ABSTRACT
                This study was conducted to gather data about courses
currently available to students through distance technologies, and to gather
information from both faculty members and students concerning their
perceptions of teaching and learning through remote processes in the Florida
Community College System. This study focuses particularly on two-way
interactive teleclasses and on-line courses with the overall goal of learning
more about how many students participate, and how their instructors and they
regard their learning experiences. The results of this study indicate that
community college students appreciate the access and convenience of distance
learning courses and are willing to adapt to and accommodate themselves to
the technology. However, faculty who teach distance learning are ambivalent.
They are struggling with the demands of teaching distance learning courses
and are concerned about the challenges distance learning brings to the
learning environment. Two ways in which the Florida Community College System
has addressed quality concerns, as well as the Commission on Colleges
Southern Association of Colleges and Schools' criteria about offering
appropriate support services for distance learners, have been through the
development of the Florida Academic Counseling and Tracking System (FACTS)
and through the Distance Library Learning Initiative. Appendices listing the
available community college distance learning courses and the complete
surveys used in the study constitute over half of the report. (VWC)

DISTANCE LEARNING IN THE COMMUNITY COLLEGES:

A LOOK AT THE ONLINE AND TELECLASS EXPERIENCE

A LEVEL I REVIEW

STATE BOARD OF COMMUNITY COLLEGES

JANUARY 2000

FLORIDA COMMUNITY COLLEGE SYSTEM

PUTTING MINDS TO WORK

STATE BOARD OF COMMUNITY COLLEGES

CHAIRMAN
Joseph H. Lang

EXECUTIVE DIRECTOR
J. David Armstrong, Jr.

Preface

Section 240.312, Florida Statutes, requires that systematic program reviews be conducted for the Community College System. To meet this requirement, the State Board of Community Colleges elected to conduct a Level I program review on Distance Learning in the Community Colleges. Since 1994, these programs have been a growing sector of community college instruction; yet little is known at the State level about faculty and student reactions to this relatively new instructional medium.

This study was conducted to gather data about courses currently available to students through distance technologies and to gather information from both faculty members and students concerning their perceptions of teaching and learning through remote processes. Since relatively little in known about the impact of distance learning using the newer technologies, this study focuses particularly on two-way interactive teleclasses and on-line courses with the overall goal of learning more about how many students participate and how their instructors and they regard their learning experiences.

While the review is intended to be primarily descriptive rather than making policy recommendations for change, the information may serve as a valuable resource to faculty and administrators as they continue to develop and refine distance learning for future applications.

Special Recognition is given to Dr. Beverly L. Bower, Professor at Florida State University, Department of Educational Leadership, Higher Education, who served as a consultant on this review.

Executive Summary

Due to rapid advances in technology and its increasing affordability, the use of distance learning has become an increasingly significant delivery mechanism of the American higher education system. Florida community colleges have kept pace with distance learning national trends by first offering correspondence courses, then educational television courses, and now interactive teleclasses and Internet courses. Through survey, interviews, and site visits this report provides a broad description of the distance learning environment in Florida's community colleges, focusing on the emerging interactive technologies—teleclasses and online courses— and key stakeholders—students and faculty.

During Spring 1999 data was gathered from students, faculty, and administrators at eighteen Florida community colleges using four different survey instruments. One hundred fifty-three (153) faculty members at fourteen community colleges participated in the study. These faculty members were teaching 155 different courses. The majority (85%) were full-time community college faculty with ten to twelve years of community college teaching experience. Most were teaching only one distance learning course; average class size of twenty students. Most of the faculty reported that they had not received any training to prepare them for teaching a distance learning course. While many reported that there were no college rewards available to them for their involvement in distance learning, those who reported rewards most frequently cited computer equipment as an available reward. Faculty indicated that what motivated them to be involved with distance learning was personal interest in technology and the ability to reach new audiences. Most of the faculty perceived distance learning courses to be a learning experience equivalent to the traditional classroom. However, 35% perceived it to be worse or ineffective. Fifty-eight percent of the respondents said they considered their distance learning teaching experience a positive one, and 85% of the faculty would be willing to teach another distance learning course.

The students who participated in this study were taking either interactive teleclasses or online/Internet classes. Five hundred fifty-five of the student respondents were taking online courses and 952 were taking teleclasses. The online students came from eighteen community colleges; the teleclass students from fourteen colleges. Among the online students 47% responded that they would not have been able to take the class if it had not been offered via distance learning technology. Eighty-seven percent stated they chose distance learning for its convenience in accommodating their schedules. Eighty-four percent indicated they were satisfied with their distance learning experience, 85% said they would recommend the online course to other students, and 90% would take another online course.

Teleclass students were divided into onsite students, those taking the course in the room with the instructor, and those remote from the instructor. The majority of onsite students (82%) were satisfied with the teleclass. Eighty percent would recommend the teleclass to other students but only 76% would take another teleclass. Among remote site students only 67% were satisfied with the teleclass, 72% would recommend the teleclass to other students, and 75% would take another teleclass. Thirty-two percent of the teleclass students stated that they would not have been able to take the course if it had not been offered as a distance learning class. Primarily, this response came from the remote site students.

Site visits were conducted at Indian River Community College, Pensacola Junior College, and St. Petersburg Junior College. Each of these colleges is significantly involved in either interactive teleclasses and/or Internet courses. Visits with the administrators at these colleges indicated that each college intends to expand its distance learning offerings with the goal of eventually being able to provide a complete Associate of Arts or Associate of Science degree via distance learning. Each college acknowledged the need to maintain high quality in its distance learning courses, especially in light of the increasing competition in the educational marketplace brought about by technological advances. A major issue for all three of the colleges is how to

acquire the finances necessary to meet distance learning goals. Administrators also discussed various student and faculty issues, especially support issues for both groups.

The results of this study indicate that community college students appreciate the access and convenience of distance learning courses and are willing to adapt to and accommodate themselves to the technology. However, faculty teaching distance learning courses are ambivalent. They are struggling with the demands of teaching distance learning courses and are concerned about the challenges distance learning brings to the learning environment. Administrators must successfully address these concerns and respond to the funding issues if they want to expand student access to education via quality distance learning experiences.

Two ways in which the Florida Community College System (FCCS) has addressed quality concerns and the Commission on Colleges Southern Association of Colleges and Schools (SACS) criteria about offering appropriate support services for distance learners has been through the development of the Florida Academic Counseling and Tracking System (FACTS) and through the Distance Library Learning Initiative (DLLI). Among the services offered through FACTS, students may gain electronic access to college transcript information, degree audits, degree shopping, financial aid information, and determine what upper division courses are required for specific majors. The Distance Library Learning Initiative has provided access to over 70 databases, a reference and referral center, library user training, a document delivery station, and statewide courier services to book borrowers across the state with overnight delivery. These services have been overwhelmingly successful. In addition, the College Center for Library Automation (CCLA) has provided quality library and technology related services to all 28 community colleges. FACTS serves as the electronic student services support system and DLLI assures statewide remote library support (the two key SACS requirements). These initiatives have put Florida colleges well ahead of many other states in the nation with regard to distance learning support services.

