preventive and ongoing care.

Paul Kennedy

1997 Pediatric Emergency Room Use for Selected Conditions

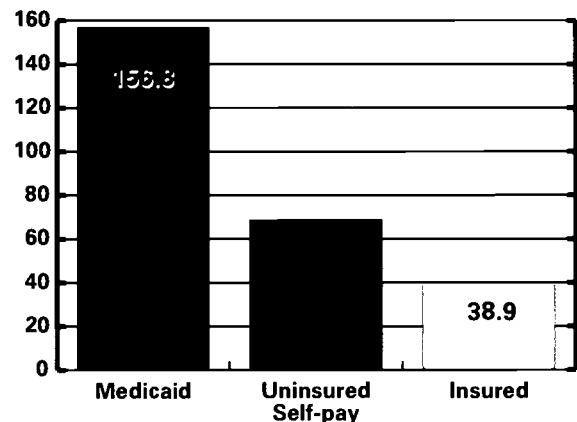

Includes ear infections, sore throat, colds, gastrointestinal, and asthma. Ten hospital service areas are not shown due to incomplete data submissions to the Maine Health Data Organization. Rates are for Maine resident children age 0-17.

Data obtained from the Maine Health Management Coalition, the Maine Health Data Organization, and the Department of Human Services will be used to identify patterns of ER use by children. The Maine Health Management Coalition consists of more than 30 large employers throughout Maine who offer health insurance coverage to employees and their dependents. Its mission is to measure and continuously improve the value of the health care services delivered to the citizens of Maine. This employer-based Coalition provided access to its claims database in order to help promote efforts to improve the delivery of health care for Maine's children. The Coalition data will be used to provide some detail regarding the use of the ER by children with private insurance who live in families receiving coverage through employment. This will help determine if there are geographical differences in emergency room use that are independent of health insurance coverage. The Department of Human Services will provide information regarding ER use by children with Medicaid coverage. The Maine Health Data Organization (MHDO) collects data from hospitals and will provide information regarding children for whom services are paid for by family members (self pay) and/or who are uninsured. The MHDO will also provide information that can be used to verify or correlate data obtained from the other two sources previously mentioned.

1997 Pediatric Emergency Room Use for Selected Conditions

Includes ear infections, sore throat, colds, gastrointestinal, and asthma. Rates are for Maine resident children age 0-17. The numerator is based on hospital emergency room data submitted to the Maine Health Data Organization. Medicaid denominator is children age 0-17 participating in Medicaid during 1997 as reported in the 1998 Maine KIDS COUNT Data Book. The uninsured denominator was taken from *Health Insurance Coverage Among Maine's Children, The Results of a Household Survey 1997*. Institute for Health Policy, University of Southern Maine (p.10, Table 2).

These sources will provide the data regarding emergency department use in designated hospital service areas (HSAs) throughout the state during the calendar year 1997.

School Based Health Centers Expand in Maine

The information will be used to identify patterns of ER use by children for the treatment of primary care illnesses including ear infection, sore throat, common cold, stomach and intestinal problems and asthma. It will be useful to primary care providers in rural areas in perhaps identifying high ER use areas, children who are more likely to use the ER rather than a medical home, and frequent and repeat ER users. Rural pediatricians will develop standards of care that can be shared with other resources in their communities and will work together in ensuring that children living in rural Maine have access to and know how to use a medical home that meets their primary care needs.

What the Data Show Us So Far... A total of 24,581 pediatric hospital emergency room visits were identified statewide in 1997 for the conditions previously identified. The average rate of visits for these selected conditions per 1,000 children was 82.1. The rates varied significantly by hospital service area from a low of 64.5 to a high of 337.8 (per 1,000 children). Preliminary analysis of data obtained at the printing of this book shows a **strong correlation between population density and emergency room rates**. Areas of lower population density have higher ER visit rates for the conditions studied. Although there are some exceptions, the geographical differences are quite striking with virtually the whole urban and southern portion of the state having lower rates and the northern or rural areas having higher visit rates. It is also worth noting that **many of the areas showing high ER rates for the selected diagnoses also had high rates of pediatric hospital admissions of medical conditions such as asthma, stomach and intestinal illness and pneumonia. The rate for the uninsured/self pay population (68.8 per 1,000 children) was 77% higher than the rate for insured children (38.9). Children with public insurance (Medicaid) had the highest rate of 156.8.**

The data will be further analyzed in an effort to determine when and why some children utilize the ER more frequently than others and to develop strategies for improving access to primary care services throughout rural Maine. Please contact the Maine Children's Alliance at (207) 623-1868 for more information regarding the Rural Access Research Initiative.

School Based Health Centers continue to emerge in Maine as a promising approach for improving children's and adolescents' access to health care services. The development of new School Based Health Centers creates a realistic opportunity to improve the health of many children throughout Maine. The National Adolescent Health Information Center acknowledges that health care systems have traditionally had difficulty in serving adolescents well. As many children, particularly adolescents, have special health concerns, school based health centers offer an avenue for providing health services that may otherwise be underutilized.

The number of school based health centers in Maine will expand to over 16 in 1999. Although some of the new centers are still in a planning phase, their development is critical to improving children's access to health care. Services offered by School Based Health Centers vary and may include diagnosis and treatment of acute conditions and management of chronic illnesses such as asthma. Some centers have basic laboratory capabilities for diagnosing illness, such as strep throat cultures. Some provide mental health and substance abuse services or preventive health care services such as sports physicals or smoking cessation programs. Some are the first to respond to emergency situations involving students during school hours. These centers also serve as an important referral resource, connecting students to primary care providers and other needed health services.

School Based Health Centers are located or are being developed at:

Bonny Eagle High School	(207) 929-3840

**Children With Medicaid Coverage
Seen by Dentists for Preventive Care
Calendar Year 1997**

Providing health care services in the school setting may provide healthier outcomes in the future for many Maine children. For more information regarding Maine's School Based Health Clinics, contact the Maine Department of Human Services, Bureau of Health at (207) 287-5364.

The Maine Dental Access Coalition

Too many Maine children and families lack access to dental care.

Created in June of 1997, the Maine Dental Access Coalition addresses dental access issues specific to the needs of children and families in Maine for whom access to oral health care is increasingly limited. The Coalition has grown to include more than 50 members representing consumers, dentists, hygienists, physicians, other health care providers, health educators, consumers and advocates, state agencies and Maine's Legislature. Its mission is to improve access to quality oral health care services throughout Maine through the development of a system that emphasizes the importance of preventive and restorative oral health care.

The work of the Coalition is important to low-income Maine children whose families are unable to pay for dental care at the time services are delivered. Improved access is also an issue for children covered by Medicaid; it is estimated that less than one third of these children accessed preventive oral health services in 1997. Though there are over 400 general practice dentists and pedodontists practicing in Maine, less than 275 provided preventive services to children with Medicaid coverage in 1997. Of those 275 dentists, only 15, or 3.7%, provided 43% of the preventive dental services to Medicaid recipients that year.

Health care advocates are genuinely appreciative of those who provide significant dental and oral health services to children living in low-income families. There is much concern, however, over the lack of willingness by many dentists to provide such services at some level. Reasons for the lack of participation by dentists in the State Medicaid Program include various social, economic and administrative issues that frustrate dentists and families covered by Medicaid. These issues create barriers to oral health care for many children in Maine. Without early preventive services, many Maine children will face major oral health problems as they grow, including the possibility of significant tooth decay and/or gum disease.

Medicaid Patient Load	Maine Dentists*	Percent of Dentists	Numbers of Children Who Received Preventative Care	Percentage of Children Who Received Preventative Care
No patients	134	33.0%	0	0.0%
1-10	64	15.8%	304	0.9%
11-50	87	21.4%	2,320	7.0%
51-100	45	11.1%	3,158	9.5%
101-500	61	15.0%	13,106	39.3%
501 & over	15	3.7%	14,480	43.4%
Total	408	100.0%	33,368	100.0%

*Excludes orthodontists and oral surgeons

The Maine Department of Human Services is working towards improving many of the factors that have discouraged dentists from participating in the Medicaid Program in the past. The changes include an increase in the rates of reimbursement offered to dentists who provide services under the program as well as many administrative changes within the program itself. The Department offers assistance to families with Medicaid coverage in finding a dentist, and in getting transportation to appointments through its HealthWorks toll-free telephone line at 1-800-977-6740. Dentists are also encouraged to use HealthWorks as an avenue for making suggestions that may improve access to dental care under the program and also to request assistance on behalf of their patients who have. Some have had problems getting to appointments.

There is still much that needs to be done, however, to ensure all children have access to oral health care services. Please contact the Maine Children's Alliance at (207) 623-1868 for more information regarding the Maine Dental Access Coalition.

Physical and Mental Health

Maine continues to lead the nation in many areas related to child health:

- Maine's infant mortality rate continues to decrease and is the lowest in the United States.
- The percentage of live births in Maine for which prenatal care began in the first trimester continues to increase and remains one of the highest in the nation.
- Tied only with Massachusetts, Maine has the highest immunization rate among 2-year old children.
- The percent of low birth-weight infants born in Maine continues to decline and remains less than the national rate.

