#### ABSTRACT

This report provides detailed statistical information on crime in schools. It is a companion document to Tibe Annual Provider Cohool Safety: 1999," which offers an overview of the nature and scope of school crime. This report is organized as a series of indicators, with each indicator presenting data on a different aspect of school crime and safety. The report contains 4 sections: Nonfatal Student Victimization -- Student Reports; Violence and Crime at School--Public School Principal/Disciplinarian Reports; Nonfatal Teacher Victimization at School--Teacher Reports; and School Environment. The report shows that even though the actual rate of victimization has declined or remained constant over recent years, students feel less safe at school now than just a few years ago. Students, ages 12 through 19, who reported avoiding one or more places at school for their own safety increased between 1989 and 1995. The presence of street gangs on school property continued to concern students, reflected by the fact that the percentage of students who reported seeing street gangs at their school increased from 1989 to 1995. Alcohol and marijuana use on school property remained constant, although marijuana use anywhere by students in grades 9 through 12 increased. Three appendices list school safety practices and policies, technical notes, and other information. (RJM)

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and report on education activities in foreign countries.

The **Bureau of Justice Statistics** (BJS) is the primary federal entity for collecting, analyzing, publishing, and disseminating statistical information about crime, its perpetrators and victims, and the operation of the justice system at all levels of government. These data are critical to federal, state, and local policy-makers in combating crime and ensuring that justice is both efficient and evenhanded.

#### **FOREWORD**

The renewed national focus on school crime and safety continues into the current school year, fueled not only by the tragic events in Colorado, Oregon, and elsewhere, but also by the more common but less serious violence that touches the lives of students, parents, teachers, and school officials.

Solutions to any problem can only be developed if the programs and policies developed to address it are built on accurate information about the nature, extent, and scope of the problem. This report is intended to provide information that will assist in developing programs to prevent and cope with violence and crime in schools.

This is the second edition of *Indicators of School Crime and Safety*, a joint effort by the Bureau of Justice Statistics and National Center for Education Statistics. The report provides detailed statistical information to inform the nation on the current nature of crime in schools, and is a companion document to the *Annual Report on School Safety:* 1999. The *Annual Report* is a joint publication of the Departments of Education and Justice that provides an overview of the nature and scope of school crime and describes actions schools and communities can take to address this critical issue. The two reports respond to a 1998 request by President Clinton for an annual report card on school violence.

This edition of *Indicators* contains the most recent available data on school crime and safety drawn from a number of statistical series supported by the federal government. The data in the report can provide perspective on the extent of crime and violence in our schools, as well as some measure of our national response to this problem.

We were not able to include in this edition the latest information about school-associated violent deaths, a key indicator of great interest to students, parents, teachers and others involved in addressing school violence. We anticipate that preliminary estimates from the Centers for Disease Control and Prevention's study on this topic will be included in the 1999 Annual Report, and the complete study will be submitted later this year for publication in the Journal of the American Medical Association. Electronic editions of this Indicators report will contain links to the data concerning school-associated violent deaths as soon as they are available.

The Bureau of Justice Statistics and National Center for Education Statistics continue to work towards providing more timely and accurate data on the issue of school-related violence and safety. The results of the 1999 School

Foreword

Crime Supplement to the National Crime Victimization Survey will be included in next year's edition of *Indicators*, while the following year's report will contain data from a new survey of school administrators on crime and victimization in the schools.

We hope that this ongoing series of data collections and reports will continue to help inform the President, Congress, and the American people about our nation's progress in providing our children with safe places to live and learn.

v Foreword

#### **EXECUTIVE SUMMARY**

Schools should be safe and secure places for all students, teachers, and staff members. Without a safe learning environment, teachers cannot teach and students cannot learn. In fact, as the data in this report show, more victimizations happen away from school than at school. For example, despite the tragic and deadly incidents on school campuses in the last few years, in 1997, students were about three times more likely to be victims of nonfatal serious violent crime away from school than at school (Indicator 1).

However, although young people are less likely to be victimized at school than they are away from school, this does not mean that there are not crimes in schools. Although between 1993 and 1997 the total nonfatal victimization rate for young people declined, in 1997, students ages 12 through 18 were victims of about 202,000 serious violent crimes at school (that is, rape, sexual assault, robbery, and aggravated assault). They were victims of more than 2.7 million total crimes at school (Indicator 1). Furthermore, for some types of crimes at school, rates have not changed over the last few years. For example, between 1993 and 1997, the percentage of students in grades 9 through 12 who were threatened or injured with a weapon on school property in the past 12 months remained constant—at about 7 or 8 percent (Indicator 3). The percentage of students in grades 9 through 12 who reported being in a physical fight on school property in the past 12 months also remained unchanged between 1993 and 1997—at about 15 percent (Indicator 4).

As noted in last year's report, while data show that the actual rate of victimization has declined or remained constant over recent years, students seem to feel less safe at school now than just a few years ago. Students ages 12 through 19 who reported avoiding one or more places at school for their own safety increased between 1989 and 1995—from 5 to 9 percent (Indicator 13). Furthermore, the presence of street gangs on school property continues to be a concern and may lead to students feeling less safe. The percentage of students who reported that street gangs were present at their schools increased from 1989 to 1995. In 1995, 28 percent of students ages 12 through 19 reported that they had street gangs at their schools compared to 15 percent in 1989 (Indicator 14).

In addition, whereas alcohol and marijuana use on school property remained constant between 1993 and 1995, marijuana use anywhere among students in grades 9 through 12 increased. In 1997, about 26 percent of these stu-

<sup>&</sup>lt;sup>1</sup>The reader should be cautious in making comparisons between victimization rates on school property and elsewhere. These data do not allow the estimation of hours on school property and hours elsewhere.

dents had used marijuana in the last 30 days (Indicator 17). Furthermore, almost one-third of all students in grades 9 through 12 (32 percent) reported that someone had offered, sold, or given them an illegal drug on school property—an increase from 24 percent in 1993 (Indicator 18).

Therefore, the data shown in this report present a mixed picture of school safety. While overall school crime rates have declined, violence, gangs, and drugs are still evident in some schools. It is hoped that all children will be able to go to and from school and spend time at school without fearing for their safety or the safety of their friends and teachers. The data presented in this report indicate that more work needs to be done.

#### **ORGANIZATION OF THE CURRENT REPORT**

This report, the second in a series of annual reports on school crime and safety from the Bureau of Justice Statistics and the National Center for Education Statistics, presents the latest available data on school crime and student safety. The report repeats many indicators from last year's report but also provides updated data on nonfatal student victimization and nonfatal teacher victimization, and new data on student fights and the availability of drugs on school property.

The report provides a profile of school crime and safety in the United States and describes the characteristics of the victims of these crimes. It is organized as a series of indicators, with each indicator presenting data on a different aspect of school crime and safety. There are four sections to the report: Nonfatal Student Victimization—Student Reports; Violence and Crime at School—Public School Principal/Disciplinarian Reports; Nonfatal Teacher Victimization at School—Teacher Reports; and School Environment. Each section contains a set of indicators that, taken together, describe a distinct aspect of school crime and safety.

Rather than relying on data from a large omnibus survey of school crime and safety, this report uses a variety of independent data sources from federal departments and agencies including the Bureau of Justice Statistics, the National Center for Education Statistics, and the Centers for Disease Control and Prevention. Each data source has an independent sample design, data collection method, and questionnaire design, all of which may be influenced by the unique perspective of the primary funding agency. By combining multiple and independent sources of data, it is hoped that this report will present a more valid portrait of school crime and safety than would be possible with any single source of information.

However, because the report relies on so many different data sets, the age groups, the time periods, and the types of respondents analyzed can vary from indicator to indicator. Readers should keep this in mind as they compare

data from different indicators. Furthermore, while every effort has been made to keep key definitions consistent across indicators, different surveys sometimes use different definitions, such as those for specific crimes and "at school." Therefore, caution should be used in making comparisons between results from different data sets. Descriptions of these data sets are located in appendix B of this report.

#### **KEY FINDINGS**

Some of the key findings from the various sections of this report are as follows:3

#### NONFATAL STUDENT VICTIMIZATION—STUDENT REPORTS

In 1997, students ages 12 through 18 were victims of about 202,000 nonfatal serious violent crimes at school, and about 636,000 away from school. These numbers indicate that when students were away from school, they were more likely to be victims of nonfatal serious violent crime—including rape, sexual assault, robbery, and aggravated assault—than when they were at school (Indicator 1).

- The percentages of students in grades 9 through 12 who have been threatened or injured with a weapon on school property<sup>4</sup> have not changed significantly in recent years. In 1993, 1995, and 1997, about 7 to 8 percent of students reported being threatened or injured with a weapon such as a gun, knife, or club on school property in the past 12 months (Indicator 3).
- Students were differentially victimized by crime according to where they lived. In 1997, 12- through 18-year-old students living in urban or suburban areas were more vulnerable to serious violent crime at school than were students in rural areas. Away from school, urban students were more vulnerable to serious violent crime than were suburban or rural students. However, student vulnerability to theft at school in 1997 was similar in urban, suburban, and rural areas and similar in urban and suburban areas away from school (Indicator 1).

#### VIOLENCE AND CRIME AT SCHOOL—PUBLIC SCHOOL PRINCIPAL/DISCIPLINARIAN REPORTS

In 1996–97, 10 percent of all public schools reported at least one serious violent crime to the police or a law enforcement representative. Principals' reports of serious violent crimes included murder, rape or other type of sexual battery, suicide, physical attack or fight with a weapon, or robbery. Another 47 percent of public schools reported a less serious violent or nonviolent crime (but not a serious violent one). Crimes in this category include physical at-

<sup>\*</sup>Definitions for "on school property" and "at school" may differ. See appendix C for specific definitions.

<sup>&</sup>lt;sup>2</sup>Readers should consult the glossary of terms in appendix C for the specific definitions used in each survey.

<sup>&</sup>lt;sup>3</sup>All comparisons reported here were statistically significant at the 0.05 level. See appendix B for details on the methods used here.

tack or fight without a weapon, theft/larceny, and vandalism. The remaining 43 percent of public schools did not report any of these crimes to the police (Indicator 7).

- Elementary schools were much less likely than either middle or high schools to report any type of crime in 1996–97. They were much more likely to report vandalism (31 percent) than any other crime (19 percent or less) (Indicator 8).
- At the middle and high school levels, physical attack or fight without a weapon was generally the most commonly reported crime in 1996–97 (9 and 8 per 1,000 students, respectively). Theft or larceny was more common at the high school than at the middle school level (6 versus 4 per 1,000 students) (Indicator 8).

#### NONFATAL TEACHER VICTIMIZATION AT SCHOOL—TEACHER REPORTS

Over the 5-year period from 1993 to 1997, teachers were victims of 1,771,000 nonfatal crimes at school, including 1,114,000 thefts and 657,000 violent crimes (rape or sexual assault, robbery, and aggravated and simple assault) (Indicator 9). This translates into 84 crimes per 1,000 teachers per year.

- In the period from 1993 to 1997, middle/junior high school teachers were more likely to be victims of violent crimes (most of which were simple assaults) than senior high school teachers, who, in turn, were more likely to be victims of violent crime than elementary school teachers (60 versus 37 and 37 versus 18 crimes per 1,000 teachers) (Indicator 9).
- In the 1993–94 school year, 12 percent of all elementary and secondary school teachers were threatened with injury by a student, and 4 percent were physically attacked by a student. This represented about 341,000 teachers who were victims of threats of injury by students that year, and 119,000 teachers who were victims of attacks by students (Indicator 10).

#### SCHOOL ENVIRONMENT

Between 1989 and 1995, the percentages of students who felt unsafe while they were at school and while they were going to and from school increased. In 1989, 6 percent of students ages 12 through 19 sometimes or most of the time feared they were going to be attacked or harmed at school. By 1995, this percentage had risen to 9 percent. During the same period, the percentage of students fearing they would be attacked while traveling to and from school rose from 4 percent to 7 percent (Indicator 12).

10

- Between 1989 and 1995, the percentage of students ages 12 through 19 who avoided one or more places at school for fear of their own safety increased, from 5 percent to 9 percent. In 1995, this percentage represented 2.1 million students (Indicator 13).
- Between 1989 and 1995, the percentage of students who reported that street gangs were present at their schools increased. In 1989, 15 percent of students reported gangs being present in their schools. By 1995, this percentage had risen to 28 percent (Indicator 14).
- Between 1993 and 1997, the percentage of students in grades 9 through 12 who reported carrying a weapon on school property at least 1 day within 30 days before the survey fell from 12 percent to 9 percent (a 25 percent reduction) (Indicator 11).
- In 1997, about 51 percent of students in grades 9 through 12 had at least one drink of alcohol in the 30 days before being surveyed. A much smaller percentage (about 6 percent) had at least one drink on school property during the same period (Indicator 16).
- There was an increase in the use of marijuana among students between 1993 and 1995. In 1995, about 25 percent of all students in grades 9 through 12 had used marijuana in the last 30 days, compared with 18 percent in 1993. Marijuana use in 1997, at 26 percent, was similar to that in 1995. However, marijuana use on school property did not increase significantly between 1993 and 1995, or between 1995 and 1997 (Indicator 17).
- In 1995 and 1997, almost one-third of all students in grades 9 through 12 (32 percent) reported that someone had offered, sold, or given them an illegal drug on school property. This was an increase from 1993 when 24 percent of such students reported illegal drugs available to them on school property (Indicator 18).

