ABSTRACT

This Kids Count report examines statewide and county trends in the well-being of Colorado's children. The statistical portrait is based on 12 indicators of well-being: (1) infant mortality; (2) low birth weight births; (3) immunizations; (4) child poverty; (5) early prenatal care; (6) child abuse deaths; (7) health insurance; (8) paternity establishment; (9) teen births; (10) teen suicide rate; (11) youth unemployment; and (12) high school graduations. The report begins with a discussion of the major results. The bulk of the report details county- and state-level demographic, economic, health, education, and safety data. County-level trends for data are indicated where appropriate, based on 1991, 1994, and 1996 data. Additional information on school enrollment, child abuse and neglect, and teen suicide is also included. Findings indicate that since 1990, only 1 of the 12 indicators (infant mortality) has met the decade goal, but that progress has been made toward meeting seven goals. Fifteen percent of Colorado's children live in poverty. About 25 percent of infants are born to unwed mothers and 10 percent to teen mothers. Over 80 percent of women who gave birth in 1996 received early prenatal care. The low birth weight rate continues to rise and is one of the worst in the nation. However, the infant mortality rate is on the decline. Over 90 percent of Colorado's licensed child care facilities were ranked poor or mediocre. The high school graduation rate is still well below the state's goal. (KB)

Foreword:

The Colorado Children's Campaign aims to help children live better lives. Our dream is that all Colorado children will have everything they need to grow up safe, healthy, well-educated, cherished, and with hope for the future.

Since 1985, the Colorado Children's Campaign has worked to mobilize individuals and organizations to think and act on behalf of children. The *KidsCount in Colorado!* report is an important part of what we do because it allows us to track key indicators of child health, education and safety

and spread the news to all of our state's communities.

The 1998 *KidsCount in Colorado!* report features county-level data in a new format. For the first time, the report includes 63 individual county report cards with county-level demographic, economic, health, education and safety data that lets us know how children in each county are doing. Statewide data is reported in the same way so that comparisons may be made easily. County-level trends for data in the report cards are indicated where appropriate, based on 1991, 1994, and 1996 data. Additional information on school enrollment, child abuse and neglect, and teen suicide is also included in this year's report.

A child is a person who is going to carry on what you have started. He is going to sit where you are sitting, and when you are gone, attend to those things which you think are important. You may adopt all the policies you please, but how they are carried out depends on him. He will assume control of your cities, states and nations. He is going to move in and take over your churches, schools, universities, and corporations. All your books are going to be judged, praised or condemned by him. The fate of humanity is in his hands.

ABRAHAM LINCOLN

Decade of the Child

In 1990, concerned about the effect of emerging economic and social trends on the state's children, the Colorado Children's Campaign established specific "Decade of the Child" goals in critical areas of child health, education and safety. A coalition of 1,200 organizations and community leaders endorsed the stated goals. Since that time, only 1 of the 12 indicators (infant mortality) has met the decade goal, but progress has been made toward meeting 7 of the 12 goals.

	Where we were (1990)	Where we are (1996)	Our goal (2000)
 Mortality Rate	8.8 per 1,000	6.6 per 1,000	7 per 1,000
Low Birth Weight Births	8.0%	8.9%	5%
Children Fully Immunized	58% (1991)	79%	90%
Children Living in Poverty	15%	available after 2000 census	8%
Moms Receiving Early Prenatal Care	77.8%	81.4%	90%
Number of Children Dying From Child Abuse	31	20 (1995)	12
Children with Health Insurance	85%	85%	100%
Cases in Which Paternity Established for Births to Unmarried Women	37%	58% (1995)	70%
Teen Birth Rate	54.3 per 1,000	50.7 per 1,000	25 per 1,000
Teen Suicide Rate	9.7 per 100,000	7.9 per 100,000	3.5 per 100,000
Youth Unemployment	13%	available after 2000 census	7%
High School Graduation Rate	78.9% (1991)	77.7%	90%

"The solutions for adult problems tomorrow depends in large measure upon the way our children grow up today. There is no greater insight into the future than recognizing when we save our children, we save ourselves."