Preventive health care continues to play a significant role in the health status of Maine's young children. In 1996, the percentage of live births for which prenatal care began during the first trimester increased from 88.6% the previous year to 89.7%, remaining substantially higher than the national rate of 81.9%. Maine's infant mortality rate continues to decline, with a five-year average of 5.8 per 1000 births during the period 1992-1996. In 1997, Maine's infant mortality rate was 3.7 and has been said to be the lowest in the country and perhaps even in the world. The percent of Maine two-year olds who were age appropriately immunized in 1997, 88.7% remains the highest in the United States,

Paul Kennedy

tied only with Massachusetts. Finally, the already low percent of low-birth weight babies born in Maine continued to decrease from 6.1% in 1995 to 5.9% in 1996. Healthier babies are born every day in Maine and many of our young children are getting the preventive services they need to thrive. The numbers show us that programs that improve access to prenatal care, child immunizations, and other programs that support pregnant women and children, improve outcomes for children throughout Maine.

Other numbers however, represent areas of concern for our children as they grow. It appears, for example, that the percent of Maine children who received preventive health screenings under the State Medicaid Program, as a percent of those who should have received such services, continued to decrease from 64% in 1996 to 60% in 1997.

Reasons reported for the decline range from changes in outreach activities aimed at promoting participation in prevention services, to differences in how health care providers' report the provision of preventive services to the Medicaid State Agency. In an effort to improve access to preventive services offered under the program, the Department of Human Services has made some administrative changes to the program. These changes include the use of the new Bright Futures Health Assessment Form and the Medicaid Incentive Program for Physicians who participate actively in providing preventive and continued care to children enrolled in the Program.

The Department also provides outreach to families regarding preventive health services covered by Medicaid through the State Immunization and IMPACT Programs and through the health benefits advisor for the Medicaid Program, HealthWorks. These programs share the responsibility for providing outreach activities that assist families with Medicaid coverage in accessing the preventive and diagnostic health care children should have. Families with Medicaid coverage are encouraged to contact HealthWorks at 1-800-977-6740 for assistance in accessing preventive health care and in arranging transportation to medical appointments. Physicians and other health care providers who offer preventive services are also encouraged to use HealthWorks as an avenue for sharing concerns and making suggestions that may improve access to preventive services offered under the program.

The reported number of children age 0-14 who used the services of licensed alcohol and drug abuse treatment providers, doubled from 76 in 1996 to 152 in 1997. The number of children age 15-19 using such services also increased, from 743 in 1996 to 971 in 1997. Reasons for the increase included a conscientious effort by the Maine's Office of Substance Abuse to ensure that services already available were also accessible to those who really need them. The increase in the number of children accessing substance abuse services tells us that we must continue to improve access to prevention opportunities that are available and strive for the expansion of resources that meet the mental health and substance abuse concerns of Maine youth.

The Maine Children's Alliance, through KIDS COUNT and the Health Care Access Project, will continue to provide information regarding children's access to health care. Policy changes that affect the physical and mental health of children will be monitored in a continued effort to track improved health outcomes for Maine's children.

Community and Family Environment

Between 1996 and 1997 the number of children who were determined by the state to be victims of child abuse and neglect jumped from 4,656 to 5,725, a 23% increase. In 1997 4,222 domestic assaults were reported to police in Maine.

Some of the new research on brain growth focuses on the role of certain hormones in the development of the brain. The findings of this research underscore the importance of the quality of the attachment between children and their parents and between children and their care givers. If a child experiences a stable, warm and nurturing relationship with the adults in their life, they will develop the capacity to control their own emotions, a skill critical for later success in life.

If, on the other hand, a child has experiences with adults that cause undue stress, the child's body will release excessive amounts of cortisol, a hormone which at higher levels can lead to fewer electrical connections being made in the brain. The continued release of this hormone can cause a child to become stuck in a high alert state even when there is no danger. This state can lead to aggression, emotional, and behavioral problems and can undermine the ability of children to take in the stimuli necessary to the development of critical cognitive and social skills.

Emma Dillon, Sherwood Heights School, Auburn

K. Wall

Between 1996 and 1997 the number of children who were determined by the state to be victims of child abuse and neglect increased dramatically from 4,656 to 5,725, a 23% increase. While the total number of referrals for child abuse and neglect actually went down between 1996 and 1997, the total number deemed appropriate for referral (cases not initially screened out) increased from 7,298 to 8,016. Most of the increase in the number of victims of child abuse and neglect fell into the categories of sexual abuse (25.8% increase), neglect (22.2% increase) and emotional abuse (35.7% increase). The increase in the total number of child abuse and neglect victims may in part reflect efforts the State has made to improve the quality of its risk assessment capabilities, coupled with a rise in the number of families experiencing multiple problems. The number of children who were placed in the care or custody of the state jumped from 2,294 in July, 1996, to 2,939 in January, 1998. Some of this increase may be due to improved risk assessment, combined with significant efforts by Maine's judiciary to better understand the effects of child abuse and neglect and improve the court's role in protecting children. In any case, this increase is a warning to all of us that an increasing number of children and families in Maine are under stress and need help.

Between 1996 and 1997 the number of allegations of child abuse and neglect that were not investigated due to a lack of resources increased from 2,823 to 3,425.

To add to the tragedy of child abuse and neglect, the state lacks sufficient resources to investigate all of the referrals they deem appropriate. Between 1996 and 1997, the number of appropriate referrals for child protective

(continued, page 22)

Social and Economic Opportunity

Almost one in three children in Maine receive free or reduced price school lunches.

Almost 16% of Maine's children live below the federal poverty level. Many more live in families where parents work hard at low wage jobs that place them just above the poverty line, but still don't offer an income adequate to meet basic needs. In school year 1996-97, almost one third (31.6%) of Maine's school children receives free or reduced price school lunches. A brighter economy has helped reduce the caseloads for welfare assistance in Maine, but it is clear that families leaving the welfare rolls, as well as working poor families who have not been on welfare, are still relying on supplemental assistance such as subsidized school lunches to get by. Too many of Maine's jobs do not pay a livable wage. The proportion of Maine's jobs that pay enough to meet basic necessities has gone down from 76% in 1995 to 67.2% in 1997.

One reason why there has been such an emphasis on the importance of the new brain research for disadvantaged children is that the risk factors associated with poor brain development are also so closely linked with poverty. While neglect and excessive stress occur in families across the income spectrum, the challenges of poverty place low-income families at particular risk. When parents are so overwhelmed with the struggle to survive, when they are worried every day about whether they will be able to feed their children and keep them housed and safe, the stress involved can sap the energy they need to nurture and stimulate their children. Children who are not spoken to often enough, who do not have opportunities to explore and discover, are denied the chance to develop to their fullest potential cognitively and emotionally.

▲ This indicator has changed from that used in last year's Data Book. Please see each indicator's definition for the exact changes.

While the new research on the brain certainly highlights the need for early interventions to address the specific risk factors scientists have identified, it should also give a new urgency to efforts to improve the economic status of Maine's families with children.

Education and Learning

Maine's high school drop out rate is the sixth lowest in the nation. Yet the proportion of Maine's high school graduates who plan to attend post-secondary school is lower than the national average.

According to the most recent national rankings, in school year 1995-96, Maine's high school drop-out rate slipped from second lowest in the country to sixth lowest. The most recent rate available, as of this printing for the 1996-97 school year, is about the same as in the previous year (2.98%). While we can still take great pride in our national ranking, we should be concerned about the many young people in Maine who are graduating from high school without the high expectations about their future and the financial resources to enable them to go on to post secondary education. Maine's percentage of youth who plan to continue their education past the secondary level (62.5%) in the school year 1996-97 represents a decrease over the previous school year and is below the national average of 72%. If Maine is to attract higher paying jobs, then we must provide the encouragement and resources necessary to enable more of our youth to receive the education they need to become highly skilled workers. The well-being of our families and the economic stability of our state are at stake.

Maine's regulations for family child care homes permit a provider, by herself, to care for three infants, three preschoolers and two school aged children, not counting her own children. Approximately 4,000 working poor families in Maine are on a waiting list for child care assistance.

Maine also must focus resources on the other end of the education continuum – early education during the first years of life. The widely publicized research on brain development demonstrates that early experiences, whether negative or positive, heavily influence brain development and either enhance or undermine the innate ability of children to gain a healthy foundation for lifelong thinking, learning and social interaction. Particularly for at-risk children, gains in cognitive and social development are best accomplished through

both high-quality preschool education programs and parenting education/home visiting to support parents in providing the nurturing care and stimulation their children need to grow and thrive.