Distance Learning in the Community Colleges:
A Look at the Online and Teleclass Experience

Introduction

While the recent advances in technology have brought distance learning to the forefront of the education discussion today, the concept of education at a distance has been present and in practice for more than a century, originating as correspondence or home study courses delivered by mail. Since then the concept has taken the form of audio tapes, educational television, and the open university. Today the emerging delivery methods are interactive videoconferencing (teleclasses) and courses delivered primarily via the electronic capabilities of the Internet or World Wide Web.

Definitions of the concept of distance education or distance learning vary. Typically the definition indicates the separation of teacher and learning in space and/or time. Moore & Kearsley (1996) defined distance education as the

> *family of instructional methods in which the teaching behaviors are executed apart from the learning behaviors, including those that in contiguous teaching would be performed in the learner's presence, so that communication between the learner and the teacher must be facilitated by print, electronic, mechanical, or other devices* (p. 197).

In 1992 the U.S. Congress broadly defined distance education as "The transmission of education or instructional programming to geographically dispersed individuals or groups" (as cited in Sherron & Boettcher, 1997). In conducting its 1995 study of this phenomenon, the U.S. Department of Education defined distance education as "education or training courses delivered to remote (off campus) locations via audio, video or computer technologies" (National Center for Educational Statistics (NCES), 1997).

While these encompassing definitions could include a wide variety of delivery methods, in the present study the term is used in reference only to interactive teleclasses and courses delivered primarily via the electronic capabilities of the Internet or World Wide Web.

Widespread use of these particular technologies is fairly new and therefore has not been examined in depth.

Due to rapid advances in technology and its increasing affordability, the use of distance learning has become an increasingly significant delivery mechanism of the American higher education system. A recent study of two year and four year higher education institutions by the U.S. Department of Education stated that 58% of public two year and 62% of public four year institutions offer distance learning courses. Of the public two-year institutions offering distance learning, 49% offered two-way interactive video courses and 14% online courses (NCES, 1997). The increasing involvement of colleges and universities in distance learning has led to the creation of the concept of the "virtual campus"

> *a metaphor for the electronic teaching, learning, and research environment created by the convergence of several relatively new technologies including but not restricted to, the Internet, World Wide Web, computer-mediated communication, video conferencing, multi-media, groupware, video-on-demand, desktop publishing, intelligent tutoring systems, and virtual reality* (Van Dusen, 1997).

The Florida system has kept pace with the national distance learning trends. Florida's postsecondary education institutions, particularly its community colleges, have been involved with distance learning since the 1970's by offering correspondence courses, educational television courses, and have increasingly made use of the recent technological advances such as interactive teleclasses and Internet courses. The State's interest in distance learning is evidenced by the formation of the Florida Community College Distance Learning Consortium, and other state supported entities designed to encourage and guide the use of distance technologies for educational use. The Florida Virtual Campus (FVC) was founded by the 1999 Legislature and it is expected to begin its operation in early 2000. The FVC will contain course offerings ranging from certificates to graduate medical and engineering courses.

The focus of this Level I review is the experience and perceptions of two key stakeholders—students and faculty. This study looks at the issues surrounding the

2

implementation of distance learning courses as they impact students and faculty. It examines a variety of stakeholder interests including learning effectiveness, training, and support.

Research Design

This investigation of the distance learning activities in the Florida community colleges was limited to two delivery mechanisms—online courses and interactive teleclasses. As a Level I program review the goal is to provide a description of the activities occurring in these areas. This review was guided by the following questions:

> What types of distance learning courses are currently offered in the Florida community colleges? (See Appendix.)

> What are the numbers of distance learning courses offered in what subject areas? (See Appendix.)

> Do students and faculty perceive distance learning courses to be effective compared to traditional courses?

> What training do faculty members receive to teach a teleclass or on-line course? Is this training adequate and effective?

> Since teaching in the distance learning environment requires special preparation and class size is often larger than in the traditional class, what, if any, adjustments in compensation and/or workload are available for faculty engaged in distance learning initiatives?

> What are some of the best distance learning practices within the FCCS?

To address these questions both surveys and site visits were used. Data was collected during spring 1999. Students in online courses and in interactive teleclasses were surveyed, along with the faculty who teach these classes. Site visits were made to three colleges to gain an institutional perspective.

A contact person for the study was established at each of the community colleges. These individuals provided initial information regarding the online and teleclass offerings at their

3

11

institutions, served as the distribution point for survey instruments, and, in some cases, arranged on-site visits. During spring 1999, twenty of the 28 community colleges offered approximately 58 different courses via interactive teleclass and approximately 211 online courses. Of the twenty colleges involved in delivering these courses, eighteen participated in the study. The colleges indicated that approximately 250 faculty members and 6000 students were engaged in either online or interactive distance learning activities.

Four different survey instruments were prepared and distributed as part of the study. (See Appendix A) A forty-three item questionnaire was distributed to faculty teaching online and interactive teleclasses. This instrument was distributed by the college contacts and returned directly to the researcher. Surveys for students in interactive teleclasses were distributed and collected by the college contact person. Students taking the teleclasses on-site responded to a thirty-one item questionnaire; those taking the classes from remote sites responded to a thirty-six item questionnaire. A thirty-four item online survey was created to gather information from students taking online courses. College contact persons were asked to provide students the internet address for this survey.

Faculty Survey Results

One hundred fifty-three useable responses were collected from faculty teaching online and/or interactive teleclasses at fourteen of the colleges. These faculty members reported teaching 155 different courses. Of the respondents, 47% were female, 53% male. A large majority (85%) were full-time faculty members. The faculty respondents in this study have an average of ten to twelve years of experience teaching at the community college. Most faculty (65%) reported teaching only one distance learning course; very few (2%) reported teaching more than three distance learning courses. The average distance learning class size reported was twenty students per class. However, reported class sizes range from one to 85 students. (See Table 1)

Faculty were asked about a number of issues relating to their experience in the distance learning environment. They were asked several questions designed to gain an understanding of the efforts taken to prepare them for distance learning instruction. They were asked how many hours of training they had received in the general use and application of distance learning technology, in development of curricula for distance learning courses, and in teaching methods for the distance learning environment. While faculty reported an average (mean) of 17 hours of training in the use of application of distance learning technology and an average (mean) of seven hours of training in development of curricula for distance learning courses, the most answered response (mode) was zero hours of training in both cases. (See Table 1) Those who had received training indicated that in most cases the training was effective, but many responded that it was not adequate to meet their needs.