MARGARET MEAD

Definitions

Children receiving AFDC (rate)

Number of children under 18 receiving Aid to Families with Dependent Children per 1,000 children provided by the CO Dept. of Human Services. Calculations for 1996 by the Colorado Children's Campaign.

Children qualified for free lunch (percent)

Public school children qualify for free lunches if their family income is less than 130% of the official poverty level. Number of children who qualify for free school lunches per 100 students in public school provided by the CO Dept. of Education. Comparable 1991 data not available due to significant change in reporting practices.

Children in out-of-home placements (rate)

Out-of-home placements include family foster care, specialized group homes, residential child care facilities, independent living situations, foster care with relatives, residential treatment centers, detention, legal risk adoptions, medical care and both emergency and non-emergency placements in shelters. Number of emergency and non-emergency out-of-home placements per 1,000 children provided by the Child Welfare Division, CO Dept. of Human Services.

Births to single moms (percent)

Number of all births to single moms per 100 live births provided by the Health Statistics Section, CO Dept. of Public Health and Environment.

Births to single teens (percent)

Number of live births to single teens per 100 teen live births provided by the Health Statistics Section, CO Dept. of Public Health and Environment.

Population estimates provided by the Health Statistics Section, Colorado Department of Public Health and Environment and the Community Section, Department of Local Affairs, Division of Local

Families in Need

For some Colorado families, life's basics seem out of reach. Shelter, food and clothing, to say nothing of child care, can equal—or exceed—a monthly budget for those living at the poverty level. It is estimated that 15% of the state's children are currently living in poverty, despite tremendous economic growth in our state since the early 1990's. Should this be cause for concern? Absolutely. Children who grow up in impoverished families are much more likely to experience bad outcomes in terms of their health, education and safety throughout childhood and into their adult years.

What can be done? Early educational opportunities for poor children have the ability to mitigate the harmful effects of poverty. For instance, four-year-olds enrolled in the Colorado Preschool Program come from at-risk households and typically lag 17 months behind their peers in language development. By the time they graduate from the program at age five, they have made up for lost ground and enter kindergarten on even footing, ready to learn. Best of all, studies suggest that the effects of high quality early education on young, high risk children, are long lasting and cumulative.

KIDSCOUNT! QUICK FACTS

Census figures show that 15% of Colorado's children live in poverty. In a few Colorado counties, up to 40-50% of children live in poverty.

> Children who are poor when they are young are more likely to die during childhood, be in poor health, experience learning disabilities and developmental delays, suffer from emotional or behavioral problems, score lower on standardized tests, be retained a grade, and drop out of school.

Though the rate of children in Colorado receiving Aid to Families with Dependent Children has declined since 1991, still almost 7% of the state's children were relying on AFDC benefits in 1996.

> 1996 federal changes in welfare legislation replaced the AFDC program with the Temporary Assistance for Needy Families (TANF) program. As of July 1, 1997, Colorado families must apply to the Colorado Works/TANF office and meet all training, education, and work requirements to receive cash benefits.

Household Income of Colorado's Families

Median income of female headed family
\$17,505

Median income of married couple family
\$40,095

Source: 1990 Census

"For low income children, preschool education programs can mean the difference between failing and passing, regular or special education, staying out of trouble or becoming involved in crime and delinquency, dropping out or graduating from high school"

Children's Defense Fund

20% of public school students in Colorado qualify for a free lunch at school.

- > Good nutrition is necessary for optimum psychological and cognitive development in children and child care programs and schools often are relied on to meet this need. One study showed that children in preschool received 75% of their nutritional intake from their child care provider.

The rate of out-of-home placements for Colorado children, including placements in foster care, residential child care, and specialized group homes, has risen from 9.5 to 14.2 per 1,000 since 1991.

- > A national study estimates that almost 1/3 of the children in out-of-home placements have severe emotional problems.

About 25% of Colorado's babies are born to unwed mothers. More than 70% of teens who have babies are single.

- > Children of single mothers are 5 times as likely to be poor as children living in two parent families.
- > Of those cases in which child support payments are ordered in Colorado, payments are collected only 14% of the time.

