AUTHOR Kucker, Marsha, Comp.; Bemis, Dodie, Comp.; Smith-Rockhold, Gloria, Comp.; Wiese, Vicki, Comp.

TITLE Putting the Pieces Together: South Dakota Integration Training Model. 4th Ed.

SPONS AGENCY South Dakota State Dept. of Education, Pierre. Div. of Workforce and Career Preparation.

PUB DATE 1999-00-00

NOTE 167p.; For the 2nd edition, see ED 424 403.

AVAILABLE FROM Technical Education Resource Center, Mercedes MacKay Building/State Library, 800 Governors Drive, Pierre, SD 57501-2294. Tel: 605-773-7030, e-mail: sharon.sumner@state.sd.us; Web site: [http://www.state.sd.us/state/executive/deca/workforce/tech ed.htm](http://www.state.sd.us/state/executive/deca/workforce/tech%20ed.htm).

PUB TYPE Guides - Non-Classroom (055)

EDRS PRICE MF01/PC07 Plus Postage.

DESCRIPTORS Academic Education; Career Education; Classroom Techniques; \*Curriculum Development; Education Work Relationship; Elementary Secondary Education; \*Employment Potential; Evaluation Methods; Instructional Materials; \*Integrated Curriculum; Job Skills; Learning Activities; Models; Nontraditional Occupations; Occupational Information; \*Student Evaluation; \*Teaching Methods; \*Vocational Education

IDENTIFIERS South Dakota

## ABSTRACT

This publication is a compilation of materials that form the South Dakota Integration Training Model. Section 1 contains materials related to career information, including transparency masters/handouts with information on workplace trends, job skills, growth occupations, earnings, and nontraditional careers. Section 2, on integration basics, provides informative material and transparency masters/handouts on rationale, benefits, barriers, and design options. Section 3 contains material on, and forms for, curriculum alignment. Section 4 consists of information and transparency masters/handouts on project themes, concepts, project goals/rationale, and essential questions. Section 5, on standards, covers examples of employability-related student activities and ideas for integrating employability competencies into academic courses. Section 6, on instructional strategies, includes information on engaging instructional strategies, multiple intelligences, and assessing how students learn. Section 7, on assessment, contains: a definition of assessment; Bloom's taxonomy; comparison of typical and "authentic" tests; framework of assessment approaches and methods; multiple intelligences assessment menu; and materials for development and use of rubrics. Section 8 provides an agenda and all required materials for a two-day training session on integrated teaching and learning. Section 9 contains project examples. Section 10 is a glossary. (YLB)

## Test Yourself

### *Do You Know the ABCs of Higher Education?*

1. What percentage of high school graduates actually earn a Bachelor's degree? \_\_\_\_\_
2. What percentage of college students are enrolled in remedial classes? \_\_\_\_\_
3. In the past 15 years, the cost of living has increased by 88 percent. By what percentage has the cost of college increased? \_\_\_\_\_

### *What's Your Career IQ?*

4. What types of jobs will show the greatest growth through the year 2010? \_\_\_\_\_
5. In the past 30 years, professional jobs have increased by what percentage? \_\_\_\_\_
6. Through 2010, what percentage of jobs will require at least two years of education or training beyond high school? \_\_\_\_\_
7. Through 2010, what percentage of jobs will require a Bachelor's degree? \_\_\_\_\_
8. What percentage of recent college graduates with a Bachelor's degree are settling for jobs that do not require one? \_\_\_\_\_

### Answers

- |                               |        |
|-------------------------------|--------|
| 1. 23%                        | 5. 0%  |
| 2. 40-70%                     | 6. 80% |
| 3. 260%                       | 7. 20% |
| 4. paraprofessional/technical | 8. 25% |

# DID YOU KNOW...

- The majority of students entering higher education institutions have no career plans.
- The majority of students starting a college education drop out within two years due to no plan of direction.
- 20% of university bound complete a baccalaureate program.
- 85% of postsecondary bound complete a technical program.

*S.D. Education Statistical Digest*

# The Changing Workforce

- ◆ Our future depends upon a highly skilled workforce.
- ◆ Technology has increased the skill levels required for workers.
- ◆ Agriculture has moved from the plow and the mule to genetically altering foods using biotechnology.
- ◆ Manufacturing has moved from assembly line workers to robots and technicians who maintain them.
- ◆ Information processing has moved from manual typewriters and keypunch to voice-to print technology and Personal Data Assistants (PDA).
- ◆ Employment has shifted from manufacturing to service.

# Future Trends

60% of high school students will work in jobs that currently do not exist.

90% of all jobs in the year 2005 will require knowledge of a computer.

85% of future jobs will require skill training beyond high school.

65% of future jobs will require some college but less than a 4-year degree.

# Future Trends

The average adult changes jobs 7 times and changes careers 3 times over his or her work life.

The new workforce will work predominantly in small companies.  
(25 employees or less)

The workforce will be predominantly female, older, and culturally diverse.

# Some Workplace Trends

	<ul style="list-style-type: none"> <li><input type="checkbox"/> Individual achievement is being replaced by team focus. Strong interpersonal skills will become a condition of employment.</li> </ul>
	<ul style="list-style-type: none"> <li><input type="checkbox"/> Large corporations are becoming leaner and flatter. There is an increase in employment in small companies. Career paths are changing. Downsizing is a way of life. Outplacement is a real possibility.</li> </ul>
<b>SOME WORKPLACE TRENDS</b>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Continuous lifelong learning will be essential. Companies will provide professional development opportunities and learning assignments in place of job security.</li> </ul>
	<ul style="list-style-type: none"> <li><input type="checkbox"/> The focus will be on psychological success versus upward mobility. There are few one-job, one-employer careers. Employees are increasingly expected to manage their own careers.</li> </ul>
	<ul style="list-style-type: none"> <li><input type="checkbox"/> Employees must know and be able to communicate their skills, values, interests, etc. People who take risks and think creatively will be valued and rewarded.</li> </ul>
	<ul style="list-style-type: none"> <li><input type="checkbox"/> We are moving toward a more diverse workforce. New hires are entering a global economy.</li> </ul>
	<ul style="list-style-type: none"> <li><input type="checkbox"/> To stay competitive, organizations will continuously recreate themselves. These "self-designing" organizations require employees who can continuously adapt and grow. No organization is exempt.</li> </ul>
	<ul style="list-style-type: none"> <li><input type="checkbox"/> The world is becoming increasingly technology and computer dependent. Fifty-five percent of U.S. corporation capital investments are related to information technology. Technological improvements will replace unskilled labor.</li> </ul>
	<ul style="list-style-type: none"> <li><input type="checkbox"/> Wage gaps will grow larger between occupational and educational levels. Highly skilled workers will be required in all industries.</li> </ul>

<b>TRAINING</b>	
<input type="checkbox"/> minimal for production workers <input type="checkbox"/> specialized for craft workers	<input type="checkbox"/> training sessions for everyone <input type="checkbox"/> broader skills sought

# NEW BASIC SKILLS OF THE FUTURE

"The new basics do not mean throwing out all the skills being taught in school. It simply means looking at them in a different fashion. It's how you can relate academic instruction to the workplace." *Dr. Richard D. Jones*

## Creative Thinking

The ability to make random connections between existing information to generate new information. It is through creative thinking that social, community, and work-related problems are solved.

The basic skills of the future are designed to apply knowledge to real life settings, thus reinforcing the learning process and increasing the desire for students to learn, while challenging them at the same time.

## Adaptation and Constant Improvement

Businesses are looking for employees who seek to improve themselves, their organizations, and their communities. Such employees are self-motivated and looking for new methods of bettering the workplace.

## Speaking and Listening

Schools need to find new ways to include speaking and listening skills, and to give students feedback as to how well they are doing. It is the ability to speak and listen well that makes an important difference in the workplace.

## Computer Applications

Computers are becoming common workplace tools. An essential skill is to apply these tools to increase productivity and enhance communication. Merely operating or programming a computer is of little use unless it is applied to a work task.

## Reasoning and Problem-Solving

The ability to discover how and why variables relate to each other, and then apply what has been learned to new situations and problems.

## Inquiry and Technology

Inquiry is the capacity to observe, pose questions, develop hypotheses, and collect relevant data. Technology is the capacity to appropriately use modern technological tools, and to design solutions to human problems and needs.

# Job Skill Level Changes

## JOB SKILL LEVEL CHANGES

YEAR	SKILLED	UNSKILLED	PROFESSIONAL
1950	20%	60%	20%
1991	45%	35%	20%
2005	65%	15%	20%

## Earnings: How Do They Vary by Occupation?

Each year the US Bureau of Labor Statistics estimates the average salary in various occupations. Here are the figures from the latest *Occupational Outlook Handbook* for selected fields. In some cases, such as physicians, the figure may be lower than normally quoted as averages include those just getting started in the field as well as established workers. Salaries are higher in metropolitan areas than in smaller communities.

# NONTRADITIONAL CAREERS FOR WOMEN

	Salaries	Training Programs
Construction Laborers	\$11.02 - \$20.20/hour	None required
Mechanics and Repair	\$14,000 - \$42,000	2 year programs; apprenticeships
Electronic Technician	\$22,524 - \$29,292	1 and 2 year programs
Computer Maintenance	\$16,000 - \$23,000	6 months - 2 years
Fire Fighters	\$13,500 - 32,600	1 year program; apprenticeships
Water & Waste Tech.	\$24,284 - \$27,200	On-the-job and formal training
Robotics	\$16,000 - 30,000	1,2 and 4 year programs
Carpentry	\$8.00 - \$20.00/hour	Apprenticeship programs
Welding	\$16,000 - \$25,000	1 & 2 year programs; apprenticeships
Tool and Diemaking	\$22,256 - \$31,772	1 & 2 year programs; apprenticeships
Machinist	\$12.00 - \$29.00/hour	1 & 2 year programs; apprenticeships
Machine Tool Operation	\$14,924 - \$25,428	On-the-job; apprenticeships
Drafting/CAD	\$18,000 - \$29,000	3 months - 4 year programs
Small Engine Repair	\$7.50 - \$11.00/hour	3 months - 1 year training
Bricklayer	\$8.00 - \$21.00/hour	2 year programs; apprenticeships
Auto Body Repair	\$20,956 - \$27,900	1 & 2 year programs on the job training; apprenticeships
Aircraft Mechanics	\$7.50 - \$17.00/hour	Graduation from FAA School
Heating & Cooling System Mechanics	\$8.00 - \$18.00/hour	2 year programs; apprenticeships
Engineering	\$30,526 - \$39,000	Bachelor's Degree

# The Forces at Work in Today's Business Environment

---

No doubt about it. We live in a fast-paced, fast-changing world -- a world where emerging frontiers and realities are changing forever the world of "used-to-be's" that were the norm for workers in most organizations:

*It used to be* that we could plan our career path in our 20's, prepare for our promotions and accomplish these benchmarks pretty much on *our* schedule. Not anymore.

*It used to be* that if, in our 20's, we took a job with a company, we could eventually retire in our 60's from that same company. Not anymore.

*It used to be* that most top managers and supervisors were men with wives at home. Not anymore.

*It used to be* that each department operated separately with few overlappings. Not anymore.

*It used to be* that, if an employee was fired or let go, his manager didn't need to consider the possibility of being sued or shot by this person. Not anymore.

*It used to be* that *we* could control if and when we left one organization to join another. Not anymore.

*It used to be* that accepting a new job also meant an increase in pay. Not anymore.

*And, it used to be* that orders from the top managed the organization. Not anymore.

Any number of things *used to be*. In fact, you can probably think of many others. Using the following activity sheet, take a moment to write a few “used-to-be’s” that apply to your career, work experiences or observations in the workplace:

<p style="text-align: center;"><b>ACTIVITY</b> <b>IT USED TO BE, BUT NOT ANYMORE</b></p> <p>Complete the following sentences with experiences from your career and workplace or from your observations in your work environment:</p> <p><i>It used to be</i> that _____ . But not anymore.</p> <p><i>It used to be</i> that _____ . But not anymore.</p> <p><i>It used to be</i> that _____ . But not anymore.</p>
--

These “**used-to-be’s**” represent the diverse forces at work in today’s ever-changing work environment. These forces impact your future and they certainly affect the way you communicate at work. Have you thought about forces such as:

- ☞ New technologies that require work skills you never imagined needing and are only beginning to learn?
- ☞ Fewer positions in departments, where one person must do the work of four?
- ☞ Changing markets that demand that workers acquire different skills to succeed in the job they’ve held for years?
- ☞ Company mergers that change the workplace culture and your career path options?

# Reality Check Questions

---

☞ Where am I now?

☞ Where do I want to go?

☞ How am I going to get  
there?

(These 3 questions apply throughout your whole life)

# Where do students want to see themselves in 25 years?

*(Reprinted by permission of Nightingale-Conant Corporation)*

# Integration Basics

## INTEGRATION BASICS

# INTEGRATION

## Integration Basics

- A “BLENDING” OF HIGH LEVEL VOCATIONAL AND ACADEMIC CURRICULUM STANDARDS TO INCREASE RELEVANCY AND REINFORCE ACADEMIC COMPETENCIES

BEST COPY AVAILABLE

# Integrated Vocational Technical and Academic Curriculum IS...

## Integration Basics

- Challenging, higher-level mathematics, science, language arts, and technical content and courses;
- Students required to apply information in rigorous assignments;
- Students involved in all phases from planning to evaluation;
- Students engaged in their learning;
- Teachers working and planning cooperatively;
- Learning activities reflect skills needed in today's workplace and have meaning to students;
- Assessment includes an application and demonstration of learning;
- Evaluation by teachers, employers, or other students;
- Teachers, students, and employers working together to make learning relevant;
- Career exploration and planning for a variety of careers within an occupational cluster;
- Options and choices for students - college, post-secondary technical, and/or employment;
- High expectations for all students; and
- Students leaving high school with plans for further education and/or employment, documentation of achievements and a high level of technical and academic skills.

# Integrated Vocational Technical and Academic Curriculum IS NOT...

## Integration Basics

- Watered-down curriculum with low-level basics as content;
- Teachers directing all learning;
- Teachers lecturing and using textbooks as the only source of learning;
- Teachers and students working alone;
- Rote memorization by students;
- Students learning facts and procedures without knowing why;
- Assessment by paper and pencil tests only;
- Evaluation solely by teacher without including students and employers;
- Preparation for entry-level jobs. Students have no plans beyond their first job;
- Limited opportunities of student choices and input; and
- High expectations reserved only for college-bound students.

# WHY INTEGRATE?

- ★ To prevent fragmentation of curriculum
- ★ To stimulate higher level, integrated thinking processes
- ★ To view complex issues from a broader perspective
- ★ To save time; curricular overload is a problem
- ★ Integration is consistent with brain research and learning theory

BEST COPY AVAILABLE

# BENEFITS OF INTEGRATION

## Integration Basics

# I N T E G R A T I O N

- ⇒ Motivates students to learn by making the work interesting to them
- ⇒ Learning in context is more effective
- ⇒ Addresses employers' concerns about deficiencies in fundamental competencies, e.g. reading and communicating at appropriate level
- ⇒ Equips the students for changing requirements and escalating skill demands in the U.S. workplace
- ⇒ Provides students with the skills they need to function in a technological, information-based society
- ⇒ Helps schools to meet the standards that are in place worldwide
- ⇒ Builds bridges between content areas
- ⇒ Faculty collaboration is an antidote to the isolation of teaching
- ⇒ Broadens and expands teaching and assessment methods
- ⇒ Offers career information to students

BEST COPY AVAILABLE

STUDENT BENEFITS	EXPLANATION
♫ Reduces curricular fragmentation	• Facilitates curriculum connections
♫ Provides depth to teaching and learning	• Depth of thought and ideas, not depth of facts stacked higher
♫ Provides teaching and learning focus	• Teaching and learning are guided by the high-level generalizations arising from concepts and critical content.
♫ Engages students in active learning	• Students search for and construct knowledge using a variety of learning styles and modalities.
♫ Challenges higher level thinking	• The abstract concepts and generalizations force thinking to the analysis and synthesis levels.
♫ Helps students connect knowledge	• The best minds rise above the facts and see patterns and relationships.
♫ Addresses significant problems, issues, and concepts	• Teacher-designed units typically address critical issues of life and the world.
♫ Forces an answer to the relevancy question, "Why study these facts?"	• Facts are not ends but means to deeper understandings. (The unit design provides teacher and learner focus.)
♫ Draws on multiple styles of learning	• Auditory, visual, and kinesthetic activities are designed to engage many different modalities.

# BARRIERS TO INTEGRATION

## Integration Basics

I  
N  
T  
E  
G  
R  
A  
T  
I  
O  
N

- ↖ Historic split between academic and occupational programs
- ↖ Organizational structure of most schools (high schools, community colleges, and four-year institutions) reinforces the historic split
- ↖ Disciplinary specializations
- ↖ Multiple and evolving missions for education
- ↖ Lack of resources to support integration
- ↖ Absence of support from “top down” and “bottom up”

## FINDING TIME TO PLAN

**Purchased Time**  
Summer writing; vacation

**Borrowed Time**  
Add 15 minutes for 4 days,  
gain 1 hour on 5<sup>th</sup> day

**New Time**  
Teacher incentives;  
motivates use of own time

**Common Time**  
Schedule block time for  
teacher teams

**Tiered Time**  
Layer with existing  
functions such as lunch  
and breakfast meetings

**Found Time**  
Serendipitous times that  
occasionally occur: student  
teacher, visiting dignitary,  
assembly, snow day

**Freed-Up Time**  
Parent volunteers, senior  
citizens, visiting artists,  
etc.; create time

**Rescheduled  
Time**  
Revise calendar year  
and/or daily timetable

**Better-Used  
Time**  
Rethink faculty and  
department meetings  
already on schedule - use  
memo, notes, or bulletins  
when possible

**Released Time**  
Inservice, institute, and  
professional development  
days

From *The Learner-Centered School*, p. 51-52. (Extrapolated from *Time for Reform* by Purnell and Hill.)

## CONDITIONS THAT SUPPORT EFFECTIVE INTEGRATION

## Integration Basics

To overcome barriers in integrating academic and vocational studies, system and school leaders need to create certain conditions.

**1: Set higher expectations and get students to meet them.**

When you set higher expectations, you communicate the message that high school is important and that high performance counts for all students. Integration involves blending higher-level academic studies with challenging vocational instruction.

**2: Teach challenging vocational technical studies, including emphasis on the use of academic content in the workplace.**

Success in the modern workplace is based on the ability to apply academic and technical knowledge in communicating and in solving problems. Vocational technical teachers need to devise learning experiences that cause students to use language arts, algebra, geometry, statistics, and science knowledge and skills in performing tasks and in designing and making products.

