 IDENTIFIERS Child Mortality; *Indicators; *Utah; Vaccination

ABSTRACT

This Kids Count report details statewide trends in the well-being of Utah's children. The statistical portrait is based on 22 indicators of children's well-being, including: (1) prenatal care; (2) low birth weight infants; (3) infant mortality; (4) child death rates; (5) child injury deaths; (6) child abuse; (7) injury hospital discharges; (8) child poverty rate; (9) school meals participation; (10) child care needs; (11) health insurance; (12) adjudication rates; (13) school enrollment; (14) pupil-teacher ratios; (15) per pupil expenditure; (16) dropouts; (17) academic achievement; (18) teen births; (19) teen smoking and alcohol use; (20) youth risk behavior; (21) teen chlamydia infection; and (22) teen abortion rates. Part 1 of the report introduces state goals for children, provides population estimates statewide and by county, and details findings on selected health status measures for Utah counties and for 61 small homogeneous areas within the state. This section also describes a simple strategy for child advocacy. Part 2 of the report provides county and statewide trend data for each of the indicators. The findings indicate that the percent of women receiving first trimester prenatal care has decreased and the percent of low birth weight infants has been increasing. There have been decreases in infant mortality since 1996. The number of child abuse or neglect cases have increased. There have been fluctuations in child death rates, child injury deaths, and dropout rates. The report concludes with suggestions for child advocacy. (KB)

OLENE S. WALKER
LIEUTENANT GOVERNOR

January 1, 2000

Dear Friends of Utah's Children:

Utah has the ability to be a national leader by creating a model environment for our children. This environment helps them grow into healthy, happy and productive adults. To do this, we must have leaders from all segments of the population, who are willing to investigate problems and carry out solutions. The first step in this process is gathering data which will enable us to make informed decisions concerning the children of Utah.

This data book is the first step. Utah Children, through its KIDS COUNT Project has once again produced a quality, reliable means of tracking how children and their families fare in Utah. Measures of Child Well-Being provides a snapshot look at the realm of child development, from prenatal care through high school graduation.

As we begin the new millennium, I urge all citizens of Utah to look at the data, analyze the problems, and decide where they fit in the job of improving the lives of each and every one of our children.

Sincerely,

Michael O. Leavitt
Governor

Utah KIDS COUNT Project

How are the children? The Masai tribe of Africa are said to be the most fierce warriors throughout all of Africa. However, when they greet each other it is not with questions of war or weapons or even themselves. Instead, these warriors hail each other with the question, "How are the children?" They know that if the children are well, all is well. They know that the well-being of the community's children mirrors the prosperity of the tribe as a whole.

So how are the children? On the surface it seems like a simple enough question. But in reality the question is much more than it seems; it is really many questions. How many kids are dropping out of school? How many children die from violent causes? How many infants don't get properly immunized? How many teens are having babies before they themselves have a chance to grow up? The answer to the question, "How are the children", is really a puzzle, with many pieces coming together to give a clear picture of how children in our state are really doing.

One puzzle piece confronts health issues our children face, another, the economic environment. There is a piece for education and a piece for safe behaviors. Together, these pieces create a complete picture of how children, and therefore our communities are functioning.

How are the children? What if we heard that question and passed it along to each other a dozen times a day? What if it was the last question we asked at every public gathering or policy setting meeting? When will we be able to truly say, without hesitation, that all the children are well?

So, "How are the children?" As we enter a new year, a new millennium, it's a question that should be on the minds of every Utahn. This book is full of the statistics which can

answer many of the above questions. Read through this copy of *Measures* and find out. Then decide for yourself where you fit into the puzzle of child well-being. What part will you play to create a better life for Utah children?

What's New for 2000

This year's book is divided into several "goals" for children. Within these goals, we have provided information on almost 30 indicators of child well-being. These goals were defined with the help of the F.A.C.T. (Families, Agencies, and Communities Together) Data Committee and the Department of Health Child Indicators Project. The goals are:

1. All of our children are safe and healthy.
2. All of our children live in nurturing and economically secure family environments.
3. All of our communities are safe and supportive.
4. All of our children succeed in school and are ready to work.
5. All of our children choose healthy and safe behaviors.

This year's book includes sources and definitions on the topical pages to help users link to sources and terminology and on page 10, users will find a one page "Utah at a Glance" table to quickly gauge how children in their county are faring.