#### **A**CKNOWLEDGMENTS

The authors wish to thank the heads of their respective agencies, Gary Phillips of the National Center for Education Statistics (NCES) and Jan Chaiken of the Bureau of Justice Statistics (BJS), for backing this report. We also appreciate their support of our larger data collection and reporting agendas on school crime and safety.

From BJS, we wish to thank Cathy Maston and Matthew Durose of the Victimization Statistics Branch for their work in preparing and verifying data from the NCVS.

From NCES, we wish to thank Bruce Taylor, Dan Kasprzyk, Ellen Bradburn, and John Wirt, who served as reviewers. They each provided input that substantially improved the publication.

Outside of NCES and BJS, school crime experts who reviewed the report were Carlos Sunderman and Ira Pollack of the Northwest Regional Educational Laboratory/National Resource Center for Safe Schools and Joanne Wiggins of the Planning and Evaluation Service of the U. S. Department of Education. Their advice was gratefully accepted. We particularly appreciated their willingness to review the report under very strict time constraints.

Without the assistance of the following staff at MPR Associates this report could not have been produced: Barbara Kridl (overall production and proofreading), Francesca Tussing (production, proofreading, layout, and editing), Andrea Livingston (editing), and Leslie Retallick (figure design and text layout). They provided invaluable editorial, graphic, and production assistance.

18.3.	Percentage of students in grades 9 through 12 who reported that drugs were made available to them on school property during the last 12 months, by race—ethnicity: 1993, 1995, and 1997	40

Nonfatal Student Victimization— Student Reports

#### 1. Victimization of students at school and away from school\*

The amount of crime committed in the nation's schools continues to be a concern. However, students are exposed and vulnerable to crime when they are away from as well as at school. In fact, life away from school may be more dangerous for some students than life at school.

\*The 1997 data reported here are new. The 1992 through 1996 entries are revised from those previously published in the original 1998 Indicators of School Crime and Safety

- Students ages 12 through 18 experienced fewer nonfatal serious violent crimes (that is, rape, sexual assault, robbery, and aggravated assault) when they were at school than away from school. In 1997, students in this age group were victims of about 202,000 such crimes at school, and about 636,000 away from school (tables 1.1b and 1.3b). The victimization rate for this type of crime declined slightly at school from 1992 to 1997 and also declined away from school (figure 1.1 and tables 1.2a, b and 1.4a, b).
- Students ages 12 through 18 were victims of about 1.1 million nonfatal violent crimes (that is, serious violent crime plus simple assault) at school, and about 1.6 million away from school in 1997 (tables 1.1b and 1.3b). There was a decline in the victimization rate at school between 1993 and 1997 (from 59 to 40 per 1,000 students ages 12 through 18) (figure 1.1 and tables 1.2a, b). During this period, the victimization rates for nonfatal violent crime were generally lower at school than away from school.
- Students ages 12 through 18 were more likely to be victims of theft at school than away from school each year between 1992 and 1996 (tables 1.1a, b and 1.3a, b). However, in 1997, about the same number of thefts occurred at and away from school. In 1997, there were about 1.7 million thefts at school (61 percent of all crimes at school), and about 1.6 million thefts away from school (50 percent of all crimes away from school). The victimization rate declined slightly for thefts at school between 1992 and 1997, as it did for thefts away from school during this period (figure 1.1 and tables 1.2a, b and 1.4a, b).
- Considering all nonfatal crime (theft plus violent crime), 12- through 18year-old students were victims of about 2.7 million crimes while they were at school in 1997, and a larger number of crimes (about 3.1 million) away from school (tables 1.1b and 1.3b). These represent victimization rates of 102 crimes per 1,000 students at school, and 117 crimes per 1,000 students away from school (tables 1.2b and 1.4b).
- In 1997, the rates for serious violent crime were higher for males than females at school, but not away from school (figures 1.2 and 1.3 and tables 1.2b and 1.4b). The rates for theft were similar for males and females at school, but higher for males than females away from school.
- In 1997, 12- through 18-year-old students living in urban or suburban areas were more vulnerable to serious violent crime at school than were students in rural areas (figure 1.2 and table 1.2b). Away from school, urban students were more vulnerable to serious violent crime than were suburban or rural students (figure 1.3 and table 1.4b). However, student vulnerability to theft at school in 1997 was similar in urban, suburban, and rural areas and similar in urban and suburban areas away from school.

24

For this indicator, "at school" includes on school property or on the way to or from school.

## 2. Prevalence of students being victimized at school\*

Some of the crimes committed against students involve violence, while others involve their property. Presenting information on different types of victimization for public and private school students separately helps clarify how many students are affected and where the most serious problems are.

\*This indicator repeats information from the 1998 School Crime Report.

- In 1995, about 15 percent of students ages 12 through 19 reported being victims of a crime at school during the previous 6 months (figure 2.1 and table 2.1). Students in both public and private schools were much more likely to report theft of property (from their desks, lockers, or other location) than they were to report being the victim of a violent crime (being physically attacked or having property taken by force).
- Public school students were more likely to report having been victims of a violent crime during the previous 6 months (4 percent) than were private school students (2 percent) in 1995 (figure 2.1 and table 2.1). Public and private school students were about equally likely to report having had property stolen at school (theft) in that year (12 and 11 percent, respectively).
- Victimization was related to grade level. In 1995, students in higher grades were less likely to report being the victims of violent and property crimes than were students in lower grades (table 2.1). When considering both types of crime, there was a notable difference between students in grades 6 through 9 on the one hand and students in grades 11 and 12 on the other.

Figure 2.1.—Percentage of students ages 12 through 19 who reported criminal victimization at school during the previous 6 months, by type of victimization and school control: 1989 and 1995

<sup>&</sup>lt;sup>1</sup>Any victimization is a combination of reported violent and property victimization. If the student reported an incident of either, he or she is counted as having experienced both, he or she is only counted once under "Any victimization."

NOTE: "At school" means in the school building, on the school grounds, or on a school bus.

SOURCE: U.S. Department of Justice, Bureau of Justice Statistics, School Crime Supplement to the National Crime Victimization Survey, 1989 and 1995

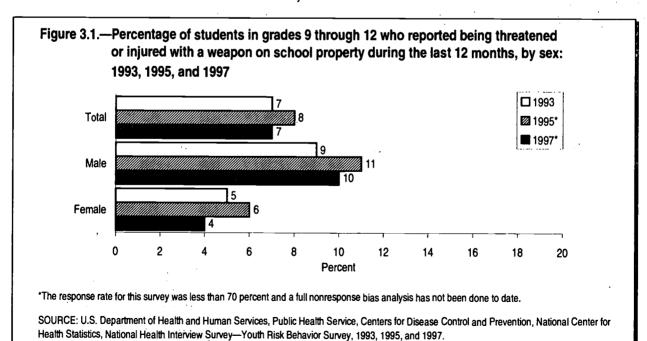

<sup>&</sup>lt;sup>2</sup>Property victimization includes theft of property from a student's desk, locker, or other locations.

<sup>&</sup>lt;sup>3</sup>Violent victimization includes physical attacks or taking property from the student directly by force, weapons, or threats.

# 3. Prevalence of students being threatened or injured with a weapon on school property

Every year, some students are threatened or injured with a weapon while they are on school property. The percentages of students victimized in this way provide an important measure of how safe our schools are and how this is changing over time.

- The percentage of students in grades 9 through 12 who were threatened or injured with a weapon on school property in the 12 months before the survey has remained constant in recent years. In 1993, 1995, and 1997, about 7 to 8 percent of students reported being threatened or injured with a weapon such as a gun, knife, or club on school property in the past 12 months (figure 3.1 and table 3.1).
- In each survey year, males were more likely than females to report being threatened or injured with a weapon on school property (figure 3.1 and table 3.1). For example, in 1997, 10 percent of males reported being threatened or injured in the past year, compared with 4 percent of females. Moreover, the percentage of females who reported being threatened or injured declined slightly over the period—from about 5 percent in 1993 to 4 percent in 1997.
- Of 9th through 12th graders, those students in lower grades were more likely to be threatened or injured with a weapon on school property than were students in higher grades (figure 3.2 and table 3.1). For example, in 1993, 9 percent of 9th graders reported being threatened or injured, compared with 6 percent of 12th graders. The comparable percentages in 1997 were 10 percent for 9th graders and 6 percent for 12th graders.
- There were few racial—ethnic differences in the percentages of students being threatened or injured with a weapon on school property in the 12 months in each year (figure 3.3 and table 3.1). About the same percentage of students from each racial—ethnic group reported being threatened or injured.<sup>2</sup>

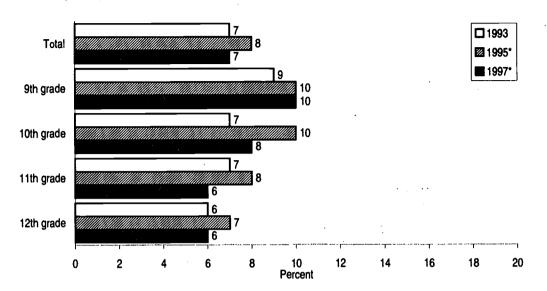

While there appear to be large differences among racial—ethnic groups, these differences are associated with large standard errors, making these estimates somewhat unreliable, and the differences are not statistically significant.

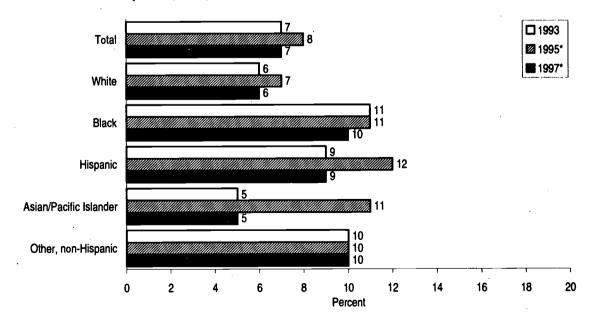

Figure 3.2.—Percentage of students in grades 9 through 12 who reported being threatened or injured with a weapon on school property during the last 12 months, by grade: 1993, 1995, and 1997

\*The response rate for this survey was less than 70 percent and a full nonresponse bias analysis has not been done to date.

# 4. Prevalence of students involved in physical fights on school property

Schools where there are numerous physical fights may not be able to maintain a focused learning environment. Students who are constantly involved in fights on school property cannot be ready to learn.

- In 1997, about 15 percent of all students in grades 9 through 12 said that they had been in a physical fight on school property in the last 12 months (figure 4.1 and table 4.1). In that same year, 37 percent reported that they had been in a physical fight in any location (including on school property).
- The percentage of students who reported being in a fight anywhere declined slightly from 1993 to 1997—from 42 percent in 1993 to 37 percent in 1997 (figure 4.1 and table 4.1). However, the percentages of students who reported fighting on school property across these years were similar.
- Males were more likely than females to have been in a fight anywhere and on school property (figure 4.1 and table 4.1). In 1997, 46 percent of males said they had been in a fight in the last 12 months, and 20 percent said they had been in a fight on school property. In that same year, about 26 percent of females reported they had been in a fight, and 9 percent said they had been in a fight on school property.
- Of 9th through 12th graders, those students in lower grades reported being in more fights than students in higher grades anywhere and on school property (figure 4.2 and table 4.1). For example, in 1997, 21 percent of 9th graders reported that they were in a fight on school property in the last 12 months; in contrast, 10 percent of 12th graders were in fights on school property.

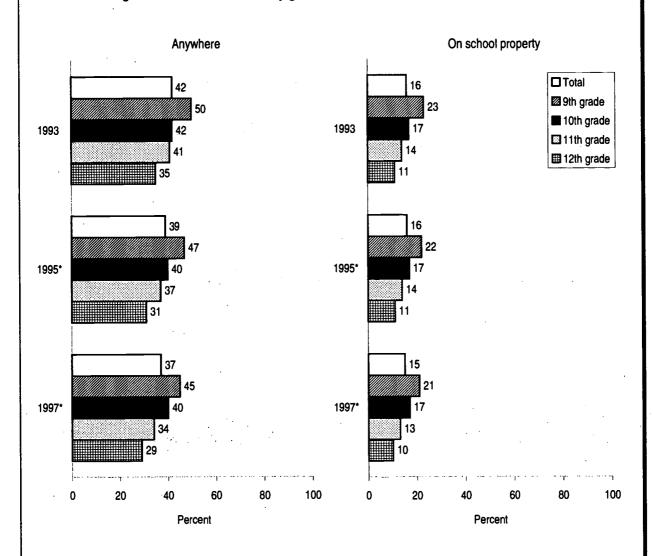

Figure 4.1.—Percentage of students in grades 9 through 12 who reported having been in a physical fight in the last 12 months, by sex: 1993, 1995, and 1997 On school property Anywhere 42 □ Total 1993 1993 Male Female 19951 1995 37 1997\* 1997 26 0 20 40 60 80 100 80 O 20 40 60 100 Percent Percent \*The response rate for this survey was less than 70 percent and a full nonresponse bias analysis has not been done to date.