Table 1
Faculty Characteristics

Gender	47% female	53% male
Employment Status	85% full-time	15% part-time
Years of Community College Teaching Experience	Range: <1 yr. to 35 yrs. Mean: 14 yrs. Mode: 10 yrs.	
No. of distance learning courses taught (Spring, 1999)	1 course 64.7% (99 faculty) 2 courses 26.1% (40 faculty) 3+ courses 9.2% (14 faculty)	
Distance Learning Class Size	Range: 1 to 85 students Means: 23 to 6 student Mode: 20 students	
Training Hours	Use & application Range: 0 to 224 hrs. Mean: 17 hrs. Mode: 0 hrs. Development of curricula Range: 0 to 100 hrs. Mean: 7 hrs. Mode: 0 hrs.	

Faculty also answered questions regarding rewards and incentives for preparing distance learning courses and for teaching distance learning courses. Six types of rewards/incentives were listed—workload adjustment, monetary incentives, extra vacation time, release time, computer equipment, and public recognition. Respondents were instructed to indicate all that applied. The most frequently cited incentive to develop a distance learning course was the availability of better computer equipment. However, only 39 faculty members cited the

availability of this reward for distance learning course development, while 64 faculty members stated that there were no rewards/incentives available to them for this type of endeavor.

An even larger number of faculty stated that there were no rewards or incentives in place to encourage them to teach distance learning courses. Almost half (48%) of the faculty who responded to this question stated that there were no incentives to teach distance learning courses. Among those citing available incentives, the most frequently answered responses were computer equipment and monetary rewards.

Faculty were also asked what motivated them to become involved in distance learning initiatives and what prompted them to continue this involvement. Five reasons were suggested— the ability to reach new audiences, the opportunity to develop new ideas, personal interest in technology, intellectual challenge, and monetary or workload incentives offered by the college. Respondents could indicate all that apply and were given the opportunity to indicate other inducements as well. Monetary or workload incentives did not seem to be a motivator showing the lowest response rate (21 respondents for 14%). The reasons most often chosen to explain faculty motivation to become involved in distance learning were ability to reach a new audience (63%) and personal interest in technology (64%). Monetary and workload incentives were even less of a motivation to continue involvement in distance learning instruction. Only 15 faculty members (10%) responded that this was a motivator for their continued involvement. Again the other options received more positive responses.

Table 2
College Incentives Offered and Faculty Motivators
Number & Percent of Positive Responses (N = 153)

College Incentives offered to faculty

preparing to teach distance learning courses
- 11 (7%) workload adjustment
- 28 (18%) monetary incentives
- 0 (0%) extra vacation days
- 18 (12%) release time
- 39 (26%) computer equipment
- 1 (1%) public forms of acknowledgement
- 64 (42%) none
- 15 (9%) other [See Faculty Comments.]

teaching distance learning courses
- 9 (6%) workload adjustment
- 34 (22%) monetary incentives
- 2 (1%) extra vacation days
- 3 (2%) release time
- 29 (19%) computer equipment
- 6 (4%) public forms of acknowledgement
- 73 (48%) none
- 7 (5%) other [See Faculty Comments.]

Faculty Motivations

to become involved w/ distance learning
- 97 (63%) ability to reach new audiences
- 84 (55%) opportunity to develop new ideas
- 98 (64%) personal interest in technology
- 86 (57%) intellectual challenge
- 21 (14%) monetary/workload incentives
- 35 (23%) other [See Faculty Comments.]

to continue involvement w/ distance learning
- 90 (59%) ability to reach new audiences
- 83 (54%) opportunity to develop new ideas
- 92 (60%) personal interest in technology
- 85 (56%) intellectual challenge
- 15 (10%) monetary/workload incentives
- 29 (19%) other [See Faculty Comments.]

Faculty members were asked a number of additional questions regarding various aspects of their experiences and perceptions of distance learning at their colleges. Over half (56%) of the respondents perceived distance learning classes to be an equivalent learning experience compared to the conventional classroom. However 35% found it to be worse or ineffective. Possible reasons for this statistic can be found in the faculty comments where faculty express concern about the student dropout rate and communication problems. In contrast, most faculty agreed that teaching a distance learning class had improved the quality and effectiveness of their teaching. Their responses also indicated that a large majority agreed with the statement that course development and class preparation time is greater for distance learning courses.

8

Despite the reservations about distance learning indicated in the previous paragraph, 58% of the faculty who responded to the survey indicated that their overall teaching experience in distance learning had been positive or very positive. When asked if they would recommend involvement in distance learning to a faculty colleague, the large majority (71%) said yes. In addition 84% said they would be willing to teach another distance learning course.

Student Survey Results

The students who participated in this study were taking either interactive teleclasses or online/Internet classes during spring 1999. Data from students taking online classes were collected via a survey posted on the Internet. Students were given the Internet address and asked to respond to the survey online. Their responses were available only to the researcher. The college contact person was responsible for the distribution of questionnaires and answer sheets to students taking interactive teleclasses. They were encouraged to use their college's established course evaluation procedures as the distribution mechanism.

Online Courses. Five hundred fifty-five students responded to the online survey. These students represented eighteen community colleges and were enrolled in 113 different courses. Responses to demographic questions indicated that 67% of the students who responded to the survey were female, 33% were male. Thirty-four percent were between the ages of 21 and 29, 25% were 30-39 years old, and 22% were over 40 years old. Eighty-two percent of the respondents were White; 6% African-American, 5% Hispanic, 4% other ethnicity, and 3% remained unspecified (See Table 3).

Students were asked about their reasons for enrolling in an online distance learning course. Forty-seven percent of the respondents stated that they would not have been able to take the course they were in if it had not been offered through distance technology and 87% of the students gave convenience in accommodating work, family, or other competing demands as a

reason they were taking the course. Sixty-two percent were taking the online course to satisfy a degree or certificate requirement.

In this survey students were asked about a variety of aspects of the online course—course administration, instruction, and delivery format. Students who responded to the survey were satisfied with all of these areas of the online learning experience, indicating high levels of satisfaction in all areas. Eighty-four percent indicated that they were satisfied or very satisfied with the online course they were taking. Eight-six percent of the students said that they would recommend this online course to other students and 90% stated that they would take another online course. Although 62% of the respondents answered that the workload in the online course had been demanding, half of the student respondents found the online course to be equivalent to the traditional classroom and 36% said it was better. (See Table 3.)

Teleclasses. Nine hundred fifty-two usable answer sheets were received from students taking interactive teleclasses during spring 1999. These students represented fourteen different community colleges and were enrolled in over fifty different courses. Of the respondents, 591 were taking the course onsite (i.e., in the same room/building as the instructor) and 361 indicated that they were taking the course from a remote site. Among the remote site students, responses to demographic questions indicated that approximately 35% of the students who responded to the survey were male, 65% were female. Forty-five percent of the remote site students were 20 years of age or younger. Twenty-five percent were between the ages of 21 and 29, 17% were 30-39, and 13% were over 40 years old. Eighty-four percent of the remote site respondents were White; 8% African-American, 4% Latino, and 4% other ethnicity. In the onsite student populations 34% of the students who responded to the survey were male, 64% were female. Thirty-seven percent of the onsite students were 20 years of age or younger. Thirty-four percent were between the ages of 21 and 29, 18% were 30-39, and 10% were over 40 years old. Sixty-

18

nine percent of the onsite respondents were White, 12% African-American, 6% Latino, and 4% Asian American. (See Table 3.)