We appreciate any feedback concerning these changes and additions. Drop us an e-mail or send us a letter and let us know how you are using the book and how it is making a difference for children in your community.

Terry Haven, Editor

This is the fifth edition of *Measures of Child Well-Being in Utah*. This annual publication of the Utah KIDS COUNT Project is a compilation of statistics that measure child well-being in the state. The guide is used for a variety of purposes including: identifying positive and negative trends in the state to allow policy-makers and service providers to ascertain where programs are effective and where changes need to be made; consolidating and analyzing data relevant to children that can be used as a resource for those applying for grants; providing the media with ready access to the most recent data on children; a resource for all interested individuals who want to make child advocacy a part of their lives.

Through a thoughtful look at the data and analysis of trends available in this publication, action plans can be formulated to further the goal of healthier, happier children.

How to Use the Data Book

Many of the indicators in this book are presented as percents or rates which are needed to compare one group with another or to follow trends over time. Rates are calculated by taking the number of incidents in any given category (for example child deaths), dividing it by the total number of individuals in that category (all children), and multiplying by 1,000 or 10,000 to give you the number of incidents per 1,000 or 10,000.

$$\frac{\text{Number of Child Deaths}}{\text{Total number of Children}} \times 1,000 \quad \text{OR}$$

$$\frac{5 \text{ child deaths}}{500 \text{ total children}} \times 1,000 = 10 \text{ deaths per } 1,000 \text{ children}$$

A **percentage** is basically the same formula, multiplied by 100 rather than a larger number.

As the population base becomes smaller, as it does in many counties in Utah, statistical variation becomes more prone to anomalies. For example, let's say a county has 2 children die out of a population of 75 children. If we divide 2 by 75 and multiply by 1,000 we get a child death rate of 26 per 1,000. If the next year only 1 child dies out of 75 the child death rate would be 13. This seemingly large decrease is a result of statistical variation, and the magnitude of the drop is exaggerated because the denominator (75) is so small. To attempt to minimize chance variations such as these, we use 5 year averages for some of the indicators. This allows the use of larger denominators in those counties where the population is small, enhancing the reliability of the rates. Wherever possible we have also included raw numbers or "counts". While rates are useful for making comparisons and following trends, actual numbers are needed to determine service needs such as anticipated caseloads.

Statistics alone cannot help improve the well-being of Utah's children, but they can help all Utahns make informed decisions. The information in this book is an important tool in identifying problem areas to confront and successes to celebrate. Utah Children invites all citizens of Utah to get involved in the lives of children to make sure our next generation is equipped to be successful leaders and adults.

How Do You Interpret the Statistics in Measures?

The Advocacy Academy

This year, Utah Children's KIDS COUNT Project hosted its second Advocacy Academy. The Academy, funded primarily by the R. Harold Burton Foundation, is designed to help further our outreach efforts in Utah and train individuals on how to be child advocates.

Thirty individuals were accepted to participate in the Academy. The three-day intensive training session educated the participants in media training, legislative training, grass roots advocacy, and how to give an Advocacy-in-a-Box presentation.

Outcomes

Upon graduation from the Academy, participants become KIDS COUNT Leaders within their communities. This title carries with it several commitments. As KIDS COUNT Leaders they become role models to all members of the community. Participants agree to three basic obligations in exchange for the training:

1. Be prepared to serve as a resource on children's issues. Utah KIDS COUNT will publish KIDS COUNT leaders' names and numbers in their annual data book *Measures of Child Well-Being in Utah*.
2. Present at least one Advocacy-in-a-Box presentation in their community in the year following participation in the Advocacy Academy.
3. Develop one advocacy strategy to be carried out in their community.

The KIDS COUNT Leaders (box left) are available as resources on children's issues in their communities. They are trained to give short presentations to interested groups or organizations and can answer questions you may have concerning children in your town

Source: Estimates of the Population of Counties by Age, Sex, Race, and Hispanic Origin, U.S. Census Bureau.

The Census Bureau treats race and ethnicity as separate and independent categories. This means that within the federal system everyone is classified as both a member of one of the four race groups and also as either Hispanic or non-Hispanic. Consequently, there are a total of 8 race-ethnicity categories.

*More in-depth definitions and sources for data in this chart can be found on the individual data pages pertaining to each indicator.