Yet compared to a total of approximately 14,000 babies born to families in Maine each year, only 1,000 families are currently receiving assistance from Maine's home visitation and family support programs. Approximately 4,000 working poor families must remain on a waiting list for child care subsidies. Maine's regulations for family child care homes allow a provider, by herself, to care for three infants, three preschoolers, and two school aged children not counting the provider's own children. In our state, child care workers earn an average hourly wage of \$6.79, above the national average of \$6.12 for child care workers, but still well below the average hourly wage of \$9.64 for all workers in Maine. Almost three-quarters of Maine's children under age six live in families where parents are working outside the home, compared with 63% nationwide. Because such a high proportion of these children live in low-income families, there is a critical need for affordable quality child care: child care that provides the stimulation and guidance that build social and cognitive skills.

▲ This indicator has changed from that used in last year's Data Book. Please see each indicator's definition for the exact changes.

● New Indicator

Maine needs to make a stronger commitment to early education. Standards of care need to be strengthened, better coordination between services needs to occur, and substantial new resources need to be found to enable children to gain access to quality early education services, at home and in the child care setting, regardless of family income.

Community and Family Environment *(cont'd from Page 18)*

services which were not assigned due to a lack of resources jumped from 2,823 to 3,425, continuing a worsening trend in the state's capacity to protect children. In 1998 the State began to enter into partnerships with community agencies to address this problem.

In addition to addressing the need for stronger child protective services, Maine needs to focus resources at the front end to prevent child abuse and neglect by supporting and educating parents to better meet the challenging task of raising their children. The new research on brain development shows that the stress of abuse and neglect and the experience of witnessing violence in the home have a biological effect on a child's brain that can seriously harm a child's emotional and cognitive development. Early intervention programs that help educate and support families in their child rearing responsibilities, starting even before a child is born, have

proven highly effective. For example, a study of the first five years of a Parents Are Teachers Too (PATT) program in Waldo County found only two incidents of substantiated child abuse among PATT families in an area with the highest rate of child abuse in the state. Yet in Maine, because of under funding, only about 1,000 families in need of these services are able to receive them.

Between 1996 and 1997, the number of OUI arrests of drivers under 21 almost doubled.

Maine continues to struggle with the issue of substance abuse among our youth. Between 1996 and 1997, OUI arrests of drivers under 21 (Operating Under the Influence of alcohol or drugs or any combination of the two) almost doubled from 848 to 1,654. There was a parallel increase in the number of licenses suspended among young drivers from 642 in 1996 to 1,010 in 1997. While these numbers may be due in part to stronger law enforcement, the size of the increase should be a warning to us that more intervention is required with our teens. A study of motor vehicle crash data in Maine revealed that per licensed driver, the rate of alcohol-related crashes, was almost three times higher for young drivers than for older drivers; and that young drivers are three times more likely than older drivers to be injured in a motor vehicle crash. Education about the tragedy of fatal accidents due to driving while under the influence, presented in ways that have proven to be effective with teens, needs to be supported and expanded. Risky behaviors need to be prevented and healthy behaviors rewarded.

Maine Two Year-Olds Who Were Age-Appropriately Immunized

Percent of Two Year-Olds

1991-92	65.3
1992-93	70.1
1993-94	71.1
1994-95	74.3
1995-96	84.0
1996-97	89.0
1997-98	87.8

Source:
Maine Department
of Human Services,
Immunization
Program

Immunization protects children from diseases such as measles, mumps, rubella and polio. State-wide estimates are based on retrospective surveys of children entering school. Age-appropriate immunizations include 4 diphtheria/pertussis/tetanus, 3 polio, and 1 measles/mumps/rubella vaccine, administered in a series of well-child visits to a health professional. The immunization rate in Maine is one the highest in the United States.

Maine Infant Mortality

Deaths/1,000 live births

1986	8.7	1992	5.6
1987	8.1	1993	6.4
1988	7.9	1994	6.1
1989	7.0	1995	6.2
1990	5.9	1996	5.8
1991	6.7		

Source:
Maine Department of
Human Services, Office of
Data, Research,
and Vital Statistics

Infant mortality rates are a widely-used indicator of the health and well-being of a population. Maine has the lowest infant mortality rate in the United States.

Maine Child and Teen Suicide Rate

**Suicides/100,000
10-19 year-olds**

1988	10.7
1989	8.0
1990	7.5
1991	8.6
1992	8.7
1993	7.5
1994	5.8
1995	4.5
1996	6.1

Source: Maine Department of Human Services, Office of Data, Research, and Vital Statistics

Suicide is the ultimate form of self-destructive behavior. Child and teen suicide is a matter of great concern in Maine and in the United States.

Maine Teen Pregnancy

**Pregnancies/100,000
10-17 year-old females**

1988	15.8
1989	15.0
1990	14.6

1992	11.5
1993	11.6
1994	10.6
1995	11.8
1996	10.0

Source: Maine Department of Human Services, Office of Data, Research, and Vital Statistics

Teen pregnancy places both the young mother and her child at risk for a variety of medical, social, and economic problems. Rates are shown for 10 through 17 year-olds, for whom the risk of problems is greatest. Maine has one of the lowest teen pregnancy rates in the country.

Reported Domestic Assaults in Maine

**Assaults/100,000
population**

1987	223
1988	236
1989	301
1990	305
1991	355
1992	356
1993	331
1994	355
1995	315
1996	315
1997	341

Source: Maine Department of Public Safety, Uniform Crime Reporting Division

While most of the victims of domestic violence are women, children may be the victim or the perpetrator of a domestic assault. They are also witnesses to violence and its effects.

Arrests of Maine Children Aged 10-17

Arrests/1,000 10-17 year-olds

1988	66.6
1989	62.4
1990	64.2
1991	69.5
1992	69.6
1993	66.5
1994	74.6
1995	82.3
1996	90.4
1997	90.2

Source: Maine Department of Public Safety, Uniform Crime Reporting Division

Children and adolescents who are arrested have often committed previous minor infractions noted by their parents, teachers, or neighbors. Arrests are made for causes ranging from homicide and robbery to vandalism and operating under the influence. The overall rate of arrests for Maine children and adolescents continues to be a concern.

Maine School Children with Special Needs

Rate /1,000 students

1991-92	124.4
1992-93	128.9
1993-94	130.4
1994-95	134.5
1995-96	140.1
1996-97	144.9
1997-98	157.2

Source: Maine Department of Education, Division of Special Services

Children with a variety of disabilities, including learning disabilities, behavior impairments, speech and language impairments and developmental disabilities, receive supplemental services from their schools. The percent of all children enrolled in school who receive such services has increased each year in Maine.

Maine High School Graduates Planning to Attend Post-Secondary Education

Percent of Graduates

1990	54.7
1991	56.0
1992	55.9
1993	57.3
1994	58.4
1995	59.4
1996	62.5
1997	60.7

Educational attainment reflects self-esteem and motivation and is a positive indicator of success in later life. Since 1990, an increased proportion of Maine high school graduates planned to attend post-secondary education, whether college or technical school.

MAINE CHILDREN'S ALLIANCE

Dear Reader:

This letter is to bring your attention to errors that have been found in the current printing of the 1999 Maine KIDS COUNT Data Book. We would like to take this opportunity to explain these errors. In addition, we would like to call your attention to our web site, www.mekids.org, which is continuously updated with the most recent data and information regarding children and families.

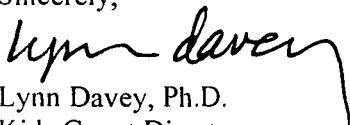

- The "Child Well-Being Indicators" pages for Franklin and Kennebec Counties were reversed. In the published book, the indicators on page 39 are actually for Franklin County, while page 35 contains the indicators for Kennebec County. To correct the problem and alleviate any confusion, we have enclosed newly printed pages for these two counties that you may insert into your data books.
- On page 17, ten indicators are incorrectly marked with a percentage sign when they should be rates per 1,000. Please disregard the % marks for all indicators that are defined in the text as rates.
- New Federal Poverty Levels were issued on March 18, 1999. Please make note of the following changes in the income eligibility guidelines for Expanded Medicaid and Cub Care that were listed on Page 6.

Family Size	Expanded Medicaid	Cub Care
1	\$1,030	\$1,271
2	\$1,383	\$1,706
3	\$1,735	\$2,140
4	\$2,088	\$2,575
5	\$2,440	\$3,010
6	\$2,793	\$3,445
Each additional member	\$ 353	\$ 435

- Population totals on the State of Maine page 26 were misstated, please change the following: 5-17 year olds should be 228,335, 10-17 year olds should be 143,802, and 18-64 year olds should be 770,378.
- In Penobscot County, page 47, Teen Deaths should be 5 with a rate of 4.4.
- The Maine Department of Education aggregates data from private schools in the State as one group, without regard to the county in which the private school is situated. There are two State totals that need explanation because of this. On page 27, the 1,981 High School dropouts include 90 private school dropouts that are not accounted for in the separate county pages. Similarly, the 8,158 high school graduates planning to attend post-secondary school, includes 725 private school students who are not accounted for in the separate county pages.
- On page 27, the individuals with disabilities aged 3-21 total is incorrect. The total, which is reflected on page 21 as well, should be 33,739. The reporting period on this indicator on the State and County pages should be 1997 - 1998.