Students were asked about their reasons for enrolling in a teleclass. Thirty-two percent of the respondents stated that they would not have been able to take the course they were in if it had not been offered through distance technology. As expected this response came primarily from the students at the remote sites. Sixty-five percent of the respondents indicated that they were taking the interactive teleclass to satisfy a degree or certification requirement. Fifty percent of the remote site students, but only 18% of the onsite students, also indicated that they enrolled in the teleclass because of its convenience. The teleclass students were also asked about a variety of aspects of the teleclass—course administration, instruction, and delivery format. Students who responded to the survey were generally satisfied with all of these areas of the teleclass learning experience.

Technology issues are of particular concern in the courses that employ interactive video technologies. Students were asked a variety of questions about this issue. Although 60% of the remote site students reported that a broadcast failure had interrupted their teleclass at least once, the responses indicated high reliability of the technology used to deliver distance learning teleclasses and that students have learned to adapt to this environment. Seventy-five percent of onsite students and 73% of remote site students were satisfied with the technological aspects of the teleclass. (See Table 3.) If technology presented a problem in teleclasses, one would expect a significant difference between responses of onsite and remote students.

Eighty-two percent of the onsite students indicated that in general they were satisfied or very satisfied with the teleclass environment. However only 67% of the remote site respondents indicated that in general they were satisfied or very satisfied with the teleclass environment. Eighty percent of the onsite students, but only 72% of the remote site students said that they would recommend this teleclass to other students. Seventy-six percent of the onsite students and

75% of the students taking the course from a remote site stated that they would take another teleclass. Among the onsite students, 83% found the teleclass experience to be equivalent to or better than the traditional classroom but 16% said it was worse or ineffective. Seventy percent of the remote site students responded that they perceived the teleclass experience to be equal or better than the traditional classroom and 30% said it was worse or ineffective. (See Table 3.)

Table 3
Student Demographics &
Satisfaction w/ Distance Learning Experience

	ONLINE (N = 555)	TELECLASS Onsite (N = 591)	Remote (N = 361)
Gender			
Female	67%	64%	65%
Male	33	35	35
Age

Yes	86%	80%	72%
No	14	19	27
Enroll in another course of this type			
Yes	90%	76%	75%
No	10	23	24

12

In summary, the students who responded to this survey were satisfied with the distance learning experience. Many of the students indicated that they would not have been able to take the class they were in if it had not been offered via distance learning. This was especially true among students enrolled in online courses. Students were taking distance learning courses for their convenience in helping them cope with the demands of busy schedules and to meet the requirements of their programs of study. Although the technology may present challenges on occasion, students consider interactive teleclasses and online courses to be viable alternatives to the traditional classroom.

Discussion of Site Visits

Site visits were conducted at three of the community colleges—Indian River Community College (IRCC), Pensacola Junior College (PJC), and St. Petersburg Junior College (SPJC). Each of these institutions is substantially involved with delivery of courses via interactive teleclasses and/or online classes. During the site visits, group discussions and individual interviews were conducted with staff involved in the administration and delivery of the colleges' distance learning offerings. In these conversations, individuals shared successes, challenges, and philosophy regarding distance learning.

The vice president at each of the institutions described an expanding role for distance education at his/her institution. This role is primarily to support the needs of the citizens in their geographical service districts. But the possibility of providing courses to a wider market was not excluded if a demonstrated and appropriate market niche should develop and policies permitting such expansion be in place. The vice presidents envision distance education as providing an additional dimension with which to enrich the curricula, a "new approach" or an additional "modality" with which to reach students. They also expressed the goal of eventually providing complete Associate of Art and Associate of Science degrees through distance learning. One of

13

the vice presidents described the vision of the campus becoming an occasional "touch down zone" for students as they progress through a degree program offered "any time, any place, any pace" through distance learning. Another envisioned that 15-20% of the institution's total enrollment would be through distance education in the next five to ten years.

Each of the institutions visited demonstrated a different organizational pattern for their distance learning programs. These patterns were based on historical development of the program and philosophy of the institution regarding distance learning. It was evident that in some institutions, distance learning had developed as a "special case" and was organizationally separated from the academic mainstream. With the rapid growth in the distance learning area, it has become clear that it can function more effectively with closer ties to the general academic program. Each of the institutions folds the distance learning courses into its schedule of classes, alerting students to the different delivery mode via a special code or note in the schedule. Concern was expressed in the interview for the need to have both faculty and students understand that distance learning courses maintain the rigor and quality of the traditional classes. To do this institutions are encouraging their full-time faculty to teach distance learning courses, as opposed to using adjunct faculty to teach these courses. In all cases, faculty who taught distance learning courses were "borrowed" from existing academic departments.

A major issue in providing distance learning courses is finance. The technical equipment needed to produce, deliver, and maintain quality teleclasses or online courses is greater than that needed in the delivery of traditional courses. While institutions may have been able to provide for small distance learning initiatives through regular funding channels, they are discovering that as these programs become a more significant part of the curriculum there is a need to look for other funding sources. Each of the institutions visited mentioned grants as a method of funding that had already been used to fund some distance learning initiatives or that was being explored as a funding source.

14

22

It is important to note that the American Association of Community Colleges (AACC) has praised the 2% staff development "setaside" which Florida community colleges and universities appropriate annually for staff and program development purposes. Many of the community colleges have elected to use those dollars to develop distance learning courses and to provide staff development for faculty members who teach them.

St. Petersburg Junior College is certainly a leader as shown by its commitment, financial and philosophical, to distance learning. Good examples of its commitment to instructional technology are its Seminole Campus and Project Eagle. The Seminole Campus, which opened in 1998, is the focal point for SPJC's distance learning efforts. The first building at this site, the Technology Learning Center, has been designed to accommodate the expanding growth of distance learning and other educational technologies. The center includes a dramatic 6700 square foot Information Commons, which houses a variety of computers and other educational equipment and serves as an online classroom and open lab for students and faculty, in addition to multiple rooms for videoconferencing, computer-based instruction, and online course development. Among the most interesting services provided through the Seminole Campus of SPJC is the CyberLibrary, an online reference collection for SPJC distance learners. The campus also houses the instructional computing staff who are available to provide faculty with one-on-one training and assistance in developing online courses.

Project Eagle is a multi-year $5 million initiative to create a model of access to four-year degrees and workforce training for community college students. Distance learning technologies will play a key part in providing the access. The project plans include the development of 160 technology-mediated courses, continued development of the SPJC Electronic College, and the infrastructure and support mechanisms necessary to make it all work.