### 5. Prevalence of students being bullied at school\*

Bullying contributes to a climate of fear and intimidation in schools. As part of a youth interview on school safety and discipline conducted in 1993, students in grades 6 through 12 were asked if they had been victims of bullying at school.

\*This indicator repeats information from the 1998 School Crime Report.

- Eight percent of all students in grades 6 through 12 reported that they had been victims of bullying at school during the 1992–93 school year (either in school, at school activities during the day, or on the way to or from school) (figure 5.1 and table 5.1).
- The incidence of bullying declined as grade level increased (figure 5.1 and table 5.1). Students in 6th grade were about four times as likely as students in 12th grade to report being bullied at school in the 1992–93 school year.
- The incidence of bullying at school was about the same (between 8 and 10 percent) in the 1992–93 school year regardless of the urbanicity of the place where the student lived (table 5.1).
- Urban males were more likely than urban females to report being victims
  of bullying at school (9 percent versus 6 percent) in the 1992–93 school
  year (table 5.1). However, this was not true of males and females in suburban areas or in rural areas.<sup>3</sup>

Figure 5.1.—Percentage of students in grades 6 to 12 who reported being bullied at school during the current school year: 1992–93

NOTE: Bullying was described as students picking on others a lot or making other students do things such as give them money. "At school" means in school, at school activities during the day, or on the way to or from school.

SOURCE: U.S. Department of Education, National Center for Education Statistics, National Household Education Survey, 1993.

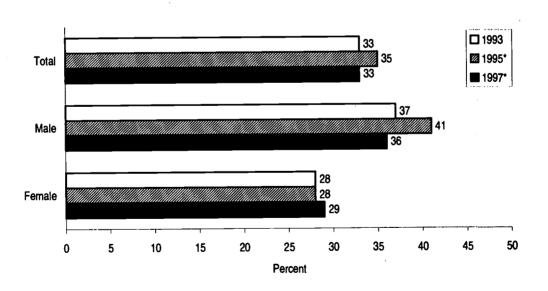

<sup>&</sup>lt;sup>3</sup>See appendix C for definition of "suburban" used in NHES.

# 6. Prevalence of students having property stolen or deliberately damaged on school property

One way that students are victimized at school is by having their personal property stolen or deliberately damaged. While less harmful than attacks on students themselves, such crimes have financial consequences and can divert students' attention from their studies as well as contribute to perceptions of schools as unsafe places.

- It is relatively common for students to have something stolen or damaged on school property. In 1997, about one-third of all students in grades 9 through 12 said that someone stole or deliberately damaged their property, such as their car, clothing, or books, on school property during the last 12 months (figure 6.1 and table 6.1). This proportion was similar in 1993 and 1995.
- Generally, males were more likely than females to report being victims of theft or deliberate property damage on school property. In 1993, 1995, and 1997, about 28 percent of females reported being victimized, compared with 37 percent of males in 1993, 41 percent in 1995, and 36 percent in 1997 (table 6.1).
- Students in lower grades were more likely than students in higher grades to report having something stolen or deliberately damaged at school (figure 6.2 and table 6.1). For example, in 1997, 37 percent of 9th graders had something of theirs damaged or stolen, compared with 28 percent of 12th graders.

Violence and Crime at School— Public School Principal/Disciplinarian Reports

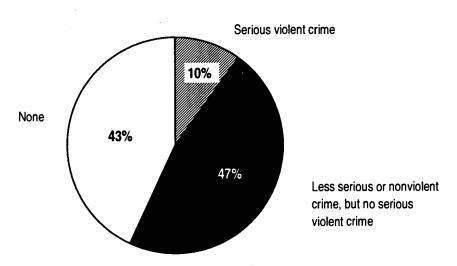

## 7. Crimes reported to the police\*

The number of crimes that principals indicated that they reported to police or other law enforcement representatives is a useful measure of the occurrences of serious crimes in the nation's schools. The percentage of schools reporting crimes provides an indication of how widespread crime is, while the number of crimes reported provides information on the magnitude of the problem.

- In 1996–97, 10 percent of all public schools reported at least one serious violent crime to a law enforcement representative (figure 7.1 and table 7.1). Another 47 percent of public schools reported a less serious violent or nonviolent crime (but not a serious violent one). The remaining 43 percent of public schools did not report any of these crimes to the police.
- The vast majority of crimes reported by public schools were of the less serious violent or nonviolent type in 1996–97 (402,000 out of the 424,000 total crimes reported to the police) (table 7.3).
- The percentage of schools reporting crimes was similar at the middle and high school levels (figure 7.2 and table 7.1). At each level, about 20 percent of the schools reported at least one serious violent crime, and about 55 percent reported at least one less serious violent or nonviolent crime, but no serious violent crime in 1996–97.
- The numbers of reported incidents per 1,000 students were similar for middle and high schools for both serious violent and less serious violent and nonviolent crimes (figure 7.2 and table 7.4). For both types of crimes, there was a lower rate at the elementary level than at the middle or high school levels.
- The percentage of schools reporting at least one serious violent crime was much higher in cities (17 percent) than in towns (5 percent) or rural areas (8 percent) during 1996–97 (figure 7.2 and table 7.1).

Figure 7.1.—Percentage distribution of public schools according to types of crimes reported to police: 1996–97

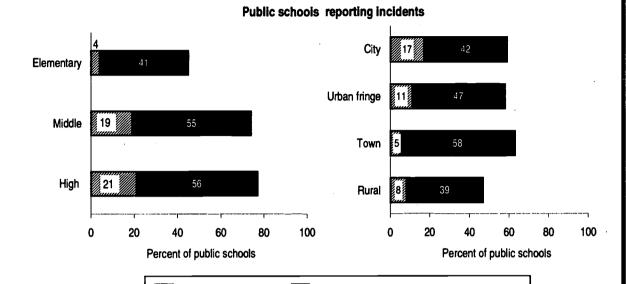

NOTE: Serious violent crimes include murder, rape or other type of sexual battery, suicide, physical attack or fight with a weapon, or robbery. Less serious or nonviolent crimes include physical attack or fight without a weapon, theft/larceny, and vandalism. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Principal/School Disciplinarian Survey on School Violence," FRSS 63, 1997.

<sup>\*</sup>This indicator repeats information from the 1998 School Crime Report.

#### 8. Specific crimes reported to the police\*

Data on the prevalence of specific types of crimes add detail to the more general discussion of serious violent crimes and less serious violent and nonviolent crimes. Each type of crime affects students and schools differently.

- Elementary schools were much less likely than either middle or high schools to report any of the types of crime described here in 1996-97 (figure 8.1 and tables 8.1 and 8.2). They were much more likely to report vandalism (31 percent) than any other crime (19 percent or less).
- In 1996-97, physical attack or fight without a weapon was generally the most commonly reported crime at the middle and high school levels (9 and 8 per 1,000 public school students, respectively) (figure 8.2 and table 8.8). Theft or larceny was more common at the high school than the middle school level (6 versus 4 per 1,000 students).
- Overall, there was relatively little variation by urbanicity in the crime rates at school discussed here during the 1996-97 school year (as measured by the number of crimes reported per 1,000 public school students) (figure 8.2 and tables 8.7 and 8.8).

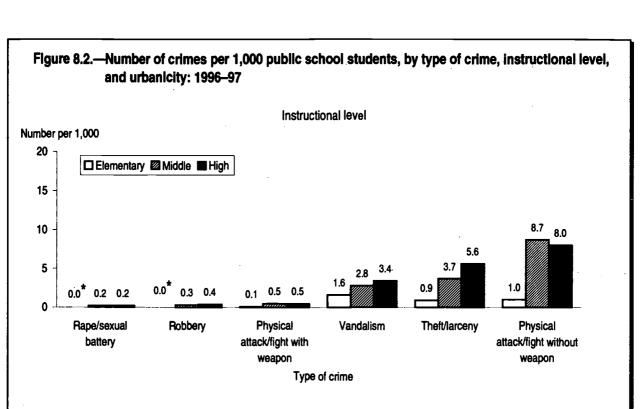

\*This indicator repeats information from the 1998 School Crime Report.

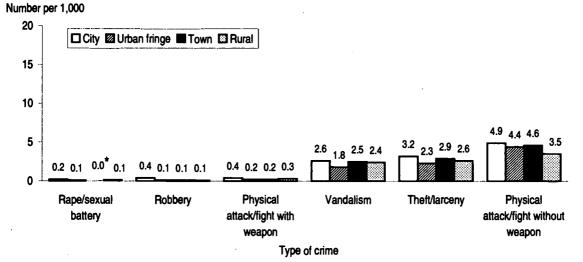

NOTE: Examples of weapons are guns, knives, sharp-edged or pointed objects, baseball bats, frying pans, sticks, rocks, and bottles. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Principal/School Disciplinarian Survey on School Violence," FRSS 63, 1997. ore of astrong &

About one-half (44 to 55 percent) of all public middle and high schools reported incidents of vandalism, theft or larceny, and physical attacks or fights without weapons to the police or other law enforcement representatives in the 1996-97 school year (figure 8.1 and table 8.2). Considerably smaller percentages of public middle and high schools reported the more serious violent crimes of rape or other type of sexual battery (5 and 8 percent, respectively); robbery (5 and 8 percent); or physical attack or fight with a weapon (12 and 13 percent) (table 8.1).

Nonfatal Teacher Victimization at School— Teacher Reports

### 9. Nonfatal teacher victimization at school

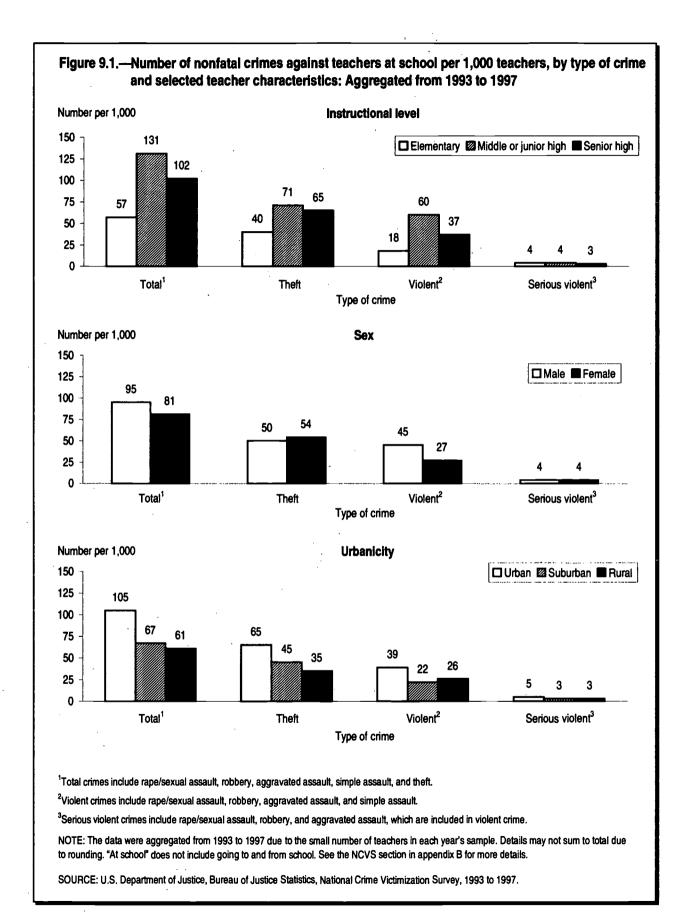

Students are not the only ones who are victims of crime at school.

Teachers in school are also the targets of violence. In addition to the personal toll such violence takes on teachers, those who worry about their safety may have difficulty teaching and may leave the profession altogether. Information on the number of crimes against teachers at school can help show how severe and widespread the problem is.