**3: Drop low-level academic courses and prepare academic teachers to teach the essential concepts from the college preparatory curriculum to career-bound students.**

For integration to work, academic teachers need to make challenging assignments rather than rely on drill sheets and memory work. Schools need to offer academic courses that involve students as workers in writing research papers, producing quality products, preparing and making oral reports, presenting ideas and defending opinions, using mathematics to solve real-life problems, and presenting their findings in class. Teachers need to function as coaches, mentors, and facilitators rather than as sources of all knowledge.

**4: Require students to complete a challenging program of study consisting of an upgraded academic core and career cluster area.**

Enrolling students in a challenging, focused program of study is a key condition for any high school integration effort. The Southern Regional Education Board recommends replacing the general track by requiring at least 90 percent of students to complete four years of college preparatory English; three years of mathematics, including two courses equivalent to Algebra I and geometry or higher; three science courses, including two courses acceptable to major universities as lab science courses; and three social studies courses. In addition to an upgraded academic core, students should complete at least 600 hours in an academic or a career cluster area.

**5: Create a school organization, structure, and schedule enabling teachers to work together in integrating academic and technical studies.**

To develop integrated learning approaches that advance student achievement, teachers must have quality time and resources for collaboration. System and school leaders must find ways to bring teachers together during the school year and in the summer to strengthen respect, trust, and cooperation needed in integrated learning.

**6: Broaden classroom assessment to include student products and performances.**

Traditional assessment methods must be expanded to measure students' progress in integrated learning. If students are expected to solve problems, problem solving must be the focal point of homework, tests, and assessment associated with this instruction. In real life, individuals are evaluated on how they use what they know. Students take assessment more seriously if it is linked to reality and if they understand the evaluation criteria and process in advance.

**7: Provide staff development to support teachers in integrating academic and technical studies.**

Schools wanting to integrate academic and vocational studies must offer staff development on integration. In fact, many school leaders identify staff development as the key to success in providing integrated learning.

Academic and vocational teachers at new *High Schools That Work* sites in 1993 and 1994 listed common planning time as a staff development priority. Teachers said they would like to observe outstanding practices in other classrooms and schools. They would also like to visit workplaces to view how academic skills are used in daily activities.

**8: Involve parents in the effort to integrate academic and vocational studies.**

Parents and schools need to work hand-in-hand in helping career-bound students succeed in a challenging, integrated curriculum.

**9: Be willing to learn as you go.**

Schools need to create an environment of continuous improvement in integrating academic and vocational studies and in raising student achievement. Integration works best when school leaders recognize that improvement takes place little by little, day by day.

# Integration Basics

## LOOKING AT THE BIG PICTURE: Conditions Leading to Effective Integrated Learning

Instructions: Check where your school is in establishing the conditions that lead to effective integration of academic and vocational courses. Compare your response with others on your team.

Conditions	Not Started	Planning Stages	Some Activities Taking Place	Making Significant Progress
Set higher expectations and get students to meet them.				
Teach challenging vocational technical studies, including emphasis on the use of academic content in the workplace.				
Drop low-level academic courses and prepare academic teachers to teach the essential concepts from the college preparatory curriculum.				
Require students to complete a challenging program of study consisting of an upgraded academic core and a major.				
Create a school organization, structure, and schedule enabling teachers to work together in integrating academic and technical studies.				

Southern Regional Education Board, High Schools That Work Teleconference

## Options for Integrated Curriculum Design

- ☞ Discipline Based
- ☞ Parallel Disciplines
- ☞ Multidisciplinary
- ☞ Interdisciplinary Units/Courses
- ☞ Integrated Day
- ☞ Field-Based Program

### Discipline-Based Design

The discipline-based content design option focuses on a strict interpretation of the disciplines with separate subjects in separate time blocks during the school day. No attempt at integration is made; in fact, it is avoided. Traditional approaches to subjects such as language arts, mathematics, science, social studies, music, art, and physical education are the usual fare. In secondary programs, these general academic and arts areas break down into more specific fields, such as algebra under mathematics, or American history under social studies. There are some variations of block scheduling and the way the week or cycle is programmed. Nevertheless, knowledge is presented in separate fields without a deliberate attempt to show the relationships among them.

### Parallel Disciplines Design

When the curriculum is designed in a parallel fashion, teachers sequence their lessons to correspond to lessons in the same area in other disciplines. For example, if the social studies teacher teaches a World War II unit in the beginning of the spring semester, then the English teacher will reschedule her autumn book to coincide with the social studies unit. The content itself does not change, only the order in which it appears. The goal is a simultaneous effect as students relate the studies in one subject with the others. Teachers working in a parallel fashion are not deliberately connecting curriculum across fields of knowledge; they are simply resequencing their existing curriculum in the hope that students will find the implicit linkages.

### Multidisciplinary Design

The multidisciplinary option suggests that certain related disciplines be brought together in a formal unit or course to investigate a theme or issue. It is different from parallel teaching, where the focus stays on the prescribed scope and sequence of each discipline. A good analogy is a color wheel and the notion of complementary colors. Just as groups of colors complement one another, certain disciplines are directly related to one another, such as the humanities. Of course, it is possible to design a course that brings together two disciplines of seemingly different characters – as long as the questions shed light on and complement one another (as in a course on “Ethics in Science”).

### **Interdisciplinary Design**

In this design, periodic units or courses of study deliberately bring together the full range of disciplines in the school's curriculum: language arts, math, social studies, and science; and the arts, music, and physical education. The main point is that the designers attempt to use a full array of discipline-based perspectives. The units are of specific duration: a few days, a few weeks, or a semester. This option does not purport to replace the discipline-field approach; rather, they are mutually supportive.

### **Integrated-Day Design**

This model is based primarily on themes and problems emerging from the student's world. The emphasis is on an organic approach to classroom life that focuses the curriculum on the student's questions and interests rather than on content determined by a school or state syllabus.

### **Field-Based Program**

This approach is the most interdisciplinary form of integration. Students live in the school environment and create the curriculum out of their day-to-day lives. For instance, students who are interested in the buildings on campus might study architecture. If there were a conflict between students concerning ways to behave in the school, they could study rules or government. This is a totally integrated program because the student's life is synonymous with school.

Cons:

Integrated Learning Approach

---

---

Pros:

Cons:

# Concepts of Integration:

## Integration Basics

1. Effective working relationships exist between academic and vocational technical teachers.
2. Academic and vocational technical teachers have scheduled time to plan and work together.
3. School administrators as well as teachers are committed to integrating educational programs.
4. All students are provided the opportunity and expected to complete a rigorous course of study.

# Integrated System

## Integration Basics

- Organized around career clusters;
- Based on validated standards;
- Based on strong foundation of high level contextual, cognitive, and work-related skills;
- Includes assessment component; and
- Provides multiple exit points

# Curriculum Alignment

**CURRICULUM  
ALIGNMENT**

**INTEGRATION OF ACADEMIC AND VOCATIONAL  
EDUCATION  
STEPS FOR DESIGNING A UNIT OF STUDY**

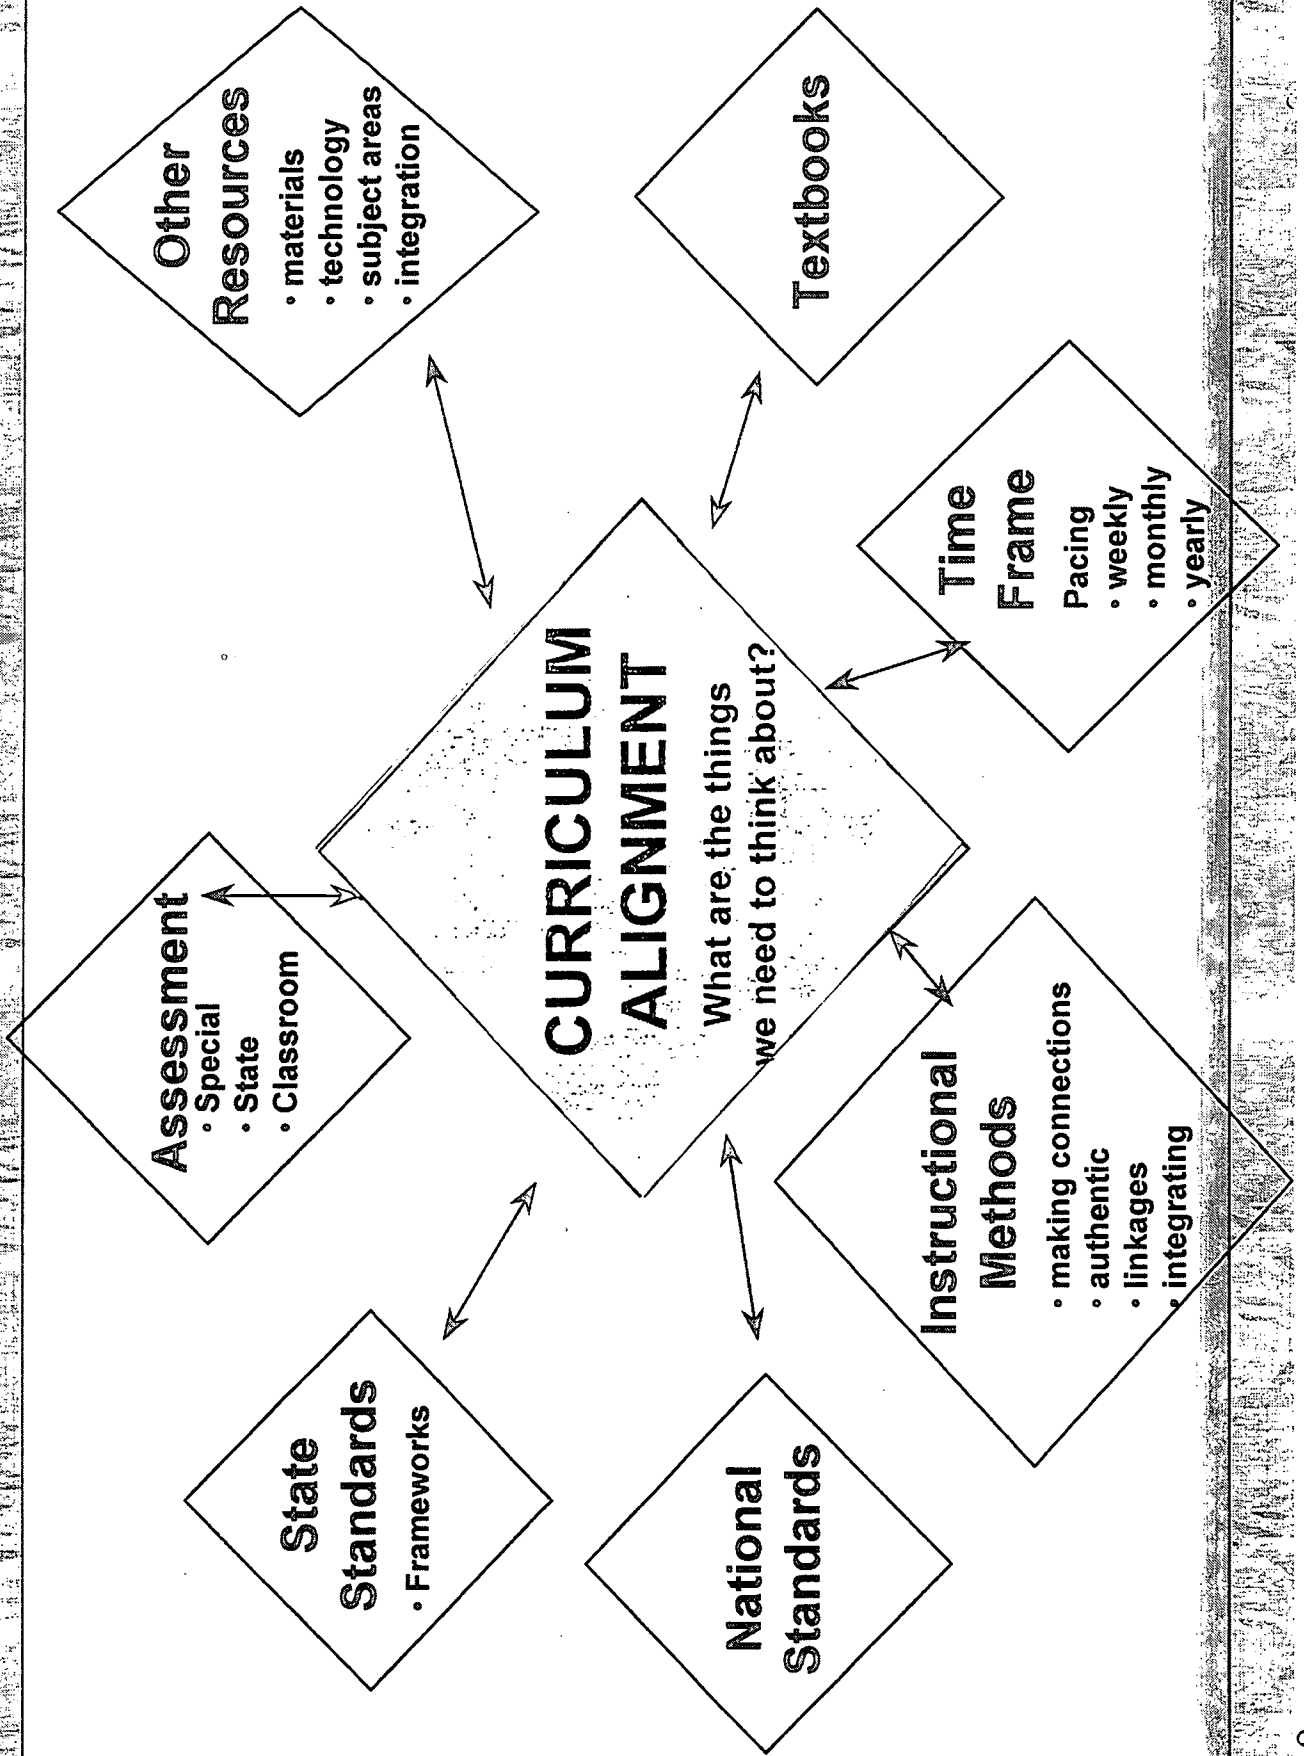

**Curriculum  
Alignment**

1. First individually, and then as a team, complete the curriculum alignment process to determine common areas of content and/or standards. Discuss possible theme/topic areas which would allow all team members to enter the integration process.
2. Decide on a unit theme/topic based on an area of study, problem or issue. Themes could be industry, career or community focused. List the subject/discipline areas to be included as “spokes” surrounding the theme/topic hub.
3. Identify a major concept to serve as an integrating lens, or focus for the study.
4. Incorporate the theme/topic and concept, develop a goal or rationale statement that frames the study.
5. Brainstorm essential understandings (generalizations) that students may derive from the study. From this list, select three to five items to list as guiding or essential questions to further frame the unit. These questions are usually in the “who,” “what,” “how,” and “why” format.
6. Using the goal/rationale statement as a guide, determine career readiness and academic and skill standards that will be emphasized and included as a part of the project.
7. Determine student outcomes as a result of the study. “What should the student know and be able to do upon completion?”
8. As a team, discuss instructional activities and strategies, using the concept, theme, goal/rationale statement, essential questions, standards and outcomes as the framework. Consider individual learning styles and include activities that address the multiple intelligences.
9. Design the specific performance tasks and scoring guide (rubric) to be used as a basis for assessment.

**THEME**

# Project Theme

Theme

A theme is designated as the central idea and used as an overlay to the various content areas for an interdisciplinary approach with alignment to outcomes. The theme provides a fresh lens with which to frame and view content. The theme acts as a common umbrella that is visible to students as they work in the various content areas.

There are many ways to develop a common theme. Two of these are briefly described here.

**Topics** These are headings or outlines about a particular subject matter. Examples of topics would be *immigration, war, flight, oil, or environment*. Other topics could be current events or particular issues such as *homelessness or AIDS*.

**Categories** These are a group or classification to which particular facts and experiences belong. Examples would be *islands, animals, countries, or dance*.

## WHY CONCEPT-BASED INTEGRATED PROJECTS?

1. To help students achieve higher level thinking:

Knowledge  
Comprehension  
Application  
Analysis  
Synthesis  
Evaluation

2. To deepen students' understanding
3. To help students see patterns and connections between subjects and grade levels
4. To connect to prior learning
5. To take students beyond disciplines
6. To provide a way for students to transfer knowledge and skills to new situations and real-life experiences
7. To offer a way to deal with the information explosion

# CONCEPTS & TOPICS: WHAT'S THE DIFFERENCE?

Conflict  
Family  
Culture  
Change  
Human Rights  
China  
Power  
Circus  
Revolution  
Model  
Dinosaurs  
Systems  
Bears

1. Topics are isolated, aim at lower level thinking, have short-term use, and increase the overload on the curriculum.
2. Concepts-
  - provide a mental pattern for categorizing common examples,
  - lead to higher order thinking,
  - aid in development of higher order generalizations,
  - lead to essential understandings,
  - serve as tools for processing life events, and
  - reduce the overload on the curriculum by making learning transferable from one discipline to another, from one grade to the next, and from school to life experience.

# CRITERIA FOR DEVELOPING ESSENTIAL QUESTIONS

## Essential Questions

1. They will lead to the essential understandings expected from the project/unit.
2. They highlight conceptual priorities for a specific target population.
3. They fulfill learning outcomes.
4. There are usually two to five questions.
5. Use how, why, and what questions for the most part. They lead students to higher order thinking skills and essential understandings.
6. Include both specific questions and open-ended questions.
7. Write a realistic set of questions for the time frame allocated for the project.
8. Each question embraces a distinct section of activity within the project/unit.
9. Involve students in developing the essential questions for the project.
10. POST the questions in every classroom involved in the integrated unit.
11. Use questions to connect the disciplines represented in the project.
12. EVERY student can understand the questions.

The fundamental design question is

“Given the amount of time we have to spend on this particular unit of study, what is the essence of the unit; what is essential for the learners in my care to explore?”

# WHAT IS AN ESSENTIAL QUESTION?

- ◆ the heart of the curriculum
- ◆ an organizer
- ◆ a creative choice
- ◆ a conceptual commitment
- ◆ a skill to be encouraged in students

# SCANS

## Standards

(THE SECRETARY'S COMMISSION ON ACHIEVING NECESSARY SKILLS)

### WORKPLACE KNOW-HOW

**COMPETENCIES** - Effective workers can productively use:

- Ⓟ **RESOURCES** - allocating time, money, materials, space, & staff;
- Ⓟ **INTERPERSONAL SKILLS** - working on teams, teaching others, serving customers, leading, negotiating, and working well with people from culturally diverse backgrounds;
- Ⓟ **INFORMATION** - acquiring and evaluating data, organizing and maintaining files, interpreting and communicating, and using computers to process information;
- Ⓟ **SYSTEMS** - understanding social, organizational, and technological systems, monitoring and correcting performance, and designing or improving systems;
- Ⓟ **TECHNOLOGY** - selecting equipment and tools, applying technology to specific tasks, and maintaining and troubleshooting technologies.