Definitions

Moms receiving early prenatal care (percent)

Number of births for which known prenatal care was initiated in the first trimester of pregnancy per 100 live births provided by the Health Statistics Section, CO Dept. of Public Health and Environment.

Low birth weight births (percent)

Number of babies born weighing 5.5 pounds or less (less than 2.5 kilograms) per 100 live births provided by the Health Statistics Section, CO Dept. of Public Health and Environment.

Deaths of infants under age 1 (rate)

Number of deaths during the first year of life per 1,000 births provided by the Health Statistics Section, CO Dept. of Public Health and Environment.

Deaths of children under age 18 (rate)

Number of deaths of children under 18 per 100,000 children provided by the Health Statistics Section, CO Dept. of Public Health and Environment, includes deaths from natural causes (such as illness or congenital defects) and injury (including motor vehicle deaths, homicides and suicides). Calculations by the Colorado Children's Campaign.

Child abuse/neglect

Number of confirmed incidents of child abuse or neglect provided by the Central Registry of Child Protection, Division of Child Welfare Services, CO Dept. of Human Services. An incident may involve more than one child, and includes physical abuse, neglect, medical neglect, sexual abuse and psychological or emotional abuse or neglect.

Child Health

It makes sense that the health of a child has an effect on all of the other things a child does. Everything from school work to social relationships can suffer when a child is ill. While missing a week of activity due to poor health isn't likely to have a long-term impact on a child's potential, poor health that stretches through childhood can.

New research on early brain development has shown that medical conditions that go untreated in young children can have a dramatic effect on the rest of their lives. For instance, children with untreated ear infections can suffer irreversible hearing damage that later will impair their ability to hear a classroom teacher's instructions. If not removed by the age of 2, cataracts that cloud a baby's vision will make that child blind forever. The truth is, the health of our children is not just an issue of their health today, but of their overall well-being far into the future.

KIDSCOUNT! QUICK FACTS

81.4% of Colorado women who gave birth in 1996 received early prenatal care, nearly 9 percentage points shy of the Decade of the Child goal but an improvement when compared to 1991 figures.

> Women who receive prenatal care throughout their pregnancy stand a better chance of delivering healthy babies and are more likely to get preventive care such as immunizations and well-baby care for their infants.

Colorado's low birth weight rate continues to rise, reaching 8.9% in 1996, and is one of the worst in the country.

> The average hospital costs for a low birth weight baby are 10 times the cost of prenatal care. Also, up to 40% of babies born at a low birth weight experience learning difficulties.

Colorado's infant and child mortality rates, following the national trend, are on the decline. In 1996, the state's infant mortality rate was 6.6 deaths per 1,000, and the child mortality rate was 66.5 deaths per 100,000.

> The infant mortality rate for babies born into poor families remains 50% higher than the rate for babies born into families with incomes above the poverty line.

Population estimates provided by the Health Statistics Section, Colorado Department of Public Health and Environment and the Demography Section, Department of Local Affairs, Division of Local Government.

Monthly expenses for a family of four with annual income of \$30,300.

Source note: Provided by the CO Department of Health Core Policy and Financing, Office of Public and Private Initiatives. Initial data by: Bureau of Labor Statistics/US Department of Labor, CO Department of Revenue, CO Department of Human Services, CO Division of Insurance, and the Census Bureau.

“State legislators grappling with health care reform soon realize that child health, particularly the health and nutrition of young children, is a cornerstone of health care cost containment. Good health is key to children’s development, to their future personal and social development and their success in school and, later, work.”

National Conference of State Legislatures

In 1996, there were 5,112 confirmed incidents of child abuse or neglect. The last year for which complete data is available, 1995, saw 20 children die statewide as a result of child abuse.

> Research shows that a child who has either been abused or witnesses such behavior is 40% more likely to be violent as an adult.

161,000 children in Colorado, or approximately 15% of the total population under the age of 18, have no health insurance.

> Children without health insurance are less likely to get preventive care or see a doctor when they are sick, and more likely to get treatment in an emergency room and report poor health. National studies show that almost 90% of uninsured children have a parent who works.