Assessing health status at the community level is important for many reasons. The following information was compiled by the Utah Department of Health, Bureau of Surveillance and Analysis and provides data on selected health status measures for small areas. Sixty-one small areas were created using ZIP code and county boundaries based on the following criteria:

- ◆ population size - at least 20,000 population
- ◆ county boundaries - whenever possible, sub-county areas did not cross county boundaries. The exception was that eastern Weber County was combined with Morgan County
- ◆ income levels - whenever possible, small areas contained ZIP code areas with similar socio-economic status (per capita income)
- ◆ local health - areas were constrained so that they did not cross local health district boundaries.

Areas vary widely in surface area. The smallest areas consist of a few square miles, in an urban county, and the largest area encompasses four large frontier counties. The key maps on this page are included to help convey the location of the small areas geographically.

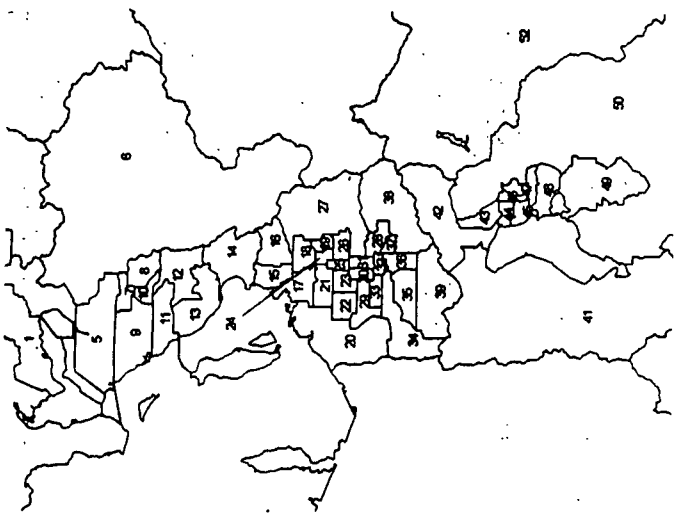

Multiple years are combined for analysis to allow for computation of reasonably stable rates. In other words, to have a greater degree of reliability, multiple years were used to provide estimates that are more reflective of those that are typical for a given area.

"Take Five for Kids"

One Simple Advocacy Strategy

Over the years advocates have learned that sending a mailing out to anyone who puts their name on a sign-up sheet or posting a notice on a bulletin board won't necessarily produce more letters or calls to the legislature. There are just too many groups trying to get our attention (many using bright colors...dramatic punctuation... & **!!BOLD** warnings!!).

Just as important, groups with shoe-string budgets can't afford to spend scarce resources on postage, paper, and staff time sending out alerts that don't result in calls or letters. If you want to produce results, you might try a version of the following. It has been tried and proven effective.

One year some University of Washington students tried to get their fellow students to write letters about welfare proposals they thought might harm children, but the responses they got just seemed like excuses. In response to their pleas, people said:

- ◆ I don't have time
- ◆ I wouldn't know what to say
- ◆ I have too many questions about it
- ◆ I don't have any envelopes/paper/stamps
- ◆ I don't know the address
- ◆ I can't

28

Once their anger wore off, the students decided to take the "excuses" seriously: what if these were real barriers, and not just excuses? In the process they developed something they called "Take Five for Kids" — a way to be an advocate in just five minutes or less. Over lunch time every day for a week, at strategically located tables, they provided: sample letters, brief fact sheets, answers to questions, blank paper, envelopes, stamps, the names and addresses of legislators. In a single week they generated several hundred letters on welfare reform.

Inspired by their success a child advocacy group adopted the idea and renamed their legislative alerts, "Take Five for Kids." Just like the students at their table, these alerts include all the necessary ingredients, in a simple weekly "alert"; brief information, brief sample messages, and the information needed to contact a legislator.

People who get the Take Five Alerts say they prop them on their telephones or computer keyboards until they've made their calls or written their letters.

Other groups are following suit, Take Five tables are popping up in the lobbies of hospitals and social agencies, after services on Sunday, at PTA meetings, and similar gatherings. Anyone can set up a Take Five table in a busy corridor, put out copies of brief fact sheets or alerts, along with paper, pens, stamps, and envelopes. People who stop by the table say just knowing they can be advocates for people and issues they care about in five minutes or less is empowering.