**THE FOUNDATION** - Competence requires:

- Ⓟ **BASIC SKILLS** - reading, writing, arithmetic and mathematics, speaking, and listening;
- Ⓟ **THINKING SKILLS** - thinking creatively, making decisions, solving problems, seeing things in the mind's eye, knowing how to learn, and reasoning;
- Ⓟ **PERSONAL QUALITIES** - individual responsibility, self-esteem, sociability, self-management, and integrity.

# EXAMPLES OF EMPLOYABILITY-RELATED STUDENT ACTIVITIES

## Standards

### *Resources*

***Allocates Time.*** Selects relevant, goal-related activities, ranks them in order of importance, allocates time to activities, and understands, prepares, and follows schedules.

- Examples:
- construct a timeline chart, e.g., Gantt, PERT;
  - understand the concept of critical path;
  - estimate the time required to complete a project by task; or
  - use computer software, e.g., Harvard Project Planner, to plan a project.

***Allocates Money.*** Uses or prepares budgets, including cost and revenue forecasts; keeps detailed records to track budget performance; and makes appropriate adjustments.

- Examples:
- estimate costs;
  - prepare a multi-year budget using a spreadsheet; or
  - do a cost analysis.

***Allocates Material and Facility Resources.*** Acquires, stores, and distributes materials, supplies, parts, equipment, space, or final products in order to make the best use of them.

- Examples:
- lay out a workspace document with narrative and graphics using desktop publishing software;
  - demonstrate understanding of First In First Out (FIFO) and Just in Time (JIT) inventory systems; or
  - design a request for proposal (RFP) process.

***Allocates Human Resources.*** Assesses knowledge and skills and distributes work accordingly, evaluates performance, and provides feedback.

- Examples:
- develop a staffing plan;
  - write a job description;
  - conduct a performance evaluation.

# INTERPERSONAL

## Standards

**Participates as a Member of a Team.** Works cooperatively with others and contributes to group with ideas, suggestions, and effort.

- Examples:
- collaborate with group members to solve a problem;
  - develop strategies for accomplishing team objectives; or
  - work through a group conflict situation.

**Teaches Others.** Helps others learn.

- Examples:
- train a colleague on-the-job; or
  - explore possible solutions to a problem in a formal group situation.

**Serves Clients/Customers.** Works and communicates with clients and customers to satisfy their expectations.

- Examples:
- demonstrate an understanding of who the customer is in a work situation;
  - deal with a dissatisfied customer in person; or
  - respond to a telephone complaint about a product.

**Exercises Leadership.** Communicates thoughts, feelings, and ideas to justify a position; and encourages, persuades, convinces, or otherwise motivates an individual or group, including responsibility for challenging existing procedures, policies, or authority.

- Examples:
- use specific team-building concepts to develop a work group;
  - select and use an appropriate leadership style for different situations; or
  - use effective delegation techniques.

**Negotiates.** Works toward an agreement that may involve exchanging specific resources or resolving divergent interests.

- Examples:
- develop an action plan for negotiating;
  - write strategies for negotiating; or
  - conduct an individual and a team negotiation.

**Works with Cultural Diversity.** Works well with men and women and with a variety of ethnic, social or educational backgrounds.

- Examples:
- demonstrate an understanding of how people with differing cultural/ethnic backgrounds behave in various situations (work, public places, social gatherings); or
  - demonstrate the use of positive techniques for resolving cultural/ethnic problem situations.

From: "Teaching the SCANS Competencies"

61

# INFORMATION

## Standards

**Acquires and Evaluates Information.** Identifies need for data, obtains it from existing sources or creates it, and evaluates its relevancy and accuracy.

- Examples:
- develop a form to collect data;
  - research and collect data from appropriate sources, (library, on-line data bases, Internet, field research); or
  - develop validation instrument for determining accuracy of data collected.

**Organizes and Maintains Information.** Organizes, processes, and maintains written or computerized records and other forms of information in a systematic fashion.

- Examples:
- develop a filing system for storing information (printed or computerized);
  - develop an inventory record-keeping system; or
  - develop a bill processing system.

**Interprets and Communicates Information.** Selects and analyzes information and communicates the results to others using oral, written, graphic, pictorial, or multi-media methods.

- Examples:
- produce a report using graphics to interpret and illustrate associated narrative information;
  - make an oral presentation using several different media to present information (slides, overheads, film, audio); or
  - develop material for communicating information to be used during a teleconference call.

**Uses Computers to Process Information.** Employs computers to acquire, organize, analyze, and communicate information.

- Examples:
- use a computer spreadsheet, e.g., Lotus 1-2-3, to develop a budget;
  - use a computer graphics program, e.g., Harvard Graphics, to prepare overheads for a report; or
  - use on-line computer data bases, e.g., Lexus, New York Times, ERIC, to research a report.

# Systems

## Standards

**Understands Systems.** Knows how social, organizational, and technological systems work and operates effectively within them.

- Examples:
- draw and interpret an organizational chart;
  - develop a chart that illustrates an understanding of stocks and cash flows; or
  - draw a diagram that illustrates a technological problem definition and problem-solving process.

**Monitors and Corrects Performance.** Distinguishes trends, predicts impact of actions on system operations, diagnoses deviations in the function of a system/organization, and takes necessary action to correct performance.

- Examples:
- generate a statistical process control (SPC) chart;
  - develop a forecasting model; or
  - develop a monitoring process.

**Improves and Designs Systems.** Makes suggestions to modify existing systems to improve products or services, and develops new or alternative systems.

- Examples:
- draw a diagram showing an improved organizational system based on Deming's 14 points; or
  - choose a situation needing improvement, break it down, examine it, propose an improvement, and implement it.

# Technology

**Selects Technology.** Judges which set of procedures, tools, or machines, including computers and their programs, will produce the desired results.

- Examples:
- read equipment descriptions and technical specifications to select equipment to meet needs;

**Applies Technology to Task.** Understands the overall intent and the proper procedures for setting up and operating machines, including computers and their programming systems.

- Examples:
- set up/assemble appropriate equipment from instructions.

**Maintains and Troubleshoots Technology.** Prevents, identifies, or solves problems in machines, computers, and other technologies.

- Examples:
- read and follow instructions for troubleshooting and repairing relevant equipment; or
  - read and follow maintenance instructions for keeping relevant equipment in good working order.

# IDEAS FOR INTEGRATING EMPLOYABILITY COMPETENCIES INTO ACADEMIC COURSES

---

## HISTORY

A local resident lives in a home that is more than 100 years old. Help the resident apply for a Texas Historical Marker and/or National Registry.

## CHEMISTRY

Design the "perfect chemical storeroom.

Write a protocol for shutting down a laboratory in case of emergency.

## BIOLOGY

Plan the clean-up of an ecologically sensitive area.

Prepare the pruning, fertilizing and planting schedule for the campus for optimum flowering and showiness at all times during the year, within a \$\$\$ budget.

## ART

Create a marketing/advertising campaign for a local non-profit, charitable group.

Design a user-friendly map of the campus for visitors.

## ENGLISH

Create "Cliff Notes" on various pieces of literature for a lower level class.

Write resumes for literary characters, e.g., Macbeth, Lady Macbeth

## SPANISH

Plan a trip from your location to Mexico, Central America, South America, or Spain.

## ACTIVITY

### Your Assignment

1. Choose one of the ideas listed on page 68.
2. List the tasks performed by students. (Can be in random order.)
3. Using the SCANS Competencies, identify the skills demonstrated by the students.

Tasks Performed	SCANS Competencies Demonstrated

# Instructional Strategy Development Form

1. **Using complete sentences, describe 7 (at least)-9(max) specific projects/activities to be done in the classroom. Correlate each task with the appropriate SCANS foundation skill/competency.**

For example, one of the projects in a mathematics class might be: "Present the results of a survey to the class, and justify the use of specific statistics to analyze and represent the data."

**(Use Complete Sentences)**

	<u>Foundation Skills</u>	<u>Competencies</u>
1) <u>Plan the material and time requirements for a chemistry experiment, to be performed over a two-day period, that demonstrates a natural growth process in terms of resource need.</u>	<input type="checkbox"/> Basic <input type="checkbox"/> Thinking <input type="checkbox"/> Personal Qualities	<input type="checkbox"/> Resources <input type="checkbox"/> Informational <input type="checkbox"/> Interpersonal <input type="checkbox"/> Systems <input type="checkbox"/> Technology

# INSTRUCTIONAL COMPARISON

## Traditional Instruction vs Standards-Based Education

### TRADITIONAL LESSON PLANNING

1. What content will I teach?
2. How will I teach it?
3. What material will I need?
4. What assignments will I give to students?
5. What activities will I do in class?
6. How long will the unit take?
7. What homework will I assign?
8. How will I test whether or not they learned it?
9. What is the next unit?

### STANDARDS-BASED INSTRUCTIONAL ORGANIZER

1. What content standard(s) will students learn (what should they know and be able to do)? How is this content relevant; how can students apply it?
2. How will students show what they know and can do? What evidence will they provide? What authentic tasks might they use?
3. What might their work look like if it is...advanced, proficient, basic, and below basic?
4. What content, unit, or curriculum will help students "get there"? What essential learnings or components do students need? How do these learnings relate to the unit focus?
5. What teaching strategies might help various students "get there"? What adaptations might be needed? How might technology be used?
6. Are students "getting there"? Are students developing knowledge and skills aligned to the standard? Are adjustments in teaching strategies needed?
7. What help might students receive during the assessment without invalidating results?
8. How well did each of the students do? What should be refined, revised, retaught in another unit? Was the assessment valid? Did the scoring rubric have validity?

# The South Dakota Crosswalk Project

## PURPOSE

DWCP is offering the crosswalk exercise to assist schools and programs to continue to increase rigor and relevance to the curriculum.

The crosswalk is a process for identifying where vocational technical courses and programs use, enhance, and/or teach academic content standards.

## RELEVANCE

How many times has a teacher heard a student ask, "When will I ever use what you're teaching me today?" How often do we hear of employers complaining that high school graduates may have passed all the tests, but they can't seem to use what they know? These comments should raise a warning flag about the quality of American education.

The kinds of skills needed in contemporary society are different from those traditionally taught in American schools, and the level of academic and technical competency required in them is higher than ever before.

## INTENT

Students will demonstrate higher level academic skills through application of knowledge and skills to real-world settings.

Schools will periodically review all curricula for academic content and measure the effectiveness of learning through application.

Integrated projects and student assessment will be integral to a school's curriculum.

Schools will meet or exceed all legislative requirements and recommendations concerning academic excellence.

DWCP will give direction to this exercise by . . .

Developing an instrument, which will be used to identify technical standards that reflect or enhance state academic standards in mathematics and communications/language arts. Science and social studies standards will be crosswalked upon approval by the South Dakota State Board of Education

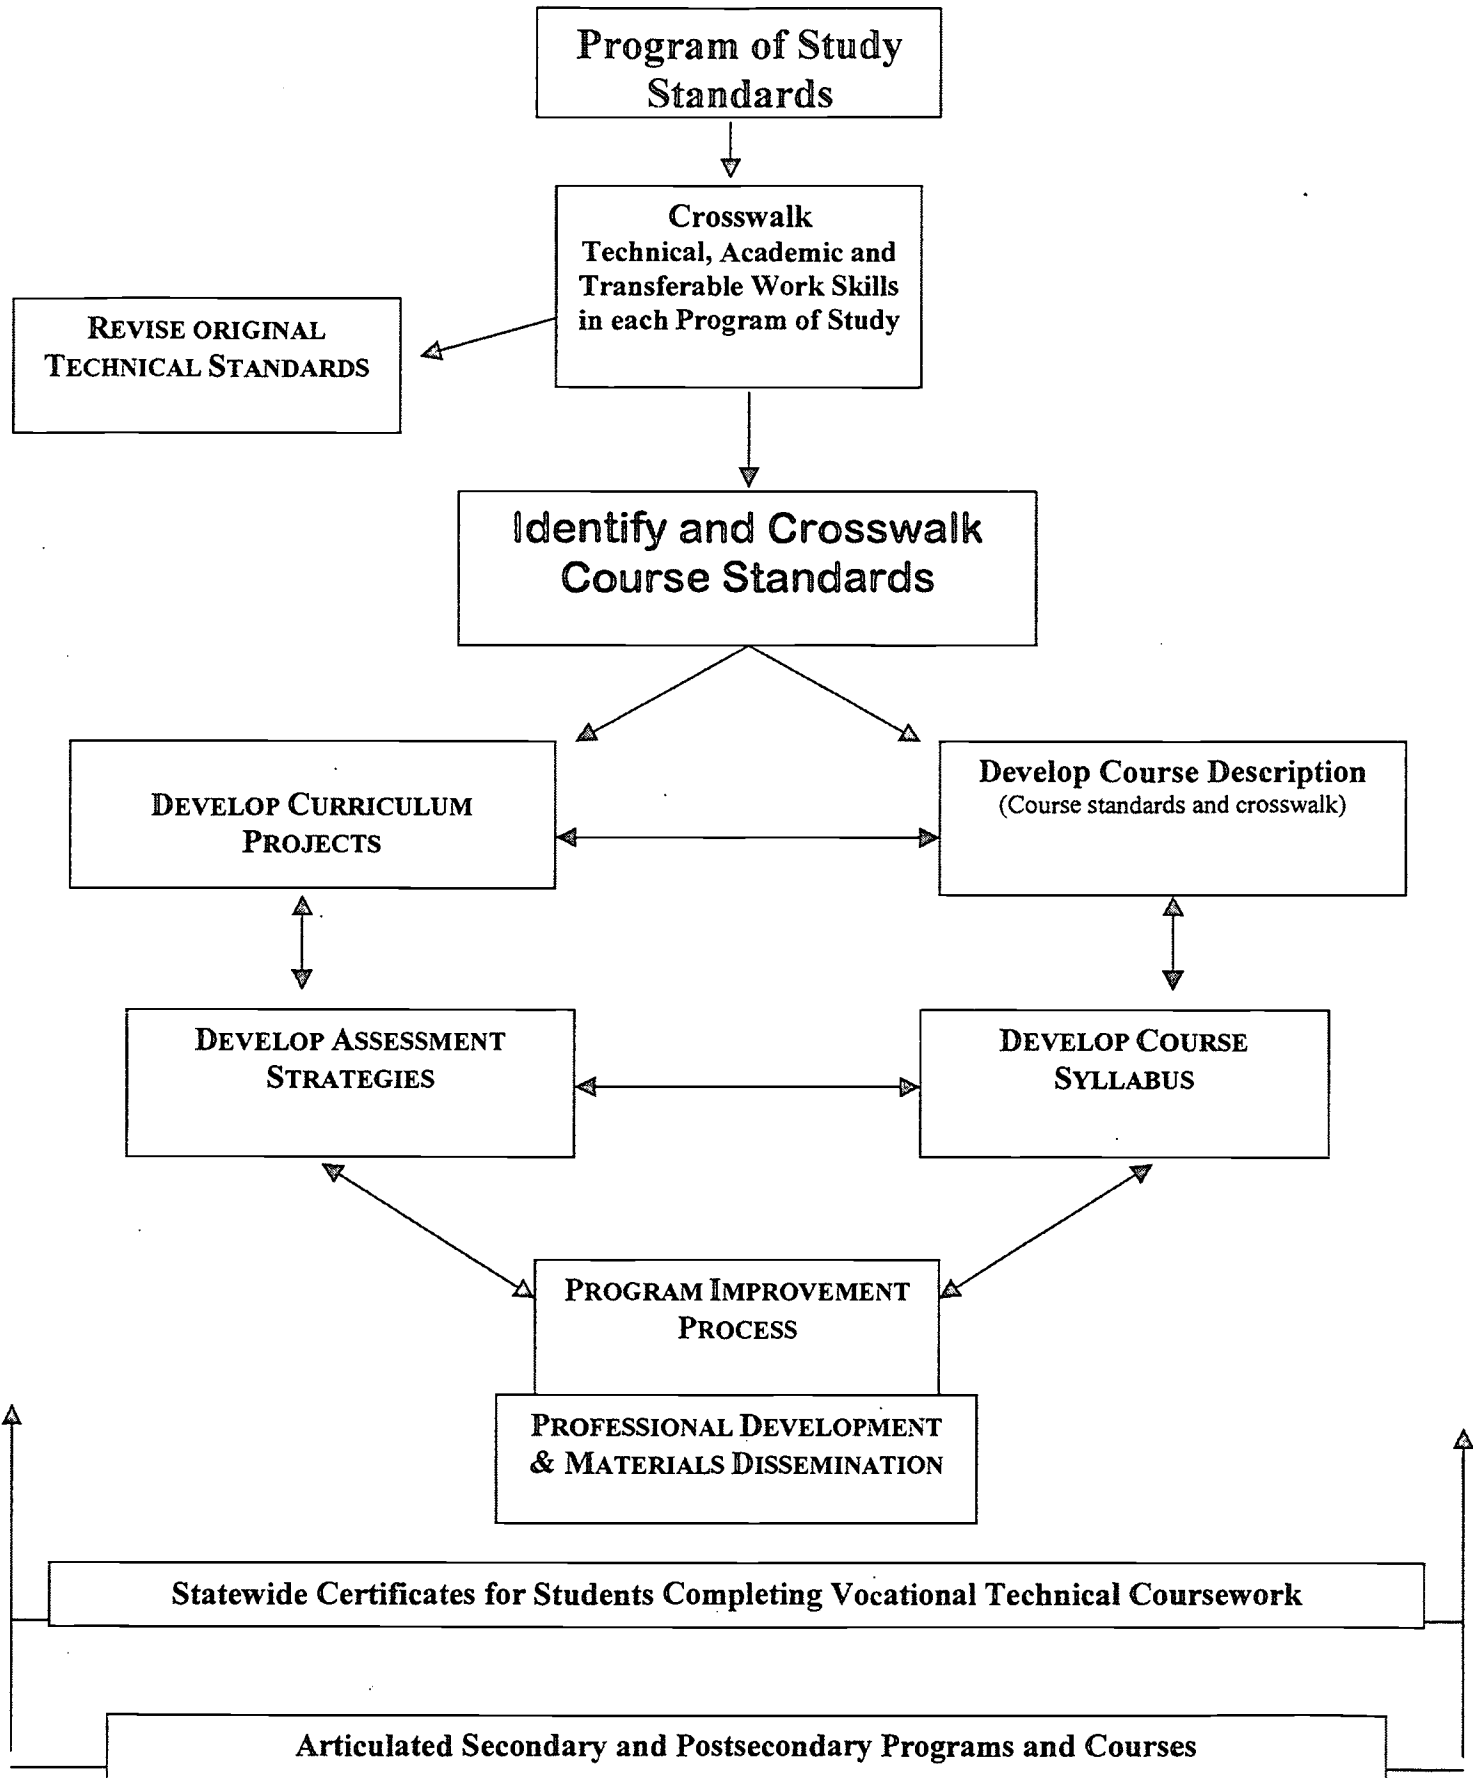

Providing technical assistance to programs in making changes and enhancing curriculum through the Program Improvement Process.