Please feel free to call the Maine Children's Alliance if you need further clarification. And again, please check our web site for the most current and complete information.

Sincerely,

Lynn Davey, Ph.D.
Kids Count Director

Adults aged 18 and over who have completed high school or equivalency, 1990.

Includes persons whose highest degree was a high school diploma or its equivalent, persons who attended college or professional school, and persons who received a college, university, or professional degree. Persons who reported completing the 12th grade but not receiving a diploma are not included. Percent calculated using a denominator of 1990 Census population data for adults aged 18 and over.

Source: U.S. Bureau of the Census, September 1992. Table P60, 1990 Census of Population and Housing Summary Tape File 3a.

Alcohol-related license suspensions for drivers under age 21; rate per 1,000 licensed drivers under age 21, 1997.

Number of license suspensions for drivers under age 21 with a blood alcohol count of .02 or greater during 1997. Rate is that number divided by the total number of licensed drivers under age 21 in 1997.

Source: Maine Bureau of Highway Safety.

See also: OUI arrests for drivers under age 21.

Alcohol use

See: Alcohol-related license suspensions for drivers under age 21; Children aged 0-14 using services of licensed alcohol and drug abuse treatment providers; OUI arrests for drivers under age 21; High school students reporting alcohol use within past 30 days; Youth aged 15-19 using services of licensed alcohol and drug abuse treatment providers.

Arrests for crimes against persons of children aged 10-17; rate per 1,000 children aged 10-17, 1997.

Total number of arrests of children aged 10-17 for crimes against persons including: murder and non-negligent manslaughter, forcible rape, robbery, and aggravated assault; does not include other assaults. The annual arrest data count all arrests of youth for crimes against persons during calendar year 1997, including repeated offenses by the same individual. Rate is the total number of arrests for crimes against persons divided by the estimated number of 10-17 year-olds in 1996, using data prepared by the Office of Data, Research and Vital Statistics. National rate is for 1995.

Source: Maine Department of Public Safety, Uniform Crime Reports, 1997; 1995 national rate from the Annie E. Casey Foundation, *Kids Count Data Book: State Profiles of Child Well-being*, 1998.

Arrests of children aged 10-17; rate per 1,000 children aged 10-17, 1997.

Total number of arrests of children aged 10-17 for crimes including manslaughter, rape, robbery, aggravated assault, burglary, larceny, motor vehicle theft, forgery and counterfeiting, fraud, stolen property, vandalism, possession of a weapon, prostitution, sex offenses, drug and alcohol related offenses, violation of liquor laws, driving under the influence, drunkenness, disorderly conduct, and curfew and loitering law violations. The annual arrest data counts all arrests of youth for offenses during calendar year 1997, including repeated offenses by the same individual. Rate is the number of arrests divided by the estimated number of 10-17 year-olds in 1996, using data prepared by the Office of Data, Research, and Vital Statistics.

Source: Maine Department of Public Safety, Uniform Crime Reports, 1997.

Chelsea Brunetti, Presumpscot School, Portland

Births to married teenaged mothers as a percent of total live births, 1996.

The percent of total live births to married women under age 20 in calendar year 1996. Births are reported by the mother's place of residence at the time of birth.

Source: Maine Department of Human Services, Office of Data, Research, and Vital Statistics.

See also: Teen pregnancy rate.

Births to single teenaged mothers as a percent of total live births, 1996.

The percent of total live births to unmarried women under age 20 in calendar year 1996. Births are reported by the mother's place of residence at the time of birth.

Source: Maine Department of Human Services, Office of Data, Research, and Vital Statistics.

Births to unmarried teenaged mothers who have not completed 12 years of school; rate per 1,000 females aged 10-19, five-year average, 1992-1996.

Births to unmarried females aged 10 through 19 who have either not completed high school and are still in school, or who have dropped out of school. The data reflect the mother's place of residence at the time of birth. They are averaged over a five-year period (1992-1996) to smooth out annual fluctuations, and as a rate per 1,000 females aged 10 through 19 residing in the area during the five-year period. Population data used in the denominators to calculate the rates are based on estimates developed by the Office of Data, Research, and Vital Statistics.

Source: Special tabulations by the Maine Department of Human Services, Office of Data, Research, and Vital Statistics.

▲ This indicator has changed from that used in last year's Data Book. Please see each indicator's definition for the exact changes.

Child abuse

See: Requests for child abuse and neglect services; Substantiated child abuse and neglect victims.

Child and teen suicides; rate per 100,000 children aged 10-19, five-year average, 1992-1996.

Deaths of children aged 10 through 19 for which suicide was listed as the cause. The data are reported by the child's place of residence, not the place of death. They are averaged over a five-year period (1992-1996) to smooth out annual fluctuations and to protect confidentiality. Population data used in the denominators to calculate the rates are based on estimates developed by the Office of Data, Research, and Vital Statistics. Rates are calculated per 100,000 at the state level to be consistent with standard mortality data reporting practices, per 10,000 at the county level for ease in interpreting relatively rare occurrences and small base populations.

Source: Special tabulations by the Maine Department of Human Services, Office of Data, Research and Vital Statistics; 1996 national rate from National Center for Health Statistics.

See also High school students reporting at least one suicide attempt in the last year.

▲ Child day care, April 1998.

Total licensed slots refers to the number of child care spaces for children available statewide in facilities licensed or certified by the Department of Human Services, Bureau of Child and Family Services, in April, 1998. The number of children served refers to the total number of children served through contracted slots and vouchers. The percentage is calculated as the number of children served as a percentage of the total number of licensed and certified slots available. Number of children served in child care contracted slots and child care vouchers have not been previously reported.

Source: Maine Department of Human Services, Office of Child Care and Head Start.

See also Head Start Program.

Child deaths; rate per 100,000 children aged 1-14, five-year average, 1992-1996.

Deaths from all causes to children from ages 1 through 14 per 100,000 children in this age range. The data are reported by the child's place of residence, not the place of death. They are averaged over a five-year period (1992-1996) to smooth out annual fluctuations. Population data used in the denominators to calculate the rates are based on estimates developed by the Office of Data, Research, and Vital Statistics. Rates are calculated per 100,000 at the state level to be consistent with standard mortality data reporting practices, per 10,000 at the county level for ease in interpreting relatively rare occurrences and small base populations.

Source: Special tabulations by the Maine Department of Human Services, Office of Data, Research and Vital Statistics; 1995 national rate from the Annie E. Casey Foundation, *Kids Count Data Book: State Profiles of Child Well-being*, 1998.

See also Infant mortality; Teen deaths; Teen violent deaths.

Child support enforcement, cases with collection, 1995.

The number of families with children for which the state child support enforcement agency successfully collected child support payments due, as a percent of the total number of families on the agencies caseload during state fiscal year 1995. In this year, Maine ranked 4th in the nation in terms of successful cases.

Children aged 0-14 using services of licensed alcohol and drug abuse treatment providers; rate per 1,000 children aged 0-14, 1997.

The number of individual children aged birth through 14 using services provided by Maine alcohol and drug abuse treatment facilities with state funding, Driver Education Evaluation Program certification, or certification to dispense methadone, during calendar year 1997. Population data used in the denominator to calculate rates are 1996 estimates developed by the Office of Data, Research, and Vital Statistics.

Source: Maine Addiction Treatment System, Maine Department of Mental Health, Mental Retardation, and Substance Abuse Services.

See also Alcohol-related license suspensions for drivers under age 21; OUI arrests for drivers under age 21; High school students reporting alcohol use within past 30 days; High school students reporting use of inhalants at any time during their life; High school students reporting marijuana use within past 30 days; High school students reporting use of any form of cocaine within past 30 days; Youth aged 15-19 using services of licensed alcohol and drug abuse treatment providers.

▲ Children aged 0-17 in Department of Human Services care or custody; rate per 1,000 children aged 0-17, January, 1998.

Children ordered into Department of Human Services custody as a result of a child protection hearing where the child is found to be in jeopardy, a juvenile hearing where it would be contrary to the child's health and welfare to remain in the care or custody of his parents, or a divorce and/or custody hearing where neither parent has been found able to provide a home in the best interest of the child. Children come into the Department's care when parent or other legal guardians place them voluntarily in that care as part of that parent's short-term plan to resume full care of the children. The rate is calculated per 1,000 children aged birth through 17 using 1996 population estimates developed by the Office of Data, Research, and Vital Statistics. There is an 18 month time span (rather than 12 month) between those figures published in the 1998 and 1999 Data Books.

Source: Maine Department of Human Services, Bureau of Child and Family Services.

Children aged 0-17 living at or below federal poverty line, five-year average, 1993-1997.