- Over the 5-year period from 1993 to 1997, teachers were the victims of approximately 1,771,000 nonfatal crimes at school, including 1,114,000 thefts and 657,000 violent crimes (rape or sexual assault, robbery, aggravated assault, and simple assault) (table 9.1). On average, this translates into 354,000 nonfatal crimes per year, or 84 crimes per 1,000 teachers per year. Among the violent crimes against teachers during this 5-year period, there were about 78,000 serious violent crimes (12 percent of the violent crimes), including rape or sexual assault, robbery, and aggravated assault. On average, this translates into 16,000 serious violent crimes per year.
- During the 1993–97 period, the rate of serious violent crime at school was similar for teachers (on average, 4 per 1,000 teachers), regardless of their instructional level, sex, race—ethnicity, and the urbanicity of the schools where they taught (figure 9.1 and table 9.1).
- In the period from 1993 to 1997, middle/junior high school teachers were more likely to be victims of violent crimes (most of which were simple assaults) than senior high school teachers, who, in turn, were more likely to be victims of violent crime than elementary school teachers (60 versus 37 and 37 versus 18 crimes per 1,000 teachers) (figure 9.1 and table 9.1).
- During the 1993–97 period, senior high and middle/junior high school teachers were more likely to be targets of theft than elementary school teachers (65 and 71, respectively, versus 40 per 1,000 teachers) (figure 9.1 and table 9.1).
- The violent crime rate among teachers at school varied by sex. Over the 5-year period from 1993 to 1997, male teachers were more likely to be victims of violent crimes than female teachers (45 versus 27 crimes per 1,000 teachers) (figure 9.1 and table 9.1). However, males and females were equally likely to be victims of serious violent crime (4 per 1,000 teachers).
- Teachers were differentially victimized by crimes at school according to where they taught. For example, over the 5-year period from 1993 to 1997, urban teachers were more likely to be victims of violent crimes than suburban teachers (39 versus 22 crimes per 1,000 teachers). Urban teachers were also more likely to experience theft (65 per 1,000 teachers) than rural teachers (35 per 1,000 teachers, respectively) (figure 9.1 and table 9.1).

See appendices B and C for the revised definition of "at school" for teachers.

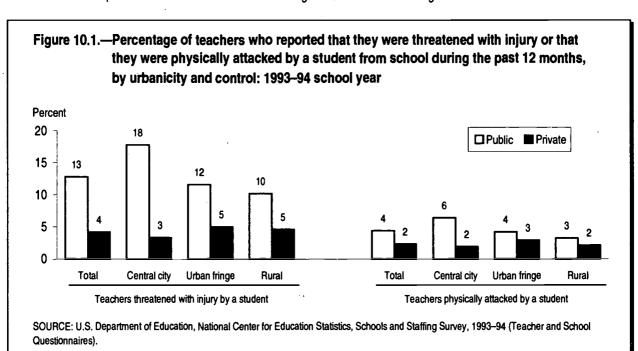

# 10. Prevalence of teachers being threatened with injury or attacked by students\*

Some of the offenses against teachers are committed by students. Data on physical attacks and threats against elementary and secondary teachers by students can provide a snapshot of the prevalence of this problem.

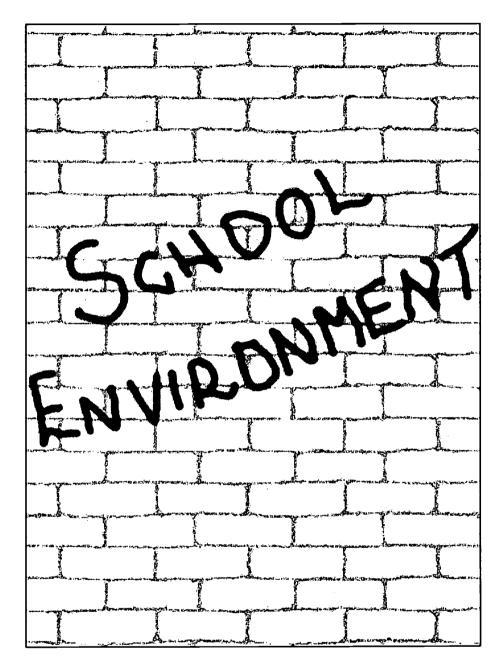

- In the 1993–94 school year, 12 percent of all elementary and secondary school teachers (341,000) were threatened with injury by a student from their school, and 4 percent (119,000) were physically attacked by a student (table 10.1).
- Teachers in central city schools were more likely to be victims than were teachers in urban fringe or rural schools in 1993–94 (table 10.1). About 15 percent of teachers in central city schools had been threatened with injury by students, compared with 11 and 10 percent of teachers in urban fringe and rural schools. About 6 percent of teachers in central city schools had been attacked by students, compared with 4 and 3 percent of teachers in urban fringe and rural schools.
- Public school teachers were more likely than private school teachers to be victimized by students in school in 1993–94 (figure 10.1 and table 10.1). Almost 13 percent of public school teachers had been threatened with injury by students, compared with 4 percent of private school teachers, and 4 percent of public school teachers had been physically attacked by students, compared with 2 percent of private school teachers. Teachers in public central city schools were about five times more likely to be targets of threats of injury and about three times more likely to be targets of attacks than their colleagues in private central city schools.
- In 1993–94, secondary school teachers were more likely than elementary school teachers to have been threatened with injury by a student from their school (15 percent versus 9 percent) (table 10.1). However, elementary school teachers were more likely than secondary school teachers to have been physically attacked by a student (5 percent versus 3 percent). The prevalence of teacher victimization by students did not vary according to the racial—ethnic backgrounds of teachers.

\*This indicator repeats information from the 1998 School Crime Report.

Nonfatal Teacher Victimization

**School Environment** 

45

#### 11. Prevalence of students carrying weapons on school property

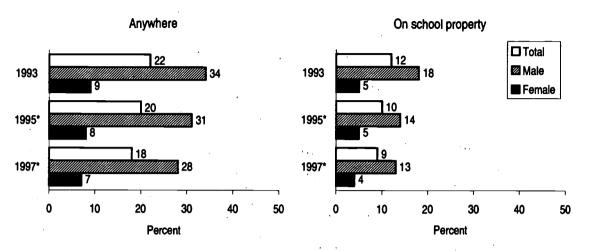

The presence of weapons at school can create an intimidating and threatening atmosphere, making teaching and learning difficult. The percentages of students who report that they carry a gun or other weapon on school property is an indicator of how widespread the problem of weapons at school is.

- In 1997, 18 percent of students reported carrying a weapon such as a gun, knife, or club at any time in the past 30 days. About 9 percent reported they had carried a weapon on school property in the past 30 days (figures 11.1 and 11.2 and tables 11.1 and 11.2).
- Between 1993 and 1997, the percentage of students in grades 9 through 12 who reported carrying a weapon on school property at least 1 day within 30 days before the survey fell from 12 percent to 9 percent (a 25 percent reduction) (figure 11.1 and table 11.1).
- There was also a decline in the percentage of students in grades 9 through 12 who carried a weapon at any time during the past 30 daysfrom 22 percent in 1993 to 18 percent in 1997 (figure 11.2 and table 11.2).
- Males were about three times more likely than females to carry a weapon on school property. For example, in 1997, 13 percent of males carried a weapon on school property, compared with 4 percent of females (figure 11.1 and table 11.1).
- Students in lower grades were more likely to have carried a weapon anywhere in the previous 30 days than were students in higher grades (figure 11.2 and table 11.2). For example, in 1997, 23 percent of 9th graders had carried a weapon compared with 15 percent of 12th graders.
- Generally, students in lower grades were no more likely to carry a weapon to school than other students (figure 11.2 and table 11.1). The one exception to this general trend was in 1995, in which 12th graders were less likely to carry a weapon to school than were 10th or 9th grade students.

# 12. Students' perceptions of personal safety at school and when traveling to and from school\*

One consequence of school violence is the fear that it can instill in students. Students who fear for their own safety may not be able or ready to learn. Concems about vulnerability to attacks by others at school and on the way to and from school may also have a detrimental effect on the school environment and learning.

\*This indicator repeats information from the 1998 School Crime Report.

- Between 1989 and 1995, there were increases in the percentages of students feeling unsafe while they were at school and while they were going to and from school (figures 12.1 and 12.2 and table 12.1). In 1989, 6 percent of students ages 12 through 19 sometimes or most of the time feared they were going to be attacked or harmed at school, while in 1995 this percentage rose to 9 percent. Between these years, the percentage of students fearing they would be attacked while traveling to and from school rose from 4 percent to 7 percent.
- In 1989 and 1995, larger percentages of black and Hispanic students than white students feared attacks at school and when traveling to and from school (figures 12.1 and 12.2 and table 12.1).
- Much of the increase between 1989 and 1995 in the percentage of students ages 12 through 19 fearing for their own safety at school came from an increase in the percentage of black students who did so (figure 12.1 and table 12.1). In 1995, this percentage was 13 percent, nearly double the percentage in 1989 (7 percent).
- Examining student perceptions by location indicates that there was a large increase between 1989 and 1995 in the percentage of suburban black students who feared being attacked when traveling to and from school (figure 12.3 and table 12.1). The percentage of suburban black students ages 12 through 19 fearing attacks increased almost threefold—from 6 percent to 16 percent.

Figure 12.1.—Percentage of students ages 12 through 19 who reported fearing being attacked or harmed at school, by race-ethnicity: 1989 and 1995 Percent 20 1989 1995 16 13 15 11 9 10 7 5 0 Hispanic Black, non-Hispanic Total White, non-Hispanic NOTE: Includes students who reported that they sometimes or most of the time feared being victimized in this way. ## 13. Students' reports of avoiding places at school\*

One consequence of crime at school is that students begin to perceive specific areas at school as unsafe. In order to try to ensure their own safety, they begin to avoid these areas. Changes in the percentage of students avoiding areas at school may be a good barometer of how safe schools are—at least in the minds of those who attend these schools.

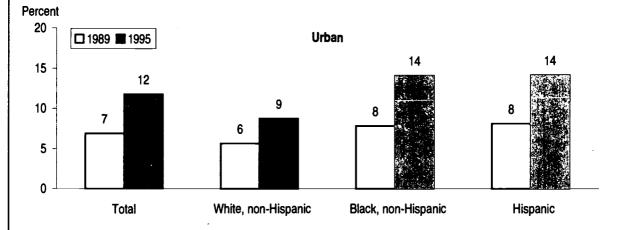

\*This indicator repeats information from the 1998 School Crime Report.

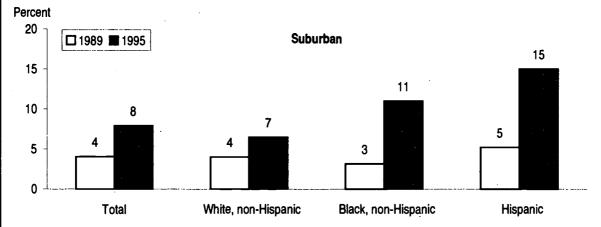

- Between 1989 and 1995, there was an increase in the percentage of students ages 12 through 19 who avoided one or more places at school—from 5 percent in 1989 to 9 percent in 1995 (figure 13.1 and table 13.1). This percentage represented 2.1 million students in 1995 who reported avoiding some areas at school for fear of their own safety.
- The percentage of black students avoiding specific areas at school rose from 7 percent in 1989 to 12 percent in 1995, and for Hispanic students it rose from 7 percent in 1989 to 13 percent in 1995 (figure 13.1 and table 13.1). The percentage of white students avoiding areas at school rose from 5 percent to 7 percent.
- In suburban areas in 1989, there were no significant differences in the percentages of white, black, and Hispanic students who avoided one or more places at school (figure 13.2 and table 13.1). However, in 1995, black and Hispanic students in suburban areas were much more likely than suburban white students to stay away from some places at school.

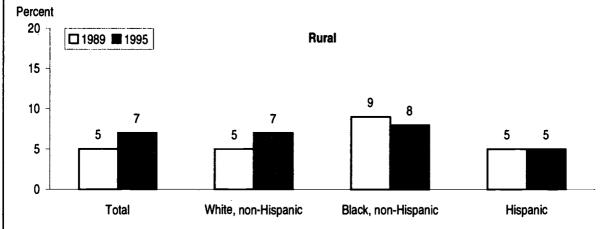

Figure 13.1.—Percentage of students ages 12 through 19 who reported that they avoided one or more places in school, by race-ethnicity: 1989 and 1995 Percent 20 1989 1995 15 13 12 10 7 7 5 5 5 Black, non-Hispanic Hispanic Total White, non-Hispanic NOTE: Places include the entrance into the school, any hallways or stairs in the school, parts of the school cafeteria, any school restrooms, and other places inside the school building. SOURCE: U.S. Department of Justice, Bureau of Justice Statistics, School Crime Supplement to the National Crime Victimization Survey, 1989 and 1995.

## 14. Students' reports of gangs at school\*

Gangs are organized groups that are often involved in drugs, weapons trafficking, and criminal activities. The presence of gangs in school can be very disruptive to the school environment. Gangs may not only create fear among students but also increase the level of violence in school. The percentage of students who report the presence of street gangs in their schools indicates the existence and severity of the gang problem in schools.