## PROJECT GOAL

Providing workshops to assist instructors in matching current curriculum standards to that of the academic standards  
*The Crosswalk* will become a significant part of the Perkins Core Standards and Measures and the Program Improvement Process conducted by all technical programs.

Academic and technical instructors working jointly will increase the academic rigor in technical programs, as well as application of knowledge and skills in academic programs.

# Instructional Strategies

**INSTRUCTIONAL  
STRATEGIES**

# ENGAGING INSTRUCTIONAL STRATEGIES

## Instructional Strategy

1. Classroom pacing (Harmin, 1994) is a collection of strategies that can vary and enliven the pace of a classroom.
  - Whip Around, Pass Option—Students give a short response to a question or issue with the option of “passing” if they do not choose to respond. Taking turns should be done quickly around the class.
  - Questions, All write—The teacher poses a question and gives the class time to write a response before discussing it orally. This process requires all students to think about the question, not just the first student to raise his or her hand.
  - Ask a friend—When students ask the teacher to repeat an assignment, clarify directions, or provide other information, the teacher responds, “Ask three then me.” (Moorman, 1989). Students are pushed to think together.
  - Speak-write—Students need to know how to listen actively and take notes. In the speak-write strategy, the teacher instructs students to listen initially without taking notes. After three or four minutes, the teacher pauses and instructs students to write one or more of the following: a summary, questions, reactions, or anything else. Following this activity, pairs of students clarify questions and discuss reactions.
  
2. Questioning strategies Skillful teacher questioning can reverse the traditional high ratio of teacher talk to student talk and can encourage students to think before speaking. However, questions for their own sake are not necessarily valuable. Numerous classroom studies have found that teacher questions focus on low-level recall. Kindsvatter, Wilen, and Ishler (1988) outline these criteria for effective teacher questioning:
  - Phrasing—Questions are clearly stated.
  - Adapting questions—Questions follow a purposeful sequence.
  - Balance—A balance exists between convergent questions (knowledge, comprehension, and application) and divergent questions (analysis, synthesis, and evaluation).
  - Participation—Teacher involves more students and redirects questions for more than one answer.
  - Probing—Students are challenged to complete, clarify, expand, or support their statements.
  - Wait time—Teacher pauses after questions to allow time for thought. Teacher also pauses after student responses to allow time for qualification and elaboration.
  - Student questions—Students are encouraged to formulate questions at all levels of cognitive complexity.

3. Reading in every class In the ReQuest strategy (Manzo, 1969), teachers and students take turns asking each other questions about a text. This approach allows the teacher to model thoughtful engagement with the text and students to practice active and purposeful reading.

Raphael (1984) provides a framework for student questioning that engages students in classifying comprehensive questions according to how they can be answered. The first two categories are "In My Head" and "In the Book," a distinction that pushes students to discriminate between prior knowledge and knowledge to be gained. Each category is further subdivided. "In the Book" includes two answer sources: "Right There" and "Putting It Together." Students distinguish between information that is stated directly and knowledge that is put together through more complex reasoning processes. Similarly, the category "In My Head" includes "The Author and Me," a synthesis of prior knowledge with text information and "On My Own." Either category may require further research. The process of identifying types of questions and text information makes students aware of their own strategies for gaining information from texts.

4. Completed products Brophy (1987) suggests that one source of intrinsic motivation is being able to complete products. The following list includes a variety of student products:
  - Written Products
    - Directions/manual
    - Scripts/transcripts
    - Autobiographies
    - Bibliographies
    - Proposals
    - Journals
    - Logs and field notes
    - News articles
    - Essays
    - Summaries
    - Advertisements
  - Mathematical Products
    - Mathematical models
    - Computer programs
    - Budgets
    - Charts and graphs
    - Blueprints
    - Scale drawings/models
    - Estimates

- Oral Products
  - Debates
  - Storytelling
  - Poetry
  - Presentations
  - Eyewitness reports
  
- Electronic Products
  - Databases
  - Spreadsheets
  - Computer simulations
  - Multimedia presentations
  - Computer programs
  - Broadcasts
  - Recordings
  - Computer graphics
  
- Three Dimensional Products
  - Dioramas
  - Displays
  - Sculptures
  - Models
  - Consumer products
  - Structures
  - Games

5. Research Methods. A range of research methods involves students directly in their learning: They include:

- Observations:
  - Field observations
  - Case studies
  - Experiments
  - Collection of artifacts
  
- Interviewing:
  - Oral histories
  - Interviews with experts
  - On-the-street interviews
  - Opinion polls
  - Surveys
  
- Document research:
  - Original records
  - Letters, diaries, journals
  - Photographs

Newspaper and magazines  
Databases  
Reference books

6. Writing in every classroom

- Student journals: Students develop the habit of using writing as a tool for thinking.
- Entry tickets: Class begins with a short written response to a question that requires reflection on the previous day's lesson, elicits prior knowledge of the day's topic, or requires a response to the homework assignment.
- Focusing: A journal entry during class provides a change of pace and an opportunity for reflection. The stimulus for writing can be as simple as "What do you understand at this point and what questions do you have?" or it may be a question that challenges students to analyze, synthesize, or evaluate the material being covered. A concluding entry can summarize the day's learning at the end of class.
- Progress reports: Students can use journal entries to reflect their own strengths and weaknesses in relation to the course material. These reports provide a starting point for teacher and students to collaborate on strategies for improvement.
- Practice essay questions: Students are frequently thrown into essay tests with minimal preparation. Regular practices with feedback will improve performance on "the real thing."
- Reflective journal entries: Split-page journal entries can help students develop a habit of reflection.

7. Research papers: A traditional research paper can integrate curriculum when it is a shared assignment. Research can be focused in an area of vocational interest, with students graded for content by their vocational teacher and for organization and mechanics by their English teacher.

8. Lab experiments and reports: As science courses become more applied, opportunities increase for reporting procedures and results. Students can read published reports to see how professionals report their findings, and they can work in groups to create reports that reflect what they have done in the lab.

9. Demonstration video: Students can create videotapes that demonstrate a procedure used in their career field. Because the purpose is demonstrate the skill to others, the appropriate criterion for acceptability is 100 percent accuracy.

10. Creation of materials: Students learn subject matter when they are required to create study materials that teach content to others. They can create games, simulations, and graphic illustrations as well as more conventional forms such as outlines, timelines, and flow charts.

11. Peer evaluation: Students' participation in the evaluation of peer presentations and products is especially effective if those students participate in developing the evaluation criteria. Videotapes of presentations add to the depth of the evaluation process.
12. Incorporation of game-like features: Brophy (1987) suggests four features that should be included when assignments are made in the form of puzzles, brain teasers, or other games:
  - Require students to solve problems, avoid traps, or overcome obstacles to reach goals;
  - Call for students to explore and discover to identify the goal in addition to developing a method for reaching it;
  - Involve suspense or hidden information that emerges as the activity is completed;
  - Involve random aspect or uncertainty about what the performance outcome is likely to be given trial.
13. Individualization: The following strategies can be used to individualize instruction:
  - Individual checklist of skills accomplished—Because many vocational courses are directly related to skills in a field of specialization, students may be required to master a list of skills in order to complete a course. Students may be required to take responsibility for their own pacing on the checklist.
14. Teamwork: Slavin (1994) describes an approach to teamwork that maintains individual responsibility for mastering content and motivates students to bolster each other's learning. Five major components are:
  - Class presentations—The teacher presents a body of material, and students are clearly aware that attentiveness is essential to the success of their team.
  - Teams—Teams are made up of four or five students; they are mixed by past academic success, gender, race, and ethnicity. The goal of the team is to prepare members for a quiz that will cover the material given in the class presentation.
  - Quizzes—Quizzes cover one or two periods of class presentation and team score. Those points are based on *improvement* over a baseline average of past quiz scores. This requirement pushes individual students to continue raising their levels of performance.
  - Team recognition—A team whose average score exceeds a certain standard is rewarded with activities, bonus points toward individual grades, or other recognition.

15. Jigsaw: The jigsaw approach is another form of cooperative learning. Students work in small groups in which each person specializes in a component of a larger body of information or skill. Thus, each person possesses knowledge that is essential to the group. Clarke (1994) describes four stages of the process:

- Introduction—After dividing the class into heterogeneous “home groups” of four to five students, the teacher establishes a context for the topic to be studied. Students leave their home groups and reorganize into focus groups, for example:

Home groups: A B C D

E F G H

Focus groups: A E

B F

C G

D H

The teacher gives each focus group an aspect of a problem or topic to work together and may provide a set of guiding questions.

- Reporting and reshaping—Home groups reconvene and students report what they learned in their focus groups. The emphasis during this stage is on posing questions and exploring ideas in depth.
- Integration and evaluation—The teacher designs an activity that requires individuals or home groups to integrate their learning. Students also reflect on how they worked together and how they might proceed differently in the future.

## QUESTIONING FOR QUALITY THINKING

**Knowledge**—Identification and recall of information.

Who, what, when, where, how \_\_\_\_\_ ?

Describe \_\_\_\_\_ .

**Comprehension**—Organize and selection of facts and ideas

Retell \_\_\_\_\_ in your own words.

What is the main idea of \_\_\_\_\_ ?

**Application**—Use of facts, rules, principles

How is \_\_\_\_\_ an example of \_\_\_\_\_ ?

How is \_\_\_\_\_ related to \_\_\_\_\_ ?

Why is \_\_\_\_\_ significant ?

**Analysis**—Separation of a whole into component parts

What are the parts of features of \_\_\_\_\_ ?

Classify \_\_\_\_\_ according to \_\_\_\_\_ ?

Outline/diagram/web \_\_\_\_\_ ?

How does \_\_\_\_\_ compare/contrast with \_\_\_\_\_ ?

What evidence can you list for \_\_\_\_\_ ?

**Synthesis**—Combination of ideas to form a new whole

What would you predict/infer from \_\_\_\_\_ ?

What ideas can you add to \_\_\_\_\_ ?

How would you create/design a new \_\_\_\_\_ ?

What might happen if you combine \_\_\_\_\_ ?

with \_\_\_\_\_ ?

What solutions would you suggest for \_\_\_\_\_ ?

**Evaluation**—Development of opinions, judgments, or decisions

Do you agree \_\_\_\_\_ ?

What do you think about \_\_\_\_\_ ?

What is the most important \_\_\_\_\_ ?

Prioritize \_\_\_\_\_ ?

How would you decide about \_\_\_\_\_ ?

What criteria would you use to assess \_\_\_\_\_ ?

## STRATEGIES TO EXTEND STUDENT THINKING

- **Remember “wait time I and II”**  
Provide at least three seconds of thinking time after a question and after a response.
- **Utilize “think-pair-share”**  
Allow individual thinking time, discussion with a partner, and then open up the class discussion.
- **Ask “follow-ups”**  
Why? Do you agree? Can you elaborate? Tell me more. Can you give me an example?
- **Without judgement**  
Respond to student answers in a non-evaluative fashion.
- **Ask for summary (to promote active listening)**  
Could you please summarize John’s point?
- **Survey the class**  
“How many people agree with the author’s point of view?” (“thumbs up, thumbs down”)
- **Allow for student calling**  
“Richard, will you please call on someone else to respond?”
- **Play devil’s advocate**  
Require students to defend their reasoning against different points of view.
- **Ask students to “unpack their thinking”**  
“Describe how you arrived at your answer.” (“think aloud”)
- **Call on students randomly**  
Not just those with raised hands
- **Student questioning**  
Let the students develop their own questions
- **Cue student responses**  
“There is not a single correct answer for this question. I want you to consider alternatives.”

McTighe, J. & Lyman, F. T. (1998). Cueing Thinking in the Classroom: The Promise of Theory-Embedded Tools. *Educational Leadership*, 45(7), 18-24. Permission to print by publisher.

# MULTIPLE INTELLIGENCES FRAMEWORK

A *multiple intelligences framework* helps provide an enriched and accelerated educational program, as required by the Improving America's Schools Act school reform legislation.

As described in *Gardner's Frames of Mind*,<sup>1</sup> the theory of multiple intelligences proposes that individuals use at least eight intellectual capacities or talents to approach problems and create products.

These intelligences include:

**Linguistic** - Ability to use words and language effectively, both written and spoken

**Logical-Mathematical** - Capacity to use numbers, inductive and deductive thinking, and abstract patterns

**Visual-Spatial** - Ability to visualize and create mental images

**Bodily-Kinesthetic** - Use of one's body to solve problems and communicate ideas and feelings

**Musical** - Capacity to recognize, create, reproduce and reflect on musical forms

**Interpersonal** - Ability to understand and interact effectively with others

**Intrapersonal** - Capacity to understand oneself, engage in self-reflection, knowing one's strengths and weaknesses

**Naturalist** - Ability to recognize and classify plants, minerals, and animals

<sup>1</sup>Gardner, H. (1983). *Frames of Mind: The Theory of Multiple Intelligences*. New York: Basic Books.

## MULTIPLE INTELLIGENCES

### Verbal/Linguistic Intelligence

We use our verbal/linguistic intelligence when we speak to each other, whether through formal speech or informal conversation. We use this intelligence when we put our thoughts down on paper, create poetry, or simply write a letter to a friend. Verbal/linguistic intelligence is involved in storytelling and creating, in all forms of humor that involve such things as plays on words, in the unexpected ending in a joke, and in a various funny twists of the language. This intelligence is involved in any use of metaphors, similes, and analogies, and, of course, in learning proper grammar and syntax in speaking and writing.

#### Exercises to Stimulate Verbal/Linguistic Intelligence

- Choose a word randomly from the dictionary and practice working it into normal conversations with other people.
- Get a book of word games and puzzles (for example, crosswords, jumbles, and so on) or play language-oriented table games (for example, Scrabble™, Spill and Spell™, and so on).
- Watch a TV drama or detective story, then write your own sequel, or tell what you think should happen in the next episode.
- Talk with someone about his or her ideas or opinions. Ask questions, have a discussion, or engage in friendly debate.
- Make a presentation on a topic that interests and excites you (for example, a hobby, a political view, a book you've read, or someone you know).

### Logical/Mathematical Intelligence

You can see logical/mathematical intelligence in operation most clearly when you are involved in a situation that requires problem solving or meeting a new challenge. This intelligence is often associated with what we call "scientific thinking." We use our logical/mathematical intelligences when we recognize abstract patterns, such as counting by twos or knowing if we've received the right change at the supermarket. We use it when we find connections or see relationships between seemingly separate and distinct pieces of information. Logical/mathematical intelligences is responsible for the various patterns of thinking we use in our daily lives, such as making lists, setting priorities, and planning something for the future.

#### Exercises to Stimulate Logical/Mathematical Intelligence

- Practice analytical thinking by classifying a group of twelve randomly gathered objects. See if you can create a rationale for organizing them (for example, shape, color, size, use, and so on).
- Do a project that requires following step-by-step directions, for example, building something that is not prefab or cooking from scratch.
- Create a four-point outline telling about a movie you have seen; each of the points will have four subpoints, and each subpoint will have four more subpoints.
- Create a convincing, rational argument for something that is ridiculous, such as why a family pet should be allowed to sit at the table and eat with the family.
- Create a sequence of numbers that have a hidden pattern. See if someone else can discover the pattern.

### **Visual/Spatial Intelligence**

Visual/spatial intelligence can be seen in its purest form in the active imagination of children involved in such things as daydreaming, pretending to make themselves invisible, or imagining themselves to be on a great journey to magical times and places. We employ this intelligence when we draw pictures to express our thoughts and feelings, or when we decorate a room to create a certain mood. We use it when we use a map successfully to get someplace we want to go. Visual/spatial intelligence helps us win at chess, enables us to turn a blueprint on paper into a “real” object (for example, a bookshelf or a dress), and allows us to visualize things we want in our lives (for example, new curtains or wallpaper, a successful speech, a trip, a career change, or an award).

#### **Exercises to Stimulate Visual/Spatial Intelligence**

- Look at the clouds with a group of friends and see if you can find such things as animals, people, objects, faces, and so on, hidden in the formations.
- Practice excises for using the active imagination; for example, imagine yourself living in a different period of history or pretend you are having a conversation with your hero, a character from literature, or a historical figure.
- Try to express an idea, opinion, or feeling with clay, paints, colored markers, or pens. Use images, shapes, patterns, designs, textures, and colors.
- Plan a scavenger hunt with friends. Make complex and interesting maps of each other to follow that will lead to the “treasure.”
- Create a picture montage based on a theme or idea that interests you. Cut out a number of pictures from magazines and arrange them to convey what you want to say.

### **Bodily/Kinesthetic Intelligence**

Bodily/kinesthetic intelligence would be seen in operation if I gave you a typewriter, with no markings on the keys, and asked you to type a letter. If at some time in your life you learned how to type, your fingers would “know” the keyboard and would likely be able to produce the letter with little or no effort at all. The body knows many things that are not necessarily known by the conscious mind, for example, how to ride a bike, park a car, catch an object. Or maintain balance while walking. Bodily/kinesthetic intelligence also involves the ability to use the body to express emotions and thoughts (such as in dance or body language), to play an athletic or sporting game, to invent a new product, and to convey ideas (such as charades, mime, and drama).

#### **Exercises to Stimulate Bodily/Kinesthetic Intelligence**

- After a presentation, have everyone in a group express her or his reactions to the presentation through a physical gesture, action, movement, posture, or other body language.
- Pay attention to your body when you are involved in everyday, physical tasks such as shoveling snow, washing dishes, or fixing your car. See if you can become aware of what your body “knows” how to do and how it functions.
- Perform different physical activities, such as walking, dancing, or jogging. Try to match your mood. Also try some activities to change your mood.
- Practice using your nondominant hand to perform any taken-for-granted task, for example, brushing your teeth, eating, buttoning a shirt, and so on. See if you can train the hand to function more effectively.

- Try role-playing to express an idea, opinion, or feeling, or play “Modern-Day Inventions Charades.”

### **Musical/Rhythmic Intelligence**

We use our musical/rhythmic intelligence when we play music to calm or to stimulate ourselves. Many of us use music and rhythm to maintain a steady rhythm when jogging, cleaning the house, or learning to type. Musical/rhythmic intelligence is involved when you hear a jingle on the radio and find yourself humming it over and over throughout the day. This intelligence is active when we use tones and rhythmic patterns (instrumental, environmental, and human) to communicate how we are feeling and what we believe (for example the sounds of intense joy, fear, excitement, and loss), or to express the depth of our religious devotion or the intensity of our national loyalty.