The estimated average percent of related children aged birth through 17 who lived in families with incomes below the U.S. poverty threshold during the five-year period 1993-1997. In 1996, the poverty threshold for a family of four (two adults and two children) was \$15,911. Related children include the family head's children by birth, marriage, or adoption, as well as other persons aged birth through 17, such as nephews and nieces, who are related to the family head. Children aged birth through 17 who do not live in a household where they are related to the head of the household are not counted. Rate is calculated using census population estimates for all children aged birth through 17. Five-year averages are used to smooth out annual fluctuations due to small sample size.

Source: U.S. Department of Commerce, Bureau of the Census, Current Population Survey (March supplement), 1993-1997; national indicator as published in the Annie E. Casey Foundation, *Kids Count Data Book: State Profiles of Child Well-being*, 1998.

▲ The estimated number and percent of children, age 0-17, that are living in poverty. The data are reported by county.

Source: US Census Bureau, Small Area Income and Poverty Estimates program. These estimates are modeled from combined census estimates, current population survey (CPS), and other administrative and economic data.

See also Jobs that pay a liveable wage; Median household income, Median income of families with children.

Children aged 0-17 living in homeless or emergency shelters, rate per 1,000 children aged 0-17, March 1998.

Individual children aged birth through 17 staying in one of Maine's homeless or emergency shelters during March of 1998, with or without other family members. This number may include children whose primary residence is out of state. It is also important to note that not all of the states homeless or emergency shelters admit children.

Source: Maine State Housing Authority.

Children aged 0-17 not living with a parent, 1990.

Children aged birth through 17 who did not live in the same household with at least one of their parents in 1990. Parenthood is determined by birth, marriage, or adoption. This figure includes children living in group quarters, such as residential treatment facilities. For a small number of children, it could not be determined from the available data whether or not they were living with a parent. They are counted as not living with a parent. The rate is calculated using 1990 census data.

▲ Children aged 0-17 on TANF in September, 1998.

The total number of children aged birth through 17 who were receiving Temporary Aid to Needy Families in September. TANF is the program that replaced AFDC in 1997.

Source: Maine Department of Human Services, Bureau of Family Independence.

Children aged 0-17 participating in Medicaid, 1997.

The estimated number of individual children aged birth through 17 eligible for Medicaid reimbursement during state fiscal year 1998. The data are reported by the child's county of residence at the time the eligibility was determined. Population data used in the denominator to calculate percentages are 1996 estimates developed by the Office of Data, Research, and Vital Statistics.

Source: Maine Department of Human Services, Bureau of Medical Services.

● Children aged 0-17 receiving Food Stamp benefits in October, 1998.

Total number of children aged birth through 17 who were receiving Food Stamp benefits in October, 1998. Percent is this number divided by the estimated number of children aged 0-17 in Maine developed by the Office of Data, Research, and Vital Statistics.

Source: Maine Department of Human Services, Bureau of Family Independence.

Children aged 0-19 who are white, Asian/Pacific Islander, American Indian, or African American, 1996 estimated.

Estimated numbers of children aged birth through 19 who fall into the major race groups recognized by the U. S. Census. Hispanic numbers are not included because they are also counted in the four major race groups. Population data used in the denominator to calculate percentages in the 1996 estimate of population from the Census Bureau, which differs slightly from that developed by the Office of Data, Research, and Vital Statistics.

Source: U.S. Department of Commerce, Bureau of the Census, estimates of population by age, sex, and race/Hispanic origin.

Children aged 19 and under in motor vehicle crashes with personal injury, as a percent of all children in motor vehicle crashes, 1997.

All children aged birth through 19 injured in any type of motor vehicle accident, regardless of whether or not the youth was driving the vehicle, as a percent of all children in motor vehicle crashes during calendar year 1997.

Source: Maine Bureau of Highway Safety.

Children aged 5-17 who do not speak English at home, 1990.

The number of children aged 5 through 17 who spoke a language other than English at home as recorded in the 1990 U.S. Census. Children who spoke a language other than English at home are included in this category regardless of their proficiency in English or the primacy of English in the home. Rate is calculated using 1990 Census population data for all 5-17 year-olds.

Source: 1990 Census data as published in *The Challenge of Change: What the 1990 Census Tells Us About Children*, a report prepared by the Population Reference Bureau for the Center for the Study of Social Policy, September 1992, Table 34.

See also Children with limited English proficiency attending school.

Children in single-parent families, three-year average, 1994-1996.

The estimated percent of related children aged birth through 17 who live in families headed by a male or female person without a spouse present in the home. Related children include the family head's children by birth, marriage or adoption, as well as other persons aged 0-17, such as nieces or nephews, who are related to the family head. Children aged 0-17 who do not live in a household where they are related to the head of the household are not included in this count. Rate is calculated using census population estimates.

Source: Population Reference Bureau analysis of data from the U.S. Department of Commerce, Bureau of the Census, Current Population Survey (March supplement), 1994 through 1996 as shown in the Annie E. Casey Foundation, *Kids Count Data Book: State Profiles of Child Well-being*, 1998.

Children living in overcrowded housing, 1990.

The estimated percent of children living in households with more than one person per room. The definition of rooms includes living rooms, dining rooms, kitchens, bedrooms, finished recreation rooms, enclosed porches suitable for year-round use and lodgers rooms. Children living in households with nine or more rooms are assumed to live in housing that is not overcrowded, regardless of the number of people in the household. Rate is calculated using 1990 census population data.

Source: Center for Urban and Economic Research at the University of Louisville, analysis of U.S. Department of Commerce, Bureau of the Census, Census of Population and Housing 1990, Five-Percent Public Use Microdata Sample.

Children under age 6 with both or only parent in the labor force, 1990.

Children under age 6 are included in this category if they live with only one parent and that parent is in the labor force (i.e., working or looking for work), or if they live with two parents and both are in the labor force. Parenthood is determined by birth, marriage or adoption. Rates are calculated using 1990 census population data.

Source: 1990 Census data as published in *The Challenge of Change: What the 1990 Census Tells Us About Children*, a report prepared by the Population Reference Bureau for the Center for the Study of Social Policy, September 1992, Tables 21 and 23.

Children under age 18 with both or only parent in the labor force, 1990.

Children under age 18 (including children under age 6) are included in this category if they live with only one parent and that parent is in the labor force (i.e., working or looking for work), or if they live with two parents and both are in the labor force. Parenthood is determined by birth, marriage or adoption. Rates are calculated using 1990 census population data.

Source: 1990 Census data as published in *The Challenge of Change: What the 1990 Census Tells Us About Children*, a report prepared by the Population Reference Bureau for the Center for the Study of Social Policy, September 1992, Tables 21 and 23.

Children with limited English proficiency attending school, 1997-1998 school year, rate per 1,000 students enrolled in public and private schools.

Children attending public or private school in Maine who are determined at the start of the school year to be limited in their ability to use English because it is not their native language.

Source: *Data Collection Report on Language Minority Student Demographics in Maine Schools*, Maine Department of Education, Special Projects Leadership Team, 1997-1998.

Children with special needs as reported to the Department of Education, 1997 -1998 school year; rate per 1,000 students enrolled in public and private schools.

The number of students enrolled in schools and individual education programs in Maine who are aged 3 through 21 and have disabilities requiring the provision of special education services. The count is taken as of December 1 of the school year and is available on the Department of Education website, www.state.me.us/education/

Source: Maine Department of Education, Division of Special Services.

Children without health insurance, five-year average, 1993-1997.

The estimated percent of related children aged birth through 17 who are not covered by any kind of public or private health insurance, including Medicaid. Related children include a household head's children by birth, marriage or adoption, as well as any other person aged 0-17, such as nieces or nephews, who are related to the household head. Children aged 0-17 who do not live in a household where they are related to the head of the household are not included in this count. Figures shown here represent a five-year average of estimates from 1993 through 1997. Rates are calculated using census population estimates. Five-year averages are calculated to smooth out annual fluctuations due to small sample sizes.

Source: U.S. Department of Commerce, Bureau of the Census, *Current Population Survey* (March supplement), 1993 through 1997.

Cathy Dowling

Core mental health professionals, rate per 1,000 children aged 0-19, 1994.

Total number of psychiatrists, psychologists, licensed clinical social workers, marriage and family counselors, and psychiatric nurse specialists registered with the Maine Department of Professional and Financial Regulation. Data are all from 1994 with the exception of psychiatric nurse specialists, which are from 1993. This number does not indicate how many core mental health professionals provide services to children. Rate is calculated using 1994 population estimates developed by the Office of Data, Research, and Vital Statistics.

Source: Tabulation by Muskie School based on data from the Maine Department of Human Services, Office of Data, Research, and Vital Statistics, and the Department of Professional and Financial Regulation.

Crime

See: Arrests for crimes against persons of children aged 0-17; Arrests of children aged 0-17.

Domestic assaults reported to police, rate per 100,000 population, 1997.

Assaults reported to the police which were perpetrated by family or household members who are or were married or living together in a romantic relationship, natural parents of the same child (whether or not the couple ever lived together) or other adult family members related by blood or marriage. These are not unduplicated counts, and may include numerous assaults affecting the same individuals. These numbers also do not indicate the presence of minor children in households where the assaults occurred. Rates are calculated using 1996 population estimates developed by the Office of Data, Research, and Vital Statistics.