Faculty issues that surfaced in the site visits include compensation/workload, training and support. Administrators at each of the institutions seemed aware of the great deal of time it takes

faculty to develop a distance learning course. Overload pay and release time were methods mentioned as ways to compensate faculty for distance learning course development. However, the philosophy expressed by at least one of the institutions was that course development for distance learning should be treated in the same manner as course development for traditional courses. The administrators also discussed what they had learned about providing training to prepare faculty to teach distance learning courses and how training had been modified to better meet faculty needs. The general theme of the modifications was a move to more individualized training sessions and providing more focused training, as opposed to exposing faculty to all the nuances and issues at once, i.e., breaking the training into more discrete segments. Not surprisingly, the greatest need for training or support seemed to be for the online courses. Given the variety of skills needed to develop quality courses in the online environment, at least one of the institutions has gone to a team approach, hiring full-time instructional technologists to participate with faculty in designing online courses and to provide technical assistance to students taking these courses.

In discussing student issues, the administrators included the topics of technical support, student services, and testing. Someone at each of the institutions mentioned how important it was for students to understand the skills they need to be successful in distance learning courses, especially online courses. Each of the colleges tries to make clear to students what special requirements there are to take distance learning courses, e.g. minimum equipment requirements for online courses. This information is shared at or before students register for classes via printed materials and online. Most of the student issues that were discussed concerned providing services to students in online courses. Because students in teleclasses come on campus to attend their teleclasses, their needs are somewhat different from students enrolled in online courses. However, as videoconferencing technology advances into the home market, colleges recognize that these two groups of students will become more similar in their relationship with the campus.

Each of the institutions is developing ways to provide adequate student services (e.g. registration, academic advising) to distance learning students. Two of the institutions are involved in projects which make innovative use of current computer technology to provide these services. How to best provide testing services in a *truly* distance learning environment was also an issue that surfaced. At each institution, testing required the physical presence of the student at one of the institutions' campuses or centers.

Summary of Findings

Through survey, interviews, and site visits this report has provided a broad description of the distance learning environment in Florida's community colleges, focusing on the emerging interactive technologies—teleclasses and online courses—and key stakeholders—students and faculty. In considering this initial review, certain limitations must be acknowledged. This review attempts to describe what is, not what should be. In this report no comparison is made to assessments of the traditional classroom experience. Nor is there any attempt to assess student retention/success or barriers that may prohibit students from taking distance learning courses. Future studies should address these issues.

Several themes emerge from a review of these findings. Community college administrators view distance learning as an opportunity to provide access and needed service to untapped markets in their service areas and beyond. In this regard they appear to be successful, given that 47% of the online students and 32% of the teleclass students in the study stated that they would not have been able to take the course they were in if it had not been available via distance learning. The results of the study indicate that community college students appreciate the access and convenience of distance learning courses and are willing to adapt to and accommodate themselves to the technology. So, it appears that students and administrators both see that distance learning can help them meet their goals. To do this, however, both groups need committed and adequately prepared faculty.

Of the groups examined in this study, faculty seem to be less satisfied with distance learning than were the students surveyed. In this regard Florida's community colleges reflect national concerns. While student satisfaction with distance learning courses ranged from 67% to 84%, fifty-eight percent (58%) of the faculty who responded to the survey indicated that their teaching experience with distance learning had been positive. In the response to the quality question, two thirds of the faculty perceived the quality to be as good as or better than traditional approaches, but approximately one-third (35%) of the faculty respondents perceived distance learning courses to be a worse learning experience than the traditional classroom or even ineffective.

Factors which play a part in the lack of some faculty members' enthusiasm for distance learning may be represented in the 68% who stated that course development and class preparation is greater for distance learning courses. In addition, the faculty who responded perceived that, on the whole, there were no adequate rewards or incentives being offered to compensate them for the workload involved in distance learning instruction. This sentiment was clearly expressed both in the responses to specific survey questions and in the additional comments added. Another factor at work in faculty reluctance toward distance learning may be their lack of training to prepare them for distance learning. The responses indicate that many faculty are not given any training before they embark on distance learning efforts.

Administrators must recognize and address these issues if they hope to meet their goals of increased course delivery via distance learning. Several colleges have begun to expend significant dollars from their Staff and Program Development (SPD) funds for distance education related development. In addition, both the Consortium and the Florida Virtual College will provide statewide staff development opportunities and become tools to assist this effort. As the distance learning marketplace expands, students will have a wider variety of educational choices and competition will increase. The colleges that are successful in providing quality courses to

18

distant students will be those that have successfully responded to the issues that emerged in this study. The leaders will be those who have planned and carried out strategies to improve student and faculty satisfaction and those who have made a financial commitment to the necessary support and infrastructure needed to create a learning experience where students are successful and faculty have the tools they need to facilitate student learning.

Conclusion

Overall, this study yields three significant findings. First, students satisfaction with distance learning courses is high. Second, distance learning is increasing access for students who otherwise would not be able to come to campus to take courses. Third, there appears to be a need to strengthen opportunities for faculty members to receive appropriate training to prepare and instruct using distance learning technologies.

The Florida Community College Distance Learning Consortium is aware of the faculty training issue and is in the process of taking steps to address it. It is the intent of the Consortium to hire an individual whose sole responsibility will be to provide technical assistance to the colleges. This individual will train faculty with the goal of increasing their confidence and proficiency in both the development of courses and instruction through the use of on-line or telecourse instruction.

In addition, the quality issue has been addressed at the state level through two major initiatives, both of which have addressed the Commission on Colleges Southern Association of Colleges and Schools (SACS) criteria. The FCCS has made available appropriate support services for distance learners through the development of the Florida Academic Counseling and Tracking System (FACTS), and through the Distance Library Learning Initiative (DLLI). FACTS serves as the electronic student services support system and DLLI assures statewide remote library support (the two key SACS requirements). Among the services offered through FACTS, students may gain electronic access to college transcript information, degree audits,

degree shopping, financial aid information, and determine what upper division courses are required for specific majors. Distance Learning Library Initiative is a collaborative effort among state universities, community colleges, and public libraries to provide distance education library services for higher education in Florida. Services provided through DLLI include: electronic resources encompassing over 70 data bases ranging from electronic abstracts to full-text journals and encyclopedias, a reference and referral center, library user training, book borrowing privileges, and a document delivery station. The courier services to book borrowers across the state provides overnight delivery to and from over 416 public and academic library locations in Florida. The service has been overwhelmingly successful. In addition, the College Center for Library Automation (CCLA) has provided quality library and technology related services to all 28 community colleges for the past ten years. These initiatives have put Florida colleges well ahead of many other states in the nation with regard to distance learning services.

GLOSSARY OF DELIVERY METHODS

Delivery Method Description

Internet * Course information, instruction, interaction, and assignments transferred over the internet in real time or asynchronously. Computer modem and internet connection required.
2-way TV * The learner and instructor are at designated remote TV sites where real time interaction takes place. 2-way TV is similar to a traditional classroom.
Multi * These courses incorporate a variety of technologies such as the Internet, CD-ROM, video, and print materials.
Print * Course content is delivered via print This type of course is also referred to as correspondence, independent study, or AIM.
Video * Video is the primary lecture method. Videos may be viewed on local TV or checked out of the library. Additional reading may be required

* General guidelines. For specific information, contact the college regarding each course.