#### **Exercises to Stimulate Musical/Rhythmic Intelligence**

- Make a list of different types of music you own or have access to. Listen to several minutes of each type and note how each affects you, for example, feelings and images it evokes, memories it sparks, and so on.
- Think of something you want to remember or something you want to teach someone. Choose a well-known tune and create a simple song using the information you want to remember to teach.
- Experiment expressing your feelings (for example, fear, contentment, anger, exhaustion, exhilaration, and so on) through vocal sounds only (no words!). Try producing different volumes, pitches, tones, and noises to communicate your meaning.
- Listen to the natural rhythmic patterns of your environment, for example, coffee brewing, traffic, the wind blowing, rain beating on the window, and so on. See what you can learn from these rhythms and beats.
- Read a story and practice “illustrating” it with various sound effects, music, rhythmic beats, tones—much like the old-time radio shows.

### **Interpersonal Intelligence**

We experience our interpersonal intelligence most directly whenever we are part of a team effort, whether it be a sports team, a church committee, or a community task force. This intelligence utilizes our ability to engage in verbal and nonverbal communication and our capacity to notice distinctions among ourselves, for example, contrasts in moods, temperament, motivations, and intentions. Interpersonal intelligence allows us to develop a genuine sense of empathy and caring for each other. Through our interpersonal intelligence we can “stand in another’s shoes” and understand another person’s feelings, fears, anticipations, and beliefs. This person-to-person way of knowing is the one through which we maintain our individual identity, but we also become “more than ourselves” as we identify with and become a part of others.

#### **Exercises to Stimulate Interpersonal Intelligence**

- Get a partner to try to reproduce a complex shape or design you have drawn. These are the rules: (1) Give verbal instructions only. (2) Your partner may not look at the drawing. (3) Your partner may ask you any question. (4) You may not look at what your partner is drawing.
- Explore different ways to express encouragement and support for other people (for example, facial expressions, body posture, gestures, sounds, words, and phrases). Practice giving encouragement and support to others around you each day.

- Practice listening deeply to someone who is expressing a view with which you disagree. Cut off the tendency to interpret what the person is saying and to express your own views. Force yourself to stay focused on what the person is saying. Try to paraphrase his or her thoughts to verify your own understanding.
- Volunteer to be part of a team and watch for positive and negative team behavior (positive team behavior includes the things that help the team work together and be successful; negative behavior includes the things that impair the team's efforts).
- Try disciplined people-watching, guessing what others are thinking and feeling, their backgrounds, professions, and so on, based on nonverbal clues (for example, dress, gestures, voice tone, colors, and so on). When possible (and appropriate!), check your accuracy with the person.

### **Intrapersonal Intelligence**

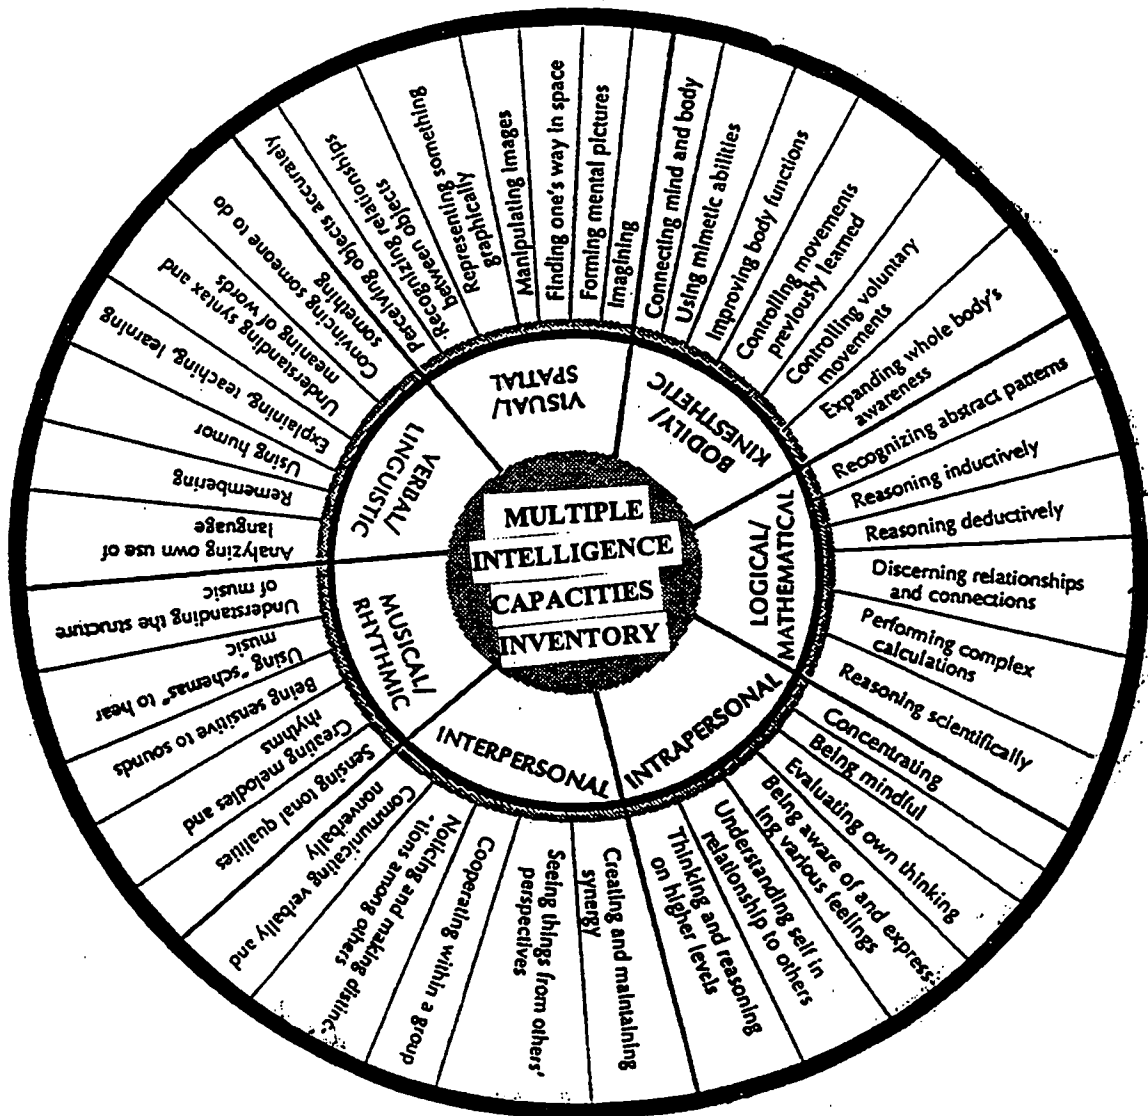

Intrapersonal intelligence is the introspective intelligence. Intrapersonal intelligence allows us to be self-reflective, that is, to step back from ourselves and watch ourselves, almost like an outside observer. As far as we know, we are the only creatures gifted with such an ability. Intrapersonal intelligence involves a knowledge about and an awareness of the internal aspects of the self such as feelings, thinking processes, self-reflection, and intuition about spiritual realities. Both self-identity and the ability to transcend the self are part of the functioning of intrapersonal intelligence. When we experience a sense of unity, have an intuition about our connection with the larger order of things, experience higher states of consciousness, feel the lure of the future, and dream of unrealized potentials in our lives, it is the result of our intrapersonal way knowing.

#### **Exercises to Stimulate Intrapersonal Intelligence**

- Make a mood graph that shows the high points (as well as points in between) of your day. Note the external events that contributed to your different moods.
- Evaluate the thinking strategies and thinking patterns you use in different situations (for example, a problem arises in a well-planned activity, and emergency occurs, or you have to decide among a number of viable and attractive options).
- When doing something boring, try to be aware of all aspects of the activity: your movements, feelings, thoughts, the taste in your mouth, the smell in the air, the textures, the sounds, and so on.
- Create an experimental reflection log in which you record key events from your day. Then, using such things as paints, music, clay, and poetry, express your feelings about those events.
- Pretend you are an outside observer watching your thoughts, feelings, and moods. Notice different patterns that seem to arise in certain situations, for example, the "anger pattern," the "playfulness patterns," or the "anxiety pattern."

## MULTIPLE INTELLIGENCE CAPACITIES INVENTORY WHEEL

The following diagram includes a summary of the capacities and skills related to each of the intelligences. These skills must be taught explicitly to students if the students are to learn how to use all seven ways of knowing. Just as students must be taught the alphabet, how to make words, and how to read and write if they are to be strong in verbal/linguistic intelligence, they must be taught such things as how to use the active imagination, how to do graphic representation, and how to see relationships between different objects in space if they are to be strong in visual/spatial intelligence. I suggest that you use this wheel as a checklist to evaluate your children's relative strengths and weaknesses in each intelligence area.

STRATEGIES THAT REFLECT THE SEVEN INTELLIGENCES

	Motivational <sup>1</sup>	Management	Software <sup>2</sup>
<b>Logical-Mathematical</b>	<p>List or organize facts</p> <p>Sequence numbers</p> <p>Solve problems</p> <p>Analyze data</p> <p>Compute or calculate</p> <p>Solve story problems</p> <p>Play pattern games</p>	<p>List logical consequences of actions</p> <p>Chart the students behaviors</p> <p>Problem solve solutions</p> <p>Count to ten before reacting</p>	<p>Math skills tutorials (Math Blaster)</p> <p>Computer programming tutors (LOGO)</p> <p>Logic games (King's Rule)</p> <p>Science programs (Science Tools Kits)</p> <p>Critical thinking programs (HOTS—Higher Order Thinking Skills)</p>
<b>Linguistic</b>	<p>Write letters, poems, stories, descriptions</p> <p>Lead oral discussions</p> <p>Create audiotapes</p> <p>Give an oral presentation</p> <p>Write or give a news report</p> <p>Conduct an interview</p> <p>Present a radio drama</p> <p>Create a slogan</p> <p>Write your own story problems</p> <p>Tell a story</p>	<p>Talk with students</p> <p>Provide books related to the problem</p> <p>Tell stories that focus on the behavioral issues such as <u>The Boy Who Cried Wolf</u> for fibbing</p>	<p>Word processing programs (WordPerfect)</p> <p>Typing tutors (Mavis Beacon Teaches Typing!)</p> <p>Desktop publishing programs (Publish It!)</p> <p>Electronic libraries (Word Library)</p> <p>Interactive storybooks (Just Grandma and Me)</p> <p>Word games (Missing Links)</p>
<b>Interpersonal</b>	<p>Work on an assignment cooperatively</p> <p>Teach someone else</p> <p>Learn from someone outside of school</p> <p>Consider diverse points of view</p> <p>Establish group rules</p> <p>Act in a play or simulation</p> <p>Conduct an interview</p> <p>Establish "phone buddies" for homework</p> <p>Give feedback to someone else on their work</p> <p>Work on group projects</p>	<p>Provide peer group discussions</p> <p>Buddy up a student with a role model</p> <p>Tutor a younger child</p> <p>Assign different roles such as leading a group</p>	<p>Electric bulletin boards (Kidsnet)</p> <p>Simulation games (Sim City)</p>

	Motivational	Management	Software <sup>2</sup>
<b>Bodily-Kinesthetic</b>	<p>Create a dance or movement sequence</p> <p>Make a board of floor game</p> <p>Make manipulatives</p> <p>Build a model</p> <p>Perform a skit or play</p> <p>Perform a simulation</p> <p>Put together a puzzle</p> <p>Do a scavenger hunt</p> <p>Perform a pantomime</p> <p>Play sports</p>	<p>Role play the appropriate behavior</p> <p>Teach physical clues such as taking a deep breath</p> <p>Use exercise to reduce tension</p>	<p>Hands-on construction kits that interface with computers (LEGO to LOGO)</p> <p>Motion-simulation games (Flight Simulator)</p> <p>Virtual-reality system software (Dactyl Nightmare)</p> <p>Eye-hand coordination games (shufflepuck Café)</p> <p>Tools that plug into computers (Science Toolkit)</p>
<b>Musical</b>	<p>Sing a song</p> <p>Create a rap</p> <p>Compose a melody</p> <p>Change the words to a song</p> <p>Create a musical game</p> <p>Identify music that helps you study</p> <p>Hum a tune</p> <p>Imitate environmental sounds</p> <p>Imitate instrumental sounds</p>	<p>Provide music that calms</p> <p>Use music to reduce tension</p>	<p>Music literature tutors (Exploratorium)</p> <p>Singing software [transforms voice input into synthesizer sound] (Vocalizer)</p> <p>Composition software (Music Studio)</p> <p>Tone recognition and melody</p> <p>Memory enhancers (Arnold)</p> <p>Musical instrument digital interfaces—i.e., MIDI (Music Quest MIDI Starter System)</p>
<b>Naturalist</b>	<p>Create observation notebooks</p> <p>Describe changes in the local or global environment</p> <p>Care for pets, wildlife, gardens, or parks</p> <p>Use binoculars, telescopes, microscopes</p> <p>Draw or photograph natural objects</p>	<p>Discuss examples of cooperation and teamwork in nature</p>	<p>The Magic School Bus Explores the Rainforest; Dangerous Creatures-Explore the Endangered World of Wildlife; Animal Planet</p>

	Motivational <sup>1</sup>	Management	Software <sup>2</sup>
<b>Intrapersonal</b>	<p>Keep a journal, diary, or reflection logs</p> <p>Set short- and long-term goals</p> <p>Explain why and how this topic is important in real life</p> <p>Describe your feeling about this topic</p> <p>Evaluate your own work</p> <p>Describe your personal strengths that help you with this work</p> <p>Carry out an independent project</p> <p>Create your own schedule for completing classwork</p> <p>Use metacognitive techniques</p>	<p>Voluntarily take a time-out</p> <p>Provide one-to-one counseling</p> <p>Design an individual behavioral contract</p> <p>Involve the student in high-interest projects</p> <p>Provide self-esteem activities</p>	<p>Personal choice software (Decisions, Decisions)</p> <p>Career counseling software (The Perfect Career)</p> <p>Any self-paced program (e.g., most of the above programs)</p>
<b>Spatial</b>	<p>Create charts, posters, graphs, diagrams, etc.</p> <p>Make a videotape or film</p> <p>Create pie charts, bar graphs, etc.</p> <p>Make a photo album or scrapbook</p> <p>Create a collage</p> <p>Make a poster or mobile</p> <p>Make a map</p> <p>Use color and shape</p> <p>Make a painting</p> <p>Create a drawing</p>	<p>Draw appropriate behaviors</p> <p>Visualize the consequences of certain behaviors</p> <p>Show pictures or movies that model appropriate behaviors</p>	<p>Animation programs (Art and Film Director)</p> <p>Draw-and paint programs (Dazzle Draw)</p> <p>Electronic chess games (Chessmaster)</p> <p>Spatial problems-solving games (Tetris)</p> <p>Electronic puzzle kit (Living Jigsaws)</p> <p>Clip-art programs (the New Print Shop)</p> <p>Geometry programs (Sensei's Geometry)</p> <p>Graphic presentations of knowledge (World GeoGraph)</p>

2. Taken from Armstrong, T. (1994). *Multiple intelligences in the classroom*. Alexandria, VA: Association for Supervision and Curriculum Development.

# Multiple Intelligences Planning Questions

## Integration Basics

Armstrong, T. (1994). Multiple intelligences in the classroom (p.58). Alexandria, VA: Association for Supervision and Curriculum Development.

# Assessing How Your Students Learn

This checklist, adapted with permission from Multiple Intelligences In The Classroom by Thomas Armstrong (Association for Supervision and Curriculum Development, 1994) can help you take an in-depth look at which intelligences a student uses most. Fill out the checklist for two or three students you have difficulty reaching. For each student in your class check each statement that describes the student, then review them together to see which intelligences are the student's strongest.

## Instructional Strategy

### Word Smart

- tells tall tales, jokes, and stories
- has good memory
- enjoys word games
- enjoys reading and writing
- has a good vocabulary for age
- has good verbal communication

### Number Smart

- asks questions about how things work
- quickly does mental math
- enjoys math activities
- enjoys strategy games
- enjoys logic puzzles or brainteasers
- uses higher-order thinking skills

### Picture Smart

- reports seeing clear mental pictures
- reads maps, charts, and diagrams easily
- daydreams more than peers
- enjoys art activities
- likes visual presentations
- enjoys puzzles and mazes
- understands more from pictures than words while reading
- doodles on paper

### Body Smart

- excels in one or more sports
- moves, twitches, taps, or fidgets while seated for a long time
- enjoys taking things apart and putting them back together

- touches new objects
- enjoys running, jumping or wrestling
- expresses her/himself dramatically
- enjoys clay and finger painting

### Music Smart

- recognizes off-key music
- remembers melodies
- plays a musical instrument or sings in a choir
- speaks or moves rhythmically
- taps rhythmically as he or she works
- is sensitive to environmental noises
- responds favorably to music
- sings songs that s/he has learned outside of the classroom

### People Smart

- enjoys socializing with peers
- acts as a natural leader
- gives advice to friends who have problems
- seems to be street-smart
- belongs to clubs, committees, or other organizations
- likes to play games with other kids
- has one or more close friends
- shows concern for others

### Self Smart

- displays a sense of independence
- has a realistic sense of his/her strength
- has a good sense of self-direction
- prefers working alone to working with others
- learns from his/her failures and successes
- has high self-esteem

**SPATIAL  
LOGICAL**

# Assessment

## THE POOR SCHOLAR'S SOLILOQUY

By Stephen Corey

*Professor Corey is an outstanding leader in the field of educational psychology and is now associated with Teachers College, Columbia University. This treatise on educational philosophy brings out an aspect of education which we are all likely to forget at times. Though amusingly written, It strikes deep and hard.*

1. No, I'm not very good in school. This is my second year in the seventh grade, and I'm bigger and taller than the other kids. They like me all right, though, even if I don't say much in the classroom, because outside I can tell them how to do a lot of things. They tag me around and that sort of makes up for what goes on in school.
2. I don't know why the teachers don't like me. They never have, very much. Seems like they don't think you know anything unless they can name the book it comes out of. I've got a lot of books in my room at home – books like POPULAR SCIENCE, MECHANICAL ENCYCLOPEDIA, and Sears' and Ward's catalogs – but I don't very often just sit down and read through like they make us do in school. I use my books when I want to find something out like whenever Mom buys anything second hand, I look it up in Sears' and Ward's first and tell her if she's getting stung or not. I can use the index in a hurry.
3. In school, though, we've got to learn whatever is in the book and I just can't memorize the stuff. Last year, I stayed after school every night for two weeks trying to learn the names of the presidents. Of course, I knew some of them like Washington and Lincoln and Jefferson, but there must have been thirty altogether, and I never did get them straight.
4. I'm not sorry though, because the kids who learned the presidents had to turn right around and learn all the vice-presidents! I am taking the seventh grade over, but our teacher this year isn't so interested in the names of presidents. She had us trying to learn the names of all the great American inventors.
5. I guess I just can't remember names in history. Anyway, this year I've been trying to learn about trucks because my uncle owns three and he says I can drive one when I'm sixteen. I already know the horsepower and number of forward and backward speeds of 26 American trucks, some of them diesels, and I can spot each make a long way off. It's funny how the diesel works. I started to tell my teacher about it last Wednesday in science class when the pump we were using to make a vacuum in a bell jar hot, but she didn't see what a diesel engine had to do with our experiment in air pressure so I just kept still. The kids seemed interested though. I took four of them around to my uncle's garage after school and we say the mechanic, Gus, tear a big diesel truck down. Does he know his stuff!
6. I'm not very good in geography either, they call it economic geography this year. We've been studying the imports and exports of Chile all week but I couldn't tell you which they are. Maybe the reason is I had to miss school yesterday because my uncle took me and his big

trailer down state about 200 miles and we brought almost 10 tons of stock back to the Chicago market.