Source: Maine Department of Public Safety, Uniform Crime Reports, 1997.

Drug abuse

See: Children aged 0-14 using services of licensed alcohol and drug abuse treatment providers; Students reporting marijuana use within past 30 days; Students reporting use of any form of cocaine within past 30 days; Students reporting use of inhalants at any time during their life; Youth aged 15-19 using services of licensed alcohol and drug abuse treatment providers.

Education

See: Adults aged 18 and over who have completed high school or equivalency; Children with limited English proficiency attending school; Children with special needs as reported to the Department of Education; High school completions; High school dropouts; High school graduates planning to attend post-secondary school; Home-schooled students; Private school enrollment; Public school enrollment.

Families headed by mothers receiving child support or alimony, five-year average, 1993 -1997.

The estimated percent of families headed by a woman with no spouse present and with one or more own children aged birth through 17 receiving either child support or alimony payments during the previous calendar year. Includes those receiving partial payment as well as those receiving full payment. There may be no child support award in place for many of these families. Own children include the family heads children by birth, marriage or adoption. The figures shown here represent an average of data from 1993 through 1997. Rates are calculated using census population estimates.

Source: Population Reference Bureau analysis of data from the U.S. Department of Commerce, Bureau of the Census, Current Population Survey (March supplement), 1993 through 1997, as published in the Annie E. Casey Foundation, *Kids Count Data Book: State Profiles of Child Well-being*, 1998.

See also Child support enforcement, cases with collection.

Family Planning Services, 1998

Number of youth receiving direct services from family planning by age and gender as a percent of all youth aged 10-19 based on 1996 Census estimates.

Source: Ahlers Reporting Data, Unduplicated Count by Age, Table FL-3A, FY 1998 (7/1/97-6/30/98)

General practice dentists, full-time equivalent rate per 1,000 children aged 0-17, 1998.

Full-time equivalent licensed dentists in active general and pediatric practice as of December 1998. One full-time equivalent equals 40 hours of work per week. This number does not indicate how many dentists provide services to children. Rate is calculated using 1996 population estimates developed by the Office of Data, Research, and Vital Statistics. Rate has changed to rate per 1,000 aged 0-17 from 0-19 in previous years.

Source: Maine Department of Human Services, Office of Data, Research, and Vital Statistics, Maine Cooperative Health Manpower Resource Inventory.

Gonorrhea cases, 10-19 year-olds, rates per 100,000 10-19 year-olds, 1996.

Reported cases of gonorrhea among Maine children and adolescents aged 10 through 19 during calendar year 1997 as a percent of total 10-19 year-olds. Rate is calculated using 1996 population estimates developed by the Office of Data, Research, and Vital Statistics.

Source: Maine Department of Human Services, Bureau of Health, HIV/STD Program.

See also Chlamydia cases, 10-19 year-olds, rate per 100,000 10-19 year-olds; Sexually active high school students who reported using a condom during last intercourse.

Head Start Program, 1998.

Total number of children eligible for Head Start Programs statewide during 1998 state fiscal year. Head Start provides comprehensive child development and supportive services to low income preschool children and their families. Eligible children were estimated by multiplying the number of children under age five in each county by 40 percent to get an estimate of the number of 3-4 year-olds, then multiplying by the percent of children at or below the federal poverty line in that county. Current capacity reflects actual number of current slots available. Unmet need calculated by subtracting the number of slots from the estimate of eligible children.

Source: Maine Department of Human Services, Office of Child Care and Head Start

Health insurance

See: Children without health insurance; Children aged 0-17 participating in Medicaid programs.

High school completions, as a percent of all 17 year-olds, 1996-1997.

Number of high school diplomas granted during the 1996-1997 school year, including persons completing General Equivalency Development (GED) Certificates or receiving diplomas granted through adult education centers. Rate is calculated using 1996 population estimates developed by the Office of Data, Research, and Vital Statistics. Figures are available on the Maine Department of Education Website.

Source: Maine Department of Education, Division of Management Information.

See also Adults aged 18 and over who have completed high school or equivalency.

High school graduates planning to attend post-secondary school, 1996-1997 school year.

High school graduates who intend to or are enrolled full or part time in post-secondary education, according to a survey administered by the local educational unit and submitted in the fall following graduation. Numbers include graduates from public high schools and those private high schools with at least 60% publicly-funded students. The rate is calculated as a percent of all students graduating, including regular diploma, other diploma, high school equivalency, or certificate of completion during the previous school year or subsequent summer school. The national rate reports the actual number of high school seniors who enrolled in any post-secondary education institution within two years of their scheduled graduation in 1992.

Source: Maine Department of Education, Division of Management Information; national rate from U.S. Department of Education, *The Condition of Education 1997*, [Http://nces.ed.gov/pubs/ce/c9709a01.html](http://nces.ed.gov/pubs/ce/c9709a01.html)

High school dropouts, 1996-1997 school year.

Any person who has withdrawn or been expelled from high school before graduation or completion of a program of studies and who has not enrolled in another educational institution or program. Each local educational unit submits a dropout report to the Department of Education as of the last day of school, counting all students who dropped out during the previous calendar year. Numbers include dropouts from public high schools and those private high schools with at least 60% publicly-funded students. The rate is calculated as a percent of all students enrolled in grades 9-12 during the school year.

Source: Maine Department of Education, Division of Management Information.

High school students reporting alcohol use within past 30 days, 1997.

Percent of high school students responding to the spring 1997 Maine Youth Risk Behavior Survey who indicated that they had at least one drink of alcohol on one or more of the past 30 days. This information comes from a survey that used somewhat different questions than the one cited in the 1997 Maine Kids Count Databook, so comparisons must be made with caution.

Source: Maine Department of Education, Bureau of Instruction, 1997 *Maine Youth Risk Behavior Survey Report*.

High school students reporting at least one suicide attempt in the last year, 1997.

Percent of high school students responding to the spring 1997 Maine Youth Risk Behavior Survey who indicated that they actually attempted suicide one or more times during the previous 12 months.

Source: Maine Department of Education, Bureau of Instruction, 1997 *Maine Youth Risk Behavior Survey Report*.

High school students reporting cigarette smoking within past 30 days, 1997.

Percent of high school students responding to the spring 1997 Maine Youth Risk Behavior Survey who indicated that they had smoked cigarettes on one or more of the past 30 days. This information comes from a survey that used somewhat different questions than the one cited in the 1997 Maine Kids Count Databook, so comparisons must be made with caution.

High school students reporting use of any form of cocaine within past 30 days, 1997.

Percent of high school students responding to the spring 1997 Maine Youth Risk Behavior Survey who indicated that they had used any form of cocaine, including powder, crack, or freebase one or more times during the past 30 days.

Source: Maine Department of Education, Bureau of Instruction, 1997 *Maine Youth Risk Behavior Survey Report*.

High school students reporting use of inhalants at any time during their life, 1997.

Percent of high school students responding to the spring 1997 Maine Youth Risk Behavior Survey who indicated that they had sniffed glue, breathed the contents of aerosol spray cans, or inhaled any paint or spray to get high during their life. This information comes from a survey that used somewhat different questions than the one cited in the 1997 Maine Kids Count Databook, so comparisons must be made with caution.

Source: Maine Department of Education, Bureau of Instruction, 1997 *Maine Youth Risk Behavior Survey Report*.

High school students who visited a health professional during the past 12 months, 1995.

Percent of high school students responding to the spring 1995 Maine Youth Risk Behavior Survey who indicated that they visited health professional one or more times during the previous 12 months. This question was not asked on the 1997 survey.

Source: Maine Department of Education, Bureau of Instruction, 1995 *Maine Youth Risk Behavior Survey Report*.

Home-schooled students, 1997 annual average.

The number of students approved for home schooling for the 1997 year as reported to the Maine Department of Education by school superintendents.

Source: Maine Department of Education, Division of Management Information.

▲ Hospital discharges of children 0-19 for mental health and substance abuse diagnoses, per 1,000 children aged 0-17, 1996.

The number of hospital discharges of patients aged birth through 19 for mental health or substance abuse, per 1,000 children aged 0-19. The number of hospital discharges of patients birth through age 19 treated in Maine hospitals and discharged with mental health and substance abuse diagnoses (MDC 19 and 20, DRGs 424 through 437). These data count hospitalizations and not individual children.

Source: Maine Uniform Hospital Discharge Data Set, Maine Health Information Center special run. Rates are calculated using 1996 population estimates developed by the Office of Data, Research, and Vital Statistics.

Source: Maine Health Data Organization special data run.

Infant mortality; rate per 1,000 live births, five-year average, 1992-1996.

Deaths of infants under 1 year of age in comparison to live births occurring during the same time period. The data are reported by place of residence, not place of death. They are averaged over a five-year period (1992-1996) to smooth out annual fluctuations. Population data used in the denominators to calculate rates are based on birth records filed with the Office of Data, Research, and Vital Statistics.