How Many Utah Women Get Prenatal Care?

- ◆ **Definition:** Statistics are based on the number of births (twins = 2 births, triplets = 3 births, etc.) occurring where the mother did receive prenatal care during the first three months of pregnancy by county of residence of the mother.
- ◆ **Source:** Utah birth certificate data, Utah Department of Health, Office of Vital Records and Statistics.
- ◆ **Trend:** Since 1994 this indicator has worsened slightly each year.

Definition: Low birth weight babies are those born weighing less than 2,500 grams (about 5 pounds 9 ounces). Figures given are the percent of all births born at low birth weight.

Source: Utah birth certificate data, Utah Department of Health, Office of Vital Records and Statistics.

Trend: The percent of low birth weight babies has been increasing since 1994 and this trend continued in 1998. Some of this increase results from greater success at saving low birth weight infants who might have died previously.

Child Injury Deaths

- ◆ **Definition:** Child injury deaths are those occurring to individuals 1 to 19 due to injuries (e.g. accidents, suicides, and homicides). Rates are per 100,000 youth.
- ◆ **Source:** Utah Department of Health, Office of Vital Records and Statistics.
- ◆ **Trend:** The injury death rate has fluctuated over the last 10 years from a high of 31.1 in 1994 to a low of 24.5 for 1991. In Utah, the majority of injury deaths (or sometimes called violent deaths) are due to motor vehicle accidents with suicide a close second for teenage males.

Cottonwood	1,120
Western	1,144
Eastern	543
Southwest	701

* The total count of victims; 8,884 is an unduplicated count. With the breakdown by region, a victim may be counted in more than one region; thus the total by region is higher.

"Everywhere I go I hear people talking about rebuilding community. And their instincts are right. A sound family is a tremendous advantage to a child, but it's not enough. The parent has to know that when a child walks out the door, there are others who care and will create a safe environment."

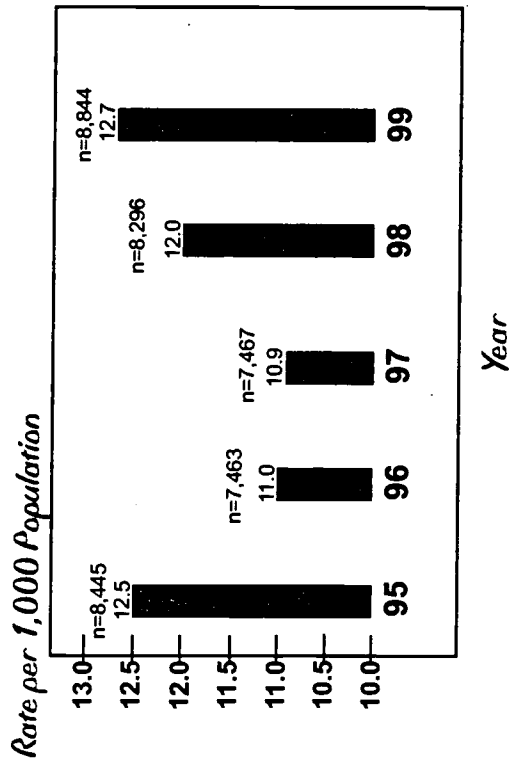

John W. Gardner

Definition: Figures given here represent the number of substantiated victims of abuse or neglect and can include sexual abuse, physical abuse, emotional maltreatment, abandonment, fetal addition to alcohol or other substance, physical neglect, and educational neglect. Rates are per 1,000 children under age 18.

Source: Utah Department of Human Services, Division of Child and Family Services.

Trend: Over the last two years there has been an increase in the number of abused or neglected children in Utah. In 1998, there was an increase of 548 cases for a total of 8,844 substantiated child abuse and neglect victims.

Injury Hospital Discharges

- ◆ **Definition:** The number of Utah resident children age 1 to 19 who were discharged from the hospital following an admittance due to an injury. Rates are per 100,000 youth.
- ◆ **Source:** Utah Department of Health, Hospital Discharge Database, Office of Health Care Statistics.
- ◆ **Trend:** The Hospital Discharge Database began in 1992. In general, all injury related hospitalizations have declined from 1997 to 1998 with the exception of hospitalization due to homicide attempts.

