ABSTRACT

The goal of this study was to obtain feedback from relevant community businesses regarding skills needed by employees in Sustainable Technologies. Survey results will help design the innovative Sustainable Technologies curriculum, which is under development at the Maui Community College. In the fall 1999 semester, the Sustainable Technologies Coordinator and the Assistant Dean of Instruction developed a questionnaire (included in the appendix) to survey relevant community representatives regarding the value of Sustainable Technologies toward various employee skills. The questionnaire presented 49 skills from seven curricular categories: general education, waste water quality, energy related tech, occupational safety, environmental tech, potable water quality, and hazardous materials. The 26 respondents were asked to rate each of the skills as "Not Applicable," "Low," "Medium," or "High" in importance for successful job performance. The top three skills are from the general education category: English speaking, English writing, and computer literacy. The skills next in line are all from the occupational safety category: accident prevention, OSHA, safety plans, worker compensation, hazardous materials, emergency response, occupational health, and industrial hygiene. A rather large number of skills were rated as "Not Applicable" or left blank. Eighteen skills accumulated lower than 20 points (out of a possible 78). The response rate was quite low (11.5%) and so are the rankings in general. These results raise several questions for further consideration: validity of the fax methodology, complexity of the questions, and relevancy of studied skills to community need. (VWC)

Maui Community College

SUSTAINABLE TECHNOLOGY Community Survey of Requisite Skills

Spring 2000

PURPOSE

The goal of this study was to obtain feedback from relevant community businesses regarding skills needed by employees in Sustainable Technologies. Survey results will help design the innovative Sustainable Technologies curriculum, which is under development at the Maui Community College.

METHODOLOGY

In the Fall 1999 semester, the Sustainable Technologies Coordinator and the Assistant Dean of Instruction, under auspices of the Dean of Instruction, developed a questionnaire (shown in Appendix A) to survey relevant community representatives regarding their value toward various employee skills. The questionnaire presented 49 skills from seven curricular categories, including:

General Education Waste Water Quality Energy Related Tech Occupational Safety Environmental Tech Potable Water Quality Hazardous Materials

In January 2000, the questionnaire was faxed to 326 representative businesses on a list generated by the MCC Office of Continuing Education and Training. The list was drawn from two sources: businesses participating in the Maui Chamber of Commerce and those previously participating in Office's non-credit courses in retailing.

Of the 326 listed names, 92 held fax numbers that did not transmit due to no answer or a busy signal, resulting in a sample size of 234. The number of respondents was 27, for a response rate of 11.5 percent. One respondent returned a blank form stating the survey was not applicable, netting 26 usable returns.

RESULTS

Specific Job Skills Needed

Analysis. Respondents were asked to rate the 49 skills as Not Applicable, Low, Medium, or High in importance for successful performance on the job. Table A displays the number of respondents selecting the various ratings on each competency.

The analysis then assigned points to ratings according to this scheme:

Points Ratings 0 = Not applicable or blank 1 = Low2 = Medium 3 = High

Adding points across all participants yields a maximum score of 78 points -- if all 26 respondents rated a skill High (3). Table A reports the total points for each skill in the "Points" column, as well as the percent of maximum score shown under Percent (by dividing each sum by 78), in order to evaluate which skills are weighted the most important overall.

The most highly rated skills appear first in the table, and then in descending order.

Top Requirements Overall. The top three skills are from the General Education category:

1. English Speaking

2. English Writing

3. Computer Literacy

That English Writing is highly regarded is not unexpected; perhaps unanticipated is how English Speaking is regarded even more highly than English Writing.

The skills next in line are all from the Occupational Safety category:

4. Accident Prevention

5. OSHA

6. Safety Plans

7. Worker Compensation

8. Hazardous Materials

9. Emergency Response 10. Occupat'l Health 11. Industrial Hygiene

A rather large number of skills were rated as Not Applicable or left blank. As seen from Table A, 18 skills accumulated fewer than 20 points (<25% percent maximum).

B. Comparative Ratings of Skills within Curricular Categories

Analysis. Total points for the various skills within each curricular category were bar graphed and displayed in Figures 1-7, in order to compare the relative importance of skills within each category. The graphs also contain a bar for the highest ranked skill (English Speaking) and the lowest ranked skill (Internship in Energy) for purposes of referencing the anchor points.

General Education: While English Speaking, English Writing, and Computer Literacy are among the most highly regarded skills overall, other General Education attributes receive less

favor. An interesting note is how Physics, Biology, and Technical Algebra received ranks lower than the generic Physical Science – and lower than even Arts & Humanities.

Occupational Safety: Most of these skills were looked on with much favor, the exception being the Internship in Safety.

Potable Water Quality: These skills were all ranked low with fewer than 30 points.

Waste Water Quality: These skills were all ranked low with fewer than 30 points.

Environmental Tech: These skills were all ranked low with fewer than 30 points.

Hazardous Materials: Four skills accumulated more than 30 points; in order of importance: Environmental Health, Environmental Law, Environmental Science, and Site Assessment.

Energy Related Tech: One skill accumulated more than 30 points: Energy Management.

SUMMARY

The response rate is quite low. So are the rankings in general -- with exception of some General Education-skills-and-most Occupational Safety-skills. These results raise several-questions for further consideration:

- Validity of the fax methodology.
- Complexity of the question.
- Relevancy of studied skills to community need.

Sustainable Technology Skill Survey

MCC is in the process of designing an Associate of Science Degree in Sustainable Technology. Your Help is needed to evaluate which skills are most needed for success in related positions at your place of business. Please rate each of the skill areas below as not applicable (N/A), Low, Med or High by circling the appropriate response for each skill item. Your input is an important part of our success in serving the community.