Source: Maine Department of Human Services, Office of Data, Research and Vital Statistics; 1996 national rate from Federal Interagency Forum on Child and Family Statistics, *America's Children: Key National Indicators of Well-Being*, 1998.

Jobs that pay a liveable wage, 1997.

The number of jobs in Maine that paid a liveable wage for a family of two (assuming a single wage-earner) as a percent of total jobs in calendar year 1997. A liveable wage is defined as 85% above the federal poverty line. In 1997, this amounted to \$19,375 for a family of two.

Source: Maine Development Foundation analysis based on Maine Department of Labor, Division of Labor Market Information Services, ES-2-2, Covered Employment and Wages Program.

Live births for which prenatal care began in the first trimester, 1996.

Number of live births occurring in calendar year 1996 for which the mother began receiving prenatal care during the first three months of pregnancy. Population data used in the denominators to calculate rates are based on birth records filed with the Office of Data, Research, and Vital Statistics. This indicator is often used as a measure of access to prenatal care, or to primary care in general.

Source: Maine Depart. of Human Services, Office of Data, Research, and Vital Statistics; 1996 national rate from *Report of Final Natality Statistics*, 1996. Monthly Vital Statistics Report; Vol. 46, No. 11, National Center for Health Statistics, CDC.

Low birthweight infants; live births under 2500 grams (5.5 pounds), as a percent of all live births, 1996.

Live births occurring in calendar year 1996 in which the newborn weighed less than 2500 grams, as a percent of total live births. Population data used in the denominators to calculate rates are based on birth records filed with the Office of Data, Research, and Vital Statistics.

Source: Maine Department of Human Services, Office of Data, Research and Vital Statistics; 1996 national rate from Federal Interagency Forum on Child and Family Statistics, *America's Children: Key National Indicators of Well-Being*, 1998.

Median income of families with children, 1995.

The estimated median annual income for families with related children aged birth through 17 living in the household. Related children include the family heads children by birth, marriage, or adoption, as well as other persons aged 0-17, such as nieces and nephews, who are related to the family head and living in the household. The median income is the dollar amount which divides the income distribution into two equal groups – half with income above the median and half with income below it. The figures shown represent an average of estimates from 1992 to 1996, based on surveys of a sample of Maine households. Although we refer to data collected in March 1995 as 1995 data, they actually reflect 1994 income. Therefore, figures are expressed in 1994 dollars. Rate is calculated using census population estimates.

Source: Population Reference Bureau analysis of the U.S. Department of Commerce, Bureau of the Census, Current Population Survey (March supplement), 1992 through 1996, as published in the Annie E. Casey Foundation, *Kids Count Data Book: State Profiles of Child Well-being*, 1998.

See also Children aged 0-17 living at or below federal poverty line.

Median household income, 1996.

The median household income is the dollar amount which falls in the middle of the range of household income distribution. Half of households have income above the median, the other half have income below it. This figure counts the income from all sources of the head of household and all other persons aged 15 and over in the household, whether related to the head of household or not. Figures are based on estimates from a survey of a sample of Maine households.

Source: U.S. Department of Commerce, Bureau of the Census, Current Population Reports, Series P60-188, *Income, Poverty, and Valuation of Noncash Benefits*: 1996, Table D.

Medicaid Early Periodic Screening, Diagnostic, and Treatment Services, eligible children under age 21 receiving at least one initial or periodic screening service, as a percent of those who should, 1997.

The number of eligible Medicaid recipients receiving at least one initial or periodic screening service offered through the Medicaid Programs Preventive Health Program (PHP) as a percent of the total number of Medicaid eligible children who should receive at least one initial or periodic screening service. These services include age-appropriate immunizations; lead screenings, monitoring and investigations; treatment for defects in hearing and vision; and dental care needed for the relief of pain and infections, restoration of teeth and maintenance of dental health.

Source: Maine Department of Human Services, Bureau of Medical Services, Form HCFA-416: Annual EPSDT Participation Report.

OUI arrests for drivers under age 21, rate per 1,000 licensed drivers under age 21, 1997.

Arrests of Maine drivers under age 21 for Operating Under the Influence (driving with a blood alcohol concentration of .08 percent by weight). OUI includes being under the influence of alcohol, a drug or drugs other than alcohol, or any combination of alcohol and one or more drugs other than alcohol. The blood alcohol concentration is measured as a percent by weight of alcohol in the blood.

Source: Maine Bureau of Highway Safety.

See also Alcohol-related license suspensions for drivers under age 21.

Pediatricians, family practitioners, and general practitioners (MDs and DOs); full-time equivalent rate per 1,000 children aged 0-19, 1997.

Full-time equivalent licensed pediatricians, family practitioners, and general practitioners (allopaths and osteopaths) registered with the Maine Department of Professional and Financial Regulation in 1996. One full-time equivalent equals 40 hours of work per week. This number does not indicate how many family practitioners and general practitioners provide services to children. Rates are calculated using 1996 population estimates developed by the Office of Data, Research, and Vital Statistics.

Source: Maine Department of Human Services, Office of Data, Research, and Vital Statistics, Maine Cooperative Health Manpower Resource Inventory.

Private school enrollment, Fall 1997.

Maine students enrolled in private schools as of October 1, as reported by the local educational unit. These numbers include publicly-funded students enrolled in private schools.

Source: Maine Department of Education, Division of Management Information.

Public school enrollment, Fall 1997.

Maine students enrolled in public schools as of October 1, as reported by the local educational unit.

Source: Maine Department of Education, Division of Management Information.

Recipients of WIC benefits, 1997.

Number of individuals receiving WIC benefits during calendar year 1997. WIC (Women's, Infants' and Children's Supplemental Nutrition Program) provides specific nutritious foods and nutrition education to low income pregnant and breast feeding women, infants and children up to the age of five. Recipients must be at or below 185% of federal poverty guidelines and be at medical or nutritional risk. Rate is calculated using 1996 population estimates developed by the Office of Data, Research, and Vital Statistics.

Source: Maine Department of Human Services, WIC Program, special data run.

Repeat teen pregnancies as a percent of total teen pregnancies, 1996.

The percent of females under age 20 who became pregnant during calendar year 1996 who had already been pregnant at least once before in their lives.

Source: Special tabulations by Maine Department of Human Services, Office of Data, Research, and Vital Statistics.

Ann Woloson

Requests for child abuse and neglect services, 1997.

Any written or verbal requests made during calendar year 1997 for Child Protective Services intervention in a family situation on behalf of a child in order to assess or resolve problems being presented. Cases are screened out when evidence of serious family problems or dysfunction was evident but the situation did not contain an allegation of abuse or neglect. Cases deemed appropriate for referral meet the standards contained in 22 MRSA, 4002 as defined under the definition for substantiated child abuse and neglect victims. Appropriate referrals not assigned due to lack of resources refers to the Department of Human Services ability to respond to referrals of child abuse and neglect based on factors such as the number of caseworkers, the seriousness or complexity of cases receiving services and the availability of resources.

Current staff resources are not sufficient for the Department to assign all of the referrals it receives for Child Protective Services. The allegations of these referrals warrant Child Protective Services intervention but are not assigned because the office has reached the upper limits of its capacity to investigate and assess.

Source: Maine Department of Human Services, Bureau of Child and Family Services, Child Protective Services.

See also Substantiated child abuse and neglect victims; rate per 1,000 children aged 0-17.

School children receiving subsidized school lunches, 1997-1998 school year.

The National School Lunch Program is a meal entitlement plan primarily funded through federal dollars. All elementary and junior high schools are required to participate in the program. In Maine, high schools have the option of participating. Children are eligible for free school lunches if their family income does not exceed 130% of poverty level. They are eligible for reduced price school lunches if their family income falls between 130% and 185% of poverty level. Student eligibility for the program is a measure of change in the poverty status of children. Rates are calculated as a percent of total school enrollees.

Source: Maine Department of Education, School Nutrition Program.

Sexually active high school students who reported using a condom during last intercourse, 1997.

Percent of high school students responding to the spring 1997 Maine Youth Risk Behavior Survey who indicated that they were sexually active and who said they used a condom during their most recent intercourse.

Source: Maine Department of Education, Bureau of Instruction, 1997 *Maine Youth Risk Behavior Survey Report*.

See also Chlamydia cases, 10-19 year-olds, rate per 100,000 10-19 year-olds; Gonorrhea cases, 10-19 year-olds, rate per 100,000 10-19 year-olds.

▲ State TANF and Food Stamp benefits as a percent of poverty line in 1997.

The percent of the prior years U.S. poverty threshold for a one-parent family of three persons covered by the combination of current-year state TANF (Temporary Aid to Needy Families) Food Stamp benefits.

Source: Data are provided by the Congressional Research Service, Education and Public Welfare Division, Library of Congress, as shown in the Children's Defense Fund, *The State of America's Children Yearbook 1997*.