Number and Rate of Injury Hospitalizations of Utah Children, 1 to 19

(suicide figures are for ages 10-19)

	1997		1998	
	#	rate	#	rate
All injuries	3,270	451.7	2,753	376.1
Suicide Attempts	254	66.4	235	61.5
Motor Vehicle Injuries	593	81.9	574	78.4
Assault Injuries	77	10.6	80	10.9
Firearm Related Injuries	29	4.0	19	2.6

Percent of Utah Children Age Appropriately Immunized*: 1994 - 1998

*To be considered age-appropriately immunized, a child should have had 4 doses of diphtheria/tetanus/pertussis (DPT) vaccine, 3 doses of polio vaccine, and one dose of measles vaccine by the age of two, (included children age 19 - 35 months). An Advocacy Story by Nancy Amidei

Some years ago I was teaching in Houston and on the last day a student raised her hand.

"This may be a cop-out," she said, "but I am a wife, a mother, a student, and I have a part-time job. I can't also be a full-time advocate."

"You are right," I replied, "that is a cop-out."

Few people have the luxury of being full-time advocates. Most don't. But if at this point in your life, all you can give is five minutes a week, then that is your obligation.

If at some point in your life, you can give five hours a week, that is your obligation.

And if there is a time in the future when you can give full-time, great -- go for it.

But no matter what the available time, so long as even one child needs your voice, the obligation is LIFE-time, not FULL-time.

How Many Utah Children Receive Free or Reduced Price School Lunch?

School Meals Participation

- ◆ **Definition:** An approved application allows a child to receive lunch and/or breakfast (if served) free or at a reduced price depending on household income. For example, a household size of 4 with an income of \$20,865 (130% of poverty level) or less qualifies for free meals; a household size of 4 with an income of \$20,866 to \$29,693 (130-185% of poverty level) qualifies for reduced-price meals. The reduced price lunch is \$0.40, and reduced price breakfast is \$0.30.
- ◆ **Source:** Utah State Office of Education, Finance and Statistics.
- ◆ **Trend:** The percent of students receiving school meals has remained stable at just under 30 percent, indicating that at least 30 percent of K-12 children were living at or near poverty.

How Many Utah Children Need Child Care and is There Enough?

Estimates of the Potential Number of Utah Children Needing Child Care - 1999 and 2003

	1999	2003
1. Estimated population ages 0-12 years		
age 0 - five	252,100	278,400
age 6 - 12	259,900	277,400
Total	512,000	555,800
2. Number of children age 0 - 5		
Living w/both parents	217,100	239,800
both parents in labor force	110,300	121,800
both work 35+ hours	42,700	47,100
Living with one parent	35,000	38,600
parent in labor force	23,000	25,300
at work 35+ hours	14,100	15,600
3. Number of children age 6 - 12		
Living with both parents	224,000	238,000
both parents in labor force	138,500	147,200
both work 35+ hours	63,600	67,600
Living with one parent	35,900	39,400
parent in labor force	29,400	32,300
at work 35+ hours	21,700	23,800
4. Total Potential child care children	142,100	154,100

Note: The relationships between the numbers in items 2-4 are based on 1990 Census data. An additional factor for consideration: Because of Utah's economic expansion since 1990, it is likely that relatively more parents are in the labor force. But a lot of the expansion jobs are part-time. Thus, the impact on the "potential day care children" totals may be relatively small.

Estimated Child Care Need

Source: The information on this page comes from a report compiled by the Department of Workforce Services, Office of Child Care.

Trend: As can be seen in the information to the right, there is currently an estimated 142,100 children in need of child care in Utah. To meet the needs noted, there are only approximately 35,487 licensed child care slots available in Utah.

A recent customer survey of Child Care Resource and Referral parents showed 41.6% of the respondents said "no openings" was a barrier to finding care. In addition, 32.4% indicated that "schedule problems" was a barrier to finding care. While the chart below seems to indicate a large amount of vacancies, the reality is that many of the women moving from welfare to work are finding jobs where work hours fall outside of the "normal" 8:00 to 5:00 hours. For these women and children alternate child care is a must and not readily available. Also, while licensed for a specific number of children, some child care providers do not take as many children as they are licensed for.

	slots	vacancies
Infant/Toddler	4,531	809
Age 2 thru Kindergarten	25,112	5,429
School-Age	5,844	1,383
Total	35,487	7,621

- ◆ **Definition:** The number of children age 17 or under with no health insurance coverage.
- ◆ **Source:** 1991 and 1996 Utah Health Status Surveys, Utah Department of Health.
- ◆ **Trend:** In 1996, 8.6% of Utah children were without any type of health insurance. This is down from the 1991 percentage of 10.2. Utah's Child Health Insurance Program (CHIP), which began serving the public in August 1998, will serve an estimated 30,000 low-income children. The state's contribution to CHIP is heavily leveraged by federal dollars (approximately 80% federal, 20% state).