- Between 1989 and 1995, the percentage of students who reported that street gangs were present at their schools increased (figure 14.1 and table 14.1). In 1989, 15 percent of students reported gangs being present in their schools. By 1995, this percentage had risen to 28 percent.
- Gangs were more likely to exist in public schools than in private schools (figure 14.1 and table 14.1). In 1989, 17 percent of students in public schools reported that street gangs were present in their schools compared with 4 percent in private schools. Similar results were reported in 1995. However, between these two years, the percentage of public school students reporting that gangs were present in their schools almost doubled (from 17 percent in 1989 to 31 percent in 1995) as has the percentage of private school students reporting gang presence (from 4 percent to 7 percent).
- In 1995, urban students were more likely to report that there were street gangs at their schools (41 percent) than were suburban students (26 percent) or rural students (20 percent) (figure 14.2 and table 14.1). Similar results occurred in 1989. Between 1989 and 1995, reports of gang presence increased in all three categories of students' place of residence.
- In both years, black students were more likely than white students to report the existence of street gangs in their schools, and Hispanic students were more likely than either white or black students to do so (table 14.1). Between 1989 and 1995, reports of gang presence increased for whites, blacks, and Hispanics.

Figure 14.1.—Percentage of students ages 12 through 19 who reported that street gangs were present at school, by control of school: 1989 and 1995 Percent 50 ■ 1989 ■ 1995 40 31 28 30 17 20 15 10 0 Total **Public Private** NOTE: "At school" was not defined for the survey respondent. School Environment

# 15. Public school principals' reports of discipline problems at school\*

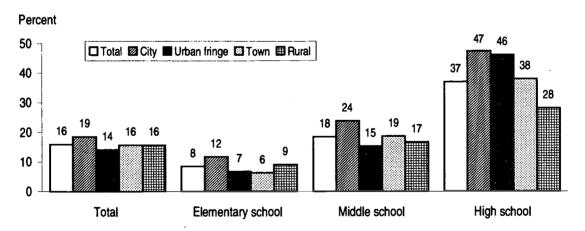

Discipline problems in a school may contribute to an overall climate in which violence may occur.

Schools that suffer from student drug or alcohol use, racial tensions, or verbal and physical abuse of teachers may be filled with pressures that result in school violence.

\*This indicator repeats information from the 1998 School Crime Report.

- During the 1996–97 school year, 16 percent of all public school principals reported that one or more discipline issues had been a serious problem in their school<sup>5</sup> (figure 15.1 and table 15.1). About the same percentage of principals in city, urban fringe, town, and rural settings reported one or more serious discipline problems.
- Public elementary schools were the least likely to report any serious discipline issues, followed by middle schools and then high schools (figure 15.1 and table 15.1). About 8 percent of elementary school principals reported one or more of these issues as a serious problem, while 18 percent of principals in middle schools and 37 percent of those in high schools did so.
- While overall there were no significant differences in reported serious problems by urbanicity, a greater percentage of principals in public city high schools than in rural high schools reported having serious discipline problems—47 percent compared with 28 percent (figure 15.1 and table 15.1).

Figure 15.1.—Percentage of public schools that reported that 1 or more of 17 discipline issues\* was a serious problem in their school, by instructional level and urbanicity: 1996–97

\*Student tardiness, student absenteeism/class cutting, physical conflicts among students, robbery or theft of items worth over \$10, vandalism of school property, student alcohol use, student drug use, sale of drugs on school grounds, student tobacco use, student possession of weapons, trespassing, verbal abuse of teachers, physical abuse of teachers, teacher absenteeism, teacher alcohol or drug use, racial tensions, and gangs.

NOTE: "At school" was not defined for the survey respondent.

School Environment

<sup>&</sup>lt;sup>5</sup>These issues were student tardiness, student absenteeism/class cutting, physical conflicts among students, robbery or theft of items worth over \$10, vandalism of school property, student alcohol use, student drug use, sale of drugs on school grounds, student tobacco use, student possession of weapons, trespassing, verbal abuse of teachers, physical abuse of teachers, teacher absenteeism, teacher alcohol or drug use, racial tensions, and gangs.

## 16. Prevalence of students using alcohol

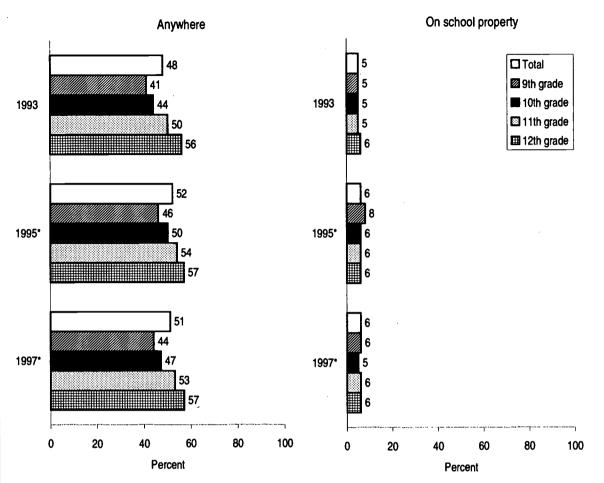

The consumption of alcohol by students on school property, a crime in itself, may also lead to other crimes and misbehavior. It can lead to a school environment that is harmful to students, teachers, and staff.

- In 1997, 51 percent of students in grades 9 through 12 had at least one drink of alcohol in the 30 days before being surveyed (figure 16.1 and table 16.1). A much smaller percentage (6 percent) had at least one drink on school property during the same period.
- Approximately the same percentage of students had drunk alcohol in 1997 as in 1993 and 1995—both in general and on school property.
- Males were more likely than females to have used alcohol in 1993 and 1997 (figure 16.1 and table 16.1). Furthermore, males were more likely than females to use alcohol on school property. For example, in 1997, 7 percent of males had used alcohol on school property compared with 4 percent of females.
- Of 9th through 12th graders, in every survey year, students in higher
  grades were more likely to report drinking alcohol anywhere than were
  students in lower grades (figure 16.2 and table 16.1). However, there were
  no differences by grade among students who said they had drunk alcohol
  on school property during 1993, 1995, or 1997.

Figure 16.1.—Percentage of students in grades 9 through 12 who reported using alcohol in the last 30 days, by sex: 1993, 1995, and 1997 Anywhere On school property 48 □ Total 50 1993 1993 Male 46 Female 52 19951 53 1995 50 51 1997 53 20 40 60 80 100 20 40 60 80 100 Percent Percent \*The response rate for this survey was less than 70 percent and a full nonresponse bias analysis has not been done to date. School Environment

# 17. Prevalence of students using marijuana

The use of other drugs such as marijuana on school property may also cause disruptions in the learning environment. The consumption of these substances leads to a school environment that is harmful to students, teachers, and school administrators.

- Between 1993 and 1997, 6 to 9 percent of students in grades 9 through 12 reported using marijuana on school property during the last 30 days.
   About 18 to 26 percent reported using marijuana anywhere during the last 30 days (figure 17.1 and table 17.1).
- There was an increase in the use of marijuana among students between 1993 and 1995. In 1995, about 25 percent of all students in grades 9 through 12 had used marijuana in the last 30 days, compared with 18 percent in 1993 (figure 17.1 and table 17.1). Marijuana use in 1997, at 26 percent, was similar to that in 1995. However, marijuana use on school property did not increase significantly between 1993 and 1995, or between 1995 and 1997.
- Males were more likely than females to have used marijuana in every survey year (figure 17.1 and table 17.1), both in general and on school property.
- Both males and females increased their overall use of marijuana from 1993 to 1997 (figure 17.1 and table 17.1). The percentage of males who reported using marijuana in the 30 days before the survey increased from 21 percent in 1993 to 30 percent in 1997. The percentage of females increased from 15 percent to 21 percent.
- Students' grade in school was not associated with their use of marijuana on school property (figure 17.2 and table 17.1). However, in 1993 and 1995, students in lower grades were less likely than students in higher grades to report using marijuana at any time during the last 30 days. In 1997, this difference by grade was not apparent, with students in lower grades about as likely to report using marijuana as students in higher grades. This pattern occurred because the overall use of marijuana in 9th, 10th, and 11th grades increased from 1993 to 1997, while its use by 12th graders remained relatively constant.

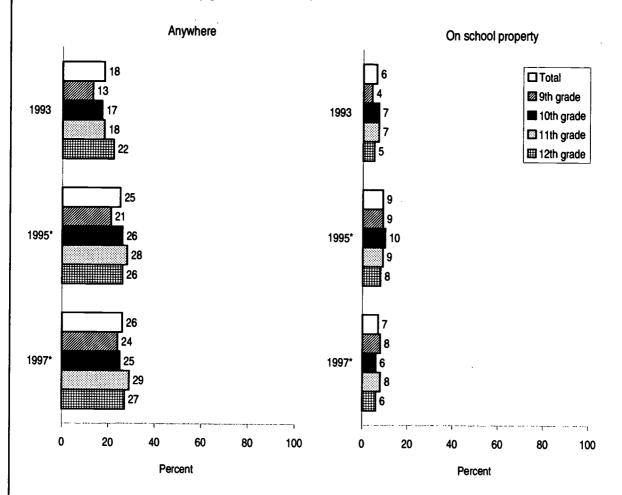

\*The response rate for this survey was less than 70 percent and a full nonresponse bias analysis has not been done to date.

School Environment

18. Prevalence of students reporting drugs were made available to them on school property

Schools can be places where young people are offered or can purchase illegal drugs. The availability of drugs on school property is a disruptive and corrupting influence in the school environment.

- In 1995 and 1997, almost one-third of all students in grades 9 through 12 (32 percent) reported that someone had offered, sold, or given them an illegal drug on school property (figure 18.1 and table 18.1). This was an increase from 1993 when 24 percent of such students reported illegal drugs available to them on school property.
- The percentages of both males and females reporting that illegal drugs were made available to them on school property increased between 1993 and 1995. However, in each survey year, males were more likely than females to report that drugs were offered, sold, or given to them on school property. For example, in 1997, 37 percent of males reported the availability of drugs, while 25 percent of females did so.
- Students' grade level in school did not appear to be associated with whether they had been offered, sold, or given drugs on school property (figure 18.2 and table 18.1). Generally, in each survey year, about the same percentage of students in each grade level reported the availability of illegal drugs.
- The racial—ethnic background of students was associated with whether they reported having illegal drugs offered, sold, or given to them on school property (figure 18.3 and table 18.1). In general, Hispanics were more likely than students from other racial—ethnic groups to report having drugs available to them on school property.

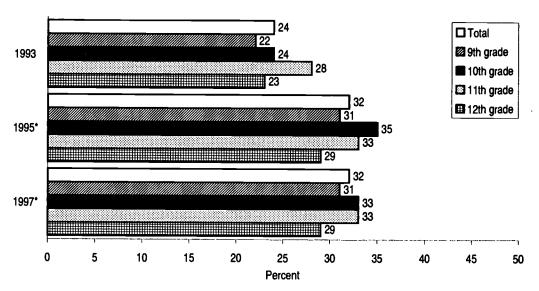

Figure 18.1.—Percentage of students in grades 9 through 12 who reported that drugs were made available to them on school property during the last 12 months, by sex: 1993, 1995, and 1997 □ Total 1993 Male Female 32 1995\* 25 19971 25 40 45 50 30 35 20 25 5 10 15 0 Percent

Any victimization is a combination of reported violent and property victimization. If the student reported an incident of either, he or she is counted as having experienced any victimization. If the respondent reported having experienced both, he or she is only counted once under "Any victimization."

Violent victimization includes physical attacks or taking property from the student directly by force, weapons, or threats.

<sup>3</sup>Property victimization includes theft of property from a student's desk, locker, or other locations.

NOTE: "At school" means in the school building, on the school grounds, or on a school bus. Population sizes are 21,554,000 students ages 12 through 19 in 1989 and 23,933,000 in 1995.

NOTE: Serious violent crimes include murder, rape or other type of sexual battery, suicide, physical attack or fight with a weapon, or robbery. Less serious violent or nonviolent crimes include physical attack or fight without a weapon, theft/larceny, and vandalism. Any incidents refer to any of the crimes listed. Not included are any crimes not listed here and any crimes not reported to police. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is 78,000 public schools.

physical attack or fight without a weapon, theft/larceny, and vandalism. Any incidents refer to any of the crimes listed. Not included are any crimes not listed here and any crimes not reported to police. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is 78,000 NOTE: Serious violent crimes include murder, rape or other type of sexual battery, suicide, physical attack or fight with a weapon, or robbery. Less serious violent or nonviolent crimes include public schools. Due to rounding or missing cases, details may not add to totals. Numbers are rounded to the nearest 100. SOURCE: U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System, "Principal/School Disciplinarian Survey on School Violence," FRSS 63, 1997.

-Fewer than 30 sample cases.

NOTE: Examples of weapons are guns, knives, sharp-edged or pointed objects, baseball bats, frying pans, sticks, rocks, and bottles. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is 78,000 public schools.

t No cases were reported in this cell, although the crime defined by the cell could have happened to some teachers with these characteristics if a different sample had been drawn.

SOURCE: U.S. Department of Justice, Bureau of Justice Statistics, National Crime Victimization Survey, 1993 to 1997.

Total crimes include rape/sexual assault, robbery, aggravated assault, simple assault, and theft.

<sup>&</sup>lt;sup>2</sup>Violent crimes include rape/sexual assault, robbery, aggravated assault, and simple assault.