See also Children aged 0-17 on TANF.

Substantiated child abuse and neglect victims; rate per 1,000 children aged 0-17, 1997.

The number of individual victims of child abuse and neglect in calendar year 1997 for whom assessment led to a finding of a threat to a child's health or welfare by physical, mental or emotional injury or impairment, sexual abuse or exploitation, deprivation of essential needs or lack of protection from these by a person responsible for the child (22 M.R.S.A. 4002).

These numbers are affected by the Department of Human Services' ability to respond to referrals of child abuse or neglect based on factors such as the number of caseworkers, the seriousness or complexity of the cases receiving services, and the availability of resources. Current staff resources are not sufficient for the Department to assign all of the referrals it receives.

Source: Maine Department of Human Services, Bureau of Child and Family Services, Child Protective Services; 1996 national rate from U.S. Department of Health and Human Services. *Child Maltreatment 1996: Reports From the States to the National Child Abuse and Neglect Data System*.

Suicide

See: Child and teen suicides.

Teen deaths; rate per 100,000 children aged 15-19, five-year average, 1992-1996.

The number of deaths from all causes to children aged 15 through 19. The data are reported by the child's place of residence, not the place of death. They are averaged over a five-year period (1992-1996) to smooth out annual fluctuations. Population data used in the denominators to calculate the rates are based on estimates developed by the Office of Data, Research, and Vital Statistics. Rates are calculated per 100,000 at the state level to be consistent with standard mortality data reporting practices, per 10,000 at the county level for ease in interpreting relatively rare occurrences and small base populations.

Source: Special tabulations by the Maine Department of Human Services, Office of Data, Research and Vital Statistics; 1996 national data published in Federal Interagency Forum on Child and Family Statistics, *America's Children: Key National Indicators of Well-Being, 1998*.

Teen pregnancy, rate per 1,000 females aged 10-17, 1996.

All reported live births, induced abortions, and fetal deaths occurring to females aged 10 through 17 during calendar year 1996. The rate is calculated using a denominator of the 1996 population of 10-17 year-old females estimated by the Office of Data, Research, and Vital Statistics.

Source: Maine Department of Human Services, Office of Data, Research and Vital Statistics.

Teens aged 16-19 not in school and not in the labor force, three-year average, 1994-1996.

Estimated percent of all teens aged 16 through 19 who are not enrolled in school full or part time, and not employed full or part time. Three-year averages are used to reduce fluctuations due to sampling error.

Source: Special tabulations of Current Population Survey microdata prepared by the Bureau of Labor Statistics, as published in the Annie E. Casey Foundation, *Kids Count Data Book: State Profiles of Child Well-being, 1998*.

Teens aged 16-19 not in school and not high school graduates, three-year average, 1993 - 1995.

A reflection of educational performance, this measure is based on the twelve-months Current Population Survey (CPS) file maintained by the Bureau of Labor Statistics (BLS). Each month the CPS asks respondents in about 60,000 households nationwide about their activities related to the labor force and education. For this indicator, a percentage is calculated based on nine months of data (September through May) for each year. Three-year averages were used to reduce fluctuation due to sampling error.

Source: Special tabulations of Current Population Survey microdata prepared by the Bureau of Labor Statistics, as published in the Annie E. Casey Foundation, *Kids Count Data Book: State Profiles of Child Well-being, 1997*.

Teens aged 19 and under receiving services from family planning providers, 1997.

Unduplicated client counts of Maine teens, male and female, aged 15 through 19, who received services at family planning clinics during the 1997 state fiscal year. Such services include annual exams; contraceptive counseling and administration; breast and pelvic exams; pap smears; pregnancy testing; STD testing and treatment; and treatment of infections.

Source: Family Planning Association of Maine, Ahlers Reporting System, fiscal year 1997, page 4, Table FL-3A, Unduplicated Client Counts by Age, CVR Item #21.

Teen violent deaths; rate per 100,000 children aged 15-19, 1992-1996.

Deaths caused by homicide, suicide, and accidents to children aged 15 through 19. The data are reported by the child's place of residence, not the place where the death occurred. Population data used in the denominators to calculate the rates are based on estimates developed by the Office of Data, Research, and Vital Statistics. Rates are calculated per 100,000 at the state level to be consistent with standard mortality data reporting practices, per 10,000 at the county level for ease in interpreting relatively rare occurrences and small base populations.

Source: Special tabulations, Maine Department of Human Services, Office of Data, Research, and Vital Statistics; 1995 national rate from Annie E. Casey Foundation, *Kids Count Data Book: State Profiles of Child Well-being, 1998*.

Total population, 1996 estimated.

Total number of individuals by age are estimated by extrapolating from the 1990 census, taking into account births, deaths, and net migration.

Source: Estimates prepared by the Maine Department of Human Services, Office of Data, Research, and Vital Statistics.

Two-year-olds who were age-appropriately immunized, 1997.

Immunization rates are estimated from retrospective surveys of five-year-olds entering a representative sample of Maine schools each year. According to current state recommendations, two-year-olds should have had 4 DPT (diphtheria, tetanus, pertussis) vaccines, 3 OPVs (oral polio vaccines), and 1 MMR (measles, mumps, rubella) vaccine. For a child to receive these immunizations, a minimum of 4 well-child visits to a health care professional is necessary.

Source: Maine Department of Human Services, Immunization Program; 1996 national data published in Federal Interagency Forum on Child and Family Statistics, *America's Children: Key National Indicators of Well-Being*, 1998.

Unemployed persons aged 16 and over, annual average, 1997.

The sum of the number of unemployed people aged 16 and over each month of the year 1997, divided by 12. Percent is the average number of unemployed people divided by the average number of people in the civilian labor force. Data are not seasonally adjusted.

Source: Maine Department of Labor, Division of Economic Analysis and Research, in cooperation with the US Bureau of Labor Statistics.

Unemployed persons aged 16-19, annual average, 1997.

The estimated average percent of Maine 16 through 19 year-olds in the civilian labor force but not employed during calendar year 1994. This includes 16 through 19 year-olds still enrolled in school who also consider themselves to be in the labor force.

Source: U.S. Bureau of the Census, Current Population Survey.

Well child clinic visits by children under age 21, 1997.

Total number of well child clinic visits provided statewide to children under age 21 by public health nurses or agencies contracted by the Division of Community and Family Health during the 1997 state fiscal year. Data is based on visits, not individuals, so children who had more than one visit in the year are counted multiple times. A visit, however, may include more than one type of service, e.g. screening for lead poisoning and immunization. Services provided during well child visits may also include periodic preventive and diagnostic exams, hearing and vision screening, referral counseling, and some sick care.

Source: Maine Department of Human Services, Bureau of Health, Division of Community and Family Health.

Women in labor force with youngest child under age 6, 1990.

The number of women aged 16 and over (regardless of marital status) whose youngest child is under age 6, and who are in the paid labor force. Rates are calculated as a percent of all women aged 16 and over whose youngest child is under age 6, using census population data. These figures are corrected from those shown in earlier editions of the Maine Kids Count Databook.

Source: 1990 Census data as published on the Census Bureau website (<http://venus.census.gov/cdrom/lookup>).

Women in labor force with youngest child ages 6 to 17, 1990.

The number of women aged 16 and over (regardless of marital status) whose youngest child is between ages 6 and 17, and who are in the paid labor force. Rates are calculated as a percent of all women aged 16 and over whose youngest child is between the ages of 6 and 17. These figures are corrected from those shown in earlier editions of the Maine Kids Count Databook.

Source: 1990 Census data as published on the Census Bureau website (<http://venus.census.gov/cdrom/lookup>).

Youth aged 15-19 using services of licensed alcohol and drug abuse treatment providers; rate per 1,000 youth aged 15-19, 1996.

The number of individual youth aged 15 through 19 using services provided by Maine alcohol and drug abuse treatment facilities with state funding, Driver Education Evaluation Program certification, or certification to dispense methadone, during calendar year 1996. Population data used in the denominator to calculate rates are 1995 estimates developed by Office of Data, Research, and Vital Statistics.

Source: Maine Addiction Treatment System, Maine Department of Mental Health, Mental Retardation, and Substance Abuse Services.

See also Alcohol-related license suspensions for drivers under age 21; Children aged 0-14 using services of licensed alcohol and drug abuse treatment providers; OUI arrests for drivers under age 21; High school students reporting alcohol use within past 30 days; High school students reporting use of inhalants at any time during their life; High school students reporting marijuana use within past 30 days; High school students reporting use of any form of cocaine within past 30 days.

The 1999 Maine KIDS COUNT Data Book provides policymakers and citizens with the best available data on the well-being of children in the state of Maine. As users of the Data Book, **you** are the best resource we have for meeting your needs and the needs of our kids. By completing and returning this survey, you can help us improve the format, content, and distribution of the 1999 Maine KIDS COUNT Data Book which, in turn, will provide you with a clearer picture in the future. *Thank you for your time and interest; please turn form over to mail.*