The highest proportion of children without health care coverage was found in Tri-County (Uintah, Daggett and Duchesne), and Southwest (Beaver, Garfield, Iron, Kane, and Washington) Health Districts.

CHIP - Children's Health Insurance Program

CHIP, a new health insurance program administered through the Utah Department of Health, provides affordable health insurance for working families who have children under 19, earn too much for Medicaid, and cannot afford health insurance. CHIP benefits include:

- ◆ hospital and emergency care
- ◆ physician visits
- ◆ well-child check-ups
- ◆ immunizations
- ◆ mental health services (limited)
- ◆ eye and hearing exams
- ◆ dental care

There is no monthly insurance premium and co-payments are as low as \$5 depending on family income. A child living in a family of four which makes between \$21,876 and \$32,900 may qualify for CHIP based on 1998 guidelines.

For more information about CHIP or to apply contact the Health Resource Line for the number of the nearest CHIP office at 1-888-222-2542.

Juvenile and Adult Adjudication Rates

◆ **Definition:** The following rates represent the number of referrals (for juveniles) or the number of filings (for adult) to court for the various offenses examined. Juveniles rates are for youth through age 17 and adult statistics are for individuals 18 or over. Rates are per 1,000 population. The referrals/filings do not include those cases where the victims did not press charges or where the police decided there was not enough evidence to warrant adjudication. These are only the cases which actually made it to court.

Eight separate offense categories are examined below. They include:

- Domestic violence cases filed in court
- Substance abuse cases in juvenile court
- Drug related offenses in juvenile court
- Alcohol related offenses in juvenile court
- Property crime offenses in juvenile court
- Violent crime offenses in juvenile court - violent crimes are those committed against another person such as murder, rape, and assault. They include property crimes which are committed with a weapon. In 1997 there were 26 cases of property crimes with a weapon and in 1998 there were 39 cases.
- Property and violent crime offenses in adult court
- Truancy offenses in juvenile court

◆ **Source:** Administrative Office of the Courts.

◆ **Trend:** Only two of the offense categories increased or worsened from 1997 to 1998. These were the number of domestic violence cases filed in court and the number of alcohol related offenses in juvenile court. All the other categories either remained the same or decreased slightly.

Domestic Violence Cases Filed in Court

Year	#	rate
1997	5,286	3.9

Year	#	rate
1997	1,374	2.0
1998	1,396	2.0

"Each of us must come to care about everyone else's children. We must recognize that the welfare of our children and grandchildren is intimately linked to the welfare of all other people's children. After all, when one of our children needs some lifesaving surgery, someone else's child will perform it. If one of our children is threatened or harmed by violence, someone else's child will be responsible for the violent act. The good life for our own children can be secured only if a good life is also secured for all other people's children."

How Many Children Are Enrolled in Utah Schools?

School Enrollment

- ◆ **Definition:** Enrollment figures include the number of students enrolled in the fall of each school year. The Average Annual Rate of Change is for a five year period from 1993 to 1997.
 - ◆ **Source:** Utah State Office of Education, School Finance and Statistics.
 - ◆ **Trend:** Since 1993, the average annual growth in Utah schools has been 0.6%. Twelve counties have experienced a negative average growth rate while 17 in Summit County at 4.5%.
- Utah currently has 479,151 children enrolled in public schools. There has been a steady increase each year.

Definition: Pupil/Teacher ratios are calculated by taking the total number of students divided by the total number of teachers. Interns and resource teachers are included. Special education students are not included in the per pupil ratios in the chart below.

◆ **Source:** Utah State Office of Education, Finance and Statistics.

◆ **Trend:** Due to a change in methodology, data for 1995-96 and later are not comparable to earlier data. Relatively little change has occurred between 1996-97 and 1997-98, however, all three grade levels (Kindergarten, 1-6, and 7-12) saw slight decreases.