<sup>&</sup>lt;sup>3</sup>Serious violent crimes include rape/sexual assault, robbery, and aggravated assault, which are included in violent crime.

The estimate was based on fewer than 10 cases.

<sup>&</sup>lt;sup>5</sup>Teachers teaching in more than one school in different locales are not included.

for a total population size of 21,062,797 teachers. The average annual number of full-time-equivalent teachers is approximately 2.9 million. The population reported here includes part-time teachers NOTE: The data were aggregated from 1993 to 1997 due to the small number of teachers in each year's sample. On average, there were about 4.2 million teachers per year over the 5-year period as well as other instructional and support staff. Due to rounding or missing data, details may not add to totals. Numbers are rounded to the nearest 100.

Any victimization is a combination of reported violent and property victimization. If the student reported an incident of either, he or she is counted as having experienced any victimization. If the respondent reported having experienced both, he or she is only counted once under "Any victimization."

Violent victimization includes physical attacks or taking property from the student directly by force, weapons, or threats.

Property victimization includes theft of property from a student's desk, locker, or other locations.

NOTE: "At school" means in the school building, on the school grounds, or on a school bus. Population sizes are 21,554,000 students ages 12 through 19 in 1989 and 23,933,000 in 1995.

police. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is 42,336,819 physical attack or fight without a weapon, theft/larceny, and vandalism. Any incidents refer to any of the crimes listed. Not included are any crimes not listed here and any crimes not reported to NOTE: Serious violent crimes include murder, rape or other type of sexual battery, suicide, physical attack or fight with a weapon, or robbery. Less serious violent or nonviolent crimes include public school students. Values of 0.0 are less than 0.05.

NOTE: Examples of weapons are guns, knives, sharp-edged or pointed objects, baseball bats, frying pans, sticks, rocks, and bottles. Schools were asked to report crimes that took place in school buildings, on school buses, on school grounds, and at places holding school-sponsored events. Population size is 42,336,819 public school students.

tNo cases were reported in this cell, atthough the crime defined by the cell could have happened to some teachers with these characteristics if a different sample had been drawn.

SOURCE: U.S. Department of Justice, Bureau of Justice Statistics, National Crime Victimization Survey, 1993 to 1997.

Total crimes include rape/sexual assault, robbery, aggravated assault, simple assault, and theft.

Violent crimes include rape/sexual assault, robbery, aggravated assault, and simple assault.

Serious violent crimes include rape/sexual assault, robbery, and aggravated assault, which are also included in violent crime.

<sup>&</sup>lt;sup>4</sup>The estimate was based on fewer than 10 cases.

Feachers teaching in more than one school in different locales are not included.

for a total population size of 21,062,797 teachers. The average annual number of full-time-equivalent teachers is approximately 2.9 million. The population reported here includes part-time teachers NOTE: The data were aggregated from 1993 to 1997 due to the small number of teachers in each year's sample. On average, there were about 4.2 million teachers per year over the 5-year period as well as other instructional and support staff.

Table S10.1—Standard errors for table 10.1: Percentage and number of teachers who reported that they were threatened with injury or that they were physically attacked by a student during the past 12 months, by urbanicity and selected teacher and school characteristics: 1993-94 school year

# APPENDIX A. SCHOOL PRACTICES AND POLICIES RELATED TO SAFETY AND DISCIPLINE

Concern over school crime and violence has prompted many public schools to take various measures to reduce and prevent violence and ensure safety in schools. Such measures include adopting zero tolerance policies; requiring students to wear uniforms; employing various security measures such as requiring visitor sign-in and using metal detectors; having police or other law enforcement representatives stationed at the school; and offering students various types of violence prevention programs. Presented in this appendix are data on the implementation of such safety measures in public schools. This report does not evaluate the effectiveness of any of these efforts or strategies, and the inclusion of a strategy does not suggest that it is endorsed by the National Center for Education Statistics (NCES) or the Bureau of Justice Statistics (BJS) as an effective means of reducing or preventing violence. Likewise, the omission of a possible strategy does not suggest it is rejected by NCES or BJS as a policy to reduce or prevent violence. This information, along with supporting tables, was drawn from a recent NCES report titled Violence and Discipline Problems in U.S. Public Schools: 1996-97 (NCES 98-030). The report was based on data from the 1996-97 Fast Response Survey System (FRSS) Principal/School Disciplinarian Survey on School Violence. Readers should consult that report for more detailed findings on variation by school characteristics.

### Zero Tolerance Policies

Most public schools reported having zero tolerance policies toward serious student offenses (table A1). A "zero tolerance policy" was defined as a school or district policy that mandates predetermined consequences or punishments for specific offenses. At least 9 out of 10 schools reported zero tolerance policies for firearms (94 percent) and weapons other than firearms (91 percent). Eighty-seven percent of schools had policies of zero tolerance for alcohol and 88 percent had zero tolerance policies for drugs. Most schools also had zero tolerance policies for violence and tobacco (79 percent each).

#### **School Uniforms**

 Requiring students to wear school uniforms was not common. Three percent of all public schools required students to wear uniforms during the 1996–97 school year (table A2).

#### Security Measures

Schools took a number of measures to secure their schools. For example, 96 percent of public schools reported that visitors were required to sign in before entering the school building (table A3); 80 percent of public schools reported having a closed campus policy that prohibited most students from leaving the campus for lunch; 53 percent of public schools controlled access to their school building; and 24 percent of public schools controlled access to their school grounds. In addition, 19 percent of public schools reported conducting drug sweeps, with middle schools and high schools being more likely to use drug sweeps than elementary schools (36 and 45 percent, respectively, versus 5 percent). While 4 percent of public schools reported that they performed random metal detector checks on students, daily use of metal detectors as a security measure was not common: only 1 percent of public schools reported taking this measure.

Presence of Police or Other Law Enforcement Representatives in Schools In addition to the security measures described above, 6 percent of public schools reported having police or other law enforcement representatives stationed 30 hours or more at the school in a typical week during the 1996–97 school year; 1 percent of schools had them stationed from 10 to 29 hours; and 3 percent had them stationed from 1 to 9 hours. Twelve percent of schools did not have police or other law enforcement representatives stationed during a typical week but made them available as needed, and 78 percent of schools did not have any such persons stationed at their schools (table A4).

## Violence Prevention or Reduction Programs

A majority of public schools (78 percent) reported having some type of formal school violence prevention or reduction program (table A5). The percentage of schools with both 1-day and ongoing programs (43 percent) was higher than schools with only ongoing programs (24 percent) and schools with only 1-day programs (11 percent).

# Policies to Prevent Firearms in School

In the 1996–97 school year, there were over 5,000 student expulsions for possession or use of a firearm (table A6). An additional 3,300 students were transferred to alternative schools for possession or use of a firearm, while 8,144 were placed in out-of-school suspensions lasting 5 or more days. About 5 percent of all public schools (or 4,170) took one or more of these actions.

Table A1—Percentage of public schools that reported that they have a zero tolerance policy for various specified student offenses, by selected school characteristics: 1996–97

## **APPENDIX B. TECHNICAL NOTES**

# General Information

The information presented in this report was obtained from many data sources, including databases from the National Center for Education Statistics (NCES), the Centers for Disease Control and Prevention (CDC), the Bureau of Justice Statistics (BJS), and the Survey Research Center (SRC) of the University of Michigan. While some of the data were collected from universe surveys, most were gathered by sample surveys. Some questions from different surveys may appear the same, but they were actually asked of different populations of students (e.g., high school seniors or students in grades 9 through 12); in different years; about experiences that occurred within different periods of time (e.g., in the past 4 weeks or during the past 12 months); and at different locations (e.g., in school or at home). Readers of this report should take particular care when comparing data from the different data sources. Because of the variation in collection procedures, timing, phrasing of questions, and so forth, the results from the different sources may not be strictly comparable. After introducing the data sources used for this report, the next section discusses the accuracy of estimates and describes the statistical procedures used.

#### **Sources of Data**

Table B1 presents some key information for each of the data sets used in the report, including the survey year, target population, response rates, and sample sizes. The remainder of the section briefly describes each data set and provides directions for obtaining more information. The exact wording of the interview questions used to construct the indicators are presented in table B2.

## National Household Education Survey (NHES)

The National Household Education Survey (NHES) is a data collection system of the National Center for Education Statistics that provides descriptive data on the condition of education in the United States. It has been conducted in 1991, 1993, 1995, and 1996. For each year, the survey covered two substantive components addressing education-related topics. One topic that the 1993 survey focused on was school safety and discipline, covering information on the school learning environment, discipline policy, safety at school, victimization, availability and use of alcohol/drugs, and alcohol/drug education.

Unlike traditional student- or school-based data collections, the NHES collected data from households. The data collection involved a three-stage process. First, using random digit dialing (RDD) telephone survey methods, a representative sample of households in the 50 states and the District of Columbia was selected. Within these households, individuals who met predetermined criteria were then screened. Finally, eligible persons were given detailed or extended interviews by computer-assisted telephone interview (CATI) procedures. Two groups of individuals completed interviews for the School Safety and Discipline component of NHES:93: 12,680 parents of children enrolled in grades 3 through 12, and 6,504 students enrolled in grades 6 through 12. This report focuses only on the responses of students in grades 6 through 12; the overall weighted student response rate was 68 percent. The item nonresponse rate was generally low, and items with missing data were imputed. As a result, no missing data remain in the data set. For additional information about the School Safety and Discipline component of NHES:93, refer to J.M. Brick, M. Collins, M.J. Nolin, P. Ha, M. Levinsohn, and K. Chandler, 1994, National Household Education Survey of 1993, School Safety and Discipline Data File User's Manual (NCES 94-193), or contact:

## Schools and Staffing Survey (SASS)

This report draws upon data on teacher victimization from the 1993–94 Schools and Staffing Survey (SASS:93–94), which provides national- and state-level data on public and private schools, principals, school districts, and teachers. The 1993–94 survey was the third in a series of cross-sectional school-focused surveys, following ones conducted in 1990–91 and 1987–88. It consisted of four sets of linked questionnaires, including surveys of schools, the principals of each selected school, a subsample of teachers within each school, and public school districts. Data were collected by multistage sampling. Stratified by state, control, type, association membership, and grade level (for private schools), schools were sampled first. Approximately 9,900 public schools and 3,300 private schools were selected to participate in the 1993–94 SASS. Within each school, teachers were further stratified into one of five teacher types in the following hierarchy: 1) Asian or Pacific Islander; 2) American Indian, Aleut, or Eskimo; 3) bilingual/ESL; 4) new teachers; and 5) experienced teachers. Within each

teacher stratum, teachers were selected systematically with equal probability. Approximately 56,700 public school teachers and 11,500 private school teachers were sampled.

This report focuses on teachers' responses. The overall weighted response rates were 84 percent for public school teachers and 73 percent for private school teachers. In the Public School Teacher Questionnaire, 91 percent of the items had a response rate of 90 percent or more, and in the Private School Teacher Questionnaire, 89 percent of the items had this level of response. Values were imputed for questionnaire items that should have been answered but were not. For additional information about SASS, refer to R. Abramson, C. Cole, S. Fondelier, B. Jackson, R. Parmer, and S. Kaufman, 1996, 1993–94 Schools and Staffing Survey: Sample Design and Estimation (NCES 96-089), or contact:

National School-Based Youth Risk Behavior Survey (YRBS) The National School-Based Youth Risk Behavior Survey (YRBS) is one component of the Youth Risk Behavior Surveillance System (YRBSS), an epidemiological surveillance system that was developed by the Centers for Disease Control and Prevention (CDC) to monitor the prevalence of youth behaviors that most influence health. The YRBS focuses on priority health-risk behaviors established during youth that result in the most significant mortality, morbidity, disability, and social problems during both youth and adulthood. This report uses 1993, 1995, and 1997 YRBS data.

The YRBS used a three-stage cluster sampling design to produce a nationally representative sample of students in grades 9 through 12 in the United States. The target population consisted of all public and private school students in grades 9 through 12 in the 50 states and the District of Columbia. The first-stage sampling frame included selecting primary sampling units (PSUs) from strata formed on the basis of urbanization and the relative percentage of black and Hispanic students in the PSU. These PSUs are either large counties or groups of smaller, adjacent counties. At the second stage, schools were selected with probability proportional to school enrollment size. Schools with substantial numbers of black and Hispanic students were sampled at relatively higher rates than all other schools. The final stage of sampling consisted of randomly selecting within each chosen school at each grade 9 through 12 one or two intact classes

of a required subject, such as English or social studies. All students in selected classes were eligible to participate. Approximately 16,300, 10,900, and 16,300 students were selected to participate in the 1993 survey, the 1995 survey, and the 1997 survey, respectively.