An increasing percentage of Colorado’s children are getting timely immunizations. The statewide rate has risen from 58% in 1991 to 79% in 1996.

> Immunizations are extremely cost-effective over time. Nationally, every dollar spent on childhood immunizations has been shown to save \$10 in later medical expenses.

Definitions

Child care

An estimate of child care need was calculated for children under the age of six with all parents in the workforce based on the number of spaces in state licensed child care centers and homes. Children under the age of six with all parents in the workforce taken from the 1990 Census; number of licensed child care spaces provided by the CO Dept. of Human Services, Division of Child Care Services Facility and Spaces Report, May 1995. Calculations by the Piton Foundation and the Colorado Children's Campaign.

Number of public school, non-public school and home school students

Number of public school, non-public school, and home school students provided by the CO Dept. of Education. Students enrolled in BOCES are included in the state total, but not the county report card breakout.

High school graduation rate

The graduation rate is a four-year rate based on dividing the membership base which is derived from an end-of-year count of eighth graders or a beginning-of-year count of ninth graders four years earlier, and adjusting that figure for the number of students who have transferred into or out of the district during the years covering grades 9 through 12. In addition, high schools can adjust their membership base for a student reported as a dropout during the previous school year if the high school has documentation that the student returned or transferred to another educational program. Graduation rates provided by the CO Dept. of Education.

High school dropout rate

The dropout rate is an annual rate reflecting the percentage of all students enrolled in grades 7-12 who leave school during the reporting period for any reason except for death and are not known to transfer to other public or private schools or an approved home study program. In accordance with a 1993 legislative mandate, beginning with the 1993-94 school year, the dropout rate calculation excludes expelled students. Drop out rates provided by the CO Dept. of Education.

Early Care & Education

Common sense has always told us that babies benefit from an environment of love, nurturing, and stimulation. Now, new medical research confirms the notion that the experiences of children in the first three years of life determine, to a large degree, the brightness of their future.

Unfortunately, an opportunity to build the foundation for learning in some young children is being wasted. Only 6% of Colorado's licensed child care centers are providing the level of quality needed to best support young children's developmental needs. At the same time, our schools have seen a dramatic increase in the numbers of entering students deemed at-risk, as well as those needing special education in order to catch up. Warm, responsive care for young children by parents, families, and other caregivers is the key to fostering development that will pay big dividends for today's children and their communities well into the future.

KIDSCOUNT! QUICK FACTS

On any given day, it is estimated that 48% of Colorado's young children spend some or all of their day in a child care center or a child care home. An analysis of 1990 Census data estimated that there was a significant shortage of licensed slots for care.

> Economic and social conditions have changed. By 1990, more than 6 in 10 married mothers with children under the age of six were working—double the 1970 figure.

94% of Colorado's licensed child care facilities were ranked "poor" or "mediocre" according to a recent study that looked at children's developmental needs and the quality of the state's facilities.

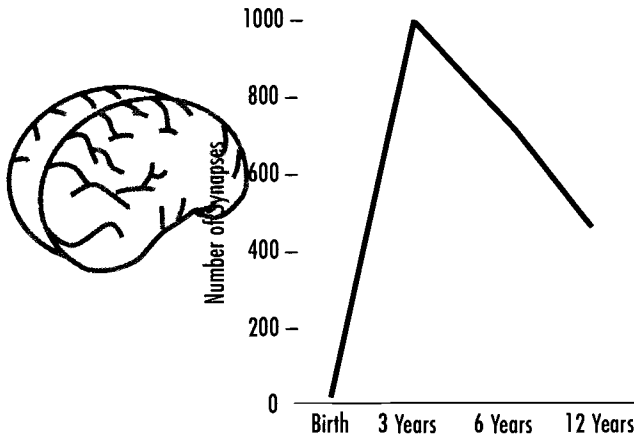

> Children in high-quality child care programs have stronger language, pre-mathematics, and social skills than those in low quality programs, and in the long run are more likely to be successful in school, avoid trouble with the law, and earn higher incomes as adults.