7. He had told me where we were going, and I had to figure out the highways to take and also the mileage. He didn't do anything but drive and turn where I told him to. Was that fun! I sat with a map in my lap and told him to turn south, or southeast or some other direction. We made seven stops and drove over 500 miles round trip. I'm figuring now what his oil cost and also the wear and tear on the truck (he calls it depreciation) so we'll know how much we made.
8. I even write out all the bills and send letters to the farmers about their pigs and beef cattle brought at the stockyards. I only make three mistakes in 17 letters, my aunt said – all commas. She's been through high school and she reads them over. I wish I could write school themes that way. The last one I had to write was on "What a Daffodil Thinks of Spring," and I just couldn't get going.
9. I don't do very well in school in arithmetic either. Seems I just can't keep my mind on the problem. We had one the other day like this:

"If a 57 foot telephone pole falls across a cement highway, so that 17  $\frac{13}{16}$  feet extend from one side and 14  $\frac{9}{17}$  feet from the other, how wide is the highway?"

That seemed to me like an awfully silly way to get the width of the highway. I didn't even try to answer it because it didn't say whether the pole had fallen straight across or not.

10. Even in shop I don't get good grades. All of us kids made a broom holder and even a bookend this term, and mine were sloppy. I just couldn't get interested. Mom doesn't use a broom any more. She has a new vacuum cleaner and all our books are in a bookcase with glass doors in the parlor. Anyway, I wanted to make an end-gate for my uncle's trailer, but the shop teacher said that meant using metal and wood both, and I'd have to learn how to work with wood first. I didn't see why, but I kept still and made a tie rack at school and the tail gate after school at my uncle's garage. He said I saved him ten dollars.
11. Civics is hard for me too. I've been staying after school trying to learn the "Articles of Confederation" for almost a week because the teacher said we couldn't be good citizens unless we did. I really tried because I want to be a good citizen. I did hate to stay after school, though, because a bunch of us boys from the south end of town have been cleaning up the lot across from Taylor's machine shop to make a playground out of it for the little kids in the Methodist home. I made a jungle gym from old pipe and the guys made me Grand Mogul to keep the playground going. We raised enough money collecting scrap this month to build a wire fence clear around the lot.
12. Dad says I can quit school when I am fifteen, and I am sort of anxious to because there are a lot of things I want to learn how to do, and as my uncle says, "I'm not getting any younger."

## Assesment

# What Is Assessment?

-  A demonstration of learning
-  Evidence of skill and process development
-  Evidence of conceptual insight
-  Evidence of knowledge acquisition
-  Evidence of growth or progress over time
-  Evidence whether standards have been met

# Assessment

Assesment

**ASSESSMENT:** process of gathering evidence (not just paper and pencil)

**EVALUATION:** process of interpreting that evidence and making judgments and decisions based on that evidence

**AUTHENTIC ASSESSMENT:**

- linkage among learning tasks and performance tasks
- part of instruction
- meaningful tasks
- multiple assessments
- over time and ongoing

**Therefore:**

- greater reliability
- greater validity

Assesment

## Levels and Words Associated with Questioning

<b>EVALUATION:</b>	judge rate conclude measure score recommend	decide compare select estimate predict	appraise value criticize infer choose	evaluate revise assess deduce determine
<b>SYNTHESIS:</b>	compose invent arrange set up hypothesize incorporate	plan develop assemble prepare incorporate originate	propose design construct imagine generalize systematize	produce formulate create predict contrive concoct
<b>ANALYSIS:</b>	interpret categorize discover classify examine question differentiate	analyze probe inquire arrange survey diagram	contrast test detect group dissect inspect	scrutinize investigate compare organize inventory distinguish
<b>APPLICATION:</b>	exhibit employ use calculate	solve experiment illustrate simulate	interview practice dramatize demonstrate	apply show operate
<b>COMPREHENSION:</b>	restate recognize locate translate	summarize explain report	discuss express retell	describe identify review
<b>KNOWLEDGE:</b>	know record relate cite	define list collect enumerate	memorize recall label tell	repeat name specify recount

## Typical Tests vs "Authentic" Tests

Typical Test	"Authentic" Test	Indicators of Authenticity
Requires 'correct' responses	Requires judgement, method, refinement, accuracy, and justified responses	We observe and assess whether the student is in control of the "process" and the "product" in terms of the depth and quality of the work – not just correctness of answers
Must be unknown in advance to insure validity	Known as much as possible in advance; the "test" involves excelling at known, difficult tasks	The tasks, criteria and standards by which work will be judged are predictable or known – like the recital piece, the play, the game, a graduate oral exam, engines to be fixed, reports to be written and presented, proposals to a client, etc.
Disconnected from a realistic context	Effective use of the knowledge required: the student must "do" history, science, etc. in a rich and realistic simulation	A question likely to be encountered as experienced by the professional, citizen or consumer – as know-how in use, embedded in a set of performance obligations
Requires recognition of one 'correct answer' or plugging-in of one skill or theory	Knowledge tested as know-how; effectiveness in fashioning a quality product or performance	The task is multi-faceted and complex. Even if there is a "right answer," the task requires problem clarifying, planning, trial and error, research, adapting the facts to the case at hand, etc.
Simplistic - faster to score	Essential and judgement-based	Involves core challenges, not the easily-scored; requires careful judgement in scoring
Superficial	In-depth	Reveals whether the student has achieved real versus pseudo-mastery
Indirect 'proxy' for authentic challenges	Authentic simulation, engaging, educative, and meaningful	Thought-provoking and realistic; evokes student engagement and persistence

**Verbal-Linguistic  
Intelligence**

*(Language Arts-Based  
Assessment Instruments)*

- written essays
- vocabulary quizzes
- recall of verbal information
- audiocassette recordings
- poetry writing
- linguistic humor
- formal speech
- cognitive debates
- listening and reporting
- learning logs and journals

**Logical-Mathematical  
Intelligence**

*(Cognitive Patterns-Based  
Assessment Instruments)*

- cognitive organizers
- higher-order reasoning
- pattern games
- outlining
- logic and rationality exercises
- mental menus and formulas
- deductive reasoning
- inductive reasoning
- calculation processes
- logical analysis and critique

**Visual-Spatial  
Intelligence**

*(Imaginal-Based  
Assessment Instruments)*

- murals and montages
- graphic representation and visual illustrating
- visualization and imagination
- reading, understanding, and creating maps
- flowcharts and graphs
- sculpting and building
- imaginary conversations
- mind mapping
- video recording and photography
- manipulative demonstrations

**Bodily-Kinesthetic  
Intelligence**

*(Performance-Based  
Assessment Instruments)*

- lab experiments
- dramatization
- original and classical dance
- charades and mimes
- impersonations
- human tableaux
- invention projects
- physical exercise routines and games
- skill demonstrations
- illustrations using body language and gestures

**Musical-Rhythmic  
Intelligence**

*(Auditory-Based  
Assessment Instruments)*

- creating concepts songs and raps
- illustrating with sound
- discerning rhythmic patterns
- composing music
- linking music and rhythm with concepts
- orchestrating music
- creating percussion patterns
- recognizing tonal patterns and quality
- analyzing musical structure
- reproducing musical and rhythmic patterns

**Interpersonal  
Intelligence**

*(Relational-Based  
Assessment Instruments)*

- group "jigsaws"
- explaining to or teaching another
- "think-pair-share"
- "round robin"
- giving and receiving feedback
- interviews, questionnaires, and people searches
- empathic processing
- random group quizzes
- assess your teammates
- test, coach, and retest

**Intrapersonal  
Intelligence**

*(Psychological-Based  
Assessment Instruments)*

- autobiographical reporting
- personal application scenarios
- metacognitive surveys and questionnaires
- higher-order questions and answers
- concentration tests
- feelings diaries and logs
- personal projection
- self-identification reporting
- personal history correlation
- personal priorities and goals

# Celebration of Learning Student Sign-up Sheet

To show that I know \_\_\_\_\_, I would like to:

- \_\_\_\_\_ write a report
- \_\_\_\_\_ do a photo essay
- \_\_\_\_\_ compile a scrapbook
- \_\_\_\_\_ build a model
- \_\_\_\_\_ put on a live demonstration
- \_\_\_\_\_ create a group project
- \_\_\_\_\_ do a statistical chart
- \_\_\_\_\_ develop an interactive computer presentation
- \_\_\_\_\_ keep a journal
- \_\_\_\_\_ record interviews
- \_\_\_\_\_ design a mural
- \_\_\_\_\_ create a discography based on the topic
- \_\_\_\_\_ give a talk
- \_\_\_\_\_ develop a simulation
- \_\_\_\_\_ create a series of sketches/diagrams
- \_\_\_\_\_ set up an experiment
- \_\_\_\_\_ engage in a debate or discussion
- \_\_\_\_\_ do a mind-map
- \_\_\_\_\_ produce a videotape segment
- \_\_\_\_\_ develop a musical
- \_\_\_\_\_ create a rap or song that encompasses the topic
- \_\_\_\_\_ teach it to someone else
- \_\_\_\_\_ choreograph a dance
- \_\_\_\_\_ develop a project not listed above: \_\_\_\_\_
- \_\_\_\_\_ other: \_\_\_\_\_

**Brief description of what I intend to do:**

\_\_\_\_\_  
Signature of Student

\_\_\_\_\_  
Date

\_\_\_\_\_  
Signature of Teacher

# Assessment

Assesment

A rubric is an established set of criteria for scoring or rating students' performance on products, writing samples, or other performance tasks.

## TYPES OF RUBRICS

### HOLISTIC

A single overall score is assigned to a performance task

### ANALYTICAL

Several dimensions of traits of a task are scored

## HOW DO YOU CREATE RUBRICS?

1. Brainstorm a list of criteria that indicate quality work
2. Decide if the rubric will be holistic or analytical
3. Write short descriptive statements
4. Describe the highest and lowest levels of quality, then fill in the middle levels
5. Try out the rubric on models of student work
6. Revise rubric descriptors if needed
7. Train for rater consistency

107

# Assessment

Assesment

## WHY USE RUBRICS?

### RUBRICS:

- Make expectations clear
- Help students become more thoughtful judges of the quality of their own work
- reduce the amount of time teachers spend evaluating student work
- allow for gradations of quality and heterogeneous classes
- are easy to use and explain to both students and parents

Goodrich, H. (December 1996/January 1997). "Understanding rubrics." Educational Leadership, pp. 14-17.

# RUBRIC

Generic Performance Level for Declarative Knowledge	Generic Performance Level for Procedural Knowledge
<p><u>Advanced performance:</u> demonstrates a thorough understanding of the important information; is able to exemplify that information in detail and articulate complex relationships and distinctions</p>	<p>carries out the major processes/skills inherent in the procedure with relative ease and automaticity</p>
<p><u>Proficient performance:</u> demonstrates an understanding of the important information; is able to exemplify that information in some detail</p>	<p>carries out the major processes/skills inherent in the procedure without significant error, but not necessarily at an automatic level</p>
<p><u>Basic performance:</u> demonstrates an incomplete understanding of the important information, but does not have severe misconceptions</p>	<p>makes a number of errors when carrying out the processes and skills important to the procedure, but still accomplishes the basic purpose of the procedure</p>
<p><u>Novice performance:</u> demonstrates an incomplete understanding of the important information along with severe misconceptions</p>	<p>makes so many errors when carrying out the processes and skills important to the procedure that it fails to accomplish its purpose</p>

# ALTERNATIVE ASSESSMENT RUBRIC

Assesment

## Computer History Project

### Report (15 points)

- ◆ Three different sources using the computer - example: Encarta, Grolier's, Internet (3 points)
- ◆ Print out the sources and attach to report (3 points)
- ◆ Two pages on MicroSoft Word, 1.5 line spacing (2 points)
- ◆ New York font, 12 point size (2 points)
- ◆ 1" margins on all sides (1 point)
- ◆ Title page with the title of reports, name, and date (2 points)
- ◆ Grammar check using grammar check on the computer (1 point)
- ◆ Spelling check using the computer (1 point)

### Presentation (25 points)

#### ORAL

- ◆ 5 minutes (5 points - 1 point per minute)
- ◆ Note cards (1 point)
- ◆ Eye contact (1 point)
- ◆ Posture and tone (1 point)

#### POWER POINT

- ◆ Ten slides (5 points - half point per slide)
- ◆ Quick time movie on one page (1 point)
- ◆ Graphics on six slides (3 points - half point per slide)
- ◆ Clear fonts and styles (2 points)
- ◆ Follows oral presentation (2 points)
- ◆ Has name and title on the first slide (2 points)
- ◆ Colorful and eye catching (1 point)
- ◆ No spelling errors (1 point)

Total project - 40 points possible

This assessment will be given to the students when the project is assigned. A similar one will be used for final grading.

# Training Information

## INTEGRATION OF ACADEMIC AND TECHNICAL EDUCATION TRAINING AGENDA

\*This is a suggested agenda/format to use for a two day training session. Please use as a planning tool, adapting where appropriate. The schedule listed below is a six hour session per day.

### INTEGRATED TEACHING AND LEARNING: A FIRST LOOK

#### A. OPENING 30 minutes

1. Welcome/Facilitator Introductions
2. Housekeeping Issues - College credit information, breaks, etc.
3. Participants Introductions

PROCEDURE: Venn Diagram - Logical/Mathematical Intelligence - see attached format, pages 122-124. Components of the diagram: Academic Instructor, Technical Instructor, Completion of an Integrated Project or Unit.

4. Explanation/Distribution of AHA Cards

PROCEDURE: AHA Cards - Naturalist Intelligence - see information in this section, pages 125-126. These cards are to be used throughout the training for participants to note items that caused them to think "aha" - I may be able to use that - or - I want to remember this. Individuals will be asked to share their "aha's" at the end of each day's session.

#### B. SETTING THE STAGE 30 minutes

1. Overview of Agenda/Topics - Distribution of Integration Manual
2. Guiding Questions for the Workshop  
(Verbal/Linguistic Intelligence)

How can we design curriculum, assessment, and instruction to improve student performance?

3. Essential Questions for the Day
  1. What is meant by integrated teaching and learning?
  2. Why integrate? What are the benefits?
  3. What are the components?
  4. How do we start?

4. The Need for Change

PROCEDURE: Group Discussion/Activity. (Bodily/Kinesthetic Intelligence). Purpose is to introduce the concept of change and to identify principles of change that apply to classroom learning and teaching methodology. See information in this section for instructions on conducting the activity, page 127.

OR

PROCEDURE: Have CHANGE written vertically on flip chart paper. (Have as many sheets as teams) The teams are then to think of their schools or communities reaction to the word change and write a word that starts with each of the six letters. This is a good introductory and self-reflective activity that may indicate conditions and/or barriers.

Refer to the Career Information section in the manual, pages 6-24, for information regarding future trends.

A short video on workforce trends and/or an overview of Tech Prep could be shown during this segment. See the Resource section of this manual. (Visual/Spatial Intelligence)

**BREAK**

**15 minutes**

5. What is Integrated Teaching and Learning for your school (team)? **1 hour**

PROCEDURE: Activity - Bag of Knowledge. See instructions in this section, page 127. (Verbal/Linguistic, Interpersonal, Intrapersonal, Bodily/Kinesthetic, Logical/Mathematical Intelligences). Small groups will respond to the following questions:

1. What is your definition of the integration of academic and technical curriculum?
2. Why integrate? What are the benefits?
3. What are the barriers to integration?
4. What are the conditions that support integration?
5. What are some models of integration? Pros? Cons?

Small groups will report out to the large group. Reports will be written on flip chart sheets to post. Facilitator will support comments with transparencies from manual or from other sources.

6. Video-Integrating the Curriculum - by Heidi Hayes Jacobs. Show the first 11 minutes.

7. Project Showcase - **1 hour**

PROCEDURE: A presentation by a school team who has implemented an integrated project. (Interpersonal intelligence) The team will describe their project, the procedure used for implementation, what went well, and barriers they encountered. Time should be allowed for questions by the participants.

**LUNCH**

**45 minutes**

**C. INTEGRATION - PLANNING AND DEVELOPMENT **2 hours****

Materials Needed: Post-it notes (6-9 different colors), flip charts for each group, marking pens. Music (suggestion of Mozart) may be played during this session. (Musical intelligence)

**METHOD:** This segment follows the basic format of a brief overview of each topic/section, followed by small group application.

### **1. Curriculum Mapping and Alignment**

**PROCEDURE:** Small group activity. (Visual/Spatial intelligence) Using post-it notes ( a different color for each individual), each participant lists topics that will be covered in their particular course over a 5-9 week time frame. Post-it notes are aligned vertically by subject area on the flip chart, horizontally by time frame. See curriculum alignment form in Curriculum Alignment section of manual, pages 44-48.

### **2. Concept Identification**

See pages 130-131 for example of project and format:

**PROCEDURE:** Small group discussion as to possible concept(s) that would serve as an integrating lens for the project (Interpersonal intelligence). Refer to Concepts section of manual for supporting information, pages 49-53. Begin completing project map on page 130.

### **3. Theme Identification**

**PROCEDURE:** Small group discussion as to possible unit theme/topic. (Interpersonal intelligence.) Keep in mind the theme is the tool that helps students and staff see the relationship (connection) of those concepts. See page 54.

### **4. Project Rationale/Goal Statement**

**PROCEDURE:** Participants prepare a project rationale incorporating the identified theme/topic and concept(s) (Interpersonal intelligence). The rationale should describe what students will know and be able to do at the completion of the project. See Rationale section of manual for supporting information, page 55.

### **5. Essential Questions**

**PROCEDURE:** Small group activity to identify 3-5 “essential” questions that will further focus the study. These questions usually begin with “how,” “why,” and “what.” See Essential questions section of manual for supporting information, page 56-57.

### **6. Instructional Strategies**

**PROCEDURE:** Allow a short time for brainstorming of possible instructional strategies (Interpersonal intelligence). See pages 73-80.

### **7. Group Reports**

**PROCEDURE:** Team reports identifying their projects theme/topic, concept, project rationale, essential questions and possible instructional strategies. (Interpersonal intelligence).

Group sharing of “aha’s” from the training topics.

## **EVALUATION**

## INTEGRATED TEACHING AND LEARNING: ANOTHER LOOK

\*This agenda is for a six hour session - part two of a twelve hour training session.