The overall response rate was 70 percent for the 1993 survey, 60 percent for the 1995 survey, and 69 percent for the 1997 survey. NCES standards call for response rates of 70 percent or better and bias analyses are called for by NCES when that percentage is not achieved. For the YRBS data, a full nonresponse bias analysis has not been done to date. The weights were developed to adjust for nonresponse and the oversampling of black and Hispanic students in the sample. The final weights were normalized so that only weighted proportions of students (not weighted counts of students) in each grade matched national population projections. Fast Response Survey System: Principal/School Disciplinarian Survey on School Violence

The Principal/School Disciplinarian Survey was conducted through the NCES Fast Response Survey System (FRSS) during the spring and summer of 1997. Generally, the FRSS is a survey system designed to collect small amounts of issue-oriented data with minimal burden on respondents and within a relatively short time frame. The FRSS Principal/School Disciplinarian Survey focused on incidents of specific crimes/offenses and a variety of specific discipline issues in public schools. The survey was conducted with a nationally representative sample of regular public elementary, middle, and high schools in the 50 states and the District of Columbia. Special education, alternative and vocational schools, schools in the territories, and schools that taught only prekindergarten, kindergarten, or adult education were not included in the sample.

The sample of public schools was selected from the 1993–94 NCES Common Core of Data (CCD) Public School Universe File. The sample was stratified by instructional level, locale, and school size. Within the primary strata, schools were also sorted by geographic region and by percent minority enrollment. The sample sizes were then allocated to the primary strata in rough proportion to the aggregate square root of the size of enrollment of schools in the stratum. A total of 1,415 schools were selected. Among them, 11 schools were found no longer to be in existence, and 1,234 schools completed the survey. In April 1997,

questionnaires were mailed to school principals, who were asked to complete the survey or to have it completed by the person most knowledgeable about discipline issues at the school. The raw response rate was 88 percent (1,234 schools divided by the 1,404 eligible schools in the sample). The weighted overall response rate was 89 percent, and item nonresponse rates ranged from 0 percent to 0.9 percent. The weights were developed to adjust for the variable probabilities of selection and differential nonresponse and can be used to produce national estimates for regular public schools in the 1996–97 school year. National Crime Victimization Survey (NCVS) The National Crime Victimization Survey (NCVS), administered for the U.S. Bureau of Justice Statistics by the Bureau of the Census, is the nation's primary source of information on crime victimization and the victims of crime. Initiated in 1972 and redesigned in 1992, the NCVS collects detailed information on the frequency and nature of the crimes of rape, sexual assault, robbery, aggravated and simple assault, theft, household burglary, and motor vehicle theft experienced by Americans and their households each year. The survey measures crimes reported as well as those not reported to police.

Revision of Definition of "At school" for Teachers The method for producing estimates of teacher victimizations was revised for this edition in order to more accurately reflect crimes occurring to teachers at school while working. The National Crime Victimization Survey asks a number of questions that potentially can be used to examine the relationship between employment and crime victimizations. The survey asks questions about job type at the time of the crime, the person's activity at the time of the crime, and the place of occurrence. The previous edition used job type and activity at the time of the crime to estimate teacher victimizations. A crime was counted if it occurred to a teacher while working or on the way to or from work. For this, and future editions, the estimate of teacher victimizations includes crimes occurring to teachers at school (location), or at the worksite (location), or while working (activity). (For thefts, activity was not considered, since thefts of teachers' property kept at school can occur when teachers are not present.) This combination of data elements provides the most complete, and, it is believed, most accurate estimate of victimizations to teachers on the job. Crimes occurring in transit to or from work

are now being excluded from the estimate, since these may not be directly related to risk while teaching.

The NCVS sample consists of about 55,000 households, selected using a stratified, multi-stage cluster design. In the first stage, the primary sampling units (PSUs), consisting of counties or groups of counties, are selected. In the second stage, smaller areas, called Enumeration Districts (EDs) were selected from each sampled PSU. Finally, from selected EDs, clusters of four households, called segments, were selected for interview. At each stage, the selection was done proportionate to population size in order to create a self-weighting sample. The final sample was augmented to account for housing units constructed after the decennial Census. Within each sampled household, Census Bureau personnel interviewed all household members ages 12 and older to determine whether they had been victimized by the measured crimes during the 6 months preceding the interview. About 90,000 persons ages 12 and older are interviewed each 6 months. Households remain in sample for 3 years and are interviewed 7 times at 6-month intervals. The initial interview at each sample unit is used only to bound future interviews to establish a time frame to avoid duplication of crimes uncovered in these subsequent interviews. After their seventh interview households are replaced by new sample households. The NCVS has consistently obtained a response rate of about 95 percent at the household level. During the study period, the completion rates for persons within households were about 91 percent. Thus, final response rates were about 86 percent. Weights were developed to permit estimates for the total U.S. population 12 years and older. For more information about the NCVS, contact:

School Crime
Supplement (SCS)

Created as a supplement to the NCVS and co-designed by the National Center for Education Statistics and Bureau of Justice Statistics, the School Crime Supplement (SCS) survey was conducted in 1989 and 1995 to collect additional information about school-related victimizations on a national level. The survey was designed to assist policymakers as well as academic researchers and practitioners at the federal, state, and local levels so that they can make informed decisions concerning crime in schools. The SCS asks students a number of key

questions about their experiences with and perceptions of crime and violence that occurred inside their school, on school grounds, or on the way to or from school. Additional questions not included in the NCVS were also added to the SCS, such as those concerning preventive measures used by the school, students' participation in afterschool activities, students' perceptions of school rules, the presence of weapons and street gangs in school, and the availability of drugs and alcohol in school, as well as attitudinal questions relating to fear of victimization in school.

In both 1989 and 1995, the SCS was conducted for a 6-month period from January through June in all households selected for the NCVS (see discussion above for information about the sampling design). Within these households, the eligible respondents for the SCS were those household members who were between the ages of 12 and 19, had attended school at any time during the 6 months preceding the interview, and were enrolled in a school that would help them advance toward eventually receiving a high school diploma. These persons were asked the supplemental questions in the SCS only after completing their entire NCVS interview. A total of 10,449 students participated in the 1989 SCS, and 9,954 in the 1995 SCS. In the 1989 and 1995 SCS, the household completion rates were 97 percent and 95 percent, respectively, and the student completion rates were 86 percent and 78 percent, respectively. Thus, the overall SCS response rate (calculated by multiplying the household completion rate by the student completion rate) was 83 percent in 1989 and 74 percent in 1995. Response rates for most survey items were high—mostly over 95 percent of all eligible respondents. The weights were developed to compensate for differential probabilities of selection and nonresponse. The weighted data permit inferences about the 12- to 19-year-old student population who were enrolled in schools in 1989 and 1995. For more information about SCS, contact:

Accuracy of Estimates

The accuracy of any statistic is determined by the joint effects of "nonsampling" and "sampling" errors. Both types of error affect the estimates presented in this report. Several sources can contribute to nonsampling errors. For example, members of the population of interest are inadvertently excluded from the sampling frame; sampled members refuse to answer some of the survey questions

(item nonresponse) or all of the survey questions (questionnaire nonresponse); mistakes are made during data editing, coding, or entry; the responses that respondents provide differ from the "true" responses; or measurement instruments such as tests or questionnaires fail to measure the characteristics they are intended to measure. Although nonsampling errors due to questionnaire and item nonresponse can be reduced somewhat by the adjustment of sample weights and imputation procedures, correcting nonsampling errors or gauging the effects of these errors is usually difficult.

Sampling errors occur because observations are made on samples rather than on entire populations. Surveys of population universes are not subject to sampling errors. Estimates based on a sample will differ somewhat from those that would have been obtained by a complete census of the relevant population using the same survey instruments, instructions, and procedures. The standard error of a statistic is a measure of the variation due to sampling; it indicates the precision of the statistic obtained in a particular sample. In addition, the standard errors for two sample statistics can be used to estimate the precision of the difference between the two statistics and to help determine whether the difference based on the sample is large enough so that it represents the population difference.

Most of the data used in this report were obtained from complex sampling designs rather than a simple random design. In these sampling designs, data were collected through stratification, clustering, unequal selection probabilities, or multistage sampling. These features of the sampling usually result in estimated statistics that are more variable (that is, have larger standard errors) than they would have been if they had been based on data from a simple random sample of the same size. Therefore, calculation of standard errors requires procedures that are markedly different from the ones used when the data are from a simple random sample. The Taylor series approximation technique or the balanced repeated replication (BRR) method was used to estimate most of the statistics and their standard errors in this report. Table B3 lists the various methods used to compute standard errors for different data sets.

Standard error calculation for data from the National Crime Victimization Survey and the School Crime Supplement relied on a different procedure. For statistics based on the NCVS and the SCS data, standard errors were derived from a formula developed by the Census Bureau, which consists of three generalized variance function (gvf) constant parameters that represent the curve fitted to the individual standard errors calculated using the Jackknife Repeated Replication technique. The formulas used to compute the adjusted standard errors associated with percentages or population counts can be found in table B3.

# Statistical Procedures

The comparisons in the text have been tested for statistical significance to ensure that the differences are larger than might be expected due to sampling variations. Unless otherwise noted, all statements cited in the report are statistically significant at the .05 level. Several test procedures were used, depending upon the type of data being analyzed and the nature of the statement being tested. The primary test procedure used in this report was the Student's *t* statistic, which tests the difference between two sample estimates, for example, between males and females. The formula used to compute the *t* statistic is as follows:

$$t = \frac{E_1 - E_2}{\sqrt{se_1^2 + se_2^2}} \tag{1}$$

where  $E_1$  and  $E_2$  are the estimates to be compared and  $se_1$  and  $se_2$  are their corresponding standard errors. Note that this formula is valid only for independent estimates. When the estimates are not independent (for example, when comparing a total percentage with that for a subgroup included in the total), a covariance term (i.e.,  $2*se_1*se_2$ ) must be added to the denominator of the formula:

$$t = \frac{E_1 - E_2}{\sqrt{se_1^2 + se_2^2 + 2*se_1*se_2}}$$
 (2)

Once the *t* value was computed, it was compared with the published tables of values at certain critical levels, called *alpha levels*. For this report, an alpha value of 0.05 was used, which has a *t* value of 1.96. If the *t* value was larger than 1.96, then the difference between the two estimates was statistically significant at the 95 percent level.

When multiple comparisons among more than two groups were made, for example, among racial/ethnic groups, a Bonferroni adjustment to the significance level was used to ensure that the significance level for the tests as a group was at the .05 level. Generally, when multiple statistical comparisons are made, it becomes increasingly likely that an indication of a population difference is erroneous. Even when there is no difference in the population, at an alpha of .05, there is still a 5 percent chance of concluding that an observed *t* value representing one comparison in the sample is large enough to be statistically significant. As the number of comparisons increase, the risk of making such an erroneous inference also increases. The Bonferroni procedure corrects the significance (or alpha) level for the total number of comparisons made within a particular classification variable. For each classification variable, there are (K\*(K-1)/2) possible comparisons (or nonredundant pairwise combinations), where K is the number of categories. The Bonferroni procedure divides the alpha level for a single *t* test by the number of possible pairwise comparisons in order to produce

a new alpha level that is corrected for the fact that multiple contrasts are being made. As a result, the *t* value for a certain alpha level (e.g., .05) increases, which makes it more difficult to claim that the difference observed is statistically significant.

Finally, a linear trend test was used when a statement describing a linear trend, rather than the differences between two discrete categories, was made. This test allows one to examine whether, for example, the percentage of students using drugs increased (or decreased) over time or whether the percentage of students who reported being physically attacked in school increased (or decreased) with their age. Based on a regression with, for example, student's age as the independent variable and whether a student was physically attacked as the dependent variable, the test involves computing the regression coefficient (*b*) and its corresponding standard error (se). The ratio of these two (*b*/se) is the test statistic *t*. If *t* is greater than 1.96, the critical value for one comparison at the .05 alpha level, the hypothesis that there is a linear relationship between student's age and being physically attacked is not rejected.

Table B1—Descriptions of data sources and samples used in the report

Data source	Target population	Year of survey	Response rate (%)	Sample size
National Household Education Survey (NCES)	A nationally representative sample of students enrolled in grades 6 through 12 in public and private schools at the time of the interview.	1993	68 <sup>1,2</sup>	6,504
Schools and Staffing Survey (NCES)	A nationally representative sample of public and private school teachers from grades K through 12.	1993–1994	84 (public)¹ 73 (private)¹	47,105 8,372
Youth Risk Behavior Survey (CDC)	A nationally representative sample of students enrolled in grades 9 through 12 in public and private schools at the time of the survey.	1993 1995 1997	70³ 60³.⁴ 69³.⁴	16,296 10,904 16,262
FRSS Principal/School Disciplinarian Survey (NCES)	A nationally representative sample of regular public elementary, middle, and secondary schools.	1996–1997	89'	1,234
National Crime Victimization Survey (BJS)	A nationally representative sample of individuals 12 years of age and older living in households and group quarters.	1992-1997 (Annual)	About 86 <sup>3</sup>	About 90,000
School Crime Supplement (BJS/NCES)	A nationally representative sample of students ages 12 through 19 enrolled in public and private schools during the 6 months prior to the interview.	1989 1995	83° 74°	10,449 9,954

<sup>-</sup>Not applicable.