Statewide enrollment in Colorado's public, private, and home schools continues to swell, with schools in the state serving 731,000 students in 1996.

> Since 1991, enrollment in public schools has grown by 14%, private schools have 29% more students, and 155% more are being home schooled.

Growth of brain cell connections (in trillions)

Source: 1990 Census

“For a baby, those early weeks and months of growth, understanding, and reasoning can never be brought back to do over again. This is not a rehearsal—this is the main show.”

Irving Harris

First year results from the Colorado State Assessment Program indicate that state reading standards were met or surpassed by 57% of fourth grade students, but writing standards by only 31% of students.

> The assessment program is currently putting in place tests for students in the 3rd, 4th, 5th and 8th grades in the areas of reading, writing, math, science, history and geography.

Colorado’s high school graduation rate is 77.7%, slightly worse than the 1991 rate and still 12 percentage points shy of the Decade of the Child goal.

> Graduation rates for black and Hispanic students are substantially lower than the statewide rate. In 1996, only 59% of Hispanic students and 65% of black students graduated in four years.

In 1996, almost 13,000 high school students dropped out of school.

> Dropout rates for non-Asian minority students are higher than the average. In 1996, more American Indian students in Colorado dropped out of school than graduated.

> On average, a high school dropout earns about 40% less annually than a high school graduate.

Definitions

Births to teens (percent)

Number of births to teens per 100 live births provided by the Health Statistics Section, CO Dept. of Public Health and Environment.

Teen birth rate

Number of live births to girls, ages 15-19, per 1,000 female teens of that age provided by the Health Statistics Section, CO Dept. of Public Health and Environment. Calculations for 1996 by the Colorado Children's Campaign.

Three risk factor births (percent)

Number of births that are to single moms under age 25 with less than a high school education per 100 live births provided by the Health Statistics Section, CO Dept. of Public Health and Environment.

Teen suicide rate

The teen suicide rate is the average annual number of suicides from 1992-1996 per 100,000 teens age 10-19.

Juvenile crime and violent crime arrest rates

The arrest rate is the number of all juvenile arrests per 1,000 youth ages 10-17. The violent crime arrest rate is the number of arrests of juveniles for violent crimes (homicide, forcible rape, aggravated assault, and robbery) per 10,000 youth ages 10-17. All agencies may not have reported 12 months of juvenile arrest data; the rates are subject to change. The annual figures include all arrests of youth during the year reported by law enforcement agencies. An individual is counted once for each time s/he is arrested. If the arrest is for multiple offenses, the arrest is counted only for the most serious offense. Arrests made by the State Patrol are included in the state total but not in the county report card breakout. Number of juvenile arrests provided in the annual report of the Colorado Bureau of Investigation's Crime Information Center.

Signs of Trouble

"Signs of Trouble" are not only indications of troubled lives, but of social costs as well. Youth crime, suicides, and three-risk factor births all exact a toll at some point on human lives and community resources. For instance, the cost of punishing Colorado youth for crimes committed has tripled over the past 10 years, and shows no sign of slowing. Fortunately, long-term solutions such as home visitation programs for new parents have the ability to turn around these negative statistics.

Ultimately, programs that target at-risk families with young children will be a key factor in reducing "signs of trouble" because circumstances in the lives of three- and four-year-olds often lead 10 years later to risk behaviors in teenagers. At the same time that we focus on long-term prevention strategies, it is important to keep a vigilant watch on children and teens who are currently at risk, and ensure that programs that are proven to work, like mentorships, are utilized to their fullest potential.

KIDSCOUNT! QUICK FACTS

More than 10% of Colorado babies are born to teenage moms. Only 28 percent of Colorado's teen mothers, aged 15-19, are married.

- > Bearing a child during adolescence increases the likelihood that the teen mother and the child will experience greater obstacles in the long run. For instance, teen mothers are more likely to have limited schooling and, in turn, less likely to meet their full earnings potential in the future.

About 8% of births in Colorado are considered to have "three risk factors," meaning that the babies are born to single mothers under the age of 25 with less than a high school diploma.