Distance Learning
Faculty Survey

Use of distance learning technology is becoming an increasingly common part of instruction in higher education. Today you are being asked to evaluate your experience as a distance learning instructor. This information is being collected as part of the State Board of Community College program review. The results of this study will help to provide a better understanding of the faculty experience in distance learning.

Please respond as honestly as possible to each question and return the survey to the researcher in the envelope provided. Thank you for your participation.

Institution: _____

1. Gender
    A. Male
    B. Female

2. General subject area/s in which you teach distance learning courses:

_____

3. Years of community college teaching experience: _____

4. Employment status
    A. Full-time faculty
    B. Part-time faculty

5. Information on distance learning courses you are teaching this semester

Course No.	No. of Students Enrolled	Course Format

6a. Number of hours of training you have received in the *use and application* of distance learning technology:

_____

6b. Was this amount of training adequate?
    A. Yes   B. No

6c. Was this training effective?
    A. Yes   B. No

7a. Number of hours of training you have received in *development of curricula* for distance learning courses.

_____

44

7b. Was this amount of training adequate?

    A. Yes   B. No

7c. Was this training effective?

    A. Yes   B. No

8a. Number of hours of training you have received in *teaching methods* for distance
learning courses.

                    _____

8b. Was this amount of training adequate?

    A. Yes   B. No

8c. Was this training effective?

    A. Yes   B. No

9. Which of the following rewards and incentives does your college offer to faculty who are *preparing to teach* distance learning courses? Choose all that apply.

    A. workload adjustment ·
    B. monetary incentives (e.g. overload pay, travel money)
    C. extra vacation days
    D. release time
    E. computer equipment
    F. public forms of acknowledgment such as certificates of appreciation, teaching awards, etc.
    G. Other: _____

10. Which of the following rewards and incentives does your college offer to faculty who are *teaching* distance learning courses? Choose all that apply.

    A. workload adjustment
    B. monetary incentives (e.g. overload pay, travel money)
    C. extra vacation days
    D. release time
    E. computer equipment
    F. public forms of acknowledgment such as certificates of appreciation, teaching awards, etc.
    G. Other: _____

11. My department strongly encourages the use of distance technologies for instruction.

    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

12. My department/division chair views the use of distance learning in a positive light.

    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

13. Distance technology for instruction is important to my department.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

14. The college has provided most of the necessary help and resources I need to achieve rapid familiarity with distance learning technologies.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

15. My department will recognize my efforts in using distance learning for instruction.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

16. Using distance learning technology improves the quality of my teaching.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

17. There is always someone in my college to whom I can turn for help in solving problems with my distance learning course.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

18. Using distance learning technology improves my teaching effectiveness.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

19. My department is committed to a vision of distance learning for instruction.
    A. Strongly Disagree   C. Agree
    B. Agree   D. Strongly agree

20. I have easy access to the hardware necessary to support my distance learning courses.
    A. Strongly Disagree   C. Agree
    B. Disagree   D. Strongly Agree

46

21. I have adequate Internet response time to support my distance learning efforts.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

22. Faculty at my college who teach distance learning courses gain more prestige than those who do not.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

23. The college strongly encourages the use of distance learning for instruction.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

24. Faculty at my college who teach distance learning courses enjoy a higher profile than those who do not.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

25. The college will recognize my efforts in using distance learning for instruction.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

26. Among my peers, I am usually the first to try out new information technologies.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

27. I am constantly updated by my college on new tips that can help me teach distance learning classes more effectively.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

28. My departmental faculty colleagues view the use of distance learning technologies in a positive light.
    A. Strongly Disagree   C. Agree
    B. Disagree   D. Strongly agree

47

29. The opinions of my departmental faculty colleagues are important to me.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

30. I have easy access to the software necessary to support my distance learning teaching efforts.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

31. Involvement with distance learning efforts is a status symbol in community colleges.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

32. Teaching via distance learning is fun.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

33. The college is committed to supporting my distance learning efforts .
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

34. Which of the following motivated you to *become involved* with distance learning? Choose all that apply.
    A. the ability to reach new audiences
    B. the opportunity to develop new ideas
    C. personal interest in technology
    D. the intellectual challenge
    E. monetary or workload incentives offered by the college
    F. Other: _____

35. Which of the following motivates you to *continue involvement* with distance learning? Choose all that apply.
    A. the ability to reach new audiences
    B. the opportunity to develop new ideas
    C. personal interest in technology
    D. the intellectual challenge
    E. monetary or workload incentives offered by the college
    F. Other: _____

36. Course development time for distance learning courses is significantly longer than for conventional courses.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

37. Class preparation time (i.e. the time you spend before each class session) for distance learning courses is significantly longer than for conventional courses.
    A. Strongly Disagree
    B. Disagree
    C. Agree
    D. Strongly agree

38. Compared to conventional classroom courses distance learning courses are:
    A. A better learning experience
    B. An equivalent learning experience
    C. A worse learning experience
    D. An ineffective learning experience

39. Overall your teaching experience in distance learning has been
    A. Negative
    B. Neutral
    C. Positive
    D. Very positive

40. Would you teach another distance learning course?
    A. Yes   B. No

41. Would you teach a course using a new distance learning technology that you have not previously used?
    A. Yes   B. No

42. Would you recommend involvement in distance learning to other faculty at your college?
    A. Yes   B. No

43. Please write any additional comments you would like to make below and attach additional sheets, if necessary:

Thank You.
Dr. Beverly Bower, 113 Stone Building, Florida State University
Tallahassee, FL 32306-4452

FACULTY COMMENTS

Q9. Which of the following rewards and incentives does your college offer to faculty who are *preparing to teach* distance learning courses? Choose all that apply.
A. workload adjustment
B. monetary incentives (e.g. overload pay, travel money)
C. extra vacation days
D. release time
E. computer equipment
F. public forms of acknowledgement such as certificates of appreciation, teaching awards, etc.
G. Other:
  — Workshops
  — They only pay 1/2 compensation for teaching telecourses -- a major disincentive.
  — Recently, teachers have been given maintenance of contract units of credit.
  — Help from our technology specialist
  — Paid my tuition to take a computer class (Windows 95 and Power Point).