### A. OPENING 30 minutes

1. Housekeeping
2. Ice Breaker - Career Keno

PROCEDURE: See copy and instructions in this section, page 129 (Interpersonal, Bodily/Kinesthetic, Visual/Spatial intelligence).

Or

Ice Breaker – Traveler Aha’s

PROCEDURE: Have teams share Aha’s they experienced while traveling to and from the integration training sessions.

Or

PROCEDURE: Have participants introduce themselves by sharing their answers to “What is the last thing you learned how to do; how did you learn it?” This illustrates people’s varied learning styles.

3. Review of Agenda/Purpose

Following are the essential questions that will be addressed as part of this session.

1. What assessment strategies can be applied to our project?
2. What instructional strategies can be used?
3. How are individual learning styles addressed?
4. How do we implement our project?

4. Distribution of AHA Cards (Naturalist intelligence)

### B. REVIEW OF INTEGRATION BASICS 30 minutes

\*This section is intended for review. Following are suggestions for activities that could be used.

#### 1. Integration Review

PROCEDURE: Small group activity. Bag of Knowledge. Each team draws one card (question) from the bag and discusses the question drawn. (Have as many cards as teams) (Interpersonal intelligence). Small groups will report back to the large group.

- a. What is integration?
- b. What is the most important benefit of integration?
- c. What is the largest barrier? How could it be overcome?
- d. What model of integration would work best for our district?

e. What condition is the most essential for effective integration to occur?

2. **Video – Planning Integrated Units – *A Concept Approach*** featuring Lynn Erickson, published by ASCD (Visual/Spatial intelligence) This video is available through the Technical Education Resource Center.

**BREAK** **15 minutes**

**D. INSTRUCTIONAL STRATEGIES AND MULTIPLE INTELLIGENCES** **1 hour**

1. Presentation - Overview of Topic
2. Assessing How Your Students Learn

PROCEDURE: Individual Activity (Intrapersonal intelligence) Participants will complete “Assessing How Your Students Learn” from Instructional Strategies section that is provided in the manual on page 91 using the following rating scale:

- 1 - always like me
- 2 - sometimes like me
- 3 - never like me

Large group activity: Participants will divide into groups, based on their dominant multiple intelligence (determined from the assessment just completed). Each group answers/presents the following as related to their particular intelligence:

1. Define the intelligence
2. Learn best by...
3. Assessed by...
4. Group t-shirt design

Flip chart paper will be provided to record responses.

3. Planning Instructional Strategies

PROCEDURE: In teams, complete step one of Planning for the Eight Intelligences, page 93.

PROCEDURE: School district teams will plan instructional strategies for their project incorporating activities that address standards and multiple intelligences. See manual pages 80-88. Transfer to project format page 130, substituting more appropriate activities as they surface.

**BREAK** **15 minutes**

**E. INCORPORATING ACADEMIC AND EMPLOYABILITY STANDARDS**  
**30 minutes**

1. SCANS/Employability Skills

PROCEDURE: Presentation/Discussion (Interpersonal intelligence) Refer to pages 58-63 from manual. Video - Learning for Earning (Visual/Spatial intelligence) This six minute video is available from the Technical Education Resource Center.

PROCEDURE: Ideas for Integrating Employability Competencies into academic courses. Team Activity. Participants will incorporate these skills in planning for project instructional activities, pages 64-67.

PROCEDURE: Complete step two of Planning for Eight Intelligences, page 92. Transfer to appropriate place on project map page 131.

PROCEDURE: In small groups choose one activity from Toward Active Learning. This publication is also available from the Technical Education Resource Center.

2. Academic Content Standards

PROCEDURE: Presentation/Discussion. Copies of the South Dakota Content Standards in mathematics, language arts, social studies, and science should be available for participants' use.

Participants will determine which academic content standards are incorporated in project activities.

**LUNCH**

**45 minutes**

**F. PLANNING FOR ASSESSMENT/RUBRIC DESIGN**

**1 hour**

1. Presentation/Overview

PROCEDURE: In participants original multiple intelligence group, brainstorm for appropriate assessment ideas. Use flip chart paper to record responses.

2. Project Application

PROCEDURE: Complete step three of Planning for Eight Intelligences, page 93

PROCEDURE: Participants will plan assessment activities for their particular course and also for the overall project. Time will be allowed for rubric development. See manual pages 95-113.

3. Group Reports

PROCEDURE: Each school team will give a short overview of their project highlighting the theme, instructional strategies, and assessment methods.

**G. ACTION PLAN 30 minutes**

PROCEDURE: Using the format from page 132 each school team will review the two day integration training session and devise a plan for implementing within their respective system.

**H. CLOSING/EVALUATION 15 minutes**

# THE VENN

## What to Do

On the board or overhead, display a Venn diagram made of 2 circles.

Select 2 geometric shapes (e.g., square and triangle).

Ask students to identify the elements and attributes each has in common, then list these in the area where the 2 circles overlap.

Ask students to identify the shapes' differences. List unique features of each shape in separate circles.

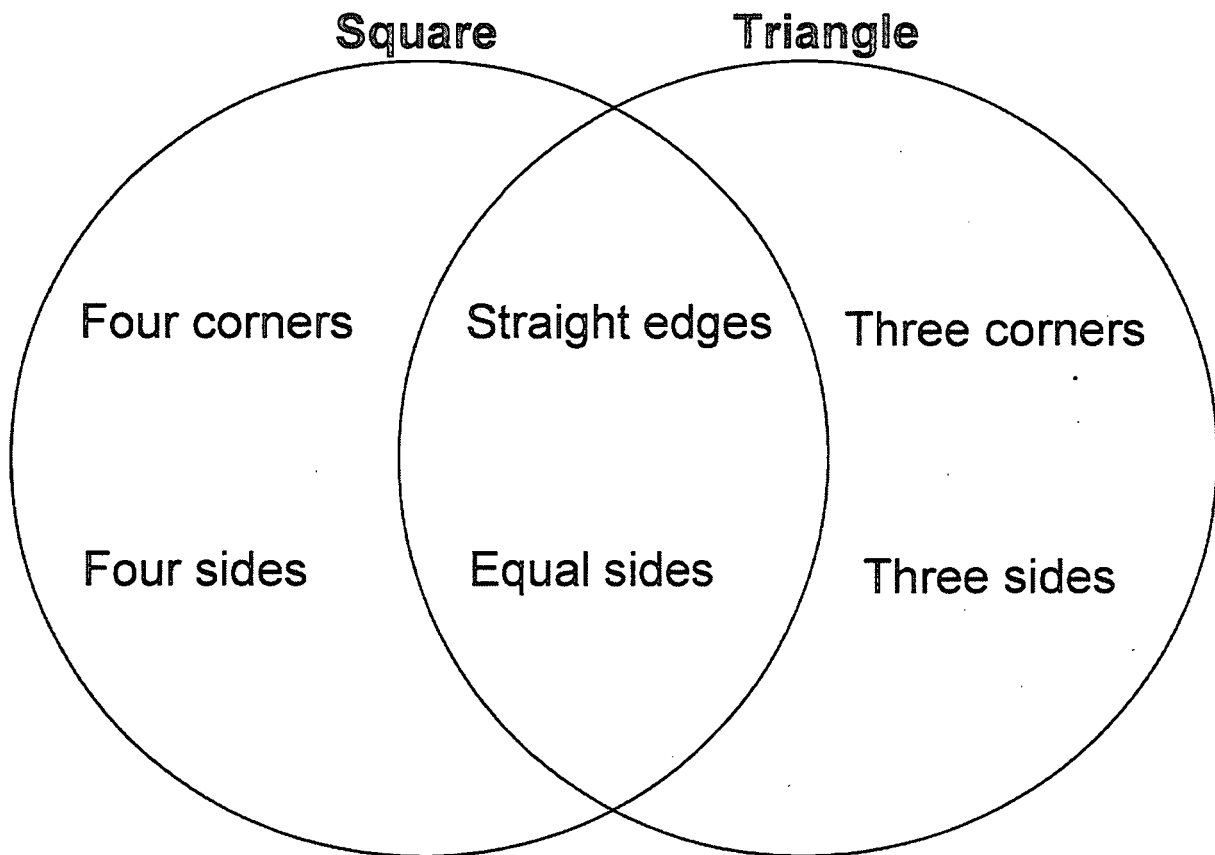

Frame a definition of each shape by stressing its unique features.

# VENN DIAGRAM

## Variation

Create Venn diagrams using numerical sets, problem types in mathematics, characters, settings, moods, or styles in literature as well as events, cultures, historic figures, philosophies, or music.

**VENN DIAGRAM**

# AHA! LOG

## What to Do

Introduce students to the notebooks of Leonardo da Vinci or Charles Darwin. (Videotapes about their scientific accomplishments most likely will show how they kept their logs.)

Ask students to use a notebook to log information during a lab experiment. Instruct students to include the following for each log entry; date, topic of study, sketch or written description of the day's lab topic, notes on procedures used, and at least one "aha!" gained from the experiment. ("Aha," or eureka, refers to an exclamation made when a person discovers something or when a confusing concept or fact suddenly becomes clear.)

Select 5-6 logs daily to collect and read. Provide brief commentary of feedback.

At the end of the experiment instruct students to review their logs and make a closing entry about the log process and their own reaction to it. (For example, Describe the most important thing you learned during this process. Has keeping a log been an advantage or disadvantage to you? Why?)

### Variations

1. Provide opportunities for informal or small group sharing logs throughout the process.
2. Select student sketches and transfer them to overhead transparencies. As a class, discuss strengths of displayed sketches.
3. Use logs during literature or music classes to record "ahas."
4. Introduce by explaining the concept of "ahas," or eureka, and ask students to reflect on prior experiences and recall a significant eureka. Invite students to share their experiences.

**Integration of Academic and Vocational Technical Education:  
Putting the Pieces Together**

**“A-HA” Card**

Use this card to jot down ideas you wish to implement later, things you want to remember, or just something that made you think “A-HA”!!

1.

2.

3.

4.

5.

4.

5.

# FIVE CHANGES

## What to Do

- Use a graphic organizer such as a list or web to identify students' prior knowledge of the concept of change.
- Focus on change as process.
- Divide the class into pairs. Ask partners to spend 1-2 minutes studying each other. Then seat students back to back. Designate an "A" role and a "B" role for each pair.
- Instruct "A" students to make 5 quick changes in their appearance. At the signal, each "A" will turn to student "B" and "B" will try to identify the changes.
- Reverse roles so the "B" students make changes in their appearance and "A" students identify the changes.
- Repeat this process with students making 5 new changes each rotation.
- Form pairs into fours. Ask students to discuss the following questions and record their responses:
  - What was easy about making the changes?
  - What was difficult?
  - What was learned about the change process?

Compile each group's responses in an all-class 3-column chart.

Easy	Difficult	Learned
1. Easy to guess things like one eye closed.	1. Hard to identify very small changes like a bent finger.	1. Some changes are obvious, others less so.
2. Easy to change body position.	2. Hard to think of a clever change in a hurry.	2. Changes can be big or small.
3. Easy to use props like rubber bands.		

- Ask students to formulate generalizations about change based on information in the chart. Form several hypotheses and seek consensus.
- End with individual journal entries that complete lead-in statements such as *I learned...* or *I discovered...*

**Variation:** Use the chart to structure an essay on the change process.

# BAG OF KNOWLEDGE

## What to Do

-  Give each student a paper lunch bag. List 5 key names, places, events, or concepts from the upcoming lesson.
-  On the outside of the lunch bag, invite students to use words, sketches, or symbols to tell 1 thing they already know about each of the key words or concepts listed. Students may leave a blank if they don't have any ideas for a specific word.
-  After students have answered the questions, arrange them in small groups of 2-4 and have them share what they wrote or drew. As a class, invite students to share what they know about each example.
-  Give each student 5-10 index cards. As the class progresses through the lesson or unit, invite students to write on the cards any new information they learn about the key words or concepts. Students may keep the cards inside their lunch bags. At the end of the lesson, have small groups reconvene and invite students to share their bags of new knowledge.

### Variations

- Create an all-class map using the key words.
- Instruct secondary students to create a concept map on their bags.

## Career Keno

Your Name: \_\_\_\_\_

Below are 25 squares, each with a description. At the signal to begin, please move around the room, find individuals who meet each of the descriptions, and ask them to sign their names in the appropriate squares. You should have 25 different signatures on your sheet.

Has worked as a waiter or waitress in college	The career counseling program in your school has an advisory committee	Has worked in a country outside the USA	Uses student portfolios as a tool for career counseling	Within the last 3 years, has been an active member in a professional organization related to counseling and/or careers
Has obtained a graduate degree in counseling	A career development needs assessment has been administered to all students within the last 3 years	Uses creative career counseling techniques to provide career counseling to all students	Worked on an assembly line	Owns your own business
Students are registered by career clusters	Plays an instrument or sings in a choir	Has created a career center	Has been involved in planning my state's school-to-work/tech prep work efforts	Career assessment instruments are administered to students
Regularly uses the computer to provide career development activities	Labor market and occupational information are presented in the classroom	Successful at grant writing	Has talked to parents about the career development needs of their children	Employers are involved as part of the career education program
Utilizes the South Dakota Comprehensive Guidance Model	Is a baby boomer	Has worked for private industry during the last 3 years	Parents/families are involved in the design and implementation of career development activities	Knows a teenager who is not going to college after high school and is searching for an alternative route

**Concept - Cause & Effect**

**Goal Statement:**

Students will explain the cause and effect of James River Flooding on Sanborn County.

**Essential Questions**

1. What are the causes of flooding of the James River?
2. What effect does this flooding have on Sanborn County? Economically? Socially? Psychologically?
3. How can flood damage be reduced?

**Social Sciences**

Study the social, economic and psychological effects of flooding on the family.

**Technology**

Collect data obtained across the disciplines and put into spreadsheet form.

**Guidance**

Research career opportunities associated with conservation and environmental occupations.

**Theme/Topic**

**James River Flooding  
In Sanborn County**

**Science**

Study of ecological effects of flooding.

**Fine Arts**

Photograph the flood stages and develop a slide show with background music.

**Agriculture**

1. Gather and analyze soil and water samples.
2. Research methods of reducing flood damages - such as soil erosion, loss of wildlife, etc.

**Business**

Monitor legislative activities of flooding prevention and aid to farmers affected by flooding.

**Language Arts**

Write and present a conservation essay.

**Assessment**

1. Written and oral presentations.
2. Data analysis and statistical study.

**Career Readiness Skills**

Basic Skills - Reading, Writing Math

# Project Examples

## DESIGNING AND CREATING A MOTORIZED GO-CART

### SCHOOL DISTRICT/ADDRESS:

Todd County School District  
PO Box 87  
Mission SD 57555-0087  
856-4457

### PARTICIPANTS:

Dr. Richard Bordeaux, Supt.  
Janet Henne  
Jeff Henne  
Dennis Schmaltz

Fred Phillips  
Kathleen Selby  
Joanne Winter Chaser

### SUBJECT/PROGRAM AREA(S):

- Career Guidance
- Mathematics
- Language Arts
- Sciences
- Industrial Technology
- Fine Arts
- Auto Mechanics
- Business/Marketing

**PROJECT GOAL:** Students will:  
Design and create a motorized go-cart.

### PROJECT OBJECTIVE(S): Students will:

- understand how to design, plan produce, and market a product;
- work cooperatively;
- evaluate the use of technology to plan, produce, and market a product;
- demonstrate effective verbal skills to promote the product;
- demonstrate effective writing skills to produce a technical manual, instruction manual, operating manual, and research liability factors associated with the sale of product; and
- assess effectiveness of product.

### CAREER READINESS/EMPLOYABILITY SKILLS:

- Resources
- Systems
- Interpersonal
- Technology
- Information

### CAREER CLUSTERS:

- Technical
- Science
- Art

**PROJECT DURATION:** One Semester

### MATERIALS/RESOURCES:

- Library resources
- Internet access
- Computers
- Interviews
- Video cameras

### INSTRUCTIONAL ACTIVITIES: Students will:

- write a technical manual, instructional manual, and operating manual;
- enter data on a computer to design the product and create a blueprint using CAD;
- research liability factors associated with the sale of the product;
- research a recommended type of fuel to be used;
- present speeches to promote the product;
- create a budget with projected costs and comparison pricing;
- devise a marketing plan (advertise and promote product);
- keep a journal;
- conduct a mock interview with a loan officer (entrepreneurship);
- research career areas related to the product;
- design and paint the logo on the product;
- apply mathematics principles during design process; and
- apply auto mechanics principles to determine best power plant, power train, and safest operations.

### PROJECT ASSESSMENT:

- Completion of technical, instructional, and operating manuals
- Oral presentation
- Successful completion of product
- Marketing plan

## DESIGNING AND BUILDING A HOUSE

### SCHOOL DISTRICT/ADDRESS:

Redfield School District  
PO Box 560  
Redfield SD 57469-0560  
472-2315

### PARTICIPANTS:

Robert Graham, Supt.  
Lynn Brace  
Judy Galvin

Cindy Brace  
Craig Brooks

### SUBJECT/PROGRAM AREA(S):

- Science
- Industrial Arts
- Mathematics
- Language Arts
- Agriculture

### PROJECT GOAL: Students will:

Design a house to meet specific budget criteria.

### PROJECT OBJECTIVE(S): Students will:

- design an adequate and efficient floor plan with the elements and principles of design observed;
- correctly perform and check the mathematical calculations used by other areas;
- design and calculate the landscape design of the floor plan;
- select the materials needed to build the house and help in the construction;
- assist in selecting materials and helping build the structure; and
- insure that the instructions and reports that are needed have correct spelling and grammar.

### CAREER READINESS/EMPLOYABILITY SKILLS:

- Resources
- Systems
- Interpersonal
- Information

### CAREER CLUSTERS:

- Science
- Business Operations
- Business Contact
- Arts
- Technical

### PROJECT DURATION: One year

### MATERIALS/RESOURCES:

- Guest speakers
- Drafting supplies
- Computers
- Resource people from the community
- Building supplies

### INSTRUCTIONAL ACTIVITIES: Students will:

- research and design a house using the elements and principles of design;
- select the materials needed to construct the home;
- figure the cost of materials to build the home;
- reevaluate the calculations done by the previous instructional areas;
- design an outdoor landscape for the home and figure its cost; and
- use correct grammar and spelling in all reports.

### PROJECT ASSESSMENT:

- Student will be assessed by using the attached Rubric Evaluation Form. Some of the points may vary depending on the individual instructor.