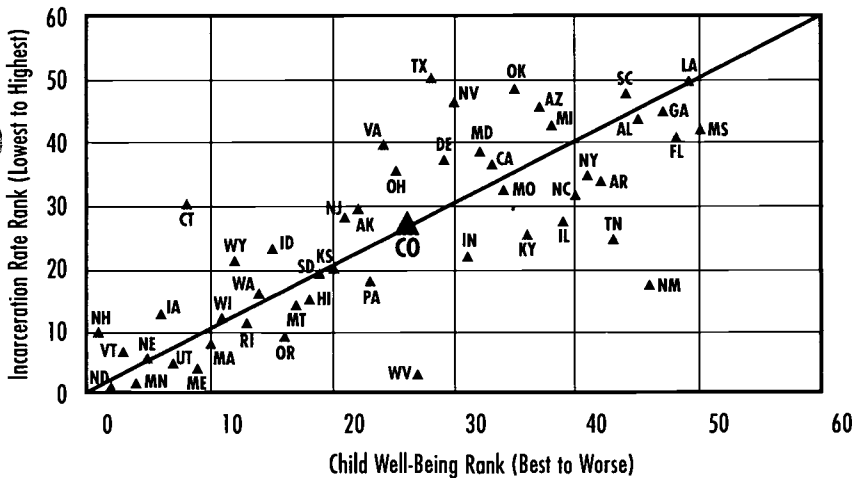

- > More than 4,500 Colorado children are being born each year into circumstances that are strongly linked to long-term poverty.

Colorado's teen suicide rate averaged from 1992-1996 was 13.2 teen suicides per 100,000 teens. Western mountain states, including Colorado, typically have the nation's highest rates.

- > Over the past 35 years, the youth suicide rate has tripled. Research has shown that access to or the availability of firearms is a significant factor in the increase of youth suicide.

Relationship of Incarceration Rate and Child Well-Being (1994 – Rank order of the 50 States)

Indicators of child well-being: Percent low birth weight, infant mortality rate, death rate (1-4), teen violent death rate (15-19), juvenile incarceration rate, percent of children living in poverty, percent graduating high school. Source: American Probation and Parole Association, 1996

“We must restore to teenagers a belief in themselves, their futures, and the broader society. As long as they lack adequate opportunities to learn, work, develop healthy self-esteem, and succeed, our nation will face abnormally high rates of teen pregnancy, drug use, and violence...”

Children’s Defense Fund

In 1996, Colorado’s juvenile crime arrest rate was higher than in 1991, while the juvenile *violent* crime arrest rate was lower.

- > There were more than 60,000 juvenile arrests recorded in 1996, for offenses ranging from curfew violations to rape. Almost 20% of the total number of people arrested on murder charges were juveniles.

A recent nationwide poll showed that a majority of adults consider drug abuse the biggest danger facing our nation’s children.

- > After declining for 14 years in a row, drug use among high school seniors has been on the rise nationally since 1992. In Colorado, public schools expelled 40% more students for drug offenses during the 1996-97 school year than during the previous year.
- > Teens who aren’t living with both biological parents are much more likely to use and become dependent on illicit drugs, alcohol, and cigarettes.

County Report Cards

Colorado 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Did you know?

Concerned in 1990 about the effect of emerging economic and social trends on the state's children, the Colorado Children's Campaign established specific "Decade of the Child" goals in the areas of child health, education and safety with the endorsement of 1200 organizations and individuals across the state. Since that time, only 1 of the 12 indicators (infant mortality) has reached the decade goal.

STATE DEMOGRAPHICS

Trends should be viewed with caution, especially in smaller counties, because of variability due to chance. In addition, data reporting and population estimation methods may have changed over time.

Bent County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Trends should be viewed with caution, especially in smaller counties, because of variability due to chance. In addition, data reporting and population estimation methods may have changed over time.

Crowley County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Did you know?

In 1996, children under the age of 18 in Crowley County received federal aid in the form of Aid to Families with Dependent Children (AFDC) at a greater rate than children living in any other Colorado county.

Custer County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Did you know?