How Much is Spent Per Pupil in Utah Schools?

Per Pupil Expenditures

- ◆ **Definition:** Per pupil expenditures are determined by dividing total net current expenditures by fall enrollment. Property, equipment, community services, and debt service expenditures are excluded.
- ◆ **Source:** Utah State Office of Education, Finance and Statistics, and the U.S. Department of Education, National Center for Education Statistics.
- ◆ **Trend:** Per pupil expenditures has risen every year but Utah is still below the national level of \$6,131 and ranks last in the nation. Between 1997 and 1998 Utah saw a 5.3 percent increase in per pupil expenditures compared to 2.9 percent nationally.

Measures of Child Well-Being in Utah, 2000

Copyright © 2000 Utah Children

Definition: Dropout figures are obtained by taking the sum of dropouts from grades 7 through 12 for a given school year and dividing by the number enrolled in those grades as of October 1. The figure is presented as a percentage of all students.

Source: Utah State Office of Education, School Finance and Statistics.

Trend: Dropout rates have fluctuated over the last several years. This year's rate of 3.6% is down from the 1997-98 rate of 4.1.

◆ **Definition:** See below chart

◆ **Source:** Utah State Office of Education, Finance and Statistics.

◆ **Trend:** Scores remained the same from 1997 to 1998 except for a decrease in Math, Reading, and Language in Grade 5. In all three of these categories, students in 5th grade scored below the 50th percentile.

Key
M = Math
R = Reading
L = Language
S = Science
SS = Soc. Science
C = Composite

Note: Categories are Mathematics, Reading, Language, Science, and Composite. The national norm is 50 for each subset. Therefore, for example, a score of 56 indicates that the average of that group was higher than 56 percent of the students who took the test nationally.

How Many Teenage Girls Have Babies Each Year?

Teen Births

- ◆ **Definition:** Statistics are for females between the ages of 15 and 17 and rates represent the number of births per 1,000 young women in that same age group.
- ◆ **Source:** Utah birth certificate data, Utah Department of Health, Office of Vital Records and Statistics.
- ◆ **Trend:** The overall teen birth rate has declined over the last few years. It decreased slightly from 1997 to 1998. The current rate is slightly above the rate ten years ago.

How Many Utah Teens Choose to Drink Alcohol or Smoke?

Teen Smoking and Alcohol Use

- ◆ **Definition:** The Division of Substance Abuse administers surveys to students in grades 7 through 12. The questions responded to are: "Have you smoked a cigarette in the last 30 days", and "Have you taken a drink of alcohol in the last 30 days". The survey is anonymous, self-reported, and confidential. Results are reported for the state and for the 13 planning districts.
- ◆ **Source:** Department of Human Services, Division of Substance Abuse.
- ◆ **Trend:** Teens smoking has risen consistently over the last few years. Teen alcohol use remained steady from 1994 to 1997.

Percent of Utah Teens Reporting They had Smoked Tobacco or Used Alcohol in Past 30 Days

1994 and 1997

Percent of Utah Teens Reporting They had Smoked Tobacco or Used Alcohol in Past 30 Days

"We must restore to teenagers a belief in themselves, their futures, and the broader society. As long as they lack adequate opportunities to learn, work, develop healthy self-esteem, and succeed, our nation will face abnormally high rates of teen pregnancy, drug use, and violence..."

Children's Defense Fund

How Many Utah Teens Live Healthy Life-styles?

Risk Behavior Survey

Definition: The Youth Risk Behavior Surveillance System surveys high school students (grades 9 through 12) and is administered in the classroom every two years. The sample is drawn at the state level and therefore conclusions cannot be made at smaller geographic levels. Many questions are asked on the survey concerning healthy behaviors and life-style choices.

Source: Center for Disease Control, administered through Utah State Office of Education.

Trend: Teens are choosing to exercise more, wear seatbelts more often, and are less likely to view themselves as overweight.

"On how many of the past 7 days did you participate in vigorous exercise or sports for at least 20 minutes."
Percent Responding 3 or more times a week

"How do you describe your weight"
Percent Responding 'Slightly' or 'Very' Overweight*

*In 1997, 33.6% of the girls responded slightly or very overweight compared to 15.1% of the boys.