Q10. Which of the following rewards and incentives does your college offer to faculty who are *teaching* distance learning courses? Choose all that apply.
A. workload adjustment
B. monetary incentives (e.g. overload pay, travel money)
C. extra vacation days
D. release time
E. computer equipment
F. public forms of acknowledgement such as certificates of appreciation, teaching awards, etc.
G. Other:
  — They only pay 1/2 compensation for teaching telecourses -- a major disincentive.
  — Paid as independent study (greatly lower than a real class).
  — Use of higher tech teaching tools

Q34. Which of the following motivated you to *become involved* with distance learning? Choose all that apply.
A. the ability to reach new audiences
B. the opportunity to develop new ideas
C. personal interest in technology
D. the intellectual challenge
E. monetary or workload incentives offered by the college
F. Other:
  — Flexible schedule
  — Need make course load

— The possibility of offering courses that otherwise would not be offered on my campus
— Tangible incentives
— (Was) asked to
— I was asked to do it.
— Departmental request
— Supervisor insisted--I was drafted
— Geographically remote students!
— For the experience and to give those students access to a full-time instructor.
— Assigned courses by Dean
— I have a higher tolerance for frustrating experiences than most of my colleagues.
— Opportunity to get in on cutting edge
— Students needed alternative course offerings
— Administrative encouragement
— Deliver info about the medium via the medium
— To assist another instructor in DL
— Did not want someone to water down course materials
— It may be the way of the future. I do not wish to be left behind.
— The need to reach small classes in different campuses which otherwise will not hold
  (classes)
— Serve students otherwise unable to take accounting
— Told to do it
— Offering classes to students online -- timeframe
— More students enrolled in my program area
— To test my strong belief in distance learning
— I was told my course would be offered
— As an adjunct, if I want to teach, I take what's available
— May prove useful in my dissertation
— Keep abreast of new developments
— Future possibilities
— Told to do it
— Assigned
— Flexibility
— Ability to teach course not otherwise offered

Q35. Which of the following motivated you to *continue involvement* with distance learning? Choose all that apply.
A. the ability to reach new audiences
B. the opportunity to develop new ideas
C. personal interest in technology
D. the intellectual challenge
E. monetary or workload incentives offered by the college
F. Other:
  — Flexible schedule

51

— Student demand
— The quality of students in my DL courses
— Departmental request
— Students appreciative of the curriculum.
— Help my instruction in classroom courses.
— I think it's a leadership role.
— Assigned courses by Dean
— I have a higher tolerance for frustrating experiences than most of my colleagues.
— Flexible scheduling. Increased student response.
— Administrative encouragement
— Did not want someone to water down course materials
— It may be the way of the future. I do not wish to be left behind.
— Improvements in the technology.
— Not motivated to continue unless requested by [name of college].
— I will not continue my involvement
— Frees up time with family
— Reaching more students for enrollment in my program area
— If that is the only course I'm offered, I will probably do it again.
— May prove useful in my dissertation
— Keep abreast of new developments
— Enjoy the students.
— Future possibilities
— College wants it done
— Only option for students
— Flexibility

52

Distance Learning Course Evaluation
Online Classes**

Use of distance learning technology is becoming an increasingly common part of instruction in higher education. Today you are being asked to evaluate your distance learning experience in this class. The results of this study will help us design future distance learning courses to better meet the needs of students. Please respond as honestly as possible to each question. This survey is for research purposes only and will not be used by your instructor or your college as a course evaluation.

Course Number: Course Name:

**This survey was distributed via the Internet.

1. Why did you enroll in this distance learning course? Choose all that apply.
   A. Convenience due to work/family/school
   B. Interest in subject matter or instructor
   C. To satisfy a degree/certification requirement
   D. Course recommended by others

2. Would you still have been able to take this course if it had not been offered through distance technology?
   A. Yes
   B. No

3. How satisfied were you with the educational experience gained in this distance learning course?
   A. Very satisfied
   B. Satisfied
   C. Somewhat satisfied
   D. Not satisfied

COURSE ADMINISTRATION

4. Was adequate information provided to you prior to taking the course?
   A. Yes
   B. No

5. How satisfied were you with class enrollment and registration procedures?
   A. Very satisfied
   B. Satisfied
   C. Somewhat satisfied
   D. Not satisfied

6. Were you able to access class materials easily?
   A. Yes
   B. No

7. How satisfied were you with the technical support received during this course?
   A. Very satisfied
   B. Satisfied
   C. Somewhat satisfied
   D. Not satisfied

8. How satisfied were you with the technologies (e.g. television equipment, audio equipment, computers, etc.) that were required for successful completion of this course?
   A. Very satisfied
   B. Satisfied
   C. Somewhat satisfied
   D. Not satisfied

54

9. To what extent did technical problems interfere with your learning of the content covered?
   A. Not at all
   B. Only a little
   C. Substantially
   D. A great deal

INSTRUCTION

10. Communication was used effectively throughout the course.
    A. Strongly agree
    B. Agree
    C. Disagree
    D. Strongly Disagree

11. The instructor encouraged interaction among students via discussions and/or activities.
    A. Strongly agree
    B. Agree
    C. Disagree
    D. Strongly Disagree

12. The instructor was available for consultations outside of class time.
    A. Strongly agree
    B. Agree
    C. Disagree
    D. Strongly Disagree

13. The instructor provided feedback on assignments and projects in a timely manner.
    A. Strongly agree   C. Disagree
    B. Agree   D. Strongly Disagree

14. How effective was the instructor in his/her distance learning instruction?
    A. Highly effective
    B. Effective
    C. Somewhat effective
    D. Not effective

15. How effective were the distance learning class materials?
    A. Highly effective
    B. Effective
    C. Somewhat effective
    D. Not effective

16. Instructions for the course lessons, projects, and assignments were easy to follow.
     A. Strongly agree
     B. Agree
     C. Disagree
     D. Strongly Disagree

17. The purpose, objectives and grading procedures for the course were clear.
     A. Strongly agree
     B. Agree
     C. Disagree
     D. Strongly Disagree

18. Examinations and graded assignments or graded activities were consistent with course objectives.
     A. Strongly agree
     B. Agree
     C. Disagree
     D. Strongly Disagree

19. Audio and/or visual aids provided helped to clarify the subject matter.
     A. Strongly agree
     B. Agree
     C. Disagree
     D. Strongly Disagree

20. Overall the instructor was
     A. Poor
     B. Average
     C. Good
     D. Very good

DELIVERY FORMAT

21. The course online site was easy to use.
     A. Strongly agree
     B. Agree
     C. Disagree
     D. Strongly Disagree

22. The course online site was attractive.
     A. Strongly agree
     B. Agree
     C. Disagree
     D. Strongly Disagree

56

23. The links provided to other sites were appropriate and aided in your understanding of course content.
     A. Strongly agree
     B. Agree
     C. Disagree
     D. Strongly Disagree

COURSE OVERALL

24. The workload required by this course was
     A. Too light
     B. Manageable
     C. Demanding
     D. Overwhelming

25. Overall, the course was
     E. Poor
     F. Average
     G. Good
     H. Very good

26. Compared to conventional classroom courses this course was
     A. A better learning experience
     B. An equivalent learning experience
     C. A worse learning experience
     D. An ineffective learning experience

27. Would you recommend this course to others?
     A. Yes
     B. No

28. Would you enroll in another online distance learning course?
     A. Yes
     B. No

29. Would you enroll in another type distance learning course (e.g. videocourse, interactive telecourse)?
     A. Yes
     B. No

DEMOGRAPHICS

30. Gender
    A. Male
    B. Female

31. Age
    A. 20 years or younger
    B. 21-29
    C. 30-39
    D. 40 or older

32. What final grade do you expect to receive in this course?
    A. A
    B. B
    C. C
    D. D
    E. Pass [for Pass/Fail courses only]

33. Racial/Ethnic Group
    A. American Indian/Native American
    B. Asian American
    C. Black/ African American
    D. Hispanic American/Latino
    E. White

34. Please add any additional comments here. You may also use this space to explain your responses to any of the questions on this survey. Please specify the question to which your comment applies.