Custer County's 1996 high school graduation rate was second best in the state, with over 96% of students completing in four years. This fact is particularly impressive given Custer County's relatively high rate of low income children under the age of 18 receiving Aid to Families with Dependent Children.

Eagle County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Trends should be viewed with caution, especially in smaller counties, because of variability due to chance. In addition, data reporting and population estimation methods may have changed over time.

Grand County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Did you know?

In 1996, nearly 13% of Grand County's babies were born at a low birth weight — more than double the Decade of the Child goal of 5%.

Kit Carson County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Logan County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Morgan County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Phillips County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Did you know?

12.3% of Phillips County's babies were considered "three risk factor births" in 1996, meaning their mothers were single, under the age of 25, and had not graduated from high school. The county's high school graduation rate, while still one of the state's best, has declined by 5 percentage points since 1991.

Pueblo County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Trends should be viewed with caution, especially in smaller counties, because of variability due to chance. In addition, data reporting and population estimation methods may have changed over time.

San Miguel County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Did you know?

Over 95% of high school students in San Miguel County graduate in four years — one of the best rates in Colorado. In 1996, almost 25% of San Miguel County's babies were born to single moms.

Yuma County 1998 KidsCount! Report Card

Most of Colorado's 1,043,910 children and youth benefit from a strong, healthy start in life. They are born to parents who have the time and the resources to nurture them, they attend good schools, live in safe neighborhoods, and know their family doctors by name. There are children in each of Colorado's counties, however, who aren't so lucky. KidsCount! county-level data is provided so that members of every community have the information they need to make a difference in the lives of local children.

Did you know?

Yuma County's graduation rate has increased since 1991, and is nearing the Decade of the Child goal of 90%. However, the percent of pregnant women receiving early prenatal care has slipped from the goal of 90% in 1991 to just 79% in 1996.

COUNTY DEMOGRAPHICS

1997 population	9,504
1997 population under 18	2,536

* - Fewer than 3 events

Trends should be viewed with caution, especially in smaller counties, because of variability due to chance. In addition, data reporting and population estimation methods may have changed over time.

Mission Statement

Since 1985, the Colorado Children's Campaign has worked to mobilize individuals and organizations to think and act on behalf of children, with particular attention to the health, education, and safety of those most at risk.

KidsCount in Colorado!

KidsCount in Colorado is the Campaign's annual report on the status of children. It documents the health, education, safety, and economic trends in each of Colorado's 63 counties. This report helps local groups and public policy makers identify new issues, evaluate the effectiveness of programs, and set priorities for the coming years. KidsCount! is the most widely quoted and used report about children in Colorado.

BrainChild

"We have the information. Let's use it!" Eighty percent of brain growth takes place in the first three years of life. The Campaign's renowned project, BrainChild, is designed to translate the new science around brain development into practical steps parents and other caregivers can take to ensure optimum cognitive development for children. Tip sheets for parents, training materials for child care providers, public awareness campaigns, conferences on brain development, and recommendations for policy makers are just part of this project.

The Doll Project

The Doll Project helps raise public awareness about the needs of children. Every April, a grassroots army of volunteers throughout the state makes thousands of cardboard dolls that represent the real stories of Colorado children. Major improvements in the health, education, and safety of children have been passed in the state legislature because the dolls have created heightened awareness about our kids.

Corporate Campaign for Kids

A committee of today's corporate business leaders has been formed with the pledge to make Colorado "the best place to raise a child." The Corporate Campaign for Kids is committed to the goal of using their brains, their know-how, and their connections to help Colorado children measure up to, and exceed, national standards for health, safety, and educational performance.

Ad Hoc Children's Legislative Committee

Public policy decisions shape the world our children will inherit. In 1996, the Colorado Children's Campaign created the Ad Hoc Children's Legislative Committee to coordinate major initiatives that would improve the health, education, and safety of children. Our goals are to be above politics and to focus state resources on early prevention of the problems in the lives of children and their families. The Ad Hoc Children's Legislative Committee has created tax breaks for parents, expanded The Child Health Plan, created a tax check off fund for quality child care, streamlined child care, and funded the Youth Crime Prevention and Intervention Fund with the support of 250 phone tree volunteers.