BEST COPY AVAILABLE

## Project Assessment (rubric)

- A. Correctness of Calculations, Complete (6)  
6 – All calculations correct with all work shown.  
5 – 1-3 minor errors, or 1 major mistake.  
4 – 4-6 minor errors, or 2 major mistakes.  
3 – 7-9 minor errors, or 3 major mistakes, or some work missing.  
0 – Replace the batteries in your calculator.
- B. Neatness of Plan and Adherence to Directions (3)  
3 – All directions followed, neat, finished products.  
2 – Project not finished in appearance, one or two errors in presentation.  
1 – Not neat, pencil marks and erasures.
- C. Organization of Packet (3)  
3 – Project organized according to directions.  
2 – Out of order, or some aspect missing.  
1 – Hard to follow, not organized according to directions.  
0 – Did you use a blender to organize?
- D. Correctness of Measurements (6)  
6 – All calculations correct with all work shown.  
5 – 1-3 minor errors, or 1 major mistake.  
4 – 4-6 minor errors, or 2 major mistakes.  
3 – 7-9 minor errors, or 3 major mistakes, or some work missing.  
0 – What scale did you use?
- E. Practicality of Design (3)  
3 – Meets family needs, all aspects work together.  
2 – One or two design flaws.  
1 – Major design flaw, must be redrawn to be used.  
0 – Not designed for human habitation.

## BACK TO THE 60'S

### SCHOOL DISTRICT/ADDRESS:

DeSmet School District  
PO Box K  
DeSmet SD 57231  
854-3674

### PARTICIPANTS:

Donovan Twite, Supt.  
Kathy Sanderson  
Sharry Knock

### SUBJECT/PROGRAM AREA(S):

- Language Arts
- Social Sciences
- Mathematics
- Family and Consumer Sciences
- Fine Arts
- Science
- Agriculture
- Computers
- Business
- Journalism

### PROJECT GOAL: Students will:

analyze the upheaval, reform, invention and change of the 60's decade and its impact on today's society.

### PROJECT OBJECTIVE(S): Students will:

- gain an understanding that all discipline areas are interrelated and interdependent;
- learn first-hand knowledge of concepts in educational instruction, business practices, medicine, and the impact of the Vietnam war during the 60's decade;
- experience the influence of groups to bring about reform; and
- focus on some aspects of the 60's and correlate how this aspect still has an influence today.

### CAREER READINESS/EMPLOYABILITY SKILLS:

- Resources
- Systems
- Interpersonal
- Information

### CAREER CLUSTERS:

- Business Contact
- Art
- Business Operations
- Technical
- Science
- Social Services

### PROJECT DURATION: Four days

### MATERIALS/RESOURCES:

- Record albums from staff
- Videos from school library
- Personal interviews with Vietnam War Veterans, Educators, Medical Personnel, Business People, Psychologists, Sociologist
- Text materials from the State Library, school library, community library
- Clothing from local residents
- Computer software/Internet

### INSTRUCTIONAL ACTIVITIES: Students will:

- For all high school students: panel discussion: educator, doctor, banker, veteran; faculty fashion show; student dress-up days; 60's carhop meal; and student protest;
- Band – instrumental music from HAIR;
- History – Vietnam War, Assassinations of Kennedy and King;
- Agriculture – evolution of the industry and farming practices;
- Computer and Spanish – macrame;
- Science – discoveries in medicine;
- Mathematics and Physics – charts and graphs illustrating various aspects of the decade;
- Economics/Business – federal budget;
- Advanced Mathematics – lunar landing;
- English I – research on any aspect of the decade;
- English II – Martin Luther King, Jr. and “I Have A Dream” speech;
- English III – LSD culture, various dance steps that went with the various types of music and lyrics;
- English IV – 2001 Space Odyssey (movie made in the 60's), following discussion of accuracy of movie;
- Sociology – family issues and changes;
- Chorus – swing choir music, entertainment prior to the guest panel;
- Family and Consumer Sciences – talk show format over lifestyle changes; and
- Government – organization of student protest.

### PROJECT ASSESSMENT:

- Each instructor determined their own means of assessment for the content presented during the integration project.

## A STUDY OF SOUTH DAKOTA

### SCHOOL DISTRICT/ADDRESS:

DeSmet School District  
PO Box K  
DeSmet SD 57231  
854-3674

### PARTICIPANTS:

Donovan Twite, Supt.  
Tony Sturgeon  
Sue DeReino  
DeSmet Middle School Staff

### SUBJECT/PROGRAM AREA(S):

- Agriculture
- Language Arts
- Fine Arts
- Science
- Mathematics
- Social Studies

### PROJECT GOAL: Students will:

compare their culture, with the cultures of others, and analyze the diversity of cultures that settled in South Dakota.

### PROJECT OBJECTIVE(S): Students will:

- learn some of the major land forms in South Dakota;
- learn how agriculture affected South Dakota;
- learn how soil conservation affects agriculture in South Dakota;
- list major authors from South Dakota and discuss their work;
- describe how L. Frank Baum developed his ideas for the Wizard of Oz;
- discuss ethnic groups in South Dakota;
- name some of the small towns and learn about the ethnic groups that settled here;
- describe the population growth in South Dakota and how it relates to other states; and
- list names and cultured background of some of their ancestors.

### CAREER READINESS/EMPLOYABILITY SKILLS:

- Resources
- Systems
- Interpersonal
- Information

### CAREER CLUSTERS:

- Business Contact
- Art
- Business Operations
- Technical
- Science
- Social Services

### PROJECT DURATION: One week

### MATERIALS/RESOURCES:

- Library resources by South Dakota authors
- Maps
- Computer software

### INSTRUCTIONAL ACTIVITIES: Students will:

- tour area sites and museums;
- participate in a cultural potluck picnic;
- prepare family trees;
- graph population growth in different areas of South Dakota;
- read books, poems, etc., by authors of South Dakota;
- draw maps;
- listen to guest speakers on South Dakota authors;
- write riddles for towns of South Dakota
- learn the origins of landmark names; and
- study the land forms of South Dakota.

### PROJECT ASSESSMENT:

- Journals before and after the project
- Hand drawn map of South Dakota
- Event – cultural picnic

## CREDIT CARD COMPETENCIES FOR YOUNG ADULTS

### SCHOOL DISTRICT/ADDRESS:

Brookings School District  
530 Elm Avenue  
Brookings SD 57006  
696-4100

East Central Multi District  
700 Elm Avenue  
Brookings SD 57006  
696-4754

### PARTICIPANTS:

Orville Creighton, Supt.  
Sharon Johnson  
Mary Moeller  
Joey Fjerstad

Brad Bonde  
Kathy Booher

### SUBJECT/PROGRAM AREA(S):

- Mathematics
- Language Arts
- Business and Marketing

### PROJECT GOAL: Students will:

define what credit is and differentiate rights and responsibilities of using credit.

### PROJECT OBJECTIVE(S): Students will:

- become well-adjusted, supportive individuals who accept responsibility and consequences for actions/accomplishments;
- accept the responsibility that accompany individual rights;
- value introspection as important in decision making;
- analyze consequences of personal choices;
- become analytical and creative thinkers who apply a variety of processes, research, methods, and technologies to solve problems; and
- learn about careers related to the credit card industry.

### CAREER READINESS/EMPLOYABILITY SKILLS:

- Resources
- Systems
- Interpersonal
- Information

### CAREER CLUSTERS:

- Business Operations
- Business Contact

PROJECT DURATION: Two weeks

### MATERIALS/RESOURCES:

- Materials from the South Dakota Curriculum Center: *Choices and Decisions: Taking Charge of Your Life; Credit Cards – Living With Plastic; and Credit Card Basics – Play Now, Pay Forever*
- Speakers: local bank credit card division counselors, Special Teams/American Express Human Resource Personnel and Engineers, and Lutheran Social Services Credit Counselor
- Internet
- Magazines
- Newspaper articles
- Credit application forms

BEST COPY AVAILABLE

**INSTRUCTIONAL ACTIVITIES:** Students will:

- work in teams of four to scan through an assortment of information relating to credit cards. They will focus on the question, "What do young adults need to know about credit cards in order to use them wisely?" and will compile a list of general topics of interest and importance;
- analyze various credit card applications and determine percentage rate, annual fees, and other costs. They will then determine which card would be better if you carried a balance or paid your credit card in full each month;
- discuss when it is appropriate to use a credit card and when it is better to pay cash;
- discuss the responsibilities of using a credit card;
- select three topics they would be willing to research and develop into an information page for a class booklet on young adult credit card use;
- collect career information as they listen to various guest speakers, tour businesses, and use the library. They will focus on background information relating to careers involved with the credit card industry such as educational requirements, job descriptions, salary ranges, and opportunities involved; and
- use a computer spreadsheet to compute costs of a purchase at various interest rates and lengths of time.

**PROJECT ASSESSMENT:**

- Content and grammatical/mechanical quality of information collected
- Computer spreadsheets
- Accuracy and completeness of information presented in poster design and content
- Team presentation skills
- Application form
- Informational brochure

**BEST COPY AVAILABLE**

# Glossary

**GLOSSARY**

## APPENDIX - GLOSSARY

---

- Basic Skills** *Basic skills* are essential academic and personal abilities that are necessary for success in school and the workplace. Traditionally referred to as the three R's—reading, writing, and arithmetic—in recent times, the term has been expanded by both educators and employers to include a number of cognitive and interpersonal abilities, including the capability to think and solve problems, to communicate information in oral, written, and electronic forms, to work effectively alone and in teams, and to take responsibility for one's own development.
- Block Scheduling** *Block scheduling* is a means of reconfiguring the school day. Blocked courses may be scheduled for two or more continuous class periods or days to allow students greater time for laboratory, project-centered work, field trips, or work-based learning.
- Career Awareness** *Career awareness activities* generally take place at the elementary level. They are designed to make students aware of the broad range of careers and/or occupations in the world of work, including options that may not be traditional for their gender, race, or ethnicity. Career awareness activities range from limited exposure to the world of work, through occasional field trips and classroom speakers, to comprehensive exposure. The latter may involve curriculum redesign, introduction of students to a wide span of career options, and integration with activities at the middle school level.
- Career Clusters  
Job Families** *Career Clusters* group several careers that are viewed as having a common set of foundation knowledge, skill, and attitudes. South Dakota uses six career clusters; namely, Business Contact, Business Operations, Science, Social Service, Art, and Technical. The clusters incorporate 23 job families which are arranged by work tasks and on data, people, things, and ideas.
- Career Days/  
Career Fairs** *Career day* activities are designed to help students think about their interests and abilities in relation to potential careers, and to meet people who can assist them in getting the necessary skills and experience for workforce success.
- Career  
Development** *Career development* is the process through which an individual comes to understand his/her place in the world of work. Students develop and identify a career area through a continuum of career awareness, career exploration, and work exposure activities that help them discern their own career area.
- Career  
Exploration** *Career exploration* generally takes place at the middle school level and is designed to provide some in-depth exposure to career options for students. Activities may include the study of career opportunities in particular fields to identify potential career clusters and the preparation of career planning materials.

- Career Guidance & Counseling** As defined in the School-to-Work Act, the term “*career guidance and counseling*” means, programs that... A. Pertain to the body of subject matter and related techniques and methods to develop and individual’s career awareness, career planning, career decision-making, placement skills, and knowledge and understanding of local, state, and national occupational, educational, and ongoing market needs, trends, and opportunities; B. Assist individuals in making and implementing informed educational and occupational choices; and C. Help students develop career options with attention to surmounting gender, race, ethnic, disability, language or socioeconomic impediments to career options and encouraging careers in nontraditional employment.
- Career Pathway** As defined in the Act, the term “*career major*” means “a coherent sequence of courses or field of study that prepares a student for a first job and that... A. Integrates academic and occupational learning, integrates school-based and work-based learning, and establishes linkages between secondary schools and postsecondary institutions; B. Prepares the student for employment in a broad occupational cluster; C. Typically includes at least 2 years of secondary education and at least 1 or 2 years of postsecondary education; D. Provides students, to the extent practicable, with strong experience in and understanding of all aspects of the industry that the student is planning to enter; E. Results in the award of a high school diploma or its equivalent; a certificate or diploma or its equivalent; a certificate or diploma recognizing successful completion of 1 or 2 years of postsecondary education (if appropriate); and a skill certificate; and F. May lead to further education and training, such as entry into a registered apprenticeship program, or to admission to a 2- or 4-year college or university.
- Contextual Learning** *Contextual* knowledge is learning that occurs in close relationship with actual experience. Contextual learning enables students to test academic theories via tangible, real world applications. Stressing the development of “authentic” problem-solving skills, contextual learning is designed to blend teaching methods, content, situation, and timing.
- Curriculum Alignment** *Curriculum alignment* occurs when academic and related or parallel vocational curricula are linked so that course content and instruction dovetail across and/or within subject areas.
- Integrated Curriculum** *Integrated curriculum* occurs when academic and occupational or career subject matter—normally offered in separate courses—are taught in a manner that emphasizes relationships among the disciplines. Integrated curriculum may take many forms, ranging from the simple introduction of academics into traditional occupational courses to comprehensive programs that organize all instruction around career major themes.

<b>Internships (Student)</b>	<p><i>Student internships</i> are situations where students work for an employer for a minimum of 80 hours to learn about a particular industry or occupation. Students' workplace activities may include special projects, a sample of tasks from different jobs, or tasks from a single occupation. These may or may not include financial compensation.</p>
<b>Internships (Teacher)</b>	<p><i>Teacher internships</i> or <i>externships</i> are worksite experiences of at least two weeks in duration. During this time, teachers may work at a particular job at the firm to learn specific skills or rotate throughout the firm to learn all aspects of the industry in which they are employed.</p>
<b>Job Shadowing</b>	<p><i>Job shadowing</i> is typically a part of career exploration activities in late middle and early high school. A student follows an employee at a firm for one or more days to learn about a particular occupation or industry. Job shadowing can help students explore a range of career objectives and select a career major for the latter part of high school.</p>
<b>Learning Objectives, Performance Measures, and Performance Standards</b>	<p>Educators sometimes develop performance measurement systems to assess student achievement, monitor school progress, and support program improvement. The terms <i>learning objectives</i>, <i>performance measures</i>, and <i>performance standards</i> are used to define each part of the three-part process of establishing a performance measurement system. The process begins with identifying learning objectives for students or other program participants. After identifying these objectives, it is then necessary to decide how to measure their attainment. After developing appropriate performance measures, standards must then be set to represent the level of performance that is desired.</p>
<b>Mentor</b>	<p>1. A <i>School Site Mentor</i> is defined in the Act as a professional employed at a school who is designated as the advocate for a particular student, and who works in consultation with classroom teachers, counselors, related service personnel, and the employer to design and monitor the progress of the student. 2. A <i>Workplace Mentor</i> is defined in the Act as an employee or other individual, approved by the employer at a workplace, who possesses the required skills and knowledge, and who instructs the student, critiques the performance of the student, challenges the student to perform well, and works in consultation with classroom teachers and the employer.</p>
<b>Mentorship</b>	<p>A <i>mentorship</i> is a workbased learning experience that requires a minimum of 36 hours of training on part of the student. Students will work with a <i>mentor</i> who possesses the skills and knowledge to be mastered by the student and who instructs the student.</p>

- Secretary's Commission on Achieving Necessary Skills (SCANS)**
- The *Secretary's Commission on Achieving Necessary Skills (SCANS)* was formed to examine the demands of the workplace and to determine whether the current and future workforce is capable of meeting those demands. The Commission was directed to:
1. *Define the skills needed for employment;*
  2. *Propose acceptable levels in those skills;*
  3. *Suggest effective ways to assess proficiency;*
  4. *Develop a strategy to disseminate the findings to the nation's schools, businesses, and homes.*
- Skills are listed in the appendix**
- Skill Standard**
- A *skill standard* specifies the knowledge and competencies required to perform successfully in the workplace. Standards are being developed along a skill continuum ranging from general work readiness skills and core skills for an industry, to specific occupational skills. Standards may cover basic and advanced academic competencies, employability competencies, and technical competencies. Development of these standards is tied to efforts to certify students' and workers' skills.
- Tech Prep**
- TECH*nical *PREP*aration is the name given to strategies used to develop programs that offer at least four years of sequential course work at the secondary and postsecondary levels to prepare students for technical careers. Planned sequences of courses typically begin in ninth grade and result in an award of an associate's degree or certificate after two years of postsecondary training. Other Tech Prep combinations are also available, depending on local consortium arrangements. Tech Prep is designed to build student competency in academic subjects and to provide broad technical preparation in a career area. Course work integrates academic and vocational technical curriculum and may provide opportunities for dual enrollment in academic and vocational technical courses at secondary and postsecondary institutions.
- Workbased Learning**
- Workbased learning* experiences are activities at the high school level that involve actual work experience or connect classroom learning to work. They include experiences such as job shadowing, internships, cooperative education, mentorships, and registered apprenticeships.

BEST COPY AVAILABLE

1. **Academic performance standards** - consist of selected target knowledge or behaviors which students should be expected to perform prior to successfully completing an educational program.
2. **Competency** - is learned behavior which can be repeated to predetermined standard.
3. **Content standards** - spell out the subject-specific knowledge and skills that schools are expected to teach and students are expected to learn. Standards-setters have adopted the shorthand phraseology "what students should know and be able to do."
4. **Performance objective** - is a statement of what the student must do in observable and measurable terms.
5. **Rubrics** - are scoring devices (or tools) which are designed to assist in the process of clarifying and communicating expectation. Rubrics are expectations or grading grids which contain specific information about what is expected of students for every performance standard.
6. **Benchmarks** - agreed-upon developmental mileposts.
7. **Block-scheduling** - extended class periods at the secondary school level; intended to allow for curricular coordination or integration of compatible subject areas.
8. **Concept** - a mental construct that frames a set of examples sharing common attributes; high-level concepts are timeless, universal, abstract, and broad. Examples: Cycles, Diversity, Interdependence.
9. **Cooperative learning** - a teaching strategy that groups students in pairs or teams to problem solve, discover, and discuss ideas or investigate topics of interest.
10. **Curriculum** - the planned curriculum is an educational response to the needs of society and the individual and requires that the learner construct knowledge, attitudes, values, and skills through a complex interplay of mind, materials, and social interactions.
11. **Multidisciplinary** - a variety of disciplines coordinated to a topic of study; lacking a conceptual focus.
12. **Objectives** - Specific statements of what you want students to know; specific content of skill focus; measurable, usually by paper-and-pencil test.
13. **Outcomes** - Broad statements of what you want students to know and be able to do as a result of teaching/learning.

14. **Performance assessment** - a complex demonstration of content knowledge and performance assessed according to a standard and set of criteria; shows what students know and can do.
15. **Portfolio** - a chosen collection of student work and self-assessment that is used to showcase excellence or to demonstrate progress on a developmental performance.
16. **Standard** - an agreed-upon definition of quality performance.
17. **Integrated learning** - the blending of educational disciplines that are typically taught independently of one another. Involves curricula that is thematic, coordinated, and/or project-based. The objective is to increase students' applied knowledge of traditional subjects by organizing learning around broad, interdisciplinary questions. For example, a health occupations program's unit on infections might coordinate math, science, English, and health lessons and incorporate examples from the workplace.