Weighted response rate.

<sup>&</sup>lt;sup>2</sup>Bias analyses by NCES found that estimates from this survey are not substantially affected by differential nonresponse.

<sup>&</sup>lt;sup>3</sup>Unweighted response rate.

<sup>&#</sup>x27;The response rate for this survey was less than 70 percent and a full nonresponse bias analysis has not been done to date.

Table B3—Methods used to calculate standard errors of statistics for different surveys

Survey	Year	Standard errors of crime level data and aggregated crime rates per 1,000 persons were calculated using three generalized variance function (gvf) constant parameters (denoted as a, b, and c) and formulas published in Appendix II, pp. 144–148) of <i>Criminal Victimization in the United States</i> , 1994, Bureau of Justice Statistics, May 1997, NCJ-162126.				
National Crime Victimization Survey	1993 to 1997					
		The formula used to calculate standard errors (q) of crime level data (x) is:				
		$\sqrt{ax^2 + bx + cx^{3/2}}$				
		where x is the esting and a, b, and c are	mated number of o		terest,	
		aggregated crime	The formula used to calculate standard errors of aggregated crime rates per 1,000 persons (r) is:			
		$\sqrt{\text{br}(1000 - r)/\text{y} + \text{cr}(\sqrt{1000r} - r)/\sqrt{\text{y}}}$				
		where r is the aggregate crime rate (i.e., 1000* total crimes / total population), y is the aggregated base population, and b and c are gvf constant parameters.				
		The three gvf constant parameters associated with the specific years are:				
		Year	a	b	Ç	
		1992	-0.00015053	5,470	4.332	
		1993	-0.00007899	2,870	2.273	
		1994	-0.00006269	2,278	1.804	
		1995	-0.00006269	2,278	1.804	
		1996	-0.00006543	2,378	1.883	
		1997 Aggregated data from 1993 to 97	-0.00016972 -0.00003284	2,945 4,763	2.018 1.683	
	The standard error parameters for 1997 somewhat from those for previous year sample cut implemented in October, 19 cut was not implemented across the bo done to maximize cost savings by elimi interviewing in certain selected geograp the "a" parameter is directly related to p selection in the survey sample, it was the impacted of the parameters.			ears because 1996. School Crime Supplement	1989 and 1995	Standard errors of percentage and population counts were calculated using three generalized variance function (gvf) constant parameters (denoted as a, b, and c) and formulas drawn from <i>Students' Reports of School Crime</i> : 1989 and 1995 (p. 26), March 1998, NCES 98-241.				

Table B3—Methods used to calculate standard errors of statistics for different surveys—Continued

Survey	Year	Method of calculation			
		The formula used to calculate standard errors for percentages (p) is: $\sqrt{bp(1-p)/y+cp(\sqrt{p}-p)/\sqrt{y}}$ where p is the percentage or interest expressed as a proportion, y is the size of the population to which the percent applies, and b and c are gvf constant parameters. After the standard error is estimated, multiply it by 100 to make it applicable to the percentage. The formula used to calculate standard errors of population counts (x) is: $\sqrt{ax^2 + bx + cx^{3/2}}$ where x is the estimated number of students who experienced a given event, and a, b, and c are gvf constant parameters. The three gvf constant parameters associated with the specific years are:			
		Year 1989 1995	a -0.00001559 -0.00006269	b 3,108 2,278	c 0.000 1.804
National Household Education Survey	1993	Balanced repeated replication method using replicate weights available from the data set.			
Schools and Staffing Survey	1993–1994	Balanced repeated replication method using replicate weights available from the data set.			
FRSS Principal/School Disciplinarian Survey	1997	Balanced repeated replication method using replicate weights available from the data set.			
Youth Risk Behavior Survey	1993, 1995, and 1997	Taylor series approximation method using PSU and strata variables available from the data set.			

# **APPENDIX C. GLOSSARY OF TERMS**

#### **General Terms**

Crime Any violation of a statute or regulation or any act that the government has deter-

mined is injurious to the public, including felonies and misdemeanors. Such violation may or may not involve violence, and it may affect individuals or property.

**Incident** A specific criminal act or offense involving one or more victims and one or more

offenders.

**Prevalence** The percentage of the population directly affected by crime in a given period.

This rate is based upon specific information elicited directly from the respondent regarding crimes committed against his or her person, against his or her property, or against an individual bearing a unique relationship to him or her. It is not

based upon perceptions and beliefs about, or reactions to, criminal acts.

**School** An education institution consisting of one or more of grades K through 12.

**School crime** Any criminal activity that is committed on school property.

School year The 12-month period of time denoting the beginning and ending dates for school

accounting purposes, usually from July 1 through June 30.

## **Specific Terms Used in Various Surveys**

#### National Crime Victimization Survey

At school (students) Inside the school building, on school property (school parking area, play area,

school bus, etc.), or on the way to and from school.

At school (teachers) Inside the school building, on school property (school parking area, play area,

school bus, etc.), at work site, or while working. Activity is not considered part of

the definition for thefts.

Aggravated assault Attack or attempted attack with a weapon, regardless of whether or not an injury

occurs, and attack without a weapon when serious injury results.

Rape Forced sexual intercourse including both psychological coercion as well as

physical force. Forced sexual intercourse means vaginal, anal, or oral penetration by the offender(s). This category also includes incidents where the penetra-

tion is from a foreign object such as a bottle.

Robbery Completed or attempted theft, directly from a person, of property or cash by force

or threat of force, with or without a weapon, and with or without injury.

Rural A place not located inside the Metropolitan Statistical Area (MSA). This category

includes a variety of localities, ranging from sparsely populated rural areas to

cities with populations of less than 50,000.

Serious violent crime Rape, sexual assault, robbery, or aggravated assault.

**Sexual assault** A wide range of victimizations, separate from rape or attempted rape. These

crimes include attacks or attempted attacks generally involving unwanted sexual contact between the victim and offender. Sexual assault may or may not involve force and includes such things as grabbing or fondling. Sexual assault also in-

cludes verbal threats.

Simple assault Attack without a weapon resulting either in no injury, minor injury, or in undeter-

mined injury requiring less than 2 days of hospitalization. Also includes at-

tempted assault without a weapon.

**Suburban** A county or counties containing a central city, plus any contiguous counties that

are linked socially and economically to the central city. On the data tables, suburban areas are categorized as those portions of metropolitan areas situated

"outside central cities."

**Theft** Completed or attempted theft of property or cash without personal contact.

**Victimization** A crime as it affects one individual person or household. For personal crimes, the

number of victimizations is equal to the number of victims involved. The number of victimizations may be greater than the number of incidents because more than

one person may be victimized during an incident.

Victimization rate

A measure of the occurrence of victimizations among a specific population

group.

Violent crime Rape, sexual assault, robbery, or assault.

**Urban** The largest city (or grouping of cities) in an MSA.

#### School Crime Supplement

**At school** In the school building, on the school grounds, or on a school bus.

**Property crime** Theft of property from a student's desk, locker, or other locations at school.

**Violent crime** Physical attacks or taking property from the student directly by force, weapons,

or threats.

#### National Household Education Survey

At school In the school, at school activities, or on the way to or from school.

**Bully** Treat other persons abusively or affect others by means of force or coercion. For

example, pick on others or make other students do things like give them money.

**Rural** Places not classified as urban are rural.

Urban An urban area in an urbanized area comprising a place and the adjacent densely

settled surrounding territory that together have a minimum population of 50,000

people.

**Suburban** A suburban area is an urban area out of an urbanized area that includes incor-

porated or unincorporated places outside of an urbanized area with a minimum

population of 2,500 people.

#### Youth Risk Behavior Survey

On school property On school property is included in the question wording but was not defined for

respondents.

**Weapon** Any instrument or object used with the intent to threaten, injure, or kill. Examples

of weapons appearing in the questionnaire include guns, knives, and clubs.

**Illegal drugs** Examples of illegal drugs were marijuana, cocaine, inhalants, steroids, or pre-

scription drugs without a doctor's permission, LSD, PCP, ecstasy, mushrooms,

speed, ice, and heroin.

#### FRSS Principal/School Disciplinarian Survey

At school In school buildings, on school buses, on school grounds, or at places that hold

school-sponsored events or activities, but are not officially on school grounds.

Central region Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North

Dakota, Ohio, South Dakota, and Wisconsin.

City A central city of a Metropolitan Statistical Area (MSA).

**Elementary school** A school that has a low grade of 3 or less and a high grade of 1 through 8.

Free/reduced-price The percent of students enrolled in the school who are eligible for the federally

lunch funded free or reduced-price lunch program.

**High school/combined** A school that has a low grade of 9 through 12 and a high grade of 10 through 12.

Schools that do not precisely meet these qualifications, and are not elementary and middle schools, are classified as "combined" and are included in the analy-

ses with high schools.

**Less serious or** Physical attack or fight without a weapon, theft or larceny, or vandalism.

Minority enrollment The percent of students enrolled in the school whose race or ethnicity is classi-

fied as one of the following: American Indian or Alaskan Native, Asian or Pacific Islander, black, or Hispanic, based on data in the 1993–94 Common Core of

Data (CCD) file.

Middle school A school that has a low grade of 4 through 9 and a high grade of 4 through 9.

Northeast region Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts,

New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Ver-

mont.

**Robbery** The taking or attempting to take anything of value that is owned by another per-

son or organization, under confrontational circumstances by force or threat of

force or violence and/or by putting the victim in fear.

Physical attack or fight An actual and intentional touching or striking of another person against his or her

will, or the intentional causing of bodily harm to an individual. This category should be used only when the attack is serious enough to warrant calling the po-

lice or other law enforcement representative.

Rural A place with a population less than 2,500 and defined as rural by the U.S. Bu-

reau of the Census.

**School enrollment** Total number of students enrolled as defined by CCD.

250

nonviolent crime

Serious violent crime Murder, suicide, rape or sexual battery, physical attack or fight with a weapon, or

robbery.

**Sexual battery**An incident that includes rape, fondling, indecent liberties, child molestation, or

sodomy.

Southeast region Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North

Carolina, South Carolina, Tennessee, Virginia, and West Virginia.

**Theft or larceny** The unlawful taking of another person's property without personal confrontation,

threat, violence, or bodily harm.

**Town** A place not within an MSA, but with a population greater than or equal to 2,500

and defined as urban by the U.S. Bureau of the Census.

**Urban fringe** A place within an MSA of a central city, but not primarily its central city.

**Vandalism** The damage or destruction of school property.

West region Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New

Mexico, Oklahoma, Oregon, Texas, Utah, Washington, and Wyoming.

#### Schools and Staffing Survey

Central city A large central city (a central city of a Metropolitan Statistical Area [MSA] with

population greater than or equal to 400,000, or a population density greater than or equal to 6,000 per square mile) or a mid-size central city (a central city of an

MSA, but not designated as a large central city).

Elementary school

teachers

An elementary school teacher is one who, when asked for the grades taught, checked: 1) only "ungraded" and was designated as an elementary teacher on

the list of teachers provided by the school; 2) 6th grade or lower, or "ungraded," and no grade higher than 6th; 3) 6th grade or lower and 7th grade or higher, and reported a primary assignment of prekindergarten, kindergarten, or general ele-

mentary; 4) 7th and 8th grades only, and reported a primary assignment of prekindergarten, kindergarten, or general elementary; 5) 6th grade or lower and 7th

grade or higher, and reported a primary assignment of special education and was designated as an elementary teacher on the list of teachers provided by the

school; or 6) 7th and 8th grades only, and reported a primary assignment of special education and was designated as an elementary teacher on the list of teach-

ers provided by the school. A teacher at school that has grade 6 or lower, or one

that is "ungraded" with no grade higher than the 8th.

Appendix C Glossary of Terms.

#### Rural or small town

Rural area (a place with a population of less than 2,500 and defined as rural by the U.S. Bureau of the Census) or a small town (a place not within an MSA, with a population of less than 25,000, but greater than or equal to 2,500, and defined as nonurban by the U.S. Bureau of the Census).

# Secondary school teachers

A secondary school teacher is one who, when asked for the grades taught, checked: 1) "ungraded" and was designated as a secondary teacher on the list of teachers provided by the school; 2) 6th grade or lower and 7th grade or higher, and reported a primary assignment other than prekindergarten, kindergarten, or general elementary; 3) 9th grade or higher, or 9th grade or higher and "ungraded"; 4) 7th and 8th grades only, and reported a primary assignment other than prekindergarten, kindergarten, general elementary, or special education; 5) 7th and 8th grades only, and reported a primary assignment of special education and was designated as a secondary teacher on the list of teachers provided by the school; or 6) 6th grade or lower and 7th grade or higher, or 7th and 8th grades only, and was not categorized above as either elementary or secondary.

# Urban fringe or large town

Urban fringe of a large or mid-size city (a place within an MSA of a mid-size central city and defined as urban by the U.S. Bureau of the Census) or a large town (a place not within an MSA, but with a population greater or equal to 25,000 and defined as urban by the U.S. Bureau of the Census).