Chlamydia Diagnosis Among Teens

- ◆ **Definition:** Chlamydia is a sexually transmitted disease (STD) caused by a bacteria. Chlamydia is now recognized as one of the most common and among the most damaging of all STDs seen in the United States. Anyone who has unprotected sex can be infected with chlamydia, virtually all chlamydia infections are sexually transmitted, except those of newborns who may acquire this infection from their mother during birth. Chlamydia disproportionately affects girls and young women, and can lead to infertility. Rates are per 100,000 youth ages 15 to 19.
- ◆ **Source:** Utah State Department of Health, Bureau of Epidemiology.
- ◆ **Trend:** Chlamydia infections among teens has risen substantially since 1997 and is well above the 1994 rate of 407.8.

Abortion Rates

- ◆ **Definition:** Abortion rates for teens is presented as a rate per 1,000 teens ages 15 to 17 and includes those teens terminating a pregnancy by means of an abortion.
- ◆ **Source:** Utah State Department of Health. Office of Vital Records and Statistics.
- ◆ **Trend:** The abortion rate among 15 to 17 year olds has dropped in Utah over the last 10 years. For married teens the rate has dropped from 1.0 in 1989 to 0.1 in 1998. This trend is mirrored in single teens, dropping from 7.1 in 1989 to 3.3 in 1998.

How Adults Can Advocate for Children

Anyone Can Be an Advocate

All you have to do is be willing to challenge systems when they don't work and support laws and policies that do work. Most importantly, you need to be a voice for those who can't speak for themselves -- **children**.

Why advocate for Children

Because:

- children do not vote, their voices too often go unheard
- children and youth have rights which must be honored
- children and youth deserve to have government programs Work in their best interest

Working with policy makers....

Gaining the support of policy makers is an important and valuable strategy for citizens and organizations. Often this can be done by educating them. Letter writing is one way to inform, educate and/or influence decision-makers. Another way is meeting with policy makers -- members of the City Council, Mayor's office, senior government officials, etc. Finally, phone decision makers to discuss upcoming issues that influence the lives of children.

What you can do to advocate for children and youth...

- educate your community (neighborhood, social gatherings, faith community, clubs or civic organizations, school) on the importance of supporting children and youth
- be informed -- read the paper, watch the news, attend community meetings
- mobilize a campaign in your community to support children and youth
- teach others to advocate for themselves
- make children a priority at work
- educate elected and appointed officials
- volunteer
- testify at public hearings
- become involved with a group that works with/for children and youth
- write op-eds or letters to the editor, do an editorial on the radio or TV
- vote
- become a partner with Utah Children
- Attend the 2000 KIDS COUNT Advocacy Academy

About Utah Children

Utah Children was founded in 1985 by individuals concerned about children whose parents are least able to protect and nurture them. The goal is to encourage preventive investment in children before they get sick, get into trouble, drop out of school or suffer family breakdown. Utah Children does not provide direct service, but seeks to complement direct services for children by providing a bridge between community programs and state policy-making. Utah Children seeks to:

- Improve and increase the effectiveness of the public systems charged with the protection of abused, neglected, and foster children,
- Assure the provision of children's basic needs: adequate nutrition, health care, child care, and monetary support from absent parents,
- Assure that safe, quality child care is available to all children,
- Protect our communities and redirect delinquent youth by improving the effectiveness of the juvenile justice system.

About KIDS COUNT

Utah KIDS COUNT is one of several projects of Utah Children. It is partially funded by the Annie E. Casey Foundation of Baltimore, Maryland which funds similar projects in every state for the purpose of measuring and reporting on the status of children over time. The data is used to inform public debate and strengthen public action on behalf of children and families within our nation.

Through KIDS COUNT projects the Annie E. Casey Foundation encourages state, county, and city efforts to track the status of children for the purpose of ensuring better futures for all communities in the United States.

By providing Utah policymakers and citizens with data-based information about child well-being, UTAH KIDS COUNT seeks to enhance local, state, and national discussions concerning healthy, educated, safe, and economically-secure futures for all our children.

Partners in UTAH KIDS COUNT

- Utah Children, Project Administrator
- FACT Steering Committee (Families, Agencies, & Communities Together)
- Utah Department of Health/Utah Child Indicators Project
- Governor's Office of Planning and Budget, State Data Center