Distance Learning Course Evaluation
Teleclasses—Onsite Students

Use of distance learning technology is becoming an increasingly common part of instruction in higher education. Today you are being asked to evaluate your distance learning experience in this class. The results of this study will help us design future distance learning courses to better meet the needs of students. Please respond as honestly as possible to each question. This survey is for research purposes only and will not be used by your instructor or your college as a course evaluation.

Use a number 2 or soft lead pencil to **record your responses on the answer sheet** provided.

Thank you for your participation.

---

1. Where are you taking this course?
    A. Onsite (i.e. in the same room/building as the instructor)
    B. Remote site

2. Why did you enroll in this distance learning course? Choose all that apply.
    A. Convenience due to work/family/school
    B. Interest in subject matter or instructor
    C. To satisfy a degree/certification requirement
    D. Course recommended by others

Please respond to Questions 3-5 using the following scale:

   A. Yes   B. No.

3. Would you still have been able to take this course if it had not been offered through distance technology?

4. Was adequate information provided to you prior to taking the course?

5. Were you able to access class materials easily?

59

Please respond to Questions 6-9 using the following scale:

A. Very satisfied   **B. Satisfied**   **C. Somewhat satisfied**   **D. Not satisfied**

6. How satisfied were you with the educational experience gained in this distance learning course?

7. How satisfied were you with class enrollment and registration procedures?

8. How satisfied were you with the technical support received during this course?

9. How satisfied were you with the technologies (e.g. television equipment, audio equipment, computers, etc.) that were required for successful completion of this course?

Please respond to Questions 10-20 using the following scale:

A. Strongly Agree   **B. Agree**   **C. Disagree**   **D. Strongly Disagree**

10. Technical problems interfered with your learning of the content covered.

11. Communication was used effectively throughout the course.

12. The instructor encouraged interaction among students via discussions and/or activities.

13. The instructor was available for consultations outside of class time.

14. The instructor provided feedback on assignments and projects in a timely manner.

15. The instructor was effective in his/her distance learning instruction.

16. The distance learning class materials were effective.

17. Instructions for the course lessons, projects, and assignments were easy to follow.

18. The purpose, objectives and grading procedures for the course were clear.

19. Examinations and graded assignments or graded activities were consistent with course objectives.

20. Audio and/or visual aids provided helped to clarify the subject matter.

---

21. Overall, the instructor was
        A. Poor   B. Average   C. Good   D. Very good

22. The workload required by this course was
    A. Too light
    B. Manageable
    C. Demanding
    D. Overwhelming

23. Overall, the course was
    A. Poor   B. Average   C. Good   D. Very good

24. Compared to conventional classroom courses this course was
    A. A better learning experience
    B. An equivalent learning experience
    C. A worse learning experience
    D. An ineffective learning experience

Please respond to Questions 25-27 using the following scale:

  A. Yes   B. No.

25. Would you recommend this course to others?

26. Would you enroll in another teleclass?

27. Would you enroll in another type distance learning course (e.g. videocourse, online course)?

---

    C. Black/ African American
    D. Hispanic American/Latino
    E. White

Distance Learning Course Evaluation
Teleclasses—Remote Site Students

Use of distance learning technology is becoming an increasingly common part of instruction in higher education. Today you are being asked to evaluate your distance learning experience in this class. The results of this study will help us design future distance learning courses to better meet the needs of students. Please respond as honestly as possible to each question. This survey is for research purposes only and will not be used by your instructor or your college as a course evaluation.

Use a number 2 or soft lead pencil to **record your responses on the answer sheet** provided.

Thank you for your participation.

---

1. Where are you taking this course?
   A. Onsite (i.e. in the same room/building as the instructor)
   B. Remote site

2. Why did you enroll in this distance learning course? Choose all that apply.
   A. Convenience due to work/family/school
   B. Interest in subject matter or instructor
   C. To satisfy a degree/certification requirement
   D. Course recommended by others

Please respond to Questions 3-6 using the following scale:

A. Yes   **B. No.**

3. Would you still have been able to take this course if it had not been offered through distance technology?

4. Was adequate information provided to you prior to taking the course?

5. Were you able to access class materials easily?

6. Did broadcast failure ever interrupt a class session?

Please respond to Questions 7-14 using the following scale:

A. Very satisfied **B. Satisfied** **C. Somewhat satisfied** **D. Not satisfied**

7. How satisfied were you with the educational experience gained in this distance learning course?

8. How satisfied were you with class enrollment and registration procedures?

9. How satisfied were you with the technical support received during this course?

10. How satisfied were you with the technologies (e.g. television equipment, audio equipment, computers, etc.) that were required for successful completion of this course?

11. How satisfied were you with the promptness with which the instructor recognized and answered off-site student questions during the class?

12. How satisfied were you with the material exchange (i.e. method of sending and receiving materials, promptness) between you and the course instructor?

13. How satisfied were you with the accessibility of technologies (i.e. computers, library materials, etc.) needed for this course?

14. How satisfied were you with the back-up procedures used in the event of broadcast failure?

Please respond to Questions 15-25 using the following scale:

A. Strongly Agree **B. Agree** **C. Disagree** **D. Strongly Disagree**

15. Technical problems interfered with your learning of the content covered.

16. Communication was used effectively throughout the course.

17. The instructor encouraged interaction among students via discussions and/or activities.

18. The instructor was available for consultations outside of class time.

19. The instructor provided feedback on assignments and projects in a timely manner.

20. The instructor was effective in his/her distance learning instruction.

63

21. The distance learning class materials were effective.

22. Instructions for the course lessons, projects, and assignments were easy to follow.

23. The purpose, objectives and grading procedures for the course were clear.

24. Examinations and graded assignments or graded activities were consistent with course objectives.

25. Audio and/or visual aids provided helped to clarify the subject matter.

___

26. Overall, the instructor was

   A. Poor   B. Average   C. Good   D. Very good

27. The workload required by this course was

   A. Too light   C. Demanding
   B. Manageable   D. Overwhelming

28. Overall, the course was

   A. Poor   B. Average   C. Good   D. Very good

29. Compared to conventional classroom courses this course was
   A. A better learning experience
